sion of the Jews 38,000 pounds of Vienna pennies; while those of Carinthia paid 4,000 Rhenish florins (the text of this decree was published in "*Allg. Zeit. des Jud.*" 1849, p. 23). The motives assigned for the expulsion are partly religious, arising from alleged insults to the sacrament, and partly economic, in view of the Jews' usurious and fraudulent business practises. Carniola had only one Jewish settlement, in Laibach, and the citizens of that town also obtained a decree ordering the expulsion of the Jews (Jan. 1, 1515). In all of these territories Jews had existed since the thirteenth century, and probably earlier, as is indicated by the names of many places; *e.g.*, Judenburg, Judendorf, etc.

The decrees of expulsion, with very few exceptions, remained in force until the new era following the year 1848. In Austria proper the petition of the states for the expulsion of the Jews, though often repeated, was never fully granted; and in 1518 the emperor, in replying to a petition for expulsion, stated that, while he was willing to expel the Jews from Vienna and from the province of Austria, it was not his intention to expel them from the province at once. He, therefore, permitted them to reside in the cities on the border, Eisenstadt, Marchegg, etc., where they should have a chance to look for a place of definite settlement. This policy the emperor maintained to the last. Shortly before his death (Jan. 12, 1519), he, in reply to repeated complaints of the states, announced that Jews who had been expelled from his various dominions would be allowed to reside in the border towns; and he further exempted from the expulsion the Jew Hürschl, who had been permitted to reside in Vienna (May 24, 1518). This is the beginning of the era of the COURT JEWS. Maximilian was succeeded by his grandson Charles V. (1519-56), who, in his capacity of German emperor, exercised a considerable influence upon the condition of the Jews in Austria. The frequent expulsions at the end of the fifteenth and at the beginning of the sixteenth century had made it imperative for the German emperor (who, in his illusionary capacity as Roman emperor, considered himself as the protector of all the Jews, and who, as such, derived an income from the Jewish taxes) to provide some remedy. Charles, therefore, at the commencement of his reign confirmed the privileges of the Jews (1520), among which was the important stipulation that they should not be expelled without his consent from places where they had been allowed to settle. This charter he confirmed after his coronation as Roman emperor (May 18, 1530), and again on April 3, 1544. In the latter document he also declared against the blood accusation. The policy of maintaining the Jews where they had once been tolerated and of prohibiting their settlement elsewhere remained in general

the policy of the Austrian rulers after his time, although this rule was not without exceptions. When, in 1525, the states of Austria again demanded that Jews should not be permitted to reside in any part of Austria, Ferdinand (to whom, in 1522, Charles had assigned his Austrian possessions) emphatically replied (Feb. 23, 1526) that he would allow them to live in any part of his possessions where Jews had previously dwelt. On May 28, 1529, he

again confirmed the charter of the Jews in Austria. Individual Jews occasionally received special favors, as, for example, the physician Lazarus, whom the tutor of the emperor's children commends highly for services rendered to the imperial household (1534), and the Jew Moyse, who had distinguished himself by services rendered to the mint (1542). The latter was granted, as a special favor, permission to deal in all kinds of merchandise, though he was prohibited from lending money on interest. In spite of his promises to allow Jews to reside in places where they had been tolerated, Ferdinand ordered an expulsion of the Jews from Austria (Jan. 31, 1544). The order was, however, never executed. An expulsion from Bohemia, decreed by Ferdinand in 1561, was repealed owing to the efforts of Mordecai MEISELS, who went to Rome and obtained from Pope Paul IV. the absolution of the emperor from his vow.

Under the successors of Ferdinand, Maximilian II. (1564-76), Rudolph II. (1576-1612), and Matthias (1612-19), the conditions remained the same. Expulsions were threatened and revoked; taxes were imposed on every occasion; and petty persecutions, especially in regard to the distinctive Jewish costume or badge, were the key-note of the legislation. In 1567 a charter granted to the Jews of Bohemia confirms the right of residence to the Jews of Bohemia "for all time"; while in the following year it is decreed that they shall not be permitted to reside in the mining towns. From these latter they remained excluded until the new constitution of 1848 abolished their disabilities. Another decree of expulsion followed, for the Jews of Lower Austria, in 1572, which was suspended in the following year, but seems to have been finally executed in 1575 or 1576. This expulsion, like that decreed in 1561 in Bohemia, must either have been revoked or, more probably, became again a dead letter owing to the exceptions in favor of the court Jews, who had the right to take other Jews into their employ; for in 1597 the states of Lower Austria again demand the expulsion of the Jews from the province, and, as if they knew that such a decree would not be carried out, they demand the enforcement of the decree compelling Jews to wear a badge. Rudolph II. took a great interest in the Jews from a scientific point of view also. Being an alchemist, he, like many others at that time, believed that cabalistic literature contained information on the mysteries which he was studying, and therefore he called Rabbi Löwe ben Bezalel to his castle in Prague (1592) to give him the much-desired information ("Zemah David," ed. Frankfort-on-the-Main, 1692, p. 666).

Ferdinand II. (1619-37) was a bigoted Catholic and a disciple of the Jesuits, who, in their desire to crush out all heresy, were naturally enemies of the Jews. As during the sixteenth century complaint was made that the Jews sympathized with the Turks and served them as spies, so after the battle at the White Mountain near Prague (1620), which restored Bohemia to the house of Hapsburg and to Catholicism, the charge was made that the Jews favored Protestantism. Thus, the dean of Teplitz complains in a report to the archbishop of Prague that the Jews receive Protestants into their houses, and that the noise of their synagogues ("rugitus et mugitus illo-

rum") disturbs the church services ("Allg. Zeit. des Jud." 1887, p. 30). In spite of his religious prejudices, however, Ferdinand treated the Jews with comparative fairness. When the town council of Vienna ordered landlords having Jews as tenants to require them to vacate the premises, the emperor at once intervened, enjoined the council from disturbing the Jews, and also took measures to protect them against further disturbances by allotting an area in one of the suburbs of Vienna to be set apart for the habitations of the Jews, in which they would be permitted to acquire real estate (1624). In a charter, dated Dec. 6, 1624, the Jews have assured to them undisturbed residence in Vienna; they are permitted to enter the city without the badge; the population is warned not to molest them; they are placed exclusively under the jurisdiction of the

**The Vienna Ghetto.** imperial authorities; and their houses are exempted from the obligation to billet soldiers. On the other hand, Ferdinand, as a strict Catholic, ordered that both in Vienna and in Prague Jews should be forced to attend a mission service on every Sabbath, when a Jesuit would preach to them on the truth of the Catholic religion (1630).

The policy of Ferdinand seems to have been to exempt individual Jews from the disabilities imposed upon the Jews as a class. Thus, he gave to Jacob BASSEVI hereditary nobility, and to the court Jews of Vienna a privilege which exempted them from the jurisdiction of the congregational authorities. This privilege and the immunity of the Jews from communal taxes and from the jurisdiction of the municipal authorities proved bones of contention; and after the death of Ferdinand (1637) the Jews of Vienna compromised with the city authorities, offering to pay the sum of 6,000 florins into the city treasury. This offer had not, however, the desired effect. The municipal authorities of Vienna demanded of the new emperor, Ferdinand III. (1637-57), the expulsion of the Jews from Lower Austria; and the emperor acceded to the extent of ordering that Jews should not be permitted to keep stores in the city, and that their exemption from municipal jurisdiction should cease (1638). A year or two later this law was revoked. In 1641 the

**Immunity** *status quo* of 1624 was restored, and in **from** recognition of the services rendered by

**City Taxes.** the Jews to the imperial treasury during the severe crisis which the war with the Swedes had brought upon Austria, the former privileges were confirmed in 1645. Although the Jews had been accused of secret complicity with the enemy, they suffered terribly during the Thirty Years' war. In various congregations of Moravia Jewish houses were pillaged, and in Kremsier seventeen people were killed and a considerable number wounded (June 26, 1643) (Frankl-Grün, "Gesch. der Juden in Kremsier," pp. 96 *et seq.*). The heavy taxes exacted from the Jews, in consequence of the depletion of the imperial treasury during the protracted war, and the constant quarrels in the overburdened Jewish communities, induced the emperor to give to the Jews of Vienna a new constitution (1646) which should enable the officers to enforce their authority (Meynert, in Wertheimer, "Jahrbuch für Israeliten,"

v. 22). The enforcement of a decree of expulsion against the Jews of Lower Austria in 1652 could only be averted by the payment of a contribution of 35,000 florins.

Ferdinand's son and successor, Leopold I. (1657-1705), had originally been destined for the priesthood, and only the death of his elder brother Ferdinand placed him on the throne. Of deeply religious character and a blind admirer of the Jesuits, he was only too eager to listen to the ever-renewed complaints of the citizens of Vienna. At the beginning of his reign he confirmed the privileges of the Jews (1658); and repeated his assurance of their protection, when the municipal council of Vienna ordered an appraisement of the houses and other property of the Jews, though they were not subject to municipal taxation (June 21, 1661). He also successfully checked the mob when, in 1665, the body of a murdered woman most found in the ghetto, and a rumor was spread that the Jews had committed the crime. His attitude soon changed, however. In 1660 he had married Margaret Theresa, a Spanish princess, and her influence was strongly brought to bear against the toleration of the Jews, for to this fact she ascribed the misfortune of the death of her first-born. To this was added the influence of the patriotic but fanatic bishop of Wiener Neustadt, Count Kollonitsch; and at length the emperor yielded to the demands of the citizens of Vienna, and ordered the expulsion of the Jews from the city and from the provinces of Lower and Upper Austria (Feb. 27, 1670). All Jews

**Expulsion** were required to leave the capital by from July 25, 1670, and those living in the Vienna. country were expelled in the following spring. The synagogue of Vienna

was converted into a church (Aug. 18, 1670), which, in honor of the emperor, was named after his patron saint, Leopold. The persecution of the Jews soon bore fruit. The city could not, as it had promised, pay the taxes of the Jews in addition to those which they had paid before; and many citizens complained that the commerce of the city had suffered through the emigration of such a large number of consumers. Leopold then adopted a milder policy. He not only allowed the exiles to settle in his other provinces, notably in Moravia and Bohemia, but further permitted (1673) Jews to visit the fairs in the province of Lower Austria, whence they had been expelled. Moreover, when in 1680 the ghetto of Prague was destroyed by incendiaries, he refused to listen to the entreaties of the municipality of Prague, who wanted to use the opportunity to expel the Jews altogether. Negotiations with the representatives of the Vienna exiles at Wischau, Moravia, for their resettlement in the capital did not lead to the desired result; nevertheless, not long after the expulsion Jews again appeared in Vienna.

**Culture:** Though the Jews of Austria were not very prominent in rabbinical literature and other spiritual activities, the two congregations of Vienna and Prague, and, later on, that of Nikolsburg, contained quite a number of important Talmudists. Many of them had come from Germany, like Yom-Tob Lipmann HELLER, rabbi in Nikolsburg, Vienna, and Prague, who in 1630 became the object of a

treacherous calumny and had to leave the country. Before him R. Löwe ben Bezalel (d. 1609) occupied a very prominent position in Prague. The massacres by the Cossacks in Poland (1648-56) also brought many learned fugitives to Austria, like Ephraim Cohen, Shabbethai COHEN, Samuel KARDANOVER, and others. Menahem Mendel KROCHMAL was rabbi of Nikolsburg, where he died in 1661, and was succeeded by his son-in-law, Gershon ASHKENAZI, who was the last officiating rabbi of Vienna before the expulsion. Prague was the first town in Germany in which a printing-press was established (1513). Jewish physicians were always to be found in Vienna, successful rivals of their Christian colleagues. In the sixteenth century occurs the name of Leo Lucerna, called "Maor Koton"; in the seventeenth century, those of Leo (Löw) Winkler, who graduated in Padua in 1629, and of his two sons, Jacob and Isaac, who were graduated there in 1669. Acquaintance with German seems to have been rare, for the documents signed by the Jews are signed in Hebrew. Still, the knowledge of spoken German was evidently very general, for the Jesuit priests who preached the mission sermons for the Jews were instructed to preach in German. Some Jews could write in German, as is seen from a letter addressed to WAGENSEIL by Enoch Fränkel, one of the exiles who settled in Fürth. This letter is also interesting from the broad-mindedness of the author, who protests against the accusation that the Jews hate Christians, as he can not see any reason why the professors of different religions should not be tolerant toward one another (Kaufmann, "Die Letzte Vertreibung der Juden aus Wien," p. 197).

**From the Expulsion of 1670 to the Toleration Edict of Joseph II. (1782):** As has been stated above, the needs of commercial life made the expulsion from Vienna a dead letter. The Jews went to the city on business, and the only difference was that they were not permitted to reside there. Even this prohibition was soon disregarded in exceptional instances. The war with the Turks, who in 1683 nearly captured Vienna, required large means; and among those who furnished the army with provisions and the treasury with money was Samuel OPPENHEIMER, a Jew from Heidelberg, who was given the right of residence and even that of acquiring property in Vienna. His right of residence dated from about 1685. Through him other members of his family were permitted to dwell in the city, either as members of his household, or as his employees. Prominent among them was Samson WERTHEIMER (1658-1724). Others followed, such as Simon Michael of Presburg, who had deserved well of the imperial treasury by furnishing gold and silver for the mint; so that in a comparatively short time the city had again a Jewish congregation, only with the difference that it possessed no corporate rights as such. The short reign of Leopold's son and successor, Joseph I. (1705-11), brought

**Court Jews.** no change in their condition. Under Charles VI. (1711-40), a brother of Leopold, the traditional policy was also maintained. About 1725 there came from London to Vienna as a court Jew Diego D'AGUILAR, who farmed the tobacco monopoly, and who, according to the testi-

mony of Maria Theresa, had a claim on her gratitude because of his disinterested services.

The malignant fanaticism of the clergy continued. Typical for their position is the case of the congregation of AUSSEE, when its synagogue was destroyed and three members were exiled on the charge of the local priest, who asserted that they had assaulted him, when he (contrary to the law) had entered their synagogue on Yom Kippur and preached Christianity to them (1722). In Brünn, whence Jews had been expelled through the efforts of Capistrano in 1454, one Solomon Deutsch in 1706 held services in an inn. When this became known the repetition of such an act was prohibited under a fine of 100 reichsthaler. On the application of Deutsch permission was, however, given to read prayers, but not to use a scroll of the Law ("cum res sapiat synagogam," "Tagesbote aus Mähren," Nov. 7, 1901). The taxes were very heavy. Charles demanded of the Jews of Vienna 148,000 florins to defray the expenses of his coronation (1711). In 1717 they had to lend 1,237,000 florins, toward which Samson Wertheimer contributed 500,000 florins. On the other hand, these court Jews used their influence in the interest of their coreligionists elsewhere when the latter were in trouble. It was due to Samuel Oppenheimer's influence that the work "Neu Entdecktes Judenthum," by J. A. Eisenmenger, was prohibited. They also tried, though in vain, to obtain a repeal of the cruel sentence against the Jews of Aussee mentioned above. The treatment of the Jews was still guided by the principle that they were a nuisance which required constant watching, lest it became pernicious. Thus Charles issued an order that of every Jewish family only one member should be considered "pro incola," which meant that only one should be permitted to marry (Sept. 23, 1726). Jews were expelled from Breslau in 1738 upon the demand of the merchants.

Maria Theresa (1740-80), who was very bigoted, was especially hostile to the Jews. During the war with Frederick the Great the rumor spread, as had been the case during the war with the Swedes and with the Turks, that the Jews had betrayed the country to the enemy. The empress imposed upon them a contribution of 50,000 florins, and in 1744 issued an edict that all the Jews in the kingdom of

Bohemia, including the provinces of Moravia and Silesia, should be expelled. Only after great efforts by various philanthropists and foreign ambassadors did she consent to suspend the edict for ten years for an annual payment of 3,000,000 florins (Aug. 5, 1748). Later on the matter was abandoned. During the seven years' war with Prussia the empress permitted the statement to be published that the suspicion against the Jews was unfounded. In 1756 the district rabbi of Moravia, Moses Lemberger, upon the demand of the empress pronounced an excommunication against all traitors. In spite of her aversion to the Jews, the empress took a deep interest in all matters pertaining to the administration of Jewish congregations. Her statute for the Jewry of Moravia, "General-Polizey-Process-und Kommerzialordnung für die Judenschaft im Marggrafthum Mähren" (1754), is a classic type of

paternal legislation in the administration of Jewish affairs. The duties of the district rabbi, the mode of his election, and even the course of Talmudic studies were regulated in detail. She examined personally the bill of the delegates to the election of the Jewish representatives (1751), and demanded that a Jesuit should be a member of the commission which should examine all Hebrew books. Her special confidence was enjoyed by the Jesuit Franz Haselbauer (1677-1756), who in 1726 brought the charge against a Jewish calendar, printed in Amsterdam, that it contained blasphemies against the Catholic religion ("Zeit. für die Gesch. der Juden in Deutschland," ii. 388). In 1760 she issued an order that all unbearded Jews should wear a yellow badge on their left arm.

Of the restrictions placed on the Jews a specimen may be given from a petition of the community of Prague. They complain that they are not permitted to buy victuals on the market before a certain hour—vegetables not before 9, and cattle not before 11 o'clock; to buy fish is sometimes altogether prohibited; Jewish druggists are not permitted to buy herbs at the same time with Christians ("Allg. Zeit. des Jud." 1887, pp. 676 *et seq.*). The taxation was exorbitant. For instance, it was decreed in 1744 that the Jews should pay a special tax of 40,000 florins for the right to import their citrons for the Feast of Booths (see ETROG). Upon the petition of the Jews this tax was reduced to 4,000 florins. Only occasionally was the empress humane in her treatment of the Jews. Thus, on Feb. 15, 1769, she ordered that no Jewish child should be baptized against the will of its parents; and in a special case she decided against the Church (Wolf, "Judentaufen in Oesterreich," pp. 55 *et seq.*, Vienna, 1863). An evident intention to improve the material condition of the Jews is found in her orders (1) that the Jews may sell new garments made by themselves, against which the guild of tailors had protested (April 10, 1772); (2) that Jews may engage in jewelers' work, although they must not keep an apprentice (April 24, 1772); and (3) that they may keep tanneries under certain restrictions (Sept. 20, 1775).

**Culture:** The mental activity among the Jews during this period is still almost exclusively restricted to Talmudic literature. Higher literary aims were pursued by David OPPENHEIM, nephew of the court Jew Samuel Oppenheimer, who was rabbi of Nikolsburg 1690-1705, and of Prague 1705-36. His rich and well-selected library could not, however, be brought into Austria on account of the severe censorship, then in the hands of the Jesuits. The movement of Shabbethai Zebi agitated the Jews of Austria to no small degree; and some of the mystics who followed the pseudo-Messiah were Austrians, like Lochele PROSSNITZ; or they found a fertile soil in Austria in men like Nehemiah HAYYUN and Jacob FRANK. The controversy between Jacob EMDEN and Jonathan EYBESCHÜTZ also caused a great commotion in Austria, where the latter had spent a great part of his early life and where, also, Emden had lived for some time in the house of his father-in-law, Mordecai ha-Kohen, rabbi in Ungarisch Brod. Members of the AUERBACH family who had lived in Vienna and in Nikolsburg were called to important

rabbinical positions in Poland; others, like Schmelke Horowitz, rabbi in Nikolsburg (d. 1778), and Ezekiel LANDAU, chief rabbi of Prague (1754-93), were called to Austria from Poland. Prominent men from Austria filled positions in Germany; *e.g.*, Baruch ben David TE'OMIM-FRÄNKEL, the BACHARACHS, Jacob POPPERS in Frankfort-on-the-Main, and JACOB REISCHER in Metz, both the latter being natives of Prague. To Bohemia, as the country of their nativity, point the names of Horowitz and Lipschütz, the latter derived from Liebeschütz in Bohemia. Even secular knowledge began to spread in Austria, as can be seen from the physicians Abraham KISCH, the teacher of Mendelssohn, and Jonas JETTELES (1735-1806), who had studied medicine in Halle.

**From the Emancipation Edict of Joseph II. to the Revolution of 1848:** Under Maria Theresa's son and successor, Joseph II. (1780-90), a new era began for the Austrian Jews. Joseph was an admirer of Voltaire and a disciple of the school of enlightenment, and he, therefore, adopted an attitude toward the Jews differing from that of his mother and considered it his duty to improve their condition. One of the first acts of his government was the abrogation of all the laws requiring the Jews to wear a distinctive dress (Oct. 21, 1781). The enlightenment ("Aufklärung") of the Jews was one of Joseph's cherished plans. To this end he demanded that the Jews should assimilate themselves to their surroundings, adopt the language of the country, and establish schools according to the plan of modern pedagogy ("Normalschulen"), that they should be allowed to enter all high schools and universities (which, as he expressly states, had been at no time directly prohibited), to lease lands for agricultural purposes (if they worked it with Jewish hands), to engage in all mechanical trades, arts, and wholesale commerce (Oct. 19, 1781). He abolished the poll-tax (Dec. 19, 1781), directed the authorities to treat the Jews like fellow-men ("Nebenmenschen"), and commanded that Jewish children in the public schools should also receive proper consideration. Joseph's views are most clearly expressed in what is called the TOLERANZPATENT (Jan. 2, 1782). He introduces this law with the statement that it is his aim to permit all his subjects, without distinction as to creed and nationality, to participate in the welfare and freedom of his government; and, although the restrictions on residence in the other provinces and the prohibition to reside in Lower Austria are expressly maintained, the law breathes the spirit of a new era. The specific ecclesiastic restrictions, dating from the time of the Vienna council, prohibiting Jews from being abroad before noon on Sundays and Catholic holy days, and from visiting places of amusement, are abolished. He also compelled the Jews to assume fixed family names (1787) and to serve in the army—in each case the first instance of the kind in Europe.

The short reign of Leopold II. (1790-92), brother and successor of Joseph, was too uneventful to leave any traces in the history of the Austrian Jews; but it may be mentioned that upon his ascent to the throne the bishops presented a petition asking that the laws of Joseph II. relating to the Jews be abro-

gated, and that the Jews be again declared crown vassals ("Kammerknechte") whose position depended solely on the good-will of the monarch. Leopold replied evasively that the times were too troublous to allow him to take any decisive steps in the matter. Francis II. (1792-1835), Leopold's son and successor, reigned during the most critical period of Austria's history. He was a man of narrow views, a typical Philistine; and his conception of the political and economic situation of the Jews was in harmony with his general policy. When, in 1793, Baron von Saurau, one of the highest officials, made a motion to abolish a special department of the police, the "Judenamt," an invidious distinction against the Jews, the emperor agreed that the department should be called a commission. Economic and social restrictions were numerous. The principle of improving the condition of the Jews by opening to them new ways of activity, as Joseph II. had intended, was given up. Agriculture, which Joseph II. endeavored to introduce among them, was restricted. They were prohibited from farming rural property. Only in the case of the estates of noblemen ("Landtäfliche Güter") was an exception made (March 29, 1793); and even then hereditary tenancy or acquisition was prohibited. Similarly, a Jew could foreclose a mortgage on real estate only under the condition that he should not buy it or take it under his administration (Oct. 23, 1816, and July 20, 1827). The Jews of Vienna were especially restricted: The emperor wrote with great indignation to one of his ministers stating that he had heard that the Viennese Jews bought houses in the names of Christians, and that this scandal ("Unfug") would not be tolerated (May 27, 1814). A law of 1804 prohibited dealing in saltpeter; one of 1814, in salt and grain. Although Simon von LÄMMEL, a favorite of the emperor, petitioned to have the last-mentioned act repealed, the emperor refused (1819). A law of 1818 (repeated in 1829) prohibited Jews from establishing themselves as druggists; only one exception being made; namely, in favor of Michael Perl, the son of Joseph PERL, whose father had done good service in the cause of education among the Jews of Galicia. In 1802 it was decreed that thenceforth no Jew should obtain a "Toleranz," or grant, to reside in Vienna, which law was later amended in favor of the wealthiest. The law that Jews should not keep Christian domestics, dating back to the Council of Vienna, 1267, was repeatedly renewed between 1803 and 1817. Typical for the condition of the Jews and the policy of the authorities is the case of Abraham Heimann and his family, natives of Bavaria, who during the French occupation (1809) had settled in Laibach, whence the Jews had been expelled since 1515. As soon as the Vienna congress (1815) restored the former conditions, Heimann received an order of expulsion, and until 1848 he had to fight in the courts for the most natural rights of a human being. The highly interesting details of this struggle are described by a member of the family in "Allg. Zeit. des Jud." 1849, pp. 41 *et seq.* Isaac Samuel REGGIO, who during the French occupation had been professor at the Lycée in his native town, Gorice, was

**Case of Abraham Heimann.**

discharged when Austria again took possession of Illyria.

The ecclesiastical laws were also applied with regard to the internal affairs of the Jews. The latter were not permitted to have any music in Advent, which generally occurred during Hanukkah; and an order was issued that Christians should not be permitted to dance at the balls of the Jews on Purim (1806 and 1834). How little the Jews were understood can be seen from the fact that when the assembly of Jewish notables convened in Paris, an order was given to watch the correspondence of the Jews, so as to ascertain whether they were plotting against the government. The police soon reported that, aside from some insignificant letters, which some Jews received from their relatives living in France, no interest was taken by them in the proceedings of the assembly and of the subsequent Sanhedrin (1806). The only Austrian Jew who received an invitation to attend this meeting, Bernhard von ESKELES, loyally turned over his invitation to the police. Another ecclesiastical restriction against the Jews was the prohibition of the assumption of names of Christian saints as first names (Nov. 6, 1834), which was evidently a reflex of the similar prohibition issued in Prussia Dec. 22, 1833. There was somewhat of the humorous in the report of a court councilor upon the synagogue which the Jews of Vienna desired to build: he expressed the fear that, if the Jews should have an attractive building and good sermons, the synagogue would soon be better frequented than the church (1824) (Wolf, "Gesch. der Juden in Wien," p. 133).

On the other hand, it must be acknowledged that Francis had the intention of being in a measure just to the Jews, and that he sincerely wished to improve the desolate condition of their religious organization. It is certainly a notable sign of interest in progress that as early as 1810 a Jew, Communal Hönig, member of a family of famous financiers, was appointed an officer in the army—except in France, the first case of the kind in Europe. Even a tyrannical measure, such as that requiring every one who wished to marry to pass an examination in religion (based on Herz Homberg's text-book, "Bene Zion," 1810), was well meant, although its maintenance down to 1856 was vexatious. As early as 1795 the emperor had busied himself with a scheme to improve the spiritual condition of the Jews. He intended to establish a rabbinical seminary; and the failure of the scheme was due to the opposition of rabbis of the old school, like Eleazar FLECKELES, Samuel LANDAU, and Mordecai BENET. It certainly is creditable to him that he declined to entertain the propositions of narrow-minded rationalists like Herz HOMBERG and Peter BEER—who denounced the rabbis as blind fanatics, and the Talmud as the source of all evil among the Jews—and it is especially creditable that he did not reward Homberg's defamations of Judaism with the much-coveted "Toleranz."

The next result of the investigations of the spiritual condition of Judaism was the "Patent" for Bohemia, issued Aug. 3, 1797, which stated the principle that it was the emperor's object ultimately to

remove all Jewish disabilities, although for the present the only tangible progress was the law requiring every rabbi to take a course of philosophical studies. This law was repeated for the other provinces of Austria (Jan. 22, 1820, and Jan. 29, 1826). It remained for a long time a dead letter, and even today (1902) it is not fully carried into practice. Next followed the establishment of the first scientific institution for the education of rabbis, opened in Padua (then under Austrian dominion) Nov. 10, 1829. It also redounds to the emperor's honor that he refused to entertain the proposition made by three Jews to pay into the treasury the annual sum of 150,000 florins, if they were given the right to levy a tax on Etrogim. The emperor considered it wrong to impose a tax on a religious practise (Dec. 12, 1799) ("Israelitisches Familienblatt," Hamburg, Oct. 10, 1901). It showed also considerable progress when the Jews in Vienna obtained permission to build a "Tempel," named so after the one founded in Hamburg, 1817. This name is in itself significant; for in 1620 the citizens of Vienna complain that, while the emperor had given the Jews the right to build a synagogue, they had erected a "Tempel." On the other hand, the name "congregation" was still denied to the Viennese Jews: they were merely "the Jews of Vienna," "Tempel," and their representatives not a board of trustees ("Vorstand"), but merely delegates ("Vertreter"), their rabbi an inspector of "kosher" meat, and their preacher (I. N. MANN-HEIMER) merely a teacher of religion.

Francis was succeeded by his son, Ferdinand I. (1835-48), an invalid of no brilliant intellect, and practically without influence on the affairs of the government. The ministers who ruled for him were bent on maintaining the patriarchal state of affairs which had existed under Francis I., and which was considered by the leading statesman, Metternich, to be the best safeguard of public order. Still, the progress of the age demanded here and there a milder interpretation of the existing laws. Thus, when the administration of Count Salm's estate in Raitz prohibited the giving of a night's lodging to Jewish pedlars, the authorities of the central government set aside the order (1836). The position of the Jews of Vienna was somewhat improved. Those that possessed the right of residence were allowed to transfer it to their children, and strangers were permitted to remain in the city two weeks. Further, the police did not carry out these restrictions rigorously; and sometimes they became a dead letter. Those not having the right of residence had merely to have their passports revised, as if they had left the city. Immediately after having passed the gate, they returned and applied for a new permission to reside in the city two weeks (Wolf, "Gesch. der Juden in Wien," p. 142). Here and there senseless restrictions were introduced, probably upon the complaint of some overzealous official or of an unsympathetic population, as when (Jan. 31, 1836) a prohibition against peddling in the border districts was issued because the Jewish pedlars were supposed to be responsible for smuggling, or when (1841) the Jews of Prague were prohibited from spending the summer in the suburb of Bubentisch.

But, on the whole, the policy of the government made for progress. Thus an order of June 4, 1841, permitted the possession by Jews of rural estate when they worked the farms themselves; and the restrictions (dating from the beginning of the eighteenth century) against the number of Jewish marriages, and which even Joseph II. would not remove, were more liberally interpreted. Teachers and rabbis were permitted to marry, even when there was no vacancy in the number of legally permitted families. Similar favors were bestowed on manufacturers, on the owners of large estates, and on prominent scholars. The need of a revision in the legal status of the Jews is strikingly illustrated by the fact that in 1847, when the famous composer MEYERBEER visited Vienna, the government had to issue an order declaring him to be a "cavalier" and not a Jew, so that he might be exempt from the tax which every non-resident Jew had to pay when visiting the city. One great mark of progress was the abolition of the Jewish OATH (Aug. 18, 1846), in which matter Austria preceded most of the German states. Another important step was the law of March 24, 1841, for Galicia, which promised certain improvements for the Jews of that province who should dress in European costume and

**Signs of Progress.** acquire a knowledge of either German or Polish. For the same reason the government established there county rabbinate ("Kreisrabbinate"). The government also took a great interest in the reform of public worship; and the authorities of Prague ostentatiously took part in the dedication of the new "Tempel für Geregelteten Gottesdienst" in that city, which was dedicated on the emperor's birthday, April 19, 1837. Similarly it encouraged the endeavors to induce the Jews to devote themselves to agriculture and mechanical pursuits. These endeavors are treated below under CULTURE.

**From the Revolution of 1848 to the Present Time:** The revolution in France awakened an echo everywhere in Europe. In Vienna tumults occurred March 13, and one of the first victims of the revolution was a Jewish student, Heinrich Spitzer, who was shot by the troops. Legislation relating to the Jews was at once revised in a liberal sense. In the new constitution of April 25 the free exercise of religion was granted; and the special Jewish taxes were abolished Oct. 28. For the first time in the history of Austria, Jews were appointed professors in the universities; *e.g.*, Jacob GOLDENTHAL in Vienna and Wolfgang WESSELY in Prague, both, however, as assistant professors in Semitic languages. Jews took a prominent part in the revolutionary movement. To the first parliament, assembled first in Vienna and later on in Kremsier, five Jewish deputies were elected: Adolph FISCHNOFF, who had always taken a prominent position, and was one of the most popular men in Vienna; Joseph Goldmark, also from Vienna; Abraham Halpern from Stanislau; I. N. MANNHEIMER, the Vienna preacher, for Brody; and Bär MEISELS, rabbi of Cracow, from that city. Another Jew who had taken an active interest in the revolutionary movement was one of the victims of reaction, when Prince Windischgrätz captured Vienna.

Hermann JELLINEK was shot as a rebel Nov. 23, 1848.

Ferdinand, who was too weak to remain at the helm of the state's ship in such critical times, abdicated, and was replaced by his nephew, the present emperor, Francis Joseph, who, at the age of eighteen, ascended the throne Dec. 2, 1848. The young emperor was soon prevailed upon to adopt a more autocratic policy. The Reichstag of Kremsier was suddenly dissolved, and a constitution, proclaimed by the emperor without the consent of the parliament, was promulgated ("Octroyierte Verfassung") March 4, 1849. This constitution still retained the principle of religious liberty, and the administrative authorities still interpreted the laws in a liberal sense, the right of the Jews to acquire real estate and the abolition of the restriction on marriages being expressly acknowledged. Signs of reaction were, however, not wanting. The clergy agitated against the abolition of Austria's character as a Roman Catholic country, and petitioned (April 18, 1850) the emperor to appoint no Jews to any office. The population, on the other hand, was also unwilling to allow the Jews an extension of their former rights. In cities where they had been excluded, the population would not have them admitted; and in cities where their right of residence had been restricted to certain quarters,

**Reaction.** objections were made to their removal into forbidden districts. Even before the constitution of April 25, 1848, had been promulgated there were excesses in Prague, which spread over various parts of the country and assumed very serious proportions in Hungary. The city of Sternberg, Moravia, passed a resolution that at no time should a Jew be given the city's franchise; and the council of Laibach excluded the Jews from the right to acquire real estate. In Prague the burgomaster demanded that the Jewish congregation should prevail upon its members to close the stores which they had rented outside of the ghetto (1849). The government seemed to favor this agitation; for, when a Jew applied for a position in the postal service, he was told that he must bring a certificate from the rabbi that he was permitted to write on the Sabbath. Officially the reaction was introduced when the government repealed (Dec. 31, 1851) the constitution of March 4, 1849, although even then it was declared that religious liberty should not be disturbed. This provision, however, had hardly any practical value. As the civil code had provided that a Jew who married had to show permission from the authorities, and this clause had not been abrogated, the government decided that a Jew who wished to marry had to bring a special license, a view which changed the former status only in so far as the number of marriages was no longer limited. At the same time the right of the Jews to hold real estate in all parts of the country was suspended, and the prohibition (1817 and 1834) against keeping Christian domestics and against assuming the names of Christian saints was renewed (Oct. 2, 1853). In a new regulation concerning notaries public (May 21, 1855), the Jews were excluded. In the same spirit in which, under Francis I., the Jews were suspected of conspiring against the government, an order was

issued that the Jews of Austria should not be permitted to have any dealings with Ludwig PHILIPPSON, nor to join his society for the promotion of Jewish literature (Aug. 5, 1855).

The Concordat of Aug. 18, 1855, which delivered Austria altogether into the hands of the clericals, had its effects upon the condition of the Jews. They were excluded from positions as teachers in elementary and high schools, and, contrary to the spirit of the legislation of Joseph II., the government wished even to exclude Jewish children from the public schools, which were to be exclusively Catholic. Count Thun, minister of public education, attempted to force the congregation of Vienna to establish a Jewish school. Jewish house-physicians in the Vienna hospital were to be limited in numbers (1856); and even the farming of rural estates was prohibited. The language of some of the governmental orders is in itself significant; for instance, one was issued to the administrative authorities requiring them to see that the Jews "who have sneaked into Christian real estate are removed" (March 23, 1856). Returning to the policy of 1670, the government prohibited the establishment of Jewish congregations in the province of Lower Austria (April 28, 1857), and restricted the appointment of Jewish veterans to civil positions to towns where Jews possessed the right of residence (1858). The commercial high school ("Handelsakademie") in Vienna, established from funds appropriated by merchants, among whom were quite a number of Jews, could not be opened because the minister insisted that no Jew should be appointed to a position therein. Some municipal authorities followed the example of the government in their own way. The burgomaster of Saaz, Bohemia, on the strength of the privileges granted to the city in 1361, ordered that all Jews should leave the city within two weeks; and the municipal authorities of Marburg, insisting on the legality of the edict of expulsion issued in 1496, ordered a Jew who had lived in that city for nine years to leave within a fortnight. The defeat of Austria in the Italian war of 1859, terminated by the peace of Villafranca (July 11, 1859), brought a change of policy. As late as June 6, 1859, the prohibition against keeping Christian domestics was reenforced, and on June 17 the marriages concluded without special license were declared void; but on Nov. 29 these restrictions were removed, and on Aug. 22 a liberal legislation on the position of the Jews was promised.

This legislation was promulgated Feb. 18, 1860. It gave to the Jews of most of the Austrian provinces full right to hold property. In

**Dawn of Freedom.** Galicia and in the Bukowina this right was limited to those who possessed a certain education; while Upper Austria, Styria, Carinthia, Tyrol, and Vorarlberg were excluded from the law, and in these provinces Jews were not permitted to hold any real estate until the new constitution, Staatsgrundgesetze of Dec. 21, 1867, abolished all disabilities on the ground of religious differences. In the population the new condition of affairs aroused enmities, and again occasional disturbances occurred, as in Trebitsch, Moravia, and Lemberg. The clerical party also protested against the admission of the Jews to the full rights of citi-

zenship. Noteworthy in this connection is the libel suit brought against KURANDA by Sebastian Brunner, the anti-Semitic editor of the "Wiener Kirchenzeitung," May 10, 1860, though it was dismissed. At the election to the new parliamentary bodies, the "Landtage," a number of Jews were returned, two of whom, Kuranda and WINTERSTEIN, were delegated by the Landtage to the Reichsrath. The emperor called into the House of Lords Baron Anselm von Rothschild, which is perhaps the first case of a Jew being made a peer. The constitution of Dec. 21, 1867, finally removed all disabilities, and from that date the political history of the Jews in Austria is limited to their treatment by the administrative authorities and to the position of the several political parties, on which subject information will be found under ANTI-SEMITISM.

The government of Austria has always taken great interest in internal Jewish affairs. Even under the clerical minister of public instruction, Count Thun, religious instruction in the high schools was made compulsory (Feb. 11, 1852). At a later period the government paid the teachers' salaries. On March 21, 1890, a law was issued which regulated the condition of Jewish congregations. It makes it compulsory for every Jew to be a member of the congregation of the district in which he resides, and so gives to every congregation the right to tax the individual members. In elective bodies and in governmental positions since the beginning of the constitutional era the Jews have always held their own, especially in the army, where some of them have even risen to the rank of general. The Reichsrath has since its inception had its quota of Jewish members, and the House of Lords has always numbered Jews among its members; at present there are three, the two brothers GOMPERZ and Baron von Oppenheimer. As soon as the new era began (1860), Jews were appointed to positions in the university. The first regular professor in the University of Vienna was the dermatologist ZEISSL, and in Prague in the same year Wolfgang Wessely was appointed full professor of criminal law.

**Culture:** The intentions of Joseph II. to raise the intellectual and moral status of his Hebrew subjects awakened an echo in the hearts of the Austrian Jews. In towns where there were already centers of civilization, as in Triest and Prague, Jewish schools ("Normalschulen") were established. Other places followed, especially after the awakening of the modern spirit in Austria (about 1830-39). In Galicia this movement was not very successful, although even there some men like PERL obtained good results. In Lemberg, Abraham KOHN died a martyr to the cause of education and progress (Sept. 6, 1848). The movement to lead the Jews to mechanical and to agricultural occupations was very energetically reciprocated by the Jews of Austria. The noble and active philanthropist Joseph von WERTHEIMER founded the Society for the Promotion of Mechanical Occupations in Vienna, 1840; and similar societies followed in other parts of the country, as in Prague, 1846. Wertheimer was also instrumental in introducing the Kindergarten in Austria. Hirsch Kolisch in 1844 established in Nikolsburg the first Jewish institute for deaf-mutes, which in 1852

was transferred to Vienna. There, through the efforts of Ludwig August FRANKL, the first Jewish institute for the education of the blind was founded in 1870. An institution for the training of rabbis, which at the end of the eighteenth century had already engaged the attention of the government, was finally opened in Vienna, 1894.

In religious matters Austria has always been conservative. The first introduction of any changes in the service took place in Vienna, where M. L. BIEDERMANN, the moving spirit of the congregation, hoped to introduce the reforms of the Hamburg temple; but Mannheimer, who had himself participated in these services, felt that for

**Religious** Vienna a more conservative spirit was **Con-** necessary. The latter, therefore, limited the reforms to the omission of some **PIYYUTIM**, to a trained choir, to decorum in service, and to the introduction of a German sermon. This type of temple, dedicated 1826, was introduced everywhere in the civilized parts of Austria, and also in Galicia, where, in Tarnopol, Lemberg, and Brody, the cultured element of the community founded what was called a "Chorschul." From Brody this type of reform was even introduced to Odessa, where many people from Brody had settled.

Secular education had made rapid progress after the decree of Joseph II., although, owing to the fact that the practise of medicine was the only field open for Jews through academic education, the students could not be numerous. The events of 1848 increased this number. In 1851 the number of Jewish students in the high schools of Austria was 1,598; in 1857 they had increased to 2,143. The increasing number of students in the secular schools drove the yeshibot out of existence; and so the Talmudists of the old school, with the exception of those of Galicia, have almost completely disappeared. To the first part of the nineteenth century belong: Eleazar Fleckeles (d. 1826), rabbi of Prague; Ephraim Zalman Margulies in Brody (d. 1823); Marcus Benedikt, district rabbi in Moravia (1753-1829); Jacob Ornstein, rabbi in Lemberg (d. 1839); Nahum Nehemiah Trebitsch, district rabbi in Moravia (1777-1842); Hirsch Chajes, rabbi in Zolkiev (d. 1855); Solomon Kluger in Brody (d. 1869); Marcus Wolf Ettinger (d. 1863) and Joseph Saul Nathansohn (d. 1875), both in Lemberg; and Aaron Kornfeld in Goltsch-Jenikau (d. 1881). The Jewish scholars of a more modern type are so numerous that only the most prominent names can be quoted here. Among those who belong to the school of the **BUKURISTS** must be mentioned Herz Homberg (1749-1841) and Peter Beer (1758-1838). In the school of systematic scholars Z. Frankel (1801-75) deserves the first rank. The Polish circle counts Nachman Krochmal (1789-1840), S. L. Rapoport (1790-1867), and Isaac Erter (d. 1851). The succeeding generation has Solomon Buber (b. 1827) and S. H. Halberstamm (1832-1900). One of the best-known writers of the present historical school is I. H. Weiss (b. 1815). Others are: Leopold Löw (1811-75), M. Steinschneider (b. 1816), H. B. Fassel (1802-83), A. Jellinek (1821-94), S. I. Kämpf (1815-93), Nehemias Brüll (1843-91), David Kaufmann (1852-99). Further might be included the

Italians I. S. Reggio (1784-1855), Joseph Almanzi (1801-60), and S. D. Luzzatto (1800-65), all of whom spent their life under Austrian dominion. Of prominent poets and authors those may first be mentioned who have written on Jewish subjects; viz., Leopold Kompert (1822-86), Leo Herzberg-Fränkell (b. 1827), Karl Emil Franzos (b. 1848), L. A. Frankl (1810-94), Moritz Rappaport (1808-80), Seligmann Heller (1831-90), Michael Klapp (d. 1888), J. L. Lederer (1808-76), and Moritz Hartmann (1821-73). The pianist Ignaz Moscheles (1794-1870) and the actor Adolph Sonnenthal (b. 1834) are distinguished; and to them may be added the regenerator of synagogue music, Solomon Sulzer (1804-90); the mathematician Simon Spitzer (1826-87); the chess-player W. Steinitz (d. 1900); statesmen like Kuranda, Fischhof, and Winterstein; scientists like Jacob Fischel, an authority on psychiatry (d. 1892); the dermatologist Zeissl, and others, too numerous to mention, show how, in a comparatively short time, the Jews of Austria have risen to the level of their non-Jewish fellow-citizens.

**BIBLIOGRAPHY:** For the earliest period of the history treated the best source is J. E. Scherer; *Die Rechtsverhältnisse der Juden in den Deutsch-Oesterreichischen Ländern*, Leipzig, 1901; [Joseph von Wertheimer] *Die Juden in Oesterreich vom Standpunkte des Rechts und des Staatsvortheils*, 2 vols., ib. 1842; (appeared anonymously) G. Wolf, *Gesch. der Juden in Wien*, Vienna, 1816; *Judentaufen in Oesterreich*, Vienna, 1863; D. Kaufmann, *Samson Wertheimer, der Oberhofactor und Landesrabbiner*, Vienna, 1888; idem, *Urkundliches aus dem Leben Samson Wertheimer's*, Vienna, 1892; idem, *Die Letzte Vertreibung der Juden aus Wien und ihre Vorgeschichte*, Vienna, 1889. A bibliography of the essays which appeared in periodicals treating of the history of the Jews in Austria will be found in *Zeit. für die Gesch. der Juden in Deutschland*, ii. 136 et seq.

D.

#### AUTHENTICATION OF DOCUMENTS

**(Kiyyum, Asharta, Henpek):** An official certificate of genuineness. This is either the result of actual litigation on the subject, in which case the decision of the court is the official authentication, or where the proper persons appear before a competent tribunal, which takes their testimony and officially authenticates the instrument for the purpose of preventing litigation concerning it. The use of authentication is well known in Talmudic law. Strict law does not require the authentication of an instrument in order to give it validity, because, according to Resh Lakish, the attestation of subscribing witnesses is equivalent to the testimony of those who have been examined in court (Git. 3a). The reason for this rule is obvious: there may be danger of fraud and forgery in the case of an instrument signed by the debtor, but such danger is far removed in the case of an instrument which is signed by two disinterested witnesses. An instrument is considered judicially authenticated (1) if the judges themselves recognize the handwritings of the subscribing witnesses; or (2) if the witnesses sign in the presence of the court; or (3) if the subscribing witnesses appear before the court and acknowledge their signatures, stating that they witnessed the trans-

**Methods** action; or (4) if other witnesses appear **of Authen-** and testify that they recognize the **tication.** handwriting of the subscribing witnesses; or (5) if the court, after comparison of the signatures in issue with the signatures in at least two other instruments, reaches the conclusion that the signatures are genuine.

In the latter case, the instruments with which the comparison is to be made must be at least three years old (this being the period in which prescriptive rights to real estate may be obtained), and must be instruments of conveyance of real estate in the hands of the persons in open and undisputed possession of such estate. If the instruments with which the comparison is to be made are in the possession of the person who is interested in having the signatures authenticated, they can not be used for such purposes. Some authorities are of the opinion that a comparison with the signatures in a letter or with the handwriting of the author of a book in manuscript is not permitted (Shulhan 'Aruk, Hoshen Mishpat, 46, 7, gloss).

Frankel ("Der Gerichtliche Beweis," p. 415) reduces these five cases to three fundamental principles:

(1) Acknowledgment by subscribing witnesses; (2) the testimony of third persons who know the signatures of the subscribing witnesses; and (3) comparison of handwritings.

As to the acknowledgment of their signatures by the subscribing witnesses, the Mishnah provides (Ket. ii. 4) that if one witness says, "This is my signature, and the other signature is in the handwriting of my associate, the second witness," and the other witness testifies in the same manner, their testimony is sufficient for authentication. If the one says, "This is my signature," and the other likewise says, "This is my signature," a third person must be called who recognizes both signatures, in order that there may be two witnesses for each signature. This is the decision of Rabbi Judah; but the Sages say that a third person need not be called in, because it is sufficient if each one proves his own handwriting.

The point raised here touches the very essence of attestation of documents. According to Rabbi Judah, the witnesses admitting their own handwriting are testifying merely to that fact, and not to the substance of the document; whereas, according to the Sages, the testimony of each of the witnesses acknowledging his own handwriting is to the substance of the document; hence, according to the latter, there are in fact two witnesses attesting the fact in issue; namely, the substance of the document. Therefore, it is unnecessary to call in a third person who is familiar with their signatures.

Proof of the handwriting of the witnesses is alluded to in the Mishnah above cited and in the Baraita (Ket. 19b). In this case, each of the signatures must be proved by two witnesses, because

**Proof of Handwriting.** the testimony is not as to the substance of the instrument, but as to the genuineness of the signature. If one of the subscribing witnesses admits his signature, and he and a third person prove the signature of the other subscribing witness, this is not sufficient, because thereby the instrument is proved for the greater part by one witness; to wit, the subscribing witness, who admits his own signature and proves the signature of the other. The Talmudic law requires that in every case the testimony of the witnesses, in order to establish a fact, must go to the entire matter; and a fact is not proved if the testimony of one of the witnesses proves more than that of the other (see Ket. 21a; B. B. 57a).

On the question of comparison of handwritings for the purpose of proving the signatures, the rule seems to be that the comparison may be made with two other instruments, as above stated; but comparison may also be made with an instrument the validity of which has been attacked and which has been judicially declared genuine (Ket. 19b), and such a judicially authenticated instrument is for this purpose as good as two ordinary instruments (Hoshen Mishpat, *l.c.*).

In authenticating the document, it is customary to mention the mode of authentication (*ib.*). The Shulhan 'Aruk simply prescribes that, if the court

**Examples of Formulas.** merely writes, "In the presence of us three sitting together, this instrument was authenticated," this is sufficient, although they do not state in what manner it was authenticated. The following formulas are customarily used:

(1) When the subscribing witnesses themselves admit their signatures:

We three sat together in court and considered the aforesaid document to which there are subscribed two witnesses: A, the son of B, and C, the son of D. These two witnesses came before us and acknowledged their signatures, and admitted that they were their own handwritings. Therefore, we, as is proper, have found them to be genuine and authentic. (Here follow the date and the signatures of the three judges.)

(2) When other witnesses testify to the signatures of the subscribing witnesses:

We three sat together in court and considered the aforesaid document to which there are subscribed two witnesses: A, the son of B, and C, the son of D; and there came before us two other witnesses: E, the son of F, and G, the son of H; and they testified before us concerning the signatures of the aforesaid witnesses who have subscribed these documents, and they made clear to us that the said signatures are in the handwritings of the said witnesses. Therefore, we, as is proper, have found them to be genuine and authentic. (Here follow the date and the signatures of the three judges.)

The formula in each case is varied to suit the nature of the proof brought before the court. A list of such formulas may be found in Nahalat Shib'ah, xxvi.; see also "Seder Tikune She'arot," by J. G. C. Adler, Hamburg, 1773.

As a rule, the signatures of the three judges are required; but it is sufficient if the authentication is signed by two of them (Hoshen Mishpat, 46, 29).

The tribunal authenticating the document need not necessarily be learned in the law, nor is it necessary that the **Two Judges Must Sign.** debtor or the person to be charged by this document be present; indeed, the authentication may take place even if the debtor declares the instrument a forgery (*ib.* 5). The authentication is simply a judicial affirmation of the correctness of the signature of the subscribing witness, and the truth of the facts set forth in the document is not directly in issue (Ket. 109b, top; Hoshen Mishpat, *l.c.* 20).

In order that there might be no danger of the authentication being used for some other instrument, the rule was adopted that no space must be left between the document and the authentication, but that the latter must be written immediately under the signature of the witnesses, or on the back of the instrument immediately behind the writing (B. B. 163a; Hoshen Mishpat, 46, 31). If, however, the

space between the signatures of the witnesses and the authentication is filled up by lines and dots, it is sufficient (*ib.* 32 *et seq.*). Maimonides ("Yad," *Malweh*, xxvii. 6) and Caro (*Hoshen Mishpat*, *l.c.*) seem to have been of the opinion that the authentication could be written alongside of the document.

Although an authenticated document was in the nature of a public record, and had all the faith and credit given to it as such, nevertheless the question of its genuineness could be raised. If any such question arose, it was sufficient for two of the subscribing judges to acknowledge their signatures to the authentication. Other rules concerning the proof of authenticated instruments, when the same are attested, are stated by the Shulhan 'Aruk, *Hoshen Mishpat*, 46, 14-16, 37, 38.

J. SR.

D. W. A.

**AUTHORITY, RABBINICAL:** The power or right of deciding the Law, in dubious cases, or of interpreting, modifying, or amplifying, and occasionally of abrogating it, as vested in the Rabbis as its teachers and expounders.

In Biblical times the Law was chiefly in charge of the priests and the Levites; and the high court of justice at Jerusalem, which formed the highest tribunal to decide grave and difficult questions, was also composed of priests and Levites (*Deut.* xvii. 9, 18; xxxi. 9; xxxiii. 10; *Jer.* xviii. 18; *Mal.* ii. 7; *II Chron.* xix. 8, 11; xxxi. 4). In the last two pre-Christian centuries and throughout the Talmudical times the Scribes ("Soferim"), also called "The Wise" ("Hakamim"), who claimed to have received the true interpretation of the Law as "the tradition of the Elders or Fathers" in direct line from Moses, the Prophets, and the men of the Great Synagogue (*Abot* i. 1; Josephus, "Ant." xiii. 10, § 6; 16, § 2; x. 4, § 1; "Contra Ap." i. 8; *Matt.* xv. 2), included people from all classes. They formed the courts of justice in every town as well as the high court of justice, the Sanhedrin, in Jerusalem, and to them was applied the law, *Deut.* xvii. 8-11, "Thou shalt come . . . unto the judge that shall be in those days, . . . and thou shalt do according to the sentence which they . . . shall show thee; . . . thou shalt not decline from the sentence which they shall show thee, to the right hand, nor to the left." This is explained thus: Whosoever the judge of those days may be, if he be recognized as competent and blameless, whether he be a Jephthah, a Jerubbaal, or a Samuel, he is, by virtue of his position as chief of the court of justice, invested with the same authority as Moses (*Sifre*, *Deut.* 153; *R. H.* 25a). Even when they decide that left should be right, or right left, when they are mistaken or misled in their judgment, they must be obeyed (*R. H.* 25a). Heaven itself yields to the authority of the earthly court of justice as to the fixing of the calendar and the festival days (*Yer.* *R. H.* i. 57b; compare also *Mak.* 22b).

The power of the Rabbis is a threefold one: (1)

II—22

to amplify the Law either by prohibitory statutes for the prevention of transgressions ("gezerot") or by mandatory statutes for the improve-

**Powers of the Rabbis.** ment of the moral or religious life of the people ("takkanot"), and by the introduction of new rites and customs ("minhagim"); (2) to expound the Law according to certain rules of hermeneutics, and thereby evolve new statutes as implied in the letter of the Law; and, finally, (3) to impart additional instruction based upon tradition. But the Rabbis were also empowered on critical occasions to abrogate or modify the Law (see **ABROGATION OF LAWS AND ACCOMMODATION OF THE LAW**). In many instances where greater transgressions were to be prevented, or for the sake of the glory of God, or the honor of man, certain Mosaic laws were abrogated or temporarily dispensed with by the Rabbis (*Mishnah Ber.* ix. 5, 54a, 63a; *Yoma* 69a; compare also *Yeb.* 90b).

In matrimonial matters the principle adopted is that, since marriages are, as a rule, contracted in accordance with the rabbinical statutes, the Rabbis have the right to annul any marriage which is not in conformity with their ruling (*Yeb.* 90b). In money matters the Rabbis claimed the same right of confiscation in cases when their ruling was disregarded as was exercised by Ezra (see *Ezra* x. 8; *Git.* 36b).

As to the validity of the decisions of the Rabbis, the following rules are to be considered:

"No rabbinical court [bet din] can impose laws or institute forms of practise which the majority of people can not without great hardship accept and observe" ('*Ab. Zarah* 36a, *B. B.* 60b).

"No rabbinical court can abrogate laws and institutions made by any other court, unless it is superior in both wisdom and number" ('*Eduyyot* i. 5). If, however, such a prohibitory law has

**Dissenting Rabbis.** been accepted by the entire Jewish people, no rabbinical court, even though superior to the one that introduced it, has the power of abrogating it ('*Ab. Zarah* 36b; Maimonides, "Yad," *Mamrim*, ii. 4). In case two rabbis, or two rabbinical courts, differ in their opinions, the rule is that in questions concerning Mosaic laws the more rigid decision should prevail; in questions concerning rabbinical laws the more lenient decision should be followed ('*Ab. Zarah* 7a). "After one of rabbinical authority has declared a thing to be unclean, no one else has the power to declare it clean; after one rabbinical authority has forbidden a thing, no other can permit it" (*Baraita* in *Nid.* 20b; *Ber.* 63b). If a teacher dissents from the decision of the highest court, he may state his dissent and teach accordingly; but he is not allowed to oppose the authority of the court in practise, in which case he falls under the category of a "zaken mamre" (a rebellious elder) (*Deut.* xvii. 12; '*Eduyyot* v. 6; *B. M.* 59b; *Yer.* '*Ab. Zarah* ii. 42a; *Ber.* 63a).

As a matter of course, the Rabbinical Authority and legislative power rested with the entire body of the court of justice or rabbinical academy, and not with the president or patriarch only. Still, the more eminent the latter in knowledge and wisdom, the better he succeeded in making his opinion or propositions prevail in the deliberation; and so the new

measure or institution was ascribed to him, or to him and his bet din (R. H. ii. 5-9, iv. 1-4; Yeb. 77a, and elsewhere). At any rate, the Nasi, or patriarch, announced the decision, proclaimed the New Moon, and represented on all official occasions the whole rabbinical body as its highest authority. The power of investing others with Rabbinical Authority was therefore presumably his exclusive privilege. It is known that from the beginning of the third century before the common era, rabbinical authorization by the patriarch consisted in the bestowal of authority and power ("reshut") to teach, to judge, and to grant permission regarding "the forbidden first-born among animals" ("yore yore, yadin yadin, yattir bekorot," Sanh. 5a). But it is obvious that this is no longer the original form of rabbinical authorization. Far more significant and expressive of the idea of Rabbinical Authority are the words used by Jesus when ordaining Peter as chief apostle, or his disciples as his successors, and undoubtedly taken from pharisaic usage: "I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven" (Matt. xvi. 19, xviii. 18). This corresponds exactly with what Josephus, or rather his source, tells of the Pharisees in the time of Queen Alexandra: "They were the real administrators of the public affairs; they removed and readmitted whom they pleased; they bound and loosed [things] at their pleasure" ("B. J." i. 5, § 2). The terms "bind" and "loose" ("asar we-hittir"), employed by the Rabbis in their legal terminology, point indeed to a sort of supernatural power claimed by the Pharisees for their prohibitory or permissive decrees, probably because they could place both men and things under the ban, or "herem." See BINDING AND LOOSING.

But there are other expressions which were presumably used in the old formula of rabbinical ordination. "Elijah," says Johanan ben Zakkai ('Eduy. viii. 7), "does not come to declare as clean or unclean and to separate or bring nigh." This was indeed a very important function at the time when the Levitical laws of purity and the questions of family or purity of blood ruled the entire social life of the Jews. Here the authority of the Pharisees made and unmade men and homes; and it is to this that Josephus (*l. c.*) possibly refers in saying, "They removed and readmitted whom they pleased."

When with the Bar Kokba war the solemn act of ordination ceased, Rabbinical Authority changed its character also, inasmuch as the continuity of tradition was no longer its basis and safeguard. Hence the greater learning became the chief source of authority. Thus, for instance, Rab's authority was decisive in ritualistic questions and Samuel's in legal matters. From Abaye and Raba onward the latter-day authorities were regarded as of greater weight than the earlier ones, because they could weigh all sides better. In the Middle Ages this attitude changed, from lack of self-confidence, and the respect for the former generation, which amounted to blind adoration, grew greatly (see AHARONIM). In fact,

the great lack of a central body representing Rabbinical Authority was felt more and more, and the attempts of Jacob Berab to reintroduce the ordination, or Semikah, failed. See SEMIKAH.

Thus Rabbinical Authority was transferred from the personality of the teachers to the codes of law, until finally the Shulhan 'Aruk became its embodiment, while Jewish synods in various countries provided for temporary emergencies. Singularly enough, the abolition of the power of excommunication, under the influence of modern times and through the interference of the worldly government, marks the beginning of the decline of Rabbinical Authority in occidental Judaism; while the derogation of the Shulhan 'Aruk in the modern life of the Jew practically hastened the process, and led to the convocation of rabbinical conferences, synods and like measures. See SYNOD; CONFERENCES, RABBINICAL; REFORM JUDAISM; HALAKAH; ORDINATION; CODIFICATION OF LAW; KARAITES.

K.

**AUTO DA FÉ:** Portuguese form of the Spanish "auto de fé" (in French, "acte de foi," from the Latin "actus fidei"), the solemn proclamation and subsequent execution of a judgment rendered by the Court of the Inquisition on "reos," or persons condemned by it; though in the ordinary acceptance of the term it is applied to the carrying out of the sentence only. The expression is also erroneously, or perhaps metaphorically, applied to the burning of books (the Talmud, etc.) in the early Middle Ages.

The solemn proclamation was ordinarily made in a church and on the first Sunday in Advent; because on that day the lection from the Gospel (Luke xxi.) deals with the last judgment. Some authorities held that such sentences should not be publicly read in a church because of the death-penalty connected with many of them. Where this view was held, as in Spain, some public place in the city was chosen where a large estrade was erected so that a great concourse of people could gather and witness the ceremony; "for," says Nicolas Eymeric ("Manuel des Inquisiteurs," p. 143), "it is a sight which fills the spectators with terror and is an awful picture of the last judgment. Such fear and such sentiments ought to be inspired, and are fraught with the greatest advantages."

Some time previous to the auto a formal proclamation was made before the public buildings and in the public squares of the city, which proclamation, in the case of the auto held at Madrid in 1680, was worded as follows: "The inhabitants of the town of Madrid are hereby informed that the Holy Office of the Inquisition of the city and kingdom of Toledo will celebrate a general Auto da Fé on Sunday, the 30th of June of the present year, and that all those who shall in any way contribute to the promotion of or be present at the said auto will be made partakers of all the spiritual graces granted by the Roman Pontiff."

There were various kinds of autos: the "Auto Publico General," which was surrounded with much pomp and was held in the presence of all the magistrates of the city, often in celebration of the birth

AN AUTO DA FÉ.  
(From a painting in The National Gallery, Madrid.)

or marriage of a prince; the "Auto Particular," at which the inquisitors and the criminal judges alone were present; the "Autillo" (little auto), which was held in the precincts of the palace of the Inquisition in the presence of the ministers of the tribunal and some invited guests; and lastly the "Auto Singular," held in the case of a single individual.

After having been immured for months or even years in the dungeons of the Inquisition, and after the trial, the condemned persons whose sentences were to be read were taken out of prison on the night preceding the auto and led to a place where they were prepared for the ceremony. A special

**Costume of the Con-** dress was given them, consisting of a vest, the sleeves of which came down to the wrists, and a pair of trousers reaching to the heels, both made of black stuff striped with white. Over

this was thrown a scapular, called "sanbenito"—usually made, for those accused of some crime against the church, of yellow cotton marked both on breast and back with the St. Andrew cross painted in red. For those, however, who had been convicted and who persisted in their denial, or who had relapsed, the scapular was gray and was called "samarra," and there was figured on it both in front and behind the likeness of the prisoner resting upon burning torches and surrounded by devils. Often the name of the prisoner and the crime for which he was convicted were written beneath the picture. For those who had accused themselves the flames were inverted; and for such as had been convicted of sorcery a bonnet of paper in the form of a sugar-loaf was also prescribed, upon which were figured devils and flames of fire. These bonnets were called "carochas." The culprit's feet were bare, and in his hand he carried a taper of yellow wax.

In the solemn procession which was formed, the banner of the Inquisition with its inscription "Justitia et Misericordia" was carried foremost; then came the officers of the Inquisition and other dignitaries. One or two citizens were assigned to each culprit to act as godfathers, whose duty it was to see that those given in their charge were returned safely to the prison. In the procession were also carried the bones of those who had died before sentence could be pronounced upon them; for, says Bernardus Comensis ("Lucerna Inquisitor," p. 52), "Mortui heretici possunt excommunicari et possunt heretici accusari post mortem . . . et hoc usque ad quadraginta annos." The procession also included effigies of those who had been condemned *in absentia*. The reason for this course was because the Inquisition, when it condemned a person, was able to sequester his property. As Bernard Gui expressly states in his "Practica Inquisitionis," "The crime of heresy must be proceeded against not only among the living, but even among the dead, especially when it is necessary to prevent their heirs from inheriting, because of the beliefs of those from whom they inherit" (Molinier, "L'Inquisition dans le Midi de la France," p. 358).

In the church elaborate preparations had been made for the ceremony. The great altar was draped with black cloth, and upon it were placed two thrones, one for the Inquisitor-General, the other for the king or for some high dignitary. A large

crucifix was also erected: those to whom its face was turned were to be spared; while those to whom its back was shown were to die. Before

**Procession and Ceremony.** the actual ceremony took place the secular authorities had solemnly to swear to lend all their aid to the Inquisition and to carry out its behests.

A long sermon was then preached for the purpose of exhorting those who still remained obdurate to confess, and of inciting the onlookers to the profession of faith which was made at various intervals. On this account the auto was sometimes called "sermo publicus," or "sermo general de fide" (Molinier, *ib.* p. 8). A good example of this preaching may be seen in the sermon of Don Diego Annunciazaro Justinianus, at one time archbishop of Craganor (translated by Moses Mocatta, and published in Philadelphia, 1860). A bibliography of such sermons preached at the autos in Portugal is given by I. F. da Silva ("Diccionario Bibliographico Portuguez," Lisbon, 1858 *et seq.*, s.v. "Autos da fé").

A chance was also given to those so inclined to make abjuration of their heresies, this being done at a table on which lay several open missals. Two clerks then read the report of the trial and the punishment meted out, the reading of which often occupied a whole day. As each report was read, the culprit was led out by one of the familiars of the Inquisition into the middle of the gallery, where he remained until the sentence had been pronounced.

The same ceremony was gone through when the service was held in a public square. Here a large amphitheater was erected with all the necessary appurtenances for the service, and with temporary dungeons beneath the platforms for the condemned.

The punishments meted out by the Inquisition were of four kinds according to the official enumeration: (1) Citation before the Inquisition; (2) the performance of pious deeds; (3) public pilgrimages, flagellations, and the wearing of large crosses; and (4) confiscation of goods, perpetual imprisonment, and death.

All those found guilty at the trial were led back again in the same solemn procession; the heretic penitent and relapsed, the heretic impenitent and not relapsed, the heretic "impenitent and relapsed," the heretic negative (who denied his crime), and the heretic contumacious, were all delivered over to the secular arm, as the Inquisition itself technically refused to carry out the death-sentence on the principle "*ecclesia non sinit sanguinem*" (the Church thirsts not for blood). The various sentences of death always ended with some such formula as "For these reasons we declare you relapsed, we cast you out of the forum of the church, we deliver you over to the secular justices; praying them, however, energetically, to moderate the sentence in such wise that there be in your case no shedding of blood nor danger of death."

Bellarmin says expressly, "That heretics deserve the sentence is clearly seen, or at least is referred to in Deut. xiii. 6 *et seq.*" The doctors of the Church were merely divided on the question whether those convicted should be put to death by the sword or by fire (compare Julien Havet, "L'Heresie et le Bras Séculier au Moyen Age," Paris, 1881). Death by fire

*The Jewish Encyclopedia Vol. II.*

AUTO-DA-FE  
IN THE PLAZA MAYOR OF MADRID 1680  
(AFTER A PAINTING BY RICI.)

was preferred as more in keeping with John xv. 6, "If a man abide not in me, he is cast forth as a branch, and is withered; and men gather them and cast them into the fire, and they are burned." Simanoas and Rojas were even of opinion that the culprits ought to be burned alive; the only precaution necessary being that their tongues be bound, or their mouths stuffed, in order that they do not scandalize the audience. The custom seems to have been that the penitent were first strangled and then burned, while the impenitent were cast into the flames alive. It was also held that the secular arm should not delay too long in carrying out sentences of the Inquisition. Innocent IV., in his bull "ad extirpanda," fixes five days as the longest period of delay. In Spain it was customary to carry out the sentence immediately after its proclamation, which was so timed as to occur upon some feast-day, when the populace would be at liberty to witness the burning.

The same pomp which marked the public reading of the sentence was observed at its execution; the imposing procession wending its way from the Inquisition dungeons to the "quemadero," the place where the scaffolds were erected. The dignitaries of both Church and state were present; and at the auto of June 30, 1680, in Madrid, which Charles II. held in honor of his newly married bride, the king himself lighted the first brand which set fire to the piles.

During the night preceding the carrying out of the sentence a commission sat continuously to hear the recantations of the prisoners, whenever they were minded to make them. The victims were carried on asses with escorts of soldiers, and accompanied by priests who exhorted them to take the last chance of becoming reconciled to the Church.

A full report—called in Spain "Relacion," in Portugal "Relação"—of the auto was drawn up and often printed for the double purpose of inciting the faithful to greater zeal and of bringing order into the process of the ecclesiastical court (E. N. Adler, in "Jewish Quarterly Review," xiii. 395). These reports were sent not only to the central organization of the Inquisition, but to other tribunals as well.

The earliest record of the execution of Jews at an Auto da fé relates to that held in Troyes (L'Aube) on Saturday, April 24, 1288. Jewish accounts of this event are given in the Hebrew selihot (penitential poems) of Jacob ben Judah, Meier ben Eliab, and Solomon Simha, as well as in an old Provençal account in verse by the aforementioned Jacob. This execution called forth strenuous protests from Philip le Bel (May 17, 1288), who saw in the actions of the Holy Office an infringement of his own rights (compare A. Darmesteter, in "Romania," iii. 443 *et seq.*; *idem*, in "Revue Etudes Juives," ii. 199; Salfeld, "Martyrologium des Nürnberger Memorbuches," p. 162). We have, however, little documentary evidence about the Jews of the Inquisition in countries outside of the Spanish Peninsula. Most of the information relating to the Inquisition in its relation to the Jews refers to Spain and Portugal and their colonies (see below). That Jews suffered, however, from the tribunal in Italy may be seen from the fact

that in Venice during the sixteenth century there were 43 persons before the Holy Office for the crime of "Judaismo," and in the seventeenth, 34. Many Jews may even be comprised under those who were charged with "Maomedanismo." The Inquisition worked its greatest havoc in Spain and Portugal, in the Balearic Islands, in Spanish America (Mexico, Brazil, Peru), in Guadelupe, and in Goa (India). In Spain autos were held from the time that Sixtus IV. (1480) issued a bull empowering Catholic kings to appoint inquisitors over all heretics, and in Portugal since 1531, when Clement VII. issued the bull "cum ad nihil magis," which formally established the Inquisition in Portugal (Herculano, "Estab. da Inquisicao," i. 255). The Holy Office was established in America by letters patent of Philip II. on Feb. 7, 1569. The Inquisition in Venice was abolished in 1794; at Goa, in 1812. The last auto held in Portugal was at Lisbon, Oct. 19, 1739; but as late as Aug. 1, 1826, in a short period of reaction, an auto was celebrated at Valencia, in which one Jew was burned alive ("Revue Etudes Juives," v. 155). The Inquisition was finally abolished in Spain July 15, 1834. In Peru the Holy Office had already been abolished on March 9, 1820, at the earliest moment after the cessation of the connection with Spain.

It is impossible to tell the exact number of Jews who met their death at the many autos da fé in Spain and Portugal. They were usually charged with Judaizing—a charge which might have been made against Moriscos, or even against Christians who were suspected of heresy. This was especially the case with the Maranos or Neo-Christians; and yet, from the documents already published, and from the lists which are now accessible (see below), it is known that many thousands must have met their death in this way. Albert Cansino, ambassador of Ferrara, writes on July 19, 1501: "I passed several days at Seville, and I saw fifty-four persons burned" ("Revue Etudes Juives," xxxvii. 269). According to Llorente, the Inquisition in Spain dealt with 341,021 cases and over 30,000 people were burned (see also Kohut, in "Proceedings Am. Jew. Hist. Soc." iv. 109). According to another authority, during the two hundred and fifty years that the Inquisition existed in America, 129 autos da fé were held.

From the details given by Adler the following numbers can be given of the Jews condemned, not always to death, so far as known. But in many instances, especially during the sixteenth century, no details are given:

Fifteenth century, 1481-1500	3,881
Sixteenth " (number of "reos")	868
Seventeenth "	821
Eighteenth "	878

Or in all 6,448 of whom the names and fates can be ascertained from the "relaciones" of 115 out of 464 autos da fé which are known to have taken place from 1481 to 1826.

The following list of autos da fé in which it is positively known that Jews were concerned has been selected from those held by the Inquisition; the thousands of volumes of Inquisition reports in the archives at Madrid, Seville, Simancas, Lisbon, etc.,

when published, will doubtless add largely to the number. As a basis the list drawn up by E. N. Adler ("Jewish Quarterly Review," xiii. 392), with the additions made by the writer of this article (*ib.* xiv. 80) and S. N. Kayserling (*ib.* 136), has been made use of wherever definite details are given, showing that Jews or Judaism were concerned in the Auto da fé. The authorities are given in the articles mentioned.

Several paintings of autos da fé are in existence. Two of these are in the National Gallery at Madrid. The older, attributed to Berruguete (fifteenth century), depicts one over which San Domingo de Guzman presided, and represents the actual burning at the stake. The other pictures the celebrated auto held at Madrid in 1680 before Charles II., his wife, and his mother. Of this a "relacion" was published by Joseph del Olmo (Madrid, 1680, 1820). An abstract in German was published by Kayserling, "Ein Feiertag in Madrid," and another in English by J. Rivas Puigcerner, in "Menorah Monthly," xxx. 72. A painting of an Auto da fé by Robert Fleury was exhibited in the Paris Salon in 1845. See also INQUISITION.

**BIBLIOGRAPHY:** As regards the authority and procedure, see Bernard Guidonis, *Practica Inquisitionis*, ed. Donais, Paris, 1886; Nicolas Eymeric, *Directorium Inquisitorum*, composed in 1358, of which an abstract was published with the title *Le Manuel des Inquisiteurs . . . d'Espagne et de Portugal*, Lisbon, 1762; Henner, *Beiträge z. Organismus und z. Kompetenz der Päpstl. **AUXERRE:** Chief city of the department of Yonne, France. Since the eleventh century an important community of Jews existed here and was presided over by eminent rabbis. These rabbis, known

as "the sages of Auxerre," were in correspondence with Rashi (Geiger, "*Melo Hofnayim*," quoted by Gross, "*Gallia Judaica*," p. 61). Several of the sages of Auxerre took part in the proceedings of the synod convened by Rabbenu Tam and Rashbam in Troyes about the middle of the twelfth century; and one of them, Samuel ben Jacob, was a signatory to the decisions. At this time Auxerre had a Talmudic school, over which Hezekiah presided, a rabbi whom Gross identifies as the savant of that name mentioned in one of R. Tam's letters (*op. cit.* p. 61).

The Jews were always treated kindly at Auxerre. From a letter written by Pope Innocent III. to the bishop of Auxerre, it is shown that they enjoyed the right to own farms, fields, and vineyards, for which they paid tithes to the clergy. But in 1208, emboldened no doubt by the protection granted them by the lord of the manor, the Jews refused to continue to pay the tithes. The bishop, having no other alternative, brought his grievance before the pope, who in turn could do no more than command all Christians, under penalty of excommunication, to avoid intercourse with the Jews until the demands of the clergy were satisfied ("*Innocentis Epistolæ*," vol. ii., book x., ep. lxii., Paris, 1682).

There is preserved in the municipal archives of Dijon a document, dated 1323, which relates to the confiscation of a house which belonged to a certain Jew of Auxerre, named Heliot (Gerson, "*Essai sur les Juifs de la Bourgogne*," p. 35). In 1379 a certain number of privileges were granted to the citizens of Auxerre by the Countess Mahand and Count John of Châlons. Of these privileges, many of which related especially to the Jews, the eighteenth runs as follows:

"The Jews of the countess are permitted to lend money to the citizens at the rate of threepence in the pound per week upon indentures passed under her seal or executed in the presence of two citizens, said interest not to continue for more than one year." ("*Ordonnances des Rois de France*," vi. 417.)

By the royal edict of Sept. 17, 1394, all Jews were expelled from France; and since that date there has been no Jewish community in Auxerre.

**AVÉ-LALLEMENT, FREDERICK CHRISTIAN BENEDICT:** Noted criminologist; born in Lübeck May 23, 1809; died there July 20, 1892. In his standard work, "*Das Deutsche Gaunertum*," Leipzig, 1858-62, he devotes a chapter to the Jews, in which he expresses views unfavorable to their morality. In the protracted struggle of the Jews of Lübeck for emancipation, Avé-Lallement ranged himself with their opponents. He claimed that the Jew had been a dangerous element in the economic development of the world, ever since the time of the Patriarchs. His nomadic nature and his commercialism prevented him from achieving anything tangible, even in those branches of science for which he showed decided talent. His articles appeared in

the "*Neue Lübeckische Blätter*" for 1841 and in the "*Volksbote*" for 1850. They were answered by Gabriel RIESSER.

**AVEN:** 1. One of several Egyptian cities threatened with God's vengeance (Ezek. xxx. 17). The name is evidently a corruption or an intentional vowel-change of "On" (Gen. xli. 45), which is thus made to signify "vanity." The Septuagint renders it "Heliopolis." 2. In Hosea x. 8 ("the high places also of Aven"), "Aven" probably stands for Beth-aven (Hosea x. 5), by which name Beth-el is intended. Some scholars, however (G. A. Smith, "*The Twelve Prophets*," for example), are inclined to regard Aven as a term for "false worship," and render the phrase "high places of idolatry." 3. The "plain of Aven" (R. V. "valley of Aven"), mentioned in Amos i. 5, applies to the valley of Cœle-Syria, between Lebanon and Anti-Libanus, noted for the idolatrous worship of the sun at the temple of Baalbek. The valley is now called "Beka'a" (Baedeker-Socin, "*Palestine*," p. 447).

**AVENEL, GEORGES:** French author; born at Chaumont-en-Vexin, department of the Oise, France, Dec. 31, 1828; died at Bougival July 1, 1876. He was a brother of Paul Avenel. Avenel devoted the greater part of his life to a study of the French Revolution. In 1865 he published his first book, "*Anacharsis Clootz, l'Orateur du Genre Humain*," after which he plunged with renewed energy into historical research. The outcome of several years of continuous study was the publication of "*Lundis Révolutionnaires*," Paris, 1875, a collection of essays representing only a portion of his extensive researches. He died before he could finish the second series of his "*Lundis*," which was in process of preparation, and in which the biography of Pache was to occupy an important place. Of the first series, one chapter has been published separately under the title, "*La Vraie Marie Antoinette, d'après la Correspondance Secrète*," Paris, 1876. Avenel also edited an improved and popular edition of the complete works of Voltaire, generally known as the "*édition du siècle*," 9 vols., in 1867-70.

**BIBLIOGRAPHY:** *La Grande Encyclopédie*, s.v.: Vapereau, *Dictionnaire Universel des Contemporains*, Paris, 1893.

**AVENEL, HENRI MAYER:** French author; born in Paris, March 7, 1853. He is an adopted son of Paul Avenel. He began his career by editing "*L'Événement*," the daily political Parisian paper, and several departmental newspapers. In 1888 he took charge of the "*Annuaire de la Presse Française*," founded by Emile Mermet in 1880, and improved it in many ways, especially by the addition of a political department.

Avenel is the author of "*Chansons et Chansonniers*" (Paris, 1889), a history of song in all ages; "*La Loterie: Historique Critique de l'Organisation Actuelle; Projet de Réorganisation*"; "*L'Amérique Latine*" (Paris, 1890), with an interesting introduc-

tion "on the present state and future prospects of French commerce in America."

**AVENEL, PAUL**: French author; born at Chaumont-en-Vexin, department of the Oise, France, Oct. 9, 1823. After a brief course in medicine at the University of Paris, he, in 1850, abandoned his studies to devote himself exclusively to literature. Beginning as journalist, he became successively poet, novelist, and dramatic author.

Among Avenel's dramatic works, which number more than fifty, are: "Les Chasseurs de Pigeons," farce-comedy in three acts, produced at the Folies Dramatiques in 1860; "La Paysanne des Abruzzes," drama in five acts, written in collaboration with H. de Charlieu and produced at the Théâtre Beaumarchais in 1861; "Soyez donc Concierge," farce-comedy, produced at the Folies Dramatiques in 1861; "Un Homme sur le Gril," farce-comedy, produced at the Théâtre des Variétés; "L'Homme à la Fourchette," one-act comedy, 1874; "Les Plaisirs du Dimanche," comedy in five acts; "Le Saint Pierre," drama in five acts; "Mimi-Chiffon," comedy in four acts; "Le Beau Maréchal"; "Le Pavé d'Or," and the lyric comedy, "L'Antichambre en Amour."

Of Avenel's novels and short stories the following are noteworthy: "Le Coin de Feu," 1849; "Les Tablettes d'un Fou, ou le Voyage Entre Deux Mondes," 1852, and "Les Etudiants de Paris," reminiscences of the Latin Quarter; "Le Roi de Paris," 1860; "Le Duc des Moines," 1864, and "Les Lipans, ou les Brigands Normands," 1868, three historical novels of the time of the League; "Les Prussiens à Bougival," a collection of stories of the Franco-Prussian war; "Une Amie Dévouée, Mœurs Parisiennes," 1884, a Parisian novel; "Le Docteur Hatt," a novel of a philosophical character, 1887; and "Les Calicots," scenes of real life, first published as a novel in 1866, and afterward dramatized.

As an author of poems and verse, Paul Avenel has published "Chansons de Paul Avenel," 1875; "Chants et Chansons Politiques," 1869-72—in the 8th edition, 1889, figure the most prominent political occurrences from 1848 to 1860; "Alcôve et Boudoir," a collection of verses, 1855, which was at once suppressed by the French courts. Thirty years later Quantin published an édition de luxe of the condemned verses.

Avenel is a member of the following societies: Société des Gens de Lettres; Société des Auteurs Dramatiques; Société des Auteurs, Compositeurs, et Editeurs de Musique, of which he was president from 1878 to 1881; and Lice Chansonnière, over which he presided from 1892 to 1894. He is also an honorary member of the Caveau Séphanois, at Saint Etienne.

**AVENGER OF BLOOD**.—**Biblical Data**: (Hebrew "go'el"): The Hebrew name for the clansman, "next of kin," upon whom devolved the

duties: (1) of avenging, on the person of the murderer, the blood of a murdered kinsman—in this capacity the more specific term "go'el ha-dam" (blood-avenger) was generally used—and (2) of redeeming the property or the person of a relative that had fallen into debt.

(1) Among primitive peoples of low political development—such as the ancient Greeks, Germans, and Slavs, some North American tribes, the modern Sicilians, Corsicans, and Arabs—the clan or family

**Among Primitive Peoples.** had to assume the right to protect itself. One of the most important clan duties then was plainly for the nearest of kin to hunt down and carry out the death-penalty on a person that

had slain a member of the sept or family. That this idea of family retribution—which even to-day is by no means extinct in some comparatively civilized communities—was also current among the ancient Hebrews may be seen from Gen. xxvii. 45, where the existence of the custom is clearly taken for granted. It appears, furthermore, from Josh. vii. 24, and II Kings ix. 26, that, in the most primitive period, such a vendetta was extended to the entire family of the murderer, as is still the custom among the desert Bedouins. The Hebrew religious justification for the system of family blood-revenge was undoubtedly the firm belief that God, in order to insure the sacredness of human life, had Himself fixed the death-penalty for murder (Gen. ix. 5 *et seq.*; Lev. xxiv. 17). In the earliest times blood-money was not accepted either for murder or for excusable homicide. Such a payment would have made the land "polluted by blood" (Num. xxxv. 31 *et seq.*). Unavenged blood "cried out" for vengeance to God (Gen. iv. 10; Isa. xxvi. 21; Ezek. xxiv. 7 *et seq.*; Job xvi. 18). The Avenger of Blood, then, was regarded as the representative, not only of the murdered man's family, but of YHWH Himself, who was the highest avenger (Ps. ix. 13 [A. V. 12]).

Such a stern system, however, could not, of course, survive unmodified after the community had begun to advance from the purely savage state. Abuses of the privilege of blood-revenge must have soon become evident to the tribal chiefs, as one finds in Ex. xxi. 12 (compare Gen. ix. 6) that the commonly accepted formula that a life must be given

for a life is modified by a careful legal distinction between wilful murder and accidental manslaughter. In order to

**Modification of the System.** establish a case of wilful murder, it must be shown that weapons or imple-

ments commonly devoted to slaughter were used, and that a personal hatred existed between the slayer and his victim (Ex. xxi. 12; compare Num. xxxv. 16; and Deut. xix. 4). The law enumerates three exceptions to this general principle: (a) The slaying of a thief caught *at night* in *flagrante delicto* is not punishable at all; but if he is captured by day there is blood-guilt which, however, is not liable to the blood-revenge (Ex. xxii. *et seq.*). (b) If a bull gored a human being to death, the punishment was visited upon the animal, which was killed by stoning. Its flesh in such a case might not be eaten. If gross contributory negligence could be proved on the part of the animal's owner, he was liable only for blood-

money (Ex. xxi. 28). (c) Where the master kills his slave, the offense is punishable only when the latter dies at once, and then probably not by the death-penalty, as some of the rabbinical writers thought (Ex. xxi. 23).

The later codes develop at some length the very just distinction between wilful murder and accidental homicide (see MURDER). SIX CITIES OF REFUGE were appointed for the purpose of

**Six Cities of Refuge.** affording an asylum to the homicide, where he might be secure from the hand of the avenger (Deut. xix. 12)

until the elders of the community of which the accused was a member should decide whether the murder was intentional or accidental (Num. xxxv. 9-34; Deut. xix. 1-13; Josh. xx.). According to the later procedure, at least two witnesses were necessary to establish a case of wilful murder (Num. xxxv. 30; Deut. xix. 15). In case, however, it was not possible to apprehend the murderer or manslayer, the adjudication might take place and a verdict be rendered in his absence.

It appears from Josh. xx. 4 that the elders of the city of refuge chosen by the slayer had the right to decide as to whether he should be permitted to have a temporary asylum or not. If the case were simply one of unintentional manslaughter the slayer was immediately accorded the right of asylum in the city of refuge, where he had to remain until the death of the reigning high priest (Num. xxxv. 25), whose death, in ancient Hebrew law, marked the end of a legal period of limitation (Num. xxxv.; Deut. xix.; Josh. xx.). If the "go'el ha-dam" were to find the slayer of his kinsman outside the limits of the city of refuge, he had the right to kill him at sight.

In a case in which the verdict against the slayer was one of wilful murder, the murderer incurred the blood-revenge without any restrictions. If he were already in a city of refuge, the elders

**The Family Exe-** of his own city were obliged to fetch  
**cutioner.** him thence by force if necessary, and to deliver him formally to the Avenger of Blood, who thus became

little more than a family executioner (Deut. xix. 11 *et seq.*).

Two very important restrictions should here be noticed: (a) Although the entire family or gens to which the murdered man belonged were theoretically entitled to demand the blood-revenge (II Sam. xiv. 7), still, in the practise of later times, only one member—for example, the next of kin, who was also legal heir—might assume the duty of carrying it out. According to the later Jewish tradition, when there was no heir, the court had the right to assume the position of the "go'el." (b) The law expressly states that the blood-revenge was applicable only to the person of the guilty man and not to the members of his family as well (Deut. xxiv. 16; compare II Kings xiv. 6). This is a most significant advance on the primitive savage custom that involved two gentes in a ceaseless feud. Anent this advance, it is interesting to note that, in the time of the kings, the king himself, as the highest judicial authority, was entitled to control the course of the blood-revenge (II Sam. xiv. 8 *et seq.*).

It is difficult to decide exactly how long the

custom of blood-revenge by the "go'el" remained in vogue among the Hebrews. According to II Chron. xix. 10; Deut. xvii. 8, the law of Jehoshaphat demanded that all intricate legal cases should come before the new court of justice at Jerusalem. It is not probable, however, that this regulation curtailed the rights of the "go'el ha-dam," which must have continued in force as long as there was an independent Israelitish state. Of course, under the Romans, the right of blood revenge had ceased (John xviii. 31).

(2) As indicated above, the term "go'el" had also a secondary meaning. From the idea of one carrying out the sentence of justice in the case of bloodshed, the word came to denote the

**The Redeemer of His Kinsmen.** kinsman whose duty it was to redeem the property and person of a relative who, having fallen into debt, was compelled to sell either his land or himself as a slave to satisfy his creditors

(compare Lev. xxv. 25, 47-49). It would appear from Jer. xxxii. 8-12 that the "go'el" had the right to the refusal of such property before it was put up for public sale, and also the right to redeem it after it had been sold (see RUTH).

From the Book of Ruth (iv. 5) it would appear that the duty of the nearest of kin to marry the widow of his relative in case of the latter's dying without issue was included in the obligations resting upon the "go'el"; but inasmuch as the term is not used in the passage in Deut. (xxv. 8-10) in which this institution is referred to—the obligation resting upon the brother to marry his deceased brother's widow—the testimony of so late a production as Ruth can not be pressed. The usage in the book may not be legally accurate.

From this idea of the human "go'el" as a redeemer of his kinsmen in their troubles, there are to be found many allusions to YHWH as the Divine Go'el, redeeming His people from their woes (compare Ex. vi. 6, xv. 13; Ps. lxxiv. 2), and of the people themselves becoming the "redeemed" ones of YHWH (Ps. cvii. 2; Isa. lxii. 12). The reference to God as the "go'el" and as the one who would "redeem" His people was applicable to the relationship between YHWH and Israel in the exilic period, when the people actually looked to their God to restore their land for them, as the impoverished individual looked to his kinsman to secure a restoration of his patrimony. Hence, of thirty-three passages in which "go'el" (as a noun or verb) is applied to God, nineteen occur in the exilic (and post-exilic) sections of Isaiah—the preacher par excellence of "restoration"—for example, in xlvi. 20, xlix. 26, li. 9, lxii. 12, etc. See ASYLUM; CITIES OF REFUGE; JOB; MURDER.

J. JR. J. D. P.  
—**In Rabbinical Literature:** Several primitive social regulations touching the rights of the blood-relation, the "go'el ha-dam" (Avenger of Blood), are

acknowledged by the Biblical law (Num. xxxv. 19 *et seq.*; Deut. xix. 12); although, according to the higher conception of the Bible, a murder is not so much a crime against the individual as against the community. This conception is carried still further by the rabbinical law, under which the avenging relative has no rights left. The hunting down of a murderer is no longer the business of the avenger, but of the state; accordingly, whether there is any relative or not, whether the relative lodges complaint or not, the state must prosecute the murderer (Sifre, Num. 160 on xxv. 19; Deut. 181). Every murderer, or one who had committed manslaughter, fled to one of the cities of refuge before his case was investigated; and there he was secure from any attack on the part of the avenger, who was forbidden, under penalty of death, to assail such a fugitive in his asylum (Mishnah Mak. ii. 6; Sifre, Num. 160 on xxv. 25). It was obligatory upon the court of justice to arrest the fugitive there, bring him to court, try him, and, if found guilty, to execute him. If it was proved that the death was a case of carelessness and not of intentional murder, he was sent back to the city of refuge in care of armed officers of the court, so as to protect him from the avenger (Mishnah Mak. ii. 5, 6). Should he leave his place of refuge, the avenger had, according to R. Akiba, the right—and, according to R. Jose the Galilean, the duty—to slay him, but only when the fugitive had voluntarily left his retreat (*ib.* 7). But even here it is evident that the avenger enjoyed no peculiar prerogative; for, should the fugitive be slain by a disinterested party, the latter was not held accountable (*ib.*; for the correct reading of this passage compare Rabbinowicz, "Variæ Lectiones," on the passage). One teacher, however, goes so far as to maintain that neither the avenger nor, still less, a third party can be permitted to take the man's life, should he have left his asylum (Tosef., Mak. ii. 7; Gemara *ib.* 12a).

All these details, however, are hardly to be considered as ever having been matters of actual enforcement; for, although it is highly probable that rabbinical tradition contained much concerning the cities of refuge which existed during the second Temple (see ASYLUM IN RABBINICAL LITERATURE), the regulations concerning the Avenger of Blood are rather of an academic nature and are scarcely drawn from actual life.

K.

L. G.

**AVERROES**, or **ABUL WALID MUHAMMED IBN AHMAD IBN ROSHD**: Arabian philosopher of the twelfth century; born at Cordova in 1126; died in 1198. Although himself a prolific writer on philosophy and medicine, his chief importance is as a commentator upon the works of Aristotle, and for this reason he is often styled "the commentator par excellence." Like Avicenna, who also commented Aristotle, Averroes wrote an original compendium of philosophy of his author, and, in addition to this, wrote the so-called "Middle Commentaries," which latter follow the text, with, however, the omission of passages here and there; and finally he made a full and copious exposition of every Aristotelian statement, incorporating the sentence indistinguishably with his text. His reputation was

so great that his books found their way during his lifetime even into Egypt, where, in 1190, Maimonides made their acquaintance. As a

**Jewish Preservation of His Writings.** matter of course, Averroes' views frequently conflicted with those of his Mohammedan coreligionists, and his works were therefore extensively condemned and prohibited. It is owing to his Jewish admirers that his writings are preserved to-day, for only in the shape of Hebrew translations or by a transliteration of the Arabic text in Hebrew characters did they escape the fanaticism of the Moors.

As to the relation between Averroes and Maimonides, which has frequently been misconceived, it is quite certain that Maimonides can not be called a disciple of Averroes, nor Averroes a pupil of Maimonides. The latter read Averroes' writings far too late to permit of his having used them in his own works. Both, it is true, coincide on many points. Both are strong Aristotelians and energetically opposed to the teachings of the Motakallemin concerning atoms and the non-existence of natural laws. Both deny to the Deity the possession of "attributes." Their theories of the intellect are identical, and both take the same position as regards the relation of faith and knowledge. It has yet to be determined whether these striking resemblances are not founded upon some third or common source not yet discovered.

In a letter to his favorite pupil, Joseph b. Judah Aḥnin, dated Cairo, 1190, Maimonides writes: "I have recently received Ibn Roshd's work upon Aristotle, besides the book, 'De Sensu et Sensito'; and I have read enough to perceive that he has hit the truth with great precision; but I lack the leisure now to make a study of it." A passage in a letter to Samuel Tibbon, 1199, in which he recommends Averroes' commentaries, is not quite clear.

Less known than his commentaries upon Aristotle are Averroes' own original writings, although they have left indubitable traces upon Jewish thought. His essay on "The Relation of Faith to Knowledge" (published by Joseph Müller with German translation, Munich, 1875) seems to have inspired Shem-Tob Falaquera to write his "Iggeret Havikkuaḥ." It is extant in an anonymous Hebrew translation dated 1340, as is also another work of Averroes of similar tendency, "The Book of the Revelation of the Method of Proof Touching the Principles of Religion"; both works were familiar to Kalonymus ben Kalonymus and Simon Duran in 1423. Better known than these is his reply to Gazzali's book, "A Confutation of Philosophers," Averroes calling his "A Confutation of the Confutation." Kalonymus, son of David b. Todros, translated this book into Hebrew in 1328; and there is also another translation by an unknown author.

**Original Works.** Kalonymus gives a curious reason for his undertaking. Knowing that Averroes is justly condemned as a denier of God, he protests that he translates it only because it contains in its text the whole work of Gazzali, who defended religion; had he been able to procure Gazzali's book, he would not have undertaken the ungrateful task or translated a single word of Averroes' specious argumentation. Kalonymus' translation was rendered into Latin by

a Neapolitan physician, also named Kalonymus ben David, and published in Venice, 1527.

This "Confutation" contains a few contradictions of statements made elsewhere by him, but such inconsistencies are by no means infrequent in other writings of Averroes. The change of views thus evidenced gave rise to the legend that Averroes had embraced Judaism, Christianity, and Mohammedanism in succession, and that he wrote the notorious work, "De Tribus Impostoribus." In similar strain is the assertion by a writer of the seventeenth century, that the "Confutation of the Confutation" was actually written by Gazzali himself, who thus secretly furnished a defense against his own attacks upon philosophy, these attacks having been prepared at the command of a fanatical king. Be all this as it may, Averroes' importance as a philosopher was universally acknowledged by Jewish thinkers. Not even his opinions antagonistic to Judaism could prevent their admiration of his genius.

**Admired** When, however, Averroes fiercely as-  
**in Jewish** sailed Avicenna, Jewish authors are  
**Circles.** sometimes found to side with the latter as being nearer to Judaism; and Ḥas-dai Crescas, who mournfully notes the havoc wrought in Jewish circles by philosophy through laxity of observance, vehemently denounces both Aristotle and his commentator Averroes. Crescas must, however, have been blinded by his zeal when he terms Averroes a mere chatterer. Levi ben Gerson and Moses Narboni may with all propriety be called followers of Averroes; for with them, too, the claims of the peripatetic philosophy as formulated by him seem to be rated higher than the claims of revelation. But Averroes' absolute sovereignty in the fourteenth century was soon followed by his decline. Platonism displaced Aristotelianism, and with the latter vanished all traces of Averroism.

K.

A. Lö.

**AVERROISM:** Averroes, like his contemporary Maimonides, was a strict Peripatetic; yet they differed greatly in matters of faith. While Maimonides, with all his admiration for Aristotle, dared to contradict his theories, or at least sought to attenuate them when they were in direct opposition to religion, Averroes indorsed them to their utmost extent, and seemed even to take pleasure in emphasizing them. "God," says Averroes, "has declared a truth for all men that requires for understanding no intellectual superiority; in a language that can be interpreted by every human soul according to its capability and temper. The expositors of religious metaphysics are therefore the enemies of true religion, because they made it a matter of syllogism" (J. Müller, "Philosophie und Theologie," including the Arabic text, pp. 104 *et seq.*). In expounding what he thought to be the doctrines of Aristotle, it made no difference to Averroes whether they were or were not in harmony with those taught by the Koran. Thus Averroes asserts again and again the eternity of the universe; although, as Maimonides demonstrated in his "Guide" (ii. 28, 121-127), Aristotle himself is not very decisive on this point. Averroes goes still further and declares that not only is matter eternal, but that form even is potentially existent, otherwise there would be creation *ex nihilo* ("De Cælo et

Mundo," p. 197). Maimonides advocates man's absolute free-will, but Averroes restricted that freedom. "Our soul," says the latter, "can have preferences indeed, but its acts are limited by the fatality of exterior circumstances; for if its deeds were the production of its will alone, they would be a creation independent of the first cause, or God" (Joseph Müller, *ib.* Arabic text, p. 110). Maimonides, like Avicenna, places the existence of all creatures in the category of the *possible*; that of God, in that of the necessary ("Moreh," ii., Introduction, propositions 19 and 20). Averroes combats Avicenna's classification for the simple reason that, every being having a cause, its existence is necessary ("Destructio Destructionis" at the end of the "Disputatio," x.).

However, it was due to Maimonides that the philosophy of Averroes found admirers during four centuries among the Jews, who by their translations and commentaries preserved his writings from destruction and transmitted them to the Christian world.

But if Averroes owed the preservation of his writings to the Jews, Jewish literature, in its turn, is indebted to him, directly and indirectly, for many valuable contributions. In addition to the translations of Averroes' works and commentaries on them—which in themselves form a fairly large library—the thirteenth, fourteenth, and sixteenth centuries witnessed the production of numerous essays and treatises inspired by Averroism. The first to introduce his philosophy to Jewish literature was Samuel ibn Tibbon, the same who translated Maimonides' "Moreh." Tibbon published, at the beginning of the thirteenth century, an "Encyclopedia of Philosophy," which frequently is nothing but literal extracts from Averroes, whom the author declares to

be the most reliable interpreter of Aristotle. A little later, 1232, appeared the first real translation, by Jacob ben Abba Mari Anatoli, a son-in-law of Ibn Tibbon. He was a Provençal, living in Naples, and engaged by Frederick II. to popularize Arabian science. In 1260, Moses ibn Tibbon translated nearly the whole of the Short Commentary. About the same time, Solomon ben Joseph ben Job, originally from Granada, but living in Beziers, translated of the Short Commentary that on Aristotle's treatise, "De Cælo et Mundo," under the title of השמים והעולם. In 1284, Zerahia ben Isaac of Barcelona translated of the Middle Commentaries that on Aristotle's "Physics," as well as Averroes' treatises, "De Cælo et Mundo" and "Metaphysics." The same Anatoli translated in 1298 Averroes' "Abridgment of Logic," under the title of הגין קצור; and in 1300, under the title of ס' בעלי חיים, the commentaries upon books xi.-xix. of the "History of Animals."

Other writers of this century that expounded Averroes were Judah ben Solomon Cohen of Toledo, author of "Peripatetic Encyclopedia," 1247; and Shem-Tob ben Joseph b. Falaquera (1224-95), who inserts lengthy extracts from Averroes in his books, the "Moreh ha-Moreh," "Hanhagat ha-Guf weha-Nefesh," and the "Sefer Hama'alot."

The study of Averroism was so wide-spread that, not content with the foregoing translations, the first

half of the fourteenth century produced a new series. Kalonymus b. Kalonymus, son of Meir of Arles (1277-1330), translated, in 1314, under the following titles, the Grand Commentaries on the "Organon" (הניחן), the "Physics" (הטבע), the "Metaphysics" (מה שאחר הטבע), and the treatises "De Caelo et Mundo," "Generation and Corruption," "Meteors," "The Soul," and "The Letter on Union," etc. R. Samuel b. Judah b. Meshullam of Marseilles translated the Short Commentary on the "Nicomachean Ethics," under the title המדות ס', and the paraphrase of Plato's "Republic," under the title הנהגות המדינה. Todros Todrosi of Arles translated in 1337, under the following titles, the commentaries on the "Topics" (מאמרות), the "Sophisms" (ההטענה), the "Rhetoric" (המליצה), and "Poetics" (השיר). In addition to these a crowd of other translators of uncertain date likewise devoted themselves to the study of the works of Averroes. Shem-Tob Isaac of Tortosa translated the commentary on the "Physics," and the treatise on the "Soul"; Jacob b. Shem-Tob, the "First Analytics"; Judah ben Tahin Maimon, the "Physics," the treatises on "Heaven" and on "Generation"; Moses ben Tahora b. Samuel b. Shudai the treatise on "Heaven"; Moses b. Solomon of Salon, the "Metaphysics"; Judah b. Jacob, books xi.-xix. on "Animals"; Solomon b. Moses Alguari, the treatise "De Somno et Vigilia."

The second half of the fourteenth century is the golden age of Averroism among the Jews. There were no more translations, but scholars innumerable vied with one another in commenting on the commentaries and applying the teachings of those commentaries to theology. Levi ben Gerson of Bagnols (Gersonides) wrote such commentaries, as well as some upon the original works of Averroes, as, for instance, on the "Substantia Orbis," the treatise on the "Possibility of Union," etc.; Joseph Caspi, in the middle of the century, wrote a commentary upon Aristotle's "Ethics" and Plato's "Politics," after Averroes' method. In 1344, Moses of Narbonne (Messer Vidal) wrote a commentary on the "Possibility of Union," etc.; and in 1349 on the "Substantia Orbis," and on other physical treatises.

The "Physics," the "Ethics," the commentary upon "Alexander of Aphrodisias on the Intellect," underwent a complete remodeling at his hands. As directly due to Averroism must be mentioned: The ethical and rhetorical work by Jedayah Penini (1261-1321), entitled "Behinat Olam" (Examination of the World), and his "Iggeret ha-Hitnazelut" (Letter on Self-Exculpation), defending philosophy against the vehement attack of Solomon b. Adret; also Joseph Caspi's double commentaries on Maimonides' "Guide"; Levi ben Gerson's philosophical commentary upon the Pentateuch—wherein the author admits the eternity of the universe, the natural gift of prophecy, original matter without form, and the impossibility of "Creation"; and finally, Moses Narboni's commentary upon the "Guide."

The fifteenth century, though still rich in productions of Averroism, gave signs of decadence. Boldness had vanished from the world of letters, and every author felt himself constrained to break a lance

for religion. In 1455 Joseph ben Shem-Tob of Segovia commented on the "Ethics," according to his own statement, to supply Averroes' omissions; he likewise commented on the "Possibility of Union," and on the analysis of Alexander's book on the Intellect. His son Shem-Tob, as well as Moses Falaquera and Michael ha-Kohen, wrote Averroistic treatises toward the end of the century.

Elia del Medigo, of Rome, the last representative of Averroism among Jews, wrote in 1485 a commentary on the "Substantia Orbis"; in 1492 a treatise on the "Intellect," on "Prophecy," and on various other works. Of other Averroistic writings there were the same Shem-Tob's commentary on the "Guide"; Elia del Medigo's "Behinat ha-Dat"; Abraham Shalom ben Isaac's theological and philosophical dissertations; and the "Miklal Yofi," by Menahem b. Abraham Bonfous of Perpignan.

In the sixteenth century Averroism gave place to theology. People read and studied Averroes, but very evidently only to hunt out his weak points and disprove him. Isaac Abravanel, largely indebted as he was in his commentary on the "Guide" to Averroes, does not scruple to attack him frequently in his "Shamayim Hadashim" and other works. Abraham Bibago, who commented on Aristotle's "Analytica Posteriora," abuses Averroism in his "Derek Emuna." Moses Almosnino, about 1538, comments on Al-Gazzali's "Happalat-ha-Filosofim" (Destruction of the Philosophers), and uses it as a weapon against the Peripatetic philosophy. Many other, but more insignificant, writers essayed to drag the colossus to the ground, but the traces stamped by Averroes on Jewish literature are irremovable.

**AVESTA:** The canonical book of the religious sect known as the Parsees, more frequently though less precisely called Zend-Avesta—an inversion of the Pahlavi phrase "Avistāk va Zand," the Scriptures and the Commentary or the Law and Its Interpretation. The Avesta is the Zoroastrian Bible supplemented by the Pahlavi, or Middle Persian, writings, as the Hebrew Scriptures are by the Talmud.

The Avesta has special claims upon the interest of Jewish scholars, there being certain points of similarity between the Avesta and the Old

**Jewish Interest.** as well as the New Testament, points that are striking or close enough to call forth frequent comment. In the next

place, the Avesta, as the sacred book of early Persia, must command attention because of the historical points of contact between the Jews and the Persians. Note especially such passages as the following: Isa. xlv. 1, 13, 28; II Chron. xxxvi. 22, 23; Ezra i. 1-11; v. 13-17; vi. 1-15; and perhaps Ezek. viii. 16. See PERSIAN RELIGION.

The Avesta represents the ancient priestly code of the Magi; for Zoroaster, or Zarathushtra, as his name is called in the original texts, has stood in history as the typical Magian, as the sage, priest, prophet, and

lawgiver of ancient Iran. According to the more recent views on the subject, which agree with the traditional date for his era, he flourished about 660–583 B.C.; though the

**The Typical Magian.** common tendency is to believe that he lived and taught at a much earlier period. It is certain that King Artaxerxes and the later Achæmenian rulers professed his faith; less certain is it according to some scholars whether Darius and Xerxes, and still less whether Cyrus, were really followers of the Avesta and genuine Zoroastrians, although much may be said in the affirmative. It is beyond doubt that they were all worshipers of Ahuramazda, or Ormuzd, the supreme God of the Avesta; and this makes the passages in Isaiah (xliv. 28; xlv. 1, 13) relating to Cyrus doubly interesting. In the Old Persian inscriptions the Mazda worship of Darius is most pronounced. For these reasons still more importance is to be attached to the Avesta in the history of religious thought, especially when the power and the wide-spread influence of the Persian empire in early times are taken into account.

According to the book itself the Avesta represents a direct revelation from Ahuramazda to Zarathushtra. The sacred text (Vend. xxii. 19) mentions "the Forest and the Mountain of the Two Holy Communing Ones"—Ormuzd and Zoroaster—where special intercourse through inspired vision was held between the Godhead and his prophetic representative on earth, as between YHWH and Moses on Sinai. Later tradition repeats the view that the sacred book was the result of inspiration, for the Pahlavi texts (Dk. vii. 3, 51–62; viii. 51; Zsp. xxiv. 51) recount not only how Zoroaster communed with Ormuzd, but like the Zoroastrian Gāthās they tell also of ecstatic visions of the six archangels and of other revelations which were vouchsafed to him. According to a tradition preserved in the Pahlavi writings (Dk. Bk. 3, end, quoted by West, "Sacred Books of the East," xxxvii., Introd. 30–32), the Avesta itself was committed to writing at the instance of King Vishtāspa, whom Zoroaster converted to the faith and who became Zoroaster's patron. The king's own prime minister, Jāmāspa, had a hand in the redaction as scribe, and Zoroaster's mantle descended upon him, so that he succeeded the great priest in the pontifical office on the latter's death (Dk. iv. 21; v. 34; vii. 5, 11).

It is said by Ṭabarī, and by Bundarī after him, that Vishtāspa caused two copies of the holy texts to be inscribed in letters of gold upon 12,000 ox-hides (see Jackson, "Zoroaster," p. 97)—a tradition which is confirmed by Pliny's statement that Zoroaster composed no less than 2,000,000 verses (N. H. xxx. 2). These two archetype copies, mentioned in the Dinkard, the Artā-Virāf, and the Shatrōihā-i-Airān, were to serve as the standard priestly codes of Vishtāspa's realm. The faith was to be promulgated throughout the world in accordance with the teaching of these. There is likewise a tradition (see Dk., references above) to the effect that one of these original copies came into the hands of the Greeks and was translated into their tongue. Support for this tradition may perhaps be found in the Arabic lexicon of Bar-Bahlūl (963), according to

which the Avesta of Zoroaster was composed in seven tongues, Syriac, Persian, Aramean, Segestanian, Mervian, Greek, and Hebrew. A still earlier Syriac manuscript commentary on the New Testament by 'Ishō'dād, bishop of Hadatha, near Mosul (852), similarly speaks of the Avesta as having been written by Zoroaster in twelve different languages. As for the other archetype copy, which seems to have been the principal one, the direct statement, again of the Pahlavi treatise Dinkard, says that it was burned by Alexander the Great when he invaded Iran.

Whatever may be the value of these traditions regarding the Avesta, the fate of the sacred book was connected with the history of the people, and with the rise and fall of the fortunes of Iran. The five centuries that followed the invasion of Alexander with the government of the Seleucidæ and the sway of the Parthians were dark ones for Zoroastrianism.

**The Fate of the Avesta.** Nevertheless, there is no reason for making the strong claim that Darmesteter does to the effect that the tradition was lost. It is known that the last of the Parthian monarchs were

filled with the true Zoroastrian spirit; and it can be proved from Greek, Latin, and other writings, that the tradition of the wisdom of Zoroaster lived on during the long period between Alexander and the rise of the House of Sassān in the third and fourth centuries. The entire Sassanian period was a most flourishing time for the creed which was now restored to its pristine glory. But in the seventh century, with the rise of Islam, the Avesta gave place in Persia to the Koran; Ormuzd sank before Allah; and Zoroaster yielded to Mohammed. A number of the faithful cherishers of the sacred fire, however, sought safety in flight from Iran and found refuge in India, where they are still known by their ancient name *Parsi*; it is they that are the conservators of the remnants of the old Avestan texts that have passed through so many vicissitudes.

Much had been lost through Alexander, it was claimed; but the number of texts that were still extant was nevertheless considerable, and they represented the ancient Avesta fairly well. The canon was divided into twenty-one *nasks*, or books. These again were subdivided into three classes, each comprising seven books. The first group ("Gāthā" or "Gāsān") was theological; the second ("Dāt") was legal; the third ("Hadha-māthra") was of a somewhat miscellaneous character. In this threefold classification of the nasks, Darmesteter sought to prove Jewish influences at work upon the Avesta, and he compared the classification of the Biblical texts into "Torah" (Law), "Nebiim" (Prophets), and "Ketubim." But of this Sassanian Avesta there is much less extant now because of the havoc wrought, directly or indirectly, upon Zoroastrianism and the Avesta by the Mohammedan conquest and the Koran. To-day only two of the twenty-one nasks are in any degree complete. These are the Vendīdād, or law against demons, and the Stōt Yasht, which answers to Yasna (xiv.–lix.), yet these show signs of being very imperfect. There exists also, in addition to these two remnants, an important part of another nask—this is the Bakān Yasht; and portions or fragments of others. There thus

exist specimens of about fifteen of the original nasks. This material, moreover, is supplemented by various passages that have been translated from the original Avesta into Pahlavi and are thus preserved; or by quotations of the Avesta text itself incorporated into the Pahlavi treatises. All this bears but a small proportion to the Avesta of Zoroaster's time, and the remnant is but small in extent when compared with the Hebrew Scriptures.

What is still extant is commonly divided into the following six classes: (1) Yasna, including the Gāthās, or Zoroastrian Psalms; (2) Vispered; (3) Yashts; (4) minor texts; (5) Vendīdād; (6) fragments.

The Yasna—a liturgical work, comprising seventy-two chapters—contains texts used by the “dastūr,” or priest, in connection chiefly with

**The Extant** the sacrifice of “haoma.” In the Avesta, midst of the Yasna the Gāthās are inserted. These are the Zoroastrian

psalms, and they represent the verses of Zoroaster's own preaching and teaching, embodying especially his belief in a new and better life; the coming of a Messiah, or Saoshyant; the annihilation of Satan and the evil principle, Angro-Mainyush, and the Druj, “Falsehood” (see **AHRIMAN**); and the general restoration of the world for ever and ever. For theologians the Gāthās are the most interesting and important part of the Avesta; but at the same time they are by far the most difficult.

Less characteristic is the short book known as the Vispered. It consists of brief invocations and offerings of homage to “all the lords” (“vīspe ratavō”), as the name implies. The Yashts, or Praises, twenty-one in number, contain praises of the angels or glorification of the spirits, and personified abstractions of the faith. They are generally written in meter, with some claim to poetic merit. One of the most interesting is the thirteenth, or Farvadin Yasht, on the worship of the spirits (“fravashis”). The doctrine of the ancient Persian faith, which this Yasht contains, has been brought by Paul de Lagarde into connection with the Purim festival. Another Yasht (Yt. 19) is in praise of the kingly glory (“hvarenah”), the halo, sheen, or majesty which surrounds and protects the king as a mark of divine favor (compare Moses' shining face, Ex. xxxiv. 29). The Vendīdād, in twenty-two chapters, is an Iranian Pentateuch, and it contains numerous parallels of interest to the Biblical student.

The real pioneer exegete at the end of the eighteenth century was Anquetil du Perron; then followed Burnouf and Rask; later came Haug, Westergaard, Spiegel, Roth, Hübschmann, De Harlez; or more recently, West, Mills (a staunch advocate of the Pahlavi), and especially Geldner and James Darmesteter. The latter's theory of the late origin of the Avesta (in “Le Zend-Avesta,” iii., Introduction, and “Sacred Books of the East,” 2d ed., iv., Introduction) can not be said to have found much favor among specialists or support among those best qualified to judge; but he has brought out numerous likenesses between the Avesta and the Old Testament.

**AVICEBRON, SOLOMON IBN GABIROL.**  
See **IBN GABIROL**.

**AVICENNA (ABU ALI IBN ABDALLAH IBN SINA):** Physician and philosopher of note; born at Bokhara in 980; died in 1037. His works, which were brought to Spain about one hundred years after their publication, exerted a great influence upon Jewish thought in the Middle Ages. His philosophical investigations are embodied in a great encyclopedic work entitled “*Al-Shafa'*” (Healing), a term which in the Latin translation has been corrupted into “*Sufficientia*.” This Latin translation, prepared by the aid of Jewish interpreters, has been frequently used by Jewish authors, notably Samuel ibn Tibbon in his “*Yiḳkawu ha-Mayyim*.” It is divided into four parts; namely, logic, physics, mathematics, and metaphysics. In addition to the “*Shafa'*,” there is a smaller encyclopedia, “*Al-Najah*,” which, under the title “*Healing of the Soul*,” was, in 1330, translated by Todros Todrosi in Rome.

In regard to Avicenna's importance as a philosopher, Maimonides and Shem-Tob Falaquera have both expressed their views. Maimonides says: “The works of Avicenna, although distinguished by tolerable accuracy as well as by subtlety of speculation, are nevertheless inferior to those of Abu-Nasr al-Farabi; they are useful, however, and deserve to be studied.” This opinion is shared

**His** by Shem-Tob Falaquera, who declares **Importance** that Avicenna's works are “exact, but as a Phil- incomprehensible to those unfamiliar losopher. with logic.” Of greater importance

are the medical works of Avicenna, and as an author he has been distinguished in this domain by the honorary title of “*Prince of Physicians*.” His chief medical publication is the “*Canon*,” a complete system of medicine, which, in 1279, was translated into Hebrew by Nathan ha-Meati (“of Cento”). Parts of the work were translated also by two other Jewish scholars, and numerous commentaries have from time to time been written upon it. In addition to this work, Avicenna has left a smaller medical compendium in ten volumes, and has even given expression to his medical knowledge in rime. The last-mentioned publications were likewise perpetuated in Hebrew translations.

The “*Canon*” (“*Al-Kanun fī al-Tibb*”) the greatest literary production of Avicenna, is a colossal work,

which for five centuries was accepted as a guide in European universities, and which was used as a textbook in the universities of Louvain and Montpellier until about 1650. It con-

**The** **"Canon."** consists of five books, subdivided into funūn or fen (sections), tractatus, summa, and caput. Of these volumes the first and second treat of physiology, pathology, and hygiene; the third and fourth, of the methods of treating disease; and the fifth, of materia medica. The many points of excellence possessed by the voluminous work and its admirable literary style make it possible to understand readily the reason for its great popularity both in the Oriental schools and among the Occidental Arabists of a later date. It was among the latter, rather than in Arabian Spain—where the influence of Averroes was predominant—that Avicenna's works attained their greatest popularity.

In some respects the "Canon" of Avicenna is not unlike the works of his predecessors Rhazes and Ali, although excelling the "El-Hawi" (Continens), or "Summary," of the former by greater exactness of method.

This power of systematization was due perhaps to his mastery of logic—a domain in which his acquirements entitled him to be ranked as one of the principal forerunners of **Logic and** **Meta-** Albertus Magnus and his immediate **physics.** successors, all of whom were compelled to draw their formulas largely from Avicenna's works. The logic of Avicenna is distinguished by great comprehensiveness of scope, and by a scrupulously conscientious endeavor on the part of the author—who here evidently follows the example of Al-Farabi—to present the subject clearly, comprehensively, and circumstantially.

As regards the fundamental tenets of his philosophy, Avicenna taught that matter, the principle of individuation, does not directly emanate from the Godhead, although it is in its primal origin eternal, and includes within itself all possibilities of development. In other words, he held that while all things are primarily traceable to the agency of an immutable Deity, they can not owe their existence to the immediate influence of such a Deity, inasmuch as the immutable can not itself create substances subject to the element of change. The first and only immediate product of God, therefore, is the world-soul or world-intelligence, which unwinds an endless chain of creation throughout all the celestial spheres down to the earth. The cause that produces, however, must also conserve, for cause and effect are identical; from which it follows that the world itself, like God, must be eternal.

Avicenna's psychological views, expressed in the sixth volume of his work on physics (the second part of the "Shefa," in the so-called "Liber Sextus Naturalium"), exerted great influence upon Jewish scholars. In his preface to this book the

**Psy-** **chology.** Latin translator, Johannes Hispalensis, declares that it contains "Quidquid Aristoteles dixit in libro suo de anima et de sensu et sensato et de intellectu et intellecto." In addition to this, Avicenna's principal work on psychology, he wrote a number of dissertations on the soul, nearly all of which have been

translated into Hebrew; and although in general based upon the psychological theories of Aristotle, Avicenna's views are in many respects original. As an example mention may be made of his division of the soul's attributes into four classes; namely, the external powers, or five senses; the internal powers; the motive powers, and the intellectual powers. Avicenna was also the first philosopher after Galen to indicate the three cavities of the brain as the seat of the soul's functions; his opinions on this as on other subjects being later adopted by Jewish authors, and more particularly by Shem-Tob Falaquera, who in his work on psychology shows himself a true adherent of Avicenna. Like the latter, Falaquera proceeds upon the principle, "Have cognizance of yourself, and you will have cognizance of your Maker," hereby establishing psychology as an introduction to metaphysics.

The works of Avicenna not infrequently contain conflicting theories—a fact explained by Averroes (the keenest opponent of the great philosopher) upon the ground that Avicenna was afraid to avow his opinions, as he desired to preserve the favor of all parties and to offend none. Indeed, it was early asserted that Avicenna's true views were not contained in the "Shefa" at all, but were to be found in the mystical work entitled "Oriental Wisdom or Philosophy"—a work which now exists neither in Arabic nor in Latin, only a fragment having been preserved in a Hebrew manuscript (Steinschneider, "Jüdische Literatur," p. 301).

Thus it appears that Avicenna's Neoplatonic theory of evolution gradually led him to mysticism, and as adherent of the new Platonic system the soul of the rationalist and that of the mystic were strangely blended in him, which caused him to become the originator of the ultimately fatal doctrine of the twofold truth—a doctrine focused in the sentence "Secundum fidem verum; secundum rationem falsum" (True according to faith; false according to reason), and later employed in defense of his own bold opinions by Isaac Albalag (compare Joel, "Hasdai Crescas," p. 7).

**AVIGDOR, ELIM D':** Engineer and communal worker (died in London Feb. 9, 1895); was the eldest son of Count Salamon Henri d'Avigdor and of Rachel, second daughter of Sir Isaac Lyon Goldsmid. He was educated at University College, London, and the University of London. Having been articled to the engineer Hawkshaw, D'Avigdor in 1862 went first to Hull, then to Rangoon (Burma) in connection with his professional work. He supervised the construction of railways in Syria and in Transylvania, and of water-works in Vienna. It was D'Avigdor's railway experience added to his interest in Palestine as chief of the Chovevi Zion Association which led him to contract in railway work in Syria and to form the Tyrian Construction Company. Gaining some experience in literary work in connection with "Vanity Fair," he bought the "Examiner." He subsequently brought out a paper called the "Yachting Gazette." Under the

pseudonym of "Wanderer," D'Avigdor published many hunting stories of merit for which he was well qualified, being himself an intrepid rider to hounds. D'Avigdor was a warden of the Spanish and Portuguese synagogue, and served on several committees. He was chief of the Chovevi Zion Association, in which movement he took the keenest interest; joining this in 1891 he helped to consolidate it, and was instrumental in bringing it into connection with similar associations on the Continent. He was a member of the council of the Anglo-Jewish Association from 1871 until his death.

He married a daughter of Bethel Jacobs of Hull, by whom he had one son and five daughters. The son, Osmond d'Avigdor Goldsmid, inherited the Goldsmid estates on the death of Sir Julian Goldsmid.

**AVIGDOR, JACOB:** Chief rabbi ("hakam bashi") at Constantinople from 1860 to 1863; born 1794; died 1874. He was a capable Talmudist and conversant with several foreign languages. Avigdor was instrumental in organizing several institutions in the Turkish dominions, among them the Assembly of Jewish Notables, which latter has introduced many beneficial regulations. In 1863 a fanatical rabbi, Isaac Akrisch, who had excommunicated Count Abraham de Camondo, succeeded in so inciting the people against Avigdor that in July of that year he was compelled to resign his office. He was subsequently elected "Rab ha-kolel," or spiritual leader of the community, and retained the office till his death.

**AVIGDOR, JULES D':** Banker, and member of the Piedmont Parliament; born in Nice; died at Paris February, 1856. He was a grandson of **Isaac Samuel d'Avigdor**, secretary of the Paris Sanhedrin; See SANHEDRIN. He was the first Jew elected by his Catholic fellow-citizens to the lower house of Parliament, February, 1854. He was, however, at the same time also Prussian consul at Nice, and as such ineligible to Parliament; his election, therefore, was annulled by the house, but he was returned again by an overwhelming majority, and, having resigned the consulship, was admitted. Avigdor, equally devoted to his religion and his country, died in the prime of his life, and by his own last request was interred at Nice.

M. K.

**AVIGDOR, RACHEL, COUNTESS D':** Communal worker at London, England; born Sept. 19, 1816; died Nov. 5, 1896. She was the second daughter of Sir Isaac Lyon and Isabel Goldsmid, and was privately educated by some of the most eminent teachers of the time, including Thomas Campbell, the poet. In June, 1840, she was married to Count Salamon Henri d'Avigdor, son of the d'Avigdor who was a member of the Great Sanhedrin assembled by Napoleon. Shortly after their marriage, the count and countess d'Avigdor went to London, where were born their three sons and one daughter. Her husband, from whom she eventually separated,

returned to Paris, and became a personal friend of Napoleon III., who conferred upon him the title of duke.

The countess took a deep interest in the communal institutions of the English metropolis. She was at one time president of the Ladies' Committee of the Jews' Deaf and Dumb Home, and honorary secretary of the West End Charity; also a member of the committees of the Jewish Convalescent Home, of the workhouse committee of the Jewish Board of Guardians, and of the West End Sabbath School. Both the Bayswater schools and the Jews' Deaf and Dumb Home owed their inception principally to her advocacy.

**AVIGNON:** Capital of the department of Vaucluse, France; formerly seat of the papal court. The first settlement of Jews in Avignon goes back

The Synagogue at Avignon.

(From a photograph.)

probably to the second century of the common era, a few years after the destruction of Bethar by Hadrian. In 390 they were already sufficiently numerous to take a leading part in a revolt against Bishop Stephen. As usual almost everywhere, they congregated in certain portions of the town, known later as the Jewry, or "Carrière des Juifs." It lay at first on the banks of the Rhône, along the slope of the

Rocher, and exactly opposite the papal palace; its narrow lanes are still called the "Reille Juiverie" and the "Petite Reille." There are still shown the remains of an ancient building declared, with or without reason, to have been the first synagogue. But in the course of the thirteenth century, this quarter, having become too crowded, was demolished by Louis VIII., and the Jews were allotted a new and more spacious location in the heart of the city, corresponding with the present Place de Jerusalem and the Rues Abraham and Jacob. This location was covered with buildings, four, and sometimes five, stories high, and was intersected by narrow lanes, for the most part unclean, and lacking air and light. Two

#### Early History.

Early History. The "Reille Juiverie" and the "Petite Reille." There are still shown the

gates, opened only in the daytime, communicated with the outer world. The synagogue, or "escole," was toward the southeast. It was burned down in 1844, and the present building, of modern construction, arose in its place.

With regard to its internal administration, the Carrière formed a sort of semi-independent republic, although placed under the control of the provost representing the Holy Chair. It convened its own assemblies or parliaments, appointed its own magistrates and officials, made its laws, its statutes or "ascamot," and regulated its taxes. Its population was divided into three classes, according to their property qualifications; each class being represented in the parliament by five delegates or "baylons," who were invested with both executive and legislative powers. The taxes were pro rata; and every one liable was required to declare each year upon oath the actual amount of his property. The collection of the taxes was entrusted to both Jews and Christians; the school was supported at the common expense; and instruction was obligatory and free. Like every other government, that of the Carrière had its critical periods; the assessment and collection of taxes especially gave rise to great difficulties and numerous scandals; but, compared with other constitutions, that of the Carrière, taken all in all, was relatively just and liberal.

The history, properly so-called, of the Avignon Jewry may be divided into two parts: the period preceding the fifteenth century, and that following it. During the former period, the Jews of Avignon occupied themselves peaceably in many trades. The city authorities never disturbed them; their neighbors looked upon them with no jealous eye; and as farmers, laborers, pedlars, brokers, money-lenders, small merchants, matrimonial agents, sellers of books and manuscripts, surgeons, barbers, and physicians, the Jews were to be found in every branch of human activity. The popes relied on them as treasurers, commissaries, and stewards; the magistrates entrusted them with the assessments of furniture and books and utilized their knowledge in making inventories of the estates of deceased persons.

**In the Fifteenth Century.** The university employed them in the purchase of rare and precious manuscripts; in short, every branch of the state testified to its good opinion of the Jews of the city by the use it made of them.

Unfortunately, toward the second half of the fifteenth century, their position underwent a complete change. From that epoch dates an era of violence, disorder, and persecution, which lasted until the French Revolution. The causes of this transformation were manifold. First there was the state of general trouble and misery caused throughout the country by the departure of the popes from Avignon; then the ravages caused by pestilence and inundations; the ruin left behind them by the mercenary troops of Francis I.; the egotism and the jealousy of the freshly emancipated bourgeoisie; finally and especially, the ever-growing intolerance of the Church. Avignon had lost a great portion of its population; its commerce, always flourishing under the popes, had come to a standstill; business had almost completely ceased; and discontent was

wide-spread. At this economic crisis, the population of the Carrière was considerably increased by the arrival of Jews who had been persecuted in surrounding districts and sought refuge in Avignon and the county. These unfortunate refugees came from Dauphiné, Arles, Marseilles, and the principality of Orange, and naturally brought with them all the energy and activity of their race. This was thought sufficient ground to hold them responsible for the deplorable situation in the city. In the eyes of the populace, it was the Jews who had destroyed the commerce of the country and, by their dubious intrigues, had monopolized all its wealth. A wide-spread outcry arose against them on every side; which, being taken up by the representatives of the city and the Three Estates, soon took the shape of precise accusations against them, against their unscrupulous doings, their robberies, their usuries, and so on; and also of denunciations of the liberty accorded to these formidable rivals. From that moment, the delegates of the city and the country incessantly clamored for harsh measures of repression against the inhabitants of the Carrière.

The Jews had in no way deserved these attacks. They certainly formed the most miserable portion of the population. They were for the most part poor people who lived from hand to mouth; if some of them practised usury, it was generally as brokers for rich Lombard or Italian financiers. Moreover, all the usurers of that time were not Jews. The registers of court indictments in the fifteenth century are full of proceedings relative to loans on pledges. Men and women, clerics and laymen, all dabbled in usury; and papal bulls were of no avail against it. The accusation of monopolizing wealth had no better foundation in fact. The "manifestes," declared each year by the Jews at the assessment for taxes, furnish complete evidence of the absurdity of this charge. More than once, the Carrière was upon the verge of being foreclosed and sold by its creditors, so difficult was it for the Jews to pay their debts and numerous fines. If there were any monopolists of wealth at this time, they were the convents and churches. In 1474 Sixtus IV. himself was compelled to issue a bull to restrain the constantly growing wealth of the Carthusian and Celestine monks; nevertheless, in the seventeenth century they owned houses in nearly every street in Avignon, and even the synagogue and a large portion of the Ghetto. However this may be, against the popular indignation the Jews had no protectors other than the sovereigns of the country; that is to say,

**Under the Popes.** the popes. But the papal policy toward the Jews was of a very capricious kind. It knew no constant principle, but varied according to circumstances. The Church defended the Jews when her interests recommended such course; and, with a right-about-face, she sacrificed them when there was profit in their ruin. The Jews of Avignon furnished to the popes both a source of income and a means of expiating political mistakes; and thus it came about that the same pope proclaimed himself at one time their defender, and at another their adversary.

In the fifteenth and sixteenth centuries, the popes generally welcomed the grievances of the populace.

On the demand of the Three Estates, Pius II. in 1457 issued an edict forbidding Jews to sell grain or other articles of food; to make contracts with Christians, or to take mortgages upon their property. Sixtus IV. renewed these restrictions; Leo X. in 1513 prohibited them from acquiring stores of grain before the harvest, and from going into the fields. Alexander VI., Clement VII., Paul IV., and Pius V. renewed and intensified these prohibitions, canceled all debts of ten years' standing owed to Jews, and compelled them to wear, under extreme penalties for disobedience, the infamous Jew-badge. In 1567 the Council of Avignon gravely proposed nothing less than the absolute cessation of all relations between Jews and the rest of the population. It forbade Christians, as the canon laws regularly did, to accept unleavened bread from the Jews, to employ their physicians, to enter their bathing-houses, to associate or to play with them, to be present at their marriages or their festivities, to enter their service as nurses or servants. It also forbade masons to speak to them during their work, barbers to dress their beards, etc. Further, it forbade Jews to deal in horses or mules; to pass the night outside the Ghetto, or to go out at all on Thursday, Friday, and Saturday in Holy Week; to show themselves on the street during the hours of church service; or to buy any articles pertaining to religious uses. Finally, Pius V. issued a decree banishing Jews from his dominions.

It is true, indeed, that a rigorous application of the foregoing regulations would have rendered the bull of Pope Pius V. quite superfluous. For the Jews, completely paralyzed in all their commercial activities, would have of necessity quitted the comté to beg from more hospitable countries the right to live. But in actual practise, the excessive harshness of these laws was considerably modified; and although the situation of the Jews was always sufficiently precarious and wretched, there were nevertheless moments when they were treated with a certain degree of toleration—interested toleration, no doubt, but the best obtainable.

For the right of sojourn in Avignon, Jews had to pay a heavy tax to the representatives of the popes and the city. From the papal legates down to their cooks, from the consuls down to their coachmen, every official, and even the wives of certain officials, had the right to exact from them gifts and presents upon certain occasions, which, added to the regular taxes, must have amounted to very considerable sums. Being poor, the Carrière, to pay these, was obliged to have recourse to loans from individual Christians, convents, and churches, and sometimes even from the city. But the shackles imposed upon its commerce, as well as the poor state of trade in the country generally, prevented the Jews not only from paying their debts, but also the interest thereon. Their obligations therefore increased from year to year, and attained at time huge proportions. In addition to the regular taxes, both papal legates and the estates had no scruples in levying extraordinary contributions when they needed them. Thus in the seventeenth century, after the sojourn of the troops of Marshal de Belle-Isle in the county, the estates

demanding of the Jews no less than 90,000 francs as their share of the expenses of supporting the army; although, with the rest of the people of Avignon, they had already contributed in advance. Naturally they were compelled to borrow this large sum.

But these very debts which, as has been stated, they contracted only under force and constraint, turned out to be for their benefit and made their banishment impossible. Their creditors, despairing of ever getting back their money, protested against the severity of these bulls and pontifical regulations, which hurt themselves indirectly, inasmuch as they prevented their Jewish debtors from honoring their obligations. They, therefore, insisted upon a less rigorous application of them, and opposed vehemently any idea of expelling the Jews.

The history of the Jews of Avignon in the seventeenth and eighteenth centuries is one long struggle between the city, the estates, and the Holy See. These three powers could never agree upon measures for or against the Jews. When the papacy needed funds, infractions by the Jews of the bulls and regulations of the councils were tolerated so long as the papacy profited by them. Thereupon, loud complaints from the populace would arise to remind the legates of their duty, and to insist upon the stringent application of the old prohibitory laws or even upon the expulsion of the inhabitants of the Carrière. On the contrary, when the Holy Church laid too many fetters upon the commerce of the Jews, and threatened their expulsion, the consuls flew to their aid, as is proved by certain inedited extracts from the instructions which they gave to their agent at the papal court. In 1616, upon the demand of the estates, the pope seems to have decided to order the expulsion of the Jews. The tidings produced great disquiet at Avignon, and the consuls, representing their constituents, wrote to their delegates at Rome as follows:

"We are determined to oppose this new movement, and the petition which they are making, or will make, in this regard, as prejudicial to certain individuals and contrary to the public weal. We desire that you oppose it in the name of our city, demanding that we be heard."

In another letter addressed to the same, they said:

"In continuation of what our predecessors wrote to you, concerning the Jews of the county, to insist that they shall not be expelled from the said county, we say to you that this city has right on its side to maintain that the Jews shall not leave this county, as well as to demonstrate that their residence in the country is necessary; seeing that the said Jews are indebted, both severally and as a community, in certain very considerable sums, as well to monasteries as to convents, noblemen, citizens, and merchants of this town; . . . another reason being, that the said Jews comport themselves decently and obey the rules of duty."

Thanks to this mutual antagonism of the three powers, the Jews were able to pass through the seventeenth and eighteenth centuries with expulsion only hanging as a menace over their heads. If dealing in land and grain was forbidden, if Jews were excluded from the positions of tax-collector and from other public offices, they continued to devote themselves, nevertheless, to small trading, peddling, and dealing in horses and mules.

But if their material existence, so uncertain and so wretched, was on the whole endurable, their moral condition was appalling. The Church, which permitted them to live, thought it necessary to

degrade them in its own interests. The measures devised against them by the councils of the fifteenth and sixteenth centuries have already been mentioned; but it was especially in the second half of the seventeenth century that the intolerance of the Holy Office smote them most harshly. From that epoch, up to the French Revolution, the ordinances of legates and cardinals followed each other with ever-increasing rigor; and all former regulations were applied to the letter.

The fanaticism of the Inquisition did not stop even there; it aimed at the voluntary, or involuntary, conversion of the Jews, and the disappearance of Judaism. To this end Jews were forbidden to read the Talmud and other rabbinical books; Jesuits and Dominican monks were appointed to hold discussions, or to deliver sermons, every Saturday in the synagogue, where the presence of the Jews was absolutely compulsory. But these sermons did not produce the desired effect. Then the Church had recourse to force. During part of the eighteenth century the plague ravaged Avignon. The Carrière had many victims, who were carried to the hospital and nursed by Dominicans, who, by persuasion, by promises, and by threats, caused to be baptized a full third of the poor patients entrusted to their care. These were for the most part children and old men incapable of resistance. Stimulated by this semblance of success, the monks continued their exertions long after the epidemic had disappeared. Although the Church forbade it officially, they secretly encouraged the carrying off of young Jewish children, whom they then forced into the pale of the Church. There is nothing more moving than the protestations—as indignant as futile—of the Jewish fathers against such proceedings: a child once touched by the waters of baptism had to remain a Christian, and was lost to its parents and to its faith. Avignon to-day contains about forty Jewish families. It belongs to the *Circonscription Consistorial* of Marseilles. Services are only occasionally held in the synagogue, a modern edifice erected by the municipality to replace the older one, which was destroyed by fire.

The Jews of Avignon formed with those of Carpentras, L'Isle, and Cavaillon the four communities called "Arba' Kehillot" by Jewish authors of the Middle Ages. These communities had a special liturgy of their own, called "Comtadin," from the name formerly borne by the province in which these towns were included. This liturgy, while resembling the Portuguese greatly, is distinguished from it by numerous differences; a few only can be cited: the omission of the prayer "Alenu," the substitution of "Shalom rab" for "Sim Shalom"; the insertion of certain special liturgical compositions and poems on Friday evenings, which are not to be found elsewhere. There are also reminiscences of the local history; as, for instance, נשמת דיום הסגר (the Nishmat for the Day of the Shutting In), recited on the Sabbath of the Christian Easter week in commemoration of the prohibition laid upon the Jews against leaving their quarters at that period, and the prayer על הנסים.

**AVILA** (אבילה, אבילה): Town in Old Castile, fifteen miles from Madrid. In the Middle Ages it was one of the wealthiest and most flourishing cities of Spain. Jews have resided there since 1085, when they dwelt in the street called "Calle de Lomo" (now "Calle de Esteban Domingo"). In 1291 the congregation was of such large proportions that it paid more than 74,000 maravedis in taxes. It possessed several synagogues. One of them was on the same spot in the Calle de Lomo on which the Church of All Saints was afterward built; a second, not far from the former, was "presented" by the government in 1495 to the monastery of Santa Maria de la Encarnacion. The Jewish cemetery, which had a frontage of about 200 meters, lay in the valley; it is now called "Cerca de los Osos." After the expulsion of the Jews their Catholic majesties "presented" it to the monastery of St. Thomas, which purchased additional land with the proviso that converts to Christianity or descendants of converts should not be interred therein.

It was before the inquisitional tribunal of Avila in 1491 that the celebrated trial took place for the alleged ritual murder of the afterward canonized "child from La Guardia," a place that never existed. A shoemaker named Jucé Franco, his old father, and his brothers were accused of this murder, and were all put to death at the stake Nov. 16, 1491. As a sequel to the trial and execution a popular uprising took place, and the Jews in Avila were massacred and plundered. To such excesses did the popular fury give rise that a special edict had to be issued by the crown (Dec. 16, 1491) taking the Jews under royal protection.

Avila with its many churches and monasteries was extremely ecclesiastical; the Jews dwelling there were therefore inclined to religious mysticism. It was in Avila that a man named Abraham appeared in 1295 as Messiah and miracle-worker. Here, too, much attention was paid to the study of cabala; and many cabalists and scholars from Avila (or whose ancestors had belonged to the town) took the surname "de Avila."

**AVILA, ELIEZER B. SAMUEL DE:** Author of rabbinical works, and rabbi at Rabat, Morocco; born 1714; died at Rabat Feb. 7, 1761. Avila was a scion of an illustrious family of scholars. His father Samuel, his grandfather Moses, and Hayyim b. Moses ibn Attar, his maternal uncle, were all prominent Talmudists and well-known authors. Like

his uncle Hayyim, Avila desired to see the Holy Land and intended to settle in Jerusalem; but, owing to an epidemic and a famine in Morocco, which lasted a long time and compelled him to leave Rabat for a while, he lacked the necessary means to do so.

Avila was a prolific writer, and among his manuscripts were found notes dating from his sixteenth year. After his death the following of his works appeared: (1) "Magen Gibborim" (The Shield of the Mighty), Leghorn, 1781-85, in two volumes; the first containing novellæ to the treatises, Baba Mezi'a and Horayot; the second, novellæ to the treatises Ketubot and Kiddushin. (2) "Milhemet Mizwah" (The War for the Law), *ib.*, 1806, containing the principles of the Talmudic and post-Talmudic Halakah. Some funeral sermons are appended under the title "Hesed we-Emet" (Kindness and Truth). (3) "Be'er Mayyim Hayyim" (A Well of Living Waters), *ib.*, 1806, consisting of thirty-six responsa, treating of questions relating to jurisprudence and cases of 'AGUNAH. (4) "Ma'yan Gannim" (A Fountain of Gardens), explanations and elucidations of Jacob ben Yehiel's "Turim," especially of the second and third parts (*ib.*, 1806).

As these works show, Avila confined his work in rabbinical literature to the Halakah. In this province at all events he was an undisputed master; and his epithet, "Ner ha-Ma'arabi" (Light of the West) was not undeserved. His greatness as a Talmudist was recognized even by the most eminent Palestinian scholars, who, in the capacity of "Meshullahim," had the opportunity of becoming personally acquainted with him. It was to them that he owed this title. Among the scholars of Morocco, Avila, with his avowed inclination toward the casuistic treatment of the Halakah (PILPUL), was a rare personality. This tendency explains his independent attitude toward his colleagues, on whom his keen and brilliant intellect made a deep impression, as shown in his responsa. These responsa contain many interesting items concerning the condition of the Jews in Morocco ("Be'er Mayyim Hayyim," p. 71).

Avila left one child, a daughter, who married her cousin Solomon de Avila, a man of wealth and a distinguished Talmudist. The sons by this marriage, **Moses** and **Samuel**, were, in a way, the successors of their grandfather, both being rabbis and Talmudic teachers in Rabat. **Joseph de Avila**, son of Moses, was the publisher of the works of his great-grandfather Eliezer.

L. G.

**AVILA, SAMUEL BEN MOSES BEN ISAAC DE:** Rabbi and preacher at Mequenez, Morocco, and later at Salé, Morocco, born in the first-named place in 1687 or 1688. He published, under the title of "Ozen Shemuel," a collection of sermons: Five on "Repentance," preached on the Sabbath preceding the Day of Atonement; ten on "The Sabbaths of the Lord," preached on the Sabbath preceding Passover and the other festivals; and

sixteen funeral orations on some of his contemporaries, Joseph b. Bahatit (1705), Ephraim ibn Laba, (1705), Samuel Zarfati (1713), Isaac b. Amara (1713), and others. The book was approved by Judah ibn 'Attar, Abraham ibn Danon, and Jacob ibn Zur, and prefaced and published at Amsterdam, 1715, by Hananiah ibn Sikri. Samuel also published a work entitled "Keter Torah" (The Crown of the Law), pleading for the relief of scholars from taxation, and containing older regulations on the same subject as well as ethical rules. Appended to it are notes on Rashi, and Tosafot on the treatise Nazir, Amsterdam, 1725.

**AVIMS, AVITES.** See **AVVITES**.

**AVITUS OF AUVERGNE:** Bishop of Clermont-Ferrand, France, in the sixth century. While the Roman bishops at that time generally treated the Jews with great liberality, while Pope Gregory I. exhorted the clergy and the princes against the use of force in converting the Jews to Christianity, and while his predecessor Cautinus of Clermont was so favorably disposed toward the Jews that he paid them high prices for rare goods and jewelry, Avitus was one of those insolent bishops who, with the increasing power of the clergy under the feudal system, were overzealous in making proselytes among the Jews by force or by any other means. He repeatedly exhorted the Jews of Clermont to embrace Christianity, but met with no response. The people of Frankish Gaul at that time were entirely free from intolerance, and associated with the Jews without prejudice, intermarriages being frequent among them. Jews were among the shipowners on the rivers of Gaul and at sea, and distinguished themselves as physicians, judges, and warriors. This did not please the bigoted bishop, who at last had succeeded in converting one Jew, who was baptized on Easter Day, April 5, 576. When the new convert went in a procession through the streets in his white baptismal robe, he was sprinkled with rancid oil by a Jew. This act so aroused the mob that they attempted to stone the Jew, but were prevented from doing so by the bishop. On Ascension Day, May 14, however, the mob demolished the synagogue. On the following day the bishop gave the Jews a choice between baptism and banishment. After hesitating and delaying for three days, during which time many were attacked in their houses and some killed, over five hundred asked to be baptized (May 18, 576). Those who remained true to their religion emigrated to Marseilles.

Venantius Fortunatus, who at the request of the historian Gregory of Auvergne, bishop of Tours (544-595), wrote a poem on this occasion, hints at

the fact that the Jews only concluded to be baptized when they found out that resistance by arms was impossible ("Carm." v. 5). From Gregory's letters to Virgilius of Arles and to Theodore of Marseilles, it appears that the Jews who escaped to Marseilles were later also forced to adopt Christianity.

**AVLONA, AULONA, or VALONA** (אָוילאָנע, אַוילאָנע): Varying names of a town and seaport of Albania, on the Gulf of Avlona, on the Adriatic. From early times there seems to have been a flourishing Jewish community in the place. Messer David LEON, born about 1470, son of the philosopher Judah Leon, was in Salonica about 1510, when he received an invitation to go to Avlona and assume charge of the three Jewish congregations there, with an annual salary of 70 florins. He accepted the offer because he wished to go to Corfu, and Avlona was on his way. David preached in the synagogues in rotation. A quarrel breaking out among the various Jewish nationalities of the town, the Sephardim (comprising under that name the Jews of Portugal and Castile) separated from the Catalans and organized a prayer-meeting in the house of Abraham Zarfati. Toward the end of the second year of David's stay dissensions broke out also among the Sephardim. David sided with the Portuguese, who, he said, were "hot-tempered but obedient; they are open and generous, and not hypocritical and proud like the Castilians." The Portuguese established a synagogue for themselves; the Castilians demanded that David should compel the Portuguese, under penalty of excommunication, to continue to attend the former common synagogue. But David declined on the ground that the Portuguese were in the majority, and therefore had the right to separate from the minority.

At this juncture there arrived at Avlona a Jewish physician of Lisbon, Don Solomon Cressente. Slowly recovering from a serious illness, he offered, in testimony of gratitude to God, a gift of paraphernalia to the Portuguese synagogue. He intended by this to bring about the reconciliation of the Castilians with the Portuguese; and upon the sacred evening of Kol Nidre (the eve of Atonement Day) he sent messengers to the Castilians in their synagogue to implore them to pardon the Portuguese for any wrong which the latter might have done them. But his exertions were of no avail. The next day, the Day of Atonement, he requested David to intervene as conciliator; but the Castilians refused to obey David's summons to come to him for a mutual explanation, and so the strife grew warmer. The Portuguese, with David at their head, launched anathemas against the Castilians, who responded similarly. At the head of the Castilians at that time were Abraham de Collier and Abraham Harbon, judge, the former an enemy of David.

In the question of the conflicting synagogues, however, Abraham Harbon, who was a friend of David, pronounced against him, though among other arguments David had instanced his title of מוֹסֵמֵךְ

("ordained teacher") to influence the obedience of the Castilians. The Sephardim, on the other hand, laughed at the custom of ordaining rabbis (סְמִיכָה) as practised in France, Germany, and Italy. They claimed that the ceremony could only be legally performed in Palestine, and that rabbis who performed it in other countries did so only in imitation of the Gentiles. Moses ben Jacob Albelda, author of commentaries on various parts of the Bible, also lived in Avlona toward the end of the sixteenth century (Conforte, "Kore ha-Dorot," p. 39a).

**AVVITES, AVVA, AVVIM** (in A. V. **AV-ITES**): 1. A people mentioned in Deut. ii. 23 as being dispossessed by the Caphtorim. This, however, could not have taken place before the days of Joshua, for it is stated in Josh. xiii. 3 that the Israelites upon entering Canaan failed to conquer them; and their place of settlement is identical with the one mentioned in Deut. ii. 23. Although settled in the Philistine district, they do not appear to have had anything in common with the Philistines; they resemble rather the class of Bedouins who had made some progress toward the stage of permanent settlements.

2. A city in the domain of Benjamin, which may once have been a city of the Avvites (Josh. xviii. 23).

3. The place from which the king of Assyria brought people, worshipers of Nibhaz and Tartak, whom he settled in Samaria (II Kings xvii. 31). Called "Ivvah" in II Kings xviii. 34, xix. 13; Isa. xxxvii. 13.

G. B. L.

**AWANI, ISHAK IBN AL-:** Head of the Academy of Bagdad until displaced by a rival; lived in the thirteenth century. He was a contemporary of Al-Harizi, who seems to have made much fun of him. Referring to his displacement from his academical position, Al-Harizi accuses him of having paid for the chair then occupied by another. Awani's poetry finds no mercy at the hands of this rigorous critic, who exhausts his supply of stings upon him. But Al-Harizi's judgment upon Awani has proved to be a most unjust one, being simply the expression of discontent and revenge for insufficient payment of his own poetic efforts, or possibly of merely wounded vanity. Of all Awani's poems only one has been preserved, which has recently been published. It shows, however, sufficiently that the poet deserves a place among the foremost masters of "muwashshah" (popular poetry). With regard to form, Awani faithfully observes all the rules of the art. His so-called "girdle-poem," which is a poem on friendship, is strictly metrical and fully rhimed, and it shows the author's name in acrostic. In contents the poem is likewise of considerable merit. Babylonian though he was, he knew and had a skilful mastery of all the figurative expressions derived by the old Spanish classical writers from the Arabs and adopted into Hebrew poetry. The language is pure and free from all harshness; the connection is well preserved; and the whole is permeated by a genuine poetical spirit. Hazardous as it may be to pronounce a final judg-

ment concerning a poet based on a single poem, it is nevertheless true that the perusal of this one production is sufficient to show that he was no bungler in the art.

G.

H. B.

**AWIA** or **IWIA, RAB:** Babylonian amora of the fourth generation (fourth century), contemporary of Abaye and Raba (Ber. 28*b*; Shab. 46*a*), and brother-in-law of Rammi b. Pappa (B. B. 100*b*; Ket. 56*b*; compare "Aruch Completum," vii. 277, *s. v.* אַוּיָא). He was a disciple of R. Joseph, and very strict in ritual observances. An example of his extreme scrupulousness is given in Ber. 28*b*; and an instance of Awia's readiness in halakic argumentation is quoted in Shab. 46*a*. He once visited Raba's school with dust on his shoes. The master intended to punish him for his breach of etiquette by propounding puzzling questions to him that he hoped Awia would be unable to answer. Awia, however, stood the test and came forth victorious. The audience sympathized with Awia, and Nahman b. Isaac exclaimed: "Thanked be the Lord, that Raba did not succeed in putting Awia to shame" (Shab. 22*a*, 23*a*, 46*b*, 63*a*; Bezah 13*b*; Sanh. 14*a*; Men. 78*a*; 'Ar. 11*b*; Ex. R. i. 11).

J. SR.

S. M.

**AWIA SABA (THE ELDER), RAB:** Babylonian halakist of the third amoraic generation (third and fourth centuries), a contemporary of Rab Pappa (the Elder) and of Rabbah b. Hanan (M. K. 24*b*; Kid. 39*a*). He was a Pumbeditan by birth, but often sat at the feet of Rab Huna I., who considered him a great scholar. The Talmud (Bezah 21*a*; Hul. 124*b*) records two instances in which Awia, by his profundity of reasoning, became troublesome to his teacher, who, being exhausted by lecturing, broke up all further discussion by the evasive remark, "A raven has flown past." Awia was probably the father of אַחָא ב. אַוּיָא.

J. SR.

S. M.

**'AWIRA, RAB:** Babylonian amora of the third and fourth generations (fourth century); contemporary of Abaye and Safra—the latter speaking of him as of "a scholar coming from the West" (Palestine). 'Awira had emigrated to Palestine, where he officiated as usher at a college of "the great teacher" (probably Ammi); but he returned to his native land (Hul. 51*a*), bringing with him many Halakot and Haggadot of R. Ammi and of R. Assi, in transmitting which he frequently interchanged the names of the authors (Ber. 20*b*; Pes. 119*b* [correct version in MSS.]; Soṭah 4*b*; Giṭ. 7*a*; Hul. 84*b*; see AMMI). Besides those which he reported in the names of others, there are some original homilies by Rab 'Awira. "Come and see," he said once, "how unlike human nature is the nature of the Holy One. The man of high standing looks up with respect to a man higher placed than himself, but does not respect his inferior; not so the Holy One: He is supreme and yet respects the lowly, as Scripture says (Ps. cxxxviii. 6). 'Though the Lord is high, yet hath He respect unto the lowly.'" (Soṭah 5*a*). [Others ascribe this to R. Eleazar.]

According to 'Awira [some ascribe the remark to R. Joshua b. Levi], "The tempter [evil inclination] is called by seven different names. The Holy One—blessed be He!—calls him simply 'Evil,' as it is said (Gen. viii. 21), 'The inclination of man's heart is evil'; Moses calls him 'The uncircumcised,' for so he says (Deut. x. 16), 'Ye shall circumcise the foreskin ("orlat") of your heart'; David calls him 'Unclean,' for he prays (Ps. li. 12), 'Create in me a clean heart,' whence it appears that there is an unclean one; Solomon calls him 'Enemy,' for he says (Prov. xxv. 21, 22), 'If thine enemy be hungry, give him bread [religious nourishment] to eat; and if he be thirsty, give him water [spiritual refreshment] to drink,' etc. (compare Isa. lv. 1, 2); Isaiah calls him 'Stumbling-block,' for he cries (Isa. lvii. 14), 'Remove the stumbling-block out of the way of my people'; Ezekiel calls him 'Stone,' for he says (Ezek. xxxvi. 26), 'I will remove the heart of stone out of your flesh, and will give you a heart of flesh'; Joel calls him 'Lurker,' for he says (Joel ii. 20, Hebr.), 'I will remove far off from you the "zefoni,"' which, in the Haggadah, is taken as a symbolical name of the tempter who lies hidden ('zafun') in the heart of man" (Suk. 52*a*). Pes. 110*b*; Ket. 112*a*; B. B. 131*b*; Men. 43*a*; Hul. 42*b*, 55*a*.

S. M.

**AXENFELD, AUGUSTE:** French physician; born at Odessa Oct. 25, 1825; died at Paris Aug. 25, 1876. He was a son of Israel AXENFELD. After completing his school education at his native town, he went to Paris to study medicine, and in due course received his diploma as doctor of medicine from the Sorbonne. For his services during the cholera epidemic in Paris in 1849 and 1854 he was awarded two medals, and after having become a French citizen he was presented with the great gold medal of the "Assistance Publique."

In 1853 Axenfeld became lecturer at the Sorbonne, and in 1857 was elected a fellow. Shortly afterward he was appointed physician-in-chief at the hospital Beaujain, substituting as such professors Andral in the École de Médecine and Rostan in the Hôtel-Dieu. These positions he retained until 1871, when he was attacked with the severe cerebral disease which finally caused his death.

Axenfeld contributed many essays to the publication of the Société Anatomique, and was the author of: "Des Influences Nosocomiales," Paris, 1857; "Des Lésions Atrophiques de la Moëlle Epinière," in "Archives Générales," 1863; "Traité des Névroses," in Requin's "Traité de Pathologie Interne," published later (1883) by Henri Huchard; "Jean de Wier et les Sorciers," Paris, 1865; and jointly with Jules Beclard, "Rapport sur les Progrès de la Médecine en France," Paris, 1867.

F. T. H.

**AYAS, LÉON:** Interpreter of the French army in the Algerian campaign against Abd-el-Kader; died 1846. He received several wounds in the expeditions in the Oran, during which he captured one of Abd-el-Kader's lieutenants.

At the battle against the Bou-Maza he showed

special bravery; killing five Arabs at a critical moment of the battle, and receiving wounds of which he died the following year.

J.

**'AYIN:** The sixteenth letter of the Hebrew alphabet. Its numerical value is seventy. In its earlier form it was a circle, a rude picture of the eye, hence its name ("Ayin" = "eye"). This form is still to be seen on the Moabite Stone, and also on the old Hebrew inscription found in the Siloam Pool. Its pronunciation in modern time ranges from no sound at all, as in the Judæo-German pronunciation, to the nasal *ng* of the Spanish and Portuguese Jews. One reason for this wide range in pronunciation is that there were originally two distinct sounds in Hebrew, as in other Semitic languages, both represented by an 'Ayin: the one a rough breathing (still retained in Morocco and Syria), the other a soft palatal. The distinction between the two, still indicated in the transliteration of proper names in the Greek version of the Old Testament, was gradually lost; in certain districts the Jews retained in their pronunciation traces of the palatal (which accounts for the Sephardic pronunciation), in others all traces of the letter disappeared, and the rough breathing became purely vocalic (see Zimmern, "Vergleichende Grammatik der Semitischen Sprachen," § 7). The letter 'Ayin, along with the Aleph, Waw, and Yod, has been used quite extensively in the Yiddish orthography as a vowel letter, indicating short *e*.

G. B. L.

**AYLLON** (incorrectly also **Aylion**, **Aelion**, **Hillion**), **SOLOMON BEN JACOB:** Haham of the Sephardic congregations in London and Amsterdam and follower of Shabbethai Zebi; born in the Orient 1664 (1660 ?); died in Amsterdam April 10, 1728. His name is derived from a town in the Spanish province Segovia of the name of Ayllon. Ayllon was neither a general scholar nor a Talmudist of standing, as his responsa (found in Ezekiel Katzenellenbogen's "Kenesei Yehezkel," Nos. 3, 5; in Samuel Aboab's "Debar Shemuel," Nos. 320, 324; in Zebi Ashkenazi's "Hakam Zebi," No. 1; in Jacob Sasportas' "Ohel Ya'akov," No. 64) amply show. See also the anonymous letter quoted by Grätz, "Geschichte," x. 482 (3d ed.). But his history is closely interwoven with that of Shabbethaism in both the East and the West.

Ayllon's youth was passed in Salonica, which was probably his birthplace, although some persons assert that Safed was the place, because many Shabbethaians claimed to be of Palestinian birth. He associated with the Shabbethaian circles of Joseph Philosoph, Solomon Florentin, and other leading spirits of antinomian and communistic tendencies. There he is said to have married as his divinely appointed spouse a woman from whom another man had separated without the formality of a divorce, only to experience that she soon left him for a third spouse, whose "affinity" seemed holier to this strange sect than the bonds of lawful matrimony (M. Hagis, "Shebet Posh'im," 34; the passage is, however, somewhat obscure). A few years later he visited

Europe as a "meshullah" (messenger) from the Palestinian congregations to collect funds for the poor of the Holy Land, leaving his wife and children domiciled in Safed, and having apparently publicly broken with Shabbethaism. From Leghorn, where he was in 1688 (Aboab, *l.c.* 329), he repaired to Amsterdam and thence to London, where, after a few months' stay, he was appointed haham June 6, 1689. The very next year, however, he was vigorously attacked by a member of the congregation, named Ruby Fidanque, who had heard something of Ayllon's antecedents. The Mahamad, caring more for its dignity than for the truth, endeavored to suppress the scandal, but Ayllon's position was so hopelessly undermined by the exposure, that all the really

Solomon ben Jacob Ayllon.  
(From an engraving by J. Houbraken.)

learned members of the congregation would not submit to the new haham, which caused considerable friction, in spite of a pronunciamento ("haskamah") issued by the Mahamad that under penalty of excommunication it was forbidden "to any one except the appointed haham to lay down the law or to render any legal decision." Ayllon, in a letter to Sasportas ("Ohel Ya'akov," No. 69) six years later (1696), still complained bitterly of the unbearable relations between him and his congregation, and inasmuch as his olden Shabbethaian proclivities began to reassert themselves, and the congregation just then began to consider the propriety of asking for his resignation (M. Hagis, *l.c.*), he resolved to leave London, and was glad to accept an appointment as associate rabbi of the Sephardic congregation of Amsterdam, 1701.

Ayllon's first blunders in his new home took place when in 1700 he pronounced as harmless a heretical work by M. Cardozo (probably the work "Boker Abraham," still extant in manuscript), which he had been requested to examine by the Mahamad. This latter body, however, was somewhat distrustful of its hakam, and sought additional opinions from other learned authorities. They gave as their opinion that

Cardozo's work merited public burning, and this sentence was actually carried out. About this time, too, Zebi Ashkenazi came to Amsterdam as rabbi of the Ashkenazic community; his advent was a serious matter to Ayllon, as the former completely eclipsed his Sephardic colleague by his superior learning and dignity of character; he was also a noted heresy-hunter in the matter of the Shabbethaian movement. The clash could hardly have been averted, and Nehemiah Hayyun, a notorious Shabbethaian, precipitated it. At the request of M. Hāgis, Ashkenazi examined the works of Hayyun (1711) and rightly denounced them as heretical; in addition, he notified the Mahamad of the fact. This august body, however, did not exactly welcome advice volunteered by a Polish-German rabbi, and replied that, before taking action, Ashkenazi's opinion would have to be fortified by the assent of Ayllon and other members of their own body. Ashkenazi peremptorily declined this express invitation to sit in council with Ayllon, for he was well aware both of his ignorance of the Cabala and of his suspected affinity with Shabbethaism. Ayllon saw in this crisis an opportunity to make political capital. He persuaded an influential member of the Mahamad, a certain Aaron de Pinto, to take up the matter as an attempt on the part of the German rabbi to interfere with the autonomy of the Sephardic community. It is difficult to discover whether Ayllon was actuated herein by secret loyalty to Shabbethaism, or whether, for personal reasons, he merely sought to clear Hayyun from the imputation cast upon him. The adventurer was well acquainted with Ayllon's antecedents, and it would have been dangerous to make an enemy of him. Be this as it may, De Pinto succeeded in having a resolution passed by the Mahamad, declining to permit any such interference in their affairs by the German rabbi, and requesting Ayllon to appoint a committee to give an official opinion upon Hayyun's work. The finding of this commission was publicly announced Aug. 7, 1713, in the Portuguese synagogue, and it ran that Hayyun was innocent of the heresy charged against him, and that he had been unrighteously persecuted. The committee consisted of seven members, but its conclusions represented simply Ayllon's opinion, for the other six understood nothing of the matter. The affair, however, could not be considered closed herewith, for Ashkenazi and Hāgis had already, on July 23, pronounced the ban of excommunication upon Hayyun and his heretical book. In the protracted discussion which ensued between Ayllon and Ashkenazi, a discussion into which the rabbis of Germany, Austria, and Italy were drawn, Ayllon made but a sorry figure, although, as far as Amsterdam was concerned, it might be said to have ended triumphantly for him, seeing that Ashkenazi was compelled to leave the city. Not alone did Ayllon permit his protégé, Hayyun, to assail the foremost men in Israel with foulest insults, but he supplied him with personal papers containing attacks upon his opponent Hāgis, the unfounded nature of which he himself had formerly admitted and testified to. Ayllon was also no doubt the rabbi who laid charges against Ashkenazi before the Amsterdam magistrates, and thus made an internal dissension of the Jewish community a matter

of public discussion. It is claimed that upon hearing of the death of Ashkenazi in 1718, Ayllon confessed that he had wronged the man. It is certain that when, a few years later, Hayyun visited Amsterdam again, he found matters changed so much that even Ayllon refused to see him.

Ayllon left a cabalistic work, a manuscript of which is preserved in the library of the Jews' College in London (Neubauer, Cat. Bodl. Hebr. MSS., No. 125).

L. G.

**AYYAS, JACOB MOSES:** Son of Judah Ayyas; lived at Jerusalem, whence he was sent abroad to collect money for the Palestine poor. In 1783 he visited Algiers, where he was received with great honor. Following a call to Ferrara, he settled there as rabbi and teacher. One of his pupils was Nepi, the associate author of "Toledot Gedole Yisrael." Ayyas wrote "Derek Hayyim" (The Way of Life), treating of annulment of vows, of the ceremony known as TASHLIK, etc., Leghorn, 1810.

M. B.

**AYYAS, JUDAH:** A commentator and casuist; born in North Africa about 1690; died at Jerusalem Sept. 11, 1760. He pursued his Talmudic studies at Algiers under the supervision of Solomon Zeror, rabbi of that city. From 1728 to 1756 Ayyas officiated as dayyan of Algiers, in which capacity he was very popular and much consulted on ritual questions. In 1756 he went by way of Leghorn to Jerusalem, where he spent the closing years of his life. The chief motive for his departure seems to have been the progressive spirit that begun to make itself felt in the Algerian community. Ayyas was a strict Talmudist, a keen casuist, but narrow-minded and without any sympathy for questions outside the domain of Halakah. He wrote: (1) "Lehem Yehudah" (The Bread of Judah), a commentary on Maimonides' "Yad ha-Hazakah" (Leghorn, 1745). (2) "Bet Yehudah" (Judah's House), responsa on the four "Turim" (Leghorn, 1746). This latter work throws some light on the social and economic conditions of the Jewry of North Africa in Ayyas' days. From the fifth responsum in Eben ha-'Ezer, for instance, it appears that cases of bigamy were not rare among Oriental Jews of the eighteenth century. Appended to it are the communal regulations of Algiers as laid down by R. Joseph ben Sheshet (ר' יוסף) and R. Simon ben Zemah Duran (ר' שמואל). (3) "Wezot li-Yehudah" (And This Too Is Judah's), commentaries on various subjects (Leghorn, 1776). (4) "Bene Yehudah" (Judah's Sons), on the terminology and style of Maimonides, Tosafot and Mizrahi; this work contains also some responsa; appended to it is a treatise, "Ot Berit" (The Sign of the Covenant), on circumcision (Leghorn, 1758). (5) "Matteh Yehudah" (The Tribe of Judah) and (6) "Shebet Yehudah" (Leghorn, 1783, 1788), containing novellæ on Shulhan 'Aruk, Orah Hayyim, and Yoreh De'ah. (7) "Afra de Ar'a"

(The Dust of the Earth), a commentary on Jacob Algazi's "Ar'a de Rabbanan" (Leghorn, 1783).

**AZ SHESH MEOT** (אז שש מאות): A poem of three stanzas by R. Elias Priscus, introduced in the northern liturgy at the conclusion of the piyyutim in the Additional Service on the Feast of Weeks. A paraphrase is given below of the two melodies associated with the poem: both are equally quotations from the music of the Days of Penitence, and afford (the more usually followed intonation especially) an excellent illustration of the hermeneutical feeling by

and the persistence of the practise shows that his intention was widely understood and appreciated.

The melody transferred already contained within itself a quotation, in the phrase between the points marked here "A" and "B," which had been excerpted from the melody of KOL NIDRE. It had been introduced because at that point in the original text mention was made of the Day of Atonement, on which alone "Kol Nidre" is sung. For this employment of a snatch of tune associated with a particular service as a representative theme of some idea suggested by that service or enshrined in the object of the occasion, see the general article MUSIC, SYNAGOGAL.

in Thy grace, And grant the... prayer of them that... seek Thy face!  
Bride was named, When He this... day the Ten great Words pro - claimed.

which so much of the traditional melody of the *hazan* has been guided in its shaping. The noble version here transcribed as sung in the "musaf" of the Feast of Weeks is quoted bodily from the same service of the Days of Memorial and of Atonement, where it is associated with that second part of the piyyut "U-netanneh Tokef," legendarily associated with R. AMNON OF MAYENCE, in which the Talmudical theory (R. H. 16b) of the writing and sealing of man's fate at the commencement and end of the Days of Penitence is rhapsodically developed. Reflecting that the destiny of man is in the end dependent upon his own obedience or disobedience to the Law, some old-time *hazan* considered that he might melodiously emphasize this Jewish doctrine of personal responsibility when singing of the giving of that Law. With this object he chanted "Az Shesh Meot" to the melody of "U-netanneh Tokef";

**AZAL** (R. V. **AZEL**): A place near Jerusalem, but the exact position can not be determined (Zech. xiv. 5). It is supposed by some to be the same as Beth-ezel (Micah i. 11). Clermont-Ganneau identifies it with the Wadi Yasul.

J. JR.

G. B. L.

**AZANKOT** (אזנקוט), **SAADIA B. LEVI**: Orientalist of Morocco; lived in Holland in the first half of the seventeenth century. He was teacher of Jewish literature to Hottinger. There exists a versified paraphrase of Esther by him, which was printed under the title "Iggeret ha-Purim," Amsterdam, 1647. The Bodleian Library has two manuscripts bearing his name: one containing a transcription of Maimonides' "Dalalat al-Hafrin" in Arabic characters, which Azankot made for Golius; the other manuscript containing the Hebrew transla-

tion of the "Lamiat al-Ayam" of Husain b. Ali, appended to a printed copy of the same.

**AZAREEL** (R. V. **AZAREL**, "God is help"):

1. One of those who came to David at Ziklag (I Chron. xii. 7).

2. Son of Jeroham, chief of the tribe of Dan when David made the enumeration of the people (I Chron. xxvii. 22). 3. A Levite, son of Heman, to whom fell the eleventh lot in the apportionment made by David for the choral service of the Temple (I Chron. xxv. 18). 4. One of the sons of Bani, who had taken a foreign wife (Ezra x. 41). 5. A priest (Neh. xi. 13, xii. 36) who played a musical instrument at the dedication of the wall. Here the name is spelled "Azarael."

J. JR.

G. B. L.

**AZARIA BEN JOSEPH IBN ABBA MARI**

(also called **Bonafoux** or **Bonfos Bonfil Astruc**): One of the last Jewish writers coming from Perpignan, France. He flourished in the first half of the fifteenth century. A rising against the Jews was the cause of his leaving his native city. Neubauer ("Ecrivains Juifs," p. 759; see also "Revue Etudes Juives," v. 41) places this riot in the year 1414, when the friar Vincent Ferrer roused the angry passions of the mob against the Jews for refusing baptism (see Grätz, "Gesch. der Juden," viii. 123); but Gross ("Gallia Judaica," p. 473) is rather inclined to place the date in 1420, when the Jews of Perpignan were exposed to all manner of vexatious proceedings by the Inquisition ("Revue Etudes Juives," xvi. 14).

Be this as it may, Azaria had, in 1423, settled with his son in Italy, where he translated from Latin into Hebrew the following works: (1) "De Consolatione Philosophiæ" of Boethius (lived 470-524). Boethius was the only early Latin writer whose works were translated into Hebrew. The preface of the translator informs us that it was commenced Tebet 28, 5183 (*i. e.*, 1423) at Torre Maestrata de Montefelatra (probably Macerata di Monte Feltro), in the province of Urbino Pesaro, and finished the same year at Castel San Pietro, in the province of Bologna. (2) A translation of the 28th book of the medical work entitled "Liber Practicæ," by Zahrawi (eleventh century), after the Latin of Simon of Genoa, was finished November, 1429, at Senise in the province of Basilicate. Neubauer maintains that Azaria made his translation not from the Arabic original, but from a translation made by Abraham of Tortosa, son of Shem-Tob, son of Isaac, who translated, in 1254, the whole work of Zahrawi at Marseilles ("Rabbins Français," p. 592). (3) A translation from the Latin of the second book of the "Simplicia" by the physician Dioscorides. The following is Azaria's brief introduction to this translation (Neubauer, "Revue des Etudes Juives," v. 46):

"It often happens that physicians find themselves in places where they can not procure required drugs except with great difficulty, and hence are placed in great embarrassment. This is particularly the case with those of our coreligionists who are obliged to dwell in villages or in the mountains to gain their living. There are places where one can not find a variety of drugs wherewith to make the necessary medicaments.

Therefore, I, Azaria, called Bonafoux in the vulgar tongue, have translated this alphabetical table which I found in use among Christians, entitled in Greek *Περὶ τῶν Ἀντιβαλλομένων* ["Book of the Equivalents of Drugs"], composed by the philosopher and physician Dioscorides for his uncle."

BIBLIOGRAPHY: In addition to the works mentioned above, see Steinschneider, *Hebr. Uebers.* pp. 466, 650, 740.

S. K.

**AZARIA B. MOSES DE ROSSI.** See ROSSI.

**AZARIAH.**—**Biblical Data:** The name given to twenty-six different persons in the Old Testament. The most important are:

1. A noble in the court of Solomon. According to I Kings iv. 2, he was the son of Zadok the priest. I Chron. v. 35 [A. V. vi. 9] makes him the son of Ahimaaz and grandson of Zadok. The same genealogical list (next verse) states that he in turn had a grandson bearing the same name who "executed the priest's office in the house that Solomon built in Jerusalem." Since Zadok figured as a prominent priestly noble in the court of Solomon, it seems more likely that not his grandson, but his son (as is stated by the older narrative of I Kings), occupied a similar position, probably succeeding his father in the high-priestly office. In that case the reference in I Chron. would apply to Azariah, the son of Zadok, rather than to Azariah's grandson. Similarity of name may have been the cause of the displacement at the hand of some later copyist.

2. The grandson of the Azariah of Solomon's reign and father of Amariah, who was high priest during the reign of Jehoshaphat (I Chron. v. 36 [A. V. vi. 10]; Ezra vii. 3).

3. The second Book of Chronicles (xxvi. 16-20), in assigning a cause for the leprosy of King Uzziah, states that the king impiously attempted to burn incense on the altar, and that Azariah "the priest" (that is, the high priest), with eighty attendant priests, opposed him, warning him that he as a layman had no right to burn incense to יהוה. As a punishment for his impiety and his anger against the priests, Uzziah was at once smitten with leprosy. Josephus adds that an earthquake further evinced the divine disapproval ("Ant." ix. 10, § 4). This tradition of Josephus clearly arose from an association of the earthquake in the reign of Uzziah, referred to in Amos i. 1 and Zech. xiv. 5, with the story of the chronicler. The older narrative of Kings simply states that "the Lord smote the king, so that he was a leper" (II Kings xv. 5). The genealogical list in I Chron. v. [A. V. vi.], purporting to give the complete line of high priests in Judah, assigns to the reign of Uzziah none bearing the name of Azariah. The point of view of the entire story in II Chronicles is not that of the days of the kingdom, when it was the duty of the king to present offerings and burn incense (I Kings ix. 25), but of the late post-exilic period when the chronicler wrote. It has a close kinship with other traditions peculiar to him or to his age, and frequently introduced into his ecclesiastical history. Its aim was clearly to explain the horrible affliction of one who figures in the earlier narratives as a just and benign ruler; and also to point a priestly moral.

—**In Rabbinical Literature:** The Haggadah identifies Azariah, chief priest under Uzziah, with

the high priest Azariah of whom it is stated, as a special distinction, "He it is that executed the priest's office in the house that Solomon built in Jerusalem" (I Chron. v. 36 [A. V. vi. 10]), to indicate that he guarded the sanctity of the Temple from the sinful king Uzziah at the risk of his life (Sifre Zutṭa, cited in Yalk., Num. 754).

J. SR.

L. G.

4. According to II Chron. xxxi. 10, 13, a certain Azariah of the house of Zadok was chief priest and "ruler of the house of God" during the reign of Hezekiah. During his high-priesthood, chambers were built in the Temple to receive the oblations of the people.

5. The Levite Azariah (probably distinct from the preceding), whose son Joel is described by the chronicler (II Chron. xxix. 12) as active in carrying out the command of Hezekiah to cleanse the Temple.

6. Associated with the same traditional cleansing of the Temple in the days of Hezekiah was a third Azariah described as a Levite of the sons of Merari (II Chron. xxix. 12).

7. Son of the high priest Hilkiah, who was connected with the reformation of Josiah (I Chron. v. 39, 40 [R. V. vi. 13, 14]; in part, Ezra vii. 1). It was his son Seraiah who was put to death by Nebuchadnezzar. Perhaps it was this Azariah who gave his name to the priestly clan that figured in the reformation of Ezra and Nehemiah (Neh. x. 3 [R. V. 2]).

J. JR.

C. F. K.

8. Son of Nathan, chief of the officers of Solomon (I Kings iv. 5).

9. Son of Hoshaiah, one of the men who disregarded the words of Jeremiah, and persisted in going to Egypt, taking the prophet along with them (Jer. xliii. 2).

10. The Hebrew name for Abed-nego, the companion of Daniel (Dan. i. 6 *et seq.*).

J. JR.

G. B. L.

—**In Rabbinical Literature:** Azariah and his friends Hananiah and Mishael were of royal lineage, like their colleague in the royal service, Daniel, being descendants of Hezekiah, to whom the prophet Isaiah had announced concerning them (Isa. xxxix. 7), "and of thy sons there shall be eunuchs in the palace of the king of Babylon" (Sanh. 93b; Pirke R. Eliezer iii.; Jerome, in his Commentary on Isaiah; Origines on Matt. xv. 5; a dissenting view in the Talmud, Sanh. *l.c.*, contends that only Daniel was a Judean; his friends belonging to other tribes). The cause of their having been eunuchs was the fact that the enemies of the Jews had accused them before King Nebuchadnezzar of leading impure lives, especially with the wives of the noble Babylonians, and in order to show the falsity of this accusation they mutilated themselves, and when arraigned before Nebuchadnezzar, they were not only able to refer to the Decalogue (Ex. xx. 14), which enforces chastity upon the Jew, but were also able to prove how unfounded was the accusation (Midr. Megillah, published by Gaster, in "Semitic Studies," p. 176).

Azariah and his friends were able to control themselves even to the suppression of every human inclination, and they were eminently fit for the service of the court (Dan. i. 4) because they did not permit themselves to be overcome by sleep or other needs

(Sanh. *l.c.*). Devoted to their mundane ruler, they were equally faithful to their heavenly Father, obeying His commands strictly and keeping the Sabbath

**His  
Strength  
and  
Faith.**

holy (Eliyahu R. xxvi.; Sanh. *l.c.*). Their faithfulness to the Jewish religion was demonstrated by their refusal to show homage to the idol erected by Nebuchadnezzar (Dan. iii.), although it was in reality no idolatry that

was required of them, but rather an act of homage to the king's statue. They gave their lives for the glorification of the Eternal, saying, "If soulless animals like frogs hastened into the burning ovens of the Egyptians (Ex. vii. 28), how much more reason is there for us to do similarly" (Pes. 53b; compare Tosafot, under the word חַמְצָה). Azariah and his friends Hananiah and Mishael were the men chosen as Jewish delegates to show homage to the statue, Nebuchadnezzar having commanded each nation to send three envoys on this occasion. They came to Daniel for advice; he sent them to the prophet Ezekiel, who advised them not to risk their lives, but rather to try to evade the command by flight. Although the prophet based his advice on the authority of Isaiah (compare Isa. xxvi. 20), they determined openly to insult the king's statue so that all the nations should say, "All peoples did homage to the image, Israel alone refused!" As Ezekiel could not make them desist from their plan, he bade them wait at least until he had questioned God; but the Almighty said to him: "Let them not depend upon Me herein, for it is precisely through the sinfulness of such aristocrats as they among My people, that My house is destroyed, My palace in ashes, and My children exiled among the heathens." This response, however, only confirmed their determination, and they each proceeded to a different point and there proclaimed loudly, "We will not serve thy gods, O king, nor worship the golden image which thou hast set up, even though God sustain us not" (Dan. iii. 18; verse 17, however, explicitly expresses faith in God's assistance). When they had thus proven their pious determination, it was revealed to the prophet Ezekiel that God would nevertheless intervene in their behalf, the former reply having been simply to test their fortitude (Cant. R. to vii. 8).

When brought before him, Nebuchadnezzar reminded the young men that the Jews had freely worshiped idols before the destruction of Jerusalem, thus affording them a precedent; he also referred them to the words of Jeremiah (xxvii. 8), threatening destruction to all who should

not obey Nebuchadnezzar; and appealing finally to the prophecy of Moses himself (Deut. iv. 28), predicting that the Jews would serve idols when scattered among the nations. But the three men remained steadfast, and intimated to the monarch that he might command their full obedience in such matters as taxes and imposts, but that in religious matters they could not obey. This defiance so enraged the king that he ordered them thrown into the fiery furnace (Lev. R. xxxiii. 6; compare also Tan., Noah, 10; ed. Buber, xv., and the parallel passages cited by Buber in note 130). Cast into the furnace, the men raised their eyes to heaven and prayed, "Lord of

the universe, Thou knowest we did this thing not in reliance upon our own good deeds, but in reliance upon Thee, who wilt not permit the heathen to say, Where is their God?" (Tanhuma, *l.c.*; the words here ascribed to the pious victims are a paraphrase of Ps. cxv. 1, 2, which psalm, according to Pes. 117*a*, was composed by these three men; compare also Ex. R. ix. 1, xviii. 4). The furnace into which they were thrown was so well heated with naphtha, tow, tar, and dry branches that the flames rose forty-nine cubits above the furnace, destroying all Chaldeans who were standing by (Septuagint and Theodotion on Dan. iii. 47; compare also Sanh. 92*b*; Cant. R. vii. 9.)

The angel of the hailstorm, Yurkani, craved divine permission to cool the furnace, but the task was entrusted to the archangel Gabriel, who so arranged matters that the interior of the furnace was cooled, but its exterior was so furiously glowing that all heathens who gathered to the spectacle perished (Pes. 118*a, b*; different in Tan. *l.c.*, which states that God Himself delivered the victims; compare also Ex. R. xviii. 4). In the midst of the flames, Azariah meanwhile intoned a penitential prayer and confession of sins, in which his friends

**In the** joined, acknowledging God's supreme  
**Fiery** justice; and when presently a strong  
**Furnace.** wind, laden with moisture, blew through the furnace, they broke into a song of thanksgiving (Septuagint and Theodotion, *ib.* iii. 26-90). The extinction of the flames was but one of six miracles happening upon that day, which happened to be both the Sabbath and the Day of Atonement. The fiery furnace, which had been sunk deep in the ground, rose upon its foundations and its walls fell apart; four adjoining nations, hostile to the Jews, were burned by it; Nebuchadnezzar himself suffered from its fury, his statue being overthrown; and it was this identical wind-storm which reanimated the dead of Ezekiel's vision (Ez. xxxvii. 9) at God's command (Sanh. *l.c.*; Cant. R. *l.c.*). When the furnace fell, the men refused obedience to the angel's suggestion that they should leave the ruins, saying that they would not leave until Nebuchadnezzar would order them to do so, as otherwise it would look as if they had run away (Tan. *l.c.*). When Nebuchadnezzar at length approached to bid them come forth, he recognized in the fourth personage present the angel Gabriel, whom he had seen previously, destroying the army of Sennacherib before Jerusalem (Yalk., Dan. 1062).

The deliverance of these three men from the furnace made a deep impression upon the surrounding nations, who came to them and remonstrated with them: "You knew that your God could perform such great miracles; how, then, could you through your sinfulness bring about the destruction of His house and the banishment of His children?" They then so forcibly expressed their contempt for so rebellious a people, that the princes exclaimed, "O Lord, righteousness belongeth to Thee, but unto us confusion of face as at this day" (Dan. ix. 7) (Pesikta, ed. Buber, xi. 99*a*; Sanh. 93*a*).

According to one account, Hananiah, Mishael, and Azariah died on the spot; but, according to other accounts, they left Babylonia and settled in Palestine, where they married and had descendants, their

sojourn in the furnace having remedied all their physical deformities (Sanh. *l.c.*; Yer. Shab. vi., end, 8*d*). Here they became the friends of the high priest Joshua, and in view of their past they were considered "men that are a sign" (Zech. iii. 8). Another result of the deliverance of these men was that the heathens broke up their idols and fashioned bells and spangles out of them, which they hung around the necks of their dogs and asses. The piety of Hananiah, Mishael, and Azariah has remained imperishable in the memory of the people, so that, for instance, when the supports of the order of the universe are spoken of, these men are referred to as its pillars (Cant. R. vii. 9).

G. B. L.

**AZARIAH**: A Palestinian scholar of the fourth amoraic generation (fourth century), often quoted in conjunction with R. Aha (Lev. R. vi. 5; Cant. R. to v. 16), R. Judan (Gen. R. xlvii.; Cant. R. to i. 4), and R. Judah b. Simon (Gen. R. xv.; Cant. R. to i. 2). Although his name appears in connection with some Halakot (Yer. Shab. vii. 9*b*; Yer. Pes. i. 28*a*), it is doubtful whether he ever became interested in legal topics; and the halakic questions with which his name is associated probably belong to R. Ezra (compare Frankel, "Mebo," p. 120*b*). Nor can the names of his teachers be definitely ascertained. Azariah transmits Haggadot in the name of leading amoraim of earlier generations,

such as Hanina (Johanan) b. Pappa (Gen. R. xlv.; Cant. R. to ii. 14), Simeon b. Lakish (Yer. Ber. i. 2d; Tan., Bereshit, ed. Buber, 15), and Johanan (Gen. R. xcvi. 5); and he also quotes his own contemporaries. Nevertheless, the assumption that he was a disciple of R. Mana II. (compare Bacher, "Ag. Pal. Amor." iii. 449, 458) is untenable, because both R. Cohen and R. Tanhuma—the former a predecessor, the latter a contemporary, of R. Mana—report in the name of R. Azariah, which shows that he was a predecessor of both and of R. Mana (Ruth R. to i. 19; Esther R. to i. 2). For the same reason the identification of R. Ezra with R. Azariah (Bacher, *l.c.* 450) is inadmissible. The two names represent two distinct persons, who flourished in different generations, and, it seems, occupied themselves with different branches of rabbinic lore (compare EZRA).

R. Azariah was a versatile haggadist, to whom even single letters suggested ideas. Thus in the trilateral term "eshel" (אֶשֶׁל = the tamarisk; which, according to Gen. xxi. 33, Abraham planted at Beer-sheba), Azariah discovers three important duties connected with hospitality: the furnishing of the guest with meat (אֶכֶּלָה), with drink (שָׁחִירָה), and with an escort (לִיָּה) (Midr. Teh. cx. 1; see note in ed. Buber). According to him, the distinction conferred on the tribal princes of Ephraim and Manasseh at the consecration of the Tabernacle—the former offering his gifts on the Sabbath day and the latter immediately following him—was owing to the merits of their ancestor Joseph. The Lord said to Joseph: "Thou hast kept inviolate the seventh commandment and the eighth commandment, in that thou hast had no dealings with Potiphar's wife and hast not stolen of Potiphar's goods, nor dishonored his house; and a time will come when I shall reward thee; when the princes of the tribes shall come to consecrate the altar, the princes descended from thy two sons will approach one after the other with their offerings, and none will intervene between them, even as nothing intervenes between the two commandments thou hast kept." Therefore we find it written (Num. vii. 48), "On the seventh day . . . the prince of the children of Ephraim offered," and (*ib.* 54), "on the eighth day, . . . the prince of the children of Manasseh" (Num. R. xiv. 7; Tan., Naso, 28). The Biblical simile (Cant. ii. 3), "As the apple-tree is among the trees of the wood, so is my beloved among the sons," he thus explains (Cant. R. to *l.c.*): "As the apple-tree ripens its fruit only in the month of Siwan, so Israel emitted sweet savor (manifest ripeness for the reception of the Law) in the month of Siwan (Ex. xix. 1 *et seq.*); and as the apple-tree occupies fifty days between budding and ripening its fruit, so did Israel take fifty days between the exodus and the reception of the Torah." (Tan., ed. Buber, Index; Midr. Teh., ed. Buber, Index; Pesik., ed. Buber, pp. 1a, 2b, 28b, 39a, 42a, 50a, 51a, 61a, 99a, 103b, 116b, 125a, 131b, 139a, 166a, 179b, 192b; Pesik. R., ed. Friedmann, Index; see also Bacher, "Ag. Pal. Amor." iii. 458-465.)

**AZARIAH, MENAHEM HA-KOHEN:** Author and translator; born at Fürth, Germany; flourished at Amsterdam in 1727. He edited Eliezer

ha-Katan's (his father-in-law's) "Shulhan 'Aruk," an extract from the first volume of the Shulhan 'Aruk, Fürth, 1696-97. Appended to this work is Azariah's short commentary on the thirteen hermeneutic rules. He later removed to Amsterdam, where he published in 1727 his "Meziat 'Azariah" (Azariah's Find), a Judæo-German translation of Moses Sulzbach's "Sam Hayyim" (Tincture of Life)—an ethical work in rimed prose, which he provided with an exhaustive introduction and epilogue. A second edition of this translation was published at Zolkiew, Galicia, 1795.

**AZARIAS:** General in the army of Judas Maccabeus, who, together with Joseph, son of Zacharias, was left in command of the Judean army (165 B.C.) when Judas and Jonathan were absent in Gilead and Simon in Galilee. Orders had been given to Azarias to remain passive and not to engage in battle before the return of the leaders. Azarias, however, became restless upon hearing of the deeds of valor which others had performed, and went out to battle with the enemy at Jamnia. He was nevertheless beaten back by the Syrian general Gorgias, with a loss of two thousand men.

**AZAZ:** A Reubenite, father of Bela and son of Shema (I Chron. v. 8).

G. B. L.

**AZAZEL (Scapegoat, Lev. xvi., A. V.):** The name of a supernatural being mentioned in connection with the ritual of the Day of Atonement (Lev. xvi.). After Satan, for whom he was in some degree a preparation, Azazel enjoys the distinction of being the most mysterious extrahuman character in sacred literature. Unlike other Hebrew proper names, the name itself is obscure.

**Biblical Data:** In Lev. xvi. the single allusion to Azazel is as follows: On the tenth day of Tishri (see ATONEMENT DAY) the high priest, after first performing the prescribed sacrifices for himself and his family, presented the victims for the sins of the people. These were a ram for a burnt offering, and two young goats for a sin-offering. Having brought the goats before YHWH at the door of the tabernacle, he cast lots for them, the one lot "for YHWH" and the other "for Azazel." The goat that fell to YHWH was slain as a sin-offering for the people. But the goat of Azazel (now usually known as the "scapegoat") was made the subject of a more striking ceremony. The high priest laid his hands upon its head and confessed over it the sins of the people. Then the victim was handed over to a man standing ready for the purpose, and, laden as it was with these imputed sins, it was "led forth to an isolated region," and then let go in the wilderness.

J. JR.

J. F. McC.

**In Biblical, Apocryphal, and Rabbinical Literature:** The Rabbis, interpreting "Azazel" as "Azaz" (rugged), and "el" (strong), refer it to the rugged and rough mountain cliff from which the goat was cast down (Yoma 67b; Sifra, Aḥare, ii. 2; Targ. Yer. Lev. xiv. 10, and most medieval com-

mentators). Most modern scholars, after having for some time indorsed the old view, have accepted the opinion mysteriously hinted at by Ibn Ezra and expressly stated by Nahmanides to Lev. xvi. 8, that Azazel belongs to the class of "se'irim," goat-like demons, jinn haunting the desert, to which the Israelites were wont to offer sacrifice (Lev. xvii. 7 [A. V. "devils"]; compare "the roes and the hinds," Cant. ii. 7. iii. 5, by which Sulamith administers an oath to the daughters of Jerusalem. The critics were probably thinking of a Roman faun).

Far from involving the recognition of Azazel as a deity, the sending of the goat was, as stated by

Nahmanides, a symbolic expression of the idea that the people's sins and their evil consequences were to be sent back to the spirit of desolation and ruin, the source of all impurity. The

very fact that the two goats were presented before YHWH before the one was sacrificed and the other sent into the wilderness, was proof that Azazel was not ranked with YHWH, but regarded simply as the personification of wickedness in contrast with the righteous government of YHWH. The rite, resembling, on the one hand, the sending off of the epha with the woman embodying wickedness in its midst to the land of Shinar in the vision of Zachariah (v. 6-11), and, on the other, the letting loose of the living bird into the open field in the case of the leper healed from the plague (Lev. xiv. 7), was, indeed, viewed by the people of Jerusalem as a means of ridding themselves of the sins of the year. So would the crowd, called Babylonians or Alexandrians, pull the goat's hair to make it hasten forth, carrying the burden of sins away with it (Yoma vi. 4, 66b; "Epistle of Barnabas," vii.), and the arrival of the shattered animal at the bottom of the valley of the rock of Bet Hadudo, twelve miles away from the city, was signalized by the waving of shawls to the people of Jerusalem, who celebrated the event with boisterous hilarity and amid dancing on the hills (Yoma vi. 6, 8; Ta'an. iv. 8). Evidently the figure of Azazel was an object of general fear and awe rather than, as has been conjectured, a foreign product or the invention of a late lawgiver. Nay, more; as a demon of the desert, it seems to have been closely interwoven with the mountainous region of Jerusalem and of ancient pre-Israelitish origin.

This is confirmed by the Book of Enoch, which brings Azazel into connection with the Biblical story of the fall of the angels, located,

obviously in accordance with ancient folk-lore, on Mount Hermon as a sort of an old Semitic Blocksberg, a gathering-place of demons from of old (Enoch xiii.; compare Brandt, "Mandäische Theologie," 1889, p. 38). Azazel is represented in the Book of Enoch as the leader of the rebellious giants in the time preceding the flood; he taught men the art of warfare, of making swords, knives, shields, and coats of mail, and women the art of deception by ornamenting the body, dyeing the hair, and painting the face and the eyebrows, and also revealed to the people the secrets of witchcraft and corrupted their manners, leading them into wickedness and impurity; until at last he was, at

the Lord's command, bound hand and foot by the archangel Raphael and chained to the rough and jagged rocks of [Ha] Duduael (= Beth Hadudo), where he is to abide in utter darkness until the great Day of Judgment, when he will be cast into the fire to be consumed forever (Enoch viii. 1, ix. 6, x. 4-6, liv. 5, lxxxviii. 1; see Geiger, "Jüd. Zeit." 1864, pp. 196-204). The story of Azazel as the seducer of men and women was familiar also to the rabbis, as may be learned from Tanna d. b. R. Yishma'el: "The Azazel goat was to atone for the wicked deeds of 'Uzza and 'Azrael, the leaders of the rebellious hosts in the time of Enoch" (Yoma 67b); and still better from Midrash Abkir, end, Yalk., Gen. 44, where Azazel is represented as the seducer of women, teaching them the art of beautifying the body by dye and paint (compare "Chronicles of Jerahmeel," trans. by Gaster, xxv. 13). According to Pirke R. El. xlv. (comp. Tos. Meg. 31a), the goat is offered to Azazel as a bribe that he who is identical with Samael or Satan should not by his accusations prevent the atonement of the sins on that day.

The fact that Azazel occupied a place in Mandæan, Sabeian, and Arabian mythology (see Brandt, "Mandäische Theologie," pp. 197, 198; Norberg's "Onomasticon," p. 31; Reland's "De Religione Mohammedanarum," p. 89; Kamus, s.v. "Azazel" [demon identical with Satan]; Delitzsch, "Zeitsch. f. Kirchl. Wissensch. u. Leben," 1880, p. 182), renders it probable that Azazel was a degraded Babylonian deity. Origen ("Contra Celsum," vi. 43) identifies Azazel with Satan; Pirke R. El. (l.c.) with Samael; and the Zohar Ahare Mot, following Nahmanides, with the spirit of Esau or heathenism; still, while one of the chief demons in the Cabala, he never attained in the doctrinal system of Judaism a position similar to that of Satan. See articles ATONEMENT and ATONEMENT, DAY OF.

## K.

—According to Talmudical interpretation, the term "Azazel" designated a rugged mountain or precipice in the wilderness from which the goat was thrown down, using for it as an alternative the word "Zok" (צוק) (Yoma vi. 4). An etymology is found to suit this interpretation. "Azazel" (אַזָּזֵל) is regarded as a compound of "az"

**The Name.** (אָז), strong or rough, and "el" (אֵל), mighty, therefore a strong mountain.

This derivation is presented by a Baraita, cited Yoma 67b, that Azazel was the strongest of mountains.

Another etymology (*ib.*) connects the word with the mythological "Uza" and "Azazel," the fallen angels, to whom a reference is believed to be found in Gen. vi. 2, 4. In accordance with this etymology, the sacrifice of the goat atones for the sin of fornication of which those angels were guilty (Gen. l.c.).

Two goats were procured, similar in respect of appearance, height, cost, and time of selection. Having one of these on his right and the

**The Rite.** other on his left (Rashi on Yoma 39a), the high priest, who was assisted in this rite by two subordinates, put both his hands into a wooden case, and took out two labels, one

inscribed "for the Lord" and the other "for Azazel." The high priest then laid his hands with the labels upon the two goats and said, "A sin-offering to the Lord"—using the Tetragrammaton; and the two men accompanying him replied, "Blessed be the name of His glorious kingdom for ever and ever." He then fastened a scarlet woolen thread to the head of the goat "for Azazel"; and laying his hands upon it again, recited the following confession of sin and prayer for forgiveness: "O Lord, I have acted iniquitously, trespassed, sinned before Thee: I, my household, and the sons of Aaron—Thy holy ones. O Lord, forgive the iniquities, transgressions, and sins that I, my household, and Aaron's children—Thy holy people—committed before Thee, as is written in the law of Moses, Thy servant, 'for on this day He will forgive you, to cleanse you from all your sins before the Lord; ye shall be clean.'" This prayer was responded to by the congregation present (see ATONEMENT, DAY OF). A man was selected, preferably a priest, to take the goat to the precipice in the wilderness; and he was accompanied part of the way by the most eminent men of Jerusalem. Ten booths had been constructed at intervals along the road leading from Jerusalem to the steep mountain. At each one of these the man leading the goat was formally offered food and drink, which he, however, refused. When he reached the tenth booth those who accompanied him proceeded no further, but watched the ceremony from a distance. When he came to the precipice he divided the scarlet thread into two parts, one of which he tied to the rock and the other to the goat's horns, and then pushed the goat down (Yoma vi. 1-8). The cliff was so high and rugged that before the goat had traversed half the distance to the plain below, its limbs were utterly shattered. Men were stationed at intervals along the way, and as soon as the goat was thrown down the precipice, they signaled to one another by means of kerchiefs or flags, until the information reached the high priest, whereat he proceeded with the other parts of the ritual.

The scarlet thread was a symbolical reference to Isa. i. 18; and the Talmud tells us (*ib.* 39a) that during the forty years that Simon the Just was high priest, the thread actually turned white as soon as the goat was thrown over the precipice: a sign that the sins of the people were forgiven. In later times the change to white was not invariable: a proof of the people's moral and spiritual deterioration, that was gradually on the increase, until forty years before the destruction of the Second Temple, when the change of color was no longer observed (*l.c.* 39b).

—**Critical View:** There has been much controversy over the function of Azazel as well as over his essential character. Inasmuch as according to the narrative the sacrifice of Azazel, while symbolical, was yet held to be a genuine vicarious atonement, it is maintained by critics that Azazel was originally no mere abstraction, but a real being to the authors of the ritual—as real as YHWH himself.

This relation to the purpose of the ceremony may throw light upon the character of Azazel. Three points seem reasonably clear. (1) Azazel is not a mere jinn or demon of uncertain ways and temper,

anonymous and elusive (see ANIMAL WORSHIP), but a deity standing in a fixed relation to his clients. Hence the notion, which has become prevalent, that Azazel was a "personal angel," here introduced for the purpose of "doing away with the crowd of impersonal and dangerous *se'irim*" (as Cheyne puts it), scarcely meets the requirements of the ritual. Moreover, there is no evidence that this section of Leviticus is so late as the hagiological period of Jewish literature.

(2) The realm of Azazel is indicated clearly. It was the lonely wilderness; and Israel is represented as a nomadic people in the wilderness, though preparing to leave it. Necessarily their environment subjected them in a measure to superstitions associated with the local deities, and of these latter Azazel was the chief. The point of the whole ceremony seems to have been that as the scapegoat was set free in the desert, so Israel was to be set free from the offenses contracted in its desert life within the domain of the god of the desert.

(3) Azazel would therefore appear to be the head of the supernatural beings of the desert. He was thus an instance of the elevation of a demon into a deity. Such a development is indeed rare in Hebrew religious history of the Biblical age, but Azazel was really never a national Hebrew god, and his share in the ritual seems to be only the recognition of a local deity. The fact that such a ceremony as that in which he figured was instituted, is not a contravention of Lev. xvii. 7, by which demon-worship was suppressed. For Azazel, in this instance, played a merely passive part. Moreover, as shown, the symbolical act was really a renunciation of his authority. Such is the signification of the utter separation of the scapegoat from the people of Israel. This interpretation is borne out by the fact that the complete ceremony could not be literally fulfilled in the settled life of Canaan, but only in the wilderness. Hence it was the practice in Jerusalem, according to Yoma vii. 4, to take the scapegoat to a cliff and push him over it out of sight. In this way the complete separation was effected.

**AZAZIAH:** 1. A Levite who took part in the choral services on the return of the Ark to Jerusalem (I Chron. xv. 21). 2. Father of Hoshea, who was the leader of Ephraim at the time that David enumerated the people (I Chron. xxvii. 20). 3. A Levite who had charge of the offerings brought to the Temple in the days of Hezekiah (II Chron. xxxi. 13).

**AZBAN, MORDECAI BEN ISAAC:** Cabbalist and rabbi in Leghorn; born in the interior of Africa; died at Jerusalem 1740. At Leghorn he had a controversy with Abraham Hayyim Rodriguez, which is printed in the latter's collection of decisions, entitled "Orah le-Zadiq." He went as rabbi to Aleppo, and later to Jerusalem, where he remained till his death. Azban composed "Zobeah Todah"

(Thank-Offering), which contains a lengthy penitential prayer ("widdui gadol") with reference to the various human organs so far as they lead man to sin (Constantinople, 1733). This work was modeled after Eleazar Ascar's "Sefer Haredim." He also wrote "Yissa Berakah" and other works of a mystic nature.

**AZBUK**: Father of Nehemiah; assisted in repairing the wall at Jerusalem (Neh. iii. 16).

J. JR.

G. B. L.

**AZEKAH**: A city in the Shephelah, or plain of Judah; about midway between Jerusalem and the Philistine boundary, in a southwestern direction; probably not far from Socoh or Shochoh (I Sam. xvii. 1)—now Shuweikah—with which it is coupled (Josh. xv. 35). Its exact site has not been ascertained. Eusebius relates that a village, Ezekah, was to be found between Elueth-ropolis and Elia.

Azekah existed before the conquest of Canaan by the Israelites. Joshua, having defeated the five kings at Gibeon, followed them up to Azekah (Josh. x. 10, 11). The Philistine army lay between Shochoh and Azekah, when David fought Goliath (I Sam. xvii. 1). Rehoboam fortified it (II Chron. xi. 9), and four centuries later, in the reign of Zedekiah, the Jews opposed Nebuchadnezzar's forces at Azekah (Jer. xxxiv. 7). After the return from the Exile it was resettled by the tribesmen of Judah (Neh. xi. 30).

M. K.

**AZEVEDO, FRANCISCO D'**: Portuguese Marano of the seventeenth century. He was sent in 1673 to Rome to implore the papal curia to curb the inhumanity of the Inquisition. Well supplied with money, and seconded by the Jesuits—who were not in sympathy with the Inquisition—he succeeded in exposing the cruelties of its procedure. Clement X. thereupon issued a bull, dated Oct. 3, 1674, suspending the activity of the Portuguese Inquisition, and prohibiting any further accusations, condemnations, or confiscations until the grievances of the Maranos in that country should have been investigated by a Roman court of inquiry.

**AZEVEDO, MOSES COHEN D'**: Haham of London; son of Daniel Cohen d'Azevedo; born in Amsterdam about 1720; died in 1784. He succeeded, in 1761, Moses Gomez da Mesquita, his father-in-law, as haham (hakam) of the Spanish and Portuguese congregation of London.

The only publications credited to him are two sermons, one on the accession of George III., delivered December, 1760, before he was called haham. They were delivered in Spanish, and published, with an English translation, in 1776, containing prayers for the success of the British arms: "Order de la Oracion, en el Dia de Ayuno, 13 Dec., 1776, Implorando . . . la Divina Asistencia a las Armas de su Magestad." One of his descendants died a few years ago in Barrow's Buildings at the age of ninety. A portrait of the haham is the only relic left of him. His son, Daniel, was hazan of the congregation from 1779 until 1812.

**AZGAD**: The Bane Azgad returned with Zerubabel from the captivity (Ezra ii. 12; Neh. vii. 17). Their number is variously given as 1,222 (Ezra ii. 12), 2,322 (Neh. vii. 17), 1,322 (I Esd. v. 13, where the form given to the name is "Astad"). Subsequently 110 more came up with Ezra (Ezra viii. 12; I Esd. viii. 38, "Asthath") Azgad signed the covenant with Nehemiah (Neh. x. 16).

**AZHAROT** (Ehortations): Liturgical poems treating of the precepts of the Law. The Babylonian Talmud (*Mak. 23b*) contains an utterance by R. Simlai to the effect that "613 commandments were revealed to Moses: 365, equal to the number of days in the year, were negative precepts; and 248, corresponding to the number of the component parts of the human body, were affirmative." R. Hammuna finds a suggestive hint for this number in the alphabetical value of the Hebrew letters composing the word *תורה* ("law"; Deut. xxxiii. 4), which amount to 611, to which there are to be added the first two passages of the Decalogue which were spoken not by Moses, but by God Himself to Israel. Although this enumeration repeatedly recurs in Talmud and Midrash, even in the name of the earlier teachers (compare Bacher, "Ag. Pal. Amor."

i. 558, note 2), and later sages discovered new intimations of the number in various passages (see Rashi on Num. xv. 39; sources in Buber, "Midrash Agada," p. 113, note 24; "613" further material in Steinschneider, **Precepts**. "Hebr. Uebers." p. 926, note 152), it has not always remained undisputed; Bahya, for instance (Hobot ha-Lebabot, "Introduction"), basing upon Ps. cxix. 96, eliminates the "duties of the heart" from these. Nahmanides ("Sefer ha-Mizwot," beginning) raises the question whether this number has traditional authority or whether it is merely an individual opinion of Simlai. From Abraham ibn Ezra, who points out ("Yesod Moreh," gate 2) that if all basic precepts and their derivatives, and those intended for all time, are considered, this number would be untenable, down to Simon b. Zemah Duran ("Zohar ha-Rakia," end), who opines that Simlai counted the precepts after his own fashion and not in a manner authoritative for others, and that the number 613 is retained only as being incidentally correct, similar objections have repeatedly been made against the enumeration.

Many teachers, nevertheless, accepting the figure, have busied themselves with the detailed enumeration. The compiler of the "Halakot Gedolot" was the first to attempt this in the introduction to his book. He divides his whole material into two main divisions, the first containing the prohibitive (negative) precepts, 71 of which are punishable with death, and 277 with scourging, total 348; the second containing the mandatory (affirmative) **Precepts**. precepts, 200 in number, to which are to be added 65 laws and statutes incumbent upon the Jews as a whole, thus making 613 in all ("Hal. Gedolot," ed. Berlin, pp. 8 *et seq.*; compare Hildesheimer, "Die Vaticanische Handschrift der Hal. Gedolot" pp. 13 *et seq.*). There is said to be a work in Arabic by Hefez b. Yazliah, upon the same subject, but nothing further is known of it. Maimonides does not agree with the author of the "Hal. Gedolot"; in section 14 of his "Sefer ha-Mizwot" (Arabic original published by M. Bloch under the title "Le Livre des Préceptes par Moïse ben Maimon," Paris, 1888; for Hebrew translations, see Steinschneider, *l.c.* § 554, 2) he lays down certain principles which must be the guide in the enumeration of the precepts, and then counts up 248 affirmative and 365 negative commands, amounting to 613. This division agrees only in its total with that of R. Simlai in the Talmud, and in later times has been made use of particularly by the cabalists. It seems, however, to have remained unknown to the author of the "Hal. Gedolot," and is omitted in the parallel passage in Tanhuma. Maimonides, indeed, who found it necessary to revise his own work, is not always consistent on this point; and his son Abraham was called upon to defend his celebrated father against the attack of R. Daniel ha-Babli ("Ma'ase Nissim," ed. B. Goldberg, Paris, 1866). Maimonides also found a redoubtable opponent in Nahmanides, who was, however, concerned not so much to attack Maimonides as to defend the author of the "Hal. Gedolot," whose words were accounted "holy tradition" ("Sefer ha-Mizwot," first printed at

Constantinople, 1510). But Maimonides was not destitute of champions. Many sided with him, of whom Simon Duran ("Zohar ha-Rakia") and Isaac de Leon ibn Zur ("Megillat Esther") may be mentioned: the former writes in a conciliatory vein; the latter can not bring himself to admit that any opinion of Maimonides could be wrong.

It will suffice for present purposes merely to mention the "Sefer ha-Hinnuk," which follows a method of its own in enumerating the precepts. For the understanding of what follows, it must also be stated that, in addition to the 613 Biblical precepts, sometimes seven non-Biblical ones are added, making the total 620, which represents the numerical value of the letters in the Hebrew word כתר ('crown').

It is this enumeration of the precepts of the Torah which furnishes the theme of all the poems known as "Azharot," a name derived from the first composition of this nature, which begins with the words **אזהרות ראשית לעמך נתת** ("Of old Thou didst give exhortations to Thy people"). The

**The Azharot.** Azharot are variously described, both in printed works and in manuscripts, as "Exhortations of the Rabbis," "Exhortations Formulated in the Academy," "Exhortations of the Holy Academies of the Rabbis in Pumbedita," also "Exhortations of Elijah of Blessed Memory!" They are of great antiquity, and the probability must be conceded that they emanated from the academy of Joseph b. Abba Gaon of Pumbedita, concerning whom Sherira's "Letter" narrates that his academy was at times visited by Elijah the Prophet. Being of prior origin to the "Halakot Gedolot" (the last line, **אז שש מאות**, is found reproduced in the "Hal. Gedolot," ed. Hildesh. p. 9, and all ancient Azharot contain it), these older compositions do not enumerate the individual 613 precepts, and speak only in general terms of the 365 negative and 248 affirmative precepts, of their sources, contents, and of the manner in which they are derived from the actual words of the Scripture text, etc. Such specific enumeration was only possible after that of the "Hal. Gedolot," and this is found in the Azharot commencing **אחת הנחלת תורה לעמך** ("Thou didst grant a law unto Thy people"). This composition, which follows the "Hal. Gedolot" accurately, is found sometimes with the superscription "Azharot of the Rabbis of the Academy," sometimes "Azharot of Elijah (or 'Elijah the Tishbite') of Blessed Memory." It has been erroneously ascribed by some to Elijah ha-Zaken (see below); while others have considered Simeon ha-Gadol its author; it undoubtedly originated in Pumbedita. Its example was followed by a host of imitators. Saadia Gaon wrote Azharot (beginning with **אני אש אוכלת**, "I am a consuming fire"), and, in addition, summarized the 613 precepts in a piyyut beginning, "The Lord thy God shalt thou fear" (both printed in I. Rosenberg, "Kobez," ii. 26-54; the 613 precepts also by J. Müller in the Paris edition of Saadia's works, ed. Derenbourg, ix. 57). The suggestion that Saadia is not the author of these compositions is entirely gratuitous, seeing that his name appears therein acrostically. Other Azharot, by Isaac Gikatilla, were known to Moses ibn Tibbon, and are mentioned

by Isaac Petit b. Mordecai Kimḥi, but have not been preserved. Perhaps they are identical with the Azharot commencing **אחנור חיל לרומם הבורא** ("I will gird me with strength to extol the Creator"), which, according to Isaac b. Todros, were contained in the "siddur" of Amram Gaon; even the present recension of this siddur contains pieces which are later than Amram's time.

Solomon ibn Gabirol was the next to treat of the precepts in the Azharot commencing **אלהיך אש אוכלה** ("Thy God is a consuming fire"), edited by Sachs-Halberstamm, "Kobez 'al-Yad," 1893; later on he wrote complete Azharot to which reference will be had in the following. Isaac b. Reuben Albargeloni is the author of the Azharot **איזה מקום בינה** ("Where is the abode of understanding?"). Elijah ha-Zaken b. Menahem of Mans wrote the Azharot **אמת יהנה חבי** ("Truth shall my mouth indite"), first published by Luzzatto in "Literaturblatt des Orients," 1850, part 16, and later reprinted by Rosenberg, *l.c.* pp. 55 *et seq.* Mention may be made here of the piyyut by Eliezer b. Nathan, **אנכי ראש לדברות**, intended for the evening service of the second day of Pentecost, which also treats of the 613 precepts. The Azharot commencing **אני בינה כעונה** ("I, Understanding, dwell on high") were written by Isaac Petit b. Mordecai Kimḥi. Krespia ha-Nakdan wrote Azharot beginning with the words **מלכי ר' ארוממך** ("I will extol Thee, O Lord, my King"). A species of Azharot was composed by Joseph b. Solomon Yahya, but nothing definite is known concerning it save that it was lost in a conflagration. Elijah ha-Kohen Tehelebi wrote **אברך לאל נורא** ("I will bless the God Tremendous"). The Azharot "Pour forth Thy mercy" were written by Menahem Tamar. Menahem Egozi (Nut-Tree) entitles his Azharot, which begin **מה מאד נעלה אשאלה**, with a play upon his own name **פרח נן אנוח** ("A blossom from the nut-garden"). Similarly, those of Elijah Adeni (of Aden), which begin with the words **אדני במ** (Amsterdam ed., 1688), were entitled by him **אליה יר**. Finally, mention must be made of the Azharot of Joshua Benveniste, which are only known from Azulai's "Shem ha-Gedolim" (*s.v.* **משמרת המצות**).

R. Simlai's utterance, quoted above, speaks of the division of the Pentateuchal precepts into affirmative and negative commandments (**עשה** and **לא תעשה**). The "Hal. Gedolot" observe this division; and, in addition, they group the individual precepts as far as may be according to their subject-matter. The

Azharot **אתה הנחלת** do not observe this method: affirmative and negative precepts follow each other in wild confusion regardless of subject, entailing a great sacrifice of perspicuity. Saadia, in his "613 precepts," places, in two divisions, first 97 duties of the person (**מצות**), and then 58 and 45 affirmative precepts referring to sacrifices, priests, and purification; in all, 200 affirmative commands. Then follow, in four divisions, 277 negative precepts (the specific enumeration is not correctly given in the present printed texts, nor even by Zunz): 71 punishable with death, and 65 sections pertaining to the community as a

whole, amounting in all to 630. This clearly shows how closely Saadia adheres to the "Hal. Gedolot"; just so closely, too, does Isaac Albargeloni follow the same authority; and, indeed, this is the rule, as Maimonides remarks, with all Azharot composed down to the latter's time. Gabirol deviates from this practise only to the extent that he observes the Talmudic enumeration of 248 affirmative and 365 negative commands. Krespia ha-Nakdan follows Maimonides in the enumeration, as do also Menahem Tamar and Joshua Benveniste. In his Azharot proper, Saadia disregards the strict demarcation between affirmative and negative precepts. He adduces the precepts according to their derivation from the Decalogue, an idea often imitated; by Saadia himself again in his Yezirah Commentary, and then, not only by later poets, but by writers on jurisprudence. Of examples may be adduced here the "Ma'amar ha-Sekel" by an unknown author, and the cabalist Ezra-Azriel in his commentary upon the Song of Solomon. The attempt to establish such a derivation was rendered all the more alluring by the discovery of the fact that the individual letters contained in the Decalogue number 620, thus corresponding to the 613 precepts and the seven additional ones mentioned above. For further references, see Zunz, "Literaturgeschichte," p. 95, and Steinschneider, "Hebr. Bibl." vi. 125.

As regards the poetical form of the Azharot there is little to be said. The oldest pieces **אזהרת אתה הנחלת** and **ראשית** are extremely simple in composition; the verses, which contain the alphabet in acrostic fashion, are two-membered and bare of all poetic adornment, such as rime, meter, etc. Rime appears later, and a division into strophes becomes general; the alphabet, both in its usual order and inverted (**תש"ק**), being given acrostically, as is also the name of the writer. Saadia's composition is more artificial, in that he not only uses the opening words of each article of the Decalogue, but interweaves therewith phrases from the Song of Solomon and from the eight verses of Psalm lxviii., which are associated by the Talmudists with the Pentecost festival. The construction of these compositions is fully treated by Zunz, Sachs, and Landsuth. Saadia's "613 precepts" are less artificial in construction, but possess rime, strophes, and refrain.

Gabirol uses four-membered strophes, the first three of which have changing rimes of their own; the fourth, a rime running through the poem. Tehelebi's Azharot are also metric, although halting in many places; Tamar, whose Azharot are metrical and resemble Gabirol's in construction, endeavors to find excuse for the halting measure of his predecessors (Steinschneider, "Cat. Leyden," p. 396). Isaac b. Reuben closes his strophes most cleverly with a verse from the Bible, greatly to the admiration of Al-Harizi, who was himself an adept in the ingenious application of Biblical passages. The same is true of the Azharot of Elijah ha-Zaken, whose Azharot consist of 176 four-membered strophes with alphabets (backward as well as forward) and frequent interweaving of names as acrostics.

That such poems can not possess poetic value is

natural; the style is too stiff; in form it must be didactic; and every deviation or imaginative flight is barred. Their dry enumeration of the precepts indeed would compel the characterization which they receive from Jair Hayyim Bacharach (Responsa, No. 51, applied to special Azharot, see below); namely, that they read like a chapter from the Mishnah, save that their form and a certain choice of expression in the earliest attempts remind one that they are to be considered as poetical compositions. Fine passages are nevertheless to be found in the opening or introductory poems (פתיחה) and in the closing verses. These poetical efforts were usually provided by the authors of the Azharot themselves; but in some cases they have been added by others; as, for instance, the introduction to Gabirol's Azharot, written by David b. Eleazar Pakudah, and the poems introducing the affirmative and the negative precepts, respectively, in Kimhi's Azharot, written by Levi b. Gershon.

As was to be expected, these poetical embodiments of the 613 precepts were at intervals met with the same violent remonstrance which greeted the computation of the number 613 for the precepts. Abraham ibn Ezra ("Yesod Moreh," gate 2, end) remarks that the authors of Azharot in general resemble a man who counts the various medicinal herbs enumerated in medical works without knowing anything of their virtues. Maimonides also expresses his disapproval (Introduction to "Sefer ha-Mizwot"); but he excuses the authors as being "poets and not rabbis." Dukes quotes from a Mahzor commentary that the Mayence sages express themselves against the Azharot אהה הנחלת because various Biblical commands are therein omitted ("Literaturblatt des Orients," 1843, col. 714). Moses Bodingen (Mahzor, ed. Metz, 1817) gives a list of the precepts omitted in these Azharot, and supposes that the author must have written ten sections, of which two were lost. As early as the Tosafot (Yoma 8a; B. B. 145b; Nid. 30a) attention was drawn to the fact that Elijah ha-Zaken had not been sufficiently careful in harmonizing his statements with the Halakah. Many similar protests might be adduced; but they all did not avail to prevent the incorporation of the Azharot in the rituals of all countries, where indeed they have maintained their position to this day. It was for the Feast of Weeks (Pentecost) especially, commemorating the Revelation on Sinai, that the Azharot were particularly intended; and they were recited in the Musaf (Additional) Prayer of that day. In some localities—probably at a later date, and in order not to prolong unduly the morning service—the Azharot were relegated to a position either before or after the Minhah (afternoon) service. When the Sabbath before this festival came to receive more regard, like the so-called "Great Sabbath" immediately before the Passover, Azharot were read on it also. Originally, the אזהרת ראשית were read upon the first day of the festival in Italy (Rome), Greece (Romania), Germany, Poland, Lorraine, and probably also in France. Later these were generally displaced by the Azharot אהה הנחלת, but retained their places in Rome and

Greece, though not in the first edition of the Mahzor Romania. In the German and Polish ritual the Azharot were postponed until the second day; while in France they were completely displaced by the Azharot of Elijah ha-Zaken. The אהה הנחלת is the form retained in the German and Polish ritual for the first day of the festival and in the first edition of the Mahzor Romania; in Rome only the first "Alphabet" is used on the second day. The whole of it was there read in former times on the Sabbath before the festival, but later on was displaced by Gabirol's Azharot. Saadia's compositions are contained in his "Siddur" and also in the siddur of Solomon Sigelmessi. Gabirol's Azharot were customarily read in Spain, Provence, Avignon, Palestine, Fez, Yemen, and to some extent in Algiers, and are found in the liturgy of the second day of the festival in the first edition of the Mahzor Romania. Albargeloni's Azharot are contained in the rituals of Constantine, Tlemcen, Tunis, Morocco (for the afternoon service), Algiers, and Oran; those of Elijah ha-Zaken in France and, earlier, in Germany. The Azharot of Isaac Kimhi are set down in the Mahzor Carpentras (Amsterdam, 1759) for the afternoon service, as they were also in Avignon. Tchelebi's Azharot and those of Tamar and Egozi are printed in the Mahzor Romania, and those of Elijah Adeni, strangely enough, in the Mahzor Cochon (China) for the Eighth Day of Solemn Assembly ("Shemini 'Azeret").

Owing to their condensed style and didactic form, it is not to be wondered at that the Azharot required commentaries; indeed, some of the later authors themselves recognized this need and supplied them; as, for instance, Tamar and Joshua Benveniste. Explanations of the Azharot are therefore to be found in such Mahzors as aim at giving a commentary, and also separately in many varieties, of which a few may be mentioned here. Azharot ראשית were commented upon by Eleazar b. Nathan and Samuel b. Kalonymus. Albargeloni's Azharot were similarly dealt with by Moses Muesi (ישיר משה) and Saul ibn Musa ha-Kohen (נחיה מצותיך). Gabirol's Azharot, however, have always been favorite subjects for commentation; thus, Moses ibn Tibbon, Isaac Kimhi, Isaac b. Todros, Simon b. Zemach Duran (זהר הרקיע), Joseph ha-Lo'ez (Barbaro), Moses Pesante or Pisanti (נר מצוה), Jacob (Israel) Hagis (פתיל תכלת), Saul ibn Musa ha-Kohen (נחיה מצותיך), Elia Benamozeg, and numerous others. Translations, however, are rather rare. (On a Persian translation, see "Jewish Quarterly Rev." x. 593, and M. Seligsohn, in "Revue Etudes Juives," xliii. 101; concerning a Judæo-Spanish translation of Gabirol's Azharot and Shabbethai Wita's משיבת נפש, compare M. Greenbaum, "Jüd.-Span. Chrestomathie," pp. 37, 109.) Many commentaries on the Azharot of Elia ha-Zaken are extant in manuscript form.

Besides the above-mentioned Azharot there are a number of poetical elaborations of the same material, which, however, are not called Azharot, nor are they incorporated in any ritual. Some of them are older than many of the later Azharot proper. The following may be enumerated in alphabetical order: דת יקותיאל by Jekuthiel Süsskind;

#### Protest Against Azharot.

#### In the Liturgy.

#### Com- mentaries.

#### Later Elabora- tions.

חרוזות נפלאות, by Mannes Hayyot; יד אברהם, by Abraham Gabbai Isidro; יריעות עזים, by Samson b. Samuel Yerushalmi; כתר תורה, by David b. Solomon Wital; כתר תורה, by M. J. Stern; מעין החכמה, by Noah Hayyim Zebi Berlin; פתנם המלך, by Uri Phœbus b. Aryeh Löb (Breslau?); שירי מצות, by Jonathan Eybeschütz; שירת משה, by Moses b. Mordecai Meisels; שער השמים, by Jacob b. Sheshet; תרי"ג מצות בחרוזים, by Moses b. Abraham Mat; furthermore a poem by the younger Gershom Hefez, in which he recited the precepts in Maimonides' enumeration (in the first edition of the **הרזים** (יד).

In addition to Azharot which treat of all the precepts, there arose in the Middle Ages a species of Azharot which confined themselves to only one precept in all its details, or to a chain of precepts referring to one subject. They were intended for recital on the great Sabbath

**Special Azharot.** before Passover, or on the Sabbath immediately before one of the other

festivals, and on similar occasions. They accordingly devote themselves to the consideration of the regulations for Passover, of the precepts concerning the shofar, the tabernacle, the citron and palm branch, the fringes, the tefillin, and similar matters, as well as the regulations for Hanukkah and Purim. This is not the place to consider the special Azharot: they belong to the halakic piyyut (see **PIYYUT**).

G. B. L.

**AZILUT** (אצילות): Cabalistic term for "emanation" or "radiation"; but philosophical authors prefer "shefa'" or "hashpa'ah." The word is derived from "azal" in reference to Num. xi. 17; and in this sense it was taken over into the Cabala from Solomon ibn Gabirol's "Mekor Hayyim" (The Fountain of Life), which was much used by cabalists. The theory of emanation, which is conceived as a free act of the will of God, endeavors to surmount the difficulties that attach to the idea of creation in its relation to God. These difficulties are threefold: (1) the act of creation involves a change in the unchangeable being of God; (2) it is incomprehensible how the absolutely infinite and perfect being could have produced such imperfect and finite beings; (3) a *creatio ex nihilo* is difficult to imagine. The simile used for the emanation is either the soaked sponge that emits spontaneously the water it has absorbed, or the gushing spring that overflows, or the sunlight that sends forth its rays—parts of its own essence—everywhere, without losing any portion, however infinitesimal, of its being. Since it was the last-named simile that chiefly occupied and influenced the cabalistic writers, Azilut must properly be

taken to mean "radiation" (compare Zohar, Exodus Yitro, 86b).

Later on the expression "Azilut" assumed a more specific meaning, influenced no doubt by the little work, "Maseket Azilut." Herein for the first time (following Isa. xliii. 7: "I have created"; "I have formed"; "I have made"; עשיתיו, יצרתיו, בראתי, the four worlds are distinguished: Azilah, Beriah, Yezirah, and 'Asiyah. But here too they are transferred to the region of spirits and angels: In the Azilah-world the Shekinah alone rules; in the Beriah-world are the throne of God and the souls of the just under the dominion of Akatriel ("Crown of God"); in the Yezirah-world are the "holy creatures" (hayyot) of Ezekiel's vision, and the ten classes of angels ruled over by METATRON; and in the 'Asiyah-world are the Ofanim, and the angels that combat evil, governed by Sandalphon. The Zohar apparently did not know of this fourfold world; for there Azilut is taken to be simply the direct emanation of God, in contradistinction to the other emanations derived from the Sefirot.

Moses Cordovero and Isaac Luria (sixteenth century) were the first to introduce the fourfold world as an essential principle into cabalistic speculation. According to this doctrine the Azilah-world represents the ten Sefirot; the Beriah-world (world of creation) the throne of God, emanating from the light of the Sefirot; the Yezirah-world (world of becoming) the ten classes of angels, forming the halls for the Sefirot; and the Asiyah-world (world of making, that is, of form) the different heavens and the material world. In contradistinction to the Azilah-world, which constitutes the domain of the Sefirot, the three other worlds are called by the general name "Pirud" (עולם הפירוד). Later cabalists explain "Azilut" (according to Ex. xxiv. 11, and Isa. xli. 9) as meaning "excellence," so that according to them the Azilah-world would mean the most excellent or highest world.

P. B.

**AZMAVETH**: 1. The Barhumite; one of the thirty heroes of David (II Sam. xxiii. 31; I Chron. xi. 33). His sons joined David at Ziklag (I Chron. xii. 3).

2. A Benjamite; son of Jehoadah (I Chron. viii. 36, ix. 42).

3. Son of Adiel, who had charge of the treasures of King David (I Chron. xxvii. 25).

4. A town in Benjamin, whence some returned from captivity along with Zerubbabel (Ezra ii. 24; Neh. xii. 29). In Neh. vii. 28, which corresponds to Ezra ii. 24, it is called "Beth-azmaveth."

**AZORES**: Group of islands in the Atlantic ocean, northwest of Africa, belonging to Portugal. It was a place of refuge for the Jews expelled from that country. At present Ponta Delgada, the capital of the island of São Miguel, Fayal, Terceira, and other islands have some Jewish inhabitants. These are engaged in exporting goods. They keep the Jewish religious observances, but intermarry with Catholics. Christian women, when marrying Jews, often enter the fold of Judaism.

**AZOTUS: 1.** The equivalent of *ASHDON*; found in the Apocrypha (Judith ii. 28; I Macc. iv. 15, etc.) and in the New Testament (Acts viii. 40).

**2.** Mount of Azotus (I Macc. ix. 15), where Judas Maccabeus was killed. It is perhaps identical with 1.

s.

G. B. L.

**AZOV** (Turkish, **Azak**): A town in the government of Ekaterinoslav, Russia, on the left bank of the Don, about twenty-four miles from Rostov and five miles from the sea. In ancient times it was an important business center, belonging to Greece and known under the name of "Tanais." The Pontic king Mithridates conquered it in 115 B.C.; in the fourth century of the common era it was destroyed by the Huns; and in the eighth century it was rebuilt and passed into the possession of the Chazars. In the twelfth century, when Azov was a store-city for the trade with Indo-China, the Genoese carried on a considerable trade there, at first recognizing the sovereignty of the Polovtzy, whom in the thirteenth century they drove out; and in 1471 they themselves were conquered by the Turks, who in 1637 were for a short time subject to the Cossacks. Since 1736 Azov has belonged to Russia.

Jews have lived in Azov since they began to settle in the Crimea and in the neighboring provinces, probably in the first century B.C. In the time of the Chazars they were largely interested in the commerce of Azov with Constantinople and Dankov. From the latter the Russian products were transported down the Don to Azov, and all imported merchandise was forwarded from Azov to Dankov.

Azov is mentioned in an epigraph on the first page of a Pentateuch written in Azak, stating that one Shabbethai, son of Isaac, during his illness, on the twenty-ninth of Marheshwan, 5035 [1274], presented this Bible (twenty-four books) to the "Karaite Synagogue in Kirim" (D. Chwolson, "Yevreiskie Nadpisi," p. 217, St. Petersburg, 1884). Another epigraph, written on a board in the Karaite synagogue in Theodosia in 1404, relates to Isaac, son of Moses, and Sarah, daughter of Moses, and to the mother of their mother, Kellah of Azak (Azov), who "have put up this board in the synagogue of the community of Kaffa, the community of the Karaites" (*ib.* p. 209).

Of the 25,488 inhabitants in 1892, about 600 were Jews, who had a synagogue and a Talmud Torah.

**AZRIEL B. HAYYIM TRABOTTA.** See TRABOT.

**AZRIEL (EZRA) BEN MENAHEM (BEN SOLOMON):** Founder of the speculative Cabala, and called "The Saint"; born at Gerona in 1160; died in 1238. As to the identity of Azriel and Ezra, taken for two brothers by Grätz ("Gesch." vii. 447 *et seq.*) and Bloch (Winter and Wünsche, "Jüd. Literatur," iii. 261), compare Jellinek ("Beiträge zur Geschichte der Kabbala," i. 41; Landauer, "Lit.-Bl." vi. 196; and Michael, "Or ha-Hayyim," No. 1151). Attracted by the mystical studies that had begun to spread in Spain, Azriel went early to southern France, and became there a pupil of the celebrated cabalist Isaac the Blind, the son of Abraham of Posquières. Later he left France and traveled all over Spain, making propaganda for the Cabala. He endeavored to win the philosophers over to his mystic views, but did not succeed, as he himself confesses in the introduction to his commentary upon the Ten Sefirot. "For," says he, "the philosophers believe in nothing that can not be demonstrated logically." He came back disappointed to Gerona, and there founded a school in which Nahmanides received Azriel's cabalistic instruction, as is stated by Abraham Zacuto ("Yuhasin"), Me'ir ibn Gabbai, Ibn Yahya ("Shalshet ha-Kabbalah"), and others (see Grätz, *l.c.*). Azriel wrote a commentary on the Ten Sefirot in the form of questions and answers, following therein the speculative method of philosophy (edited by N. A. Goldberg, Berlin, 1850). Its title, not given by the editor, was "Ezrat Adonai" (see Grätz, *l.c.*, following S. Sachs). He also wrote a commentary on "Shir ha-Shirim," ascribed often to Nahmanides, published under his name (Altona, 1764), in which the 613 commandments are explained mystically as based upon the Decalogue. Azriel was, further, the author of a commentary on "Sefer Yezi-rah," entitled "Sefer ha-Milluim," which was likewise ascribed to Nahmanides, and published under his name in Mantua, 1719. Besides these he seems to have written a cabalistic commentary on the prayers, and a hymn with his name "Ezra" as acrostic. His system rests chiefly on his Neoplatonic conception of God as the "En Sof," the Endless One, Gabirol's "En lo Tiklah" (compare Joel, "Beiträge zur Geschichte der Philosophie," Appendix, p. 12, "Lewi ben Gerson," 1862).

God, he contends, can be determined only in a negative way: what He is not can alone be ascertained; not what He is. All positive attributes bear the stamp of sensual-  
**His**  
**Doctrine of** ism. The Being that is the originator  
**God.** of all things can have no intention, desire, thought, word, or action. He is infinite; the negation of all negations; the Endless.

After having stated this strange conception of God, Azriel investigates the relation of this En-Sof to the universe. Has the universe been created from nothing? No. Aristotle is perfectly right in saying that nothing can proceed from nothing. Moreover, creation implies a decrease in the Creator's essence through subtraction, and that can not be predicated of the En-Sof. Nor can the universe have existed eternally, as Aristotle asserts, because nothing is eternal save God. Accordingly, the Platonic idea of a primary matter is not acceptable

either. Azriel, in order to solve the problem of creation, has recourse to the theory of emanation, which he develops as follows:

The universe, with all its multifarious manifestations, was latent in the essence of the En-Sof, in which, notwithstanding its infinite variety, it formed an absolute unit, just like the various sparks and colors that proceed from the one and indivisible flame potential in the coal. The act of creation did not consist in producing an absolutely new thing; it was merely a transformation of potential existence into realized existence. Thus there was really no creation, but an efflux (see *Azilat*). The effluence was effectuated through successive gradations from the intellectual world to the material, from the indefinite to the definite. This material world, being limited and not perfect, could not proceed directly from the En-Sof; neither could it be independent of Him; for in that case He would be imperfect. There must have been, therefore, intermediaries between the En-Sof and the material world; and these intermediaries were the Ten Sefirot. The first Sefirah was latent in the En-Sof as a dynamic force; then the second Sefirah emanated as a substratum for the intellectual world; afterward the other Sefirot emanated, forming the moral, the material, and the natural worlds. But this fact of emanation does not imply a *prius* or a *posterius* or a gradation in the En-Sof—a candle, the flame of which is capable of igniting an indefinite number of lights, although, in itself, it is a unit. The Sefirot, according to their nature, are divided into three groups: the three superior forming the world of thought, the next three the world of soul, the last four the world of corporeality. They all depend upon one another, being united like links to the first one. Each of them has a positive and a passive quality—emanating and receiving. The first Sefirah is called by Azriel not Keter, as the later cabalists call it, but *Rum Ma'alah*. Grätz (*l.c.*) thinks that Azriel meant by that term Ibn Gabirol's "Will" ("Hefez")—the highest dynamic force of the Deity. Indeed, Azriel's contemporary, Jacob ben Sheshet, called the first Sefirah *Razon* ("Will"). The second and third Sefirah were *Hokmah* and *Binah*; the fourth, fifth, and sixth, *Hesed*, *Pahad*, and *Tiferet*; the seventh, eighth, and ninth, *Nezah*, *Hod*, and *Yesod 'Olam*; and the tenth, *Zedek*. These Ten Sefirot were put by Azriel into correspondence to the ten parts of the human organism and to the ten different refractions of light.

The whole system, with the exception of the theory of the Sefirot, is derived from Ibn Gabirol's "*Me'kor Hayyim*," which Azriel imitated, even as to its form, in arranging his commentary upon the Ten Sefirot, by putting it into questions and answers as Gabirol did. Azriel, however, had the merit of affording some guidance in the labyrinth of mysticism.

**AZRIEL B. MOSES HA-LEVI.** See *ASHKENAZI*, *AZRIEL B. MOSES LEVI*.

**AZRIEL BEN MOSES MESHEL, OF WILNA:** Grammarian; lived at the end of the seventeenth and at the beginning of the eighteenth century. About 1700 he left his native town, Wilna, and settled with his family at Frankfort-on-the-Main. There he published, in 1704, in collaboration with his son Elijah, a prayer-book entitled "*Derek Siah ha-Sadeh*" (The Way of the Plant of the Field: Gen. ii. 5), according to the method of Shabbethai Sofer of Przemyśl, with a commentary, "*Mikra Kodesh*" (Holy Reading), containing the rules for punctuation and reading. A second edition of this prayer-book, with a German introduction, refuting the criticisms of Solomon Hanau on the first edition, was published by Azriel at Berlin in 1713, and a third at Wilhelmsdorf in 1721.

He published also: "*Pilpula Harifta*" (Keen Discussions), novellæ on the order *Neziḳin* by Yom-Tob Lipmann Heller; and "*Ma'amadot*," recitations after the reading of the Psalms, by Menahem Lonzano, with additions of his own.

I. Br.

**AZULAI, AZULAY**: A family descended from Spanish exiles who, after the expulsion of the Jews from Spain in 1492, settled in the city of Fez, Morocco. Hayyim Joseph David Azulai (see No. 4) derives the family name from the initials of the Hebrew words **אִשָּׁה זָנָה וְחֻלְלָה לֹא יִקְחוּ** ("They shall not take a woman that is a barlot, or profane," Lev. xxi. 7). This derivation, however, is not at all probable; and it is to be presumed that the name refers to a locality in Morocco or in Spain. The following genealogical tree gives the principal members of the family:

1. **Abraham Azulai**: Grandfather of Abraham (No. 2), who speaks of him as having lived in Fez.

2. **Abraham Azulai**: Cabalistic author and commentator; born in Fez about 1570; died at Hebron Nov. 6, 1643. The expulsion of the Moors from Spain brought a great number of the exiles to Morocco, and these newcomers caused a civil war from which the country in general and the Jews in particular suffered greatly. Abraham Azulai, in consequence of this condition of affairs, left his home for Palestine and settled in Hebron. There he wrote a commentary on the Zohar under the title "Kirjath Arba" (City of Arba; Gen. xxiii. 2). The plague of 1619 drove him from his new home; and while in Gaza, where he found refuge, he wrote his cabalistic work "Hesed le-Abraham" (Mercy to Abraham; Micah vii. 20). It was published after the author's death by Meshullam Zalman ben Abra-

ham Berak of Gorice, in Amsterdam, 1685. Another edition, published in Sulzbach in the same year, seems to be a reprint, although Steinschneider, in "Cat. Bodl." col. 666, thinks the reverse. Azulai's commentary on the Zohar, "Zohore Hammah" (Rays of the Sun), was printed in Venice, 1654. He also wrote: "Or ha-Lebanah" (Light of the Moon), "Ma'asse Hoshel" (Cunning Work), and "Kenaf Renanim" (Peacock's Wing).

Of the numerous manuscripts that he left and that were in the hands of his descendant, Hayyim Joseph David (No. 4), some are still extant in various libraries. Only one was published, a cabalistic commentary on the Bible, under the title "Ba'ale Berit Abraham" (Abraham's Confederates; see Gen. xiv. 13), Wilna, 1873. His most popular work, "Hesed le-Abraham," referred to above, is a cabalistic treatise with an introduction, **אבן השתיה** ("The Cornerstone"; see Talmud Yoma 53b), and is divided into seven "fountains" (see Zech. iii. 9), each fountain being subdivided into a number of "streams." The contents of the work are hardly different from the average vagaries found in cabalistic books, as evidenced by the following specimen from the fifth fountain, twenty-fourth stream, p. 57d, of the Amsterdam edition:

"On the mystery of metempsychosis and its details: Know that God will not subject the soul of the wicked to more than three migrations; for it is written, 'Lo, all these things doth God work twice, yea thrice, with a man' (Job xxxiii. 29). Which means, He makes him appear twice and thrice in a human incarnation; but the fourth time he is incarnated as a clean animal. And when a man offers a sacrifice, God will, by miraculous intervention, make him select an animal that is an incarnation of a human being. Then will the sacrifice be doubly profitable: to the one that offers it and to the soul imprisoned in the brute. For with the smoke of the sacrifice the soul ascends heavenward and attains its original purity. Thus is explained the mystery involved in the words, 'O Lord, thou preservest man and beast' (Ps. xxxvi. 7 [R. V. 6])."

BIBLIOGRAPHY: Azulai, *Shem ha-Ge'olim*, s.v.; Benjacob, *Ozar ha-Sefarim*, p. 196; Fürst, *Bibliotheca Judaica*, i. 67; Michael, *Or ha-Hayyim*, p. 12.

3. **Abraham Azulai**, called "the illustrious cabalist": Rabbi and author; born in the city of Morocco; died there about 1745. He was popularly supposed to possess miraculous powers. He is the author of a Hebrew work upon the Cabala, "Mikdash Melek," a commentary upon the Zohar.

BIBLIOGRAPHY: Azulai, *Shem ha-Ge'olim*, s.v.

4. **Hayyim Joseph David Azulai**: Son of Isaac Zerachiah (No. 7); one of the most prolific of rabbinic authors in the eighteenth century, and a pioneer writer on the history of rabbinical literature; born in Jerusalem about 1724; died at Leghorn March 21, 1807. He studied under Isaac ha-Kohen Rapoport, Jonah Nabon, and Hayyim ibn 'Attar. While in general a type of the Oriental rabbi of his age, a strict Talmudist, and a believer in the Cabala, his studious habits and stupendous

**His Early Scholar-** memory awakened in him an interest ship. in the history of rabbinical literature and in its textual criticism. He accordingly began at an early age a compilation of passages in rabbinical literature in which dialectic authors had tried to solve questions that were based on chronological errors. This compilation he called **העלם דבר** ("Some Oversights"). It was never printed.

Azulai's scholarship made him so famous that in 1755 he was chosen as meshullah (emissary), an honor bestowed on such men only as were, by their learning, well fitted to represent the Holy Land in Europe, where the people looked upon a Palestinian rabbi as a model of learning and piety. He traveled in this capacity through Italy, France, Germany, and Holland. On his return to Palestine he settled in Hebron, where his ancestor Abraham Azulai (No. 2) had first settled when he came to Palestine. Joseph David Sinzheimer, in a eulogy on Azulai, states that the latter left Palestine three times on his missions, in 1755, 1770, and 1781. His diary and his other works are, however, not clear on this point. In 1755 he was in Germany, in 1764 in Egypt, and in the year 1773 in Tunis, Morocco, and Italy, in which latter country he seems to have remained until 1777, most probably occupied with the printing of the first part of his biographical dictionary, "Shem ha-Gedolim," Leghorn, 1774, and with his notes on the Shulhan 'Aruk, entitled "Birke Yosef," Leghorn, 1774-76. In 1777 he was in France, and in 1778 in Holland. On October 28 of the latter year he married, in Pisa, his second wife, Rachel; his first wife, Sarah, had died in 1773. Noting this event in his diary, he adds the wish that he may be permitted to return to Palestine. This wish seems not to have been realized. At all events he remained in Leghorn, occupied with the publication of his works.

Azulai's literary activity is of an astonishing breadth. It embraces every department of rabbinical literature: exegesis, homiletics, casuistry, Cabala, liturgics, and literary history. The last is, as has already been stated, the only department in which he was original. A voracious reader, he noted all historical references; and on his travels he visited the famous libraries of Italy and France, where he examined the Hebrew manuscripts.

His notes were published in four booklets, comprising two sections, under the titles "Shem ha-Gedolim" (The Name of the Great Ones), containing the names of authors, and "Wa'ad la-Hakainim" (Assembly of the Wise), containing the titles of works. They were, however, so unsystematically arranged that the mass of facts contained therein was of little value until Isaac Benjacob, in 1852, published the work systematically arranged, with copious cross-references. This treatise has established for Azulai a lasting place in Jewish literature. It contains data that might otherwise have been lost, and it proves

**His** otherwise have been lost, and it proves  
**"Shem ha-** the author to have had a critical mind,  
**Gedolim."** except when touching cabalistic doctrines. By sound scientific methods he investigated the question of the genuineness of Rashi's commentary to Chronicles or to some Talmudic treatise (see "Rashi," in "Shem ha-Gedolim"). Nevertheless he firmly believed that Hayyim Vital had drunk water from Miriam's well, and that this fact enabled him to receive, in less than two years, the whole Cabala from the lips of Isaac Luria (see "Hayyim Vital," in "Shem ha-Gedolim").

The amount of blind superstition found in his diary and other works is almost incredible in a man of such admirable critical ability; and his liturgical works have greatly helped to make this superstition

general. In his diary he notes all the cabalistic recipes found by him in manuscripts, and gives many instances of the miraculous effects of his prayers. In his religious attitude **His Super-** he is a strict rigorist. He discusses  
**stition.** the question of early burial, which he recommends chiefly on the ground of the cabalistic doctrine that the delay of burial occasions suffering to the dead, and actually writes: "If it should happen in one case out of ten thousand that one would be buried alive, this would not be the slightest sin; for it was so foreordained in order to avoid the evil that would result to the world from this man or his posterity" ("Hayyim Sha'al," i. 25).

Azulai's exegetical works are of the same character, being filled with interpretations of numerals and of casuistic methods. Instances of this kind are found on every page of his "Homat Anak" (Wall Made by a Plumb-Line; Amos vii. 7) and in his commentary to the Psalms, entitled "Yosef Tehillot" (To Add Praise), Leghorn, 1794.

As a writer Azulai was most prolific. The list of his works, compiled by Benjacob, runs to seventy-one items; but some are named twice, because they have two titles, and some are only

**His Works.** small treatises. Still, his activity was marvelous. The veneration bestowed upon him by his contemporaries was that given to a saint. He reports in his diary that when he learned in Tunis of the death of his first wife, he kept it secret, because the people would have forced him to marry at once. Legends printed in the appendix to his diary, and others found in Walden's "Shem ha-Gedolim he-Hadash" (compare also "Ma'aseh Nora," pp. 7-16, Podgoritza, 1899), prove the great respect in which he was held. Even to-day a great many Oriental and Polish Jews undertake pilgrimages to his grave or send letters to be deposited there.

Azulai left two sons, Abraham and Raphael Isaiah (No. 12). Of the former nothing is known.

**BIBLIOGRAPHY:** A complete bibliographical list of his works is found in the preface to Benjacob's edition of *Shem ha-Gedolim*, Wilna, 1852, and frequently reprinted; Carmoly, in the edition of *Shem ha-Gedolim*, Frankfurt-on-the-Main, 1843; Fuenn, *Keneset Yisrael*, p. 342; Hazan, *Hama'alot li-Shelomoh*, Alexandria, 1894; Walden, *Shem ha-Gedolim he-Hadash*, 1879; and the diary *Ma'agal Tob*, edited by Elijah Benamozegh, Leghorn, 1879; Michael, *Or ha-Hayyim*, No. 868.

**5. Isaac Azulai:** Noted cabalist; lived at Hebron in the seventeenth century; son of Abraham (No. 2). He wrote "Zera' Yizhak" (The Seed of Isaac), a cabalistic work, now lost. He died at Constantinople, presumably while traveling as an emissary for the congregations of the Holy Land. Isaac had two sisters. One married **Benjamin Zebi** and was the mother of **Hayyim Abraham Israel Zebi**, who was rabbi in Hebron (died 1731) and the author of "Orim Gedolim" (The Great Lights)—a treatise on rabbinical law—and of "Yemin Moshch" (The Right Hand of Moses), glosses to the Shulhan 'Aruk (The Hague, 1777). The other became the wife of **David Isaaci**; and their son, **Abraham Isaaci** (died Jan. 10, 1729), was an eminent rabbi in Jerusalem and the author of responsa entitled "Zera' Abraham" (The Seed of Abraham), 2 vols., Constantinople, 1732, and Smyrna, 1733.

**6. Isaac Leonini Azulay:** Under the name "Joseph Leonini" (Leonini was the family name of his mother) he published in Berlin in 1794 a Spanish comedy, "El Delincuente Honrado," on the title-page of which he describes himself as "Teacher of Princess Augusta and in the gymnasium of Berlin." He is said to have traveled to Prague in order to study at the university there, but was robbed of his money and found himself stranded in Berlin, where he resorted to the teaching of languages to gain a livelihood. Azulay subsequently settled in London, where he married Bella Friedlaender, a cousin of Chief Rabbi Herschell. He died in that city July 17, 1840.

**7. Isaac Zerahiah Azulai:** Father of Hayyim Joseph David (No. 4). Died in Jerusalem Jan. 16, 1765.

**8. Isaiah Azulai:** Father of Isaac Zerahiah (No. 7) and grandfather of Hayyim Joseph David (No. 4). Died in Jerusalem March 3, 1732.

**9. Mordecai Azulai:** Father of Abraham (No. 2). Lived in Fez toward the end of the sixteenth century.

**10. Moses Azulai:** Son of Raphael Isaiah (No. 12). He edited some of his father's responsa in the collection "Zikron Mosheh" (Remembrance of Moses), Leghorn, 1830, and made an epitome of some of the works of his grandfather, Hayyim Joseph David (No. 4).

**11. Nissim Zerahiah Azulai:** Editor and annotator of Shabbethai Cohen's "Shulhan ha-Tahor" (The Pure Table), a treatise on the 613 commandments, Safed, 1836. He perished in the earthquake at Safed Jan. 1, 1837.

**12. Raphael Isaiah Azulai:** Rabbi in Ancona, where he died about 1830. One of his daughters married Abraham, son of the renowned rabbi David Pardo; and her grandson Moses Pardo was rabbi of Alexandria from 1871 to 1888. He was the author of a number of responsa and decisions, which appeared partly under the title "Tiferet Mosheh" (The Splendor of Moses), and partly in the "Zikron Mosheh" of his son Moses (No. 10).

**BIBLIOGRAPHY:** Azulai, *Shem ha-Gedolim*, s.v.; Zedner, *Cat. Hebr. Books British Museum*; Hazan, *Ha-Ma'alot li-Shelomoh*, 1894; *The Leisure Hour*, London, Aug., 1886; *Allg. Zeit. des Judenthums*, 1839, p. 60; private sources.

D. D.—A. P.

**AZZUR** or **AZUR**: **1.** Father of Hananiah, a false prophet, contemporary with Jeremiah (Jer. xxviii. 1).

**2.** A leader who sealed the covenant with Nehemiah (Neh. x. 17).

**3.** Father of Jaazaniah, a prince of the people denounced by Ezekiel (Ezek. xi. 1 *et seq.*).

J. JR.

G. B. L.

**'AZZUT PANIM** (עֲזוּת פָּנִים, "brazen-facedness"): A term applied to an impudent person. The phrase "'az panim" occurs in Deut. xxviii. 50 ("a nation of fierce countenance"), and in Dan. viii. 23 ("a king of fierce countenance"). "The brazen-faced one goes to Gehenna, the shame-faced, or bashful, to Gan 'Eden," says R. Judah (Mas. Kallah, ii., and thence transferred to Abot v. 20; see Taylor, "Sayings of the Fathers," p. 96). "He who has not 'boshet panim' [bashfulness or shamefacedness], of a surety his ancestors stood not on Mount Sinai"; that is, he has not the pure blood of the Jewish race in him (Ned. 20a; compare Mek., Yitro, 9 on "His fear be upon your face that ye sin not," Ex. xx. 20). One of the characteristics of the Jewish people, next to their being compassionate and benevolent, is their bashfulness (Yeb. 79a). No greater insult can therefore be inflicted upon a Jew than to call him "'Az-zut Panim," in dialect also "Azzes Pōnim." "Every priest that shows 'Azzut Panim is surely a descendant of the slaves of Pashhur, the son of Immer, the priest who smote the prophet Jeremiah and put him in stocks [Jer. xx. 1]; these slaves having intermarried with priestly houses" (Kid. 70b.) According to R. Eliezer, R. Joshua, and R. Akiba, an "'az panim" (shameless person) exposes himself to the suspicion of being the offspring of an incestuous marriage or of some forbidden connection ("mamzer," or "ben ha-niddah"; Mas. Kallah, ii.). An "'az panim" may be called "rasha" (wicked), in accordance with Prov. xxi. 29 ("A wicked man hardeneth his face"), or be hated, in accordance with Eccl. viii. 1 (which, with the reading "yesunne," means "the boldness of his face causeth him to be hated"). An "'az panim" is sure of falling a victim to sin, and it is on account of "'azze fanim" (the shameless) in the land that rain is withheld, according to Jer. iii. 3: "Therefore the showers have been withholden, . . . thou refusedst to be ashamed" (Ta'an. 7b).

At the close of his daily prayers Rabbi Judah ha-Nasi used to say: "May it be Thy will, O Lord our God and God of our fathers, to save us from 'azze fanim' [the shameless ones] and from 'azzut panim' [shamelessness], from an evil man, an evil plague," etc. (Ber. 16b)—a prayer which found a place in the daily morning prayer of the common liturgy.

## B

**BA'AL** (בעל; plural construct, **Ba'ale**, בעלי): Hebrew word for possessor or owner of an object. In connection with many nouns, it expresses some relation between the person and an object. Many of these combinations are found in Bible phraseology, and are still used, especially among the Polish-German Jews; e.g., "Ba'al ha-Bayit" (master of the house), corruptly pronounced "Baalboos." In the idiom of the Talmud the words compounded with Ba'al that are especially used to designate the different classes among scholars are: "Ba'ale Gemara," or "Ba'ale Talmud," those versed in the Talmud; "Ba'ale Mikra," those versed in the Bible; and "Ba'ale Mishnah," those versed in the Mishnah. Other compounds with Ba'al adopted from the Talmud, and still frequently used, are: "Ba'ale Hayim," animals; "Ba'al Din," opponent, the plural being "Ba'ale Din [in]," those engaged in a lawsuit; "Ba'al Teshubah," the repentant sinner; "Ba'al Yesurin," one afflicted with pain; "Ba'al Mum," one having a bodily defect; "Ba'al 'Ezrah," counselor. A curious use of Ba'al is found in the rabbinic, especially the halakic, writings of the Middle Ages. It consists in citing an author by the title of his best-known work, with which Ba'al is combined; e.g., "Ba'al Halakot," meaning Isaac Alfasi; "Ba'al Hassagot," meaning Abraham b. David. Jacob b. Asher is commonly cited as "Ba'al ha-Turim"; another codifier, Mordecai b. Abraham Yafe, as "Ba'al ha-Lebushim," being the authors of those works respectively. The critic Zerachiah ben Isaac is called after his work "Ba'al ha-Maor"; and Moses Isserles is known as "Ba'al ha-Mappah." The great preacher Isaac Arama is very seldom cited under his own name, but as "Ba'al 'Akedah"; and the lexicographer Nathan b. Jehiel is cited as "Ba'al he-Aruk." The Tosafists are called "Ba'ale ha-Tosafot," an expression that designates the school, just as "Ba'ale ha-Melkar" is the term for philosophers (compare MEIR BA'AL NES; BA'AL SHEM).

**BIBLIOGRAPHY:** Kohut, *Aruch Completum*, II, 141-150; Levy, *Neuchbr. Wörterb.*, I, 248-249; Jastrow, *Dictionary*, p. 182.  
J. SR. L. G.

The following enumeration of the most popular compounds of Ba'al that have crept into common use may be found useful:

*Ba'al 'Askan* (a busybody).  
*Ba'al ha-Bayit* (master of the house); dialect form, *Baalboos*, whence *Bal Boiste* (mistress of the house).  
*Ba'al-berit* (the master of the covenant), name given to the father upon whose child the covenant rite of circumcision is performed.  
*Ba'al Dabar* (compare Ex. xxiv. 14, "Ba'al Debarim," the man who has a case before the court).  
*Ba'al Darshan*, or *Ba'al Derush* (the preacher).  
*Ba'al Din* (the man who has a litigation at court).  
*Ba'al Emah* (a man of fear; a timid man).  
*Ba'al 'Erek* (one who is assessed; one well-to-do).  
*Ba'al Ezrah* (a man of counsel; an able adviser).  
*Ba'al Geburah* (a man of strength; a robust man).  
*Ba'al Halom* (a dreamer).  
*Ba'al Hen* (a man of pleasing manners).

*Ba'al Hesron*: dialect, *Bal hisaron* (a man having some physical defect).  
*Ba'al Hob* (debtor; though in the Talmud the creditor, Ket. ix. 2; Ned. 47b, and elsewhere).  
*Ba'al Kabod*: dialect, *Bal Kovod* (a man who lays stress on forms of respect).  
*Ba'al Koth* (man of strength).  
*Ba'al Korch* (the reader from the scroll of the Law).  
*Ba'al [Mahaloket]* *Mahaloket* (a quarrelsome man).  
*Ba'al Mahashaboh* [*Mahashabot*] (a dreamer; literally, a man of thoughts).  
*Ba'al Massat u-Mattan* (a business man).  
*Ba'al Mazzal* (man of good luck; a fortunate man).  
*Ba'al Mefunnah* (a lover of comfort and ease).  
*Ba'al Melakah* [*Bal Meloko*] (a working man; a craftsman).  
*Ba'al Milhamah* [*Bal Milhomo*] (a man of war; a soldier).  
*Ba'al Mum* (a man of some physical blemish).  
*Ba'al Nes* (a man who had some miraculous experience in life).  
*Ba'al Nihush* (a man of superstitious notions; a believer in omens).  
*Ba'al Nissayon* (a man who has been tried and has stood the test).  
*Ba'al Serarah* (an aristocrat).  
*Ba'al Shalom* (a man of peace).  
*Ba'al Shem* (master in the use of the Holy Name).  
*Ba'al Tefillah* (the reader of the prayers on special occasions).  
*Ba'al Teshubah* (the man of repentance; one who has turned from an irreligious to a religious mode of life).  
*Ba'al Tobah* (a man who loves to shew kindness to others).  
*Ba'al Torah* (a man of learning).  
*Ba'al Uman* [Talmudical, *Ba'al Umanut*] (a craftsman).  
*Ba'al Yesurin* (a man afflicted with pain).  
*Ba'al Zedakah* (a man of benevolence).  
*Ba'al Zikharon* (the possessor of a good memory).

**BA'AL AND BA'AL-WORSHIP.—Biblical**

**Data:** The wide-spread and primitive Semitic root ("ba'al") may be most nearly rendered in English

Altar of Ba'al at Petra, Idumea.  
(After a photograph.)

by "possess." The term "Ba'al," therefore, which is usually explained as meaning "lord," is properly "possessor" or "owner," and is so used in a great variety of applications in common Hebrew speech. Thus we read of the "ba'al" of a house, of land, of goods, of a woman (that is, as a husband). It is also generalized so far as to be a mere noun of relation. Thus a "ba'al of dreams"

is a dreamer; a "ba'al of anger" is an angry man; a "ba'al of wings" is a bird; a "ba'al of edges" is two-edged; "ba'alim of a covenant" are allies; "ba'als of an oath" are conspirators. Further, a "ba'al" may be the owner of animals (Isa. i. 3; Ex. xxi. 28

*et seq.*), but not of men as slaves or subjects, for the phrase in Isa. xvi. 8, the "ba'alim" of the nations, implies dominion over regions rather than over people. "Ba'al" in Hebrew is therefore essentially different from "adon," which implies personal sway and control. When any divinity is called "ba'al" or "a ba'al," the designation must be understood to imply not a ruler of men, but a possessor or controller of certain things. On the other hand, the Assyrian (Babylonian) "bēl," originally the same word, implies especially lordship over men, though it is also,

Ba'al as a Sun-God.  
(From a Phoenician stele in the Louvre.)

as in all north-Semitic languages, used as a mere noun of relation. In Arabic "ba'al," as applied to persons, is confined to the meaning of "husband."

The question as to the origin of the Worship of Ba'al among the Hebrews can only be settled by tracing it among the Semites in general and especially among the Babylonians. Here the name (Bel) is that of one of the earliest and most honored of national deities. Bel was the special god of Nippur, perhaps the oldest of Babylonian cities. Nippur was in the earliest known times a

**Bel in** pur was in the earliest known times a  
**Babylonia.** religious center, and the prestige of Bel was so great that when the city of Babylon became supreme his name was imposed upon that of Merodach, the patron deity of the capital, who was thenceforth known as Bel-Merodach or simply Bel (compare Isa. xlvi. 1). There is, however, nothing to show that Bel was a universal object of Semitic worship before he became the god of Nippur. Moreover, Nippur, like other Babylonian cities, had its own local deity under whose auspices the city itself and its temple were founded, and who seems to have received the name Bel, "lordly, dominant," by reason of the renown and influence of this central shrine.

This, however, will hardly account for the place held by Bel in the Babylonian pantheon, where he appears as the god of the earth, distinguished from Anu, the god of the heavens, and Ea, the god of the lower world. Bel seems to have been honored on similar grounds in Lagash in southern Babylonia, and it is reasonable to suppose that it was a combination of the several leading cults of such Bels that led to the unification indicated in the position of the great Babylonian Bel. It appears probable that it

was the gradual assimilation of cities and petty states that raised the leading local deities to national prominence. Thereafter other influences, sacerdotal, theological, and administrative, cooperated to make a favorite cult predominant. Bel, accordingly, became a distinct national god, with a proper name, at an early date, though at a comparatively late stage of religious development.

In Palestine such a degree of syncretism in Baal-Worship was never attained. There were several reasons for this, the chief of which was that political combination of any sort was difficult in that singularly diversified region, so that each city-state among the Canaanites retained its own special divinity with its separate and independent shrine. Yet when any community came to exert a wide influence, as did the city of Tyre, the worship of its deity extended among the dependent cities and might even be adopted elsewhere by virtue of alliances, political or matrimonial, on the part of the rulers of the respective states. Such, for example, was the occasion of the degradation of worship in Israel in the time of Solomon (I Kings xi. 1 *et seq.*) and of Ahab (I Kings xvi. 31 *et seq.*).

The passage last cited is suggestive. There it is stated that Ahab "took as a wife Jezebel, daughter of Ethbaal, king of the Sidonians, and he went and served the Baal and worshiped him; and he set up an altar to the Baal in the house of Baal which he had built in Samaria." It is hardly likely that the passage embodies a reference to a god Ba'al whose worship was common throughout Palestine, for "the Baal," according to the context, does not necessarily mean anything more than Melkart, the deity specially honored by the Phoenicians (Sidonians), and in fact it appears that there were many Ba'als in Palestine, each of whom stood on an independent footing (compare BAAL-BERITH, BA'ALIM, etc.). But Ahab had no occasion to aggrandize any one of these minor Ba'alim, since he did not regard them as at all serviceable.

To account for the worship of these Ba'alim we may refer to the usage of the word as a common noun. The supernatural powers most obvious to the imagination of primitive Semites were those which were supposed to supply their most pressing wants, such as the need of food and drink. Gatherings and settlements were made where the soil was most inviting; that is, where it was perennially productive. Such districts were regarded as being fertilized by

Ba'al Hamon.  
(From a Phoenician terra-cotta in the Louvre.)

divine agency, and as each of them had its own divinity or demon as the "owner" of the soil, such a being was called its "Ba'al." The usage, having thus begun in agricultural settlements, was naturally transferred to the sites of cities, all of which were in any case founded under religious auspices. Hence the multiplicity of Ba'als; and hence the proper names of places which have "Baal" as the first element, such as BAAL-HAZOR, BAAL-HERMON, BAAL-MEON, BAAL-PERAZIM, BAAL-SHALISHA, BAAL-TAMAR, and BAAL-ZEPHON. A second stage of development was reached when to the Ba'al of a place was assigned a more abstract character as a divinity of wider functions as BAAL-BERITH, BAALZEBUB. A further step was taken when the name was used absolutely of a god Ba'al without qualifications, used, for example, in antithesis to YHWH and as the second element in names of persons, in such forms as Ish-baal ("Man of Ba'al") or Hannibal ("Favor of Ba'al").

It is not correct, therefore, to speak of Ba'al as being a universal Semitic deity, nor even as being the object of a common Canaanitish worship. On the other hand, it can not be said that there was no god Ba'al, as a distinct divinity among inland or maritime Canaanites, for later usage points clearly to the use of the word as a proper name without any definition whatever.

It would appear that the Hebrews first learned Ba'al-Worship from the agricultural Canaanites. Their life before the conquest of Canaan, whether lived in or outside of Palestine, was nomadic, and therefore kept them beyond the circle of religious associations promoted by the cultivation of the soil.

After their settlement the Israelites began to live as did the people of the land, and with the new mode of industrial and domestic life came the example and the incitement of the religious use and wont that were inseparable from the soil. The stated festivals, in which the Ba'als of the land had drawn to themselves all the enthusiasm and devotion of an intensely religious people, were a part of the fixed order of things in Palestine, and were necessarily appropriated by the religion of YHWH. With them came the danger of mixing the rites of the false gods and the true God; and, as a matter of fact, the syncretism did take place and contributed more than anything else to the religious and moral decline of Israel.

The noxious elements in such Ba'al-Worship were not simply the degradation of YHWH and the enthronement in his place of a baseless superstition. The chief evil arose from the fact that the Ba'als were more than mere religious fantasies.

**Dangers and Evils of the Worship.** They were made the symbols of the reproductive powers of nature, and thus their worship ministered to sexual indulgences, which it at the same time legalized and encouraged.

Further, there was placed side by side with the Ba'al a corresponding female symbol, the ASHTORETH (Babyl. "Ashtar") and the relation between the two deities was set forth as the example and the motive

of unbridled sensuality. The evil became all the worse when in the popular view YHWH himself was regarded as one of the Ba'als and the chief of them (Hosea ii. 16). It was in northern Israel, where agriculture was more followed than in the southern kingdom, that Ba'al-Worship was most insidious and virulent. The Book of Hosea speaks eloquently and pathetically of the moral and religious ruin which it wrought in the days just before the fall of the monarchy. It was to the Ba'als that the popular worship of the high places was paid; or, more frequently, to YHWH Himself with Baalish rites. In the kingdom of Judah the inveterate evil was abated, if not at once quelled, by the concentration of all religious acts in Jerusalem and its Temple. More pernicious while it lasted than this popular inland Canaanitic cult was the elaborate official Ba'al-Worship of Ahab and Jezebel, above alluded to, which was finally rooted out by revolution and proscription (II Kings ix., x.).

It had prophets by the hundred, as well as priests, and had the effect of virtually though not avowedly putting the religion of YHWH under the ban. It was introduced into Judah by Athaliah, daughter of Jezebel; and its suppression there was also accompanied by a civil outbreak (II Kings xi. 4 *et seq.*). Ba'al-Worship did not play so great a part in the later religion of Judah as did the adoration of the heavenly bodies and related usages borrowed from Assyria and Babylonia. Yet the customs native to the soil lingered on till they were obliterated by the Exile.

Apart from the offerings of fruits from the earth and the firstlings of cattle, much is not known with regard to the rites of the popular Ba'al-Worship. Self-torture and mutilation characteristic of the Phœnician type **Accompaniments.** (I Kings xviii. 28) were probably absent from the simpler and freer usages of the primitive local observances. It is also doubtful whether the sacrifice of children, proper to the service of Molech, was ever a feature of inland Canaanitic Ba'al-Worship (Jer. xix. 5 is to be corrected by the LXX.). The shrines were little more than altars with the symbol of the Ashtoreth planted beside it—the sacred tree-stem or pole named from an old Canaanite goddess, Asherah, with whom Ashtoreth was identified. Near by sacred pillars were also often reared.

It has been already indicated that the Ba'al plays a great rôle in Canaanitic proper names. A curious phase in the history of the cult in Israel

**Baal in Personal Names.** is shown in the substitution by later editors of (נשׁוֹבֵט), "boshet," "the shameful thing," for Ba'al in such names as Ishbosheth and Mephibosheth; compare "Eshbaal," I Chron. viii. 33, and "Meribbaal," I Chron. ix. 40 (viii. 34). A name which could not be thus treated was "Bealiah" (I Chron. xii. 6 [A. V. 5]), which means "Jehovah is Ba'al."

—**In Mohammedan Literature:** It is more than doubtful whether "Baal" appears in the Koran as a proper name. Five times it is used in the sense "husband"; once in the singular (sura xi. 75), and four times in the plural (suras ii. 228, xxiv. 31). Once it is used of a god (sura xxxvii. 125). In that passage, according to the interpretation of Ibn 'Abbas ("Lisan al-Arab," xiii. 62), a cousin of the prophet and the founder of Koranic exegesis (died 687), it is to be rendered "Lord." Sura xxxvii. 123-127 may be translated: "And verily Elijah was one of the divine messengers when he said to his people, 'Will ye not fear? Will ye invoke a Lord ["Ba'l"] and abandon the best of creators, God your Lord and the Lord of your forefathers?' But they gave him the lie; and they, verily, will be brought to judgment." There seems little doubt that Ibn 'Abbas' interpretation of "Ba'l," as equivalent to "rabb" (lord) or "malik" (possessor), represents the conception of Mohammed. It agrees with Arabic usage (see "Lisan al-Arab," *l.c.*, and Lane, "Lexicon," p. 228 b. c.). But later Islam, with few exceptions, has united to interpret "Ba'l" as a proper name. One exegete has said that it meant any idol ("sanam") in general; another, that it was any deity except God. But for the great mass of Moslems, Ba'l was an idol of gold worshiped by the people of Bakk, a town in Syria, afterward called from it "Ba'lbakk" (Baalbek). It was twenty cubits high, and had four faces; and "devils" entered it and spoke to the people from it, according to the usual Moslem idea. This was in the time of Ahab and Jezebel; and Bakk was their capital. Others have held that it was in the time of JONAH; still others, that it was a woman whom the people of Bakk worshiped. For the later legend see Al-Tha'labi (died 1036), "Kisaṣ al-Anbiya," ed. Cairo, p. 142, and references above. See also ELLIAH IN MOHAMMEDAN LITERATURE.

**BA'AL HA-BAYIT** (בעל הבית, literally "master of the house"; see Ex. xxii. 7 [R. V. 8]; Judges xix. 22. In Talmudic usage "owner," "landlord," "host"; see Jastrow, "Dictionary," *s.v.* בית. In Yiddish, **Balboos**; plural, **Ba'ale Battim**): In more modern usage, the constituent members of a congregation as contrasted with the "toshabim" (transient members or strangers). The Ba'ale Battim consist of those members who pay over a certain amount for their seats in the synagogue. In return for this they had special privileges, such as being elected bridegroom of the Law, voting at elections, and certain other advantages, on which account they are known in England as "privileged members," as contrasted with "seat-renters." They are also eligible for the honorary offices of the synagogue, and can not evade service except on payment of a fine.

**BAAL-BERITH.**—**Biblical Data** ("the Ba'al of the Covenant"): A form of Ba'al-worship prevailing in Israel (Judges viii. 33), and particularly in

Shechem (Judges ix. 4). The term "Ba'al" is shown by the equivalent "El-berith" (Judges ix. 46, R. V.) to mean "the God of the Covenant." In considering what the covenant (or covenants) was over which this Ba'al presided, it must not necessarily be concluded that certain definite treaties of the time were alone referred to, such as the Canaanitic league of which Shechem was the head, or the covenant between Israel and the people of Shechem (Gen. xxxiv.). The term is too abstract to have been occasioned by a single set of conditions. Moreover, the temple of the god (Judges ix. 4, 46) in Shechem implies a permanent establishment. Probably the name and the cult were wide-spread and ancient (see BAALIM), though it happens to have been mentioned only in connection with the affairs of Shechem.

J. F. McC.

—**In Rabbinical Literature:** The idol Baal-berith, which the Jews worshiped after the death of Gideon, was identical, according to the Rabbis, with Baal-zebul, "the ba'al of flies," the god of Ekron (II Kings i. 2). He was worshiped in the shape of a fly; and so addicted were the Jews to his cult (thus runs the tradition) that they would carry an image of him in their pockets, producing it, and kissing it from time to time. Baal-zebul is called Baal-berith because such Jews might be said to make a covenant (Hebr. "Berit") of devotion with the idol, being unwilling to part with it for a single moment (Shab. 83b; comp. also Sanh. 63b). According to another conception, Baal-berith was an obscene article of idolatrous worship, possibly a *simulacrum priapi* (Yer. Shab. ix. 11d; 'Ab. Zarah iii. 43a). This is evidently based on the later significance of the word "berit," meaning circumcision.

L. G.

**BAAL-GAD:** A place situated at the northern limit of Palestine, in the valley of Lebanon, near Mount Hermon (Josh. xi. 17, xii. 7, xiii. 5). Since I Chron. v. 23 mentions Baal-hermon as the northern limit of the tribe of Manasseh, it has been supposed that Baal-gad and Baal-hermon are identical. This conjecture is quite possible, and more plausible than that of Gesenius, Raumer, Robinson, and others, according to whom Baal-gad (Hermon) is identical with the later celebrated Paneas (Bāniās); for Paneas can hardly be said to lie in the valley of Lebanon. Others have connected Baal-gad with Ḥaṣḥbêjâ in the Biḡa'.

J. JR.

F. Bu.

**BAAL-HAMON:** A place mentioned in Cant. viii. 11, in which passage Solomon is said to have had a vineyard there; its identity is unknown. Graetz proposes to read "Baal-hermon" for "Baal-hamon"; but this is mere conjecture. Balamon (Judith viii. 3), with which Delitzsch and others have sought to identify it, is apparently the Old Testament Ibleam, or Bileam, and the modern Bel'ame, a moderately fruitful valley south of the great plain of Jezreel. Bickell and Cheyne eliminate the word, to preserve the meter.

F. Bu.

**BAAL-HANAN:** 1. An Edomite king (Gen. xxxvi. 38). He is called the son of Achbor; but the name of his native city is not given. For this and

other reasons, Marquart ("Fundamente Israelitischer und Jüdischer Gesch." 1896, pp. 10 *et seq.*) supposes that "son of Achbor" is a duplicate of "son of Beor" (Gen. xxxvi. 32), and that "Baal-hanan" in the original text is given as the name of the father of the next king, Hadad.

2. A Gederite who had charge of David's olive- and sycamore-trees in the low plains of Judah (I Chron. xxvii. 28).

J. JR.

F. Bu.

**BAAL-HAZOR**: A place situated near Ephraim, where Absalom possessed an estate (II Sam. xiii. 23). It was there that during a sheep-shearing festival Amnon was killed at the instigation of his stepbrother Absalom. Baal-hazor has, with some degree of plausibility, been identified as the modern Tell 'Azur, east of Beth-el (see EPHRAIM). It is perhaps the same as Hazor, mentioned in Neh. xi. 33.

F. Bu.

**BAAL KORÉ** (בַּעַל קֹרֶה), literally "the master reading": Term applied to the person who reads the weekly portion from the Pentateuch—usually the hazzan, though not necessarily so (see CANTILATION: HAZZAN; MUSIC, SYNAGOGAL; compare Dembitz, "Jewish Services in Synagogue and Home," pp. 70, 71, 262).

A.

F. L. C.

**BAAL-MEON, BETH-BAAL-MEON, BETH-MEON, or BEON**: A city in the eastern part of the Jordan district, which is designated in Numbers (xxxii. 3, 38), Joshua (xiii. 17), and Chronicles (v. 8) as Israelitish (Reubenitish), and in Jeremiah (xlviii. 23) and Ezekiel (xxv. 9) as Moabitish. According to the inscription on the MOABITE STONE (lines 9-30), this city was reconquered by King Mesha after it had become, under Omri, one of the cities of the Israelites. The site of Baal-meon, which is declared by Eusebius to be at a distance of nine Roman miles from Heshbon, is marked by the ruins of Ma'in. The remains of buildings show the Roman style of architecture. In a number of houses the lower part is hewn out of the rock. As Eusebius uses the name "Baian" ("Onomastica Sacra," ed. Lagarde, cccxxii. 40) for "Beon" (Num. xxxii. 3), the word has been connected with the sons of Baan (I Macc. v. 4 *et seq.*), who were punished by Judas Maccabeus for their hostility toward the Jews. The name of this same Bedouin tribe occurs also in Arabic authors (Wellhausen, "I. J. G.," 3d ed., p. 277).

J. JR.

F. Bu.

**BAAL-PEOR**: Name of a Canaanitish god. Peor was a mountain in Moab (Num. xxiii. 28), whence the special locality Beth-peor (Deut. iii. 29, etc.) was designated. It gave its name to the Ba'al who was there worshiped, and to whose service Israel, before the entrance into Canaan, was, for a brief time, attracted (Num. xxv. 3, 5; Ps. cvi. 28). The god is himself also called "Peor" by abbreviation (Num. xxxi. 16; Josh. xxii. 17). It is commonly held that this form of Ba'al-worship especially called

for sensual indulgence. The context seems to favor his view, on account of the shameful licentiousness into which many of the Israelites were there enticed. But all Ba'al-worship encouraged this sin; and Peor may not have been worse than many other shrines in this respect, though the evil there was certainly flagrant. In Hosea ix. 10 "Baal-peor" is the same as "Beth-peor," and is contracted from "Beth-baal-peor."

J. JR.

J. F. McC.

—**In Rabbinical Literature**: The worship of this idol consisted in exposing that part of the body which all persons usually take the utmost care to conceal. It is related that on one occasion a strange ruler came to the place where Peor was worshiped, to sacrifice to him; but when he heard of this silly practise, he caused his soldiers to attack and kill the worshipers of the god (Sifre, Num. 131; Sanh. 106a). The same sources mention various other facts concerning the cult, all of which give the impression that it still existed at the time of the Tannaim. That the statements of the Rabbis are not wholly imaginative and do not take their coloring from the rites of some heathen or antinomian-Gnostic sects is shown by the fact that the worship of Peor is ridiculed, but nowhere stigmatized as moral depravity, by the Rabbis, which latter might have been expected, had the assertions of the Rabbis been based on the Gnostic cults mentioned.

L. G.

**BAAL-PERAZIM**: A place mentioned in the report of the battle between David and the Philistines in II Sam. v. 20 (compare I Chron. xiv. 11). The Philistines encamped in the valley of REPHAIM, while David withdrew to the hill-fortress of Adullam and thence proceeded to Baal-perazim, where he defeated the Philistines. Consequently the place must have been situated in the valley of Rephaim; but more definite information concerning it can not be found. One is tempted to connect it with Mount Perazim (Isa. xxviii. 21).

J. JR.

F. Bu.

**BAAL-SHALISHA**: A place mentioned in II Kings iv. 42, and in the Talmud (Sanh. 12a). Eusebius identifies it with Baithsarisa, 15 Roman miles to the north of Lydda. This, however, is uncertain, and there is much in favor of connecting Baal-shalisha with the ruins of Serisiyyah, lying on the western side of the mountains of Ephraim, or with the ruins of the cities Kefr Thilth, lying somewhat to the northeast. According to the Talmud (*loc. cit.*), fruits ripened earlier at Baal-shalisha than elsewhere in Palestine.

**BA'AL SHEM** (בַּעַל שֵׁם; plural, "Ba'alei She-mot," more correctly "Ba'alei Shem," *i.e.*, Master of the Name): Designation of certain people who were supposed to work miracles through the name of God. This belief in the miraculous power of the Sacred Name is very old, having a history that covers more than two thousand years (compare SHEM HA-MEFORASH and GOD, NAMES OF); but the designation "Ba'al Shem" seems to have originated

only with the German-Polish Jews when they became acquainted with the practical Cabala of the school of Luria. The payetan Benjamin b. Zerah is indeed called "Ba'al Shem," which, however, only indicates that in his piyyuṭim he frequently alludes to the various mystical names of God. The first one who is known to have borne this name, Elijah of Chelm, flourished about 1500, at the period when the study of the Cabala was wide-spread in Poland. The Ba'al Shem, which first was undoubtedly applied only as a special distinction to particular men who were considered great saints and in whose miraculous powers the people believed, had two centuries later developed into a profession. These "Ba'ale Shem" represented a mixture of quack doctor, physician, and cabalist. They wrote amulets, prescribed empiric medicines, with which they were well acquainted, and engaged also in casting out or summoning spirits. Their profession was such that they incurred the hostility of physicians, with whom they often entered into serious competition. The following prayer, composed by a Ba'al Shem for himself and his compeers, is indicative of the attitude toward the physicians: "Preserve me from enmity and quarrels; and may envy between me and others disappear. Let, on the contrary, friendship, peace, and harmony prevail between me and the physicians, . . . that I may be respected in their opinion, . . . that they may not speak evil of me or of my actions" ("Toledot Adam," Zolkiev, 1720). Solomon Maimon speaks, in his autobiography (i. 217), of a Ba'al Shem who possessed medical knowledge and sufficient astuteness to make him a formidable competitor of the physicians.

Following is an approximately complete alphabetical list of persons known to have been Ba'ale Shem:

(1) Elhanan, rabbi in Vienna, seventeenth century (Dembitzer, "Kelilat Yohi," 78b); (2) Elijah, rabbi at Chelm (government of Lublin), a progenitor of Zebi Ashkenazi, flourished about 1500 (Responsa of Zebi Ashkenazi, No. 93; Emden, "Megilat Sefer," 4); (3) Elijah b. Moses Loans (1555-1636); (4) Falk, Hayyim Samuel, 1708-1782; (5) Gedaliah of Worms, an eminent Talmudist, died between 1622 and 1624 (Kaufmann, "Ya'ir Hayyim," Bacharach, p. 20, note 2); (6) Israel b. Eliezer (1700-1760), commonly known as BA'AL SHEM-TOB (see article); (7) Joel b. Isaac Heilprin, middle of the seventeenth century; (8) Joel b. Uri Heilprin, beginning of the eighteenth century; (9) Selig of Lublin, beginning of the eighteenth century (Kahana in the passage cited below, p. 63); (10) Wolf, who, like most of the Ba'ale Shem, lived in Poland in the beginning of the eighteenth century (Kahana l.c.); (11) Sekl Loeb Wormser (1768-1846), the Michaelstadter Ba'al Shem, still known in Germany under that name.

**BAAL SHEM, JOEL.** See HEILPRIN, JOEL B. ISAAC, and HEILPRIN, JOEL B. URI.

**BA'AL SHEM-TOB, ISRAEL B. ELIEZER** (commonly known by the initial letters of his name, **בְּשֵׁם טוֹב**, BESH-T): Founder of the sect of Hasidim; born about 1700; died at Miedzyboz (Medzhibozh), May 23, 1760. The little biographical information concerning him that exists is so interwoven with legends and miracles that in many cases it is

hard to arrive at the historical facts. He is said to have been born at Akuf (אקוף), a border-city between Poland and Wallachia; but no such place is known. From the numerous legends connected with his birth it appears that his parents were poor, upright, and pious, and that when left an orphan he was taken care of by the community in which he lived. At the "heder" he distinguished himself only by his frequent disappearances, being always found in the lonely woods surrounding the place, rapturously enjoying the beauties of nature.

His benefactors gave up the hope of his ever becoming a rabbi, and made him a "helper," who took the children to and from school and rehearsed short benedictions and prayers with them.

**Early Life.** His tender, sentimental nature, to which his later success was in great measure due, now stood him in good stead; for he could win children and attach them to him by explanations suited to their understanding. Later he became "shammash" in the same community, and at about eighteen he married. When his young wife died he left the place, and after serving for a long time as helper in various small communities of Galicia, he settled as a teacher at Flust near Brody.

On account of his recognized honesty and his knowledge of human nature he was chosen to act as arbitrator and mediator for people conducting suits against each other; and his services were brought into frequent requisition owing to the fact that the Jews had their own civil courts in Poland. In this avocation Besht succeeded in making so deep an impression upon the rich and learned Ephraim of Kutzy that the latter promised Besht his daughter Anna in marriage. The man died, however, without telling his daughter of her betrothal; but when she heard of his wish, she did not hesitate to comply. Besht's wooing was characteristic. In the shabby clothes of a peasant he presented himself at Brody before Abraham Gerson Kutower, brother of the girl, and a recognized authority in the Cabala and the Talmud. Kutower was about to give him alms, when Besht produced a letter from his pocket, showing that he was the designated bridegroom. Kutower tried in vain to dissuade his sister Anna from shaming the family by marrying this "am ha-arez"; but she regarded her father's will alone as authoritative.

After his marriage Besht did not long remain with this aristocratic brother-in-law, who was ashamed of him (for he kept up the pretense of being an ignorant fellow); and he went to a village in the Carpathians between Kutzy and Kassowa. His worldly property consisted of a horse given him by his brother-in-law. Every week his wife took a wagon-load of lime to the surrounding villages; and from this they derived their entire support. But the magnificent scenery in this, the finest region of the Carpathians, and the possibility of enjoying it without the interruptions of city life, compensated him for his great privations. Besht's condition was bettered when he took a position as sholet in Kshilowice, near Iaslowice. This position he soon gave up in order to conduct a village tavern which his brother-in-law bought for him. During the many years that he lived in the woods and came into

contact with the peasants, Besht learned how to use plants for healing purposes and to effect wonderful cures. In fact, his first appearance in public was that of an ordinary BA'AL SHEM. He wrote amulets and prescribed cures. To his credit be it said that he was far from practising the quackery of his fellows in the craft. In treating, for instance, those who suffered from melancholy, or the insane, he sought to influence their minds.

After many trips in Podolia and Volhynia as a Ba'al Shem, Besht, considering his following large enough and his authority established, decided (about 1740) to expound his teachings. He

**Appearance** chose for the place of his activity the little city of Miedzyboz; and the people, mostly from the lower classes, came to listen to him. His following gradually increased, and with it the dislike, not to say hostility, of the Talmudists. Nevertheless, Besht was supported at the beginning of his career by two prominent Talmudists, the brothers Meïr and Isaac Dob Margalit. Later he won to his side Baer of Meseritz, to whose great authority as a Talmudist it was chiefly due that Besht's doctrines (though in an essentially altered form) were introduced into learned circles. The antagonism between Talmudism and Hasidism was apparent to the representatives of each at Besht's first appearance; but the open breach did not come about until later. In fact, Besht took sides with the Talmudists in the Frankist disputes, and was even one of the three delegates of the Talmudists to a disputation between the two parties held at Lemberg in 1759. It was only in keeping with Besht's character that he felt keenly upon the acceptance of baptism by the Frankists, for it is related that he said: "As long as a diseased limb is connected with the body, there is hope that it may be saved; but, once amputated, it is gone, and there is no hope." The excitement consequent upon the Frankist movement undermined his health, and he died shortly after the conversion of many Frankists to Christianity.

Besht left no books; for the cabalistic commentary on Ps. cvii., ascribed to him (Jitomir, 1804), "Sefer mi-Rabbi Yisrael Ba'al Shem-Tob," is hardly genuine. In order to get at his teachings, it is therefore necessary to turn to his utterances as given in the works of the old Hasidim. But since Hasidism, immediately after the death of its founder, was divided into various parties, each claiming for itself the authority of Besht, the utmost of caution is necessary in judging as to the authenticity of utterances ascribed to Besht.

The foundation-stone of Hasidism as laid by Besh is a strongly marked pantheistic conception of God. He declared the whole universe, mind and matter, to be a manifestation of the Divine Being; that this manifestation is not an emanation from God, as is the conception of the Cabala, for nothing can be separated from God: all things are rather forms in which He reveals Himself. When man speaks, said Besht, he should remember that his speech is an element of life, and that life itself is a manifestation of God. Even evil exists in God. This seeming contradiction is explained on the ground that evil is not bad in itself, but only in its relation to man. It is wrong

to look with desire upon a woman; but it is divine to admire her beauty: it is wrong only in so far as man does not regard beauty as a manifestation of God, but misconceives it, and thinks of it in reference to himself. Nevertheless, sin is nothing positive, but is identical with the imper-

**Elements** fections of human deeds and thought. **of Besht's** Whoever does not believe that God **Doctrines.** resides in all things, but separates Him and them in his thoughts, has not the right conception of God. It is equally fallacious to think of a creation in time: creation, that is, God's activity, has no end. God is ever active in the changes of nature: in fact, it is in these changes that God's continuous creativeness consists.

This pantheism of Besht, of the consequences of which he was not at all conscious, would have shared the fate of many other speculative systems which have passed over the masses without affecting them, had it not been for the fact that Besht was a man of the people, who knew how to give his metaphysical conception of God an eminently practical significance.

The first result of his principles was a remarkable optimism. Since God is immanent in all things, all things must possess something good in which God manifests Himself as the source of good. For this reason, Besht taught, every man must be considered good, and his sins must be explained, not condemned. One of his favorite sayings was that no man has sunk too low to be able to raise himself to God. Naturally, then, it was his chief endeavor to convince sinners that God stood as near to them as to the righteous, and that their misdeeds were chiefly the consequences of their folly.

Another important result of his doctrines, which was of great practical importance, was his denial that asceticism is pleasing to God. "Whoever maintains that this life (עולם הזה) is worthless is in error: it is worth a great deal; only one must know how to use it properly." From the very beginning Besht fought against that contempt for the world which, through the influence of Luria's Cabala, had almost become a dogma among the Jews. He considered care of the body as necessary as care of the soul; since matter is also a manifestation of God, and must not be considered as hostile or opposed to Him.

In connection with his struggle against asceticism, it is natural that he should have fought also against the strictness and the sanctimoniousness that had gradually developed from the strict Talmudic standpoint. Not that Besht required the abrogation of any religious ceremonies or of a single observance. His target was the great importance which the Talmudic view attached to the fulfilment of a law, while almost entirely disregarding sentiment or the growth of man's inner life. While the rabbis of his day considered the study of the Talmud as the most important religious activity, Besht laid all the stress on prayer. "All that I have achieved," he once remarked, "I have achieved not through study, but through prayer." Prayer, however, is not petitioning God to grant a request, though that is one end of prayer, but רבקות ("cleaving")—the feeling of oneness with God, the state of the soul when man gives up the consciousness of his separate existence,

and joins himself to the eternal being of God. Such a state produces a species of indescribable joy (שמחה), which is a necessary ingredient of the true worship of God.

It is remarkable that Besht, whose starting-point was the same as that of Luria's Cabala, arrived at exactly opposite results. His conception of God was pantheistic; while the school of Luria laid the greatest stress upon the principle of

**Opposition** emanation. Besht's fight against as to Luria's ceticism was directed more against Cabala. the school from which it sprang than against pure Talmudism. His teach-

ings concerning שמחה ("joy") were especially opposed to asceticism. The followers of Luria considered weeping an indispensable accompaniment to prayer; while Besht considered weeping and feelings of sorrow to be wholly objectionable. The sinner who repents of his sin should not sorrow over the past, but should rejoice over the Heavenly Voice, over the Divine Power, working within him and enabling him to recognize the true in admitting his sin. The function of joy in prayer is paralleled by glowing enthusiasm and ecstasy (התלהבות) = "to become inflamed") in every act of worship. Fear of God is only an initiatory step to real worship, which must spring from a love of God and a surrender of self to Him. In his enthusiasm man will not think either of this life (עולם הזה) or of the next: the feeling of union with God is in itself a means and an end. Enthusiasm, however, demands progress, not the mere fulfilment of the Law's precepts in a daily routine which becomes deadening: true religion consists in an ever-growing recognition of God.

The later developments of Hasidism are unintelligible without consideration of Besht's opinion concerning man's proper relation with the universe. True worship of God, as above explained, consists in רביקות, the cleaving to, and the unification with, God. To use his own words, "the ideal of man is to be a revelation himself, clearly to recognize himself as a manifestation of God." Mysticism, he said, is not the Cabala, which every one may learn; but that sense of true oneness, which is usually as strange, unintelligible, and incomprehensible to mankind as dancing is to a dove. The man, however, who is capable of this feeling is endowed with a genuine intuition; and it is the perception of such a man which is called prophecy, or "bat kol," according to the degree of his insight. From this

**Idea of the** it results, in the first place, that the Zaddik. "zaddik," the ideal man, may lay claim to authority equal, in a certain sense, to the authority of the Prophets. A second and more important result of the doctrine is that the zaddik, through his oneness with God, forms a connecting-link between the Creator and creation. Thus, slightly modifying the Bible verse, Hab. ii. 4. Besht said: "The righteous can vivify by his faith." Besht's followers enlarged upon this idea, and consistently deduced from it that the zaddik is the source of divine mercy, of blessings, of life; and that therefore, if one love him, one may partake of God's mercy.

Though Besht may not be held responsible for the later conception of the zaddik, there is no doubt

II.—25

that his self-reliance was an important factor in winning adherents. It may, in fact, be said of Hasidism that, with the exception of Jesus and the Judæo-Christians, there is no other Jewish sect in which the founder is as important as his doctrines. Besht himself is still the real center for the Hasidim; his teachings have almost sunk in oblivion. As Schechter ("Studies in Judaism," p. 4) finely observes: "To the Hasidim, Ba'al-Shem [Besht] . . . was the incarnation of a theory, and his whole life the revelation of a system."

Besht did not combat the practise of rabbinical Judaism; this seemed harmless to him: it was the spirit of the practise which he opposed. His teach-

**Char-** ing being the result not of speculation, but of a deep, religious temperament, **acteristics.** he laid stress upon a religious spirit, and not upon the forms of religion.

Though he considered the Law to be holy and inviolable, he held that one's entire life should be a service of God, and that this would constitute true worship of Him. Since every act in life is a manifestation of God, and must perforce be divine, it is man's duty so to live that the things called "earthly" may also become noble and pure, that is, divine. Besht tried to realize his ideal in his own career. His life provided the best example for his disciples; and his intercourse with the innkeepers, a class of people who nearly corresponded to the publicans of the time of Jesus (a number of whom he raised to a higher level), furnished a silent but effective protest against the practise of the rabbis, who, in their inexorable sense of strict righteousness, would have no dealings with people fallen morally. The Hasidim tell of a woman whom her relatives sought to kill on account of her shameful life, but who was saved in body and soul by Besht. The story may be a myth; but it is characteristic of Besht's activity in healing those in greatest need of relief. More important to him than prayer was friendly intercourse with sinners; though the former constituted an essential factor in the religious life. The story of Besht's career affords many examples of unselfishness and high-minded benevolence. And while these qualities equally characterize a number of the rabbis of his day, his distinguishing traits were a merciful judgment of others, fearlessness combined with dislike of strife, and a boundless joy in life.

Moreover, Besht's methods of teaching differed essentially from those of his opponents, and contributed not a little to his success. He was certainly not a scholar; that is, his knowledge of rabbinical literature, especially of the Talmud and the Midrashim, was only that of an average "lamdan." He was still less gifted as a speaker. But the lack of scholarship and oratory was supplied by fine satire and inventiveness in telling parables. There are many satirical remarks directed against his opponents, an especially characteristic one being his designation of the typical Talmudist of his day as "a man who through sheer study of the Law has no time to think about God." Besht illustrated his views of asceticism by the following parable:

"A thief once tried to break into a house, the owner of which, crying out, frightened the thief away. The same thief soon afterward broke into the house of a very strong man, who, on

seeing him enter, kept quite still. When the thief had come near enough, the man caught him and put him in prison, thus depriving him of all opportunity to do further harm."

Not by fleeing from earthly enjoyments through fear is the soul's power assured, but by holding the passions under control.

Much of Besht's success was also due to his firm conviction that God had entrusted him with a special mission to spread his doctrines. In his enthusiasm and ecstasy he believed that he often had heavenly visions revealing his mission to him. In fact, for him every intuition was a divine revelation; and divine messages were daily occurrences. Accustomed, through the influence of the Cabala, to use mystic language, Besht frequently said with emphasis that his teacher was Ahijah of Shiloh, the prophet who at God's bidding undertook to bring about the breach between Judah and Israel. Besht was fully aware of the opposition between himself and rabbinical Judaism. And just as Ahijah's struggle with Judah ended in the victory of the golden calves, so Besht's endeavors for reform ended in the later Hasidism, a degeneration far worse than the Talmudic-rabbinic Judaism against which he had contended.

Besht is quite naturally one of the most interesting figures in modern Jewish legend. As a man of the people and for the people, it is not strange that he should have been honored and glorified in story and in tradition. Of the many narratives that cluster about him, the following are given as the most characteristic:

About his parentage, legend tells that his father, Eliezer, whose wife was still living, was seized during an attack (by the Tatars?), carried

**In Legend.** from his home in Wallachia, and sold as a slave to a prince. On account of his wisdom he found favor with the prince, who gave him to the king to be his minister. During an expedition undertaken by the king, when other counsel failed, and all were disheartened, Eliezer's advice was accepted; and the result was a successful battle of decisive importance. Eliezer was made a general and afterward prime minister, and the king gave him the daughter of the vice-king (*משנה למלך*) in marriage. But, being mindful of his duty as a Jew and as the husband of a Jewess in Wallachia, he married the princess only in name. After being questioned for a long time as to his strange conduct, he confessed his race to the princess, who loaded him with costly presents and aided him to escape to his own country. On the way, the prophet Elijah appeared to Eliezer and said: "On account of thy piety and steadfastness, thou wilt have a son who will lighten the eyes of all Israel; and Israel shall be his name, because in him shall be fulfilled the verse (Isa. xlix. 3): 'Thou art my servant, O Israel, in whom I will be glorified.'" Eliezer and his wife, however, reached old age childless and had given up all hope of ever having a child. But when they were nearly a hundred years old, the promised son (Besht) was born.

Besht's parents died soon after his birth; bequeathing to him only the death-bed exhortation of Eliezer, "Always believe that God is with thee, and fear nothing." Besht ever remained true to this injunc-

tion. Thus, on one occasion, when he was escorting school-children to synagogue, a wolf was seen, to the terror of old and young, so that the children were kept at home. But Besht, faithful to the bequest of his father, knew no fear; and, on the second appearance of the wolf, he assailed it so vigorously as to cause it to turn and flee. Now, says the legend, this wolf was Satan. Satan had been very much perturbed when he saw that the prayers of the children reached God, who took more delight in the childish songs from their pure hearts than in the hymns of the Levites in the Temple; and it was for this reason that Satan tried to put a stop to Besht's training the children in prayers and taking them to synagogue. From this time on, successful struggles with Satan, demons, and all manner of evil spirits were daily occurrences with Besht.

At this time, too, he learned how to work miracles with the name of God. The following is an instance: In Constantinople, where Besht stopped on his intended journey to Palestine, he was received with un-

usual hospitality by a worthy couple who were childless. In return for **His Miracles.** their kindness Besht, when departing, promised them that they should be blessed with a son, and rendered this possible by the utterance of the Sacred Name. Now, to do this was a great sin; and scarcely had the words of the incantation passed Besht's lips when he heard a voice in heaven declaring that he had forfeited thereby his share in the future life. Instead of feeling unhappy over such a fate, Besht called out joyfully: "Blessed art Thou, O Lord, for Thy mercy! Now indeed can I serve Thee out of pure love, since I may not expect reward in the future world!" This proof of his true love for God won pardon for his sin, though at the expense of severe punishment.

Besht's miraculous power was so great that he did not fear even the brigands who lived in the mountains, but dwelt care-free in their vicinity. Once, when wandering about, deeply immersed in thought, he climbed a steep mountain and, without noticing where he was going, reached a very dangerous spot. Besht thought that his end had come, for he felt himself slipping toward a deep precipice; but suddenly the opposite cliff approached and closed up the gap. The robbers, who were looking on at a distance, doubted no longer that he was a man endowed with divine power.

**BIBLIOGRAPHY:** The chief source for Besht's biography is Baer (Dob) b. Samuel's *Shibhe ha-Besht*, Kopy, 1814, and frequently republished. For Besht's methods of teaching, the following works are especially valuable: Jacob Joseph ha-Kohen, *Toledot Ya'akov Yosef*; *Liklutim* [*Liklute*] *Yekarim*, a collection of Hasidic doctrines; the works of BAER or MESERITZ. Critical works on the subject are: Dubnow, *Yevreiskaya Istoria*, II. 426-431; *idem*, in *Voskhod*, viii. Nos. 5-10; Grätz, *Gesch. der Juden*, 2d ed., xl. 94-98, 546-554; Jost, *Gesch. des Judenthums und Seiner Sekten*, iii. 185 *et seq.*; A. Kahana, *Rabbi Yisrael Ba'al Shem*, Jitomir, 1900; D. Kohan, in *Ha-Shahar*, v. 500-504, 553-554; Rodkinson, *Toledot Ba'ale Shem-Tob*, Königsberg, 1876; Schechter, *Studies in Judaism*, 1896, pp. 1-45; Zweifel, *Shalom 'al-Yisrael*, i.-iii.; Zederbaum, *Keter Kehunah*, pp. 80-103; Frumkin, *Adat Zaddikim*, Lemberg, 1880, 1865 (?); Zangwill, *Dreamers of the Ghetto*, pp. 221-288 (fiction).

F. BU.

**BA'AL TOKEA'** (בעל חוקע), literally "the master of blowing"): Term applied to the person who blows the SHOFAR.

A.

F. L. C.

**BAAL-ZEBUB.**—**Biblical Data:** Name of a god of the Philistine city of Ekron, mentioned only in connection with the illness of Ahaziah, king of Israel, in 842 B.C. (II Kings i. 2, 3, 6, 16), when the sick monarch sent messengers to Ekron to consult him on the prospects of his recovery. There has been much speculation as to the character of the god. As the word stands, it means "Baal of flies." This is usually explained as the god who expels or destroys flies; though it may also mean the patron or controller of flies. The two explanations may be combined in one, or rather the second may include the first; for the god who has power to drive away any plague has also power to send it. A Ζεὺς Ἀπόλυτος was worshiped at Elis in Greece as a disperser of flies, and further analogies drawn from the occurrence of "fly gods" among other nations (see Frazer's note to his ed. of Pausanias, v. 14) warrant us in retaining the common explanation until decisive proof to the contrary is forthcoming. It has been suggested that the second element of the name has been modified from an original "Zebul," or rather "beth Zebul," so that the name would mean "lord of the high-house" (compare I Kings viii. 13). The dropping of "Beth" is not without example (see BAAL-PEOR); but the warrant for assuming textual corruption is not sufficient. It was not unusual to call a god by the name of things that were particularly troublesome, and which he was asked to destroy (Nowack, "Hebr. Arch." p. 304; compare Apollo Smintheus as the destroyer of mice among the Greeks). The New Testament form "Beelzebub" (Matt. x. 25, etc.) is probably not based upon any Old Testament reading, but is due to phonetic dissimilation. See BEELZEBUB.

**BAAL-ZEBUB IN RABBINICAL LITERATURE.** See BAAL-BERITH IN RABBINICAL LITERATURE.

**BAAL-ZEPHON.**—**Biblical Data:** An Egyptian locality in the neighborhood of the Red Sea. In spite of all attempted combinations (Dillmann-Ryssell on Ex. xiv. 2) its situation is still unknown. An Egyptian god, B'irati Dapuna—that is, Ba'alat Zaphon—is mentioned by the Egyptians themselves (W. Max Müller, "Asien und Europa," p. 315). The name calls to mind the Phenician בעל צפון, which designates both a god and a place. It particularly signifies a city on Mount Lebanon, which, in the opinion of H. Winckler, occurs also in the Old Testament; for he interprets Jer. xv. 12 ("Alttestamentliche Untersuchungen," p. 179), as "iron of Baalzephon." However, it is not certain whether the Egyptian city and the Egyptian god Ba'alat Zaphon are directly connected with the Phenician name of a god.

F. BU.

—**In Rabbinical Literature:** The idol at Baalzephon was the only one that remained unharmed

when God sent the tenth plague upon Egypt, which not only brought death to men and animals, but also destroyed the idols. When Pharaoh overtook Israel at the sea, near Baal-zephon (Ex. xiv. 9), he said, "This idol is indeed mighty, and the God of Israel is powerless over him." But God intentionally spared Baal-zephon in order to strengthen the infatuation of the wicked Pharaoh (Mek., Beshallah, 2; Bo, 13).

L. G.

**BAALAH:** 1. A border town of Judah (Josh. xv. 9, 10; I Chron. xiii. 6) called elsewhere KIRJATH-JEARIM.

2. A mount on the border of Judah (Josh. xv. 11).

3. A city in the south of Judah (Josh. xv. 29), held by the Simeonites (Josh. xix. 3, where it is called Balah, while in the corresponding list of I Chron. iv. 29, it is called Bilhah).

J. JR.

G. B. L.

**BAALATH:** 1. A Danite city (Josh. xix. 44).

2. A city built by Solomon mentioned in connection with Tadmor (I Kings ix. 18; II Chron. viii. 6). Its site has not been determined.

J. JR.

G. B. L.

**BAALATH BEER:** A city in the possession of Simeon (Josh. xix. 8); but in the corresponding list of I Chron. iv. 33 called "Baal."

J. JR.

G. B. L.

**BAALBEK:** A city situated at the base of the western slope of the Anti-Lebanon, in a fertile region. It is the Heliopolis of the Greek and Roman writers, and is famous for the magnificent ruins of several temples—a large one with a vast courtyard; a smaller one (the Temple of the Sun); and a still smaller one, elegantly built in rococo style. The last two buildings, distinguished not only for their large proportions, but also for fine detail work, were probably constructed in the second century; and information from the seventh century indicates that the large temple was erected by Antoninus Pius. In classic literature the first mention of Heliopolis is in the third century; but coins found in the city show that it existed in the first century, when it was a Roman colony.

Its origin, however, belongs to a still earlier period, for it was the principal center of the Syrian sun-worship. This is corroborated by the fact that the name "Baalbek" is found among the Syrians and the Arabians. The meaning of the second part of the name is inexplicable; but the first part suggests the old Semitic "Baal." It is doubtful whether this city is mentioned in the Old Testament. Some identify it with Baal-gad; but Baal-gad could not have lain so far north. Others think that it is Aven (Amos i. 5), because the Greek translation renders "Aven" by "On"—the usual designation of "Heliopolis." The word "On," however, borrowed from the Egyptians, can not with justification be applied to a Syrian city; and the place mentioned by Amos is undoubtedly in the neighborhood of Damascus. Baalbek is mentioned several times in Talmud and Midrash; compare Neubauer, "G. T." p. 286; compare also SOLOMON IN RABBINICAL LITERATURE.

**BAALE, JUDAH.** See KIRJATH-JEARIM.

**BAALIM:** Plural of "Baal"; occurs in the Bible fifteen times, always used with the article; not found in the Pentateuch nor in the poetical books. For a full discussion of the cult, see BA'AL-WORSHIP. The true signification has been a matter of dispute. One of the leading explanations is that the expression is a "plural of majesty," equivalent to "the great god Ba'al," after the analogy of "Elohim" and "Adonim." Apart from other objections, it may be urged against this view that such phrases always become proper names, and, unlike "Baalim," are often used without the article. Hence other explanations are more plausible; for example, that Baalim are images of the god Baal, or that they are the various forms in which Baal is worshiped. Since, however, there is no evidence of the formal worship in Israel of any Ba'al at a common center, and as the local Canaanitic deities were known as the "baals" of their respective districts, and as Israel notoriously addicted itself to the cult of such deities, it is altogether probable that the expression designates the local deities to which such worship was paid in various places by the Hebrews in Palestine. Among other passages, Judges viii. 33 is specially instructive on this point. In connection with the lapse of the people of Israel into the worship of the Baalim, it is there said that "they made Baal-berith their god" (see BAAL-BERITH).

J. JR.

J. F. McC.

**BAALIS:** King of the Ammonites, who was the leading spirit in the murder of Gedaliah (Jer. xl. 14). While the first element in the name is clearly "Baal," the second is puzzling; and no satisfactory explanation has as yet been suggested.

J. JR.

J. D. P.

**BAALTIS.** See ASTARTE.

**BAANA (בַּעְנָא):** 1. Son of Ahilud, one of the twelve commissariat officers of Solomon. He had charge of the districts Taanach and Megiddo (I Kings iv. 12).

2. Son of Hushai, another of the commissariat officers of Solomon; placed over Asher and Aloth or Bealoth (I Kings iv. 16).

3. The father of Zadok, one of the builders of the wall at Jerusalem (Neh. iii. 4).

4. See BAANAH (3).

J. JR.

G. B. L.

**BAANAH (בַּעְנָה):** 1. Son of Rimmon the Beer-othite, of Benjamin, who, with his brother Rechab, was an officer under Ishbosheth. He killed Ishbosheth and brought his head to David in the hope of obtaining a reward; but instead of this, he and his brother were put to death by David (II Sam. iv. 2, 5, 6, 9).

2. Father of Heleb, one of the thirty men in the body-guard of David (II Sam. xxiii. 29).

3. One of the "children of the province" that returned with Zerubbabel (Ezra ii. 2, and in the parallel account of Neh. vii. 7). He was among those that sealed the covenant with Nehemiah (Neh. x. 27, 28; see also I Esd. vii. 8, where the name is spelled "Baana").

J. JR.

G. B. L.

**BAAR, HERMAN:** American educator; born in 1826 at Stadthagen, near Hanover, Germany. He received a preliminary education at the gymnasium of Hanover, and, after graduation, took a course in philology and theology at the University of Göttingen. On the completion of his studies he took a position as teacher at the celebrated undenominational school at Seesen, Germany, which he held eight years. In 1857 Baar received the ministerial appointment in the Seel street synagogue, Liverpool, in which office he spent ten years. Loss of voice forced him to relinquish this post; and, believing a change of climate advisable, he went to New Orleans, La., where he directed a school. In 1876 he was appointed superintendent of the Hebrew Orphan Asylum, New York city—a position he filled with great success till his resignation in 1899. Baar was the author of "Homely and Religious Topics" (two volumes of sermons to children), a Biblical history (part 1 published 1901), and of numerous magazine articles. He died Sept. 4, 1904. S.

**BA'ARAS** ("Ba'arah," "hot springs," from בָּעַר, "burning"): A place in the ravine Zerka Ma'in above the city of Macherus on the northeastern shore of the Dead Sea, where are, according to Josephus ("B. J." vii. 6, § 3), the so-called Iron Mountains. According to Eusebius ("Onomasticon," s. v. *κορυδαίη*), the place called Baaru was near Baal Meon, nine miles from Heshbon; similarly Jerome on Num. xxxii. 38. There are many hot springs at the place, some containing sweet and some bitter water, and they are interspersed with cold springs. One spot is especially remarkable, containing a cave overhung by a rock joining two projecting hills, from the one of which issues a very cold spring, from the other a very hot one; and the bath composed of these waters as they mingle is used as a remedy against many maladies, and is especially efficacious for strengthening the nerves. In the neighborhood are mines of sulphur and alum.

An interesting legend connected with these springs is related in the Midrash (see Epstein, "Beiträge zur Jüdischen Alterthumskunde," pp. 107, 108; and compare Buber's Tan., Wayeze, p. 146, note): Jacob was pursued by Esau on his way along the Jordan, but no sooner did he put his staff into the river than the Jordan divided itself and he passed over. Then Jacob came to Ba'arah (בַּעְרָה), a place like the hot springs of Tiberias, and there took a bath; again Esau followed him and besieged the place, so that Jacob would have died there in these hot waters had God not opened a way of escape for him in the cold springs whither he went. To these miracles the prophet refers when saying of Jacob, "When thou passest through the waters I will be with thee; when thou walkest through the fire thou shalt not be burned; neither shall the flame kindle upon thee" (Isa. xliii. 2).

Ba'aras is especially significant for a peculiar plant of the same name which grows there, deriving its name, "Ba'aras" (the burning one), from its flame-like color, which flashes at night like lightning. It was used, says Josephus, "by exorcists to drive out the demons from sick persons possessed by spirits of wicked persons that enter living men and kill them

unless some help is used against them." (Compare Pliny, "Hist. Nat." xxviii. 23).

**BIBLIOGRAPHY:** Josephus, *B. J.* vii. 6, § 3; Reland, *Palestina*, pp. 303, 487, 611, 881; Böttger, *Topographisch-Histor. Lexicon zu . . . Fl. Josephus*, p. 47; Buhl, *Geographie des Alten Palästina*, p. 123.

K.

**BAASHA:** Son of Abijah and king of Israel. Owing to the weakness of Nadab, the successor of Jeroboam I., first king of Israel, Baasha was enabled to seize the throne through the murder of his master. The conspiracy was carried out at Gibbethon on the western frontier, which was held by the Philistines and was being besieged by the Israelites. The presence and apparent approval of the army indicate that Baasha, like Omri later, must have been a military leader. His subsequent career confirms this conclusion. Like many military leaders, he appears to have risen from obscurity, as is suggested by the words of Jehu the prophet, "I exalted thee out of the dust, and made thee prince over my people Israel" (I Kings xvi. 2). In his complete extermination of the house of Jeroboam, who had proved himself a loyal patriot, he revealed the cruel traits of his nature. The fact that he came from the tribe of Issachar suggests that he may have represented a local faction.

Baasha's restless energy led him to wage a protracted war against Asa of Judah. His aim seems to have been not the complete conquest of Judah, but the blockade and plunder of its northern towns. To this end he built a strong fort at Ramah, and was so far successful that Asa resorted to the dangerous expedient of calling upon the common foe, Benhadad of Damascus (I Kings xv. 17-20). The Aramean king improved this opportunity to break his treaty with Baasha, and invaded Israel, overrunning its northern territory and annexing several towns. Baasha was defeated by his powerful northern neighbor and was obliged to transfer his capital to Tirzah, east of Shechem, and to abandon Ramah. Asa of Judah utilized the materials of this abandoned fort for the fortification of his own frontier towns, Geba and Mizpah.

Although the duration of Baasha's reign was twenty-four years (I Kings xv. 33), and while he died a natural death and was buried at the capital which he had established, he never attained the popularity or prestige that could assure permanence to his dynasty. On the whole, he brought disaster and weakness to Israel. His policy was not marked by any redeeming qualities, and it received the bitter condemnation which the Prophets visited upon all of Israel's purely military leaders (I Kings xvi. 1-7). The nation showed its disapproval by the overthrow of his dynasty in less than two years from the death of its founder.

C. F. K.

**BAB AL-ABWAB.** See **DERBENT**.

**BABA (THE GREAT):** Son of Nathaniel and grandson of Akbun, the high priests; a prominent leader and high priest of the Samaritans in the time of the emperor Constantine (fourth century). According to Samaritan traditions (see Neubauer, "Chronique Samaritaine," pp. 19-56, Paris, 1873; Abu al-Fatḥ, "Annales Samaritani," ed. Wilmar, pp.

13-132), he during his forty years' rule restored the pure worship on Mount Gerizim after having driven off the Roman guard and destroyed the Roman eagle set up there. He reestablished schools for the study of the Law, and reorganized the priesthood, appointing twelve priests over an equal number of districts.

The last chapter of the "Samaritan Chronicle," known under the name of the "Book of Joshua," contains in fragmentary form a legendary story of Baba, according to which the Samaritans, during the time of the Roman persecution in order to escape the death penalty for practising circumcision, used to carry their children in baskets covered with wool into a cave, where, by the light of candles, the rite was performed (compare Yer. Ket. i. 4, 25c; less correctly Sanh. 32b, *שְׁבוּעַת הַבֵּן אֵינָהּ הֵנָּה*). When the time came for Baba to be circumcised, his father had him also carried in the same manner to the cave by his maid-servant. German(us), the Roman (bishop), who was stationed at the gate of Nathaniel's house, knew what was intended, but allowed the maid to pass in order that the child might be circumcised in defiance of the imperial edict. Thenceforth it became customary at every Samaritan circumcision to recall the name of German, the Roman.

When Baba became high priest he sent his nephew, named Levi, to Constantinople to study. When the latter, under the guise of a Christian, had been elevated to the rank of a Christian archbishop, he obtained permission to return to Nablus, Baba's city, and visit there the church reared on Mount Gerizim in place of the ancient Samaritan temple. The story breaks off abruptly; and it can only be inferred, from what precedes, that, with Levi's help, Baba succeeded in demolishing the Roman eagle which had been set up on the Mount (and which is said to have been endowed with speech and to have denounced any "Hebrew" who ascended the hill) and in restoring the Samaritan cult. Regarding the authenticity of the story or the underlying historical facts, see the article **SAMARITANS**.

Kirchheim, *Karne Shomron*, pp. 90, 91, Frankfurt-on-the-Main, 1851.

G.

K.

**BABA** or **BAB** (בָּבָא, בָּב): Originally, "gate," a Talmudic technical term for section, part, or clause. A single Mishnah may be divided into two or three parts: "resha" and "sefa," "beginning" and "end"; or "resha," "mezi'ata," and "sefa," "beginning," "middle," and "end." The contents of these parts is referred to as "baba de-resha," "baba de-mezi'ata," and "baba de-sefa"—"the clause of the first part of the Mishnah, of the middle part, and of the last part." The first section of the fourth order of the Mishnah—"Neziḳin," damages—is subdivided into three massektas, which are called "Baba Ḳamma," "first part"; "Baba Mezi'a," "the middle part"; and "Baba Batra," "the last part." According to Baba Ḳamma, p. 102a, these three massektas were considered as one massekta called "Neziḳin." The author of Tosafot Yom-Ṭob, in his introduction to Mishnah Baba Ḳamma, says: "There is an analogy to the tripartition of Masseket Neziḳin in the

tripartition of Masseket Kelim, which in the Tosefta is divided into three Babas—Kamma, Mezi'a, and Batra." Seder 'Olam contains thirty chapters, which are also grouped in three "babas."

J. S.R.

M. F.

**BABA BATRA** ("The Last Gate"): The third of the three Talmudic tractates of the order Neziḳin, dealing with man's responsibilities and rights as the owner of property, of a house or field. This "massekta" (treatise) is not, like BABA KAMMA and BABA MEZI'A, the exposition of a certain passage in the Pentateuch. It is divided into ten chapters, the contents of which may be described as follows: (1) Regulations relating to property held by more than one owner (ch. i.); (2) responsibilities of an owner of property with regard to that of his neighbor (ch. ii.); (3) established rights of ownership and rights connected with property (ch. iii.); (4) laws referring to the acquisition of property by purchase (ch. iv.-vii.); (5) laws of inheritance (ch. viii.-ix.); (6) laws concerning documents (ch. x.).

1. Joint owners of property may dissolve partnership and divide the property, if the parties consent, except in the case of a volume of the Scriptures, which may not be divided under any circumstances. Things which lose their value on division can only be divided if all the owners consent. Except in these cases, either party has a right to insist on a division of the property. In the case

**Joint Ownership.** where a courtyard ("ḥazer") is owned by several partners, each of them has to contribute to the usual requirements of a court; if they divide it, a partition wall or fence must be erected in accordance with certain rules. The previous partners are now neighbors; and their relations are described in chap. ii.

2. The fundamental rule about neighboring property is, that the owner of the adjoining property must avoid everything that might prove a nuisance to the neighbor, or a source of injury to the neighbor's property. "The noise of a smith's hammer, of a mill, or of children in school, is not to be considered a nuisance" (ii. 3). Disputes as regards injury or nuisance are generally settled by the fact of prior or established rights (ḤAZAQAḤ).

3. "Ḥazaqaḥ" (established right, possession *de facto*) is proved by the undisturbed exercise of such a right during a certain period (three years), in spite of the presence of the rival claimant in the same "land." In this respect Palestine was divided into three "lands" or districts (iii. 2): Judah, Galilee, and Peraea (ch. iii.).

4. In the transfer of a house, a court, a winepress, a bath, a township, or a field, much depends on the meaning of these terms, which are fully defined in chap. iv. In the Mishnah similar definitions are given of a boat, a cart, a yoke of oxen, and the like (v. 1-5). In selling the produce

**Acquisition of Property.** of the field care must be taken that there be no deviation from the conditions of the sale as regards quality and quantity, lest the sale be declared invalid ("mekah ṭa'ut," v. 6-vi. 3). Various problems resulting from the sale of property, of a house, or of a piece of land are discussed in the Mishnah (vi.

4-vii.); among them the sale of land for a burial-ground for a family, or the undertaking by a workman to prepare it (vi. 8). The burial-place is described as follows: "A cave hewn out in a rock 4 cubits broad and 6 cubits long (or, according to R. Simeon, 6 by 8 cubits); along the length of the cave on each side there are three graves of 4 cubits long, 1 cubit broad, and 7 handbreadths ('tefahim') high; and 2 such graves in the back of the cave. In front of the cave was the court ('ḥazer') 6 by 6 cubits, so as to afford sufficient room for the bier and the persons attending the burial."

5. The laws of inheritance are based on Num. xxvii. 8-11, as interpreted by tradition. Among these is the rule that the husband inherits the property of his deceased wife, her claim in case of the husband's death being settled in the marriage contract (KETUBAH). Another rule gives to the first-

**Laws of Inheritance.** born son a double share of his deceased father's property. Thus the daughters of Zelophehad are said to have claimed, as their father's property, three shares of the Holy Land (which is assumed to have been divided among the 600,000 men brought out of Egypt); namely, the share of Zelophehad and, as a first-born son of Hefer, a double share of the property of his deceased father (viii. 3). These laws do not interfere with the right of a man to donate his property according to his pleasure (viii. 5). Complicated cases are dealt with in chap. ix.; such as the simultaneous claims of the heirs, the wife, and the creditors of the deceased; or the conflicting claims of the heirs of the husband and of those of the wife, where the husband and wife are found dead at the same time; the heirs of the former contending that she died first, and that by her death her property became the property of the husband; while the other party contends that he died first, and that the wife's heirs inherit her property.

6. As legal documents are of great importance in the problems dealt with in the three Babas, a chapter is added, containing regulations concerning the writing of such documents. Of these one peculiarity may be mentioned; namely, the difference between "geṭ pashuṭ," a simple, unfolded document, and "geṭ mekushshar," a folded document. The latter was prepared in the following way: When a line or two had been written the parchment was folded and one witness signed on the back of the document; this operation was repeated

**Regulations About Documents.** as many times as the parties concerned liked. This method, requiring a longer time for the execution of the document, is said to have been originally introduced for the writing of a letter of divorce in the case of hasty and passionate husbands (especially priests who were prevented by law from remarrying their divorced wives), in order to give them time to calm down (B. B. 160b). The massekta of the three Babas closes with a general remark on the educational value of the study of civil law.

The Tosefta has eleven chapters, which correspond to the ten chapters of the Mishnah as follows: chap. i. corresponds to chap. ii. of Mishnah; ii. to iii.; iii. to iv.; iv. to v. 1-5; v. to v. 6-11; vi. to vi.-vii.; vii. to vii.; viii.-x. to ix.; xi. to x.

The two Gemaras discuss and explain the laws of the Mishnah and add many fresh problems, especially the Babylonian Gemara. The Palestinian Gemara is very short, and contains little new matter. The following passages may find a place here:

Bab. 3b: One synagogue must not be pulled down before another is built. Herod, by virtue of his authority as king, ignored the rule, and pulled down the Temple before the new one was built. The story of Herod and Mariamne and a narrative of other incidents of Herod's reign are attached.

7b: Every member of the community is compelled to contribute his share toward the building of gates, walls, etc., of his place.

10a: Turnus Rufus (Tyrannus Rufus) asked R. Akiba, "If your God is a friend of the poor, why does He not give them sufficient to live upon comfortably?" To which R. Akiba rejoined, "That we may have opportunity for good actions." There are ten powerful things; and these are overcome by stronger things: a mountain by iron; iron by fire; fire by water; water is borne by the clouds; these are dispersed by the wind; the wind is borne by the human body; the latter is broken down

**Examples of Gemara.** by fear; fear is expelled by wine; wine is overcome by sleep; death is harder than all these, and yet "charity" ("zedakah") saves from death.

14b: The order of the Prophets is: Joshua, Judges, Samuel, Kings, Jeremiah, Ezekiel, Isaiah, and the twelve minor Prophets. Kings is followed by Jeremiah because Kings ends with the Exile, and Jeremiah deals with the same subject; Ezekiel precedes Isaiah, because the former ends with the rebuilding of the Temple, and Isaiah's prophecies throughout contain comforting hopes and promises. The order of the Hagiographa is Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Songs, Lamentations, Daniel, Esther, Ezra (including Nehemiah), and Chronicles. Moses wrote his book, including the section about Balaam, and Job. Joshua wrote his book and the last eight verses of the Pentateuch.

21a: At first every father had to teach his children. A large school was then opened in Jerusalem; and after that schools were established in every community. At first they were attended only by youths of sixteen or seventeen years; but Joshua b. Gamla introduced the custom that children of six or seven years should attend the schools: interesting regulations are added concerning the location of public schools, the number of pupils for each class, and the like.

58b: The elders of the Jews say, "A judge who has to be summoned to the court, and ordered by the court to pay his debt, is unfit to act as judge."

73b *et seq.*: The wondrous tales of Rabbah bar Hanah.

74b: Legends about Leviathan, and about the wonderful changes in the days of Messiah.

121a: Connection of the celebration of the fifteenth of Ab (end of Mishnah Ta'anit), with the reconciliation between the Benjamites and the rest of the Israelites.

The Gemaras also contain the following interesting homiletic interpretation of Biblical passages:

Zeph. ii. 1: "Hitkosheshu wakoshu" ("Gather

yourselves together, yea, gather together"). "Kashshet 'azmeka, ve-ahar kak kashshet aherim" ("Improve thyself first, and then improve others") (60b).

Num. xxi. 27: "Al ken yomeru hammoshelim bō'u Heshbon" ("Wherefore they that speak in proverbs say, 'Come ye to Heshbon'"), "Thus shall they that control themselves say, 'Come, let us reckon and compare the material loss caused by a good act with the reward, and the gain obtained through sinning, with the punishment; then thou wilt be built up and firmly established'" (78b, a play on "mashall," which also means "to rule," and on "heshbon" = "reckoning").

Prov. xv. 15: "All the days of the poor are troublesome"—this applies to the students of Gemara—"but he who is of a cheerful heart hath a continual feast"—this applies to the students of the Mishnah (145b).

The commentary of Rashi on the Babylonian Talmud Baba Batra ends at the beginning of chap. iii.; its place is taken by that of his grandson, Rabbi Samuel b. Meir ("Rashbam"), from ch. iii. to the end of the Massekta.

**BABA BUCH:** Judæo-German translation or adaptation by Elijah LEVITA of an Italian version of the Anglo-Roman romance, "Sir Bevis of Hamton." The Italian version of this, entitled "Buovo d'Antona," was very popular—no less than thirty editions being known of it, five of them before 1507, when Elijah Levita translated it into Judæo-German. His exact object in making this translation is not quite clear; it may have been merely as a pastime or as a sort of literary curiosity, but it had become recognized by the authorities in Rome that the German Jews could be reached only through their own dialect; and there may, therefore, have been a conversionist motive at the root of this translation, as well as of the Judæo-German translation of the Bible which was made simultaneously and among the same circles. However the case may be, the book proved very popular. After its first publication at Isny or Venice about 1540, it was republished at Prague in 1660; and was reprinted at Frankfort-on-the-Main in 1691, at Amsterdam in 1721, at Wilhelmsdorf in 1724; and became especially popular among Jewish women, for whom it was almost the sole romance in any accessible literary form. To them it was familiar as the "Bovo Buch," which was closer to the Italian original, and is probably the true transliteration, though Steinschneider transliterates it "Baba Buch" ("Cat. Bodl." col. 934). The source of this popular work remained a literary puzzle until it was solved by J. Zedner in 1863, who gave conclusive evidence of its derivation from the old English romance in its Italian form. Among other pieces of evidence of its Italian origin he points out the use of the word "solfa," misprinted in the edition as *טולפה*.

The subject is one of the curiosities of Jewish literature.

**BABA BEN BUTA:** Teacher of the Law at the time of Herod, and perhaps a member of the prominent family known as "The Sons of Baba" ("Bene Baba"), who, at the time of the siege of Jerusalem by Herod (37 B.C.), resisted its surrender, and whom Costobarus protected from the wrath of Herod for ten years, until they were discovered and put to death (Josephus, "Ant." xv. 7, § 10). But, according to a tradition preserved in the Babylonian Talmud (B. B. 3b *et seq.*), Baba ben Buta was the only teacher of the Law who was spared by Herod. According to this tradition it was Baba b. Buta, deprived of his eyesight by Herod, who advised the latter to rebuild the Temple in expiation of his great crimes. The following conversation between the king and the blind teacher, with its haggadic embellishments, forms the principal part of this tradition, and it probably rests upon a historical foundation:

"One day Herod came to visit the blind teacher and, sitting down before him, said, 'See how this wicked slave [Herod] acts.' Said he [Baba] to him, 'What can I do to him?' Said he, 'Curse him, sir.' Said he, 'It is written (Eccl. x. 20), 'Curse not the king; no, not in thy thought.''" "But," said Herod, 'he is no king.' Upon which Baba said, 'Let him be only a man of wealth, it is written (*ib.*), 'And curse not the rich in thy bed-chamber'; or let him be merely a chief, it is written (Ex. xxii. 27 [A.V. 28]), 'Curse not a ruler of thy people.'" "But," said Herod, 'this is interpreted to mean a ruler that acts according to the customs of thy people; but that man [Herod] does not act according to the customs of thy people.' Said he, 'I am afraid of him,' to which Herod replied, 'There is no man here to go and tell him; for I and thou sit here alone.' Said he, 'It is written (Eccl. l.c.), 'For a bird of the air shall carry the voice, and that which hath wings shall tell the matter.'"

"Herod now disclosed himself, and said, 'Had I known that the rabbis were so discreet, I should not have put them to death. What, now, can a man like me do to repair this wrong?' 'He,' said Baba, 'has extinguished the light of the world [put to death the teachers], as it is written (Prov. vi. 23), 'For the commandment is a lamp; and the Law is light'; let him busy himself with the light of the world [the Temple], of which it is written (Isa. ii. 2), 'All nations shall flow unto it'" [a play on *nahar*, which also means "light"]. Said Herod, 'I am afraid of the [Roman] government.' To which Baba replied, 'Send a messenger; he will be one year in going to Rome, will be detained there one year, and make his home voyage in one year, and in the mean while thou shalt have torn down and built'; and Herod did accordingly."

In halakic tradition Baba b. Buta is recorded as a disciple of Shammai; and it is said that he prevented an opinion of Shammai concerning a question of sacrifices from becoming a rule, because he was convinced of the correctness of Hillel's opposing opinion (Bezah 20a *et seq.*). Baba was so scrupulous in his religious observances that he brought a free-will offering every day, for fear that he might have committed a sin requiring atonement. These sacrifices were called "sin-offerings of the pious" ("hasidim"). Baba was a member of the "bet din" and always saw that justice was done, particularly to women (Git. 57a; Ned. 66b).

J. SR. W. B.

**BABA KAMMA** ("First Gate"): The first of a series of three Talmudic treatises of the order Nezi-

kin dealing with damages. Baba Kamma is on compensation for damages. The regulations discussed in this tractate have their source in the judgments that Moses was commanded to lay before the Israelites, and which were probably included in the "Sefer ha-Berit" (Book of the Covenant, Ex. xxiv. 7). Biblical laws dealing with the cases discussed in Baba Kamma are contained in the following passages: Ex. xxi. 18, 19, and xxi. 24-xxii. 5 [A. V. 6]. And the principle that underlies all the legislation in this respect is expressed by the sentence, "He that kindled the fire shall surely make restitution" (xxii. 5 [A. V. 6]).

Baba Kamma is divided into ten chapters, which may be grouped as follows: damage caused without criminality (chaps. i.-vi.); damage caused by a criminal act (chaps. vii.-x.).

**Damage Caused Without Criminality:** (1) Damage caused by agents in their normal condition; (2) damage caused by agents in their abnormal condition. An instance of the first class of agents is an ox treading upon things that are in his way and thus damaging them, or eating things that are in his path. An instance of the second class is the case of a Goring Ox, as under normal circumstances an ox does not gore.

(1) The Mishnah opens with the first class, and enumerates four heads of damages, "abot nezikin" (literally, parents of damages), viz.: "Shor," "Bor,"

"Mab'eh," "Heb'er" (Ox, Pit, Feeding, Burning). These four agents of **Damage by Normal Agents.** damages correspond to those mentioned in Ex. xxii. 4 [R. V. 5], xxi. 33, 34, xxii. 4 [A. V. 5], xxii. 5 [A. V. 6].

The law concerning the compensation in these cases is expressed in the Mishnah (i. 1) thus: "These four agents have in common the circumstance that they usually cause damage; that the owner has the duty to prevent the damage; and that if he fails to do so, on damage being done he must pay full compensation, with the best of his property" (compare Ex. xxii. 4 [A. V. 5]). Before, however, giving the detailed regulations for these four kinds of damage, the Mishnah proceeds to the discussion of the second class of damages, those caused by agents in an abnormal condition.

(2) The principal point in the second class is the distinction made between "tam" (harmless) and "mu'ad" (warned) (see ACCIDENT).

**Damage by Abnormal Agents.** The law of compensation in these two cases is as follows: In the case of an animal previously reputed harmless (tam) the owner has to compensate

for half the damage, unless half the damage exceeds the whole value of the animal causing the damage. In a case where the owner has been warned (mu'ad), he must give full compensation for the damage, without regard to the value of the damaging animal (compare Ex. xxi. 35, 36).

The law of mu'ad applies to the four kinds of damage done by animals or agents in their normal condition. In addition to these the Mishnah (i. 4) enumerates the following: man, and wild beasts owned by a man—such as the wolf, the lion, the bear, and the leopard; also the serpent. Of man it is said, "Man is always fully responsible (mu'ad), whether

he cause damage intentionally or unintentionally, whether awake or asleep" (ii. 6). This rule is illustrated by various instances given in the third chapter (1-7).

The remaining part of the third chapter, the fourth, and part of the fifth (1-4), contain regulations concerning the compensation for

**Damage by** damage caused by a goring ox. **Fol-**  
**Pit, Burn-** lowing the order of the abot nezikin  
**ing, etc.** given in the beginning of the tractate, the damage caused by a pit is dis-

cussed in the second part of the fifth chapter; and the sixth chapter is devoted to the remaining two causes of damage, grazing (1-3) and burning (4-6). Of the last section the following law is noteworthy: "If a camel laden with flax passes through a street, and the flax catches fire from a candle that is inside a shop so that the whole shop is thereby set on fire, the owner of the camel is held responsible for the damage; if, however, the candle is outside the shop, the owner of the shop is responsible, except in case of Hanukkah lights" (see ACCIDENT).

**Damage Caused by Criminal Acts:** (1) By theft (ch. vii.); (2) by violence (ch. viii.); (3) by robbery (ch. ix.-x.).

(1) "If a man steal an ox or a lamb and slaughter the same or sell it, five cattle shall he pay for the ox and four sheep for the lamb" (Ex. xxi. 37). The regulations as to how to apply this law under various circumstances are contained in chapter vii. 1-6.

(2) The compensation for injuries as the result of violence is discussed in chapter viii. Such compensation includes five items: "nezek," for the permanent loss, if any, in the earning capacity; "shebet," loss of time; "za'ar," pain; "rippuy," cost of the cure; and "boshet," insult. The scale of compensation for insult, as given in the Mishnah, seems to indicate the maximum compensation, for the Mishnah adds, "The principle is that the amount depends on the injured man's station in life." Rabbi Akiba, however, opposed this principle, and desired to have one measure for all. A practical case decided by Rabbi Akiba is then cited (viii. 7). In addition to all the compensation paid, the offender must beg the injured man's pardon.

(3) He who has robbed his neighbor, and desires to make restitution, pays the full value of the thing taken and a fine of one-fifth of its value (Lev. v. 21-24 [A. V. vi. 2-5]). If the things taken by robbery have undergone a change, he pays according to the value the things had at the time of the robbery (ch. ix.). The last chapter treats of cases in which the things taken are no longer in the hands of the robber, and concludes with the warning not to buy things suspected to be stolen. With the exception of chap. vii. 7 (on certain restrictions with regard to the rearing of cattle or poultry in Palestine), there are neither halakic nor haggadic digressions in this tractate.

About the linguistic peculiarities in the beginning of the tractate, see Frankel, "Darke ha-Mishnah," p. 13; and compare Bab. B. K. 6b.

The Tosefta has eleven chapters instead of the ten of the Mishnah; chaps. vii. and viii. corresponding to chap. vii. of the Mishnah, and chap. x. corresponding to chap. ix. and x. 1-8, while chap. xi. cor-

responds to x. 9-10 of the Mishnah. The enumeration of the abot nezikin placed in the Mishnah at the head of the first chapter is reserved in the Tosefta for chap. ix.; and instead

**The** of 4 the Tosefta enumerates 13 (com-  
**Tosefta and** pare Bab. B. K. 4b, where Osha'ya  
**Mishnah.** enumerates 13 and Hiyya 24, while in the Talmud Yer. B. K. i. 2a, Hiyya has 13).

The two Gemaras, as usual, discuss the laws of the Mishnah; the Jerusalem Talmud rather briefly, the Babylonian Talmud more fully. The following are a few of the principles enunciated in the Gemara:—According to Symmachus (Sumkus): Property concerning which there is a doubt whether it belongs to *A* or to *B*, is divided between *A* and *B* without either being compelled to confirm his claim by oath. The sages ("hakamim") hold that he who claims what is in the possession of an-

**The Two** other, must prove his claim (B. K.  
**Gemaras.** 46a). A person attacked on his own grounds may take the law into his own hands, when the delay caused by going to a proper court of law would involve great loss. Whenever the whole value of the damaged object is paid, the payment is considered as compensation ("mamona"); when only half the value or a certain fixed amount is paid, the payment is considered a fine ("kenasa") (B. K. 15b). The judges in Babylonia had no right to impose a fine for any offense; the case had to be tried by qualified judges in Palestine. The following incident will illustrate the last two rules: A man was charged before Rab Hisdai (in Babylonia) with having struck a fellow man with his spade. Rab Hisdai asked Rab Nahman how much the offender had to pay. The latter replied that no fine could be imposed in the Babylonian courts, but that he desired to know the facts of the case. He ascertained that *A* and *B* had together a well, each of them with the right of drawing water on certain fixed days alone. Contrary to the agreement *A* drew water on a day that was not his. *B* noticed it and drove him away with his spade. Rab Nahman's verdict was that *B* might with impunity have hit *A* a hundred times with the spade, as any delay would have involved a great loss to *B* (B. K. 27b). It is noteworthy that two codes of law are mentioned: the legal one ("dine adam," literally, judgments of man) and the moral one ("dine shamayim," literally, judgments of heaven). In some cases the former absolves man of an obligation, and the latter does not (Mish. vi. 4; Gem. 29a, 56a, and passim). There are comparatively few haggadic elements in Baba Kamma. Some of these may be given here:

(a) A "hasid" (pious man) noticed a man throwing stones and rubbish from his own garden into the public thoroughfare. The hasid rebuked him, saying, "Why do you throw these things from a place that is not yours into a place that is yours?" The man laughed; but he soon learned the true meaning of the question. For he had to sell his property, and one day, walking in the street, he met with an accident through these very stones (50b).

(b) Joshua, on dividing Palestine to the tribes of Israel, made the tribes agree to ten conditions, the

most important of which are the common use of the forests as pasture for cattle, and the common right of fishing in the Sea of Tiberias (81*a*).

(*c*) Ezra introduced ten rules ("tekanot"), among them the reading of a section of the Pentateuch on Sabbath afternoon ("minḥah"), on Monday and on Thursday, and the holding of the sittings of the court (bet din) on Mondays and Thursdays (82*a*).

(*d*) Two officers were once sent by the Roman governor to Rabban Gamaliel to be instructed in the Jewish law. When they had finished the study they declared to Rabban Gamaliel that the laws (referring probably to the civil code of laws) were all just and praiseworthy, with the exception of two that make a distinction between Jew and heathen. The rabbi thereupon ordered the inequality to be removed (Bab. 38*a*, and Yer. iv. 4*b*).

(*e*) Rabbi Johanan used to give to his servant part of everything he was eating or drinking, saying, "Is not his Creator also my Creator?" (Job xxxi. 15; Yer. viii. 6*c*).

(*f*) At the funeral of King Hezekiah a scroll of the Law was laid on the bier, with the words, "This [man] fulfilled what is written in this [scroll]" (Bab. 17*a*).

Some noteworthy explanations of Biblical texts may be added. The words "ka'asher yeba'er ha-galal" (I Kings xiv. 10) are quoted as meaning (Babli 3*a*; see Rashi, *ad loc.*) "as the tooth destroyeth" (A. V. "as a man sweepeth the dung"). "Erek appayim" ("slow to anger," Ex. xxxiv. 6) is interpreted "long-suffering to both the righteous and the wicked" (*ib.* 50*b*), on account of the dual form. A Biblical verse is quoted according to its sense and not literally, as, for example (*ib.* 81*b*; compare B. M. 76*a*), "miḥyot ṭob al tiḳḳare ra'" (when thou art kind, thou shalt not be called bad); then the question is raised, "Is it written so?" and the verse Prov. iii. 27 is cited.

M. F.

**BABA MEZI'A** ("The Middle Gate"): The second of the three Talmudic tractates of the order Neziḳin. It treats of man's responsibility with regard to the property of his fellow-man that has come lawfully into his possession for the present, and of which he is considered as trustee. The tractate is based on Ex. xxii. 6-14 (A. V. 7-15). In this passage four kinds of trustees are distinguished: (*a*) One who keeps the thing entrusted to him without remuneration (verses 6-8); (*b*) one who is paid for keeping the trust (verses 9-12); (*c*) one who keeps a thing entrusted to him for a certain time for his own use without paying for its use (verses 13, 14*a*); and (*d*) a trustee who keeps a thing for his own use and pays for using it (14*b*). The text does not clearly state the characteristic difference between the first two kinds of trustees; but tradition bases this interpretation on the fact that the things mentioned in verse 6 are generally entrusted to a friend who keeps them without remuneration, while the trust described in verse 9 is, as a rule, kept on the payment of a certain fee. In the Mishnah of Baba Mezi'a these four trustees ("arba'ah shomerim") are treated in the following order: (1) "shomer ḥinnam" (keeping for

nothing) in chaps. i.-v.; (2) shomer sakar (keeping for remuneration) in chaps. vi.-vii.; (3) "sho'el" (borrower) in chap. viii. 1-3; and (4) "sakir" (a thing hired) in chap. viii. 6). Mishnah viii. 4. 5 are without connection with the main subject, and owe their place here to some accidental relationship.

**Shomer Hinnam** ("honorary trustee," chaps. i.-v.): He who finds lost property has to keep it as "shomer ḥinnam" until he can restore it to the rightful owner (Deut. xxii. 1-3). The regulations as to what constitutes finding, what to do with the things

found, how to guard against false claimants, how to take care of the property found, under what conditions the finder of a thing is bound to take care of it, and under what conditions he is not so obligated—all this is explained in the first two chapters. A trustee who takes no payment is only responsible for such loss of the entrusted property as has been caused through the trustee's negligence ("peshi'ah"). The mode of procedure in such cases, and the regulations concerning eventual fines, are treated in iii. 1; all other laws concerning the responsibilities and the rights of the shomer ḥinnam are contained in iii. 4-12.

Chap. iv. contains various laws concerning sale and exchange. The mere payment of money does not constitute the sale; and the buyer may legally cancel the sale and claim the return of the money, unless he has "drawn" the thing bought away from its place: this "drawing" ("meshikah") makes the sale final. Until such act is performed the seller is to some extent a shomer ḥinnam of the money paid. Similarly may the

**Sale and Trust.** buyer become a shomer ḥinnam of the thing bought, if, on finding that he

has been cheated, he wants to cancel the sale, to return the thing bought, and to claim the money back. What constitutes cheating ("onaah") is defined in the course of this chapter. See ALIENATION.

Chap. v. treats of the laws concerning interest, which have nothing in common with the laws concerning shomer ḥinnam beyond the fact that taking interest and cheating ("onaah" of chap. iv.) both consist of an illegal addition to what is actually due. The laws prohibiting the taking of interest are very severe, and extend to all business transactions that in any way resemble the taking of interest. The two terms for taking interest, "neshek" (interest) and "tarbit" (increase), used in the Pentateuch (Lev. xxv. 36) are explained and illustrated by examples (v. 1-10). According to the Mishnah "the lender, who takes interest, the borrower who pays it, the witnesses, the security, and the clerk who writes the document, are all guilty of having broken the law concerning interest" (v. 11). See also under USURY.

**Shomer Sakar** ("a paid trustee," chaps. vi.-vii.): He is liable to pay for all losses except those caused by an accident ("ones"). He has to swear that such an

**Paid Trustee.** accident happened, and is thereupon free from payment (vii. 8-10). The example given in the Mishnah of shomer sakar is that of an artisan who undertakes to produce certain work out of a given material. If the material is spoiled, or the work produced

is not according to agreement, he has to pay. As the hirer ("sokeṛ") has the same liability as the shomer sakar, some laws relating to the sokeṛ are included in chap. vi. From the paid trustee the Mishnah passes over (in chap. vii.) to the workman ("po'el") in general, and regulates the working time, the food, and also the rights of the workman to partake of the fruit of the field or vineyard while working there (Deut. xxiii. 25, 26).

**Shoel** ("borrower," chap. viii. 1-3): He is liable to pay for every kind of loss, including loss through accident, except "if the lender is with

**Borrowing** him" (Ex. xxii. 14); that is, according to the traditional interpretation, if the

**Hiring.** lender was likewise at work with him, for payment or without payment.

**Soker** ("hirer," chap. viii. 6): The laws of soker having been given in chap. vi., as far as movable property is concerned, sections 6-9 of chap. viii. and 1-10 of chap. ix. treat of the soker of immovable property; of the relations between the tenant of a house and his landlord, between the farmer of a field and its owner. Among the laws that regulate these relations are the following: If the tenant takes a house for a year, and the year happens to be a leap-year, the tenant occupies the house thirteen months for the same price. The tenant can not be turned out in the winter between Tabernacles and Passover, unless notice be given one month before the beginning of the winter. In large towns and for shops, one year's notice is required.

Sections 11 and 12 of chap. ix., taking up again the subject of hiring, regulate the various terms for paying the due wages (based on Lev. xix. 13, and Deut. xxiv. 14, 15). The last section of chap. ix. defines the rights of the creditor in accordance with Deut. xxiv. 6 and 10-13.

The concluding chapter (x.) regulates the relations between joint owners and neighbors, in dwellings and in fields. The last case mentioned is especially interesting as showing a highly developed state of agricultural jurisdiction in the Mishnaic days.

The Tosefta has many valuable additions to the Mishnah. It is divided into eleven chapters, which correspond to the ten chapters of the Mishnah in the following way: Chaps. i.-ii. corre-

**Tosefta** spond to chaps. i.-ii. of the Mishnah; and chap. iii. to chaps. iii.-iv. of the Mish-

**Gemara.** nah; chaps. iv.-vi. to chap. v. of the Mishnah; chap. vii. — which begins

"he who hires workmen" ("po'alin") instead of "he who hires artisans" ("umanin") to Mishnah vi. 1; and chap. viii. correspond to chaps. vi.-viii. of the Mishnah; chaps. ix.-x. to chap. xi.; chap. xi. to chap. x. of the Mishnah.

The Gemara, in explaining the laws of the Mishnah, discusses a variety of kindred problems, especially the Babylonian Gemara; the Palestinian being very meager in this respect. Rab Zera, coming from Babylonia to Palestine, is said to have fasted a hundred times within a certain period of time, praying that he might forget the Babylonian Gemara, and fully grasp the teachings of Rabbi Johanan, the Palestinian master (B. M. 85a). According to Rashi, the rabbis of Palestine were not of a contentious disposition, and settled difficulties without much discussion

(compare p. 386: "Are you from Pumbedita, where they make an elephant pass through the eye of a needle?").

Of the haggadic passages the following are noteworthy:

(a) The disciples of Simeon b. Sheṭaḥ once bought from an Ishmaelite an ass for their master. They discovered a valuable pearl on the ass, and joyfully told their master that the treasure would enable him to live without care. "Does the owner know of it?" asked the master. "No," was the answer; "but we need not return it." "What!" exclaimed Simeon. "Am I a barbarian? More valuable than all the treasures of the world to me would be the Ishmaelite's acknowledgment of the superiority of our holy religion, that teaches us ways of righteousness" (Yer. B. M. ii. 8c).

(b) A man's house is blessed only for the sake of his wife (Bab. B. M. 59a).

(c) There are three who cry, and no notice is taken of their cry. One of the three is he who lends money without witnesses (*ib.* 75b).

(d) In a halakic discussion between R. Eliezer and R. Joshua, a "bat kol" (a heavenly voice) was heard in favor of the former. R. Joshua said: "The bat kol does not concern us; the Law given on Mount Sinai (Ex. xxiii. 2) commands us to 'decide according to the majority'" (*ib.* 59b).

(e) Resh Lakish was famous for his strength; R. Johanan, for his stately figure. R. Johanan said to the former: "Thy strength is fit for those who study the Law." The other replied: "Thy beauty is fit for women," upon which R. Johanan said, "I have a sister of renowned beauty; if you consent to turn to the Torah, I consent to your marrying my sister." This was done; and Resh Lakish, who had been a gladiator, had many, sometimes vehement, halakic discussions with his brother-in-law. When Resh Lakish died, R. Johanan was much distressed. Rabbi Eliezer b. Pedat came to comfort him; and whatever R. Johanan said, his visitor found right, and had a quotation ready in support of it. R. Johanan then mournfully said: "Resh Lakish raised many objections to whatever I said; I had to solve the difficulty, and thus the truth was found, much better than by ready consent" (*ib.* 84a).

**BABEL, TOWER OF.**—**Biblical Data:** The story of the building of the city and the Tower of Babel as found in Gen. xi. 1-9 is briefly as follows: The whole human race spoke one and the same language, and formed one community. This community or clan settled permanently in the land of Shinar, not far from the Euphrates river. Here they built a city and a tower of such materials as a great river-basin would afford and the genius of man could manufacture. Apparently this was done to prevent their scattering abroad and losing their tribal unity, to make a great center about which they might gather, and to obtain for themselves a name. YHWH came down to investigate the purpose of all this unusual enterprise. The self-confidence and unity of the people were everywhere prominent. Fearful that the accomplishment of this project might embolden them to still more independent movements,

יְהוָה said, "Let us go down, and there confound their language." Consequently they were scattered abroad upon the face of all the earth; "and they left off to build the city." The name of it was therefore called "Babel," because there יְהוָה confounded the one language of the earth.

—**In Rabbinical Literature:** The Midrashim give different accounts of the real cause for building the Tower of Babel, and of the intentions of its builders. It was regarded even in the Tannaite tradition as a rebellion against God (Mek., Mishpatim, 20, ed. Weiss, p. 107; Gen. R. xxxviii. 9), and the later Midrash records that the builders of the Tower, called דור הפלגה, "the generation of secession" in the Jewish sources, said: "He—God—has no right to choose the upper world for Himself, and to leave the lower world to us; therefore we will build us a tower, with an idol on the top holding a sword, so that it may appear as if it intended to war with God" (Gen. R. xxxviii. 7; Tan., ed. Buber, Noah, xxvii. *et seq.*). The building of the Tower was meant to bid defiance not only to God, but also to Abraham, who exhorted the builders to reverence: therefore the Bible

Tower of Babel.  
(From the Sarajevo Haggadah.)

(Gen. xi. 1) speaks of the דְּבָרִים אֶחָדִים, "one speech," which is interpreted as signifying speech against "the One," against God, and against His one, only follower (compare Ezek. xxxiii. 24). The passage furthermore mentions that the builders spoke sharp words—דְּבָרִים אֶחָדִים—against God, not cited in the Bible, saying that once every 1,656 years—according to Seder 'Olam, 1,656 years elapsed between the Creation and the Flood—heaven tottered so that the water poured down upon the earth, therefore they would support it by columns that there might not be another deluge (Gen. R. *l.c.*; Tan. *l.c.*; similarly Josephus, "Ant." i. 4, § 2). Some among that sinful generation even wanted to war against God in heaven (Sanh. 109a, and the passage from the Sibylline Books iii. 100, cited by Josephus, *l.c.*). They were encouraged in this wild undertaking by the fact that arrows which they shot into the sky fell back dripping with blood, so that the people really believed that they could wage war against the inhabitants of the heavens ("Sefer ha-Yashar," Noah, ed. Leghorn, 12b). According to Josephus and Pirke

R. El. xxiv., it was mainly Nimrod who persuaded his contemporaries to build the Tower, while other rabbinical sources assert, on the contrary, that Nimrod separated from the builders (compare Ginzberg, "Die Haggada bei den Kirchenvätern," pp. 88, 89).

Six hundred thousand men ("Sefer ha-Yashar," 12a) were engaged for forty-three years (Book of Jubilees x.) in building the Tower.

**Building of the Tower.** The Tower had reached such a height that it took a whole year to hoist

up necessary building-material to the top; in consequence, materials became so valuable that they cried when a brick fell and broke, while they remained indifferent when a man fell and was killed. They behaved also very heartlessly toward the weak and sick who could not assist to any great extent in the building; they would not even allow a woman in travail to leave the work (Greek Apocalypse of Baruch iii.). God at first permitted the people to continue with their work, waiting to see whether they would not desist from their sinful undertaking, and when they still continued, He endeavored to induce them to repent (Gen. R. *l.c.*; Tan. *l.c.*; Mek., Beshallah, Shirah, 5), but all in vain. The confounding of the languages—before that they all had spoken Hebrew—then compelled them to give up the work, many also perishing on the occasion; for if any one received stones instead of mortar through the misunderstanding of his fellow-workers, he grew angry and threw the stones upon the one who had given them ("Sefer ha-Yashar," 12b). A part of the builders were changed into apes, evil spirits, demons, and ghosts walking by night (Sanh. *l.c.*; Greek Apocalypse of Baruch ii.), and the rest were scattered over the whole earth. The mighty Tower was blown down by winds (Sibyllines *l.c.*; Josephus, *l.c.*; Mek., Beshallah, 4, ed. Weiss, 37); according to the opinion of others, one-third of the building was consumed by fire, one-third sank into the earth, and one-third remained standing (Sanh. *l.c.*; Gen. R. *l.c.* 8). In order to convey an idea of the height of the Tower, it is said that to any one who even now stands upon the ruins, tall palm-trees below him appear like grasshoppers. This remnant of the Tower is said to be at Borsippa.

Although the generation of the builders of the Tower was much more wicked than that which perished during the Flood, the punishment of the latter was much more severe, because they were robbers, while the former lived in peace with one another, and peace is of such supreme importance that God spares even idolaters so long as they live peaceably (Gen. R. *l.c.* 7). Compare LANGUAGES, SEVENTY.

L. G.

—**In Mohammedan Literature:** That some story about Babel had reached Mohammed appears to be certain; but it was in a singularly imperfect form and was confused by him with another story about Khordad and Mordad, two of the Parsi Amshaspands. The one reference appears in Koran (sura ii. 96):

"But they followed that which the Satans recited against the kingship of Solomon—and Solomon was no unbeliever, but the

Satans are unbelievers, teaching men magic—and that which was revealed to the two angels in Babil, Harut, and Marut. They do not teach any one until they say, 'We are nothing but a temptation, so be not an unbeliever.' The people learn from them that by which they may divide between man and wife, yet they injure none thereby, save by the permission of God; they learn that which hurts themselves and profits them not."

Here all that is left of the Babel story is the name and the idea that there separation may be brought about. As to Harut and Marut, the Moslem commentators explain that they were two angels sent down by God to teach men magic, in order to try them and to show them the difference between magic and miracle. It is a story of the Jews, continues the commentator Baidawi (*in loco*), but to be rejected, that they assumed flesh, were seduced by a woman Zuhara into lust and rebellion against God, and taught her how to ascend up into the heavens. But later Islam embraced this Jewish legend in its full extent, and exhausted its imagination in portraying the well at Babil with the rebellious angels hung in it by the heels and giving lessons in magic to whomever would come to them (see Lane's "Arabian Nights," chap. iii., note 14, and Al-Tha'labi's "Kisās al-Anbiyya," pp. 43 *et seq.*; compare Cairo ed., 1298).

With so vague a reference in the Koran and with a fundamental confusion like this to contend against, the stories of the Tower and of the confusion of tongues have left little or no mark on popular Islam; the "Arabian Nights" know nothing of them. Some of the historians know of the confusion of tongues only. Thus in Yakut (i. 448 *et seq.*) and the "Lisan al-'Arab" (xiii. 72) God brought mankind into the plain afterward called "Babil," by means of winds sweeping them together. There He assigned to each his separate speech, and the winds again scattered them to their appointed lands.

In one place Tabari ("Annales," ed. de Goeje, i. 220) gives a tradition that Nimrod ruled at Babil and his people were Moslems. But he seduced them to idolatry, and in a single day God confused their speech, which had been Syriac, and they became of seventy-two tongues. In another place (p. 224) Tabari tells the story practically as in Genesis. Ibn Wadīh (i. 17) has a longer narrative on the same lines. Abu 'Isa, the astronomer quoted by Abu al-Fida ("Hist. Antisl.," ed. Fleischer, p. 18), also tells the Biblical story of the Tower and the confusion. He adds that Eber alone, because he did not join the others in their impious attempt, was permitted to retain the original Hebrew language. This is in curious contrast with the other narratives, which view Syriac as the original tongue. It is possible that the belief, current in all the Moslem world, that Syriac was the original language, is to be traced to the influence of the Syriac "Cave of Treasures" and the Arabic "Kitāb al-Majall," with their anti-Jewish polemics.

D. B. M.

—**Critical View:** According to the modern analysis of the Pentateuch, the section Gen. xi. 1-9 is derived from J, or the Jahvistic writer. The name is there explained as from a stem-word "balal" (confound). This is probably a folk-etymology founded upon the similarity of the proper name to the Hebrew

stem or to the event that occurred at Babel. The Babylonian language, probably indigenous to this region, gives the true etymology of "Babel." It is compounded of "bab" (gate) and "ili" (God), literally, "the gate of God." It should be noticed, too, that this name was given to both the Tower and the

**Ety-** city, and that the cessation of building  
**mology:** operations is referred to in connection  
"Gate with the city only, the tower not even  
of God." being mentioned. The records of Gen.  
x. give a picture of the settlement of mankind upon various portions of the earth's surface. This "table of the nations" is an ethnographical map of the ancient Oriental world. The exact time of its preparation can not, with the present data, be fixed. The location of the great majority of the peoples has been determined. It has been noted, too, that the inhabitants of these communities, districts, provinces, and cities spoke different languages. The questions, how men were scattered from one common center to all these sections of the ancient world, and how they happened to speak diverse tongues, are answered by the insertion, after ch. x., of Gen. xi. 1-9.

Up to the present time no ancient documents, giving a parallel legend, such as those of the Babylonian accounts of the Creation and the Deluge, have been discovered. But another class of facts may point in the direction of answering the above question. Philologists have not yet solved the question as to the common origin of all the languages of mankind; but scientists agree that the physiognomy, the physiology, the psychology, and the religious nature of man are practically the same all over the world. This is not an absolute proof of the unity of the race; but it points to a dispersion of men from a common center, and as the descendants of a common stock.

There is general agreement that the Tower of Babel was in lower Babylonia, not far from the River Euphrates. Two principal locations are given in the

**Position** literature of the subject: (1) the ruins  
**of Babel.** of Birs-Nimrud at old Borsippa, south of the site of old Babylon; and (2) the ruins within the circuit of ancient

Babylon itself. In the first case, Nebuchadnezzar (in his Borsippa inscription, cols. i. and ii.) tells how he repaired and finished a "zikkurat," or tower, which had been left unfinished, at a height of 42 ells, by a former king. This tower, dedicated to Nebo, was called "E-zida" (Enduring Temple or House), and consisted of seven stages or stories. The conspicuous character of the present-day remains of this Tower has attracted attention since the time of Benjamin of Tudela (about 1160); and many scholars have found in this mass of ruins the remains of the Tower of Babel of Gen. xi. The latest expositor of this view is John P. Peters ("Jour. Biblical Literature," 1896, xv. 106 *et seq.*).

The second view is that the ruins of old Babylon include the site of the Tower of the record. The narrative itself speaks of a city and a tower; and, as stated above, the cessation of labor is mentioned with regard to the city only. The name "Babel" would most naturally connect this event with the city of Babylon. Nebuchadnezzar, too (in his Borsippa

inscription), states that he built and finished at Babylon "E-sag-ila" (Temple of Heaven and Earth), the dwelling of the god of gods, Marduk; and likewise the story-tower, "E-temen-an-ki" (Temple of the Foundation of Heaven and Earth). Of this latter he says (Rawlinson, "Cuneiform Inscriptions of Western Asia," v. 34, col. i. 53, 54): "E-temen-an-ki, the zikurat of Babylon I built anew," and adds immediately thereafter: "E-zida, the lasting house, beloved of Nebo, in Borsippa, I built anew." The same language is used with reference to the construction of both of these edifices. This being so, there must be a preference for Babylon as the probable site of the Babel of Gen. ix. 1-9, the ruins of which answer the requirements of both a tower and a city. See BABYLON and SHINAR.

**BIBLIOGRAPHY:** H. Rawlinson, in Smith-Sayce, *Chaldean Genesis*, pp. 171 *et seq.* For the critical analysis of the eleventh chapter of Genesis and the various problems connected with the tradition of the Tower of Babel, see Budde, *Biblische Urgeschichte*, and the commentaries of Dillmann, Strack, Holzinger, and Gunkel; J. P. Peters, as above.

J. JR.

I. M. P.

**BABENHAUSEN:** A city of Hesse, district of Starkenburg, Germany. Jews are reported to have resided here as early as 1320. At the request of the nobleman Arrosius von Breuberg, certain Jews were placed under the ban, and all intercourse between them and Christians was strictly prohibited. The reason for this measure is not stated. In 1337 the Jews were cruelly persecuted during the ARMLEDER raids. At the time of the Black Death (1349) the Jewish community was again subjected to persecution.

From 1643 to 1672 there were at no time more than six Jews resident here, and these paid an annual protection tax of 60 to 70 gulden. Between 1710 and 1719 this tax amounted to 110 gulden. The Jew Daniel of Babenhhausen obtained the protection of the Palatinate in 1648. In 1829 there were 80 Jews resident here; in 1875 there were 92; and this is about the number at the present day.

**BIBLIOGRAPHY:** Salfeld, *Des Nürnberger Memorbuches Martyrologium*, pp. 238, 281; *Beschreibung der Hanau-Münzenbergischen Lande*, p. 57; Löwenstein, *Gesch. der Juden in der Kurpfalz*, p. 28; Engelbert, *Statistik des Judenthums im Deutschen Reiche*, p. 52.

A. F.

**BABINOVICHI:** Town in the district of Orsha, government of Mohilev, Russia. In 1900, in a total population of 1,143 the Jews numbered about 800.

G.

H. R.

**BABLI, SOLOMON B. JUDAH HA-.** See SOLOMON B. JUDAH HA-BABLI.

**BABOVICH, SIMHA:** Head man of the Karaites of the Crimea in the first quarter of the nineteenth century, and president of the Karaite Council of the city of Kozlov, Eupatoria. The exact date of his birth is unknown, but he was probably born about 1785. His surname is spelled by some "Bibovich" (Gottlober, "Bikkoret le-Toledot ha-Karaim," p. 179), and by others "Babovich" (Eben Resheff, "Abne Zikaron," p. 102, and Deinard, "Massa Krim," p. 20).

Babovich did not distinguish himself as a scholar, nor did he write any book; but he was famous for

the work he did for the benefit of the Karaites, especially in regard to their political and social rights in Russia. He was a man of wealth and aided the work of Abraham Firikovich, who accompanied him to Jerusalem in 1830, and who was entrusted with the education of Babovich's children.

In 1827 Babovich went to St. Petersburg with Joseph Solomon, hakam of the Karaite community of Kozlov, to petition the Russian government to free the Karaites from military service. This mission was successful; and it was on this occasion that Solomon wrote his "Sefer ha-Zikaron," and ABRAHAM BEN JOSEPH SOLOMON HA-ĤAZAN composed a hymn in honor of Babovich.

In 1829 Babovich corresponded with Jost and other German-Jewish scholars in regard to a history of the Karaites; and it was owing to his encouragement that Firikovich gathered all the material for his history.

A. FL.

**BABSKI REFUES** ("Babski" [Polish], old-womanish; "refues" [Hebrew], remedies): The name applied in Yiddish to domestic and superstitious medicine. Common folk among the Jews in Russia and Poland believe in peculiar remedies for diseases and maladies, some of the remedies consisting of drugs or physics and some of magic agencies. Especially peculiar are the latter, which are generally prescribed or administered by a practical cabalist called "ba'al-shem" (master of [God's] name) or "guter Yid" (good Jew), to whom superstitious men and women apply for the conjuration of toothaches, of wounds, or of an evil eye ("ayyin ha-ra"), or for the exorcism of an evil spirit ("dibbuk").

Of the "segulot" (superstitious remedies) among these folk, particularly curious are those intended for the relief of pregnant women and that of children. For instance, a well-known practise among them is "Bleigiessen," or what may be termed "plumbomancy," which is divination from the forms assumed by molten lead dropped into water. This is resorted to in cases in which illness of pregnant women or that of children is due to fright, to find out what object was the cause of the alarm. A medicine-woman, muttering a psalm or an incantation, throws molten lead into a vessel full of water, and from the resemblance of the form thus assumed by the metal to a particular animal, she divines that the cause of fright was a cat, a dog, a horse, etc.

The popular guides of domestic and superstitious medicine among the Russian and Polish Jews are the "Sefer Zekirah" (Book of Remembrance), by Rabbi Zechariah of Plungyan, and the "Mif'alot Elohim" (Works of God), which latter is a collection of remedies prescribed by Rabbis Yoel Ba'al-Shem, Naph-tali of Posen, and others.

Here follow a few items contained in the two treatises: To alleviate pain of dentition, suspend upon the neck of the child a tooth of a horse or of a dog, and smear the throat of the child with butter or chicken-fat ("Zekirah," p. 80, Warsaw, 1875). To protect a child from an "evil eye," let it wear a copper or silver tablet with the letter ה engraved upon it (*ib.* p. 84). In case of measles or small-pox, take ten peas, throw them upon the patient, and say: וַיֵּאָרְא פֶּלֶא אֲרָבִים וְעָנָן נְיוֹאֲרָפִין נְיוֹאֲרָפִין אִוִּיָּא דְעָם קִינָא

אֲנֹכִי כִּי־לֹא יוֹתֵר ("As many peas as have been thrown upon the child, so many pocks shall it have, not more"; "Mif'alot Elohim," p. 94, Lemberg, 1872).

Among other treatises containing similar prescriptions is: "Toledot Adam," a collection of remedies by several cabalists, edited by Joel Heilprin (Ba'al Shem), Wilmersdorf, 1784. See **FOLK MEDICINE**.

A. H.A.

**BABYLON** (בָּבֶל, LXX. Βαβυλών).—**Biblical Data:** The chief city of Babylonia, long the capi-

speedily rose to prominence, and its history is practically the history of **BABYLONIA**.

The ruins which have been identified with ancient Babylon lie about 50 miles south of the city of Bagdad and on the east bank of the Euphrates. They are located between 44° and 45° east longitude, and between 32° and 33° north latitude, and extend over five miles from north to south. The ruins consist of several distinct portions: (a) The most northerly of the ruins consists of a vast mound covering 120,000 square feet and reaching a height of 64 feet. It now bears the name of "Babil" or "El-Maglûbeh"; and near it are the remnants of a once formidable

VIEW OF THE RUINS OF BABYLON.  
(From Perrot and Chipiez, "Art in Chaldaea and Assyria.")

tal of the kingdom and empire that controlled the whole or a large part of the valley of the Tigris and Euphrates.

This city has several names or appellatives in the native inscriptions, the chief being "Ka-dingira" and "Babu-ili" ("gate of God" or "gate of gods"), "Tintir" ("seat of life"), and "E" or "E-ki" ("House"). The Hebrew tradition groups it with "Erech, Accad, and Calneh" (Gen. x. 10), and so

**In Hebrew Tradition.** ascribes to it great antiquity; though it should be added that the beginnings of the city can not be historically determined. No native records give any clue to its origin. It appears to be mentioned in a historical inscription by Agu-kak-rime (about 1650 B.C.), who restored the shrines of Marduk and Sarpanit in the temple of E-sagila. But the city had long before been the center of a vigorous political life. In the beginning it was but one among many cities; but it

wall. Remains of hydraulic works found beneath it make probable its identification with the famous terraced or hanging gardens. Babil is now being systematically explored by an expedition sent out from Germany. (b) Near by is the mound called "Mujellibeh," identified by Rassam with a palace built by Nabopolassar and Nebuchadnezzar. (c) El-Kaşr, literally, "the castle"; so called, according to the tradition of the neighboring Arabs, from having been the castle of Nebuchadnezzar. Bricks found beneath this mound bear the stamp of Nebuchadnezzar; and, as far as it has been examined, it consists of a maze of walls full of débris. It

**The Ruins.** has now been ascertained through the excavations conducted by the German explorers that Kaşr covers the remains of the famous palace of the great king. (d) Immediately south of El-Kaşr, and practically continuous with it, are the ruins 'Amran ibn Ali, named after a Moslem

saint whose tomb is visited by pilgrims. The ruins cover the site of the great temple of E-sagila. (e) Near the village of Jumjuma are small mounds, from one of which have been taken numbers of business tablets whose inscriptions make it plain that the site was once covered with the offices of the firm of the sons of Egibi. Besides these chief ruins there are numbers of smaller ruin-groups; but their relations to each other are more or less obscure, and identification of the buildings which they mark is either doubtful or wholly lacking. This mound is now being explored by the expedition undertaken by German scientists.

Herodotus (i. 178-187) has described the city with a wealth of detail. He says it formed a vast square 480 stades (55½ miles) in circumference. Around about the city was a moat filled with running water, and beyond this was a wall built like  
**Classical** a rampart, 200 cubits high and 50  
**Descrip-** broad, the top of which was made into  
**tions.** a great street, lined with chambers, and broad enough for a four-horse chariot to turn upon it. In the city were fine streets lined with houses three and four stories in height. The main building was the temple of Belov Marduk, constructed in tower-like form, with a winding ascent on the exterior. There is no mention of the hanging gardens. The description given by Ctesias (quoted by Diodorus Siculus, 2, 7 *et seq.*) differs considerably from that furnished by Herodotus. According to Ctesias, the circuit of the city was 360 stades (about 41½ miles), and the other dimensions were generally smaller than those given by Herodotus. He describes the hanging gardens as being square in construction and of sufficient size to support full-grown trees.

The best Babylonian description of the city now extant was written by order of Nebuchadnezzar, the greatest patron of the city. This narrative of the great works of construction and of repair gives a picture of the whole city in his day. It agrees in the main with Herodotus, and seems to support somewhat the contention that he had a first-hand acquaintance with the city. The account of Ctesias is not quite in accord with the Babylonian description, which makes no mention at all of the hanging gardens. It is therefore probable that Ctesias is in error, and that they were erected by some Assyrian king. For the history of Babylon, see **BABYLONIA**.

The city of Babylon fills a large place in the literature and life of the Hebrew people. It is true that in the literature it is not always possible to distinguish between the city of Babylon and the country of Babylonia, for the same word (בָּבֶל) is used for both; yet in many cases the allusion to the city is clear. In the Book of Genesis there are but two allusions to Babel: the one (Gen. x. 10)

**In the Old** naming it as one of the cities of Shinar  
**Testament.** (Babylonia); the other (Gen. xi. 1-9) describing the confusion of tongues and the naming of the city therefrom. The city next finds mention (II Kings xvii. 24) as one of the places from which Sargon brought captives to settle in Samaria, who introduced an image of their god Suc-

coth-benoth (II Kings xvii. 30; compare Amos v. 26). After the fall of Samaria, Babylon plays a smaller part in the history of the Hebrews, while the importance of Nineveh increases until the new Babylonian or Chaldean empire. Under Nebuchadnezzar, Babylon again becomes an important city, and, as the center of the empire which destroyed Judah, finds frequent mention in the later books. See **ASSYRIA**, **ASSYRIOLOGY** AND **THE OLD TESTAMENT**, and **BABYLONIA**.

**BIBLIOGRAPHY:** For the history of the city see bibliography under **BABYLONIA**. The ruins are briefly described, and an account of their exploration is given, in Robert W. Rogers, *History of Babylonia and Assyria*, i., New York, 1900. Fuller accounts of the present state of the ruins are to be found in John P. Peters, *Nippur*, New York, 1897; Eduard Sachau, *Am Euphrat und Tigris*, Leipzig, 1900. The topography of the city is thoroughly discussed in the article *Babylon* by Baumstark, in Pauly-Wissowa, *Real-Encyclopädie der Classischen Altertumswissenschaft*, ii., 1896, with which may be compared the monograph on *Babylon* by Delitzsch, published as one of the *Mittheilungen* of the Deutsche Orient. Gesellschaft; the various other *Mittheilungen* of this Society; and also Jastrow, *The Temple and Palace of Nebuchadnezzar*, in *Harper's Magazine*, April, 1902.

—**Post-Biblical Data:** Darius Hystaspes captured the city of Babylon in 516 B.C., partially razed its walls, and carried its inhabitants into captivity (Herodotus, iii. 159; Justin, i. 10).

Xerxes is said to have either plundered or destroyed the temple of Belus, and Alexander the Great labored in vain to restore it; in connection with this, reference is made to his Jewish soldiers (see **BABYLONIA**, **GREEK PERIOD**). When Seleucus Nicator founded Seleucia for his capital, Babylon sank in importance and soon fell into ruins (Pausanias, viii. 33, 1; Dio Cassius, lxxv. 9). The Rabbis nevertheless still knew it as a city. Mention is made of baskets taken to Babylon (B. B. 22a), as also of the fact that one could live as well in Babylon as in Sura (Git. 65a). The Talmud says, "He who sees the Euphrates from the bridge near Babylon, should say the benediction, 'Blessed be the Creator of nature'" (Ber. 59b), meaning that from Babylon the Euphrates has a natural course, being checked further north by artificial dams and canals. This is the probable explanation of the passage, although there is another view, held by S. Cassel, who thinks that the land of Babylonia is meant here and not the city of Babylon. To the foregoing precept the Talmud adds—from a fifth-century point of view—that since even at this point the river had been checked by artificial means, the benediction could properly be said only lower down the stream, in Be Shabur. R. Hamnuna preached that "He who beholds the godless city of Babylon should pronounce five benedictions; the first, on sighting the ruins of the town; the second, when he beholds the house of Nebuchadnezzar; the third, when he sees Daniel's den of lions; the fourth, when he looks on the fiery furnace; and the fifth, when before the pillars of Mercury" (*ib.* 57b; less correctly, in Yer. Ber. ix. 12a). The palace of Nebuchadnezzar is a heap of ruins called by the Arabs "El Qasr" (the palace); the "pillars of Mercury" are probably a statue of the god Nebo; the "fiery furnace" is shown next to "the palace" (Layard, "Discoveries," p. 505). Benjamin of Tudela found the ruins of Babylon five miles distant from Hillah, a city which then contained ten thousand Jews. In the

work "Shebile 'Olam," i. 25*a*, Hillah is incorrectly identified with Babylon. Pethahiah also saw ancient Babylon (ed. London, pp. 42-44); he, however, often seems to confuse Babylon with Bagdad, as do many Jewish authors. Of older date is its confusion with Borsippa, an error of ancient times (Yoma 10*a*); the latter place did indeed possess a temple of Nebo (Ab. Zarah 11*b*). An aged pine-tree was shown in the vicinity (Sanh. 92*b*), which served to locate events in the time of Daniel (see Rapoport, "Erek Millin," 241*b*). Jews looked for the Tower of Babel in Babylon (compare Sanh. 109*a*): "Of the tower [of Babel], one-third was burnt, one-third was buried underground, and one-third remains standing" (see "Proc. Soc. Bibl. Archaeol.," 1893, xv. 230). Pethahiah also saw the Tower (*l.c.* p. 48). Christians lived in Babylon in early times; the passage I Peter v. 13 refers to this (compare Josephus, "Ant." xv. 2, § 2). A Christian church, said to have been destroyed by Jews under Sapor II. or Bahram, was restored in 399 (Assemani, "Bibl. Orientalis," iii. 2, 61).

**BABYLONIA.—General Data:** A country in western Asia of varying limits at different periods. The natural boundaries were the Persian gulf on the south, the Tigris on the east, and the Arabian desert on the west. On the north the boundary changed with political changes; but it may be roughly placed at a line drawn along the beginning of the alluvial soil.

The climate is subtropical. Rain may fall at any time between November and February; but the rainiest months are November and December. The rest of the year is dry and extremely

**Climate** hot, though rain is not unknown, in the form of brief showers. Ancient

**Products.** writers ascribe extraordinary fertility to the soil; and, due allowance being made for exaggeration, there remains indubitable evidence of great productivity. The disuse of former elaborate arrangements for irrigation, and the lack of attention have, in modern times, turned much of the country into an arid waste interspersed with malarial marshes. The principal products of the country were wheat, dates, barley, millet, sesame, vetches, oranges, apples, pears, and grapes. The domestic animals in use were horses, camels, oxen, sheep, dogs, and goats. Of wild animals there were enough to furnish much sport for kings and princes. In the chase the lion held first place, if one is to judge by the native accounts; but the wild boar, the wild ox, the jackal, the gazelle, and the hare were likewise found. Birds were numerous; and fish, chiefly carp, were taken in the sluggish rivers.

The people that made the great civilization and history of Babylonia, as it is now known, were Semites, of the same general stock as the Hebrews and Arabs. The time at which they entered the country is matter of dispute, as is also the question

II.—26

whether or not they found another race already in possession. It is probably safe to say that the great majority of modern Assyriologists en-

**People and Language.** tertain the view that before the advent of the Semites Babylonia was peopled by a race known as Sumerians, to whom is due the origin of the method of writing, as also that of part of the religion and the general culture of the Babylonians. To this view, however, there is opposed a strong body of opinion, of which Joseph Halévy, the eminent French Orientalist, is the chief exponent. The language spoken by the Babylonians is usually called Assyrian. It belongs to the northern group of the Semitic family, and is more closely affiliated with Hebrew, Phœnician, and the several Aramaic languages than with Arabic, Himyaritic, and Ethiopic. The method of writing is cumbrous; but it served its purpose from the earliest inscriptions antedating 4500 B.C. down to the period of Alexander the Great. It is called cuneiform, since the earlier picture-writing gradually developed into a character the chief constituent of which is a wedge (Latin, *cuneus*).

The beginnings of history in Babylonia are lost in antiquity. More than 4,000 years before the common era the country was called Kengi—that is, "land of canals and reeds"—and in it were a number of cities,

**Its History.** each with a sort of city king. One of the earliest of these kings bore the name En-shag-kush-anna, the political center of whose kingdom was proba-

bly Erech, while Nippur was its most important religious center. The names of many other kings that ruled in one city or another have been handed down; but no clear light upon the movements of men in the forming of kingdoms is obtained until the reign of Sargon I., about 3800 B.C., and of his son Naram-Sin. These kings were certainly Semites, whatever may be said of earlier monarchs. They made conquests over a large part of the country. Later astrological tablets ascribe to the former some successful campaigns into the far west to Phœnicia and Elam. For a long period after the reigns of Sargon and Naram-Sin the supreme power in Babylonia passed from city to city; first one and then

**Kings** another held the supremacy. The first **Ur-gur and** one that held the chief place after **Dungi.** this great conqueror was gone was the city of Ur, in which kings Ur-gur and

Dungi held sway about 3200 B.C. Each of them was called not only "king of Ur," but also "king of Sumer and Akkad," under which title they claimed dominion over both northern and southern Babylonia.

After the power had slipped away from Ur, the city of Isin became supreme for a time, only to be succeeded again by Ur, and this in turn by Larsa. During all this long period the city of Babylon exerted no profound influence upon the general life of the country. But about 2450 B.C., according to the native chronologists, the first dynasty began to reign, with Sumuabi as the first king. The sixth king of this dynasty, Hammurabi (about 2342-2288 B.C.; see AMRAPHEL), united all Babylonia under one scepter and made Babylon its capital. From that proud position the city was never deposed; for even when the Assyrians ruled the land from Nineveh,

the city of Babylon was still the chief city of the southern kingdom. The development of the kingdom which Hammurabi had founded was continued during the second dynasty of Babylon, at the end of which (about 1780 B.C.) a foreign dynasty known as the Kassites came to the throne.

The Kassites had come originally from the mountains of Elam; and they furnished to Babylonia some kings eminent as warriors and in the arts of peace. Among them were

**The Kassites.** Kadashman-Bel and Burnaburiash (about 1400 B.C.), who were in corre-

spondence with the kings of Egypt. During the 576 years that this dynasty ruled over Babylonia the king-

dom of Assyria achieved complete independence, and the power of Babylonia waned greatly. The dynasties that followed (dynasty 4 of Isin, dynasty 5 of the Sea Lands, dynasty 6 of Bazi) produced few men of the highest rank either as warriors or as organizers; and modern knowledge of the latter part of the period is more or less fragmentary. The seventh dynasty had but one king, an Elamite of unknown name (about 1030 B.C.), and during the eighth dynasty the power gradually drifted into the hands of Assyria. In 729 B.C. Tiglath-pileser III. of Assyria was also king of Babylonia, and thenceforward Babylonia had no life of its own (see ASSYRIA).

Not until 625 B.C. was a fresh lease of life given to Babylonia; and the king who began it was in all probability a Chaldean. Nabopolassar (625-605 B.C.) gave a rallying point to the independent life of the country, and threw off the Assyrian yoke with such energy and success as at once to establish a

new world-empire and to destroy the once powerful Assyria. His son (see NEBUCHADNEZZAR) carried on his plans with notable success, and was succeeded by Evil-Merodach (561-560 B.C.), and he by Nergal-sharezer (559-556 B.C.); but the power that Nabopo-

lassar had made dominant over the best of the world was now in decay. After Labashi-Marduk (556 B.C.), Na-

MAGIC BOWL WITH HEBREW INSCRIPTIONS, FOUND AMONG THE RUINS OF BABYLON.

(From "Revue des Etudes Juives.")

bonidus became king and reigned (555-539 B.C.) with singular devotion to religion and science, but without political wisdom. A new power had arisen in Elam; and Cyrus, who began to reign as king of Anshan, had become king of Media in 549 B.C., and shortly afterward king of Persia. In 545 B.C. he had conquered Lydia, and Babylonia was threatened. Revolts against Nabonidus in Babylonia opened the way for Cyrus; and in 538 B.C. Nabonidus fell into his hands and could no longer call himself "king of Babylonia." So ended the native rule of a mighty Semitic kingdom, which for 5,000 years had piled up wealth, furthered civilization, and ministered to peace. Babylonia, far

to reign as king of Anshan, had become king of Media in 549 B.C., and shortly afterward king of Persia. In 545 B.C. he had conquered Lydia, and Babylonia was threatened. Revolts against Nabonidus in Babylonia opened the way for Cyrus; and in 538 B.C. Nabonidus fell into his hands and could no longer call himself "king of Babylonia." So ended the native rule of a mighty Semitic kingdom, which for 5,000 years had piled up wealth, furthered civilization, and ministered to peace. Babylonia, far

more than Assyria, represented the real genius of the Semitic people; and its conquest by the semi-barbaric races of the East seemed a sad ending to its brilliant roll of centuries.

—**Biblical Data:** In the Bible, Babylon and the country of Babylonia are not always clearly distinguished, in most cases the same word (בָּבֶל) being used for both. In some passages the land of Babylonia is called Shinar; while in the post-exilic literature it is called the land of the Chaldeans (אֶרֶץ כַּשְׁדִּים). In the Book of Genesis Babylonia is described as the land in which are located Babel, Erech, Accad, and Calneh (Gen. x. 10), which are declared to have formed the beginning of Nimrod's kingdom. In this land was located the Tower of Babel (Gen. xi. 1-9); and here also was the seat of Amraphel's dominion (Gen. xiv. 1, 9). In the historical books Babylonia is frequently referred to (there are no fewer than thirty-one allusions in the Books of Kings), though the lack of a clear distinction between the city and the country is sometimes puzzling. Allusions to it are confined to the points of contact between the Israelites and the various Babylonian kings, especially MERODACH-BALADAN (Berodach-baladan of II Kings xx. 12; compare Isa. xxxix. 1) and Nebuchadnezzar (see NEBUCHADNEZZAR). In Chron., Ez., and Neh. the interest is transferred to Cyrus (see, for example, Ez. v. 13), though the retrospect still deals with the conquests of Nebuchadnezzar, and Artaxerxes is mentioned once (Neh. xiii. 6). In the poetical literature of Israel Babylonia plays an insignificant part (see Ps. lxxxvii. 4, and especially Ps. cxxxvii.), but it fills a very large place in the Prophets. The Book of Isaiah resounds with the "burden of Babylon" (xiii. 1), though at that time it still seemed a "far country" (xxxix. 3). In the number and importance of its references to Babylonian life and history, the Book of Jeremiah stands preeminent in the Hebrew literature. So numerous and so important are the allusions to events in the reign of Nebuchadnezzar that within recent times Jeremiah has become a valuable source in reconstructing Babylonian history. The inscriptions of Nebuchadnezzar are almost exclusively devoted to building operations; and but for the Book of Jeremiah, little would be known of his campaign against Jerusalem. See ASSYRIA, ASSYRIOLOGY AND THE OLD TESTAMENT, and BABYLON.

R. W. R.

—**Post-Biblical Data—Geography:** The Talmud gives the boundaries of as much of Babylonia as contained Jewish residents, but in doing

so mentions geographical names which are not always clearly identifiable. The places mentioned in II Kings xvii. 6, as the localities where the Jewish exiles were settled, are not likely to have been the only ones inhabited by them after the lapse of a few centuries. Some of these places were identified as being inhabited by Jews in the post-Biblical period. Thus R. Abba bar Kahana, commenting on the above-mentioned passage in II Kings, states that: (a) "Halah" (חֲלָה) is Halwan (according to the correct reading) or Holwan, as it is still called by the Arabs to-day; the Syrians also considered

**Extent.** it identical with "Halah" (R. Payne Smith, "Thesaurus Syriacus," col. 1277); it is, according to Abulfeda, five days' journey north from Bagdad. Both Jews and Syrians apply the name to the whole province of Calachene. (b) "Habor" (II Kings l.c.) is the same as Hadyab (ADIABENE). (c) "Nehar Gozan" (i.e. river of Gozan) is identical with Ginzak or, as Strabo and Ptolemy call it, Gaza, Gazaka, or Ganzaka, a large city on the bank of the lake Urmia (Ritter, "Erdkunde," ix. 774). (d) "The cities of the Medes" (II Kings l.c.) are intended to designate Hamadan, the ancient Ecbatana, and its sister cities. According to another opinion, Nehawend and its sister cities, south of Hamadan, are meant (Kid. 72a; Yeb. 16b *et seq.*). Ganzaka is also mentioned elsewhere as one of the remotest points in which Jews of genuine stock, descended from the actual exiles, resided. Such Jews are said to have dwelt as far as the "river" ["nhr" = water, as in Aramaic and Arabic] Ginzak, according to the correct reading of the 'Aruk based upon Kid. 71b; Yer. Kid. iv. 65d; Yer. Yeb. i. 3b. This statement was made by Rab; but Samuel names Nahrwan (see Ritter, l.c. ix. 418) as the farthest limit (see same passages, and also Gen. R. xvi. 3).

Toward the north ("above"), Rab gives as boundary a place on the Tigris which S. Cassel understands as the Bagravene mentioned by Ptolemy, a district eastward of the Tigris sources. Kohut and Berliner refer the name to Okbara and Awana, two cities on the east bank of the river; while Samuel here, too, assigns a smaller territory to Jewish residents by naming Moxene as the farthest boundary. Southward ("below") along the Tigris, Jews are said to have been domiciled as far as Apamea in Mesene. Northward on the Euphrates, Rab mentions the fortress Thulbakni (called also Akra—Greek for "fort"—by the Jews) as the limit (Gen. R. l.c.), which place, according to most investigators, is the Thilbencane mentioned by Ptolemy. Samuel names a point farther north, a "bridge" over the Euphrates, identical with the well-known Zeugma on that river, as appears from R. Johanan's statement in the passage cited; this was a strategically important point on the boundary of Commagene, called "Bir" to-day. But the district Biram, mentioned in the Talmud (l.c.) as being upon "this side of the Euphrates," is not to be understood as identical with this Bir, as Neubauer and Berliner maintain; for then there would be nothing extraordinary in the accompanying statement that the leading (Jewish) families of Pumbedita contracted matrimonial alliances with the people of Biram. It is more probable that by the latter place the district of Bahrain was meant, a

peninsula on the west side of the Persian gulf and a territory which in the times of Arabian domination, indeed, was frequently included in Irak. Nor, in speaking of Bahrain, are the words "above" and "below" employed to designate its position on the Euphrates, as with the other locations; instead, "on the other side" is used, which must mean southward, the previous side mentioned being north. Biram is identical with Beth Baltin, a spot between Syria and Babylonia, which was the extreme point to which the proclamation of the New Moon was forwarded: all beyond that was "Golah" (the Exile); *i.e.*, Babylonia proper (R. H. 23*b*; compare 'Ab. Zarah 57*a*).

This wide extent of country contained numerous districts bearing the following names in rabbinical literature:

(*a*) **בבל** (Babylon), the most frequent designation, but meaning more strictly that section between the two rivers where they came most

**Provinces.** closely together. Thus it is said that Babylon covers the Euphrates on one side and the Tigris on the other ('Er. 22*b*). The term "Golah" (Exile) was also frequently applied to Babylon; and, inasmuch as Pumbedita, the city of such prime importance for Jews, was situated in it, Golah is at times used as equivalent to Pumbedita (R. H. 23*b*). In this district were situated those celebrated cities of Babylon, Borsippa, Seleucia, and Ctesiphon, repeatedly named by the Rabbis; in Arabian times, Bagdad, too, attained celebrity. Nehardea was also important. This region also received, poetically, as it were, the Biblical name of "Shin'ar," which was variously expounded (Gen. R. xxxvii. 4). Poetically, also, must be understood the appellation "She'öl" (the nether world), Yeb. 17*a*. According to one passage (Gen. R. xxxvii. 1; compare Yalkut and Lekah Tob), the Biblical Tiras stands for Persia ("Monatsschrift," xxxix. 11). As distinguished from Palestine, Babylon, whether in its larger (Yer. Shek. ii. 47*c*) or smaller extent, was "abroad," "the foreign" (Yad. iv. 3).

(*b*) **בין הנהרות** ("between the rivers," Kid. 72*a*). The Greek name Mesopotamia, which arose after Alexander's time, means identically the same (Gen. R. xxx. 10, xlv. 3, lx. 1). In this district was situated the important city of Nisibis, called Nazibin by the Jews, as it is to-day; this region is strictly differentiated from Golah, or Babylon proper (Sanh. 32*b*). Nineveh, however, had long before been destroyed, so that it is doubtful whether the Nineveh mentioned in the Talmud (Ta'anit 14*b*) as possessing Jewish inhabitants, can have been the celebrated city of that name. More probably the whole district of Nineveh is meant, as in Shab. 121*b*, where "Nineveh" is used with Adiabene. Assemani, "Bibliotheca Orientalis Clementino-Vaticana," iii. 2, p. lxxv., mentions one baptized Jew from Nineveh in the fourth century.

(*c*) **חבל ימא** (Habel Yamma, Kid. 72*a*; Yer. Kid. iv. 65*d*; Gen. R. xxxvii. 8). The name means "the sea district," and probably applies to the region upon the Persian gulf, east of the Shaṭ-al-'Arab. This was considered the "crown" of Babylon. R. Papa applies the name, however, to the Phorat region (not Euphrates; compare Phorat, Mesene) of Borsippa,

the word "sea" then referring to the lake Bahr Nejeḥ. An important commercial town east of the Tigris and near the sea was Charax, identified in rabbinical writings under the form "Haras," with the Biblical "Erech" ("Monatsschrift," xxxix. 58). The Biblical "Accad" is identified with Kashkar, a town called thus by the Syrians and Arabs (Smith, *l.c.*, col. 1843), but also Karka, which is identical with Charax, and it thus must have been situated near the latter. In this actively commercial district, Cuthæans or Samaritans are said to have also resided (Kid. 72*a*).

(*d*) **משן** (Mesha; in Greek and Latin authors, "Mesene," equivalent in meaning to "Mesopotamia"). A region, also celebrated for its commerce, west of the Shaṭ-al-'Arab and north of the Persian gulf. In this district were both upper and lower Apamea; also Phorat Maishan, a large city identified by the rabbis with the Rehoboth-ir of Gen. x. 11 (Yoma 10*a*). Mesene formed a portion of the old province of Chaldea, a name not in use among the Jews. As a collective name for all these districts, the designation "Babylonia" may be employed in its widest sense. Palestinian usage, supported by Biblical precedent, no doubt also employed the term "Eber ha-Nahar" (beyond the river) to designate it (Ab. R. N., B. ii. 47; 'Aruk, *s.v.* עבר III.). The somewhat boastful designation of Babylonia as "the land of Israel" (Gen. R. xvi. 3) was recognized by Zacuto ("Yuḥasin," p. 245*b*) and other moderns. So, too, many Babylonian cities were known among the Jews by nicknames (see Gractz, "Messene," p. 25, and Jastrow, "Dict." p. 167).

The provinces were subdivided officially and by common usage into smaller districts, as marked by the numerous canals and waterways;

**Political Divisions.** hence the functions of the "canal-wardens" (see below). Such a district was styled a "parbar," a word occurring in I Chron. xxvi. 18; mention is made of Babylon and its district, Nehardea and its district (Ket. 54*a*); and there were doubtless other districts, named Nares, Sura, Pumbedita, Nehar-Pekod, Mahuza, etc., each with its peculiarities as to dialect, weights, and measures (Beza 29*a*, 'Er. 29*b*). One of the canals referred to above was called "the Jewish" (Nahr al-Yahudi; M. Streck, "Die Alte Landschaft Babylonien," i. 42, Leyden, 1900). From Sherira's "Letter," p. 40, it appears that Bassora was in a different district from Babylon (Bagdad). Many Babylonian cities are repeatedly mentioned in Jewish works, though the term "Sawād" (for Babylon) is never used by Jews, who prefer the old name "Babel," just as the Arabs employ "Babil." Some scholars have endeavored to discern "Al-Irāk," one of the Arabic names for Babylonia, in Targ. Yer. upon Gen. x. 6, and I Chron. i. 8 ("Monatsschrift," xxxix. 55). This name is probably intended in "Toledot Alexander" (ed. J. Levi, "Kobez," ii. 8), and is certainly meant in "Pe'er ha-Dor," No. 225 ("Irāk is Bagdad and its vicinity"), and in numerous other works.

In view of the undoubted fact that the Jewish inhabitants of Babylonia were of purer racial extraction than the Jews of Palestine, the former considered themselves, especially after the fall of Jerusalem, as the genuine Israel, and their differing traditions and customs as of higher authority than those of the

home country. Indeed, these differences were intensified and cherished. The Babylonian Talmud repeatedly contains the remark, "This is our [Babylonian] custom; theirs [the Palestinians'] is different" (see *Kid.* 29*b*). Such expressions as

**Opposition to Palestine.** "here" and "yonder," "in the east," and "in the west," are employed to specify differences of usage. The latter expressions are particularly rife as

applied by the Masoretes to the verification of the Biblical text and comparisons of variant readings; but are likewise applied to minor differences of ritual and legal custom, especially in the time of the Geonim—differences which a modern scholar has enumerated to the number of seventy-three (J. Müller, "*Hilluf Minhagim*"). Of a different nature are the variations between the Babylonian and Jerusalem (or Palestinian) Talmuds, known already to the Geonim, who, of course, always preferred "our Talmud" (the Babylonian), and accordingly transplanted the study of the latter to Europe, where it became the dominant authority for modern Judaism in general.

But this independence of Palestine and Palestinian authority was not achieved by Babylonian Judaism all at once: it came about gradually. Thus, the exilarch R. Huna I., as many others, no doubt, before and after him, was buried in Palestine at his own request (*Yer. Ket.* xii. 35*a*); while, later on, it was maintained that in this respect Babylon must be considered as the equal of Palestine (*Ket.* 111*a*). "Just as one should not leave Palestine to live in Babylon, so one should not leave Babylon to dwell in other lands," ran a modest saying; but afterward the popular axiom was, "Who lives in Babylon, lives the same as in Palestine" (*ib.*); indeed, it soon became, "To leave Babylon is to transgress a precept" (*ib.* 110*b*). Huna, principal of the Pumbedita Academy, is credited with the utterance, "Since Rab came hither, we of Babylon have constituted ourselves in matters of divorce the peers of those in Palestine" (*Git.* 6*a*). Learned intercourse between both countries was maintained by many amoraim traveling to and fro, as, for instance, Dimi and Zeïra. Babylonian scholars rightfully ranked themselves higher than their Palestinian colleagues, not, however, without incurring the ridicule of the latter for so doing (*Zeb.* 15*a*). R. Zeïra is said to have fasted a hundred days in order that he might forget the Babylonian Gemara (*B. M.* 85*a*), and R. Jeremiah always speaks of the "stupid Babylonians" (*Yoma* 57*a*). The Mishnah (*Yoma* vi. 4) mentions a particular instance of coarseness on the part of the Babylonians. They were accustomed to eat something raw which the Palestinians only ate cooked (*Bezah* 16*a*). It was declared to be improper to entrust the oral tradition to men of Nehardea, or, according to another reading, to the Babylonians at all (*Pes.* 62*b*). Scholars in Palestine were called "Rabbi," whereas in Babylonia they were styled "Rab," possibly a difference of dialect only. In Babylonia, finally, people spoke more correctly and with sharper intonation than in Palestine.

At a period when Hebrew was still spoken in Palestine—at least in scholarly circles—the people in Babylonia had already adopted Aramaic, owing to the proximity of the Aramaic-Syriac districts. Hillel

is expressly stated to have spoken a Babylonian Aramaic or Targum dialect (*Ab. R. N.* xii., p. 55, ed. Schechter). This dialect, of which the

**Language.** Babylonian Talmud is the chief literary monument, was closely related to the tongue of the natives, such as the Mandæans speak to-day. Persian never became the vernacular of the Babylonian Jews: a few words only were borrowed from it; more, perhaps, than from the Greek (Levi, "*A Grammar of the Aramaic Idiom* . . . in the Babylonian Talmud," pp. 3, 237, Cincinnati, 1900). Rabbi Joseph (fourth century) asks: "Why do we speak Aramaic in Babylon? It should be either the holy language [Hebrew] or Persian" (*Soṭah* 49*b*)—an utterance which shows that the Jews did not speak Persian. There are, of course, hundreds of Persian—or, more correctly, Pahlavi—words in Babylonian texts; and the amoraim of the first and second generations, like Rab and Judah, frequently intermingle Persian words in their utterances. Nevertheless, the proportion of Persian vocables in the Jewish Babylonian idiom is not so great as some (for instance, Kohut, in his "*Aruch Completum*," and Schorr, in "*He-Ḥaluz*," viii.) maintain. The Jewish incantations (see below) are Aramaic, and the Geonim render their responsa only in Aramaic, even during the Arabic period, as Sherira's and Hai's writings prove. But, of course, Arabic was then the ruling idiom, and Saadia—not a born Babylonian, it is true—calls the Aramaic "the language of the fathers" (comment. on the "*Sefer Yezirah*," text, p. 45); it was, therefore, no longer a living language. Hebrew, of course, was retained in a measure, as everywhere, by the Jews; and the Karaites especially wrote mainly in Hebrew. Pethahiah, the traveler, was rejoiced to find that Aramaic was closely related to Hebrew.

Although Babylonia, or Irāk, was largely populated by Jews, the population was still a mixed one, and in the course of time the non-Jewish population grew to be in the majority. The uncultivated Parthians could, of course, exercise no religious influence upon the Jews; but it was

otherwise with the Persians, and it is still a moot point to-day to what extent Judaism, both Biblical and post-Biblical, was influenced by Zoroastrianism. In Palestine it was acknowledged that the names of the angels (see *ANGELOLOGY*) were of Babylonian origin (*Gen. R.* xlviii. 9), and were adopted in the Parthian period. In this direction in general the Jews were strongly influenced by Zoroastrianism (Kohut, "*Ueber die Jüdische Angelologie und Dämonologie in Ihrer Abhängigkeit vom Parsismus*," Leipzig, 1866; Stave, "*Einfluss des Parsismus auf das Judenthum*," Haarlem, 1898). Talmud and Midrash speak very often of the Persians. Nahman, presiding judge at the court of the exilarch, was well versed in Persian law (*Shebuot* 34*b*); and a Persian document is mentioned (*Git.* 19*b*; compare *B. M.* 108*a*). The Persians were acute enough to prize the Jewish Law: a Jewish soldier found a Hebrew copy of it in the Persian treasury (*Sanh.* 97*b*). Persian trousers, a characteristic garment, are, according to some, mentioned several times (*Ab. Zarah* 2*b*; *Mcg.* 11*a*; *Kid.* 72*a*). Interesting, too, is the mention of the Persian festivals (*Yer. Ab. Zarah* i. 39*c*),

and of the fact that the Persians kiss each other upon the hand, and not upon the mouth (Tan., ed. Buber, iv. 110). It was only the Magi—wrongly called "Guebers"—who, as Nöldeke rightly explained, were contemptuously called "magicians" ("haberim" or "habrin") by the Jews, who hated and persecuted the latter. The Mandæans, however, chiefly residing in southern Babylonia, also felt deep hatred against the Jews (W. Brandt, "Die Mandäische Religion," Leipsic, 1889; Lagarde, "Mittheilungen," iv. 143; Jewish sources contain nothing upon this point). Besides these, there were Arabs living in the land or on its borders (Niddah 47*a*, Kid. 72*a*), called also Ishmaelites or Nabatæans: intercourse with them, related as they were to the Jews, must have been amicable.

But all this changed when the Arabs became masters of the country; by them all the inhabitants who were not Moslems were treated with contempt, if not with cruelty. The Christians experienced this more sharply than the Jews (in the predominantly Jewish district Nehardea, there were no Christians in olden times; Pes. 56*a*). The constitution of the Nestorian Church had for the Arabs great similarity to that of the Jews with their exilarchs and heads of academies. Hai Gaon had friendly intercourse with the Catholicus of the Nestorians. Strange to say, the only one of these nationalities to exert a detrimental influence upon Judaism was Mandæism, to which many of the superstitions and the belief in magic, found throughout the Talmud, must undoubtedly be ascribed. Evidences of

**Their Influence.** this are the magic bowls used in common by both Jews and Mandæans. Layard first found them ("Discoveries," p. 509), since which they have repeatedly been encountered; and the American Nippur expedition unearthed a great number of them (Stubbe, "Jüdisch-Babylonische Zaubertexte," Halle, 1895, p. 8; Lidzbarski, "Ephemeris für Semitische Epigraphik," 1900, p. 89; "Amer. Journal of Archeology," 1900, iv. 482). The illustration of one of these bowls, given on page 402, is from the "Revue des Etudes Juives." Arabic influence was undoubtedly much more powerful; but this confined itself to the field of science, and did not intrude upon religion.

Babylonia was always a fertile country, yielding produce of every kind. Both Jewish and non-Jewish writers describe its wealth of date-palms (Pes. 87*b* *et seq.*); cedars are said to have been brought thither from Palestine (Lam. R. i. 4). The

**Commerce and Trade.** locust (insect) is also said to have been imported thence (Yer. Ta'an. iv. 69*b*).

Olive-oil, however, was lacking; its place being supplied by sesame-oil (Shab. 26*a*). Linen was widely manufactured (Ta'an. 29*b*); and there was a special Babylonian purple material (Gen. R. lxxxv. 14; Tan., Mishpatim. 17), well known in commerce under the name of "Babylonicum." These fabrics (Pandects xxxiv. 2, 25) were brought by the Jews to Alexandria (Isaac Voss upon Catullus, p. 196). The Jews evidently contributed to Babylonia's foreign commerce, which in the earliest days was centered in Seleucia and Ctesiphon. In later days, when Bagdad rose to prominence, markets had already been held there (Streck, *l.c.* p. 52)—of course,

with the assistance of Jews (Kohut, "Aruch." vi. 10)—and there was a special Jewish quarter there, with a "Jews' Bridge" (Yakut, iv. 1045, 11—see BAGDAD). To-day trade is still mainly in the hands of the Jews in these localities, as, for instance, in Bassora (Ritter, "Erdkunde," x. 180). Their industry made the Jews rich, especially in Maḥuza (Gutschmid, "Kleine Schriften," v. 677). There were no laws in Babylonia in restraint of commerce (Git. 58*b*); but, devoted as they were to trade, the Jews did not shrink from such lowly occupations as that of canal-dredging; indeed, the Babylonian Talmud mentions all kinds of handiwork as having been followed by Jews, and even by distinguished scholars among them. Their connection with agriculture is not quite so clear, although it is quite certain that there were farmers among them. The Talmud mentions the interesting fact that the Palestinian Jews gave one-third of their yearly offering ("terumah") "for Babylon, Media, the distant provinces, and all Israel" (Yer. Shek. iii. 47*c*). There was no stone in Babylonia (Midr. Teh. xxiv. 10); bricks were, therefore, used for building, and Jews were employed in their manufacture.

The Jews are reported as having erected handsome synagogues and colleges; the pillars of the college at Pumbedita being particularly praised (Yer. 22*b*). The learned of Babylonia dressed more elegantly and were prouder in demeanor than those of Palestine (Shab. 145*b*). The climate was healthful, so that it was said that there was no leprosy in Babylonia (Ket. 77*b*).

—**History:** The earliest accounts of the Jews exiled to Babylonia are furnished only by the scanty details of the Bible; certain not quite reliable sources seek to supply this deficiency from the realms of legend and tradition. Thus, the so-called "Small Chronicle" (Seder 'Olam Zutṭa) endeavors to preserve historic continuity by providing a genealogy of the Princes of the Exile ("Reshe Galuta") back to King Jeconiah; indeed, Jeconiah himself is made a Prince of the Exile (Neubauer, "Medieval Jew. Chronicles," i. 196). The "Small Chronicle's" statement, that Zerubbabel returned to Palestine in the Greek period, can not, of course, be regarded historical. Only this much can be considered as certain; viz., that the descendants of the Davidic house occupied an exalted position among their brethren in Babylonia, as, at that period, in Palestine likewise. At the period of the revolt of the Maccabees, these Palestinian descendants of the royal house had emigrated to Babylonia, to which an obscure notice by Makrizi (in De Sacy, "Chrestomathie Arabe," i. 100) probably refers (Herzfeld, "Gesch. des Volkes Israel," ii. 396).

It was only with Alexander's campaign that accurate information concerning the Jews in the East reached the western world. Alexander's army contained numerous Jews who refused, from religious scruples, to take part in the reconstruction of the destroyed Belus temple in Babylon (Josephus, "Contra Ap." i. 22). The accession of Seleucus Nicator, 312 B.C., to whose extensive empire Babylonia belonged, was accepted by the Jews and Syrians for many centuries as the commencement of a new era for reckoning time, called "minyān sheṭa-

rot," *era contractuum*, or era of contracts (see 'Ab. Zarah 10a, and Rapoport, "Erek Millin," p. 73),

which era was also officially adopted by the Parthians. This so-called "Greek" **Greek Period.** era survived in the Orient long after it had been abolished in the West (see Sherira's "Letter," ed. Neubauer, p. 28). Nicator's foundation of a city, SELEUCIA, on the Tigris is mentioned by the Rabbis (Midr. Teh. ix. 8); while both the "Large" and the "Small Chronicle" contain references to him. The important victory which the Jews are said to have gained over the Galatians in Babylonia (II Macc. viii. 20) must have happened under Seleucus Callinicus or under Antiochus III. The last-named settled a large number of Babylonian Jews as colonists in his western dominions, with the view of checking certain revolutionary tendencies disturbing those lands (Josephus, "Ant." xii. 3, § 4). Mithridates (174-136) subjugated, about the year 160, the province of Babylonia, and thus the Jews for four centuries came under Parthian domination.

Jewish sources contain no mention of Parthian influence; the very name "Parthian" does not occur, unless indeed "Parthian" is meant by

**Parthian Period.** "Persian," which occurs now and then. The Armenian prince Sanatroces, of the royal house of the Arsacides, is mentioned in the "Small Chronicle" as one of the successors (*diadochoi*) of Alexander. Among other Asiatic princes, the Roman rescript in favor of the Jews reached Arsaces as well (I Macc. xv. 22); it is not, however, specified which Arsaces. Not long after this, the Partho-Babylonian country was trodden by the army of a Jewish prince; the Syrian king, Antiochus Sidetes, marched, in company with Hyrcanus I., against the Parthians; and when the allied armies defeated the Parthians (129 B.C.) at the River Zab (Lycus), the king ordered a halt of two days on account of the Jewish Sabbath and Feast of Weeks (Josephus, "Ant." xiii. 8, § 4). In 40 B.C. the Jewish puppet-king, Hyrcanus II., fell into the hands of the Parthians, who, according to their custom, cut off his ears in order to render him unfit for rulership. The Jews of Babylonia, it seems, had the intention of founding a high-priesthood for the exiled Hyrcanus, which they would have made quite independent of Palestine (Josephus, "Ant." xiv. 13, § 9; *ib.* "B. J." i. 13, § 6). But the reverse was to come about: the Palestinians received a Babylonian, Ananel by name, as their high priest ("Ant." xv. 2, § 4), which indicates the importance enjoyed by the Jews of Babylonia.

In religious matters the Babylonians, as indeed the whole diaspora, were in many regards dependent upon Palestine. They went on pilgrimages to Jerusalem for the festivals, and one, whose full name is given in Mekilta on Deut. (xiv. 23, ed. Hoffmann), brought first-fruits of his land to Jerusalem (Hal. iv. 11); but this case was not permitted to constitute a precedent. Sherira himself, although strongly biased in favor of his own home, acknowledges that when the Sanhedrin and the colleges were flourishing in Palestine, neither existed in Babylonia; which fact would seem to warrant the inference that the Babylonian Jews must have sent to Palestine for religious instruction, as, for instance, in the case of Hillel.

According to the "Small Chronicle," however, the exilarchs at this period already had their court-scholars. How free a hand the Parthians permitted the Jews is perhaps best illustrated by the rise of the little Jewish robber-state in Nehardea (see ANILAI AND ASINAI). Still more remarkable is the conversion of the king of Adiabene to Judaism (see ADIABENE). These instances show not only the tolerance, but the weakness of the Parthian kings. The Babylonian Jews wanted to fight in common cause with their Palestinian brethren against Vespasian; but it was not until the Romans waged war under Trajan against Parthia that they made their hatred felt (Eusebius, "Hist. Eccl." iv. 2); so that it was in a great measure owing to the revolt of the Babylonian Jews that the Romans did not become masters of Babylonia too. Philo ("Legatio ad Cajum," § 36) speaks of the large number of Jews resident in that country, a population which was no doubt considerably swelled by new immigrants after the destruction of Jerusalem. Accustomed in Jerusalem from early times to look to the east for help (Baruch iv. 36, 37; Pseudo-Solomon, Ps. 11), and aware, as the Roman procurator Petronius was, that the Jews of Babylon could render effectual assistance, Babylonia became with the fall of Jerusalem the very bulwark of Judaism. Rabbi Akiba's journeys to Nehardea (Yeb., end) and Gazaka (Gen. R. xxxiii. 5) were undoubtedly connected with preparations for revolt (Rapoport, in "Bikkure ha-Ittim," 1823, p. 70), and it is a fact that Jews of the diaspora enrolled themselves under Bar Kokba ("Gola," in Saadia Ibn Danan, in "Pe'er ha-Dor," No. 225); while it is undoubtedly erroneous when in the "Yuhasin" (ed. London, 245b) it is maintained that Bar Kokba waged war with the Romans in Mesopotamia: this can be only a reminiscence of the struggles under Trajan. The Bar Kokba disaster no doubt added to the number of Jewish refugees in Babylon.

In the continuous struggles between the Parthians and the Romans, the Jews had every reason to hate the Romans, the destroyers of their sanctuary, and to side with the Parthians, their protectors. Possibly it was recognition of services thus rendered by the Jews of Babylonia, and by the Davidic house especially, that induced the Parthian kings to elevate the princes of the Exile, who till then had been little more than mere collectors of revenue, to the dignity of real princes (F. Lazarus, in Brüll's "Jahrbücher," x. 62). Thus, then, the numerous Jewish subjects were provided with a central authority

which assured an undisturbed development of their own internal affairs.

**Resh Galuta.** It is in this period that the first certain traces of the dignity of the prince of the Exile are found; and the first-named resh galuta is Nahum or Nahunya. About the year 140 of the common era, Hananiah, nephew of R. Joshua, migrated to Babylonia before the Bar Kokba war, and founded a college in Nehar-Pekod (compare "Pekod" in Jer. l. 21; called in other places "Nehar-Pekor," probably after the celebrated Parthian general Pakorus). Upon the overthrow of the insurrection and interruption of communication with Palestine, Hananiah set about arranging the calendar, which hitherto had been the exclusive prerogative of the

Palestinian patriarch; possibly he even meditated the erection of a new temple. This spirit of independence must certainly have been gratifying to the resh galuta; but when the Palestinian Sanhedrin sent two messengers to Babylon with the sarcastic suggestion that Ahijah (the resh galuta) should build another altar and that Hananiah should play the harp there-to, the remonstrance sufficed to bring the people to their senses again, and to nip the dangerous schism in the bud. This episode made such a strong impression upon the public mind that there are several accounts of it (Ber. 63*a*; Yer. Ned. 40*a*; Yer. Sanh. 19*a*). Judah b. Bathyra, who had a college in Nisibis, also influenced Hananiah to give up his intention; nevertheless, the college of the latter was still recognized in Palestine as authorized (Sanh. 32*b*). Nathan, a son or brother of the exilarch, was vice-president of the Palestinian Sanhedrin at this time. From this period on, instances are numerous of talented Babylonians attaining high esteem in Palestine. The Babylonians were well aware of their preeminence; and a Babylonian amora thus expressed himself concerning it: "When the Torah was forgotten in Israel, Ezra came from Babylon and restored it; when forgotten again, Babylonian Hillel came and rehabilitated it; forgotten once more, R. Hiyya and his sons came and reestablished it" (Suk. 20*a*). This rather boastful utterance ignores the fact that both Hillel and Hiyya, although Babylonians by birth, gained their knowledge in the Palestinian colleges. The fact that Abba Arika (commonly called "Rab"), a nephew of Hiyya, studied in Palestine, led to remarkable results for the Babylonian Jews; for Rab was the intimate friend of the last Parthian king, Artaban IV. (209-226).

The Persian people were now again to make their influence felt in the history of the world. Artaxerxes I. (Ardeshir I., son of Babek; the full name appears in Abraham ibn Daud, ed. Neubauer, p. 60) destroyed the rule of the Arsacids in the winter of 226, and founded the illustrious dynasty of the Sassanids. Different from the Parthian

**Sassanid Period.** inclined toward Hellenism, the Sassanids intensified the Persian side of life, favored the Pahlavi language, and restored with zeal the old religion of the Magi, founded upon fire-worship, which now, under the favoring influence of the government, attained the fury of fanaticism. Of course, both Christians and Jews suffered under this; but the latter, dwelling in more compact masses, were not exposed to such general persecutions as broke out against the more isolated Christians. The attitude of the first Sassanid, Ardeshir I., toward this movement is not clear. Gibbon ("Decline and Fall of the Roman Empire," ch. viii.) narrates that Ardeshir persecuted both Christians and Jews, and adduces Sozomen, book ii., ch. i., as authority; this passage, however, refers only to Christians. Against the statement, also, is the evidence of Ibn Daud that in Ardeshir's days the Jews and Persians loved each other, as also in the days of King Sapor.

**Ardeshir I.** S. Cassel believes that the Jews were favored by the Persians; and Graetz knows of no persecution under Ardeshir. There is, however, in the "Small Chronicle"—although not

in its proper place—a statement that "the Persians obtained dominion in the year 245 after the destruction of the Jerusalem Temple, and instituted a persecution of the Jews." The passage in "Yuhasin" (ed. London, 93*a*) sets this event in the period of the exilarch Nehemiah, in the year 175 after the Destruction. Far from being declared erroneous (Lazarus, in Brüll's "Jahrbücher," x. 95), this statement deserves full confidence, but the year should read "165" instead of "175"; that is, the year 233 of the common era, seven years after the inauguration of Persian power. Certain Talmudical accounts, belonging to the period, corroborate this; thus, R. Kahana says: "Hitherto the Persians [Parthians] permitted Jews to exercise capital punishment; but now the Persians do not permit it" (B. K. 117*a*). The Jews were no longer appointed to the wardenship of the canals ("reshe nahare"), nor to offices of the court ("gezir-paṭi"; Persian, *huzar qutli*; Greek, *ἀζαραπατικός*), which, however, the Jews regarded as an advantage (Ta'anit 20*a*); canal-wardens, who were also tax-collectors, being held in such dread (as is graphically described in Sanh. 25*b*) that the Jews were glad to be relieved from the duty. A prison-warder is mentioned ("zandukna," Ta'anit 22*a*), but he was probably in the employ of the exilarch. When the news was brought to R. Johanan, the most esteemed amora in Palestine, that the Guebers (in the Talmud, "Habrîn")—meaning the Magi—had overrun and conquered Babylonia, he swooned away in sympathy for his Babylonian brethren; but on being revived he reassured himself with the thought that the conquerors were open to money inducements (Yeb. 63*b*). Difficulties were put in the way of the Jews in such matters as the slaughtering of cattle for food, and as to their bathing-places and cemeteries, which were subject to intrusion (*ib.*). On certain Persian holy days, the Guebers would not permit any light in the houses of the Jews (Sanh. 74*b*; compare She'iltot di R. Aḥai, § 42); they made no exception even in a case of sickness (Git. 17*a*). Such an instance happening in his own family, Rabba bar bar Hana is said to have exclaimed, "All-merciful God! either under Thy protection, or, if not, under the protection of Esau [Rome]." That this utterance was opposed to another, by R. Hiyya, who ascribed it to God's especial providence that the Jews found refuge from Rome in Babylonia, was explained by the remark that the evil times in Babylonia commenced only with the Guebers (*ib.*). The patriarch Judah II. was informed that the Parthians resembled the armies of King David, but that the New Persians were like demons of hell (Kid. 72*a*); and it was in these armies that the Jews, although possibly a little later, had to render military service (Sanh. 97*b*; MS. Munich, however, has רוֹמִי [Rome] for פֶּרְסִי).

All these things must have taken place under the vigorous Ardeshir. How powerful was the impression made by him upon the fancy of the Jews, may be gathered from the so-called Apocalypse of Elijah (ed. Jellinek, in "B. H." iii. 66; ed. Bittenwieser, Leipsic, 1897), which most probably refers to Ardeshir's war against the Romans ("Jew. Quart. Rev." xiv. 360). To his campaign in 230 the obscure statement of the Latin author Solinus must be referred, that Jericho was destroyed by "Artax-

erxes" (Th. Reinach, in the *Kohut Memorial Volume*, pp. 457 *et seq.*). The schismatic Mani, founder of Manicheism, appeared at this time: his execution (doubtless because Manicheism exerted some influence upon Judaism) under Shabur is mentioned by Ibn Daud (p. 61).

It was, however, before the accession of the Sassanids that the powerful impetus toward the study of the Torah arose among the Jews of Babylonia which made that country the very focus of Judaism for more than a thousand years. An exact date may be determined: Sherira and those dependent upon him (compare "Seder Tannaim we-Amoraim," in the version of the *Mahzor Vitry*, p. 482) set as the date of Rab's return from Palestine the year 530 of the Seleucid era; that is, 219 of the common era, or, according to Ibn Daud (*l.c.* p. 57), the year of the world 3979. It would seem that Palestinian scholarship had exhausted itself with the compilation of the Mishnah; and it was an easy matter to carry the finished work to Babylonia. When Rab returned thither, there was already an academy at Nehardea under the leadership of an obscure R. Shila, who bore the title "resh sidra." Upon the death of the latter it was but natural

**Academies Founded.** that the much more eminent Abba Arika—whose distinction is indicated by the title of "Rab"—should become head of the school. But, in his modesty, Rab resigned the academy at Nehardea to his younger countryman Samuel, while he himself founded a similar institution in Sura (known also by the name of an adjacent town, Mata Mehasya). Nehardea, a long-established seat of Jewish life in Babylonia, first attained flourishing eminence through this prominent teacher, Mar Samuel; and when, with the death of Rab (247), the splendor of Sura vanished, Nehardea remained for seven years the only academy ("metibta") in Babylonia. From this period on, the history of the Jews in Babylonia, hitherto obscure, becomes quite clear (see **ACADEMIES IN BABYLONIA**).

The mass of tradition zealously preserved in the Babylonian academies furnishes a series of dates and facts which illuminate their life. The *resh galuta* about this time appears to have been Mar 'Ukba, or Nathan 'Ukban (c. 210–240); the chief judge was a certain Karna; while Rab held the much more troublesome than brilliant official position of an "agoranomos" (Yer. B. B. v. 15b). Although even Rab himself had to endure harshness at the hands of the exilarch's officers, from this time on it

**Sapor I.** would appear that the exilarchs, in accordance with the prevailing spirit of veneration for learning, began to devote themselves to the acquisition of knowledge as well as of power, approaching thus the example of the Palestinian patriarchs. King Sapor I. (240–271) favored Samuel with such a degree of intimacy that the latter was sometimes called "King Sapor" and "Arioch" (friend of the Arians; see Kid. 39a; Shab. 53a), and the people generally spoke of him with respect as "the Jewish sage" (Shab. 129a). But Samuel, too, liked the Persians. He was the author of the celebrated saying, "The law of the land is the law to go by" (B. B. 54b), referring, of course to civil matters; and even when his king, in the exigencies of war, felt

himself compelled to slaughter twelve thousand Jews at Mazaga (Caesarea), in Cappadocia, Samuel was ready to defend him (M. K. 26a). Under Sapor began the bitter contest with the Romans for possession of the rich lands of the Euphrates, so thickly populated by Jews. R. Johanan aptly remarked concerning these struggles that "Holwan, Adiabene, and Nisibis are the three ribs which the prophet Daniel describes as being held in the mouth of the beast, sometimes crunched and sometimes dropped" (Kid. 72a; see Dan. vii. 5). The Persians penetrated to the very heart of the Roman territory, until Odenath, prince of Palmyra, moved against them and took their booty from them (261). Several Talmudic passages speak of a certain Papa bar Nazor, who is identified by Cassel and Graetz with Odenath, while Nöldeke (*l.c.* p. 22, note 2) makes him a brother of Odenath. Zenobia, wife of Odenath, is quite distinctly referred to in the Talmud. According to non-Jewish writers, Odenath only penetrated as far as Ctesiphon; while Jewish sources (Sherira, the "Small Chronicle" and the "Seder Tannaim") refer to the calamity of the destruction of Nehardea by Papa bar Nazor. Samuel was then no longer alive; his daughters were taken prisoners; and his disciples fled to Shekanzib, Shelhi, and Mahuza; Nehardea ceased to be the principal focus of Jewish life, although its academy still continued in existence. Many rabbis also escaped to Pumbedita, which city now became the seat for a thousand years of the most celebrated Babylonian Jewish college next to Sura.

The Jews then enjoyed, it would appear, half a century of repose; not too long a respite for the enormous intellectual work going on. By Christian writers the Jews are accused without warrant of having instigated the slaughter of twenty-two bishops by Sapor II. (310–382) as part of his antagonism to the Christian predilection for Rome (Sozomen ii. 8; Burekhardt, "Die Zeit Constantins des Grossen," 2d ed., 1880, p. 90). The "Small Chron-

**Sapor II.** icle" narrates that when Huna was exilarch, and Rabbah chief of the academy, Sapor went against Nisibis and conquered it. A persecution of the Jews is mentioned as taking place in 313 (Theophanes, ed. De Boor, p. 25); but Sapor was at that time still a child. Rabbah b. Nahmani, the head of the academy at Pumbedita (died 331), fell a victim to persecution. The charge was made against him that the 12,000 disciples who assembled twice a year for the usual public study ("kallah"; see **ACADEMIES IN BABYLONIA**) did so merely to avoid paying the tax (see B. M. 86a). Rabbah fled and perished miserably, lost in a place called Agma (swamp?) (see Sherira, *l.c.* p. 31). His successors, R. Joseph the Blind and Raba (who followed Abaye), enjoyed the favor of the queen-mother Ifra Hormiz (B. B. 8a, 10b; Ta'anit 24b; Niddah 20b; Zeb. 116b); which did not, however, prevent Raba from being imprisoned upon a baseless charge (Ber. 56a). Rabbah and, still more, his pupils Abaye and Raba are considered as the founders of the acute Talmudic dialectics practised in Pumbedita. After the short presidencies of R. Joseph and Abaye, the renowned Raba became the head of Pumbedita; in his days it was the only remaining

academy in Babylonia; for Sura had ceased to exist. R. Papa, however, presently founded a new school in Naresh near Sura, which later on was removed to that city, where, under R. Ashi, it attained to high eminence.

In the vigorous war which the emperor Julian waged, and in which Mesopotamia and Babylonia proper were involved, it is probable that the Jews, in spite of the friendly attitude of the Roman ruler, sided with their own sovereign. A small town, Birta—called Bithra by Sozomen (iii. 20)—was deserted by its inhabitants, who were Jews, and in retaliation the Romans burned the place. The same fate befell the more important city Firuz Shabur (Pyrisabora), which also possessed a large Jewish population; Maḥuza, too, near Ctesiphon, Raba's birthplace and the seat of his academy, was also laid in ashes, together no doubt with many other towns in which Jews dwelt. There were probably no other enduring results of this Roman campaign, for Jewish records mention none. Julian honored the Jews in Haran (Charrae), when, on a visit there, he witnessed the mysteries (Bar-Hebraeus, "Chronicum Syriacum," ed. Kirsch, i. 65).

Of Sapor's successors, Yezdegerd I. (397–417, Justi; 399–420, Nöldeke) was at least not hostile to the Jews. The fact that the heads of

**Yezdegerd I.** the academies, Amemar of Nehardea, Mar Zuṭra of Pumbedita, and Ashi of Sura, were rudely handled by the king's seneschal while waiting for audience in the palace (Ket. 61*a*, according to Rapoport's amended reading in "Erek Millin," p. 35, and 'Aruk), does not certainly indicate a very great degree of friendliness. The Huna b. Nathan, whose girdle Yezdegerd adjusted with a few flattering words—a polite attention which was highly valued even by the eminent R. Ashi (Zeb. 19*a*)—was no doubt the exilarch of that date, Graetz to the contrary notwithstanding. This incident probably took place in this monarch's earlier years; later on he became a strong religious fanatic, and in 414 ordered a bloody persecution of the Christians. It may have been the king's intention that the exilarchate should gradually lose its political importance, for the Talmud (Git. 59*a*) relates that Huna b. Nathan subordinated himself to R. Ashi; while Sherira adds thereto the information that the "ringle," the public festivities given by the exilarch, were transplanted to Mata Meḥasya (Sura), the home of R. Ashi. This would show that Nehardea had ceased to be the residence of the resh galuta, and that Sura had become the political center of Jewish Babylonia. With R. Ashi, who united in his person both rank and learning (Sanh. 36*a*), the position of the principal of the academy attained almost equal eminence with that of the exilarch.

Bahram (Varanes) V. (420–438) left the Jews in peace; it is probably to his time that Theodoret (ii. 264) refers when he says that Babylonia was populated with Jews (Lagarde, "Mitthei-

**Bahram V.** lungen," iv. 145). His successor Yezdegerd II. (438–457) instituted a persecu-

**II.** tion of the Jews which transcended in cruelty all that they had hitherto experienced in Iran, and was a forerunner of still severer sufferings. In the year 456 (in which both the prin-

cipals of the Sura Academy, R. Naḥman b. Huna and R. Rehumai [or Nehumai] of Pumbedita, died), the king issued a decree forbidding all observance of the Sabbath. His early death prevented further persecution. The Jewish chronicles relate that he was swallowed by a serpent, upon the prayer of the heads of the academies, Mar b. R. Ashi and R. Zoma. Rapoport did not question the authority of this Jewish source; but new discoveries show that, according to the local tradition, this sudden death in reality befell Yezdegerd I., and that only the Jews attributed it to their persecutor, Yezdegerd II. The persecution was probably instigated by the Magi; the Christians and Manicheans having been persecuted five years earlier ("Revue Etudes Juives," xxxvi. 296). To this period is to be referred Amemar's discussion with a Magus (Sanh. 39*a*).

Yezdegerd's second son and successor, Firuz, or Perozes (459–486), continued the persecution on a larger scale. The Jews of Ispahan were accused of having flayed two Magi alive (Hamza, ed. Gottwaldt, p. 56); and one-half of the Jewish population were slaughtered and their children delivered over to the fire-worshippers. But in Babylonia too the persecution gained foothold; Firuz "the wicked" (Hul. 62*b*) put the exilarch Huna Mari, son of Mar Zuṭra I., to death; and the Jews, coming under immediate Persian domination, underwent a year of suffering, 468, which in the Talmud is called "the year of the destruction of the world" (see Brüll, "Jahrb." x. 118). From this year to 474 a series of violent acts followed, such as the destruction of synagogues, prohibition of the study of the Law, the forcible delivery of children to the Fire

**Firuz.** Temples, the imprisonment and execution of Amemar b. Mar Yanuka and Meshershiya. The destruction of Sura (Shab. 11*a*) possibly also took place at this time. Maḥzor Vitry (p. 483) states that Firuz suffered a violent death (result of an earthquake?) in 483, or, more correctly, 486. In 501 Rabina died, the last of the Amoraim; succeeding teachers were called Saboraim. The compilation and editing of the Babylonian Talmud, begun by R. Ashi, were completed by Rabina, though the Saboraim may also have worked upon it. The reduction of the traditional

legal material to writing—previously forbidden—originated no doubt in the **The Talmud.** anxiety caused by the continually increasing persecution: it was no longer safe to confine this prized material to the oral traditions of the academies; it must be set down permanently in writing for posterity. Another remarkable result of these persecutions was the emigration of Babylonian and Persian Jews to India under Joseph Rabban.

The reign of Balash (Vologeses) was uneventful for the Jews; but the long sway of Kobad or Kawad (490–531; according to Nöldeke, 488–531) brought mournful developments. About 501 appeared Mazdak, the founder of Zendicism, whose socialist doctrine of community of property and wives must have aroused horror among both Christians and Jews. All indications show that Mazdak was of Irak origin, seeing that his doctrines made most headway there. Zendicism must have made exist-

ence unbearable, especially for the Jews, who were jealous of the purity of their family life. King

**Kobad**, to break the pride of the Persian nobles, embraced the new religion, **Balash and Kobad**. and, although deposed by them, he remained a devotee of the new faith.

Fortunately, the Jews had at that time an energetic exilarch, Huna VI., who succeeded to some extent in protecting his coreligionists against this evil. But when he died in 508, his nephew Pahda was appointed to the exilarchate during the minority of his son; he was, however, eventually removed by the king through the exertions of Mar Hanina, the head of the academy (about 551). Judaism in the interval seems to have been close-pressed by Zendicism; and accordingly the new exilarch, Mar Zutra II., a grandson of Mar Hanina, gathered around him an armed band of four hundred men for the defense of Jewish family life. He succeeded in maintaining his independence for seven years, collecting revenue even from the non-Jewish population of Irak. Active measures by the king put an end, at length, to the little Jewish state: Mar Zutra, only twenty-two years of age, was crucified (520) on the bridge of Mahuza, his capital; and his infant son, Mar Zutra III., was carried to Palestine, where he became Archipherecites. Kobad introduced an additional land-tax, and all Jews and Christians between the ages of 20 and 50 were subjected to a poll-tax (Justi, *l.c.* p. 370), no doubt after Roman example. Kobad's army serving against the Byzantines contained a number of Jews, who were allowed to desist from active operations on the Passover (Bar-Hebraeus, *l.c.* p. 85).

The century between Kobad and the appearance of the Arabs is destitute of historical record. In the Babylonian Talmud, the latest date mentioned is the year 521 (Sanh. 97b); see "Me'or 'Enayim," 43; Zunz, "G. V." 2d ed., p. 56. From this time on, there are extant only accounts of individual sages, the Saboraim, and these only scantily. Mention is made of R. Rehumai, R. Jose, R. Aha of Be Hatim, near Nehardea, Rabai of Rob, and others; they all died early, as Sherira expressly remarks. Rabai was reckoned as one of the Geonim, the title of "Gaon" being henceforth borne by the head of the Academy of Sura, and later also by that of the Academy of Pumbedita. The Saboraim continued to teach undisturbedly under Kobad and Chosroes Anushirwan

(531-578), a ruler beloved both by Persians and Arabs, and who showed a friendly attitude toward the Jews. It was in his time that the Christian sect of the Nestorians spread in Persia, as

mentioned also by Jewish sources (Jellinek, "B. H." vi. 13). Under Hormiz IV. (578-590) "the end of the Persian rule," as Sherira says, persecutions occurred again: the academies were closed; and many rabbis of Pumbedita migrated to Firuz Shabur, near Nehardea, because this latter city was under Arab rule (*c.* 581). The Jews, accordingly, favored the insurrection led by Bahram Tshubin, as Theophylactus Simocatta relates (vol. vii., p. 218, ed. Bonn). The legitimate ruler, Chosroes Parwez (590-628), was able to maintain his right to the throne of the Sassanids, and the Jews were at liberty to resume their

academic activities without being punished for having sided with the rebel. In the war which this king made upon the Byzantines, his general Shahr-Barz captured Jerusalem (615), and, it appears, handed over the Christians to the mercies of the Jews. Thus, for the last time, the Jews stood in intimate relations with the Persians; with the downfall of the latter ends likewise the brilliant era of the Jews in Babylonia.

The first expression of Mohammedanism toward other faiths was one of intolerance and narrowness. It was an essential feature of Moslem state policy that Jews and Christians, no less than Zoroastrians, must be warred against until they paid tribute. In addition to a poll-tax ("jizyah"), the tax upon real estate ("kharaj") was instituted; indeed, first in Irak, and later on among the Jews (A. Müller, "Der Islam," i. 272). The first calif, Abu

**Arab** Bakr, sent the famous warrior Halid **Period.** against Irak; and a Jew, by name Ka'ab al-Ahbar, is said to have fortified the general with prophecies of success (Weil, "Gesch. der Chalifen," i. 34). The Jews may have favored the advance of the Arabs, from whom they could expect mild treatment. Some such services it must have been that secured for the exilarch Bostanai the favor of Omar I., who awarded to him for a wife the daughter of the conquered Sassanid Chosroes II. as Theophanes and Abraham Zacuto narrate. Jewish records, as, for instance, "Seder ha-Dorot," contain a Bostanai legend which has many features in common with the account of the hero Mar Zutra II., already mentioned. The account, at all events, reveals that Bostanai, the founder of the succeeding exilarch dynasty, was a man of prominence, who received from the victorious Arab general certain high privileges, such as the right to wear a signet-ring, a privilege otherwise limited to Mohammedans. Omar and Othman were followed by Ali (656), with whom the Jews of Babylonia sided as against his rival Mo'awiyah. A Jewish preacher, Abdallah ibn Saba, of southern Arabia, who had embraced Islam, held forth in support of his new religion, expounded Mohammed's appearance in a Jewish sense, and, to a certain extent, laid the foundation for the later sect of the Shi'ites. Ali made Kufa, in Irak, his capital, and thither went Jews who had been expelled from Arabia (about 641). It is perhaps owing to these immigrants that the Arabic language so rapidly gained ground among the Jews of Babylonia, although a greater portion of the population of Irak were of Arab descent. The capture by Ali of Firuz Shabur, where 90,000 Jews are said to have dwelt, is mentioned by the Jewish chroniclers. Mar Isaac, chief of the Academy of Sura, paid homage to the calif, and received privileges from him.

The proximity of the court lent to the Jews of Babylonia a species of central position, as compared with the whole califate; so that Babylonia still continued to be the focus of Jewish life. The time-honored institutions of the exilarchate and the gaonate—the heads of the academies attained great influence—constituted a kind of higher authority, voluntarily recognized by the whole Jewish diaspora. But unfortunately exilarchs and geonim only too soon began to rival each other. A certain

Mar Yanka, closely allied to the exilarch, persecuted the rabbis of Pumbedita so bitterly that several of them were compelled to flee to Sura (Sherira, *l.c.* p. 35), not to return until after their persecutor's death (about 730). "The exilarchate was for sale in the Arab period" (Ibn Daud); and centuries later, Sherira boasts that he was not descended from Bostanai. In Arabic legend, the resh galuta (*ras al-galut*) remained a highly important personage; one of them could see spirits (Goldziher, in "Revue Etudes Juives," viii. 127); another is said to have been put to death under the last Ommiad, Merwan ibn Mohammed (745-750).

Messianic hopes were nurtured by external oppression. The Ommiad calif, Omar II. (717-720), persecuted the Jews. He issued orders to his governors: "Tear down no church, syna-

**Omar II.** gogue, or fire-temple; but permit no new ones to be built" (Weil, *l.c.* i. 583).

A pseudo-Messiah, called Serenus by Grætz, but probably named Severus (see Bar-Hebræus, "Chronicon Syriacum," p. 123; Payne Smith, "Thesaurus Syriacus," col. 2549), appeared in Syria (about 720); his adherents were received back into Judaism on the decision of the gaon Natronai b. Nehemiah of Pumbedita (Responsa, "Sha'are Zedek," Nos. 7-10). Another Messiah, Obadiah Allah abu-Isa, took up arms in Ispahan; but the strong house of the Abbassids, which attained sovereignty about this time (750), soon put an end to the Messiah "across the river." The sect of the Isawites, as also that of the Yudghanites—called after their founder, Yudghan (Judah)—and other small sects which appeared at this time, all amalgamated in Karaism.

Karaism owes its origin to a struggle for the succession to the exilarchate. Anan b. David, residing probably in the recently founded (758) city of Bagdad, and therefore inclined to the free views of life current at the court of the calif Almansur, was passed over in an election for exilarch: he thereupon publicly renounced (762) Rabbinism altogether and founded the sect of the Karaites (see

**Karaism.** ANAN B. DAVID). Ten years later, again owing to dissensions, the exilarch Natronai b. Habibai was compelled to emigrate to Africa (773). Isaac Iskawi II. (about 800) received from Harun al-Rashid (786-809) confirmation of the right to carry a seal of office (see Lazarus, in "Brüll's Jahrbuch," x. 177). At the court of the mighty Harun appeared an embassy from the emperor Charlemagne, in which a Jew, Isaac, took part (Pertz, "Monumenta Germaniæ Historica," i. 190, 353). Charles (possibly Charles the Bald) is said to have asked the "king of Babel" to send him a man of royal lineage; and in response the calif despatched R. Makir to him ("Yuhasin," 84b); this was the first step toward establishing communication between the Jews of Babylonia and European communities. Although it is said that the law requiring Jews to wear a yellow badge upon their clothing originated with Harun (Weil, *l.c.* ii. 162, note 1), and although the intolerant laws of Islam were stringently enforced by him, the magnificent development which Arabian culture underwent in his time must have benefited the Jews also; so that a scientific tendency began to make itself noticeable among the

Babylonian Jews under Harun and his successors, especially under Al-Ma'mun (813-833).

Like the Arabs, the Jews were zealous promoters of knowledge, and by means of translations of the Greek and Latin authors contributed essentially to their preservation. They took up religio-philosophical studies (the "kalam"), siding generally with the Motazilites and maintaining the freedom of the human will ("kadr"). The sects mentioned above also accepted this doctrine. In opposition to the enlightenment of the Motazilites, however, there arose at this period a system of mysticism: Joseph b. Abba, who taught at the Academy of Pumbedita, was a mystic, claiming intercourse with Elijah. In addition to the religious differences among the Rabbinites, there was continuous strife with the Karaites, who wished to have a certain Daniel, a Karaite, appointed exilarch, while the Rabbinites insisted upon David b. Juda (825). As the calif Al-Ma'mun, who had to regulate similar quarrels among the Syrian Christians, gave his decision in such a manner as to show that he washed his hands of the whole matter, the candidate of the Rabbinites had no difficulty in asserting himself. Such episodes could not but ultimately contribute to the complete downfall of the influence of the exilarchate. Some mysterious event compelled the Babylonian Abu Aaron, son of the prince Samuel, to emigrate to Europe (about 876, under Charles the Bald), where he imparted a mystic prayer-formula of the Babylonians ("Revue Etudes Juives," xxiii. 230; see AARON BEN SAMUEL HA-NASI).

The government meanwhile accomplished all it could toward the complete humiliation of the Jews. All non-believers—Magi, Jews, and Christians—were compelled by Al-Mutawakkil to wear a badge; their places of worship were confiscated and turned into mosques; they were excluded from public offices, and compelled to pay to the calif a tax of one-tenth of the value of their houses (about 850; Weil, *l.c.* ii. 354). An utterance of the calif Al-Mu'tadhel (892-902) ranks the Jews, as state servants, after Christians (Assemani, *l.c.* iii. 1, 215). How insignificant the exilarchate had become is shown by the fact that Uqba, one of the best of the exilarchs, was deposed after a long rule by a gaon, Cohen Zedek of Pumbedita (917); this is reported by a contemporary, Nathan the Babylonian, who has transmitted many valuable facts relating to this period (preserved by Zacuto, in "Yuhasin"). On the other hand, the

**Decline of the Exilarchate.** geonim of Pumbedita, because their district embraced the capital, Bagdad, soon attained equal rank with their colleagues of Sura. The gaon of Sura,

Mar Amram, had distinguished himself by the form of prayers ("siddur") which he sent to Spain; but the brilliant period of the literary activity of the Geonim was inaugurated by Zemah b. Paltoi I. (872-890), of Pumbedita, fragments of whose Talmudic dictionary are still extant. Nahshon of Sura left a key to the calendar system, thus marking a departure from the strict field of Talmudism, hitherto the only department studied by the Geonim. In addition, an entire series of geonim left responsa to various religious questions that came to them from the whole diaspora.

After an interval of a few years, a nephew of the deposed Uḫba, David b. Zakkai (920-940), was made exilarch, and Cohen Zedek II. was forced to recognize him. Foiled as this ambitious Pumbeditan thus was in regard to the exilarchate, he was in addition compelled to witness the rise and development of the Academy of Sura, also strongly opposed by him, but which under Saadia reached a point of unprecedented splendor. Saadia, who had been called to Sura from Egypt because there was no scholar of sufficient Talmudic authority there, had already made himself famous by his translation of the Bible into Arabic, and by his commentary upon it. His activity as gaon of Sura (928-942) was even more meritorious than this accomplishment. His battles with the Karaites form but one side of the general polemic activity which ruled at this time in Irak among the professors of the various religions. There

was a Parsee controversy ("shikand gumanik Vijar") against Jews and Christians in the ninth century (Darmesteter, "Rev. Et. Juives," xviii. 4). Sabaryeshu, a Jacobite presbyter of Mosul in the tenth century, waged a discussion with a Jewish sage (Assemani, *l.c.* iii. 1, 541; compare Steinschneider, "Polemische Literatur," p. 85); and Mohammedan writers like Al-Kindi were continuous in their attacks, from the ninth century on, against Jews and Christians alike (Steinschneider, *l.c.* p. 112). Two califs, Al-Muḫtadir and Kahir, interfered in the disputes between the exilarchate and the gaonate, with the result that both institutions suffered in influence. David had successfully maintained himself against his brother Joshua, whom Saadia had declared exilarch, and had thereafter made friends with the gaon, who had in the interval been banished to Bagdad. He left a son, Judah, to succeed him; but he ruled only seven months. Saadia then took affectionate charge of Judah's infant son, until the latter was slain in a Moslem riot. The exilarchate had to be suspended (about 940) until quieter times permitted its artificial revival. There are some faint traces that a certain Hezekiah, a grandson of David's son Judah, was exilarch for a time; but, according to other authorities, he was only gaon of Pumbedita—a post which, with his violent death in 1040, also passed away after an existence of 800 years.

The Academy of Pumbedita flourished for a century longer. Aaron ibn Sargado, a wealthy merchant of Bagdad and an opponent of Saadia, acted as gaon of Pumbedita (943-960) and very effectively.

Of less importance was Nehemiah, son of Cohen Zedek; but in SHERIRA (968-1000) and his son Hai or Haia, the Jews of Babylonia possessed two incumbents of the gaonate who shed unrivaled brilliancy upon their office. Yet both these respected dignitaries found themselves the victims of calumnious representations made to the calif Al-

**Sherira and Hai.** Ḳadir, probably through the instrumentality of scholars who felt themselves slighted. The two geonim were for a time imprisoned, but ultimately were set at liberty, and the now aged Sherira resigned his office in favor of Hai, who discharged the duties of the gaonate until 1038. Upon his death the above-mentioned Hezekiah ruled for two years longer, and

with his murder the gaonate of Pumbedita came to an end.

The gaonate of Sura was extinguished less suddenly. About 970 a certain R. Jacob b. Mordecai is said to have written to the Jewish communities on the Rhine on the matter of a false Messiah (Mannheimer, "Die Juden in Worms," p. 27); this is, however, considered to be a fabrication. The last gaon of Sura was Samuel b. Hophni, the father-in-law of Hai; he was distinguished for his literary activities. When he died in 1034, the gaonate of Sura retrograded more and more, until at last it expired quietly and unnoticed.

A special intervention of Providence, according to Ibn Daud, was arranged in order that Babylonian learning should be transplanted to Europe. Four scholars, sent to the West to gather funds for the academies, were captured on the Mediterranean by an admiral of the calif of Cordova; and after many experiences these four became the founders of rabbinical academies in Alexandria, Kairwan, Cordova, and perhaps Narbonne. Babylonia thus lost its central importance for Judaism: it was, however, replaced by the rising communities of Spain, whither the two sons of the unfortunate Hezekiah above mentioned had also migrated.

This forms an appropriate point at which to consider the general influence of Babylonia upon European Judaism. Luzzatto ("Hebräische Briefe," p. 865) thus, in substance, describes it: The West received both the written and the oral Law from Babylonia. Punctuation and accentuation were begun in Babylonia; so also the piyyuṭ,

**Babylonian Influence on Judaism.** rime, and meter. Even philosophy had its origin here: for the frequently mentioned but little-known David ha-Babli or Al-Mukammez, who lived before Saadia, is the oldest known Jewish philosopher. The greatest if not also the earliest payyetaṇ, Eleazar Kalir, of the eighth century, was apparently a Babylonian. It is true indeed, adds Luzzatto, that heresy is also a Babylonian product; for, in addition to the Karaites, Hiwi al-Balkhi, Saadia's opponent, was a Persian—in a broader sense a Babylonian. [The Talmudic usage survived for a long time of calling all Western Jews ("ma'arbaye") "Palestinians" and all Eastern Jews ("madinḥaye") "Babylonians."] One peculiarity of the Babylonians, however, made no headway among the Jews of other lands: this was the system of supralineal punctuation (see Pinsker, "Einleitung in das Babylonisch-Hebräische Punctuationssystem"), called the Babylonian or Assyrian, and said to have been invented by the Karaite, R. Aḥa of Irak (see Margoliouth, in "Proc. Soc. Bibl. Archaeology," 1893, p. 190). To Babylonian literary activity, in addition to the Babylonian Talmud, must be ascribed possibly the Targum Onkelos, together with some Midrashic works ("Rabbot"), "Halakot Gedolot," and the well-known works bearing the names of the geonim Aḥa of Shabḥa, Amram, Saadia, Sherira, Hai, Hophni, and others. Babylonian learning, always great from Rab's time, expressed itself in independent works only toward the close of the period, and then disappeared altogether.

Babylonia, however, still continued to be regarded

with reverence by the Jews in all parts. Eldad, who in the ninth century traveled extensively from Africa, notes that the Jews of Abyssinia placed "the sages of Babylon" first in their prayers for their brethren of the diaspora (Zemah Gaon, in Epstein, "Eldad ha-Dani," p. 8); and a similar

**Middle Ages.** prayer, *יקום פרקן*, although it has quite lost its application, is extant to-day in many congregations. R. Paltiel of Cairo contributed one thousand gold pieces to the schools of Babylonia ("Medieval Jewish Chron." ii. 128), in accordance, no doubt, with a custom prevalent in all places where Jews dwelt. In 1139 Abraham ibn Ezra was in Bagdad, and the exilarchate had possibly been restored at that time (see his commentary on Zech. xii. 7). Toward the end of the twelfth century, both Benjamin of Tudela and Pethahiah of Regensburg gave a description of Babylon; Judah al-Harizi's journey was somewhat later. Benjamin found seven thousand Jews in Mosul on the Tigris opposite ancient Nineveh, and at their head was R. Zakkai, of Davidic descent; he found also R. Joseph Burj al-Fulk, court astronomer of the Seljuk sultan Saifeddin. Pethahiah ("Travels," London, 1856) found there two "nesi'im" (princes) of the house of David. Other inhabitants paid a gold dinar to the government, but the Jews paid one-half to the government and the other to the two princes. In another passage (*l.c.* p. 20) Pethahiah says that every Jew in Babylonia paid a poll-tax of one gold piece to the head of the academy (of Bagdad?); for the king (calif) demanded no taxes. The Jews in Babylonia lived in peace. Passing through many places which counted two thousand, ten thousand, and even fifteen thousand Jewish inhabitants, Benjamin reached Bagdad, the residence of the calif. At this time the calif (Emir al-Mumemin) was considered only as the spiritual head of the state; the functions of government proper were exercised by the Seljuk princes. "The calif," says

**Benjamin of Tudela.** Benjamin, "is kindly disposed toward Israel, and reads and speaks our holy tongue." In Bagdad there resided about a thousand Jews, and there were ten colleges, which he enumerates, all under a president of their own. At the head of all stood the exilarch Daniel b. Hisdai. This shows that the exilarchate must have been restored, and, to judge from Benjamin's further description, it had lost but little of its former splendor. Pethahiah mentions only one academy in Bagdad and but a single presiding officer; he knows nothing of an exilarch. The inroad of the Mongolians seems to have wrought havoc in Bagdad; and the only large congregation known to Al-Harizi (Makamas 12, 18, 24, 46) was that of Mosul. Passing through the city of Babylon, Benjamin reached a place inhabited by twenty thousand Jews, where the house of the prophet Daniel was shown.

Both travelers recount many legends and popular traditions concerning Daniel's grave in Susa (see Cambridge Bible, Daniel, p. xxi.), Ezekiel's synagogue, and the graves of individual Talmudists—traditions which survive to-day in great measure there, but which evidence considerable superstition on the part of the Babylonian Jews, a failing they share, however, with their Mohammedan neighbors.

Al-Harizi sings of Ezekiel's grave in his 53d makama; Niebulir saw the grave in 1765, and was assured that even then many hundred Jews annually visited it (Ritter, *l.c.* x. 264). Benjamin went to Kufa, where seven thousand Jews dwelt, and visited also the academic cities, Sura and Pumbedita; in ruined Nehardea, Pethahiah found a congregation, and in the celebrated Nisibis there were then eight hundred Jews. He relates that the "nasi" of Damascus received his ordination from the academic head of Babylonia, so that this country was still predominant in the minds of the Jews of the Moslem world. The gaon of Bagdad, Samuel b. Ali ha-Levi, did not hesitate to oppose Maimonides publicly. Two hundred years later, about 1380, there lived in Babylonia a prince, David b. Hodayah, who took up the cause of a German rabbi, Samuel Schlettstadt; this prince traced his descent, not from Bostanai, but from the Palestinian patriarchs (Coronel, "Commentarii Quinque," p. 110, Vienna, 1864). There was likewise an exilarchate in Syria under the Egyptian sultan in the thirteenth and fourteenth centuries, with its seat at Damascus; the exilarch Yisha of Damascus (1288) joined hands with the exilarch David of Mosul and the rabbinical authorities of Babylonia—that is, Bagdad—in opposing the anti-Maimonists ("Hemdah Genuzah," p. 21b; "Kerem Hemed," iii. 170).

Temporary commotion was caused in the life of the Jews of the califate by the appearance of David ALROY, who called himself in his Messianic capacity by the name of Menahem b. Solomon.

The califate hastened to its end before the rising power of the Mongolians. These heathen tribes knew no distinction, as Bar Hebræus remarks, between heathens, Jews, and Christians; and their grand mogul Cubalai showed himself just toward the Jews who served in his army (Marco Polo, book ii., ch. vi.). Hulagu, the destroyer of the califate (1258) and the conqueror of Palestine (1260), was tolerant toward both Jews and Christians; but there can be no doubt that in those days of terrible warfare the Jews must have suffered much with others.

Under the Mongolian rulers, the priests of all religions were exempt from the poll-tax; and it is not true when Mohammedan writers deny that the Jews possessed the same privilege (Vambéry, "Gesch. Buchara's," i. 156, Stuttgart, 1872). Hulagu's second son, Ahmed, embraced Islam, but his successor, Argun (1284-91), hated the Moslems and was friendly to Jews and Christians; his chief counselor was a Jew, Sa'ad al-Daulah, a physician of Bagdad (D'Ohsson, "Histoire des Mongoles," book iii., ch. ii., p. 31; Weil, "Gesch. der Islamitischen Völker," p. 381). After the death of the great khan and the murder of his Jewish favorite, the Mohammedaus fell upon the Jews, and Bagdad witnessed a regular battle between them. Ghaikatu also had a Jewish minister of finance, Reshid al-Daulah (Bar Hebræus, i. 632). The khan Gazan also became a Mohammedan, and restored the so-called Omar Law (see above) to full sway. The Egyptian sultan Nasr, who also ruled over Irak, reestablished the same law in 1330, and saddled it with new limitations (Weil, *l.c.* pp. 19, 398). Mongolian fury once again devastated the localities inhabited by Jews, when, in 1393, Timur

captured Bagdad, Wasit, Hilleh, Bassora, and Tekrit, after obstinate resistance (Weil, *l.c.* p. 427). After various changes of fortune, Mesopotamia and Irak came into the hands of the Osmons, when Sultan Sulaiman II. in 1534 took Tebriz and Bagdad from the Persians; and, with slight interruptions, Babylonia has remained to this day under Turkish domination.

There is but scanty historical information available concerning these latter centuries. The president of a synagogue in "Babylon" (Bagdad?) brought home a scroll of the Law from Palestine to Bagdad in 1333 (Isaac Chelo, in Carmoly, "Itinéraires").

The scroll belonging to the celebrated Moses b. Asher is said to have been brought to Cairo by the "Babylonian" Jabez b. Solomon, a Karaite, probably in Turkish times ("Ibn Saphir," p. 146). Babylonia thenceforth disappears from the history of Judaism.

S. KR.

**BABYLONIAN EXILE.** See CAPTIVITY, BABYLONIAN.

**BABYLONIAN PUNCTUATION** or **VO-CALIZATION.** See PUNCTUATION.

**BABYLONISH GARMENT.**—**Biblical Data:** An article of dress mentioned in connection with the theft of Achan (Josh. vii. 21) during the spoil of the captured city of Jericho. The connection would indicate that the garment was one of considerable value. That a Babylonish garment should have been found in Jericho is not at all impossible, and points to commercial contact with Babylonia which we know, from other sources, began long before the days of Joshua. It is difficult to determine the exact kind of garment meant by the expression.

—**In Rabbinical Literature:** Bereshit Rabbah (lxxxv. 14) states that it was a purple robe, while Josephus says it was made of gold. Two other opinions are registered in the Talmud (Sanh. 44a). Abba Arika says it was a robe made of fine wool, while Samuel says that it meant a cloak made in Zerifa (near Pumbedita; Rashi: "dyed with alum"). These opinions, however, do not conflict, but touch upon different sides of the question—one, the material; the other, the method of dyeing.

J. JR.

G. B. L.

**BACA, THE VALLEY OF:** A valley mentioned in Ps. lxxxiv. 7 [6 A. V.]. Since it is there said that pilgrims transform the valley into a land of wells, the old translators gave to "Baca" the meaning of a "valley of weeping"; but it signifies rather any valley lacking water. Support for this latter view is to be found in II Sam. v. 23 *et seq.*; I Chron. xiv. 14 *et seq.*, in which the plural form of

the same word designates a tree similar to the balsam-tree; and it was supposed that a dry valley could be named after this tree. König takes "Baca" from the Arabian "baka'a," and translates it "lacking in streams." The Psalmist apparently has in mind a particular valley whose natural condition led him to adopt its name.

F. BU.

**BACAU:** Capital of a district of the same name, situated in the southwest of Moldavia, a division of Rumania, with a population of 15,000, one-half of whom are Jews. A census taken in 1876 enumerated 743 Jewish families at that time. The district contains 150,000 inhabitants, of whom, according to the official census of 1899, 15,667 are Jews. The community of Bacau is one of the oldest in Moldavia; its cemetery contains inscriptions dating from the beginning of the eighteenth century; there are no traces of any older burial-ground. It worshiped in a wooden synagogue which was destroyed by fire in 1853, and had been popularly supposed to be several centuries old. The present community possesses one synagogue, built in 1853, and twenty meeting-houses, mostly in rented buildings. Two of the latter, however, possess small libraries and are called "bet ha-midrash"; these buildings belong to the community, one having been erected in 1838 and the other in 1848.

As in all important communities in Moldavia, Bacau has a "vekil hakam-basha"; the last representative of the "hakam-basha" of Jassy was Lupu Baruch. The administration of the community was in the hands of a committee of five, or seven, elected by delegates from the synagogues. Its institutions were supported by the revenues derived from the GABELLA, which served in lieu of all imposts payable by the Jews to the state; later, however, an additional amount was imposed to pay for substitutes in the army. From 1864 the tax was intermittent; from 5 bani (1 cent U. S.), paid for each oca (kilo) of meat and for every head of poultry at the commencement of the nineteenth century, the tax rose to 25 bani (5 cents U. S.). Since 1850, the tax has furnished a revenue of from 48,000 to 68,000 francs yearly.

Among the rabbis that have officiated at Bacau are Isaac Botoschaner (1803-58), a man of strong character, a distinguished Talmudist, and

**Rabbis.** an opponent of Hasidism. A vault has been erected over his grave where a lamp is kept burning day and night, and the pious pray as at the tomb of a saint. His successor, Alter Iones (1858-73), was likewise a distinguished Talmudist, much beloved and of great influence.

The old Jewish society is the "Hebrah Kaddishah" (burial society), which also cares for the sick; it was founded in 1871 and lasted until 1885, when the cemetery passed under the administration of the Communal Committee. The "Hebrah Talmud Torah" was founded in 1828 for the encouragement of study; there were attached to it thirteen "heders," two of them for higher or Talmudic subjects, which have survived until to-day. In 1851 a society for the study of the Mishnah (Hebrah Mishnayot) was formed. In 1868 the Dorintza Natiunei (The Nation's Desire) was established for purposes of charity, frater-

nity, and education; for three years it maintained a school on modern lines. The first modern school was opened in Bacau in 1863, but it was not maintained longer than two years; reopened in 1869, it was closed again a little later, and again reopened; it numbers now between 200 and 300 pupils. Among the benefactors of the community were Leib sin Iancu, who in 1815 bequeathed it two houses, the revenues from which were to be devoted to purchasing firewood for the poor; Iancu Folticheneanu, who left a house for a "hekdesch" (hospital), transformed later into a shelter for Jews passing through the city ("haknasat orehim"); Phineas Edelstein, who in the first half of the nineteenth century left 500 ducats for a hospital, which is still standing. The communal bath-house, said to be one hundred and forty years old, was recently closed for sanitary reasons.

Jewish artisans were always numerous in Bacau. In 1832 a society, Poale Zedek, was formed, composed entirely of Jewish craftsmen, and in 1851 a society of Jewish shoemakers. There is not a trade

**Trades.** which the Jews of Bacau have not followed or do not follow to-day; they were always the most skilful artisans,

notably as jewelers, tinsmiths (exclusively Jews), lace-makers, wood-carvers, and manufacturers of tobacco-pipes. The pharmacies of the place are conducted by Jews only; the first vaccinating physician in the town was a Jew, who practised from 1828 to 1866. Among its best-known physicians were Zurach Chan, who practised medicine before 1800; Dr. Torcenau, who was employed by the state from 1848 to 1866; Dr. Meisels, distinguished as a physician and philanthropist, and Adolph Barder. At the present time (1901) Bacau has six Jewish physicians. In the world of music the orchestra conducted by Wolf Lemisch, member of a highly gifted musical family, enjoys a wide reputation. All branches of commerce are almost exclusively in the hands of the Jews. In manufactures, too, they have occupied themselves from the earliest days in various industries, such as distilling, brewing, wood-turning, and the manufacture of wagons and lamps. The Jews of Bacau are the principal, if not the exclusive, stewards of estates, foresters, lake-wardens, and general contractors of all kinds.

The accusation of ritual murder has also been heard in Bacau; that of 1824 was attended with serious consequences for the community, and that of 1838 had similar results. Since 1866, hatred of the Jew has penetrated among Christian circles, and repeated disturbances have broken out.

The district of Bacau contains other large Jewish communities, such as those of Tirgul-Ocna, Moineschti, Adjud, Caiutz, Parincea, etc. In former times the small villages also contained many Jews, but they have been frequently expelled and live in a state of poverty. The former town of Tirgul-Trosh, near Tirgul-Ocna, has lately sunk to a village owing to the departure of the Jewish population; its cemetery contains tombstones dating back more than 140 years. The little town of Tirgul-Parincea was founded by Jews. The Jews of Ocna and Moineschti were formerly well-to-do, but now they have fallen into a state of utter penury.

**BACCHIDES:** Syrian general; friend of the Syrian king Demetrius; and "ruler in the country beyond the river"—Euphrates. Demetrius sent him in 161 B.C. to Judea with a large army, in order to invest the recreant Alcimus with the office of high priest (I Macc. vii. 8, 9). The peaceable Assideans credulously expected friendship from him; but, contrary to oath and covenant, he cruelly slew sixty of them (*ib.* vii. 16). Leaving Jerusalem, he made a slaughter-house of Bezeth (Bethzecha), and after handing the country over to Alcimus, returned to the king (*ib.* vii. 19, 20). When, however, another Syrian army under Nicanor suffered defeat at the hands of Judas Maccabeus (*ib.* vii. 26-50), Demetrius again sent Bacchides and Alcimus to Judea, this time with an army of twenty thousand infantry and two thousand cavalry. At Elcasa (Laisa) he met Judas, whose three thousand soldiers had dwindled to eight hundred. Judas, though he put to flight the right wing of the Syrian army commanded by Bacchides himself, and pursued it to Azotus, was totally defeated by the left wing, and killed (*ib.* ix. 1-18). Bacchides now established the Hellenists as rulers in Judea; and the persecuted patriots (*ib.* ix. 25-27), under Jonathan, brother of Judas, fled beyond the Jordan. Bacchides came upon them there on a Sabbath, and again suffered defeat, losing one thousand men (*ib.* ix. 43-49). He returned to Jerusalem, and, in order to subdue the Jews, fortified not only the Acro, but also Jericho, Emmaus, Beth-horon, Beth-el, Thamnata (Timnatha), Pharathon, Tephon, Beth-zur, and Gazara (*ib.* ix. 50-52). Soon after Alcimus died, and Bacchides, having made a fruitless attack upon Jonathan, returned to the king. At the instigation of the Hellenists, he moved a third time against the Jews. Only after he had been defeated several times by Simon, brother of Judas and Jonathan, did he conclude an enforced treaty of peace with Jonathan, and depart into his own land (*ib.* ix. 58-73; Josephus, "Ant." xii. 10, § 13; xiii. 1).

The representation of Bacchides by Josephus ("B. J." i. 1, §§ 2, 3) as barbarous by nature, and the statement that he was slain by Mattathias, are both erroneous. In the Syriac translation of the Book of the Maccabees, Bacchides, through an error in transcription, is called "Bicrius" instead of "Bacdius"; and in the Jewish version of the Hanukkah story ("Megillat Antiochus") he is called Bagris, or Bogores (see Gaster's edition of the Megillah); forms corrupted, according to Bacher, from בַּרְיִים.

**BACH, EMILIE:** Artist and journalist; born at Neuschloss, Bohemia, July 2, 1840; died at Vienna April 29, 1890. She was directress of the royal school for artistic embroidery, and published on this subject two works: "Muster Stilvoller Handarbeiten für Schule und Haus," in two volumes (Vienna); "Neue Muster im Alten Stil." She contrib-

uted to many daily papers, such as the "Neue Freie Presse," "Heimat," "Wiener Allgemeine Zeitung," etc., and delivered many lectures on arts and handicrafts, most of which were published.

**BACH, JOSEPH:** Hungarian rabbi; born in 1784; died at Budapest Feb. 3, 1866. After I. N. Mannheimer, he was the first German preacher of a Jewish congregation in Austria-Hungary. At Alt-Ofen, his birthplace, he began to ground himself early in life in the study of the Talmud. Without the aid of a teacher he studied several foreign languages; after which he attended the University of Prague, remaining there twelve years. Then he returned to his native place, where he married the daughter of a wealthy family, and settled down as a merchant. It was not long, however, before he lost his entire fortune and was left penniless. Destitute of the means of subsistence, he was constrained to accept a situation as teacher. From the position of teacher of youth he rose to that of teacher of the people at large, becoming in 1827 the spiritual adviser of a large congregation. Bach, who had never studied homiletics, and had never heard or read a sermon, was appointed first preacher at the newly organized synagogue of Pest, where he officiated for over thirty years. Many of his sermons have been published. An autobiography, with a preface by Kayserling, was published by his son at Budapest (n. d.).

**BACH, KARL DANIEL FRIEDRICH:** German painter; born at Potsdam May, 1756; died at Breslau April 8, 1829 (according to some sources in 1826). As his father was a merchant and an elder (*Landesältester*) of the Brandenburg Jewry, Karl was enabled to obtain from the Potsdam painter, A. B. Krüger, his first instruction in the art of painting; later, through the influence of Colonel Guichard ("Quintus Icilius"), he succeeded in entering the Berlin Academy of Arts, and became intimately connected with Lesueur, Chodowiecki, and Frish. At Bach's instance life studies were introduced at the Academy. Bach soon distinguished himself by skillfully executed copies of old works, and upon arriving at Warsaw with Count Ossolinski in 1780, achieved considerable success. Later he accompanied Count John Potocki on his travels; copied paintings in Düsseldorf; and was made member of the local academy, Dec. 15, 1785. Thence he went to Paris, and afterward to Italy, where he remained for four years (1786-1792), studying at the expense of his patron, Potocki, at first in Rome—where he applied himself chiefly to the productions of Raphael and Michelangelo—and subsequently in Portici, where the antiquities of Herculaneum held his attention. Elected member of the Academy of Florence on Dec. 9, 1788, he visited Venice, Vicenza, and Berlin, at which latter place he exhibited his productions—copies, for the most part, of works of Italian masters. In 1792 Bach was appointed a director and professor of the Breslau Art Academy; and on June 23, 1794, he became member of the Academy of Berlin. Two years later, in conjunc-

tion with C. F. Benkendorf, he started a journal called "Torso," devoted to "ancient and modern art"; but after a short time its publication was discontinued.

Bach has published: "Umriss der Besten Köpfe und Parthien nach Rafael's Gemälden im Vatican"; and "Anweisung Schöne Formen nach Einer Einfachen Regel zu' Bilden, für Künstler, Handwerker, und Freunde des Schönen"—each of which is a treatise on art conceived in accordance with somewhat old-fashioned academic traditions. Bach made use of the etching-needle; and in his paintings he chose historical subjects, portraits, animals, and many allegorical themes, all conceived in the spirit of the epoch. Though not a very important figure in the world of art, he rendered great service to the cause of art in Germany by his helpful stimulation of fellow-artists, and by encouraging and promoting instruction in drawing, handicraft, etc. Bach died a Christian proselyte.

**BACHARACH:** City in the Prussian government district of Coblenz. On April 19, 1283, twenty-six Jews were murdered there, among them the boy Hezekiah, whose father, Jacob, had been killed at Lorch in 1276. In 1287 the Bacharach Jews were subjected to persecutions caused by the murder of Werner, who was made a martyr of the Church. This persecution has been described by Heine in his "Rabbi von Bacharach." In 1337 the mob, under the leadership of ARMLEDER, attacked the Jews; and in 1349, at the time of the Black Death, many of them were slain. From 1365 to 1370 the counts palatine took a number of foreign Jews under their protection and permitted them to settle at Bacharach; and in 1510 the permission was renewed. In 1722 only two Jewish families lived there, while today (1901) the number of Jewish residents has increased to forty-six.

Of the Jewish scholars of Bacharach, records of the second Crusade (1146) mention Alexander ben Moses, Mar Abraham ben Samuel, and Mar Kalonymus bar Mordecai. These, with their households, sought refuge in the castle of Stalleck, where they were killed. Their remains were brought to Mayence and interred there. Among other scholars resident here may be mentioned Ya'ir Hayyim Bacharach (seventeenth century), the well-known author of the responsa "Hawwot Ya'ir," and Elkan Levi Bacharach.

A. F.

**BACHARACH:** A name frequent among German Jews. From the twelfth, or at any rate from the fifteenth century, the name Bacharach, in various spellings—as **Bacharach**, **Bachrach**, **Bachrich**, etc.—is found among the Ashkenazim in all parts of Europe. All individuals bearing the name hardly form one family, for the name merely indi-

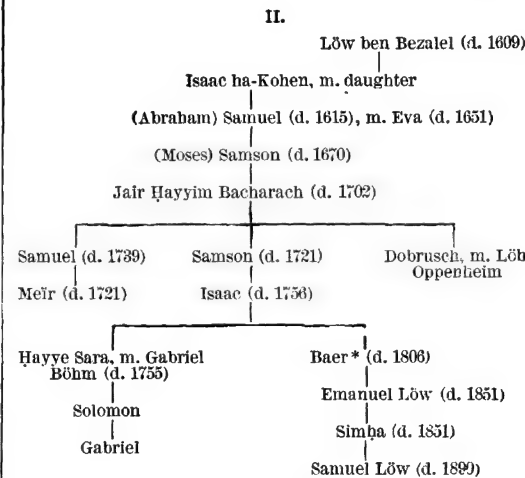

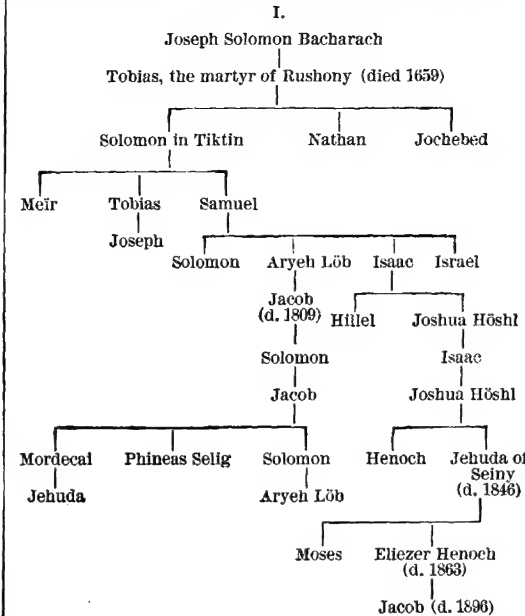

cates that the family either derived its origin from the city Bacharach in Rhenish Prussia, or that one of its ancestors was at one time a resident of that place (see on this point the Austrian law on the names of the Jews, dated July 23, 1787, in Anton Cramer, "Vollständige Gesetzessammlung für die Judenschaft in den Königlichen Staaten," pp. 248, 258, Prague, 1793).

The first mention of any Bacharach is that of **Samuel Bacharach** (טיייר) in 1175 (Solomon Luria, Responsa, No. 29; Heilprin, "Seder ha-Dorot," ed. Maskileison, p. 211, Warsaw, 1878), but it is questionable whether the reading in this case is correct, as the words of Luria may mean, "Samuel in the city בכרך of טייר."

The second mention of a scholar of this name, **Ephraim Gumprecht Bacharach** of Frankfort-on-the-Main, quoted by Moses Minz in the fifteenth century (Responsa, No. 39), is less liable to doubt. In the beginning of the sixteenth century there is a **Menahem Man Bacharach**, rabbi in Worms (Responsa of Joseph ha-Kohen of Cracow, "She'orit Joseph," No. 36; and Responsa of Moses Minz, Nos. 25, 37). In the Responsa of Moses Minz there is the further mention of **David, Asher (Anschel)**, and **Moses Bacharach**. From the end of the sixteenth century the name Bacharach occurs more frequently in western Germany. In Frankfort there is a **Mendel**, son of **Isaac Bacharach**, who died there Aug. 23, 1599. His son **Moses**, a prominent member of the congregation, died there Sept. 11, 1620. Moses' son, **Issachar Baer Gans Bacharach**, a member of the rabbinate, died Aug. 24, 1678. Issachar's son, **Naphtali Herz Gans Bacharach**, endorses the Responsa of Jair Hayyim Bacharach, but does not mention that they are related, which goes to prove that, though bearing the same name, they were not of the same family. Naphtali died July 8, 1709.

The other Bacharachs may be divided into two families; of which the one is to be traced back to **Tobias ben Joseph Solomon Bacharach**, who died as a martyr in Rushony (Russia) Sept. 19, 1659; while the other is distinguished by the great Talmudist, **Jair Hayyim Bacharach**, of Worms. To the former family belong **Judah** and his grandson **Jacob**; to the latter, besides the three generations of rabbis at Worms, **Samuel** (died 1615), **Samson** (died 1670), and **Jair Hayyim** (died 1702); the latter's grandson, **Michael**, a famous Talmudist of Prague, who died there Jan. 16, 1801; **Baer** Bacharach, who died at Nikolsburg Sept. 12, 1806, and was a great-grandson of Jair Hayyim. A brother of Michael Bacharach was **Meir**, a Hebrew poet, who died in Presburg Jan. 4, 1729. The descendants of the latter abbreviated their name to **Bacher**, and his great-grandson was the Hebrew poet, **Simon Bacher**, the father of Professor **William Bacher** of Budapest. The details in these genealogies can not, however, always be verified, inasmuch as the congregations did not keep official records of the births and deaths, and as family traditions are not very reliable, owing especially to the custom of naming children after their grandfathers, from which fact errors in identification easily occur. The following is an attempt to draw a family tree of the two best-known Bacharach families:

I. BER.

**BACHARACH, ABRAHAM SAMUEL**: Rabbi; born about 1575; died in Gernsheim, grand

\*It is not certain whether Baer was Isaac's son or grandson.

duchy of Hesse, May 26, 1615. He seems to have come from the city of Worms, but is first met with at Prague, where, in 1600, he married Eva, the granddaughter of the chief rabbi of Prague, Löwe ben Bezalel. He was rabbi in Turbin, Kolin (Bohemia), and in Pohrlitz (Moravia); and was subsequently called to the ministry of the very important congregation of Worms. One of the frequent riots against the Jews, instigated by the gilds, caused him to flee from the city. He died during exile, and was buried in Alsbach. Bacharach was respected for his learning and piety. He took a firm stand against the rabbis of Frankfurt, who arrogated to themselves preeminence over all the other rabbis of Germany. A few of his responsa were published by his grandson, Jair Hayyim, in the collected "Hut ha-Shani" (Frankfort-on-the-Main, 1679). Bacharach was the author of an essay on the Jewish calendar, a number of apologetic works against Christianity, liturgical poems, and casuistic treatises. Some of his works are still extant in manuscript.

D.

**BACHARACH, EVA:** Hebraist and rabbinical scholar; born at Prague about 1580; died in Sofia, 1651. She was the daughter of Isaac ben Simson ha-Kohen, and through her mother, Vögele, granddaughter of the well-known rabbi of Prague, Löwe ben Bezalel. Her brothers, Hayyim and Naphtali, were also noted rabbis. As a daughter of such a distinguished rabbinical family, she acquired a wide knowledge of Hebrew and rabbinical literature, and could often assist rabbis in solving textual difficulties. Such erudition was quite uncommon among Jewish women of that time, and the *Memorbuch* of Worms makes special mention of it ("Kobez 'al-Yad," iii. 15, Berlin, 1887). In 1600 she married Abraham Samuel BACHARACH, with whom she subsequently went to Worms, whither he was called as rabbi. After his death on May 26, 1615, she returned with her son Samson and her three daughters to Prague, in order to devote herself to the education of her children. Eva refused an offer of marriage from Isaiah Horowitz, then rabbi of Prague, who was about to emigrate to Jerusalem, although she longed to be in the Holy Land. When her three daughters were married, she followed her son Samson to Worms, whither he had been called to take the position of his father; and soon afterward, in 1651, she left for Palestine. On the journey, Eva Bacharach died at Sofia, where she was buried with great honor. Her grandson, Jair Hayyim, called his work in memory of her "Hawwot Yair," which, in the usual German pronunciation, might be understood as "Eva's Jaïr."

**BIBLIOGRAPHY:** Kaufmann, *Bacharach und Seine Ahnen*, 1894, pp. 3, 23, 24, 27, 28; Eisenstadt-Weiner, *Da'at Kedoshim*, pp. 215-217.

D.

**BACHARACH, JAIR HAYYIM:** German rabbi; born at Leipnik, Moravia, 1639; died in Worms Jan. 1, 1702. At the age of twelve he came with his father, Samson, to Worms (1653), and two years later married Särhan, the daughter of Sussman Brilin. Under Brilin and his son Isaac, Bacharach

continued his studies for seven years longer. In 1660 he received his rabbinical license from Mendel Bass, rabbi of Frankfort-on-the-Main. He seems to have been for some time rabbi of Mayence. In 1666 he was made rabbi of Coblenz, but for a reason unknown he was not reelected in 1669. The law of Coblenz demanded (possibly for purposes of exaction) that the rabbi be reelected every three years. He returned to Worms, where he lived as a private member of the community, and lectured on Talmudic topics. His father had hoped to see him made

#### His Rabbinical Career.

his successor, but the congregation, pretending that it was contrary to its laws to choose a rabbi from among the residents of the community, elected Aaron Teomim Fränkel. Jair Hayyim felt very much slighted by this, and it was evidently for this reason that he wrote, under the same title, a severe criticism of "Matteh Aharon" (The Staff of Aaron), his rival's work on the Passover Haggadah. He himself never published it, however; and after the death of Teomim wrote a marginal note on his manuscript forbidding its publication in the future. It was nevertheless issued by Jellinek in 1865 in the "Bikkurim," 1865, i. 4-26; reprinted in the "Ha-Misderonah," i. 348-364.

Bacharach was undoubtedly right in considering himself the superior of Teomim, who was a representative of the school of the most degenerate casuistry, while Bacharach was a systematic and thorough student of rabbinical literature and not altogether devoid of secular knowledge. He wrote under the title "Ez Hayyim" (Tree of Life) a compendium of the Jewish religion in three parts, each of which contained six subdivisions. He collected a considerable number of manuscripts: works left by his father and his grandfather; documents referring to the movement of "Ez Hayyim." Shabbethai Zebi, and other valuable relics of past ages. He made a very minute catalogue of his manuscripts, which numbered forty-six volumes; but while the catalogue is extant, the manuscripts are all lost, with the exception of a work on Talmudic methodology, "Mar Kashisha" (The Old Master), which is in the library of the bet-ha-midrash in Vienna. As his work, "The Tree of Life," was so large that he could not risk the expense of its publication, he collected some of his father's and of his grandfather's responsa and published them, together with some of his own, in 1679, under the title, "Hut ha-Shani" (The Scarlet Thread).

In the mean time the terrible suffering which the wars of Louis XIV. had brought on the Palatinate affected his career also. In 1689 Worms was burned by the French army, and Bacharach thereafter led an unsettled life, moving first to Metz, then to Frankfort and to Heidelberg. In 1699 the scattered members of the congregation found themselves again in Worms, and an imperial charter confirmed their reestablishment. It was then that Bacharach, though prematurely aged, broken down in health, and nearly deaf, had the satisfaction of seeing his worth acknowledged. The congregation elected him as its rabbi, but he held his

position for scarcely two years, dying at the age of 64.

Of his numerous manuscript works he could edit only his responsa, which he called "Hawwot Yair" in memory of his grandmother, Eva Bacharach. The book was published in 1699 through the assistance of the wealthy court-Jew, Samson Wertheimer of Vienna, to whom Bacharach was related by marriage. His wife dying not long after him, and his two sons, Samson and Samuel, leaving Worms for different localities, his manuscripts became scattered.

Bacharach was in many ways an original thinker, and his works show a certain scientific and independent spirit. Thus in one instance he says, "Even if the Tosafists and other authorities disagree with my opinion, what of it? The spirit of God made me as it made them" ("Hawwot Yair," No. 155). He wrote a scholarly treatise on the meaning of oral tradition (*ib.* No. 192), while such subjects were as a rule foreign to the rabbis of his age. He advocated the establishment of schools and the introduction of pedagogical methods (*ib.* No. 123), and strongly condemned the methods of PILPUL, and the uncouth manners customary in the rabbinical disputations of his age (*ib.* No. 152). He studied astronomy and wrote some essays upon it from the point of view of rabbinical literature, but feeling the inadequacy of his knowledge of the

**Opposed to Cabala.**

obsure subject, he burned all his manuscripts on the subject, gave up the study altogether, and advised one of his friends to leave it alone (*ib.* No. 219). He occupies a similarly irresolute position in regard to the study of the Cabala. "Who can deny," he says, "that this science is the greatest and highest of all mental attainments, and that one keeping aloof from it altogether is as one who would keep aloof from his life and from all the glories promised to those who devote themselves to the Cabala. But in our age, and especially outside of Palestine, there is more merit in keeping away from Cabala than in studying it, for we have enough to do if we devote ourselves to the legal part of rabbinical literature" (*ib.* No. 210). Otherwise, however, he was as rigidly orthodox as any of the rabbis of his time. He would not permit a man to cross the river on the Sabbath to attend the services (*ib.* No. 112); he

**Rigidly Orthodox.** demanded severe punishment for one who had drunk wine that was not kosher (*ib.* No. 140); and was indignant at the conduct of a man who had, in his will, expressed the desire that his daughter should recite the Kaddish because he had no son—for Bacharach contended if such a departure from tradition were countenanced, every one would interpret the Law according to his own opinion (*ib.* No. 222).

**BACHARACH, MOSES SAMSON:** Son of Samuel and Eva Bacharach; born in 1607; died at Worms April 19, 1670. After the death of his father his mother took him to Prague, where he was educated by his maternal uncle, HAYYIM HA-KOHEN. In 1627 he married Dobrusch, a daughter of Isaac ben Phœbus, of Ungarisch-Brod, Moravia, where he lived supported by his wealthy father-in-law. The 'Thirty Years' war brought about the ruin of his father-in-law's business, and Samson was compelled to accept a rabbinical position in Göding, Moravia, in 1629. In 1635 he became rabbi of Leipnik, Moravia, and remained there until the capture of the city by the Swedish army in 1643 scattered the congregation and forced him to return to Prague. Here he was made preacher, but during the siege of the city in 1648 found himself compelled to retreat to the country for safety. Returning after the war, he remained in Prague until 1650, when he was called to the rabbinate of Worms, which position he occupied up to the time of his death. After the death of his wife in 1662 he married Feige, the widow of Moses ha-Kohen Nerol, rabbi of Metz, who died in 1666. He left one son, Jair Hayyim (see Jair Hayyim BACHARACH), and four daughters. Of his literary works there exist a number of responsa published in his son's "Huṭ ha-Shani," Frankfort, 1679; and also some religious poems. His commentary on R. Asher's Halakot is lost.

**BACHER, EDUARD:** Austrian juriconsult and journalist; born at Pastelberg March 17, 1846. Graduating from the University of Vienna, he engaged in practise as an advocate, in which career he displayed such marked ability that some years later the Reichsrath appointed him its chief stenographer. In 1872 Bacher entered the employ of the "Neue Freie Presse" as a parliamentary reporter, and on May 1, 1879, he became the chief editor of the paper. His leading articles on internal politics were much appreciated, not in Austria only, but throughout Europe. He died Jan. 20, 1908.

I. BR.

**BACHER, JULIUS:** German playwright and novelist; born in Ragnit, eastern Prussia, Aug. 8, 1810. He studied medicine in Königsberg, and settled there as a physician in 1837; but after ten years he abandoned his medical career to devote himself exclusively to literature. His first production in this field was a drama, "Karl des XII. Erste Liebe." Then the political events of 1848 interrupted his literary activity, but he resumed it eight years later by publishing a novel, "Sophie Charlotte, die Philosophische Königin," 3 vols. Its favorable reception by the public encouraged him to pursue literature, and he published successively: "Die Brautschau Friedrich des Grossen," 1857, a drama; and "Friedrich I. Letzte Tage," 1858, a romance in 3 vols. In 1859 his "Charakterbild aus dem Leben" was performed at the Royal Berlin Theater. Bacher thereupon settled in Berlin, whence he traveled to Switzerland and France. Upon his return to Berlin

in 1860 he published three volumes of tales and a number of romances. The more celebrated of these works are: "Ein Urteil Washington's," 2 vols., 1864; "Sybilla von Kleve," 3 vols., 1865; "Napoleon I. Letzte Liebe," 6 vols., 1868; "Auf dem Wiener Kongress," 4 vols., 1869; "Prinzessin Sidonie," 3 vols., 1870; and the tragedies, "Lady Seymour" and "Lucie."

B. B.

**BACHER, SIMON:** Neo-Hebraic poet; born Feb. 1, 1823, in Liptó-Szent-Miklós, Hungary; died at Budapest Nov. 9, 1891. Bacher, whose name was originally Bachrach, came of a family of scholars, and counted as one of his ancestors the well-known Jair Hayyim BACHARACH. He studied Talmud in his native city, in Nikolsburg under Menahem Nahum Trebitsch, and under Moses Perles in Eisenstadt and Bonyhad. During this period Bacher was much influenced by the new movement of the Haskalah, and he also studied the secular sciences and literature.

When nineteen years old Bacher returned to Miklós, where, despite the business in which he was engaged, he continued his studies with unremitting zeal. After many struggles Bacher in 1874 went to Budapest, where two years later he was appointed treasurer of the Jewish community. This office he held until he died.

When a boy of eleven, Bacher had translated German poems into Hebrew. Thus Schiller's "Lied von der Glocke" first came to be known to the scholars in Bonyhad, who were wholly engrossed with their Talmudic studies. Masters and pupils of the old renowned Talmudic schools were alike delighted with his verses. The events of his fatherland and of the Jewish community, festival days and days of mourning, jubilees and funerals, equally inspired his song. He celebrated scholars, preachers, statesmen; orators, singers, philanthropists, and writers; and Jewish legends and history also provided subjects for his poems, in which were mingled reflections and expressions of sentiment, myths, and historical events.

In addition to short scientific and miscellaneous contributions to magazines—the former consisting of linguistic studies on the Talmud and essays in archeology—Bacher wrote some short poems in German. But his place in Jewish literature was won chiefly by his Hebrew poetry. Of almost equal rank with his original poetic work are some of his translations into Hebrew of German, French, and Hungarian poems. The translations are classic in form, and reproduce vividly the spirit of the original.

Bacher contributed to many Jewish magazines, and wrote also a number of occasional poems published separately. Among his longer works are the following: Translations of Ludwig Philippson's tragedy "Jochin," Vienna, 1860, and of Lessing's "Nathan der Weise," Vienna, 1866; "Zemirot ha-'Arez" (Hymns of the Land), Budapest, 1868, and a collection of Hungarian poems: "Muzzal Me'esh" (Saved from the Fire), Budapest, 1879, a collection of various original poems; "Melek Ebyon" (The Poor King), Budapest, 1881, a collection of romantic

Biblical poems; and "Michtame Gleichenberg" (Budapest, 1887), "makamas" in the manner of Ludwig August Frankl. After Bacher's death his son Wilhelm published, under the title "Sha'ar Shim'on" (Vienna, 1894), a selection of Hebrew poems, culled from Bacher's printed works and from unpublished manuscripts, 1894, in three parts: the first of these contains his original poems; the second, translations; and the third, "Nathan der Weise." The work is prefaced with a biography of Bacher and a chronological list of his works.

**BIBLIOGRAPHY:** W. Bacher, in the introduction to his father's *Sha'ar Shim'on*, 1894.

E. N.

**BACHER, WILHELM:** Hungarian scholar and Orientalist; son of the Hebrew writer Simon; born in Liptó-Szent-Miklós, Hungary, Jan.

12, 1850; he attended the Hebrew schools in Szucsán and in his native town, and passed through the higher classes of the Evangelical Lyceum at Presburg from 1863 to 1867, at the same time diligently prosecuting Talmudic studies. In 1867 he began the study of philosophy and of Oriental languages—the latter under Vámbéry—at the University of Budapest, and also attended the lectures on the Talmud given by Samuel Löb Brill. In 1868, he went to Breslau, where he continued the study of philosophy and philology at the University, and that of theology at the Jewish-Theological Seminary. He graduated at the University of Leipzig in 1870. His graduation thesis, "Nizâmî's Leben und Werke, und der Zweite Theil des Nizâmî'schen Alexanderbuches," appeared in 1871, and was translated into English in 1873 by S. Robinson. This was afterward incorporated in the collection entitled "Persian Poetry for English Readers." In 1876, Bacher graduated as rabbi, and shortly afterward was appointed to the rabbinate in Szegedin, which had become vacant in consequence of the death of Leopold Löw.

On July 1, 1877, together with Moses Bloch and David Kaufmann, he was appointed by the Hungarian government to the professorship of the newly created Landesrabinerschule of Budapest. This institution was inaugurated Oct. 4, 1877, Bacher delivering the address in the name of the faculty, and since that time he has been teacher of the Biblical sciences, of Jewish history, and of various other branches at that institution. Bacher was for a time in 1878 field-chaplain in the Austro-Hungarian army, being delegated to the headquarters of the army of occupation in Bosnia. The congregation of Pest appointed Bacher director of the Talmud-Torah School in 1885, and he has been connected with that institution ever since. In 1884 Bacher and Joseph

Wilhelm Bacher.

Bánóczy founded the Judæo-Hungarian review, the "Magyar Zsidó Szemle," which they conjointly edited during the first seven years, and it is still the only Jewish review in Hungary. In 1894 he assisted in founding the Judæo-Hungarian Literary Society, Izraelita Magyar Jrodami Társulat, of which he became vice-president in 1898. This society instituted a new translation of the Bible into Hungarian—the first complete translation due solely to Jewish initiative; and the first two volumes of this work (the Pentateuch and the earlier prophets), edited by Bacher in collaboration with S. Krauss and T. Bánóczy, have already appeared. The first five year-books of the society were edited by Bacher in conjunction with F. Mezey and afterward with D. Bánóczy.

Bacher is the author of the following works:

- (1) "Musticheddin Sa'adi's Aphorismen und Sinngedichte, zum Ersten Male Herausgegeben und Uebersetzt, mit Beiträgen zur Biographie Sa'adi's," 1879.

**Voluminous.** (2) Several contributions to the history of Persian literature in "Z. D. M. G."

- (3) "Kritische Untersuchungen zum Prophetentargum," *ib.* 1874.

- (4) "Discussions of the Targum on Job and the Psalms," in "Monatsschrift," 1871, 1872.

- (5) "Abraham ibn Ezra's Einleitung zu Seinem Pentateuchcommentar, als Beitrag zur Geschichte der Bibelepexese Beleuchtet," in "Sitzungsberichte der Kaiserlichen Akademie der Wissenschaften," 1876.

- (6) "Die Grammatische Terminologie des Jehuda b. David Hajjugs," *ib.* 1882.

- (7) "Die Hebräisch-Arabische Sprachvergleichung des Abulwalid Merwān ibn Ganachs," *ib.* 1884.

- (8) "Die Hebräisch-Neuhebräische Sprachvergleichung des Abulwalid," *ib.* 1885.

- (9) "Die Agada der Babylonischen Amoräer" (First Annual Report of the Landes-rabbinerschule at Budapest, 1878; also printed separately). This work, like all others published in the annual reports of the National Rabbinical Institute, was published contemporaneously in Hungarian.

- (10) "Abraham Ibn Ezra als Grammatiker," *ib.* 1881; "Leben und Werke des Abulwalid Merwān Ibn Gānāh und die Quellen seiner Schriffterklärung," *ib.* 1885.

- (11) "Aus der Schriffterklärung des Abulwalid Merwān Ibn Gānāh," 1889.

- (12) "Die Bibelepexese der Jüdischen Religionsphilosophen des Mittelalters vor Maimūni," 1892.

- (13) "Die Bibelepexese Moses Maimūni's," 1896.

- (14) "Ein Hebräisch-Persisches Wörterbuch aus dem Vierzehnten Jahrhundert," 1900.

- (15) "Die Agada der Tannaïten." The first volume of this work was published in Grätz's "Monatsschrift" from 1882 to 1884, and also appeared in 1884 in a separate edition in honor of the ninetieth birthday of L. Zunz; the second volume was published in 1890. A second, enlarged edition of Vol. I. will appear in 1902.

- (16) The three volumes of the "Agada der Palästinischen Amoräer" appeared respectively in 1892, 1896, and 1899.

- (17) "Kitāb al-Luma'," "Le Lion des Parterres Fleuris," in publications of the Ecole des Hautes Etudes, Paris, 1886. Bacher's revised edition of this work was published under Derenbourg's name.

- (18) An edition of the Book of Job as translated by Saadia in Derenbourg's edition of Saadia's works ("Œuvres Complètes de R. Saadia, Volume Cinquième," Paris, 1900).

- (19) An edition of the "Sefer Zikkaron," or "Hebrew Grammar" of Joseph Kimhi, published in writings of the society Mekize Nirdamin, 1888.

- (20) "Sefer ha-Shorashim, Wurzelwörterbuch der Hebräischen Sprache, von Abulwalid Merwān Ibn Gānāh, aus dem Arabischen ins Hebräische Uebersetzt von Jehudah ibn Tibbon, mit einer Einleitung über das Leben und die Schriften Abulwalid's und mit Registern und einem Anhang, Nebst Textberichtigungen zum Sefer Verschen." This is an edition of the Hebrew translation of Abulwalid's great lexicon, the principal grammatical work of that author. In this work, also published by the society Mekize Nirdamin, Bacher corrected the Hebrew text in accordance with the Arabic original, and mentioned the

sources of all the Biblical and other citations contained in it, which sources are not given in Neubauer's edition.

- (21) A compilation of the various readings of Ibn Ezra's Commentary on the Pentateuch in Berliner's "Magazin," and separately, 1894—a work prepared with the aid of a valuable codex belonging to the university library at Cambridge.

- (22) "Sefer Nahalat Yehoshua," 2 vols., a redaction of the posthumous works of the Talmudist Kosman Wodianer (d. 1830), with a biographical introduction in Hebrew, in connection with which he prepared a list of the correspondents of Moses Sofer, "Aus der Ersten Hälfte Unseres Jahrhunderts," 1893.

- (23) "Sha'ar Shim'on," an edition of the Hebrew poems of his father, Simon Bacher (d. Nov. 9, 1891), with a biographical introduction in Hebrew.

- (24) An edition of Grätz's "Emendationes in Plerosque Sacre Scripturæ V. T. Libros," 1892-94.

- (25) A treatment of the chapters of philology and exegesis in Winter and Wünsche's collection of Hebrew literature, "Die Jüdische Literatur." These contributions of Bacher have also been published separately under the respective titles: "Die Jüdische Bibelepexese vom Anfange des Zehnten bis zum Ende des Fünfzehnten Jahrhunderts."

- (26) "Die Hebräische Sprachwissenschaft vom Zehnten bis zum Sechzehnten Jahrhundert, mit einem Einleitenden Abschnitt über die Masora," 1892.

- (27) "Die Anfänge der Hebräischen Grammatik," in "Z. D. M. G.," also published by Brockhaus, Leipsic, 1895.

- (28) "Die Aelteste Terminologie der Jüdischen Schriftauslegung—ein Wörterbuch der Bibelepexetischen Kunstsprache der Tannaïten," I. C. Hinrich, Leipsic, 1899.

Bacher has also been the author of numerous criticisms and reviews in periodicals devoted, like his books, to Hebrew philology, history of Biblical exegesis, and of the Haggadah. The magazines, etc., in which his contributions have appeared are the following:

M. E. Stern, "Kokbe Yizhak," 1865-68; "Monatsschrift," 1869-92; "Israelit Közlöny," 1869-70; Rahmer's "Israelitische Wochenschrift und Jüdische Literaturblätter," 1870-76; I. Kobak's "Jeschurun," 1871; I. Reich, "Beth-Lechem,"

**His Criticisms and Reviews.** Jahrbuch, 1873; "Ha-Habazelet," 1873; "Z. D. M. G." 1874-1902; Berliner's "Magazin für die Geschichte und Literatur des Judenthums," 1880-94; "Rev. Et. Juives," 1882-1902; "Magyar Zsidó Szemle," 1884-1901;

W. R. Harper, "Hebraica," 1884-93; Stade, "Zeitschrift" 1885-1901; "Jew. Quart. Rev." 1890-1901; Königsberger, "Monatsblätter," 1891; Évkönyv, "Jahrbuch des Ungarisch-Israelitischen Literaturvereins," published in Hungarian, 1895-1901; "Ozar ha-Sefarim"; "Gräber's Magazin für Hebräische Literatur," 1896; "Zeit. f. Hebr. Bibl." 1896-1900; "Deutsche Literaturzeitung," 1898-1901; S. H. Horodeczky's "Ha-Goren"; "Abhandlung über die Wissenschaft des Judenthums," 1898-1900; "Ha-Eshkol," "Hebräisches Jahrbuch," 1898; "Jahrbuch für Jüdische Gesch. und Literatur," 1899-1900; "Theologische Literaturzeitung," 1900-1; "Keleti Szemle" ("Revue Orientale," 1902; "The Expository Times," 1900. Further contributions of Bacher appeared in the festival publications to the seventieth birthday of Graetz, 1887, and the eightieth birthday of Steinschneider, 1896; in the festival publication in honor of Daniel Chwolsohn, 1899; and in the memorial book published on the anniversary of Samuel David Luzzatto's birthday, Berlin, 1900, and in that published in memory of Prof. David Kaufmann, 1900. Bacher has also contributed the article "Levita" to the "Allgemeine Encyclopädie" of Ersch and Gruber, and the articles "Sanhedrin" and "Synagoge" to the last volume—not yet published—of Hastings and Selbie's "Dictionary of the Bible."

**BACHI, RAPHAEL:** Italian miniature-painter; lived at Paris in the middle of the eighteenth century. His name appears in the list of the Jews that resided in Paris during the reign of Louis XV., which was recently published by Paul d'Estrées. This list, drawn up by the police, mentions Bachi as a miniature painter of great talent ("peintre en miniature, de beaucoup de talent").

**BIBLIOGRAPHY:** Paul d'Estrées, in *Revue du Monde Latin*, 1891, Sept. 1, Oct. 1; Léon Kahn, *Les Juifs de Paris sous Louis XV.* p. 44.  
L. G. I. Br.

**BACHRACH, JACOB BEN MOSES:** A noted apologist of rabbinical Judaism; born at Seiny, in

the government of Suwalki, Russia, May 9, 1824; died in Bielostok Dec. 29, 1896. He received his earliest instruction from his grandfather, Judah Bachrach. For years he was superintendent of a Hebrew printing-establishment in Königsberg, where he edited, among other works, the "Turim" of Jacob ben Asher, and added valuable notes to the same. Later on he became manager of a distillery at Sebatopol, where he had the opportunity to develop into an assiduous student of Karaite literature, and where he engaged in controversies with the representatives of the local Karaite community. His works are chiefly devoted to a defense of rabbinical tradition against Karaism. In 1882 he went to Palestine in the interest of colonization. Of his printed works "Ha-yahas Liketab Ashuri" (History of the Assyrian Script), Warsaw, 1854, is a polemical treatise against Elias Levita's theory that vowel-points and accents originated in post-Talmudic times. To the same purpose is devoted his "Ishtadalut 'im Shadal" (An Engagement with ShaDaL) (Samuel David Luzzatto), 2 vols., Warsaw, 1896—in which he again attempts to refute Luzzatto's view, based on that of Levita, that the vowel-points are the invention of the Masorites. His "Ma'imare Jacob ha-Bakri" (Essays of Jacob Bachrach), Warsaw, 1893, 2 vols., is a work devoted to proving that the Jewish calendar is of ancient origin, and he opposes the arguments of the Karaites, of Slonimsky, and of others, who asserted that the ancient Israelites reckoned by the solar year. A very interesting and well-written booklet is his description of his journey to Palestine, "Ha-Massa' la-Arez ha-Kedoshah," 2d ed., Kief, 1884.

**BACHRACH, JUDAH B. JOSHUA HESKIEL:** Rabbi and Talmudist; born in Lithuania about 1775; died at Seiny, government of Suwalki, April 25, 1846. He was a lineal descendant in the seventh generation of Tobias Bachrach, who, together with Israel ben Shalom, was beheaded on a charge of ritual murder in Rushony Sept. 19, 1659. Bachrach's life was a model of piety. He distributed among the poor all the income derived from his position of rabbi at Seiny, and lived on the interest from a small fund that his friends had invested for him in their business. His notes on the Talmud, under the title "Nimmuke Hagrib הנריב = ha-Gaon R. Jehudah Bachrach" (Critical Comments of Hagrib, the Gaon R. Jehudah Bachrach), appear in the edition of the Talmud which was published by Rom at Wilna.

**BACHRICH, SIGISMUND:** Hungarian violinist and operatic composer; born at Zsambokrét, Hungary, Jan. 23, 1841. He began the study of the violin with Böhm at the Vienna Conservatory in 1851, from which institution he was graduated in 1857. He then accepted a conductorship at a Vienna theater, and four years later went to Paris. Here he was compelled to fight his way, first as

leader of a small orchestra, then as journalist, and finally as apothecary. Upon his return to Vienna he played the viola in the Helmesberger Quartet, with which organization he remained associated for twelve years. He then became a teacher at the Conservatory and still occupies this position. Bachrich is also a member of the Rosé Quartet and of the philharmonic and opera orchestras. His principal compositions are: "Muzzedin," a comic opera, Vienna, 1883; "Heini von Steier," *ib.* 1884; "Der Fuchsmajor," an operetta, Prague, 1889; "Sakuntala," a ballet; and two other operettas. Of these works, the operetta, "Der Fuchsmajor," has probably been the most successful.

**BACKOFEN, JACOB.** See REISCHER.

**BACON, ROGER:** English philosopher and scholar of the thirteenth century; born at Ilchester, England, about 1214; died about 1294. He studied at Oxford and spent some years in Paris, where he obtained the degree of doctor of theology. In 1250 he was again at Oxford, and about this time became a Franciscan friar. He devoted himself to a mastery of all human knowledge— theological, philosophical, philological, and physical. His fame spread very rapidly, and he acquired the title of "doctor mirabilis" among those of his contemporaries who recognized his wide and profound erudition; while his physical and chemical apparatus and experiments secured for him the reputation of dealing in magic and the black arts, and aroused suspicions as to his orthodoxy. Bonaventura, general of the order, about 1257, interdicted his lectures at Oxford, and commanded him to place himself under the supervision of the body in Paris; and there he remained for ten years under strict surveillance. In the year 1265 Cardinal Guy de Foulques became pope under the name of Clement IV. Shortly before, he had been sent by Pope Urban IV. to England to intervene in the disputes between Henry III. and his barons, and had then made the acquaintance of Bacon. The new pope, in 1266, directed Bacon to send him in manuscript the results of his researches, despite the interdictions of Bacon's superiors. This papal authorization gave an impetus to Bacon's pen; and in about eighteen months he completed the three great treatises, "Opus Majus," "Opus Minus," and "Opus Tertium." The result of the receipt of these works by the pope was that in 1268 Bacon was permitted to return to Oxford, where he continued his studies and the composition of learned treatises. In 1278, however, the general of the order condemned Bacon's writings; and he was thrown into prison, there to remain for fourteen years.

One of the most remarkable of Bacon's many great achievements in the sphere of learning is his demonstration of the need for prosecuting the study of the Hebrew language—a study which was as unknown in England as on the Continent till the fifteenth century, when Reuchlin aroused the mind of Europe on the subject. Hirsch, in his "Early English Hebraists," has shown how Bacon anticipated by 200 years

almost all of the reasons advanced by Reuchlin for spreading a knowledge of the Hebrew tongue; viz., religious motives, Hebrew being the language in which God first revealed His will to mankind; the difficulty of translating accurately from one language to another, and the danger of perpetuating errors once committed in translation. Furthermore, he was animated by the true philological spirit, and sought to develop the comparative study of languages generally.

It is remarkable, considering the time in which he flourished, that though Christianity and the spread of it throughout the world were, of course, all in all to Bacon, yet he has not in all his writings a single disparaging word about the Jews. He even deprecates the attempt to convert them; being content that that event should await the conversion of the rest of mankind. Moreover, he eagerly sought the aid of Jews in studying the Biblical language; and he had even a good word to say for the Jews who lived at the time of the birth of Christianity. When it is remembered that before him there were probably not three Christian theologians who could read the Hebrew Bible in the original, a large measure of commendation must be accorded Bacon for his acquisitions of Hebrew learning.

**BADCHEN.** See BADHAN.

**BADEN:** City in Lower Austria. After the expulsion of the Jews from Lower Austria in 1670, none lived in Baden until 1805, when the Jew Isaac Schischa, who had formerly lived in Mattersdorf, Hungary, succeeded in obtaining permission for himself, his family, and servants to reside there permanently. Schischa obtained permission to start a restaurant; and he also improvised a place of worship for Jews visiting this health-resort in summer. A similar permission was granted in 1820 to Heinrich Herz from Szerdahely, who likewise erected a restaurant and a house of worship. There was, however, no permanent settlement until 1861, when the right of residence in any part of the country and freedom of trade were granted to all Austrian Jews.

The first association for the support of the sick was formed in 1868, and grew so rapidly that it determined to erect a synagogue, buying a house for the purpose. The authorities sanctioned the maintenance of a synagogue only under the condition that an incorporated congregation (Kultus-Verein) be established for its management.

The synagogue which was erected in 1871 proved too small for the growing numbers of the congregation, and Jacob L. Pollak, together with Max Mandel, and through the financial aid of Jews elsewhere, erected on the same site a larger synagogue with a gallery and five hundred and seventeen seats. In 1873 the synagogue was dedicated. Pollak and Mandel were joined by Anton Schneider, a younger man, and together they founded the Hebrah Kaddishah. The first interment took place August, 1873. A Sabbath-school, established in the former small syn-

agogue, was subventioned by the Jewish Alliance in Vienna from 1872 to 1877.

At this time eighty Jewish families resided permanently in Baden. In spite of impediments put in their way by the municipal authorities, the Jewish residents of Baden succeeded in obtaining recognition by the government as a legally constituted congregation, and with such recognition was accorded the right to assess its members (June 10, 1878). It was determined to appoint a rabbi, and on Feb. 6, 1880, Wilhelm Reich was installed in the office. After some difficulties which arose from the opposition of the Orthodox, the rabbi and the presidents succeeded in establishing harmony and in securing a steady growth of the congregation.

The following Jewish organizations exist in Baden: a Hebrah Kaddishah, already mentioned; a Talmud Torah school, with three teachers; a Bet ha-Midrash, in which a Talmudic scholar is appointed to deliver lectures daily; a Women's Association; a committee for the support of the strangers who visit the city for the sake of their health, and a branch of the Jewish Alliance in Vienna. In ritual matters the congregation is conservative; but it has made some concessions to the demands of the times. The number of Jews in Baden exceeds a thousand.

Since 1894 the newly established congregation of Neunkirchen, Lower Austria, is ministered to by the rabbi of Baden.

D. W. REI.

**BADEN, GRAND DUCHY OF:** A state of the German empire, bounded on the north by Bavaria and Hesse; on the east by Bavaria, Württemberg, and Hohenzollern; on the south by Switzerland, and on the west by Alsace-Lorraine and Rhenish Bavaria. Owing to the absence of any large or ancient cities in Baden, few Jews lived there in olden times. Among the places where persecutions took place may be mentioned especially Lauda on the Tauber (1235, 1298, 1337, 1349), Tauberbischofsheim (1235, 1298, 1337, 1349), Pforzheim (1267, 1349), Freiburg (1349), Bretten (1337, 1349), Ueberlingen (1322, 1349), Constance (1326, 1349), Heidelberg (1349), Ettlingen (1349), Durlach (1349). In consequence of the edict of King Wenzel, who canceled the debts owed to the Jews, the latter in many cities of Baden suffered greatly. In 1390 they were banished by Ruprecht II. from Heidelberg; in 1430 they were burned at Lindau, Ravensburg, and Ueberlingen; and in the following year they barely escaped a similar fate at Constance. In 1422 the emperor, for the purpose of exterminating heretics in Bohemia, sought to extort from the Jews the so-called "third penny." After 1524 many Jews found refuge in the margravate of Baden, but they were banished thence by the margrave Philipp in 1584, to return, however, in 1593. In 1550 there were resident in the electoral palatinate about 155 Jews; and in 1605 there were about 13 Jewish families in the margravate. In 1608 a general edict of banishment was issued against the Jews; but by the proclamation of 1809 they were finally recognized as forming an independent sect.

The administration of each congregation is con-

ducted by the "Synagogenrath," which consists of from three to seven members. Several local synagogues constitute a synagogal district with its rabbi and elders. The district synagogues again are responsible to a so-called "Israelitischen Oberrath" (Jewish council); and this is directly responsible to the ministry of the interior, its expenses being defrayed out of the national treasury. Since 1860 the Jews of Baden have enjoyed equal rights with the other inhabitants. In 1901 they numbered 25,903 souls, distributed among fifteen rabbinical districts ("Rabbinatsbezirke").

A. F.

**BADGE:** Mark placed on the dress of Jews to distinguish them from others. This was made a general order of Christendom at the fourth Lateran Council of 1215. At the instigation of Innocent III., the decision of the Council ordered the Jews, in the following terms, to bear a Badge:

"Contingit interdum quod per errorem christiani Judæorum seu Saracenorum et Judæi seu Saraceni christianorum mulieribus commisceantur. Ne igitur tam damnatæ commixtionis excessus per velamentum erroris hujusmodi, excusationis ulterius possint habere diffugium, statuimus ut tales utriusque sexus in omni christianorum provincia, et omni tempore qualitate habitus publice ab aliis populis distinguantur."

From this it would appear that the motive of the order was to prevent illicit intercourse between Jews and Christian women; but it is scarcely doubtful that this was little more than a pretext, the evidence of such intercourse being only of the slightest (see Abrahams, "Jewish Life in the Middle Ages," pp. 93-95). It was no doubt the general policy of the Church to make a sharp line of demarcation between the true believer and the heretic; and the Badge

Badges on Garments of Jewish Priests: According to the "Bible Historiale de Pierre Comestor," 14th Century.  
(From "Revue des Etudes Juives.")

came as the last stage in a series of enactments in the twelfth century, intended to prevent social relations between Jews and Christians, the chief of these being the prohibition of Christians becoming servants of the Jews. The Badge had a most deleterious effect upon their social relations; and the

increasing degradation of the position of Jews in Christendom was due in a large measure to this outward sign of separation, which gave the official stamp of both Church and state to the discrimination

Badges and Hats Worn by Jews. From the "Bible Historiale de Pierre Comestor," 14th Century.  
(From "Revue des Etudes Juives.")

of social status against the Jew. The idea of such a discrimination seems to have been derived from Islam, in which the dress of the Jews was distinguished by a different color from that of the true believer as early as the Pact of OMAR (640), by which Jews were ordered to wear a yellow seam on their upper garments (D'Ohsson, "Histoire des Mogols," 1854, iii. 274). This was a distinct anticipation of the Badge. In 1005 the Jews of Egypt were ordered to wear bells on their garments and a wooden calf to remind them of the golden one (S. Lane-Poole, "History of Egypt," 1901, vi. 126). Later on, in 1301, they were obliged to wear yellow turbans (*ib.* pp. 300, 301). It may have been some sort of retaliation for a similar restriction placed upon the Christians in Islam, since the order of the Council applied to Saracens as well as to Jews.

The most usual form in which the Badge appeared was that of a ring sewn on the upper garment and of a different color to it. This was called **In France.** "the wheel" (Latin, "rota"; French, "roue, rouelle"), and was the distinguishing mark used in the Romance countries, France, Italy, and Spain. This form seems to have existed in the diocese of Paris even before the Lateran Council; for it is mentioned among the synodal statutes of Bishop Eudes de Sully, who died July 13, 1208. After the Lateran Council it was ordered in the whole of ecclesiastical France at the Council of Narbonne in 1237 ("deferant signum rotæ," Mansi, "Concilia," xiii., 1186). This was repeated by local councils at Arles 1234 and 1260, Béziers 1246, Albi 1254, Nîmes 1284 and 1365, Avignon 1326 and 1337, Rodez 1336, and Vanves 1368.

The state followed the Church in imposing the Badge upon the Jews in France. Saint Louis published an ordinance to that effect (June 19, 1269); and his example was followed by the kings of France

down to Charles VI. It was generally made imperative on both sexes; but at times Jewesses had to wear a veil called "orales" or "cornalia." The age at which it was worn varied from seven years at Marseilles to thirteen at Arles and fourteen at Avignon. It was mainly worn upon the breast; but during the reign of Philippe le Hardi a second Badge was worn on the back. The color at first ordered

English Jew wearing Tablet-shaped Badge.  
(From a Cottonian MS. in the British Museum.)

was saffron yellow, but under King John it was parti-colored red and white. The size varied; it was generally about three or four fingerbreadths from one side to the other, the circle of the Badge one fingerbreadth in thickness. Under King John it was of the size of the great seal, about 35 mm. in diameter, and in the time of Charles V. as large as 50 mm.

When a Jew was found without the Badge he was fined various sums, ranging from five sous at Marseilles to ten Tours livres under Saint Louis. Charles V. reduced this to twenty Parisian sous. For special reasons and doubtless for payment the Jew was allowed to go without the Badge; but the instances of this permission in France are rare, and generally only

for travel. Adding injury to insult, the authorities forced the Jews to pay an annual sum for the use of the badges, and, curiously enough, one finds them left as pledges ("Revue Etudes Juives," v. 367, 308). When the Jews left the rest of France the wearing of the Badge was still kept up at Avignon, which was under the rule of the popes; and evidence of the Badge is found there as late as 1592.

In Spain the use of the Badge varied in the different kingdoms. Pope Honorius III. gave a dispensation (1219) to the Jews of Castile; whereas James I.

in 1228 ordered those of Aragon to wear it. His example was followed by the king of Navarre, and even by the emir of Granada, Ismael Abu-l-Walid (1315-26). The practise of wearing

the Badge does not appear to have continued long in Spain. The Council of Zamora, 1313, complains of its not having been put into force; and many instances are given of permission to Jews to discontinue it. In 1371 the ordinances were revived, and a bull of Benedict XIII. (May 11, 1415) insisted upon the Jews carrying a yellow and red Badge, the men on their breast, the women on their forehead.

Italy appears to have been troubled less with injunctions about the Badge than the other parts of Christendom. Throughout the thirteenth century the Badge is only known in Sicily (Zunz, "Z. G." p. 488); but in the fourteenth and fifteenth centuries local injunctions are found in Venice, Verona, Parma, Rome, Asola, and Genoa. It was known as the "O," from its shape, and appears to have resembled the form used in France rather than that customary in Spain. In several instances it was accompanied by the pointed hat (see JUDENHUT); while in Venice the hat entirely replaced the Badge. The age at which it was worn, and the place upon which it was fixed, varied as much as in France; but, as a rule, the former was thirteen years.

In England the form of the Badge varied from that worn in the rest of Europe, at least in later years. It was first imposed upon the Jews in England by Stephen Langton, archbishop of Canterbury, in 1222, and was in the form of a band, two fingers broad and four long. It was at first white, and afterward changed to yellow. In 1274, under Edward I., its shape became that of the Tables of the Law. In Germany the earliest mention of the Badge is in a dispensation accorded to the Jews of Erfurt, Oct. 16, 1294; but it would appear that throughout the fourteenth century the hat was the chief mark of identification used, though the Badge was reintroduced by Emperor Sigismund in 1434 at Augsburg. Similar restrictions are given at Nuremberg, Bamberg, and Frankfort in the middle of the fifteenth century. Here, in almost every case, the Badge was a yellow sign (compare G. Wolf, "Geschichte der Israelitischen Cultusgemeinde in Wien," p. 68, Vienna, 1861). Schudt, in his "Jüdische Merkwürdigkeiten," gives facsimiles of those used at Frankfort in the years 1613-16, which vary from 92 to 48 mm.

**Other Countries.** In Austria it would appear that the hat was the only sign of distinction according to the Council of Vienna, 1267, whereas in Hungary, 1279, the Badge was placed on the left

FIGURES OF THE JEWISH PEOPLE IN MEDIEVAL ART

breast. In Poland there is no trace of the Badge, but only of the hat, while in Crete up to the present day some of the houses of Jews were marked with the "O."

**BIBLIOGRAPHY:** Ulysse Robert, *Les Signes d'Infamie*, Paris, 1891, in which he reproduces the substance of his article in *Revue des Etudes Juives*, vi. 81-95, vii. 94-102, with insignificant additions. Robert gives full and elaborate references for all the above statements, which summarize his main conclusions.

**BADGER, ROCK.** See CONEY.

**BADGER SKINS.** See TAḤASH.

**BADHAN** (from the Talmudic word ברה, "to cheer up, make laugh"): A merryman, professional jester, whose business it is to entertain the guests at a marriage-feast with drollery, riddles, and anecdotes. Whether they existed in Talmudic times is not certain. Two men are reported to have represented themselves as such: "We are merry-makers ("badduḥi") and cheer up the sad. Wheresoever we see two men at enmity, we try to make peace between them" (B. Ta'an. 22a). See MARRIAGE, WEDDING FESTIVITIES.

In the Middle Ages we find among the Jews traveling merry-makers, who probably patterned themselves after the troubadours, and took the place of former voluntary entertainers at weddings. Their task was by jest, music, and humorous song to provoke joviality. The name given them originally in Jewish writings is "lezin," a term which occurs in "Asufot," by R. Elijah b. Isaac of Carcassonne, who lived in the early part of the thirteenth century. The jesters were obliged to possess not only comic ability, but also a certain deal of learning, since those jokes were appreciated most which were connected with Scriptural verses or Talmudic passages. Such scholarly comedians were in vogue largely in the Middle Ages. As the clouds of persecution, however, continued to gather round the Jews, merriment was discouraged. R. David Levy in his "Ture Zahab" (Golden Rows), which appeared about the year 1680, inveighs against wedding festivities, and against the fashion of engaging lezin in particular. "At some marriage banquets," he complains, "there is a custom of intoning the 'Kaddish,' which is a sin, for naught is permissible on such occasions save the recital of the grace of God. A sin more grievous, however, is to engage lezin who try to amuse the guests with jests on Scriptural verses and holy words. Happy the man who abstains from such!" (Oral Hayyim, § 560.) Similar advocates of soberness at wedding-feasts based their opposition to merriment at such gatherings on the Mishnaic report that with the siege of Jerusalem bridal processions were shorn of their festive nature, and that with the fall of the Holy City they assumed even the hue of mourning (Soṭah ix. 13). Meantime, the wedding-jester was styled "marshallik," a word which is not a corruption of "mashallik," derived from the Hebrew "mashal" (= proverb, anecdote), but represents, no doubt, the old German "Marschalk," or "Marshall" (compare Grimm, "Wörterbuch," p. 1674, also s.v. "Schalk, Schalknarr"). In the seventeenth century, marshalliks prevailed in Poland and were not held in high esteem, as is clear from a query

addressed to R. Jair Hayyim Bacharach, as to whether it befitted a scholar who was musical to forego his dignity and play at a wedding. Bacharach stigmatized the professional jester as "a man playing the fool in order to provoke laughter; such a wedding is called a seat of scoffers, for it is not real rejoicing, but hilarity and folly" (Responsa, § 205).

In the early days the services of the Badhan were mainly called in at weddings, where the Badhan amused the guests by jests of a somewhat broad character, while the more serious discourse was given by the rabbi. In Russia he tended to combine both functions, delivering the address to the bridegroom and bride as well as amusing the whole company at table. The jests were often put in the form of riming lines, and with the advance of the new Hebrew poetry in the nineteenth century a change came over the work of the Badhan which caused him to pass from a folk-poet to a regular, however humble, member of the literary gild. The chief person concerned in this change was Eliakim ZUNSER, who applied to the verses of the Badhan the new forms of poetry introduced by Ehrenkranz and Broder. Zunser had a good voice and introduced the custom of singing his own or other people's compositions, so that nowadays the Badhan is required to be as much a singer as a wit. Zunser has been the founder of quite a school of badhanim. Thus in America, where the conditions of life are easier, they are called in on all occasions of rejoicing, and often receive comparatively high fees.

H. G. E.—J.

**BADIS (Muzaffar Nasir):** Oldest son of King Habus of Granada, whom he succeeded in 1038. In a struggle with the Berbers, who wished to make his younger brother, Bologguin, king, he was supported by the Arabs and by his vizier, Samuel ibn Nagdela. After his accession to the throne, however, Badis feared a conspiracy on the part of the Arabs and determined to exterminate them. He planned to have the Arabs in his capital slain when they assembled in the mosque on a Friday. The vizier, Joseph ibn Nagdela—who had succeeded his father, Samuel, as Badis' vizier and counselor—tried in vain to dissuade him from the act. Joseph had to promise to keep the design a secret; but in order to avert the danger from the Arabs, he advised several noble Arabian families not to visit the mosque on that Friday. The warning was taken, and few Arabs appeared in the mosque. Though Badis accused Joseph of having broken his promise, he was finally convinced that this had been the best course of action.

The king was a drunkard, and Joseph managed all state affairs, thus arousing the hatred of the Berbers, who spread the report that he had conspired against Badis with the king of Almeria. In consequence of the accusation, Joseph was murdered, whether by the Berbers or by Badis himself is

unknown. Four thousand Jews shared his fate. Badis himself was soon afterward poisoned.

**BIBLIOGRAPHY:** Grätz, *Gesch. der Juden*, vi. 21 38 *et seq.*, 413 *et seq.*; Dozy, *Gesch. der Mauren in Spanien* (Leipsic, 1874), ii. 254, 291 *et seq.*, gives a somewhat different version. G. M. K.

**BAECK, SAMUEL:** German rabbi; born at Kromau, Moravia, April 1, 1834. His father, Nathan, was rabbi in Kromau; his grandfather, Abraham, rabbi in Holitsch, Hungary. Baeck married the daughter of Abraham Platschek, chief rabbi of Moravia, and the son of this union, Leon, is also a rabbi. After being educated in the public schools of Kromau and at the Talmudical schools of Nikolsburg (Moravia) and Presburg (Hungary), Baeck studied at the University of Vienna, continuing his Talmudic studies under R. Horwitz. After receiving his diploma as rabbi from the chief rabbi Placzek of Boskowitz, he was appointed rabbi at Böhmisch Leipa, and was afterward called as rabbi to the celebrated community of Lissa, province of Posen, which position he holds at present (1902). He is a member of the municipal school committee and of the "Waisenrat," instructor in the Jewish religion at the gymnasium, and is a delegate to the Deutsch-Israelitischen Gemeindebund. He was the first to advocate with success the introduction of the teaching of the Jewish religion in the colleges of Prussia. The published works of Samuel Baeck are: "Inder und Hebräer"; "Erzählungen und Religionssätze der Heiligen Schrift," Lissa, 1875, 2d ed. 1886; "Systematische Religionssätze der Heiligen Schrift," *ib.* 1875; "Geschichte des Jüdischen Volkes und Seiner Literatur vom Babylonischen Exile bis auf die Gegenwart," *ib.* 1878, 2d ed., 1894; "Die Halachistische und Responsen Literatur, die Literatur der Darshanin, Sittenlehrer, und Apologeten," in Winter and Wünsche, "Jüdische Literatur," vols. ii. and iii. S.

**BAENA, FRANCISCO DE:** Spanish poet of the fourteenth and fifteenth centuries, brother of Juan Alfonso de BAENA, and secretary to the governor Diego de Ribera. One of his poems appears in his brother's "Cancionero." Recent investigation points to the conclusion that De Baena's given names, instead of Francisco, were Fernando Alfonso, and that he was the father of the Spanish troubadour Anton de Montoro.

**BIBLIOGRAPHY:** Rafael Ramirez de Arellano, *Anton de Montoro*, p. 6, Madrid, 1900. D. M. K.

**BAENA, JUAN ALFONSO DE:** Spanish troubadour in the fourteenth and fifteenth centuries; born at Baena, Cordova. He was "escribano escribiente" (notarial secretary) at the court of John II. Under the title "Cancionero del Judino Juan Alfonso de Baena," he collected the productions of the poetical coterie of the courts of John I., Henry III., and more particularly of John II. of Castile: "those of the friars and monks, the masters of theology, the knights and the squires, and various others." These different poems—which, in their entirety, give a perfectly rounded picture of the "gaya sciencia," as the art of poesy was called—recorded the social life and doings of this circle, for the amusement of the

king and his court. This "Cancionero," or song-book, is the oldest Castilian and the only court song-book of the country, and it contains the poems (written mostly for special occasions) of fifty-five authors, all belonging to the Sevillian school of poetry, as distinguished from the Valencian school. Among these poets are a number of Maranos—Pero Ferrus, one of the oldest but also the most decadent of them all; Garcí Fernandez de Jerena, and others—who wrote malicious satirical songs about their former coreligionists. De Baena, "this Judino" as he was called, was well versed in the poetry of his country, particularly so in satire and poetical letters. His "Cancionero" contains "requestas" and "decires" (apothegms) by him.

The "Cancionero de Baena" was first published at Madrid in 1851 by Gayangos and Pidal, with an excellent introduction by the same; and then by Francisque Michel, Leipsic, 1852.

As a Marano De Baena met with much hostility.

**BAER, BEER, BEHR:** Jewish prænomen and family name, derived from the German "Bär" (bear). The Jews of Germany, like those of other countries, borrowed their names from their non-Jewish fellow-citizens; chiefly when equivalents of these names could be found in the Bible. Because the patriarch Jacob (Gen. xlix. *passim*) compared the qualities of some of his children to those of certain animals, the Jews eagerly adopted as proper names the German designations for these animals, such as "Baer." "Wolf," "Löwe." The older forms "Bera," "Bero" occur in the Memorbuch (compare the old High German "Bero").

Among the Polish and Russian Jews, the name "Baer" assumed various diminutive forms, such as "Baeril," "Baerush," and "Baerke." All these are rendered in Hebrew by "Dob" or "Issachar"; and as such the name is used for synagogal and literary purposes. Later "Baer" became a family name, which, however, did not always retain its original spelling, the German "ä" being variously rendered in non-German countries.

**BIBLIOGRAPHY:** Zunz, *Namen der Juden*, p. 26; Salfeld, *Mar-typologium des Nürnberger Memorbuches*, p. 388. G. I. Br.

**BAER, ABRAHAM:** German cantor, musician, and composer; born in Russia Dec. 26, 1834; died at Gothenburg, Sweden, March 7, 1894. His father destined him for the rabbinate; but his love for music and the song of the synagogue caused him to elect the cantorate. At an early age he emigrated to Germany, and there under the tutelage of eminent hazanim prepared himself for his sacred calling. He officiated for a time at Pakosh and Schwetz in West Prussia, and at twenty-three (1857) was called to Gothenburg, Sweden. Well equipped with Hebrew and Talmudic learning, he applied himself with remarkable success to the acquisition of secular knowledge and the science and art of music. His researches were especially directed to the field of Jewish traditional melodies, then but little explored.

These he collected with great patience and industry; and in 1871, after fifteen years of incessant labor, published his work, "Bá'al Tefillah, oder der Practische Vorbeter"—an almost complete collection of Jewish traditional melodies, of which a second revised and enlarged edition (358 pp. folio) appeared in 1883. The work contains fifteen hundred and five melodies, in German, Polish, and Portuguese (Sephardic) versions, and is divided into four parts: (1) for the services on week-days; (2) for Sabbath; (3) for the three festivals Pesah, Shabu'ot, and Sukkot; (4) for the two great holidays, Rosh ha-Shanah and Yom ha-Kippurim; together with an appendix containing notes on the liturgy, the reading of the Torah, and directions and formulas for writing betrothal and marriage contracts. The collection is more complete in German and Polish melodies than in Portuguese. Occasionally a fourth version is appended, called by the compiler "Neue Weise," but this seems to be his own composition or that of other modern cantors. The collection is of great value both to the student and the practical cantor. The latter can find therein all traditional tunes of the synagogue—most of which were theretofore to be acquired orally from older hazanim alcae. Many of the more familiar melodies had been collected and published before Baer by Sulzer and Weintraub; and melody No. 714, p. 160, is found even in a work published in the eighteenth century by Benedetto Marcello, called "Estro Poetico Armenico," in which it appears under the head of "Intonazione degli Ebrei Spagnuoli."

A. KAI.

**BAER (ABRAHAM), ADOLF:** German physician and medico-forensic author; born in the province of Posen, Prussia, Dec. 26, 1834; educated at the universities of Vienna, Prague, and Berlin. From the last-named institution he received his degree of doctor of medicine in 1861. Baer engaged in practice as a physician in Naugard, province of Pomerania, Prussia, in the following year, and in 1866 became physician of the prison there. In 1872 he was appointed chief physician of the prison at Plötzensee, near Berlin, and in 1879 was elected physician to the board of health, with the title "Geheimer Sanitätsrath." In the course of his prison duties Baer noticed the alarming connection between alcohol and crime, and in consequence turned his attention to the prevention of the use of intoxicants, contributing many articles on this subject to the medical and other journals.

Among Baer's many essays and books may be mentioned the following: "Die Gefängnisse, Strafanstalten, und Strafsysteme, Ihre Einrichtung und Wirkung in Hygienischer Beziehung," Berlin, 1871; "Der Alkoholismus, Seine Verbreitung und Wirkung auf den Individuellen und Sozialen Organismus, Sowie die Mittel Ihn zu Bekämpfen," Berlin, 1878; "Gefängniss-Hygiene," in Pettenkofer and Ziemssen's "Handbuch der Hygiene," Munich, 1882; "Der Alkoholmissbrauch," in "Vierteljahresschrift für Oeffentliche Gesundheits-Pflege," 1882, vol. xiv.; "Ueber das Vorkommen von Phthisis in den Gefängnissen," in "Zeitschrift für Klinische Medizin," 1883, vi.; "Gesetzliche Maassregeln zur Bekämpfung der Trunksucht," in "Preussische

Jahrbücher," 1884, lvi.; "Morbidity und Mortalität in den Gefängnissen," in Holtzendorf and Von Jagemann's "Handbuch des Gefängnisswesens," Hamburg, 1888; "Die Trunksucht und Ihre Abwehr," Vienna, 1890; "Die Verbrecher in Anthropologischer Beziehung," June, 1897.

Baer is also a contributor to Eulenburg's "Realencyclopädie der Gesamten Heilkunde."

F. T. H.

**BAER, ASHER:** Russian mathematician and engraver; born at Seiny, government of Suwalk, in the first quarter of the nineteenth century; died at Jerusalem in 1897. He made many important discoveries in mathematics and especially in mechanics, the detailed accounts of which are given in the "Königsberger Zeitung," supplement to No. 211, Sept. 11, 1859. Among others he discovered a method by which the same force causes two different movements of two equal cog-wheels to dovetail with each other (*ib.* No. 8, Jan. 11, 1856). His engravings were awarded a prize at the Königsberg Exhibition of 1858 ("Journal of the Politechnische Gesellschaft zu Königsberg," Oct. 9, 1858, p. 41). The German press of that time devoted many articles to Baer's valuable inventions, and Ossip Rabbínovich and O. Wohl in the Russo-Jewish periodicals "Razsvyet" and "Ha-Karmel" (Russian supplement to "Ha-Karmel," 1860, No. 37, "Wilenski Vvestnik," 1861, No. 19) spoke highly of his talent. In the later part of the sixties Baer went to Jerusalem, whence he wrote correspondence for many years for the "Ha-Maggid" and other Hebrew periodicals. H. R.

**BAER, DOB B. SAMUEL:** Polish Hasidic writer of the end of the eighteenth century. He is the author of "Shibhei ha-Besht" (Praises of Israel Ba'al Shem-Tob), which his son Judah Löb published after his death, in 1815. The book, which is a collection of the legends current in Hasidic circles anent the founder of Hasidism, is also of great historical value. Baer, being a son-in-law of the Alexander who was for several years a secretary of BESHT, received from his father-in-law valuable information on the origin of Hasidism, and on the founder of the sect; hence his book is almost the only source of authentic information on those subjects. The book exists in two different versions, one being the Kopy's edition (1815), and the other being that of Berditschew of the same year; in the latter many legends are omitted which are found in the former, especially those that might give offense on account of their extraordinary nature. Later editions, of which there are perhaps twelve, follow either of these editions, and some are combinations of the two.

**BAER, HERMAN:** American author; born of Jewish parents at Herxheim, Germany, Jan. 29, 1830; died at Charleston, S. C., Jan. 2, 1901. He emigrated to America when a lad of seventeen, and settled in Charleston, where he obtained employment as compositor and proof-reader in the office of

the "Southern Christian Advocate" in 1848, in which year, too, he joined the Methodist Church. Baer taught German, French, and general topics in private families, and in 1852 became a teacher in the preparatory department of Woffard College (Methodist), at Spartanburg, S. C., from which institution he himself graduated in 1858. In 1861 he took the degree of M.D. from the Charleston Medical College, and served as surgeon through the Civil war, on the close of which he engaged in business as a wholesale druggist in Charleston.

Throughout his life Baer never lost his taste for literature, and he was a frequent contributor to church papers. Although a foreigner, he early acquired such a mastery of English as to be considered in his neighborhood an authority on English style. He was thrice married. In 1888 the Methodist Church Publishing House produced a book by Baer, entitled "Jewish Ceremonials."

**BAER, ISRAEL.** See ASHKENAZI, BAERMANN.

**BAER, ISSACHAR B. ELHANAN:** Rabbi at Eibenschütz; born at Frankfort-on-the-Oder in the second half of the seventeenth century. He was the author of a collection of cabalistic homilies and commentaries, entitled "Arba' Harashim" (Four Skilful Artificers), divided into four parts: (1) "Kisse Dawid" (The Throne of David), concerning the things of Judah (39 chapters); (2) "Kin'at Efrayim" (The Jealousy of Ephraim), regarding the kings of Israel (42 chapters); (3) "Ruah Hen" (The Spirit of Grace), commentaries upon the prophets mentioned in the First Prophets; (4) "Rab Berakot" (Abundance of Blessings), concerning the priests. Only the first two volumes were published (Frankfort-on-the-Oder, 1710).

**BAER, ISSACHAR BEN PETHAHIAH BEN MOSES:** Cabalist; lived at Kremnitz, Hungary, at the beginning of the seventeenth century. He seems to have traveled in the East and sojourned some time at Safed; and he frequently refers in his writings to the cabalistic school established in that place. Baer is the author of the following works: (1) "Pithei Yah" (The Gates of God)—divided into ten chapters, containing an introduction to the Cabala, on the basis of Cordovero's "Pardes Rimmonim," Prague, 1609; (2) "Yesh Sakar" (There Is Reward), containing all the ritual laws found in the Zohar, Prague, 1609; (3) "Meqor Hokmah" (Source of Wisdom)—explanations of the difficult words and expressions of the Zohar, with an appendix containing all the legends found in the Zohar, Prague, 1610; (4) "Yod'e Binah" (They Who Have Understanding), a large work on the Zohar that does not seem to have been printed.

**BAER, ISSACHAR BEN SOLOMON:** Biblical and rabbinical commentator; died at Wilna in 1807. He was the brother of Elijah b. Solomon, the

Wilna gaon, and like him was distinguished for simplicity and lucidity in commenting on Biblical and rabbinical topics. Besides Bible and Talmud, Baer studied mathematics and geography. His commentary on the Pentateuch, the manuscript of which was burned a few years ago, followed a double method: explaining first the simple, literal meaning of the text, like Rashi, Ibn Ezra, and Nahmanides; secondly, giving to it a philosophical and sometimes a mystical interpretation. He left also a commentary on the Talmud and Shulhan 'Aruk.

**BAER, ISSACHAR B. LEYSER.** See EILENBURG.

**BAER, JOSEPH:** Founder of a firm of book-sellers of Frankfort-on-the Main; born in the last half of the eighteenth century; died in 1851. A small second-hand bookseller's stall was established by Baer at Bockenheim in 1785. After encountering many obstacles, he succeeded in obtaining citizenship at Frankfort, and settled thereupon in that city, carrying on a trade in second-hand books. The business subsequently developed, and became one of the greatest in Germany. Many of the great European libraries, among them the Imperial Public Library of St. Petersburg, are largely dependent on it for their supply of rare works. On the occasion of its centenary (1885) the firm published a jubilee catalogue of 10,000 works in its second-hand department.

**BAER (DOB) OF MESERITZ** (known also as the "Maggid [Preacher] of Meseritz"): First apostle of Hasidism and its most important propagator; born in Volhynia in 1710; died in Meseritz, Dec. 15, 1772. Little is known of Baer's youth, and scarcely more of the interval preceding his conversion to Hasidism. In all probability he was educated, according to the custom then prevalent in Poland, in Talmudical and rabbinical lore. He preached in Rowno and Meseritz. Though never a rabbi, Baer was an accomplished Talmudist so far as is known, despite the contrary assertions of his opponents. A dreamy and speculative nature such as his was sure, however, to realize that it could find no satisfaction in Talmudic-rabbinical dialectics. Accordingly he became a convert to Luria's system of Cabala, then popular. At the same time he was an enthusiastic admirer of Moses Hayyim Luzzatto (see Walden, "Shem ha-Gedolim," s.v. "M. H. Luzzatto"), whose writings, then only in manuscript, had considerable renown among the Polish mystics of that day. Baer followed the precepts of the Lurian school with intense earnestness, and in consequence lived the life of an ascetic. He fasted a great deal, denied himself both the necessities and comforts of life,

**His Early** and prayed with copious tears and **Asceticism.** self-abasement. He sought to impart his ideals to others, and, as a preacher, dilated in glowing periods to the people upon the horrors of a material hell, certain to be the reward of

him who indulged in the comforts of earthly life. As Baer had neither a fortune, nor any salary as preacher in Rowno or in Meseritz, he lived in abject poverty despite his few needs. This lack of nourishment, together with his ascetic mode of life, gradually made him a cripple.

It was the broken state of his health that caused Baer to seek Besht, though he found in him a physician for the soul rather than for the body. The date of their meeting, and the manner in which Besht brought about the conversion of the seemingly confirmed ascetic, are not accurately known. The Hasidic legend concerning this episode has it that Baer, who had heard much of Besht, visited him to satisfy himself of the truth or falsity of the current reports of Besht's remarkable powers. Arrived at

**His Visit to Besht.** the latter's house, and admitted to his presence, Baer expected to hear profound mysteries expounded; instead,

Besht merely related to him numerous stories of every-day life. Hearing only similar stories at each subsequent visit, Baer decided to return home. But just as he was about to set out, at a late hour of the night, he was summoned to Besht's house. Without preliminary explanation, Besht opened the "Ez Hayyim" of Hayyim Vital, and asked Baer to elucidate a certain passage. The latter did so to the best of his ability; but Besht declared that Baer knew nothing of the real meaning of the passage, and proceeded to give his explanation. As he did so—so runs the legend—the darkness suddenly gave way to light, and angels appeared eagerly listening to Besht's words. "Your explanations," said he to Baer, "were correct, but your deductions were thoughts without any soul in them." This experience induced Baer to remain in Besht's vicinage.

The legend is correct in so far as it intimates that Baer learned through his connection with Besht to value every-day things and events, and to emphasize the proper spirit through which alone the study of the Torah is made a source of knowledge and enlightenment. Under the guidance of Besht, Baer abandoned his ascetic mode of life, and in consequence recovered from the disease which had led him to seek out the Hasid leader. Although their intercourse covered not more than the last two years of Besht's life, yet the association was intimate enough to cause Baer to be considered as Besht's heir presumptive, even during the lifetime of the founder of Hasidism. Baer's reputation as a preacher and

an ascetic on the one side, and his authority as a Talmudist on the other, made him an ideal leader for the Hasidic movement. Directed, as it was, against the learned men of the customary type, the propaganda needed an expert Talmudist to prolong its life beyond the demise of its founder. Baer was the only man capable of leading the masses, and at the same time of impressing the learned world.

Immediately after the death of Besht (1760), Baer assumed the leadership of the sect, there being no opposition to him from any quarter. As its acknowledged leader, he sought to free Hasidism from the authority of the rabbis by the introduction of a

new ritual and other innovations. Incidentally, he endeavored to make himself the spiritual and material focus of the cult. The introduction of the Lurian prayer-book, from which all the medieval piyyuṭim are excised, was the first manifesto of Hasidism, giving notice that it was henceforth not merely the possession of the few chosen ones, but the property of the masses. But in order better to reach the multitude, Baer had to appoint apostles to spread his teachings. Jacob Joseph ha-Kohen,

**Spread of Hasidism.** Elimelech of Lyzensk, his brother Meshullam Suse, and Nahum of Tshernobyl, some of the more important of Baer's emissaries, traveled from place to place spreading the new dispensation. While they appealed to the imagination and sympathies of the people at large through their discourses, Baer endeavored to attract to himself the most intelligent portion of the younger element. His powers must have been considerable, for he converted such Talmudists as the brothers Horwitz, both Phineas and Samuel, and such philosophical natures as Shneur Zohman of Ladie, and Mendel of Vitebsk. In contrast to Besht, the man of the people, who walked about, pipe in mouth, chatting to and entertaining whom he met, Baer never relinquished the student habits of a Polish Talmudist. Concerning his mode of life and home, Solomon Maimon states that Baer passed the entire week in his room, permitting only a few confidants to enter. He appeared in public only on the Sabbath, arrayed in white satin, white being the symbolic color of mercy in the Cabala. On such occasions he prayed with people, and kept open house for those desirous of eating at his table. After the meal he would begin to chant a soul-stirring melody, and,

**His Public Audiences.** placing his hand upon his forehead, would call upon all new adherents present to quote any verse in the Bible they desired. These served as texts for Baer's subsequent sermon. "He was such a master in his craft that he combined these disjointed verses into an harmonious whole," declares Maimon; and what seems to impress this chronicler as still more remarkable, each new proselyte was made to believe that that part of the sermon based upon his verse contained a direct reference to such matters as lay closest to his heart (Maimon, "Selbstbiographie," i. 231 *et seq.*). Although it is not probable that Baer sought to play the miracle-worker, there is no doubt that the common people considered it miraculous when some chance remark of his happened to come true.

Thanks to the powerful personality of its leader, Hasidism spread with remarkable rapidity. It gained a secure foothold simultaneously in Volhynia, Lithuania, and Little Russia. The dissolution of the "Four-Lands" synod in 1764 proved favorable to its spread. The Rabbis, though annoyed by the growth of the movement, could not easily take combined action, at least not such as would receive the approval of the governmental authorities. The opposition of the local rabbis against the well-organized movement proved futile; men among them whose authority reached beyond their narrow sphere of influence were few. Elijah b. Solomon, called the "Gaon of Wilna," was the only one whose reputation extended beyond the borders of Lithuania.

When Hasidism made its appearance in Wilna and adjacent towns, Elijah, usually far removed from earthly things, was forced to take cognizance of its existence, and the first anathema against Hasidism was issued at Wilna April 11, 1772, when Elijah had become convinced that the innovation was antagonistic, practically and theoretically, to Talmudic rabbinism. Baer's envoys, his pupils Mendel of Witebsk and Zolman of Ladie, were not received by Elijah, who declined even to meet the dissenters. The ban issued at Wilna drew the eyes of the world toward Hasidism, and it needed all the strong will and moral courage of a Baer to take up the gage of battle. His policy for the time was to ignore his opponents. The proposition of his pupils to reply to the ban by a counterban he opposed. But the exertions and excitement consequent upon the intense opposition to Hasidism overwhelmed Baer, and he died just as the battle against the Hasidim began in earnest, in 1772.

While Baer's practical activity in the Hasidic cause is well known, it is difficult to determine exactly his services in the domain of theoretical Hasidism. He left no writings of his own; the two works (1) "Maggid DebarO le-Ya'akov" (the last letters of which title spell "Dob"), known also under the title of "Likkuṭe Amarim" (Collected Sayings), published at Koretz, 1780, and frequently reprinted; and (2) "Likkuṭe Yekarim" (Collected Gems), published at Lemberg (1790?) are the only authentic ones in existence. They consist of excerpts from his sermons, mechanically written down and collected by his relative, Solomon b. Abraham of Lutsk, who, as he himself confesses, was often ignorant of their meaning. The separation of the kernel from the shell is so difficult a task in Baer's writings, that modern historians are puzzled to discover any system at all in Hasidism. And yet it is of the utmost importance in the study of this sect to become acquainted with its doctrinal side, the underlying and basic principles.

The foundation of Baer's system is Besht's assertion of the omnipresence of God. Before the Creation the world existed *in potentia Dei*; the act of creation consisted in God's Will—or Word—causing the materialization of the world. Creation consequently implies not a separation from the Creator, but merely a manifestation of His power; and just as the world was already in God before the Creation, so God is in the world now, He being not only the original cause of material things, but constituting also their inward essence; wherefore God is termed "the Preserver of all things" (Neh. ix. 6) (Heb. מְחַיֶּה, "the Animator"). While every existing thing is a manifestation of God, the degrees of such manifestations differ according to the higher or lower organism of things. The essence of things is for Baer the spark of divinity which is revealed in each, both as regards mind and matter. Baer remarks somewhat drastically that even heathen deities have the divine spark (נִצְּרוֹת) in them; for had they not, even an imaginary conception of their being would have been impossible. Underneath the particles of divinity

in things, God remains an undivided substance, for the powers manifested in various things are all one—merely the outward appearances differ. The relation of the one substance to the many outward manifestations of the same, Baer explains by the cabalistic theory of צִמְצוּם (zimzum), "concentration," a theory that holds an important place in Hasidism, as it did with Moses Cordovero. According to Baer creation is in reality a species of divine self-limitation. God in His endless and innumerable attributes manifests Himself in creation, which is only *one* aspect of His activity, and which is therefore in reality a self-limitation. And just as God in His goodness limited Himself, and thus descended to the level of the world and man, so it is the duty of the latter to strive to unite with God. The removal of the outer shell of mundane things, or, as the cabalist

**The Divine in All Things.** terms it, "the ascension of the [divine] spark," being a recognition of the presence of God in all terrestrial things, it is the duty of man, if he experience

pleasure, to receive such emotion in all purity and sanctity as a divine manifestation, for He is the source of all pleasure.

As the degrees of divine manifestation differ according to the nature of the various objects, it is the purpose of the world-life to advance toward an ever higher degree, until the perfect union with God is attained. Thus the vegetable kingdom serves as food for the animal kingdom, in order that the lower manifestation of divinity, existing in the former, may be developed into a higher one. Man being the highest manifestation, and the crown of creation, it is his duty to attain the highest pinnacle of development in order to be ultimately united with God. The only means through which man can attain communion with God is prayer, not a mechanical recital, but that condition of ecstasy in which man forgets self and all surroundings, and concentrates all his thought and feeling upon union with God. Like the Neo-Platonists, Baer says that when a man becomes so absorbed in the contemplation of an object that his whole power of thought is concentrated upon the one point, then his self becomes blended and unified with that point. So prayer in such a state of real ecstasy, effecting a complete union between God and man, becomes of extraordinary importance. It is even capable of breaking through and overruling the accustomed laws of the universe. While, in the natural order of things, objects slowly ascend through a series of developments from a low plane to a higher one, prayer, by this union with God in the moment of ecstasy, effects a sudden ascension of the object. This of course is conditioned by the use made of it by the truly pious man, who alone is capable, in the moment of his ecstasy, of ennobling and edifying both objects and actions.

**The Ecstasy of Prayer.** This is the danger point of Hasidism. It is obvious that the ecstatic state is for the select few only. Besht, the founder of Hasidism, maintained that real service to God must consist in prayer, rather than in the study of the Torah, for the very reason that the former is possible for all men, while the latter is not. Besht's first apostle completely over-

turned his democratic ideal. He recognizes only the supplication of the perfectly pious, the Zaddik, who is capable of absolutely withdrawing all his thought from earthly things, and concentrating it upon God. The Zaddik, as the favorite of heaven, is the instrument by means of which God bestows His mercies upon the world. Because of his union with God he is the connecting link between God and creation, and thus the channel of blessing and mercy. The love men bear the Zaddik is therefore the means to win the grace of God. The duty of the ordinary mortal is thus to love the Zaddik, and to be entirely subservient to him. In this conception of Hasidism lies Baer's significance; he destroys the idealism which lay at the foundation of the Hasidic movement, originating thus a tendency which could not but result in crass superstition and addled doctrines. Baer indeed sought hereby to establish the authority of the best, as he conceived the Zaddik to be, in opposition to the Rabbis, who relied upon their learning for their authority. However, he insisted upon the precepts promulgated by Besht, such as unselfishness, industry in doing good, peaceableness, charity in judgment of others, temperance without total abstinence, courage without pride and insolence. The success of Hasidism under Baer was due in great part to the ideal conceptions and sacrifices of its early converts, who resembled in their actions the enthusiasts among the first Judæo-Christians. But all of this did not prevent the appearance, soon after the inculcation by Baer of

such lofty conceptions, of less noble characters who impressed upon Zaddikism some most pernicious features. Not all of Baer's disciples accepted Zaddikism, at least not in its entirety. There came to be two distinct tendencies among Baer's followers; the philosopho-mystic, prevalent in Lithuania, and the practical Zaddikist, at home in Poland and Galicia (see CABALA and HASIDISM).

**BAER B. NAPHTALI HA-KOHN.** See ASHKENAZI, BAERMANN.

**BAER (DOB) BEN NATHAN NATA OF PINSK:** Russian rabbi of the first half of the eighteenth century. He was a descendant of Rabbi Nathan Nata Shapira of Cracow (who was the author of "Megalleh 'Amukim"). Baer is the author of "Neṭa' Sha'ashuim," a commentary on some parts of the Talmud, Zolkiev, 1748.

**BIBLIOGRAPHY:** Fuenn, *Keneset Yisrael*, p. 186, Warsaw, 1886. H. R.

**BAER, SELIGMAN (SEKEL):** Writer on the Masorah, and editor of the Hebrew Bible; born at Mosbach (Baden), Sept. 18, 1825; died at Biebrich-on-the-Rhine, March, 1897.

As early as 1844, Baer commenced his Masoretic studies. He belonged to the school of Wolf HEIDENHEIM, some of whose original manuscripts were in his possession. Few scholars in the nineteenth

century had so intimate an acquaintance with all the details of the Masorah as had Baer; and it was largely due to him that the study of this branch of Hebrew philology was brought to the notice of Biblical critics. His friendship with Franz Delitzsch, who stood sponsor for much of his work, aided him in making known to the world the results of his studies. He never occupied an academic position, but was contented with the office of Hebrew teacher to the Jewish community of Biebrich. In recognition of his services to the Commission for the History of the Jews in Germany, the honorary degree of doctor of

Seligman Baer.

philosophy was conferred upon him by the University of Leipsic. In conjunction with Delitzsch he published in 1861 an edition of the Psalms (Leipsic, Doerfling und Franke). A second edition was published a few years later (Leipsic, Brockhaus).

In the mean time, in connection with Delitzsch, Baer had conceived the plan of editing anew the books of the Old Testament in Hebrew, following strictly the Masoretic tradition. The volumes, with a Latin preface by Delitzsch, appeared (Leipsic, Tauchnitz) in the following order: Genesis, 1869;

Isaiah, 1872; Job, 1875; Minor Prophets, 1878; Psalms (together with a treatise "Elementa Accentuationis Metricæ"), 1880; Proverbs (together with "De Primorum Vocabulorum Dagessione"), 1880; Daniel, Ezra, and Nehemiah (together with "Chaldaismi Biblici Adumbratio" and a treatise by Friedrich Delitzsch on the Babylonian proper names in these books), were published in 1882; Ezekiel (with "Specimen Glossarii Ezechielico-Babylonici" by Friedrich Delitzsch), appeared in 1884; followed by the five Megillot, 1886; the book of Chronicles, 1888; Jeremiah, 1890; Joshua and Judges, 1891; and finally Kings, 1895. The last two were edited by Baer alone, Delitzsch having died in 1890. Death prevented Baer from finishing the series. Attached to each volume were a number of Masoretic notes taken from the best editions and manuscripts, variant readings between the Occidentals and Orientals, between Ben Asher and Ben Naphtali, and various other Masoretic lists and enumerations.

In general, Baer's text has been accepted as representing the Masoretic tradition; even though exception may be taken to his view on individual points or to his too extensive generalization from insufficient manuscript evidence. Christian Ginsburg, in introduction to his Masoretic Bible (London), has criticized a number of these fairly severely. He points out, among others, that Baer has indicated the open readings in the Prophets and the Hagiographica, and not usually

done in Masoretic manuscripts (pp. 10 *et seq.*); that he has introduced a number of anti-Masoretic pauses (p. 29); that his division of the Sedarim is faulty (p. 41); that he has introduced the dagesh into the first letter of words when the preceding word ends with the same letter (p. 117), as well as the dagesh which follows upon a guttural with silent shewa and a hatef-patah under the first of two similar letters (pp. 466, 662), all of which are not warranted by the best manuscripts. The

**Criticisms of the Work.**

Masoretic notes at the end of Baer's edition are also criticized (p. 92), especially the lists of various readings. Further, the Aramaic paradigms attached to the edition of Daniel, Ezra, and Nehemiah have also been the subject of criticism on the part of Kautzsch ("Grammatik des Biblisch-Aramäischen," p. 23). Many of these faults were due to Baer's inability to consult manuscripts in the large European collections; yet, in spite of this, his editions will remain for some time to come the standard Masoretic text.

Of his separate treatises dealing with the same subject may be mentioned "Torat Emet" (The True Law), 1852, Rödelheim, on the accentuation of the poetic books of the Old Testament, of which an enlarged edition in German, together with "Masoretische Uebersichten," was added as an appendix to the first edition of Delitzsch's Commentary on the Psalter (vol. ii., Leipsic, 1860); "Die Methegsetzung," in Merx's "Archiv für Wissensch. Erforschung des Alten Testaments" (Halle, 1867, i. 55 *et seq.*; but compare Grätz, "Monatsschrift," 1887, p. 483); his edition (in conjunction with H. L. Strack) of the "Dikduke ha-Te'amim" of Aaron ben Moses ben Asher (Leipsic, 1879); and his lengthy criticism of Ginsburg's Masora in "Z. D. M. G." 743 *et seq.* To the Rabbinic Bible, which was to have been published by the Romms in Wilna (1894), Baer contributed the Masora, a work upon which he spent many years.

What Baer did for the Old Testament, he tried also to do for the Prayer-book. His "Seder 'Abodat Yisrael" (Ritual of Israel's Service), Rödelheim, 1868, is accompanied by a literary and philological commentary, "Yakin Lashon" (Preparatory Study of Language), which has made the work a standard authority. Attached to it is the text of the Psalms, accurately vocalized and accented (see Kobak's "Jeschurun," vi. 217; Berliner, in "Israelit," 1868, Nos. 24 and 26). Among Baer's other works may be mentioned: "Lekef Zebi" [Collation of Zebi], Sammlung von Gebeten (Rödelheim, 1855, 1861); "Tikkun ha-Sofer weha-Kore" (Correct Text for the Scribe and Reader), the Masoretic text

**His Other Works.** of the Pentateuch, together with the laws governing the writing of synagogue scrolls (Rödelheim, 1856); "Dibre ha-Berit" (The Words of the Covenant), on the prayers and observances connected with circumcision (Rödelheim, 1871); "Tozcot Hayyim" (Issue of Life), prayers for the dead (*ib.* 1871), and "Zibhe Zedek" (Sacrifices of Righteousness) on Shehitah (*ib.* 1876).

During the latter part of his life, Baer ventured into the field of history, and translated for the Commission for the History of the Jews in Germany the Hebrew accounts of the persecutions at the time of

the Crusades ("Quellen zur Geschichte der Juden in Deutschland," ii., Berlin, 1892). The venture was not successful, as Brann has shown in "Monatsschrift," xxxvii. 196 *et seq.*, 286 *et seq.*

**BIBLIOGRAPHY:** *Jewish Chronicle*, March 12, 1897, p. 12; compare *Allgemeine Zeit. des Judenthums*, 1895, p. 467. S.

**BAER (DOB) BEN SHRAGA:** Author; lived in Berlin at the beginning of the nineteenth century. He wrote "Nahale Debash" (Streams of Honey), Berlin, 1832, which contains many extracts from various Hebrew books dealing mainly with philosophical and ethical subjects.

L. G.

J. CH.

**BAER (DOB) BEN URI PHCEBUS:** Author, of the eighteenth century. He resided at Altona, Germany, where in 1737 he wrote "Be'er-Tob" (A Good Explanation), containing casuistic and homiletical explanations to the Talmud.

L. G.

J. CH.

**BAERMANN, ISSACHAR I.** See ASHKENAZI, BAERMANN.

**BAERMANN OF LIMBURG:** German writer; lived at Frankfort-on-the-Main at the end of the seventeenth century and at the beginning of the eighteenth. He published (Frankfort-on-the-Main, 1712) a Judæo-German play, with the Hebrew title "Mekirat Yosef" (The Sale of Joseph), destined for the Feast of Purim, which excited great interest. It was performed in Frankfort on the Feast of Purim, 1713, with much success, many Christians being present. The actors were Jewish students from Prague and Hamburg. The same comedy was acted at Metz, and became a favorite Purim play among the Polish Jews generally.

I. BR.

**BAERWALD, HERMANN:** German educator; born at Nakel, in the province of Posen, Nov. 7, 1828. His academic education began at the gymnasium of Konitz, continued at the Elisabeth-Gymnasium of Breslau, supplemented by a couple of years spent under the inspiring influence of Gustav A. Stenzel, then the head of a school devoted to the study of philology and history, and wound up at the University of Berlin, where he became an object of Leopold von Ranke's interest, who greatly influenced Baerwald's future career. With his academic titles gained at the Prussian capital, Baerwald proceeded in 1856 to Vienna, only to be called three years later to Berlin to fill an important place at the Jewish Teachers' Seminary of that city. Here he remained till 1868, when a call was extended to him from the Jewish community of Frankfort-on-the-Main to act thereafter as the director of their realschule for boys and girls known under the name of the "Philanthropin." A more favorable field for the realization of Baerwald's great qualities could not be found.

Baerwald was possessed of a deep longing to spread light and relieve human misery, and a noble presence, rendered magnetic by a charm of manner and a soft, melodious voice, opened to him every heart and even many a capacious purse for the benefit of

the needy. Baerwald was a member of the central committee of the Alliance Israélite Universelle in Paris. There is hardly a benevolent institution in Frankfort that has not felt his benign influence. The name of the young men who are indebted to Baerwald for their making is legion. After an activity of thirty-one years at the Philanthropin, Baerwald retired from the office he had filled with considerable honor under general manifestations of admiration and gratitude.

Baerwald was the author of: "Formelbuch," "Historische Miscellen: Lebensrettung Kaiser Otto II. durch den Juden Kalonymus," in Wertheimer's "Jahrbuch," 1857; and "Zur Geschichte der Israelitischen Real- und Volksschule in Frankfurt am Main von 1804-1822," 1875. He died Feb. 8, 1907.

**BAEZA:** City in the province of Jaen, Spain, which, as early as the Moorish rule, had a considerable Jewish community that suffered greatly during the war between Castile and Mohammed al-Nasir in 1212. In 1391 there was great slaughter among the Jews of Baeza; the survivors being spared only on condition of submitting to baptism. Five years later, only Maranos were left in the city; and many of these, in 1473, fell victims to the fury of the populace, as in Cordova and in other cities, while others were saved through the protection of the count de Cabra, governor of the city.

**BAG:** A comprehensive term in the A. V. for various Hebrew words. The most adequate Hebrew expression for a large bag is "ḥarīṭ" (compare Arabic), which can contain a talent of silver, as in II Kings v. 23. The same word occurs in the list of woman's apparel and ornaments, given in Isa. iii. 22, and is usually understood as a satchel (thus R. V.; "crisping pins," A. V.). In Gen. xlii. 25 the general term for a vessel ("keli") to carry grain is freely translated "bag," being used interchangeably with "sack." In I Sam. ix. 7, xxi. 6, the same word—A. V. "vessels"—denotes the receptacles for carrying food, which need not necessarily have been bags. In I Sam. xvii. 40, 49, it stands for the same word ("vessel," A. V., margin) in "the shepherd's bag." The Hebrew text seems to mean rather "a shepherd's outfit" in a much more general sense (compare Zech. xi. 15, "the instruments of a foolish shepherd").

There is, furthermore, the small bag ("kis"), containing the weights of the merchant (Deut. xxv. 13; Prov. xvi. 11; Micah vi. 11) carried in the girdle; and perhaps another containing his money (Isa. xlvi. 6; rendered "purse," Prov. i. 14). Another word for the small money-bag is "zeror" (Prov. vii. 20; Hag. i. 6; "bundle," Gen. xlii. 35; I Sam. 25, 29; compare the denominative verb "to put up or to bind in bags," II Kings xii. 10 [Hebr. 11], see margin). The word is used in a more general sense, perhaps, in Job xiv. 17. In Cant. i. 13 the "bundle of myrrh" seems to mean a little perfume-bag hung around the neck of a woman.

**BAGDAD:** Capital of the Turkish vilayet of the same name, which is situated in lower Mesopotamia on both sides of the Tigris. The vilayet formerly extended from Diabekr to Yemen, with the Persian frontier as its eastern border; but in 1878 the vilayet of Mosul was separated from it, and in 1884 also that of Bassora. According to Arabic tradition, the town of Bagdad was founded in the middle of the eighth century by the Abbassid calif Abu Ja'far Maṣṣūr. But the fact that a Babylonian city named Bagdad is already mentioned in the Talmud (Ket. 7b, Zeb. 9a) proves that the calif Maṣṣūr only rebuilt and enlarged the old Persian City of Bagdad. That Bagdad was originally a Persian city is also proved by the name, which is Persian. Being situated on the left bank of the Tigris, the town was in close proximity to the two centers of Jewish spiritual life, Sura and Pumbedita. As the calif was anxious to see the population of his new residence increase, he offered no resistance to Jews settling there and forming a community. They became so numerous that one of the bridges over the Karkhāyā canal in the western suburb was called "Qanṭarah-al-Yahūd" or Jews' Bridge, also Bridge of the Jews' Fief (G. Le Strange, "Baghdad under Abbasside Caliphate," p. 150), and Yaḥūt mentions that the Jewish quarter, called "Dar-al-Yahūd," was in the neighborhood (iv. 1045). The Jews were, of course, occasionally troubled by revivals of the restrictions to which non-Moslems were subject. These regulations were first renewed by Harun-al-Rashid (786-809), who ordered that Jews and Christians should wear distinguishing marks on their clothing, refrain from riding on horseback, and suffer other similar humiliations. Afterward these restrictions were relaxed, but were again imposed by Al-Mutawakkil (880), who went so far as to convert the synagogues into mosques.

Notwithstanding this, Jews are found holding state offices under Al-Mutaḍid (892-902).

As the seat of the califate, Bagdad soon rose to a conspicuous height. It was a home for Jewish learning; and a number of men prominent in the history of that time had their home there. AARON BEN SAMUEL HA-NASI, of Babylon, the mystic of the ninth century, came to Italy from this city (Graetz, "History of the Jews," Hebrew transl., v., Appendix, p. 46). Its importance at the time of the Geonim must not be underrated, as it is often mentioned at this time under the name of "Babylon" (בבֶּל) (see BABYLONIA). (On the name עֲרִינָה, see Steinschneider, "Polem. und Apolog. Lit." p. 293; *idem*, "Hebr. Bibl." xiii. 90; "Jewish Quarterly Review," xii. 115). Bagdad belonged rather to Pumbedita than to Sura; but the heads of the Jewish community in both places came to the calif's city in order to swear allegiance to the "resh galuta" or exilarch (Geiger, "Wissenschaftliche Zeitschrift," v. 398; Grätz, "Gesch. der Juden," v. 479).

The Jews of Bagdad must have been affected by the Karaite schism. Ishmael of Akbara (c. 840) came from a place only seven miles from the city; and Abu al-Sari Saḥḥ ben Maḏliah (eleventh century) preached publicly in the streets against the Rabbinites. He was answered in the same way by Jacob ben Samuel (Graetz, "History of the Jews," Hebrew

transl., iii. 311). Abu Imran al-Za'farani, the founder of a new sect, was born in Bagdad in the ninth century (Graetz, *ib.* iii. 508).

At the time of the calif Al-Mutaḍid the Jews of Bagdad fared well on account of the kind treatment accorded to them by the vizier 'Ubaid Allah ibn Sulaiman. The heads of the community were Joseph ben Phineas and Natira (Graetz, *ib.* iii. 274). The gaon Aaron ibn Sargada (943-960) came from Bagdad, and it was here that his relative, Kasher ibn Abraham, was called upon to settle a dispute in which he had become involved (Graetz, *ib.* iii. 306, 308). About the year 950 the grammarian Dunash ben Labraṭ was in Bagdad; and in this city the gaons Hai, Kimui bar Rab Ahai, and Yehudai bar Samuel were officials (ר״י רבנא בבנר) before going to Pumbedita. According to Hai (died 1038) the Bagdad Jews of his day were accustomed to say the 'Abodah of the Day of Atonement both at the morning and musaf service (Graetz, *ib.* iii. 166). It is also probable that the exegete and traveler Abraham ibn Ezra visited Bagdad between the years 1138 and 1140 (see his commentary to Ex. xxv. 18). Ibn Ezra's son Isaac, who probably came with him, and was baptized, wrote in Bagdad (1143) a poem in honor of another convert, Nathaniel Hibat Allah ("Kokbe Yizhak," 1858, p. 23; Graetz, "History of the Jews," Hebr. transl., iv., Appendix, p. 47).

During the twelfth century the Jews of Bagdad attained again some measure of self-government. The calif Al-Muktafi appointed a wealthy man, Samuel ben Hisdai, exilarch in Bagdad. He gathered the taxes, paying a certain portion over into the

**In the Twelfth Century.** pointments had to receive his sanction. Both Benjamin of Tudela and Pethahiah of Regensburg visited Bagdad, and have left interesting information regarding the Jews there. According to Benjamin, there were at his time in the city 23 synagogues, 1,000 Jewish families, and 10 yeshibot (rabbinical schools). According to Pethahiah, however, "At Bagdad there are three synagogues, besides that built by Daniel on the spot on which the angel stood on the brink of the river, . . . as is written in the Book of Daniel." Pethahiah adds: "The head of the academy has many servants. They flog any one not immediately executing his orders; therefore people fear him. . . . He is clothed in gold and colored garments like the king; his palace also is hung with costly tapestries like that of the king."

The most prominent heads of the yeshibot were at that time Ali and his son Samuel. David Alroy studied under Ali at the time Hisdai was exilarch (Wiener, "Emek ha-Baka," pp. 27, 167; "Shebet Yehudah," ed. Wiener, p. 50; Sambari, in Neubauer, "Medieval Jewish Chronicles," i. 123; Graetz, "History of the Jews," Hebrew transl., iv. 317). The reputation of Samuel seems to have spread far and wide; for we learn that Rabbi Moses of Kiev (מ״ק) came from Russia especially to receive information from him (Epstein, in "Monatsschrift," xxxix. 511, 512; Graetz, *ib.* iv. 44). It was this same Samuel who, in later years, was a determined opponent of Maimonides, and who made Bagdad for the time a very hotbed of anti-Maimonist intrigue (Graetz, *ib.*

Appendix, p. 34). Maimonides' favorite pupil, Ibn Aknin, had formed a plan of opening a school at Bagdad for the purpose of propagating his master's teachings. Maimonides, however, advised him against such an action, as he wished to spare him the opposition which he knew Ibn Aknin would encounter (Grätz, "Gesch. der Juden," vi. 362). Daniel, the son of Hisdai, followed his father in office; but he left no son; and though two of his cousins in Mosul pretended to hold office, the short-lived recrudescence of the resh galuta was at an end (Grätz, "Gesch. der Juden," vi. 460; Hebrew transl., iv. 459, Appendix, p. 59). The anonymous author of the Hebrew-Arabic Diwan published in "He-Haluz," iii. 150 (MS. Bodleian 2424 and MS. in collection of E. N. Adler), who lived before the middle of the thirteenth century, traveled as far as Bagdad, where he met the head of the yeshibah ("Jewish Quarterly Review," xii. 115, 202).

The Jews of Bagdad diminished largely in numbers and influence, not only because of the general movement of the Jews toward Europe and because of the Crusades, but also through the storming of the town by the Mongols. Arghun (1284-91), however, had a Jewish physician in Bagdad, Sa'ad al-Daulah, who was consulted in all financial matters by the sultan; but upon the death of Arghun the position which the Jews had gained through Sa'ad al-Daulah was quickly lost, and the streets of the city flowed with Jewish blood (see "Revue Etudes Juives," xxxvi. 254).

With the fall of the Abbassid power the eastern califate went to ruin. Very little is known concerning the Jews of Bagdad during the following period, and we can only find a few notes here and there in the works of travelers who have passed through the place. In 1400 the city was besieged by Tamerlane, and many Jews who had taken refuge here from other villages perished (Jost, "Annalen," 1839, p. 197). Pedro Teixeira, at the beginning of the seventeenth century, found in Bagdad 20,000 to 30,000 houses, of which 200 to 300 were inhabited by Jews. He says that they lived in a certain part of the town in which their "kanis" (synagogue) was situated. At the beginning of the nineteenth century Ezekiel Bagdagi was the richest banker in the city. He became involved in politics and went to Constantinople, where he exercised great influence as a court banker ("saraf bashi"). Armenian intrigues, however, occasioned his fall, and he was put to death between the years 1820 and 1826 at Adalia in Asia Minor (Franco, "L'Histoire des Israélites de l'Empire Ottoman," p. 132).

The traveler Benjamin II. was in Bagdad in 1847, and tells us that the Jews at that time numbered 3,000 families and were living in happy circumstances. They were under a "hakam bashi" appointed by the Sublime Porte. Their dayyanim or rabbinical chiefs were Jacob ben Joseph, Elijah Obadiah, and Rabbi Abdola (Abdallah). Every male Hebrew of the community paid a tax which

**In Modern Times.** varied between 15 and 120 piasters per year. Raphael Kassin was hakam bashi, and next to him in rank was the nasi Joseph Moses Reuben. The yeshibah had then sixty pupils, who were in the charge of Abdullah ben

Abraham Seumech. Though the Jews inhabited a certain quarter of the city, to live in that quarter was not compulsory upon them. Of the nine synagogues which Benjamin the Second mentions, eight were situated in one court; while the ninth was a large building, resting on sixteen columns, called "Bet ha-Keneset Sheik Isaac Gaon," in a side room of which building the body of that saint was interred.

The trade of Bagdad with India was then largely

d'Asie," ii. 66, 97, 104) there were in the year 1890 53,800 Jews in the vilayet of Bagdad, of whom 52,500 lived in Bagdad, 500 in Hilla, and 800 in Kerbela. He gives the number of primary schools as 52, of synagogues as 26, and of cemeteries 2. The women and young children were at that time engaged in manufacturing what is called the "agabani," a garment made of European stuffs embroidered with India silk. The trade in Babylonian and Assyrian antiquities is largely in the hands of the

GIRLS' SCHOOL OF THE ALLIANCE ISRAËLITE UNIVERSELLE, AT BAGDAD.

(From a photograph by D. Gazala, Bagdad.)

in the hands of the Jews, who had manufactories in Calcutta, Bombay, Singapore, and Canton. This is corroborated by the evidence of the Rev. Henry A. Stern ("Dawnings of Light," p. 46, London, 1854), who says: "Jews are the governing element of the place. They have their stored booths in every bazaar, occupy all the principal caravansaries, and entirely control the business of banking and monopolies." Stern estimated the Jewish population in his day at 16,000, as against 1,500 Christians and 40,000 Moslems. The Jews were at that time divided into Persian and Arabian. On March 27, 1845, a "herem" (ban) was launched against all who had any connection with the missionaries (compare "Narrative of a Mission of Inquiry to the Jews from the Church of Scotland," 1848, ii. 373). In 1860 H. Petermann of Berlin found 1,300 Jewish families in Bagdad, of whom 2,300 persons paid the poll-tax. The oldest Jewish families, he says, came there from Ana on the Euphrates. According to Cuinet ("La Turquie

Jews of Bagdad (Delitzsch, "Babylon," 2d edition, 1901, p. 5).

Of the history of the Jews during the second half of the nineteenth century very little is known. In 1876 and 1877 the city was attacked by a plague, and the Jews suffered terrible hardships in consequence. For a time they were compelled to leave the city and to camp in the wilderness ("Ha-Zefirah," iii., No. 26, p. 202; iv., No. 20, p. 157; No. 24, p. 188; No. 28, p. 221). The relation of the Jews to their non-Jewish brethren seems, for the most part, to have been amicable. In 1860, however, an attempt was made to deprive the Jews of the Tomb of Ezekiel, situated a short distance outside of the city, and visited by Jews in the month of Ab. The Anglo-Jewish Association interposed in the matter; and the tomb was given back to its proper owners. A similar difficulty arose in the year 1889 with regard to a shrine called "Nabi Yusha" or "Kohen Yusha," situated about an hour's walk from the city in a small building

shaded by eight gigantic trees. The high priest Joshua (Zech. iii. 1) is said to have been buried here; and, according to Teixeira and Benjamin the Second, the Jews are accustomed to make pilgrimages thither every month. The shrine is maintained by the contributions of the Jews in Bagdad and in India, and is used not only as a synagogue, but as a burying-place for the rabbis. One of the latter had been buried there in the year 1889, and because of a dispute as to whether the property really belonged to the Jews or to the Mohammedans, a persecution of the former was set on foot, and the principal Jews of the city, including the chief rabbi, were imprisoned by direction of the governor. A memorial on the subject was addressed to the marquis of Salisbury Oct. 25, 1889, on behalf of the Jewish Board of Deputies and the Anglo-Jewish Association, as a result of which the governor was removed. Other tombs similarly visited by the Jews of Bagdad are that of Ezra, near Gurna (Kurna), between Bagdad and Bassorah, and that of Daniel, near Hillah. In 1899 the Jews numbered 35,000 souls, with about 30 to 35 synagogues known by the name of "Torah." Each Torah had a ḥakam, a "mu'allim kabir" (senior teacher), and a "mu'allim ṣaghir" (junior teacher). The Alliance Israélite Universelle founded a school for boys there in 1865, which in 1899 had 254 pupils; in 1895 the same body founded a school for girls which in 1899 had 132 pupils. There is also a Jewish apprentices' school for the education of Bagdad boys along industrial lines. The study of English has been encouraged by a foundation made by Silas Sassoon, a member of the Sassoon family which has its origin in Bagdad, David Sassoon, the founder of the family, having been born there, 1793.

During the last years of the nineteenth century a few Hebrew books have been printed in Bagdad, especially by Solomon Behor Ḥuṣain; *e.g.*, ספר פתרון (the second part of Solomon Almoli's work), 1892; מרפא לעצם of Isaac Farḥi; the story of Esther (קצת אסתר), told in Arabic by Joseph al-Shamsani; מעשה of Sasshon Mordecai Moses; and נסים on the wonders which happened in Palestine, taken from the שער ירושלים. Of earlier works may be mentioned ספר קרנות צדיק of David Salih Ya'qob, published by Raḥamim Reuben Mordecai & Co., 1867, and ספר משלי שועלים, printed by Judah Moses Joshua, 1874.

Zeit. des Judenthums*, xliv. 538 *et seq.*).

G.

[Bagdad and its vicinity possess a certain number of antiquities of Jewish interest. A large mosque, containing a tomb, is consecrated to the memory of a holy marabout, Abd el-Kader, called the Great. According to local Jewish tradition this is none other than R. Jose ha-Galili. One hour's journey from the city, there is a mausoleum surrounded by eight

almond-trees. Popular belief declares this to be the tomb of the high priest Joshua mentioned in Zechariah iii. : Haggai i. 1, etc. The Jews of Bagdad make pilgrimages to it once a month. Distant a journey of two days and a half southward of Bagdad is Hilleh, where the ruins of ancient Babylon are shown, and near by is a well, called by the natives "Daniel's Well," into which, according to local tradition, Daniel was thrown. Near the bank of the Euphrates is Kabur Kepil, a village having a tomb which it is said is that of the prophet Ezekiel. At the side of the tomb are two ancient synagogues, one of which contains a sacred scroll, which some persons claim was the property of the prophet, and others that of Anan, the founder of Karaism. This synagogue also contains a genizah. The village is said to contain tombs of Zedekiah and other kings of Judah, and of the prophet Zephaniah. Three hours' journey from Bagdad, again toward the south, and not far from the Tigris, the tomb of Ezra the Scribe is shown, venerated equally by Jews and Arabs. It is covered with inscriptions now illegible.]

I. L.

**BAGI:** A prominent Karaite family; lived in Constantinople in the fifteenth, sixteenth, and seventeenth centuries. The family name, which is variously written **Badschi** (Fürst, "Geschichte des Karäerthums," iii. 14), **Pegi**, **Poki** (Neubauer, "Aus der Petersburger Bibliothek," p. 55), is, according to Steinschneider ("Hebräische Bibliographie," xx. 94), derived from the Turkish "Bak" (pronounced "Bag"). The following members of the family are those best known:

**Elijah Bagi:** Scholar; lived at Constantinople in the first half of the seventeenth century. He is also called Aphida or Aphda (אפדא). He was the author of the following works: (1) "Hilkot Sheḥiṭah," ritual laws concerning slaughtering of animals; (2) "Biur 'Aseret 'Iḳḳarim," a commentary on the ten articles of belief of the Karaites; (3) "Miktab Eliyahu," selections of literary essays, letters, and poems. These three works are mentioned by Simḥa Luzki in his catalogue "Orah Zaddikim."

**Isaac Bagi:** Crimean scholar; lived at the beginning of the seventeenth century. He is mentioned by Luzki (*l.c.* 21b).

**Joseph ben Moses ha-Kohen Bagi:** Turkish scholar; lived at Constantinople at the end of the fifteenth century and at the beginning of the sixteenth. He was the author of the following works mentioned by Luzki: (1) "Ḳiryah Ne'emanah" (Faithful City), an apology for Karaism, in refutation of the assertion of many Rabbinites that the Karaites are a remainder of the Sadducees; (2) "Iggeret" (Letter), a decision on a marriage question; (3) "Keter Kehuna" (Crown of Priesthood), six dissertations on various subjects; (4) "Shulḥan Ḥaberim" (Table of

Comrades), on the precepts; (5) "Safah Berurah" (A Clear Language), a treatise on religious philosophy; (6) "Iggeret Sukkah," on the question whether it is permitted to light fire in the booth. This question, which gave birth to many polemics, is decided by Joseph in the negative.

**Moses Bagi:** Turkish scholar; lived at Constantinople in the beginning of the fifteenth century. The degree of relationship between Moses and Joseph is difficult to establish. Fürst believes that he was the father of Joseph, and was consequently called Moses ben Judah; while Gottlober identifies him with Moses ben Benjamin, the author of many liturgical poems, two of which are inserted in the Karaite prayer-book (iii. 267, 101 ed. Vienna). Moses was the author of two works: (1) "Ohel Mosheh" (The Tent of Moses), on the calendar; (2) "Mizwot Mosheh" (The Precepts of Moses), on the precepts contained in the Pentateuch.

**Samuel Bagi:** Turkish scholar; lived at Constantinople in the first half of the seventeenth century. Steinschneider identifies him with a person of the same name mentioned in the "Iggeret Kelulah" (MSS. "Leyden Cat." p. 127). Samuel is also mentioned by Samuel ben David in his relation of the voyage to Palestine which he made in 164-42 (compare Gurland, "Ginze Yisrael," i. 29).

**BIBLIOGRAPHY:** Fürst, *Geschichte des Karäerthums*, iii. 14; Gottlober, *Bikoret le-Toledot ha-Karaim*, p. 203; Jost, *Geschichte des Judenthums und Seiner Secten*, ii. 369; Gurland, *Ginze Yisrael*, i. 29; Neubauer, *Aus der Petersburger Bibliothek*, p. 55; Steinschneider, *Hebr. Bibl.* xx. 94 et seq.

I. BR.

**BAGINSKY, ADOLF ARON:** German physician, and professor of diseases of children in the Berlin University; born May 22, 1843, at Ratibor (Prussian Silesia). At the completion of his high-school education at the gymnasium of his native town (1861), he studied medicine in Berlin and Vienna. He was graduated from Berlin University in 1866, and in the same year accepted the position of private assistant to Doctor Traube at the cholera hospital in Berlin; and in 1868 moved to Seehausen, near Magdeburg, where he began his career as a practising physician. Two years later, however, he accepted the post of chief physician in a military hospital in Nordhausen, and at the close of the Franco-Prussian war returned to Berlin, where he practised medicine, at the same time pursuing anew the studies which had been interrupted under the pressure of practical work in different hospitals. In 1881 Baginsky was appointed privat-docent at the University of Berlin; and in 1892 promoted to an associate professorship at that institution.

Baginsky has devoted himself to the treatment of children's diseases. He is director of the Kaiser und Kaiserin Friedrich Kinderkrankenhaus, which he founded in Berlin with the assistance of Virchow in 1890. The Berlin Poliklinik für Kinderkrankheiten was also established in the metropolis through his efforts. He is, moreover, the founder and editor-in-chief of the "Archiv für Kinderheilkunde," which he has published since 1880, in collaboration with Monti and Herz at Stuttgart. Besides being an active member of the majority of medical associations in Berlin, he has taken a leading part in every

movement toward promoting the welfare of children in the Prussian capital, and belongs to a number of medical societies, both in Germany and abroad. His services have been repeatedly recognized alike by the Prussian and foreign governments, and he is the recipient of many orders and decorations. His numerous contributions to the science of medicine include treatises on school-hygiene, "Handbuch der Schulhygiene," Stuttgart, 1883; and on the cure of children's diseases, "Lehrbuch der Kinderkrankheiten," Berlin, 1892 (these latter have been translated into several languages); "Practische Beiträge zur Kinderheilkunde," Tübingen, 1880-84. All of these works have gone through several editions. Among his other writings, besides a great number of papers scattered through several medical journals, may be mentioned: "Pflege des Gesunden und Kranken Kindes," Stuttgart, 1885; "Das Leben des Weibes," *ib.* 1885; "Kost- und Haltekinderpflege in Berlin," Brunswick, 1886, etc.

It may be added that Adolf Baginsky is a member of the several associations and committees formed in Berlin for the purpose of checking the anti-Semitic movement in Germany. He is also the author of an interesting essay entitled, "Die Hygienische Bedeutung der Mosaischen Gesetzgebung," in which he comes forward as a staunch defender and enthusiastic admirer of the hygienic laws of Moses. Notwithstanding his multifarious labors as author, editor, teacher, and practitioner, Baginsky takes active part in the social and religious life of the Jewish community in Berlin. He was one of the opponents of the movement recently set on foot to hold Sunday services in the synagogues of that city. Baginsky is a member of the Imperial Leopoldina-Carolina Academy; commander of the Spanish Order Isabella the Catholic; and was decorated with the Prussian Order of the Red Eagle, fourth class.

**BIBLIOGRAPHY:** J. Pagel, *Biographisches Lexikon Hervorragender Aerzte des XIX. Jahrhunderts*, s.v.; Richard Wrede, *Das Geistige Berlin*, vol. iii. s.v.; Wernich and Hirsch, *Biographisches Lexicon Hervorragender Aerzte aller Zeiten und Völker*, s.v.; *Archives of Palestine*, x., New York, 1893; Brockhaus, *Konversations-Lexikon*, 14th ed.; Meyer, *Konversations-Lexikon*, 5th ed.; and private sources.

A. S. C.

**BAGINSKY, BENNO:** German physician; born at Ratibor, Prussia, May 24, 1848; privat-docent of the diseases of the ear, nose, and larynx, at the University of Berlin; and honorary professor. He was graduated from the gymnasium in his native town and studied medicine in Berlin University, where he received his doctorate in 1870. The same year he entered the army medical service during the Franco-Prussian war, accompanying his regiment to France. At the end of the war Baginsky began the practise of medicine; but he soon specialized in the diseases of the ear, nose, and larynx, to which branches, since 1880, he has devoted himself entirely. Four years later he became docent of otology, rhinology, and laryngology, at the University of Berlin. In 1897 he was made honorary professor.

Both in Germany and abroad Professor Baginsky by his scientific writings and lectures attained eminence in the profession as a specialist. He has contributed to a number of scientific publications of the best class, such as "Archiv für Mikroskopische Anatomie," "Archiv für Physiologie," "Archiv für

Anatomie und Physiologie," "Archiv für Pathologie und Anatomie," "Deutsche Medicinische Wochenschrift," "Archiv für Ohrenheilkunde," "Revue Neurologique," etc. He is also a collaborator of Eulenberg's "Encyclopedia of the Medical Sciences." His writings include a great variety of subjects, anatomical, physiological, and clinical, of which the following are the most important: "Syphilitische Affectionen der Extremitäten und Schädelknochen," Berlin, 1870 (inaugural dissertation); "Die Rhinoskopischen Untersuchungs- und Operations-Methoden," Berlin, 1878, in Volkmann's "Sammlung Klinischer Vorträge"; "Ueber die Folgen von Drucksteigerung in der Paukenhöhle und die Funktionen der Bogengänge," in "Archiv für Physiologie," 1881, pp. 201-235; "Die Funktion der Gehörschnecke," in "Archiv Anat. und Physiol." 1883, xciv. 61-65; "Ueber den Ursprung und den Centralen Verlauf des Nervus Acusticus des Kaninchens," in "Archiv für Pathologie und Anatomie," Berlin, 1886, pp. 28-46; "Ueber Untersuchungen des Kleinhirns," in "Archiv für Physiologie," 1881, pp. 560-566; "Hörsphäre und Ohrenbewegungen," in "Archiv für Physiologie," 1892, pp. 227-235; "Zur Entwicklung der Gehörschnecke," in "Archiv für Mikroskopische Anatomie," 1886-87, xxviii. 14-37; "Ueber das Cholesteatom des Ohres," in "Berlinische Klinische Wochenschrift," 1894, xxxi. 598, 629; "Des Phénomènes du Vertige dans les Lésions de l'Oreille," in "Revue Neurologique," Paris, 1881.

**BAGNOL.** See LEVI B. GERSHON.

**BAGOAS:** 1. General of the Persian king Artaxerxes Ochus (359-338 B.C.); is called "Bagoses" by Josephus ("Ant." xi. 7, § 1). He interfered in the Jewish party struggles, and forced an entrance into the sanctuary. 2. Eunuch of Herod the Great. He was implicated in a conspiracy against the life of Herod, instigated by four women in the royal palace and supported by the Pharisees. The Pharisees predicted that Bagoas would be king of the Jews and that he would beget children in some wonderful manner. The conspiracy was discovered by Salome; and Herod, old and near his end, finding that his fears of assassination were not without foundation, had Bagoas executed (Josephus, "Ant." xvii. 2, § 4). According to the Mishnah (Yeb. viii. 4), a person born a eunuch had the power of healing; and through this the above-mentioned story finds confirmation. As a special instance, the Mishnah mentions a certain Ben Megusat, of Jerusalem, who was, however, made a eunuch. As classical authors (Ovid, "Amores," ii. 2, 1; Pliny, "Historia Naturalis," xiii. 4) use the word "bagoas" as the equivalent of "eunuch," it may perhaps be assumed that the "Megusat" of the Mishnah is a form of the same word.

**BAGRATUNI** (also called **Bagarat**): The ancestors of the Armenian-Georgian family of **Bagrati**, the first family entered in the list of the Russian nobility (published by Count Aleksandr Bobrinsky, under the title "Dvoryanskic Rody," St. Petersburg, 1890). The Bagratians or Bagratuni claim to be descendants of King David of Israel. Moses of Chorene wrote his "History of Armenia" at the request of Isaac Bagration (Sahak Bagratuni) in the middle of the fifth century. This historian gathered his information from the Syrian historian Mar Abbas Katina, who, according to Emin, lived about 150 B.C., and, according to others, in the third century C.E. Moses states that King Hracheye (fierce eyes) joined Nebuchadnezzar in his first campaign against the Jews, and took part in the siege of Jerusalem. From among the captives he selected the distinguished Jewish chief Shambat or Smbat (Sabbat) and brought him with his family to Armenia. From this Shambat the Bagratuni claim descent; and "Smbat" often occurs as a praenomen in the family. Vaharsaces I. (2d century B.C.) granted Shamba Bagarat, his counselor, "the mighty and wise man from among the Jews," the hereditary office of placing the crown on the king's head at the coronation. It is said that Bagarat with his regiments took part in the campaign of Vaharsaces against the Macedonians. When Vaharsaces built a temple in Armavira, he in vain requested the Jew Shamba Bagarat to renounce the Jewish faith and to worship the idols. Arsaces I., son of Vaharsaces (128-115 B.C.), however, forced the sons of Bagarat to do this. Two of them gave up their lives for the faith of their fathers, but the others agreed to go hunting and participate in war on Sabbath-days, and not to circumcise their boys.

Under Tigranes II. (first century B.C.), the persecution of the Jews continued; and one of the Bagarats, named Asud, had his tongue cut off for refusing to worship the idols. Under Arthsham, Euanos, the head of the family, had the alternative placed before him of worshiping idols or of being crucified. A relative, Saria, was put to death in his presence; and then he and his whole house foreswore Judaism.

When Thaddai, the disciple of the apostle Thomas, came to the city of Edessa, he stopped at the house of the Jewish magnate Tobias, a descendant of the family of Bagratuni. This Tobias once fled from the king Arthsham, being determined not to renounce the Jewish faith.

Among the Bagratunis the following Jewish names were common: Bagadia, Tobia, Senekia (Zedekiah), Assud, Sabbatia, Azaria, Euanos (Hananiah). The family became very powerful, and in the tenth century of the common era ascended the thrones of Armenia and Georgia. These names are to the present day preserved in the families of Bagration.

The foregoing account of the origin of the Bagratuni rests upon the history of Moses of Chorene. Another Armenian historian, Bishop Sebeos, who lived in the seventh century, gives, instead of Shamba Bagarat, Bagarat-Tarazian "from the descendants of Armaniak, the son of Haik, the ancestor of the Armenians" ("Istoria Pokhoda Iraka v Persiu," p. 12; and Von Gutschmidt, who in his

"Kleine Schriften," iii. 282 *et seq.* suggests that Moses of Chorene as a court historian was forced to dissemble the real origin of the Armenian dynasty in the interests of Shabat Bagratuni, who led the revolt against Persian domination).

I. Berkhin, in his "Rod Bagratuni," in comparing the two different accounts, shows (1) that the sources of Sebeos were known to Moses, who (book i., ch. xxii.) warns his readers not to believe "such foolish words, which have not even a semblance of truth"; (2) that the vast acquaintance with the historical literature of his time and the conscientiousness of Moses of Chorene, "the Tacitus of the Armenians," are thoroughly proved, while about the character of the material of Sebeos we have no basis upon which to judge; (3) that Moses of Chorene, being affectionately disposed to the family, would have been glad to give them a pedigree as descending from Haik, the father of the nation, if his conscience would allow him to believe it to be the truth; (4) the typical Jewish names of the Bagratuni family (quoted above). Ewin, the Russian translator of Moses of Chorene, one of the best authorities on Armenian history, expressed himself, at the Fifth Archeological Congress, 1880, as follows: "Vaharslak gives his attention to the *Jew* Bagarat, the descendant of Shambat," etc. It should not be forgotten, however, that, according to Gutschmidt and other critics, Moses of Chorene's work is of a later date than the fifth century, and that his statements are open to question.

**BAHIA** (the Bay) or **SAN SALVADOR:** A city on the eastern coast of Brazil founded by the Portuguese in 1549. Its official name became Cidade do San Salvador da Bahia de Todos os Santos (The City of the Holy Savior in All Saints' Bay).

Although the year 1624 is generally assigned as the date of the earliest mention of Jews in Brazil, investigation shows that they lived there at a much earlier period.

As early as 1610 mention is made of the physicians of Bahia, who are described as being mainly New

**Ruled by the Portuguese.** Christians, who prescribed pork to lessen the suspicion and charges of Judaizing. Pyrard, the historian, who visited the place in 1610, states that a rumor was then afloat that the king of Spain "desires to establish the In-

quisition here, on which account the Jews are greatly frightened."

Whether the persons referred to by Pyrard were observers of the Jewish faith is doubtful; he probably meant persons of Jewish race. Certain it is that the open profession of Judaism was not tolerated at the time.

The beginnings of Jewish history at Bahia, as well as in other portions of Brazil, are wrapped in obscurity, mainly for the reason that the earliest Jewish settlers were Maranos or New Christians. They had left Portugal, when it became too dangerous for them to remain there, on account of the extreme vigilance of the Inquisition.

Though the Inquisition was never established in Brazil, its agents were there almost from the very beginning, and at a very early period New Christians were sent back to Europe to stand trial before the Holy Office. On this account it soon became necessary for the Maranos in the New World to wear the mask, much as they had done in their native land. Usually they kept their Judaism secret, particularly at Bahia, for that city soon became the seat of the Jesuits and the most Catholic place in the colony, numbering more than sixty-two churches at the beginning of the seventeenth century.

The secret Jews at Bahia seem to have been very numerous at the beginning of the seventeenth century. In 1618, Don Luiz de Sousa was especially charged by the Inquisition to send home a list of all New Christians in Brazil, with the most exact information that could be obtained of their property and place of abode. They were then among the wealthiest inhabitants of Bahia, some of them being worth from 60,000 to 100,000 crusados. "But," observes the historian, "they were despised by their bigoted countrymen, and were in constant danger of losing their property through the agents of the Holy Office."

At this period the Dutch commenced their ambitious schemes for the conquest of Brazil. In connection with some of the earliest intrigues, special mention is made of one Francisco Ribiero, a Portuguese captain stationed near Bahia, who is described as having Jewish relatives in Holland.

It was only when some great upheaval took place, or when some Protestant power obtained the upper hand in Brazil, that the Jewish population appeared distinctively as Jews. On such occasions the New Christians threw off the mask, joined the deliverer, and openly proclaimed their adherence to the ancient faith. While hundreds of secret Jews had lived at Bahia almost from its foundation, it was only at the period of the Dutch invasion that they appear as adherents of the Jewish faith. The Dutch war came to them as a relief, for it alone prevented the introduction of the Inquisition.

The Dutch relied for assistance on the Jews of Bahia and the comparatively large Jewish population of Brazil, when they prepared **Friendly to the Dutch.** their plans for the conquest of the country. The Dutch West India Company was formed in 1622 in furtherance of the project, and it is significant to note that one of the chief arguments in favor of the organization was, "that the Portuguese themselves, some from their hatred of Castile, others because of their intermarriage with New Christians and their conse-

quent dread of the Inquisition, would either willingly join or feebly oppose an invasion, and all that was needful was to treat them well and give them liberty of conscience."

The Dutch were not mistaken; when their fleet was sent against Bahia, they obtained from the Jews all the information they required. The city was captured in 1623, and, true to the policy mentioned, Willekens, the Dutch commander, at once issued a proclamation offering liberty, free possession of their property, and free enjoyment of their religion to all who would submit. This brought over about two hundred Jews, who exerted themselves to make others follow their example.

Unfortunately for the Jews, Bahia was recaptured by the Portuguese in 1625; and though the treaty provided for the safety of other inhabitants, the New Christians who had placed such trust in the Hollanders were abandoned, and five of them were put to death. Many of the New Christians seem to have remained, however, for they are again mentioned in 1630. Probably those who were allowed to remain had been "reconciled" by confiscation of property.

The Portuguese city of Recife was captured by the Dutch in 1631, and immediately thereafter most of the Jews or New Christians removed

**Removed to** from Bahia and elsewhere to that city.

**Recife.** It became the center of Jewish population, and was subsequently described as being "chiefly inhabited by Jews." But the authorities of Bahia became more intensely bigoted than before, and the slightest suspicion of Judaism meant transportation for trial.

After 1631, Jews appear in Bahia only individually, and then invariably in connection with arrest and trial by the Inquisition at Lisbon. The melancholy fate of Isaac de Castro Tartas may serve as an illustration. Contrary to the advice of his friends, he left Dutch territory to visit Bahia in 1646. He was at once seized, transported, and tried at Lisbon for Judaizing, and subsequently was burnt at an auto da fé.

Toward the end of the seventeenth century, Portugal banished to Brazil many New Christians who had become "reconciled." In time these became a distinct class at Bahia, and by the middle of the eighteenth century transportation of New Christians to Lisbon from Bahia and other cities had become so common that whole plantations lay idle in consequence, and ruin resulted. It was partly this that led the Marquis de Pombal to have laws enacted removing all disabilities from New Christians, making it penal for any one to reproach another for his Jewish origin, or to keep lists of persons of Jewish descent.

This deprived the Holy Office of its most effective means of accusation, and owing to these liberal provisions the New Christians were ultimately absorbed in the Catholic population of Brazil.

After 1765, and throughout the nineteenth century, Jews are not mentioned as a class at Bahia.

The city contains some Jewish residents to-day, and a list of the leading merchants published by the Bureau of American Republics contains a considerable number of unmistakable Jewish names, though these seem to be mainly of German origin.

The present constitution of Brazil guarantees to all liberty of conscience and worship.

**BAHIEL** (בַּהִיֶּל; shortened to בַּהִי; in Spanish documents, **BAHIEL**) **BEN MOSES OF SARA-GOSSA**: A physician of the thirteenth century. He was court physician to King James I. of Aragon, and in that capacity was present at the conquest of Majorca, where he rendered valuable service as interpreter between the Arabic-speaking Majorcan Moors and the conqueror, who understood only the Limousin dialect. In the dispute concerning Maimonides' writings, Bahiel made himself by his zeal the leading representative of the philosopher's defenders. In 1232 he wrote the appeal to the Jewish congregations of Aragon to recognize the excommunication pronounced upon Solomon ben Abraham of Montpellier and his associates.

**Solomon Bahiel**: Brother of the preceding; was also a physician and interpreter in the suite of King James I. He was the author of the Arabic proclamation in which the Moors were notified of the conquest of Majorca and summoned to acknowledge their submission ("Chronica del Glorios. e Invict. Rey En. Jaeme," Valencia, 1557, xl.). In the Maimonidean controversy Bahiel sided with his brother. He died in 1264. The "Confirmacion en Favor de Mosse hijo de Bahiel" and "á Favor de Salomon Bahiel," in regard to the legacy of Solomon Alfaqin, may perhaps refer to two sons of Solomon Bahiel. They are dated 3 Kal. April, 1264, and 6 Id. May, 1264.

M. K.

**BAHIR** (full title, **SEFER HA-BAHIR**—"The Luminous Book"), or **MIDRASH R. NEHUNYA BEN HA-KANAH**: Pseudonymous work attributed to the tanna Nehunya ben ha-Kanah, a contemporary of Johanan ben Zakkai (first century) because it begins with the words, "R. Nehunya ben ha-Kanah said" (אמר ר' נחוניא בן הקנה). No reference, however, to the work is to be found in Jewish literature before the thirteenth century.

**Authorship** which fact is sufficient to dispose of the idea that the authorship can be **Erroneously ascribed** to Nehunya. Nahmanides, in his commentary on the Pentateuch (Gen. i.), or, according to Steinschneider, Ephraim ben Samson (compare "Hebr. Bibl." 1872, xii. 116; 1874, xiv. 132) was the first to quote the work under the title "Midrash R. Nehunya ben ha-Kanah." The "Bahir" contains cabalistic explanations on the vowels and accents, which were introduced into Hebrew about the seventh century.

The opinion now prevailing is that the "Bahir" was written in the thirteenth century by ISAAC THE

BLIND, or in his school (compare Bahya ben Asher's commentary on the Pentateuch, Ex. xxiv.). The first sentence, *ועתה לא ראו אור בהיר הוא בשחקים*, "And now men see not the light which is bright in the skies" (Job xxxvii. 21), being isolated, and having no connection with what follows, is taken to be an esoteric allusion to the blindness of its author (compare Landauer, in *Literaturblatt des Orients*, vi. 215; Jellinek, "Auswahl," p. 14).

The "Bahir" assumes the form and style of an exegetic Midrash on the first chapters of Genesis. It is divided into sixty short paragraphs, and is in the form of a dialogue between master and disciples. The names which occur most frequently are those of Rehuma, R. Amoraï, and R. Berekiah, who are otherwise unknown. Except in the first sentence, the name of Nehunya ben ha-Kanah is never mentioned.

The world, according to the "Bahir," is not the product of an act of creation. Like God, it existed from all eternity, not only in potential-

**Its View of** ity, but in actuality; and the Creation **Creation.** consisted merely in the appearance of that which was latent in the first

"Sefirah," "Or ha-Ganuz," or, as it is called, "Keter 'Elyon," which emanated from God. This Sefirah gave birth to "Hokmah" (Wisdom), from which emanated "Binah" (Intelligence). From these three, which are the superior "Sefirot" or "Ma'amarot," and form the primary principles of the universe, emanated, one after another, the seven inferior Sefirot from which all material beings are formed (compare Pirke R. El. iii., *בעשרה מאמרות נברא העולם*, "וכשלושה כוללי", "Through ten ma'amarot the world was created, which are reduced to three," etc.). All the ten Sefirot are linked one to the other, and every one of them has an active and a passive quality—emanating and receiving. The efflux of one Sefirah from another is symbolized in the form of the letters of the Hebrew alphabet. Thus the gimel (ג), shaped like a tube open at each end, represents a Sefirah, which receives strength at one end and discharges it at the other. The ten Sefirot are the energy of God, the forms in which His being manifests itself.

The "Bahir" adopts metempsychosis and solves by it the question why the just suffer in this world, while the wicked are prosperous: "The just may have been wicked in their former lives, and the wicked righteous" (§ 58).

These are the main theories developed in the "Bahir," with many digressions of parables and mystic explanations of diverse precepts and of letters and vowels. The influence of the

**Similarity** "Sefer Yezirah" is evident. The most **to the** striking example of its dependence

**"Sefer** on the "Sefer Yezirah" is its explanation of the raising of the hands ("nesiat kappayim") by the priests in pronouncing the benediction:

<p>"BAHIR," § 48.</p> <p>משום ראה בידים עשר אצבעות רמו ליי ספירות</p> <p>"Because the hands, having ten fingers, allude to the ten Sefirot."</p>	<p>"YEZIRAH," i. 3.</p> <p>עשר ספירות בלימה כנגד עשר אצבעות</p> <p>"The ten 'Sefirot belimah' (out of naught) are analogous to the ten fingers."</p>
--	--

Although, considered by itself, the "Bahir" is a dull work, full of contradictions and one of the most

obscure of books, it is very important for the history of the development of Jewish mysticism; being a rough outline of what the Zohar was destined to be. The fact that the titles

**An Outline** of both are synonyms—one drawn **of the** from the verse in Job (xxxvii. 21), **Zohar.** "which is bright ['bahir'] in the skies"; the other, from a similar verse in Daniel (xii. 3), "And they that be wise shall shine as the brightness ['ke-zohar'] of the firmament"—is very suggestive.

Another interesting point in the "Bahir" is the strange emphasis laid upon a celestial trinity, which became even more accentuated in the later cabalistic writings ("Bahir," § 48).

**BAHRAM GOR.** See PERSIA.

**BAHRAM TSHUBIN** ("The Wooden"): Persian general; king of Persia from June 27, 590, to June 26, 591. Hormiz IV. (578-590), through his cruelty, brought the empire to the brink of destruction. His subjects were dissatisfied; and the political enemies of Persia entered its territory and possessed themselves of the country. The Jews were barbarously persecuted at the instigation of the Magi, and the academies of Sura and Pumbedita were closed. Bahram, after having delivered his country from the enemies, rose against the unworthy king, dethroned him, and threw him into prison, in which he was murdered in 590.

At first, Bahram governed in the name of Prince Chosroes II.; but soon ascended the throne in his own name. The Jews of Persia and Babylonia seem to have hailed him as their deliverer, for the Byzantine historian Theophylactus Simocatta tells us that they supported him with troops and money against the Persian nation, which turned toward Chosroes II. (Parviz), the heir of Hormiz, though the Persian and Arabic sources know nothing of this. Bahram showed himself grateful to the Jews, and the reopening of the academy at Pumbedita under Mar bar Rab Hanan, of which Sherira speaks, may be due to the benevolence which Bahram showed those who had aided him.

Unfortunately Bahram's rule did not last. Maurice, the Byzantine emperor, to whom Prince Chosroes had fled, sent an army with which the Persians united to make war upon Bahram, and the Jews paid dearly for their attachment to the usurper. At the capture of Mahuza, a town containing a large Jewish population, the Persian general Mebodes put the greater part of the Jews to death. Bahram's army was vanquished, and he himself compelled to take refuge with the Huns.

**BAHTAWI, ABU YA'AKUB JOSEPH, THE BABYLONIAN:** Karaite scholar; flourished in the ninth century. He was called "the teacher of the diaspora," and esteemed for his brilliant intellect. None of his works has survived; but many of them are known by quotations made by Karaite writers. Solomon b. Yeruham, in his "Mukaddimah" (Introduction to the Decalogue), mentions Bahtawi's "Sefer ha-Mizwot" (Book of Precepts); and Jephth ben Ali in his commentary upon the Book of Daniel refers to Bahtawi's Biblical commentaries. Bahtawi was known chiefly as "ha-medakdek" (the grammarian), and his etymologies are quoted by the Karaite lexicographer David b. Abraham Alfasi. Bacher identifies him with Abu Ya'akub Joseph ben Noah, but this is questioned by Poznanski.

**BAHUR** (בָּהוּר; plural בָּהוּרִים, **BAHURIM**): "A youth," particularly a student of the Talmud among the Ashkenazic Jews; called also "yeshibah bahur" (academy youth), and in Yiddish, "oren boher" (poor young man). In Biblical Hebrew the word signifies an adult but unmarried youth; in Neo-Hebrew also a young married man (Ruth R. iv. 10; "Bahurah," the feminine, is also employed to designate a young married woman, Gen. R. lxxi. 9). From the end of the fourteenth century, however, "Bahurim" has become the standard expression for students of the Talmud, who were generally youthful. In the responsa of MaHaRIL, No. 96, the word "Bahur" seems to be a title of honor for married men also; and Rabbenu Tam, in "Sefer ha-Yashar," ed. Rosenthal, Num. xxvii., beginning, even applies to a certain great scholar the expression "Bahur zaken." Compare also "Shibbole ha-Lešet," pp. 55, 267.

From the fourteenth century, descriptions of the life of the Bahur are numerous, and they afford valuable information not only concerning the condition of Talmud-study in those days, but also of the social and intellectual life of the Jews at large. The persecutions after the Black Death (1348) decimated many flourishing Jewish communities; the pestilence itself, massacre, conversion to Christianity, and emigration made terrible inroads into their numbers. Under such circumstances those parents

with that careful religious education which had been customary among them; their own needs and the uncertainty of their position effectually preventing this. Moreover, the academies and study-houses for adult use, which had been, in happier days, a part of every Jewish community in Germany, were closed. It was under such conditions that the wandering life of the Bahur came into existence: he journeyed from town to town; traversing various countries, and halting now and again to sit at the feet of some scholarly rabbi. This vagabond life entailed the utmost poverty, and many such students were exposed to assault and murderous attack by the way; nevertheless, they

devotedly begged their way from the Rhine to Vienna, from North Germany to Italy.

But such a life was not of a nature to exert the best moral or scholarly influence over young men; and many found the chief attraction in its adventurousness. Even when a Bahur settled permanently in a town, in order to prosecute his studies earnestly, his life became by no means enviable. In his relation to his teacher, who was usually the rabbi of the town, nothing was left to be desired: the rabbi was always considerate and tender toward his pupils, who, on their part, evinced the greatest reverence for their "master." His relations to the members of the community were not always so genial; as, for instance, when so mild a man as the Maharil excommunicated a member of the congregation for employing an insulting expression to a Bahur. This rabbi, who had never before laid a ban upon any one, felt compelled to uphold the honor of the Bahurim by such an extreme measure.

The Bahurim were generally lodged in the Bahurim-house, an institution usually found, at the beginning of the fifteenth century, in every city whose rabbi had, by his learning, proved an attraction to itinerant students. The cost of their maintenance was defrayed by voluntary contributions from every quarter, although it is not clear whether they received their meals in the Bahurim-house or, as in later times, were sent for their daily food to the tables of the more affluent members of the community. Güdemann's endeavor to throw light upon this point ("Geschichte des Erziehungswesens," iii. 87) is hardly satisfactory. Frequently the rabbis lived with the Bahurim, exerting thus a very beneficial influence upon them; and when they did not actually dwell together, the students were repeatedly invited to the rabbi's table on special occasions. On the last day of Passover, on the first of Pentecost, and on Purim, the Bahurim and some members of the congregation were always invited to a little festive gathering at the rabbi's house. To these meals witty and sagacious questions from the field of their studies lent special zest; and on Hanukkah the Bahurim were encouraged to launch all manner of riddles, rimes, and anecdotes. The special "Scholars' Feast" was, however, LAG BA-OMER (the 33d of the 'Omer), when trips into the country were made amid much rejoicing and merrymaking; for the students never permitted themselves to feel overcome by the earnestness of their Talmudic studies to a degree that would deprive them of all taste for the jovial and happy side of life. They were the custodians of Jewish wit, too few expressions of which have, unfortunately, been preserved, but that distinguished itself in ingenious and surprising applications of Bible verses and Talmudic passages to passing circumstances, and of which some specimens have been published by Brüll, from a manuscript, in his "Jahrbuch" (ix. 16-19). From these applications gradually developed those numerous parodies which arose in Neo-Hebrew literature. There were, of course, black sheep among these Bahurim, who distinguished themselves by excesses in one way or another and occasioned much sorrow to the community; some, indeed, were even guilty of setting up shameful opposition to their teachers

(Israel Bruna, Responsa, No. 203; Güdemann, *l.c.* p. 88).

The Bahurim circles of the fifteenth century contributed a peculiar form of literature, which received the name of "Kobez" or "Liḳḳuṭim" (Collection). Their poverty precluded the possession of anything like an adequate supply of books for their studies; they would, therefore, remain until any hour of the night in their rabbi's library, copying into manuscript-books such portions of valuable manuscripts, lectures, and responsa as they needed, to which they added learned remarks, gathered from all sources, and much of their own thought as well. Not a few yielded to this opportunity for plagiarism, and published their "Collections" as original; indeed, it even sometimes happened that when a rabbi availed himself of the services of some promising scholar as amanuensis, the latter covertly made a second copy of the work and proclaimed it as his own.

The preceding details refer, of course, only to the early part of the fifteenth century. The invention of printing gradually relieved the scarcity of books; from the time of the Reformation the social life of the Jews became more stable and secure, though perhaps not much happier; and the itinerant life of the Bahur gradually ceased. From the middle of the sixteenth century, Talmudic study centered in Poland and there attained a development till then unequalled. The Jews in Poland were moderately prosperous as late as the Cossack persecutions (1648); and the Bahurim shared in the general happiness. In families having marriageable daughters, the poor but scholarly German Bahur became a welcome "eligible." The annual fairs at Lemberg and Lublin, Jereslaw and Saslow were thronged by rabbis, with their most intellectually promising Bahurim, and by fathers of female candidates for matrimony; and the greater the intellect on the one side, the greater the dower on the other. Nathan Hannover, an eye-witness of the Cossack persecutions, in his work "Yewen Meẓulah," 11*a* (ed. Venice), gives the following description of the position of the Bahur in Poland in his time: "In every congregation there are Bahurim, who receive weekly stipends to enable them to pursue their studies with the head of the yeshibah. Each Bahur took charge of two boys (just as the Christian students did in Germany), to whom they would impart instruction, and for these lads also the congregation provided meals. Nevertheless many wealthy members of the congregation considered it an honor to have the Bahur and his charges as guests at their table, although the congregation sufficiently provided for their support." The cruel persecutions of the Polish Jews in the second half of the seventeenth century resulted in the emigration of the leading Talmudists of Poland to Germany, and with them went their Bahurim (see Auerbach, "Gesch. der Israelitischen Gemeinde Halberstadt," p. 64, concerning Hirsch Bialeh). Poland still remained, however, the classic land for the study of the Talmud; and the Polish Bahur of 1902 can, therefore, look back upon four centuries of history in that country.

The ideal of a Polish Bahur to-day is the same as of old; namely, to become a thorough Talmudist, and

to this end he will sacrifice every comfort and advantage. As regards privations and sufferings, his life is similar to that of the German Bahur of the fourteenth century. Such a one, probably already developed into an expert Talmudist in his native

town, travels to some yeshibah, or to a place where he can prosecute his studies, with others like himself, without any teacher. In the former case he is restricted to the very limited maintenance afforded him by the yeshibah, the funds of which frequently barely suffice to furnish bread and water. Somewhat more favorable is the condition of a Bahur who settles in a town where there is no yeshibah, and who finds there many pious Jews willing to give him a "day"; that is, a day's meals. This custom of feeding the Bahurim by billeting them daily upon the members of the community originated in Poland (see Nathan Hannover, *l.c.* 11*a*, and compare also W. Buchner, "Zebed ha-Melitzah," 1*a*, toward the end), and spread to Germany. Through the influence of Elijah Wilna the system was abolished in most Lithuanian yeshibot, and to-day it is to be found only in certain towns where a few Bahurim dwell. Even in these places it is now considered a somewhat degrading mode of providing for the Bahurim (compare Bernstein, in "Ha-Shahar," vi. 405, 406, who draws, however, too dark a picture). On the other hand, a man like Judah Löb Gordon can not withhold his admiration for the enthusiasm, frugality, and idealism of the yeshibah Bahur; and in a truly poetical manner he compares the fate of the Bahur with that of Israel in general (Judah Löb Gordon, "Shire Jehudah," iii. 86, 87).

In Germany, from the time of Mendelssohn, the yeshibot, with their Bahurim, rapidly grew fewer, and within the last fifty years they have entirely disappeared. Now the word "Bahur" denotes an awkward, helpless fellow who has not discarded the clumsy ways of the Ghetto. Börne calls Heine a Bahur because he "cracks jokes in a genuinely Jewish manner"; while Varnhagen von Ense, in a letter to E. Gans, pays the same compliment to Börne in the words, "He is as genuine a Frankfort Bahur, with all the faults of one—possibly with all the virtues of one—as there ever can be" (Karpeles, in the "Allg. Zeitung des Judenthums," lxx. 451, 452). Hungary contains to-day many yeshibot with their attendant Bahurim, many of whom every year enter the regular rabbinical seminaries. The proverb runs there and in other lands, "You can make anything out of a Bahur," thus indicating the fact that on leaving the yeshibah most Bahurim enter any of the avenues of commerce or professional life. See EDUCATION, PILPUL, TALMUD TORAH, YESHIBAH.

**BAHUR, ELIJAH.** See LEVITA, ELIJAH.

**BAHURIM:** A locality in Benjamin to which Phaltiel accompanied his wife Michal from Gallim, when she was being conducted to David at Hebron

(II Sam. iii. 16). After David, in his flight from Absalom, had passed over Mt. Olivet, he came to Bahurim, where he was confronted by Shimei, who cursed him (II Sam. xvi. 5; compare xix. 17; I Kings ii. 8). Shortly afterward, Jonathan and Ahimaaz, of priestly descent, having been discovered in their place of concealment at En-rogel, betook themselves to Bahurim, where they hid themselves in a well (II Sam. xvii. 18). This town, which, according to Josephus ("Ant." vii. 9, § 7), was situated in the neighborhood of Jerusalem, existed at the time of Antoninus (ed. Gildemeister, p. 12). The Targum identifies Bahurim with Almon (Jos. xxi. 18), the present 'Almêt, which lies to the northeast of Anatoth; and the same view is maintained by Schwarz, Marti, and others. The assumption of von Kasteren is more probable, however, that the places are not the same, and that Bahurim lay on the old road from Jerusalem to Jericho, where its site is marked by some ruins ("Zeit. Deutsch. Paläst. Ver." xiii. 101 *et seq.*).

**BAHYA (BEHAI) BEN ASHER BEN HALAWA:** One of the most distinguished of the Biblical exegetes of Spain; born about the middle of the thirteenth century at Saragossa; died 1340. A pupil of Solomon ben Adret, Bahya did not, like his eminent teacher, devote his attention to Talmudic science, but to Biblical exegesis, taking for his model Moses ben Nahman, the teacher of Solomon ben Adret, who was the first to make use of the Cabala as a means of interpreting the Scriptural word. He discharged with zeal and

**Introduces** earnestness the duties of a darshan in Saragossa, sharing this position with several others, and on this account receiving but a small salary, which was scarcely enough to support him and his family; but neither his struggle for daily bread nor the reverses that he suffered (to which he referred in the introduction to his commentary on the Pentateuch) diminished his interest in religious studies in general, and in Biblical exegesis in particular.

Bahya's principal work was his commentary on the Pentateuch, in the preparation of which he thoroughly investigated the works of former Biblical exegetes, using all the methods employed by them in his interpretations. He enumerates the following four methods, all of which in his opinion are indispensable to the exegete: (1) The "Peshat," or the simple and direct exposition advocated by Rashi and Hananel ben Hushiel, whom Bahya recognizes as authorities, and whose works he industriously employs. (2) The "Midrash," or the haggadic exegesis, accorded considerable space in his commentary; there being scarcely a haggadic work which has not been employed by him. However, he usually confines himself to a literal quotation without further exposition. (3) The method of *Reason*, or philosophical exegesis, the aim of which is to demonstrate that philosophical truths are already

**His Commentary.** embodied in Holy Writ, which as a work of God transcends all the wisdom of man. He therefore recognizes the results of philosophical thought only in so far as they do not conflict with Scripture and tradition.

(4) The method of the *Cabala*, termed by him "the path of light," which the truth-seeking soul must travel. It is by means of this method, Bahya believes, that the deep mysteries hidden in the Scriptural word may be revealed, and many a dark passage elucidated.

Bahya's commentary derives a particular charm from its form. Each parashah, or weekly lesson, is prefaced by an introduction preparing the reader for the fundamental ideas to be discussed; and this introduction bears a motto in the form of some verse selected from the Proverbs. Furthermore, by the questions that are frequently raised the reader is compelled to take part in the author's mental processes; the danger of monotony being also thereby removed. The commentary was first printed at Naples in 1492; and the favor which it enjoyed is attested by the numerous supercommentaries published on it. Owing to the large space devoted to the Cabala, the work was particularly valuable to cabalists, although Bahya also availed himself of non-Jewish sources. Later editions of the commentary appeared at Pesaro, 1507, 1514, and 1517; Constantinople, 1517; Rimini, 1524; Venice, 1544, 1546, 1559, 1566, and later. Not less than ten supercommentaries are enumerated by Bernstein ("Monatschrift," xviii. 194-196), which give further evidence of the popularity of the work.

Bahya's other great work, the "Kad ha-Ḳemah" (Flour-Jar), called by David Gans "Sefer ha-Derashot" (Book of Discourses), consists of sixty chapters, alphabetically arranged, containing discourses and dissertations on all the requirements of religion and morality as well as on the principal ceremonial ordinances. Its purpose is to preserve and promote the religious and moral life. In clear and simple language, and with great minuteness of detail, the author discusses the following subjects: belief and

**Other Works.** faith in God; the divine attributes and the nature of Providence; the duty of loving God, and of walking before Him in simplicity and humility of

heart; the fear of God; prayer, and the house of God; benevolence, and the love of mankind; peace; the administration of justice, and the sacredness of the oath; the duty of respecting the property and honor of one's fellow-man; the high value of the days consecrated to God, and of the ceremonial ordinances. The entire work is distinguished by a fervid piety, coupled with broad-mindedness which can not fail to appeal to the heart of the reader. It lays special stress on the duty of righteousness toward the non-Jewish brother. Numerous passages are borrowed from his own commentary and from the works of Abraham ben Hiyyah and of Moses b. Nahman. While the commentary on the Pentateuch was written for the scientifically educated, the "Kad ha-Ḳemah" was intended for a wider circle of readers. Of the many editions which appeared, the first one is that of Constantinople, 1515; then one in Venice, 1545; Lublin, 1596, and others; a critical edition by Breit, Lemberg, 1880. A third work of Bahya, also published frequently, and in the first Mantua edition of 1514 erroneously ascribed to Moses ben Nahman, bears the title of "Shulhan Arba'" (Table of Four [Meals]). It consists of four chap-

ters, the first three of which contain religious rules of conduct regarding the various meals, while the fourth chapter treats of the banquet of the righteous in the world to come.

A fourth work of Bahya, edited by M. Homburg under the title of "Soba' Semahot" (Fulness of Joy), as being a commentary on Job, is, according to B. Bernstein, in "Magazin für die Wissenschaft des Judenthums," xviii. 41, nothing but a compilation of the two last-mentioned works of Bahya.

A fifth work written by Bahya under the title of "Hoshen ha-Mishpat" (Breastplate of Judgment), to which reference is once made in his commentary as a book in which he dwelt at greater length on the nature and the degrees of prophecy, has been lost. Another cabalistic-exegetical work by Bahya under the title "Sefer ha-Emuna weha-Bittahon" (Book on Belief and Trust), edited first in a collection, "Arze Lebanon," Venice, 1601, only the first chapter of which justifies the title, while the following twenty-five chapters treat of the name of God, prayer, the benedictions at meals, the Patriarchs and the Twelve Tribes, has also been erroneously ascribed by the copyists to Moses ben Nahman (see Perles, "Monatsch." vii. 93; Steinschneider, "Cat. Bodl." col. 1964; Jellinek, "Beiträge z. Kabbala," i. 40 *et seq.*), but has been shown by Reifmann ("Ha-Maggid," 1861, p. 222) and Bernstein (*l.c.* 34) to have all the characteristics of Bahya's method and style, and appears to be older than his commentary. Bahya's works possess especial value both for the student of Jewish literature, owing to the author's copious and extensive quotations from Midrashic and exegetical works which have since been lost, and for the student of modern languages on account of the frequent use of words from the vernacular (Arabic, Spanish, and French) in explanation of Biblical terms. They also contain interesting material for the study of the social life as well as for the history of the Cabala, the demonology and eschatology of the Jews in Spain, as Bernstein in his instructive article (*l.c.*) has shown.

K. P. B.—K.

**BAHYA BEN JOSEPH IBN PAKUDA** (also known as **Behay** and **Bahie**): Dayyan and philosopher; flourished at Saragossa, Spain, in the first half of the eleventh century. He was the author of the first Jewish system of ethics, written in Arabic in 1040 under the title "Al Hidayah ila Faraid al-Kulub" (Guide to the Duties of the Heart), and translated into Hebrew by Judah ibn Tibbon in the years 1161-80 under the title "Hobot ha-Lebabot" (Instruction in the Duties of the Heart). Of his life nothing is known except that he bore the title of dayyan or judge at the rabbinical court. In composing the work toward the close of his life, Bahya desired, as he says in the introduction, to supply a great need in Jewish literature, neither the Talmudists nor the philosophical writers having theretofore made any attempt to bring the ethical teachings of Judaism into a system. Bahya found, on the one hand, the majority of the rabbis paying attention only to the outward observance of the Law, "the

duties to be performed by the parts of the body" ("hobot ha-ebarim"), without regard to the ideas and sentiments embodied in the 613 laws of Moses, "the duties of the heart" ("hobot ha-leb"); and, on the other hand, the people at large disregarding all duties incumbent upon them, whether outward observances or moral obligations. Even the student of the Law was often prompted

**System of Ethics.** only by selfish and worldly motives.

Bahya therefore felt impelled to make an attempt to present the Jewish faith as being essentially a great spiritual truth founded on Reason, Revelation (the written Law), and Tradition, all stress being at the same time laid on the willingness and the joyful readiness of the God-loving heart to perform life's duties.

An original thinker of high rank, thoroughly familiar with the entire philosophical and scientific Arabic literature, as well as with the rabbinical and philosophical writings of the Jews (of which he gives a valuable synopsis in the introduction), Bahya combined in a rare degree great depth of emotion, a vivid poetic imagination, the power of eloquence, and beauty of diction with a penetrating intellect; and he was therefore well fitted to write a work the main object of which was not to argue about and defend the doctrines of Judaism, but to appeal to the sentiments and to stir and elevate the hearts of the people. He was also broad-minded enough to quote frequently the works of non-Jewish moral philosophers, which he used as a pattern. The "Hobot ha-Lebabot" was intended to be, and it deservedly became, a popular book among the Jews throughout the world, and parts of it were recited for devotional purposes during the Penitential Days, as is the penitential hymn "Bareki Nafshi," composed by Bahya, which, embodied in the Roman ritual, has found a place also in Einhorn's and Jastrow's liturgies for the Day of Atonement.

From the style of his writings and the frequent and apt illustrations he uses, it appears more than probable that Bahya was a preacher of rich experience; while his great personality—a soul full of the utmost piety coupled with touching humility and a spirit of tolerance—shines through every line. Though he quotes Saadia's works frequently, he belongs not to the rationalistic school of the Motazilites whom Saadia follows, but, like his somewhat younger contemporary, Solomon ibn Gabirol (1021-1070), is an adherent of Neoplatonic mysticism, often closely imitating the method of the Arabian encyclopedists known as "the Brothers of Purity," as has been shown by Kaufmann, "Die Theologie des Bachya ibn Pakuda," pp. 202-204. Strangely inclined to contemplative mysticism and

**Bahya's Neo-platonism.** asceticism, Bahya had nevertheless the common sense to eliminate from his system every element that might obscure the pure doctrine of Jewish monotheism, or might interfere with the sound, practical teachings of the Mosaic and rabbinical law. He wanted to present a religious system at once lofty and pure and in full accord with reason.

The many points of contact that Bahya has with Ibn Gabirol and Gazzali (1059-1111) have led Rosin and Brüll to assume that Bahya borrowed largely from

both, and that consequently he lived at a later time than is assumed by Kaufmann, who holds that both Ibn Gabirol and Gazzali were indebted to Bahya (see Kaufmann, *l.c.* pp. 194, 198, 207; Rosin, "Die Ethik des Maimonides," p. 13; Brüll, "Jahrb." v. 71 *et seq.*).

The "Hobot ha-Lebabot" is divided into ten sections termed "gates," corresponding to the ten fundamental principles which, according to his view, constitute man's spiritual life. The essence of all spirituality being the recognition of God as the one maker and designer of all things, Bahya makes the "Sha'ar ha-Yihud" (Gate of the Divine Unity, or of the monotheistic faith) the first and foremost section. Taking the Jewish Confession, "Hear, O Israel: the Lord our God the Lord is One," as a starting-point, the author emphasizes the fact that for religious life it is not so much a matter of the intellect to know God as it is a matter of the heart to own and to love Him. Yet it is not sufficient to accept this belief in God without thinking, as the child does, or because the fathers have taught so, as do the blind believers in tradition, who have no opinion of their own and are led by others. Nor should the belief in God be such as might in any way be liable to be understood in a corporeal or anthropomorphic sense, but it should rest on conviction which is the result of the most comprehensive knowledge and research. Far from demanding blind belief—which is

**His Religious Philosophy.** anything but meritorious—the Torah, on the contrary, appeals to reason and knowledge as proofs of God's existence, as is shown, for instance, in Deut. iv. 6. It is therefore a duty incumbent upon every one to make God an object of speculative reason and knowledge, in order to arrive at true faith.

Without intending to give a compendium of metaphysics, Bahya furnishes in this first gate a system of religious philosophy that is not without merit. Unfamiliar with Avicenna's works, which replaced Neoplatonic mysticism by clear Aristotelian thought, Bahya, like all the Arabian philosophers and theologians before him, bases his arguments upon Creation. He starts from the following three premises: (1) Nothing creates itself, since the act of creating necessitates its existence (so also Saadia, "Emunot," i. 2); (2) the causes of things are necessarily limited in number, and lead to the presumption of a first cause which is necessarily self-existent, having neither beginning nor end, because everything that has an end must needs have a beginning; (3) all composite beings have a beginning; and a cause must necessarily be created. The world is beautifully arranged and furnished like a great house, of which the sky forms the ceiling, the earth the floor, the stars the lamps, and man is the proprietor, to whom the three kingdoms—the animal, the vegetable, and the mineral—are submitted for use, each of these being composed of the four elements. Nor does the celestial sphere, composed of a fifth element—"Quinta Essentia," according to Aristotle, and of fire, according to others—make an exception. These four elements themselves are composed of matter and form, of substance and accidental qualities, such as warmth and cold, state of motion and of rest, and so forth. Consequently the universe, being a combination of many forces, must have a creative power as

its cause. Nor can the existence of the world be due to mere chance. Where there is purpose manifested, there must have been wisdom at work. Ink spilled accidentally upon a sheet of paper can not produce legible writing.

Bahya then proceeds, following chiefly Saadia and the Motekallamin (teachers of the Kalam), to prove the unity of God by showing: (1) All classes, causes, and principles of things lead back to one principal cause. (2)

The harmony of all things in nature, the interdependence of all creatures, the wondrous plan and wisdom displayed in the structure of the greatest and smallest of animal beings, from the elephant to the ant, all point to one great designer—the physico-theological argument of Aristotle. (3) There is no reason for the assumption of more than one creator, since the world manifests but one plan and order everywhere. No one would without sufficient cause ascribe a letter written altogether in the same style and handwriting to more than one writer. (4) The assumption of many creators would necessitate either a plurality of identical beings which, having nothing to distinguish them, could not but be one and the same—that is, God—or of different beings which, having different qualities and lacking some qualities which others possess, can no longer be infinite and perfect, and therefore must themselves be created, not self-existent. (5) Every plurality, being a combination of units, presupposes an original unity; hence, even those that assume a plurality of gods must logically admit the prior existence of a Divine Unity—a Neoplatonic argument borrowed by Bahya from the Brothers of Purity. (6) The Creator can not share with the creatures accidents and substance. The assumption of a plurality, which is an accident and not a substance, would lower God, the Creator, to the level of creatures. (7) The assumption of two creators would necessitate insufficiency of either of them or interference of one with the power of the other; and as the limitation deprives the Creator of His power, unity alone establishes Divine omnipotence.

After having thus proved God's unity, Bahya endeavors to define God as the absolute unity by distinguishing His unity from all other possible unities. There is, he says, a unity that is obviously only accidental, as, for example, that of an army consisting of many soldiers; and there is another unity, the accidental character of which is less visible, as, for instance, that of the body, which consists of matter and form. Contrasting with this, there is the substantial unity presented by the unit which forms the unit and the basis of all numbers. Still this unity exists only as an idea. But there is a substantial unity which exists as the reality of all truth. Not subject to any change or accident, it is the root of all things, and has no similarity to any other thing. This real unity, necessitated by the plurality of all things as their root and eternal cause, is God. Every other unity of things is accidental, since composite; God alone is the true unity; nothing exists beside Him that is absolutely and eternally one.

Adopting this Neoplatonic idea of God as the one who can only be felt by the longing soul, but not grasped by the reason, Bahya finds it superfluous to

prove the incorporeality of God. The question with him is rather, How can we know a being who is so far beyond our mental comprehension that we can not even define Him?

**Attributes of God All** In answering this, Bahya distinguishes between two different kinds of attributes; namely, essential attributes and such as are derived from activity. Three attributes of God are essential, though we derive them from creation: (1) His existence; since a non-existent being can not create things; (2) His unity; (3) His eternity; since the last cause of all things is necessarily one and everlasting. But these three attributes are one and inseparable from the nature of God; in fact, they are only negative attributes: God can not be non-existent, or a non-eternal or a non-unit, or else He is not God.

The second class of attributes, such as are derived from activity, are most frequently applied to God in the Bible, and are as well applied to the creatures as to the Creator. These anthropomorphisms, however, whether they speak of God as having manlike form or as displaying a manlike activity, are used in the Bible only for the purpose of imparting in homely language a knowledge of God to men who would otherwise not comprehend Him; while the intelligent thinker will gradually divest the Creator of every quality that renders Him manlike or similar to any creature. The true essence of God being inaccessible to our understanding, the Bible offers the name of God as substitute; making it the object of human reverence, and the center of ancestral tradition. And just because the wisest of men learn in the end to know only their inability to name God adequately, the appellation "God of the Fathers" will strike with peculiar force all people alike. All attempts to express in terms of praise all the qualities of God will necessarily fail (Ber. 33b).

Man's inability to know God finds its parallel in his inability to know his own soul, whose existence is manifested in every one of his acts. Just as each of the five senses has its natural limitations—the sound that is heard by the ear, for instance, not being perceptible to the eye—so human reason has its limits in regard to the comprehension of God. Insistence on knowing the sun beyond what is possible to the human eye causes blindness in man; so does the insistence on knowing Him who is unknowable, not only through the study of His work, but through attempts to ascertain His own essence, bewilder and confound the mind, so as to impair man's reason.

To reflect on the greatness and goodness of God, as manifested throughout creation, is consequently the highest duty of man; and to this is devoted the second section of the book, entitled "Sha'ar ha-Behinah" (Gate of Reflection). Men, as a rule, fail to appreciate the mercies of God, either because their insatiable longing for pleasure deprives them of the sense of gratitude, or because they are spoiled by fortune, or dissatisfied and disappointed in their expectation of life. All the more necessary is it to contemplate the active working of God in order to penetrate as far as possible into the Divine wisdom, which, while ever the same, is infinitely manifold in its effects, just as the rays of the sun differ in color according to their mode of refraction.

Bahya here presents a beautiful and interesting system of natural philosophy, the teleological character of which indicates its provenience from the Brothers of Purity, as well as from Galen, whom he mentions in particular. Following the idea expressed in Prov. ix. 1, "Wisdom hath builded her house, hewn out her seven pillars,"

he points out a sevenfold manifestation for the creative wisdom in (1) the combination of the elements of which the earth forms the center, with water and air surrounding it and fire placed above; (2) the perfection of man as the microcosm; (3) the physiology and intellectual faculties of man; (4) the order of the animal kingdom; (5) that of the vegetable kingdom; (6) the sciences, arts, and industries of man; and (7) the divine revelation as well as the moral and social welfare of all the nations. But, as has been said by one of the sages, "True philosophy is to know oneself." It behooves man to ponder on his own wondrous formation in order to recognize the wisdom of his Maker in observing the process of transformation of the elements into vegetation, which as food turns into marrow and blood, and builds up the animal body, which again, when joined to the soul—a spiritual, ethereal body akin to the celestial spirits—becomes a thinking, striving, and struggling man. How diverse the qualities of soul and of body! and yet they are united by the breath of life, the blood, and the nervous system! And how wisely are all the tender organs shielded by flesh, skin, hair, or nail against the perils surrounding them! And what marvelous foresight is exhibited in the way the infant is sheltered in the womb against the harmful influences of the atmosphere and nourished like a plant until it enters life, when the blood in the mother's breast is transformed for it into nurturing milk. The long dependence of the child upon the mother, the gradual awakening of the senses, and the slow development of the intellect lest its state of helplessness become unbearable, the frequent shedding of tears, even the mode of teething and the frequent sicknesses that befall children, betoken an especial training of man for the higher objects and obligations of life.

Bahya then surveys the entire physiology and psychology of man; showing the wisdom displayed in the construction of each organ and of each faculty and disposition of the soul; also in such contrasts as memory and forgetfulness—the latter being as necessary for the peace and enjoyment of man as is the former for his intellectual progress. In nature likewise, the consideration of the sublimity of the heavens and of the motion of all things, the interchange of light and darkness, the variety of color in the realm of creation, the awe with which the sight of living man inspires the brute, the wonderful fertility of each grain of corn in the soil, the large supply of those elements that are essential to organic life, such as air and water, and the lesser frequency of those things that form the objects of industry and commerce in the shape of nourishment and raiment—all these and similar observations tend to fill man's soul with gratitude and praise for the providential love and wisdom of the Creator.

This necessarily leads man to the worship of

God, to which the third section, "Sha'ar 'Abodat Elohim" (Gate of Divine Worship), is devoted. Every benefit received by man, says Bahya, will evoke his thankfulness in the same measure as it is prompted by intentions of doing good, though a portion of self-love be mingled with it, as is the case with what the parent does for his child, which is but part of himself, and upon which his hope for the future is built; still more so with what the master does for his slave, who is his property. Also charity bestowed by the rich upon the poor is more or less prompted by commiseration, the sight

**Worship of God.** of misfortune causing pain of which the act of charity relieves the giver; likewise does all helpfulness originate in that feeling of fellowship which is the consciousness of mutual need. God's benefits, however, rest upon love without any consideration of self. On the other hand, no creature is so dependent upon helpful love and mercy as man from the cradle to the grave.

Worship of God, however, in obedience to the commandments of the Law is in itself certainly of unmistakable value, inasmuch as it asserts the higher claims of human life against the lower desires awakened and fostered by the animal man. Yet it is not the highest mode of worship, as it may be prompted by fear of divine punishment or by a desire for reward; or it may be altogether formal, external, and void of that spirit which steels the soul against every temptation and trial. Still the Law is necessary as a guide for man, says Bahya, since there exists in man the tendency to lead only a sensual life and to indulge, like the brute, in passion and lust. There is another tendency to despise the world of the senses altogether, and to devote oneself only to the life of the spirit. Both are abnormal and injurious; the one is destructive of society; the other, of human life in both directions. The Law therefore shows the correct mode of serving God by following "a middle way," alike remote from sensuality and contempt of the world. The mode of worship prescribed by the Law has therefore mainly a pedagogical value, asserts Bahya. It educates the whole people, the immature as well as the mature intellects, for the true service of God, which must be that of the heart.

Here an exposition of the teachings of the Law and the Rabbis is given, with **Pedagogical Value of the Law.** the view of emphasizing the need of spirituality without which all the observances of the ceremonies and the painstaking study of the dry volumes of rabbinical law fail of their purpose.

A lengthy dialogue follows, between the Soul and the Intellect, on Worship, and on the relation of Free Will to Divine Predestination; Bahya insisting on human reason as the supreme ruler of action and inclination, and therefore constituting the power of self-determination as man's privilege. Another subject of the dialogue is the physiology and psychology of man with especial regard to the contrasts of joy and grief, fear and hope, fortitude and cowardice, shamefulness and insolence, anger and mildness, compassion and cruelty, pride and modesty, love and hatred, generosity and miserliness, idleness and industry—ten pairs of faculties of the soul

which occur also in Ibn Gabirol's "Tikkun Middot ha-Nefesh" (see Kaufmann, "Theologie des Bahya ibn Pakuda," pp. 194 *et seq.*; Rosin and Brüll, *l.c.*), and may have been borrowed from an older Arabic source.

Trust in God forms the title and the subject of the fourth gate, "Sha'ar ha-Bittahon." Greater than the magical power of the alchemist who creates treasures of gold by his art is the power of trust in God, says Bahya; for he alone who confides in God is independent and satisfied with what he has, and enjoys rest and peace without envying any one. Yet only God, whose wisdom and goodness comprise all times and all circumstances, can be implicitly confided in; for He provides for all His creatures out of true love, and with the full knowledge of what is good for each. Particularly does He provide for man in a manner that unfolds his faculties more

**Divine Providence.** and more by new wants and cares, by trials and hardships that test and strengthen his powers of body and soul. Confidence in God, however, should not prevent man from seeking the means of livelihood by the pursuit of a trade; nor must it lead him to expose his life to perils. Particularly is suicide a crime often resulting from lack of confidence in an all-wise Providence. Likewise is it folly to put too much trust in wealth and in those who own great fortunes. In fact, all that the world offers will disappoint man in the end; and for this reason the Saints and the Prophets of old often fled their family circles and comfortable homes to lead a life of seclusion devoted to God only.

Bahya here dwells at length on the hope of immortality, which, in contradistinction to the popular belief in bodily resurrection, he finds intentionally alluded to only here and there in the Scriptures, in view of the immature and childlike understanding of the multitudes, who need a training to morality by threats and bribes, by rewards and punishments, that appeal to the sense. To Bahya the belief in immortality is purely spiritual, as expressed in Zech. iii. 7, "I give thee places among these that stand by." His frequent recurrence, however, to the Saints, whom he lauds for their ascetic life, as showing their perfect confidence in God and their hope in the soul's future, betrays the singular dualism pervading his system—on the one hand, a mysticism derived from Arabic thinkers; and, on the other, the practical common-sense religion of the Jewish Law.

Sincerity of purpose is the theme treated in the fifth "gate", called "Yihud ha-Ma'aseh" (Consecration of Action to God); literally, "Unification of Action." Nothing is more repulsive to the pious soul than the hypocrite, who is far worse than the heathen that worships idols, but does not deceive men and insult God's majesty as does the hypocrite. But it is characteristic of the age in which Bahya lived that he regarded skepticism as the chief means of seducing men to hypocrisy and all other sins. At first, says Bahya, the seducer will cast into man's heart doubt concerning immortality, to offer a welcome excuse for sensualism; and, should he fail, he will awaken doubt concerning God and divine worship or reve-

lation. Not succeeding therein, he will endeavor to show the lack of justice in this world, and will deny the existence of another world which is to readjust the wrongs of the one that now is; and, finally, he will deny the value of every thought that does not redound to bodily welfare. Wherefore, man must exercise continual vigilance regarding the purity of his actions.

The sixth gate, "Sha'ar ha-Keni'ah," deals with humility ("keni'ah"). This has its seat within, and is manifested in gentle conduct toward one's fellow-man, whether he be of equal standing or superior, but especially in one's attitude toward God. It springs from a consideration of the low origin of man, the vicissitudes of life, and one's own failings and shortcomings compared with the duties of man and the greatness of God; so that all pride even in regard to one's merits is banished. The high priest himself, in order to learn humbleness in his high station, had to remove the ashes from the altar every morning (Lev. vi. 3). The conditions of humility are meditation on God's greatness and goodness, observance of the Law, magnanimity toward the shortcomings of others, patience to endure without complaint every hardship that God imposes, kindness to others

**Humility.** and charitable judgment of their doings, and forgiveness of injuries received. Especially is humility shown in refraining from finding fault in others, and in patiently bearing insults from them. Pride in outward possessions is incompatible with humility, and must be suppressed; still more so is pride derived from the humiliation of others. There is, however, a pride which stimulates the nobler ambitions, such as the pride on being able to acquire knowledge or to achieve good: this is compatible with humility, and may enhance it.

The practical tendency of the book is particularly shown in the seventh section, "Sha'ar ha-Teshubah" (the Gate of Repentance). The majority even of the pious, the author says, belong not to the class of those who have kept free from sins, but to such as feel regret at having committed them; wherefore, the prayer for divine forgiveness is one of the first of the eighteen benedictions. As there are sins both of omission and of commission, man's repentance should be directed so as to stimulate good action where such had been neglected, or to train him to abstain from evil desires where such had led to evil actions, just as the cure of a patient is of a stimulating or prophylactic character, according to the cause of his sickness. Repentance consists in: (1) the full consciousness of the shameful act and a profound regret for having committed it; (2) a determination of change of conduct; (3) a candid confession of the sin, and an earnest supplication to God asking His pardon; (4) in a perfect

**Repentance.** change of heart. True repentance shows itself in fear of the deserved divine punishment, in contrition of soul, in tears and sighs, in outward signs of grief—such as moderation of sensual enjoyment and display, and foregoing pleasures otherwise legitimate—and in a humble, prayerful spirit and an earnest contemplation of the soul's future.

Most essential is the discontinuance of sinful habits, however excusable in themselves; because the longer they are adhered to, the more they grow from thin threads into thick ropes which can no longer be torn asunder. An especial hindrance to repentance is procrastination, which waits for a tomorrow that may never come. After having quoted sayings of the rabbis, to the effect that the sinner who repents may rank higher than he who has never sinned, Bahya quotes the beautiful words of one of the masters to his disciples: "Were you altogether free from sin, I should be afraid of what is far greater than sin—that is, pride and hypocrisy." After having dwelt upon the mode of making amendments for wrongs done to one's fellow-man, and of preparing the soul to meet its Maker in perfect purity, the author closes the section with the story—taken, as he says, "from the ancients"—of a traveler, who, laden with heaps of silver coins, cast them, in his folly, into the stream which he wanted to pass, expecting to pave a way across, but found that all his coins had disappeared save one with which he paid the ferryman to carry him across. Repentance is the one coin that will carry man across the stream of life to the shore of eternal salvation, when all life's treasures have been foolishly spent.

The next gate, entitled "Sha'ar Heshbon ha-Nefesh" (Self-Examination), is of the same admonitory character as the preceding one. It contains a solemn exhortation to take as serious and lofty a view as possible of life, its obligations and opportunities for the soul's perfection, in order to attain to a state of purity in which is unfolded the higher faculty of the soul, which beholds the deeper mysteries of God, the sublime wisdom and beauty of a higher world inaccessible to other men

**Seeing God.** —a state reached only by the truly righteous ones, the chosen ones of God, where one is capable of "seeing without eyes, of hearing without ears, of speaking without tongue, of perceiving without the sense of perception, and of arriving at conclusions without the methods of reason."

Bahya, following the example of the Arabian encyclopedists, advocates a mysticism which might have led him far away from the path of the Law and of philosophy, had he not continually insisted on the observance of the prescribed forms of prayer, of worship, and of study of the Law, with the view of using them as means of elevating the soul to those heights of contemplation of the Divine accessible only to the pure in heart. Accordingly, he devotes the following section, entitled "Sha'ar ha-Perishut" (Gate of Seclusion from the World), to the problem that is uppermost in his mind, the relation of true religiousness to asceticism. Abstinence, or seclusion from the world, is, according to Bahya, a necessary discipline to curb man's passion and to turn the soul toward its higher destiny, which is to rise, amid all earthly temptations and trials, to the station of angelic beings. Still, as the normal law of human life requires the cultivation of a world which God has formed to be inhabited, and the perpetuation of the race, asceticism can only be the virtue of a few chosen ones who stand forth as teachers of a higher art of life; but, in the same measure as the masses

inclined at all times toward sensualism, in the same measure there arose Nazarites, prophets, and saints in the midst of them to point to the higher needs of the soul.

But there are different modes of seclusion from the world. Some, in order to lead a life devoted to the higher world, flee this world altogether, and live as hermits far away from all civilization, quite contrary to the design of the Creator; others retire from the world's turmoil and strife and live

**An** a secluded life in their own homes; a  
**Ascetic** third class, which comes nearest to the  
**Life.** precepts of the Law, participates in the world's struggles and pursuits, but

leads a life of abstinence and moderation, regarding this world as a preparation for a higher one. The object of all religious practise is the exercise of self-control, the curbing of passion, and the placing at the service of the Most High of all personal possessions and of all the organs of life. Accordingly, the generation of the Patriarchs, being less passionate, required fewer legal restrictions than the people of Israel in Canaan surrounded by idolatrous nations, where the Nazarites and Prophets, who led a life of abstinence, became a necessity for them. Some such discipline of abstinence Bahya recommends, as an offset against worldliness, for an age like his own, when the people display unbridled passions and low desires; and he quotes from some Arabian moralist a lengthy admonition in this spirit.

The aim and goal of all ethical self-discipline he declares to be the love of God, which forms the contents of the tenth and last section of the work, "Sha'ar Ahabat Elohim" (The Gate of the Love of God). This is explained as the longing of the soul, amid all the attractions and enjoyments that bind it to the earth, for the fountain of its life, in which it alone finds joy and peace, even though the greatest pains and suffering be imposed on it. Those that are imbued with this love find easy every sacrifice they are asked to make for their God; and no selfish motive mars the purity of their love. Thus was the love of Abraham and Job, of Daniel and all the saintly martyrs, filled with the joy of self-sacrifice.

For those that truly love their God the

**Love** 613 commandments of the Torah are  
**of God.** rather few in number, their whole life being consecrated to the God with

whom they are one. As characteristic of this perfect unity of the loving soul with its God, Bahya tells of a saint found sleeping in the desert, who, when asked whether he had no fear of the lions in the vicinity, answered, "I should feel ashamed of my God, did I entertain fear of any being besides Him." And yet Bahya is not so one-sided as to recommend the practise of the recluse, who has at heart only the welfare of his own soul. A man may be as holy as an angel, yet he will not equal in merit the one that leads his fellow-men to righteousness and to love of God.

The "Hobot ha-Lebabot" contains many gems of thought and beautiful sayings collected from the Arabic literature; and on account of its deep religious sentiment it became a treasury of devotion for the Jews during the Middle Ages. A number of

compendiums of the work were composed and published for this purpose.

According to Steinschneider, one was written as early as the thirteenth century by a grandson of Meshullam b. Jacob of Lunel, and reedited (not composed, as was formerly assumed) by Jacob Pan in 1614. Another compendium for the Penitential Days was composed by Menahem ibn Zerah and embodied in his "Zedah la-Derek" (1874).

Two Arabic manuscripts of the "Hobot ha-Lebabot" exist, one in Paris and another in the Bodleian Library, Oxford; but they show essential variations, and seem therefore to present two different redactions. They are, according to Steinschneider, in "Jew. Quart. Rev." xiii. 452, "being prepared for the press."

Judah ibn Tibbon translated the first section of the book for Meshullam ben Jacob of Lunel in 1161, and the rest between 1170 and 1198. Meantime Joseph Kimhi of Narbonne made another translation, of which only the section on Repentance, "Sha'ar ha-Teshubah," has been preserved. It was published by Jellinek, together with Ibn Tibbon's translation, at Leipsic in 1846.

Jacob Roman of Constantinople intended to publish the Arabic text with a Latin translation in 1643. A comparison of the translations with the Arabic original (Cairo MS.) was begun by Jehiel Judah b. Joseph Moses Lewensohn in a pamphlet entitled "Hayye Lebabot," Vienna, 1872, and New York, 1885. According to Steinschneider, the Paris manuscript differs considerably from the text that Ibn Tibbon translated.

The first edition of Ibn Tibbon's translation appeared in Naples in 1489; a less correct one in Venice in 1548; and a more critical one, with register and index, in Mantua in 1559. The best critical edition, based on eight manuscripts, is the one published by Isaac Benjacob, together with a brief commentary and a valuable preface and fragment of Kimhi's translation by Jellinek, Leipsic, 1846. Hebrew commentaries, together with the text, appeared as follows: (1) "Manoah ha-Lebabot," by Manoah Händel b. Shemariah of Poland, Sulzbach, 1691, together with a German translation by Isaac b. Moses, Amsterdam, 1716; another with a German translation by Samuel Posen, Fürth, 1765; (2) "Marpe la-Nefesh," by Raphael b. Zachariah Mendel of Frankfort-on-the-Oder, Oleknitz, 1774; (3) "Toledot Aharon," by Hayyim and Isaacs, sons of Israel Somesz; (4) "Nedat ba-Kodesh," by Moses b. Reuben of Yurburg, Grodno, 1790; (5) "Pat Lehem," by Hayyim b. Abraham ben Aryeh Loeb Cohen, darshan of Mohilev, published with text under the title of "Simhat Lebab," Sokolow, 1803; (6) "Or la-Yesharim," by Raphael J. Fürstenthal, together with a German translation and the text, Breslau, 1836.

The following translations have been published: In Portuguese by Samuel b. Isaac Abbas, Amsterdam, 1670; in Italian in 1847; modern German translations were attempted in 1765; Spanish by Joseph Pardo, Amsterdam, 1610; Ladino by Zaddik b. Joseph Firmon, Venice, 1703, and Isaac Bellagrade, Vienna, 1822; German, besides those mentioned, by Mendel E. Stern, Vienna, 1856, and by Mendel Baumgarten, with preface by Abraham Geiger, Vienna, 1854.

Bahya's teachings were influenced by the Sufi theories which were in vogue at that epoch. Without going so far as to pronounce a deprecatory judgment on the ritual ceremonies, as the Sufis did, Bahya seems to have attached no great importance to them. "The precepts prescribed by the Law," says he, "are only 613; those dictated by the intellect are innumerable." This is precisely the argument used by the Sufis against their adversaries, the Ulemas (compare Von Kreme, "Notices sur Sha'rany," in "Journal Asiatique," 1868, p. 253).

The title of the eighth gate, "Muhasabat al-Nafs" (Self-Examination), is reminiscent of the celebrated Sufi chief Abu Abd Allah Harith b.

**The Sufis.** Asad (tenth century), who has been surnamed El Muhasib ("the self-examiner"), because—say his biographers—"he was always immersed in introspection" (compare Haji Khalifah, *s.v.* "Radyah"; Abu-al-Fida, "Annal Mosl." ii. 201, 698).

Jami, in describing the life of the Sufis, says: "The aim that the Sufis pursued was a perfect union with God, or rather a kind of absorption of their individuality in the Deity. This absorption can be attained only gradually by cultivating self-renunciation, perfect indifference to all externals, and the effacement of all affection and will" ("Notices et Extraits," xii. 291). Such theories are often repeated by Bahya in the last three gates. In the short introduction to the ninth gate, Bahya says: "As in speaking in the preceding gate of self-examination, as withdrawal of the world was considered one of its conditions, I thought it fit to annex to

**His "Reflections on the Soul."** it an exposition of the different forms of withdrawal and the form that is obligatory to the men of the Law.

In adding the words "to the men of the Law," which are repeated several times in this gate, Bahya had in view the asceticism of the Sufis. However this may be, Bahya knew how to find the pearls in the heap of dust accumulated in the mystical literature of the Sufis; and his work exercised the most salutary influence upon Jewish religious life during many centuries. His proofs of the existence and unity of God, although all drawn from Arabic sources, and chiefly from the Encyclopedia of the Brethren of Purity, became classic, and were copied by many Christian scholastics (compare Thomas Aquinas; see also Fénelon, "Œuvres Complètes," pp. 701 *et seq.*).

Bahya's style, although diffuse, like all Arabic philosophical writings, is clear and very often eloquent. Unfortunately, the same can

**Bahya's Style.** not be said of the Hebrew translation of his work, and consequently of all the modern translations made from the Hebrew. Judah ibn Tibbon made it his duty to translate verbatim, frequently without having penetrated into the author's thought: he thus became a source of misinterpretation. Many passages in the Hebrew translation are veritable enigmas; and the commentaries that have been grafted on the translation of this simple work—a work designed by its author for the multitude—are unable to solve these enigmas correctly, on account of the mistakes of the translator.

Another philosophical work of Bahya, entitled "Ma'ani al-Nafs" (Reflections on the Soul), was discovered six years ago in a manuscript at the Bibliothèque Nationale of Paris. This manuscript, which is quite old, bears on the title-page the name of Bahya ben Joseph ibn Pakuda as author. The authenticity of the authorship of this work, questioned by J. Guttmann, in "Monatsschrift," 1897, pp. 241-256, has been recognized by all Orientalists who were enabled to compare this manuscript with the original of the "Duties of the Heart" (compare Schreiner, in "Zeit. für Hebräische Bibliographie," i. 121-128; Kaufmann, in "Revue Etudes Juives," xxvii. 271; J. Derenbourg, *ib.* xix. 306). At any rate, the philosophical theories expounded in the "Reflections on the Soul" are in perfect accord with those expressed here and there in the "Duties of the Heart." The influence of Neoplatonism and the Kalam is apparent in both works, a fact that proves beyond any doubt that the "Reflections on the Soul" were written no later than the eleventh century—that is to say, in Bahya's era.

The "Reflections on the Soul," translated from Arabic into Hebrew under the title "Torot ha-Nefesh" (Teachings on the Soul), with a French résumé by I. Broydé (Paris, 1896), is divided into twenty-one chapters, in which the author endeavors to reconcile the Neoplatonic psychological system. Bahya refers in this work to two other writings of his, which are no longer extant: (1) "Bareki Nafshi," a psychological Hebrew poem to which the "Reflections on the Soul" serves as a commentary; and (2) "Alnask wal-Nazam fi al-Khalīqah" (Order and Gradation in Creation).

[Bahya also composed a number of liturgical poems, full of great religious fervor, part of which have found a place in the Roman Maḥzor, while some are still in manuscript in the Bodleian Library, Oxford. The best-known poem is the one beginning with "Bareki Nafshi," which was translated by Deborah Ascarelli into Italian in 1601, and was paraphrased in Italian by Johanan Alatrino, 1628; in German, by Michael Sachs in his "Die Religiöse Poesie der Juden in Spanien," and in English by M. Jastrow in his prayer-book.

A description of these liturgical poems by Bahya is given by Landshuth in "Ammude ha-'Abodah," i. 49, Berlin, 1857. A selihah by Bahya is published in Koback's "Jeschurun," iv., Hebrew part, 1864, pp. 183, 184].

K. I. BR.—K.

**BAIERSDORF:** Small city in Bavaria, near Erlangen, once the summer abode of the margraves of Kulmbach-Bayreuth. Little is known concerning the history of the Jews there. It is certain that in the

fourteenth century a Jewish community had been established; and as the seat of the rabbinate for all the Jews of the principality of Bayreuth, it must have had some importance, considering the smallness of the place. The cemetery adjoining the synagogue was used by the Jews of the surrounding district extending over many miles: it contains many tombstones, some of which are said to date from the beginning of the fifteenth century. A number of court Jews at Baiersdorf became "barnossen" (presidents) of the entire Jewish community in the principality; and in 1728 Moses Goldschmid, court agent, was appointed rabbi of the province by the margrave.

The best known of all the court Jews living there was Samson (ben Judah Selke) of Baiersdorf. He was a great "shtadlan" (official head of the Jewish community) and benefactor, and in 1712 erected a stately synagogue entirely at his own expense. The synagogue possesses valuable old candelabra and hangings. The Jewish hospital is mentioned as early as 1530. Samson's son-in-law, Moses Hameln, rabbi at Baiersdorf, has been immortalized through the memoirs of his mother, Glückel von Hameln, which memoirs, by Moses' directions, were copied from the original manuscript.

Among the notable personages of Baiersdorf in the second half of the eighteenth century were David Disbeck, author of "Pardes David" and rabbi there and in Metz; his son Simon, and grandson Moses, both scholars; Noah Hirsch Berlin, and W. Cohn. Berlin was rabbi of the principality and had his residence at Baiersdorf, but later was called to Mayence and Hamburg. Cohn was the last district rabbi of Baiersdorf.

Though the community has inherited a considerable number of institutions, it is now in a state of decay. In 1834 there were about 100 families, aggregating about 400 souls; but the emigration of the younger element to the United States (among others, the founders of the well-known banking-house of Seligman in New York, the Lehman and Lohman families), and the removal of the more prosperous members of the community to larger cities, gradually reduced the number to less than a dozen families. See **BAYREUTH**.

#### **BAIERSDORF, SAMSON BEN MANASSE:**

Court Jew of the margrave Christian Ernst of Brandenburg-Bayreuth; died in 1712. He was highly esteemed at the court of the margrave, at the same time using his influence for the good of his coreligionists. It was chiefly through his influence that they were allowed to stay in the land in peace. In 1700, for a short time his position at the court was shaken by a hostile counselor of the margrave, but it was soon reestablished. In the same year he gave his daughter in marriage to a son of Glückel Hameln, Moses Hameln, who became later on rabbi at Baiersdorf and to whom is owing the preservation of the valuable memoirs of Glückel.

In 1714 Baiersdorf was calumniated by the baptized

Jew Philipp Ernst Christfels, and engaged in a lawsuit, the issue of which is not known.

**BAIGNEUX-LES-JUIFS:** Capital of a canton, arrondissement of Chatillon-sur-Seine, Côte d'Or, France. As the name indicates, there were Jewish inhabitants in this place during the Middle Ages. A secret inquiry was made between 1306 and 1308 into the debts due to the Jews. A century later Jews were still in the community.

**BAIL:** In English and American law, the obligation of sureties in a sum named, that the person under arrest in a civil or criminal cause will, if set at large, deliver himself up to stand trial and submit to judgment. Such obligation is unknown to Jewish law. There could not be Bail in civil causes, for there was no arrest for debt. In criminal, at least in capital, cases it was the duty of the court to hold the accused "in ward" till his guilt or innocence, and the mode of punishment, should be ascertained. The Talmud (*Sanh.* 78b) draws this rule from the case of the blasphemer (*Lev.* xxiv. 12) and of him who gathered sticks on the Sabbath (*Num.* xv. 34). And as trials were very prompt and speedy—whether the punishment was death or stripes—the hardship of imprisonment without Bail, if the prisoner proved innocent, was not great.

The Talmud (*Sanh.* 78b) applies the law of imprisonment to one that has beaten or wounded another so sorely as to confine him to his house (*Ex.* xxi. 18, 19). It comments on the words, "If he rise again and walk upon his staff, then he that smote him shall be quit," thus: "This can not mean that the smiter shall be free from the death penalty; for this he is, of course, not having killed anybody; but that, then, he shall be freed from custody. But the old halakic Midrash Mekilta (*Mishpatim* vi.) says on this verse: 'You would think that the smiter might furnish sureties and then go at large; but no, we are taught here that he is imprisoned till the wounded man is healed.' In fact, to take Bail while the stricken man may die of his wound, and his smiter thus incur the guilt of blood, would, in spirit and effect, violate the law, 'Ye shall take no ransom for the life of a manslayer' (*Num.* xxxv. 31); moreover, as a rich man can readily give Bail and the poor man can not, the release of the prisoner on Bail would run counter to that other oft-repeated rule of the Torah, 'One law there shall be to you.'

L. N. D.

**BAILLY, JEAN-SYLVAIN:** Astronomer and publicist; born in Paris Sept. 15, 1736; guillotined Nov. 12, 1793. He was elected a member of the Académie des Sciences in 1763 and of the Académie Française in 1784. In 1789 he was elected by the citizens of Paris deputy to the States General. He was chosen president of that body on June 3 of the same year. In the following month he was elected mayor of Paris. Ranged on the side of

moderation and justice, Bailly's sympathies went out to the alien and the oppressed. He was one of that group of liberal-minded men who emancipated the Jews; obtaining the passage of the decree of Sept. 27, 1791 (confirmed Nov. 30 of the same year), which declared the latter to be French citizens, with all rights and privileges. This decree repealed the special taxes that had been imposed on the Jews, as well as all the ordinances existing against them. Neither threats nor ridicule could deter Bailly in this matter, as was to be expected from his unswerving adherence, at great personal risk, to what he considered to be the duties of a just and upright magistrate.

On the occasion of the arrest of Louis XVI., Bailly was obliged to disperse by force of arms the crowds that gathered at the Champ de Mars to demand the deposition of the king (July 17, 1791). This act cost Bailly his popularity. Resigning his office, he fled; but, being recognized, he was brought to trial before the Revolutionary tribunal, and guillotined.

**BAILMENTS:** Delivery of personal property for the purpose of a trust. A bailment arises when one person (the bailee) is lawfully put in the possession of goods belonging to another (the bailor) with the understanding that he will return them. The law of Bailments deals mainly with the duty of the bailee to return the things held in bailment and the grounds for not returning them in good condition.

**I.** The Scriptural law of Bailments is given in Ex. xxii. 6-14 (A. V. 7-15); and there is also a reference to deposits in Lev. v. 20-26 (A. V. vi. 1-7). In the former text the first paragraph (verses 6-8 [A. V. 7-9]) speaks of entrusting money or implements to the care

of a neighbor; and as such deposits are usually accepted without reward, this passage is understood as referring to the "gratuitous keeper" ("shomer hinnam"). The next paragraph (9-12) speaks of putting animals into the care of another; and as animals are placed every day in the care of a shepherd working for hire, this paragraph is understood to refer to a paid keeper or "receiver of hire" ("shomer sakar" or "nosé sakar"). Verses 13, 14 (A. V. 14, 15) speak of one who "borrows" some specific thing, known in Hebrew as "sho'el," while he who borrows money is known as "loweh." The sages, however, recognize a fourth kind of bailee: one who rents or hires an article ("soker"), and they place him in a more favored position than the borrower, in analogy to the greater favor that is shown to the gratuitous keeper as compared with the receiver of hire. Thus the Mishnah (B. M. vii. 8; Shebuot viii. 1) enumerates four bailees ("shomerim"): (1) the borrower; (2) the gratuitous keeper; (3) the receiver of hire; and (4) the hirer. These classes are well known to the Roman jurisprudence and to the common law of England; but the special liability of common carriers, who are in our own time the most important of all bailees, is unknown to Bible and Talmud.

The same degree of care and extent of liability are placed upon the hirer as upon the receiver of

hire: thus there are indeed four bailees; but, as the Talmud puts it, only three rules govern their liability (B. M. 93a). The "higher care," spoken of in the Talmud as resting upon the paid keeper as compared with the gratuitous one, bears in its counterpart some analogy to the *levis culpa* and *lata culpa* of the Romans; and while the main distinction (in the Scripture the only distinction) lies between "compulsion" ("ones")—that is, overpowering force, the Roman *vis major*—on the one side, and "theft or loss," the result of the keeper's negligence, on the other, the Talmud speaks of a "greater force," which is irresistible (like the "act of God," or of the king's enemies in the English law of common carriers), and of a "minor force," which a thoroughly faithful keeper might meet and overcome (Maimonides, "Yad," Sekirut, i. 2).

Another distinction, found in the very words of the Bible (Ex. xxii. 14), applies to borrower and hirer alike: "If the owner thereof be with it [the hired or borrowed article], if he be a hired man and has come for his hire, he [the borrower or hirer] need not pay." This is construed to mean: If the owner of the article, generally a draft animal, is engaged at or before the time at which the article is borrowed or hired; if he is thus engaged, whether for hire or without it, the hirer or borrower is free from liability except for misappropriation (B. M. viii. 1, and discussion in Gemara 94b *et seq.*).

It may be here remarked that when A borrows an article from B, without any hire or compensation, and nothing is said about the length of time for which he may keep it, he must restore it on demand; but if B lends the article for a fixed time, or for doing some named task, A may keep it for the whole time, or during the performance of the task, though he has given no consideration. For here is a gift of the use with delivery of possession; and such a gift is as irrevocable as a like gift of the thing itself (Maimonides, She'elah, i. 5).

The word *peshi'ut* (lit. "unfaithfulness") answers to the Latin *culpa*, or fault, and to the "negligence" of the English-American law.

**II.** The Mishnah, in the two places indicated above, states the general rules thus: "The gratuitous keeper swears about everything [clears himself by his oath in all cases, according to Ex. xxii. 7 (A. V. 8)]; the borrower pays in all cases; the receiver of hire and the hirer swear about the crippled or captured or dead beast, but pay for what is stolen or what is lost."

The exceptions to these rules will be stated later in this article.

**1. The Borrower ("Sho'el"):** The borrower of beasts, implements, or other movables, when the presence of the owner is not stipulated for, pays not only for loss or theft arising from his neglect, but even for the result of irresistible force—in the words of the text, "for if it die, or be hurt, or driven away" (Ex. xxii. 9 [A. V. 10]). For the death of animals, however, the borrower is excused, if it results from the very kind of work for which the beast was borrowed, provided the borrower does not task the beast beyond its strength. (Maimonides, for reasons unexplained, has in his code changed the words of the Talmud [B. M. 96b, and frequently] "died by reason of the work," *מחמת מלאכה*, into "died at the time of the work," *בשעת מלאכה*.) The reason of the exception is this: As the work done which caused the death was in the contemplation of both borrower

and lender, the result must also have been in their contemplation. In like manner, if a man borrows an ax for cutting down trees, and it breaks in the act of striking a tree, the borrower is not responsible. But if a man borrows a spade to dig up a certain garden, and he uses it upon another garden, he is responsible for the breakage. Where the article is put in worse shape while in the hands of the borrower, the difference in value is assessed and must be paid. This applies to a beast also: If the borrower fails to feed it properly, and by reason thereof it is returned to its owner in worse condition than when it was received, he must answer for the depreciation (Maimonides, "Yad," She'elah u-Pikadon, i. 1-9).

Where, by the death of the borrower, a borrowed beast or article passes into the hands of his heirs, the Talmudic sages are divided on the question, whether the heirs are liable even to the extent of other estate falling to them for the destruction of the thing by "force" (Ket. 34b; B. K. 112a). Maimonides in his code (She'elah i. 5) says they are; while R. Joseph Caro, in his comments on that code, wonders at this, and claims that the weight of Talmudic authority lies the other way.

Where the presence or services of the owner are obtained, the borrower does not answer even for the result of negligence ("peshi'ut"). An agent of the owner does not satisfy the rule; his slave does. A wife is supposed to be present at all times; hence he who borrows an article from his wife is not responsible for accidents (She'elah, ii. 1, 5, 7).

Where the article is sent by the lender to the borrower, the latter's liability for unavoidable accident begins only when it reaches the house or grounds of the borrower, even though the lender should have chosen an agent or son of the borrower as his messenger. But if the borrower chooses the messenger, he is answerable for whatever happens after the thing comes to such messenger's hands (*ib.* iii. 1).

When an unmarried woman borrows an article and marries, and the husband takes possession, not knowing that it is borrowed, he is not responsible even for negligence; but if he knows that it is borrowed, he becomes answerable in her place (*ib.* ii. 11).

**2. The Gratuitous Keeper ("Shomer Hin-nam"):** A preliminary question may arise as to money, whether it becomes a special deposit or a loan. When money, whether sealed or loose, is handed to a private person for safe-keeping, it is presumed that he will not use it in his business, but

**Gratuitous** will put it in a safe place. If he does the latter, he will be excused for loss

**Keeper.** like other gratuitous keepers. But if money is handed to a banker ("shulhani") otherwise than in a sealed or privately knotted bag, it is presumed to be for use in his business, and he becomes liable for it as a debtor. The better opinion applies the same rule to shopkeepers as to bankers (Mishnah B. M. iii. 10, 11). When the owner calls for his deposit, and it is missing in part or in whole, the depositary is put to an oath, by which he has to affirm (1) "I have not put my hand upon it" (in the words of Scripture, Ex. xxii. 7, Hebr.); (2) "I have not been faithless about it" (lo-fasha'ti) (B. K. 107b); (3) "It is not in my possession." The second of these avowals means, "I have kept the thing in the

manner of keepers." What is meant by "the manner of keepers" depends on the nature of the deposit. Some things, such as planks or stones, are kept in an open yard; heavy skeins of flax and the like may be laid down in an inner court; a garment or shawl is kept in the house; more valuable things—*e.g.*, silks or gold and silver vessels—are locked up in a box or turret. When the keeper puts the deposit in some place which is not for a thing of its nature, even if he puts it alongside his own similar goods, and it is lost or stolen, he is answerable, as is the case when the deposit at the improper place is met

by *vis major*, such as a fire or the collapse of the house. This is upon the principle that where faithlessness is the earliest cause of the loss or destruction, force coming in afterward is no excuse.

On like grounds it was held that where the depositary hid coins entrusted to him in a hut made of reeds—a safe enough hiding-place against thieves, but unsafe against fire—he "began with faithlessness," and he was held liable, though the coins did not perish by fire, but were stolen (B. M. 42a; She'elah, iv. 2, 3).

In Talmudic and even in much later times (B. M. *l.c.*, followed by Maimonides and other codifiers), it was thought that burial in the ground or inside of a brick wall was the only fit means for the safe-keeping of gold or silver coins. According to some authorities, this would apply also to silver in bars, and certainly to gold bars, precious stones, and like articles of great value with small bulk and weight.

When one receives money to carry from place to place, or to his own home for safe-keeping there, he must carry it well tied up, and belted in front of his body (She'elah, iv. 6).

A man who is chosen by his neighbor to safeguard his goods has no right to entrust them to another; if he does, he is responsible, unless this other person can prove that he has kept them well. But it is always supposed that a gratuitous keeper takes his wife and other adult members of his family (such as his mother living with him) and his servants into his confidence; and where he in good faith bids one of these to put the deposit in a safe place, he will not be held answerable for accidents, except such as occurred by their mistakes (*ib.* 8).

Where one has been entrusted with grain or like produce, he should not mix with his own what is thus deposited; but should he do so, and there be a diminution in the whole amount—as generally happens in course of time—a certain ratio is allowed for yearly shrinkage; thus: 4½ kabs in the kor (180 kabs) on wheat and shelled rice; 9 kabs on barley or millet; 18 kabs on spelt, linseed, or unshelled rice. On wine the outage is one-sixth; on oil 3 per cent; one-half for absorption in earthen vessels, and one-half for lees; if the vessels are old, only 1½ per cent (*ib.* v. 5).

The keeper of the article must never use it; even if it be a scroll of the Law, he should only unroll it once a year to air it, and similarly with other books. He must not lend the article to another; to do so is a "putting forth of his hand," which makes the keeper responsible for loss from any cause (*ib.* vii. 4). If the keeper of a barrel of wine lifts or moves

it, and takes out a part for himself, he becomes responsible for the whole (Hoshen Mishpat, 292, 2). If, when called upon to return the deposit, he can not tell where it is, he can be made to pay the value at once (She'elah, iv. 7). If the goods in his hands (such as grain) are deteriorating or shrinking in the ordinary way, it is no ground for interference; if, through dry-rot, mice, or like causes, they are lessening or spoiling more rapidly, the depositary should have them sold by order of court, let a stranger buy them, and safely keep the proceeds of the sale for the owner (*ib.* vii. 1, 2).

When, on demand, the depositary can not produce the deposit, he may, instead of making the threefold oath given above, offer payment of the value; but this can be done only when the deposit is of money, or of articles like grain, fruits, or other produce which can be bought in the open market. When the article is an animal or implement that may have a special worth to the bailee or to the owner, the latter may compel him to swear, "The article is not within my possession," before accepting payment (*ib.* vi. 1).

**3. The Receiver of Hire ("Nosé sakar"):** In Talmudic as well as in Biblical times, he was generally a shepherd. A very high degree of diligence was exacted upon the precedent of "our father Jacob," who could truthfully say, when he kept Laban's flock for reward: "In the day the drought consumed me, and the frost by night" (Gen.

**Keeper** xxxi. 40; see B. M. 93*b*). Not every **or Receiver** wild animal is held to be a superior **for Hire.** force: one wolf is not; two wolves are; two dogs are not. A robber, at least an armed one, is held to be such, even if the shepherd be armed; for he need not risk his life. A lion, a bear, a leopard, a panther (*πάρδαλις*), or a serpent is a force that excuses, but only when the animal comes of itself; when the shepherd takes his flock toward the lair of the noxious beast or of robbers, he is not excused (Sekirut, iii. 4). To hold the keeper thus liable for stock torn by a wild beast in any case seems to be against the plain words of Ex. xxii. 12 (A. V. 13): "If it be torn in pieces, *let him bring it for witness*: he shall not make good that which is torn." But in accordance with the adopted interpretation of the verse in the oral law, the Targum renders the italicized words as "let him bring witnesses of the tearing"; indicating that though the ox or lamb has certainly been torn by wild beasts, there is a question of fact, to be answered by witnesses, how it came to be torn (see B. K. 10*b et seq.*). Loss by shipwreck is ascribed to irresistible force, and always falls on the owner (Sekirut, i. 2).

When the beast entrusted to the keeper dies a natural death, he is excused; but not when he has by insufficient food or ill-treatment caused its death. Where the beast has climbed to the top of a cliff and falls down, its death is held unavoidable, but not so if the shepherd has led it up, and it then falls down (*ib.* iii. 9). By the plain words of Scripture, the hired keeper is liable for a beast that is stolen or strayed, and, by analogy, for articles that are stolen, mislaid, or lost sight of. He is, of course, liable in all cases in which a gratuitous keeper is

bound to make compensation, and has eventually to take the same oath (*ib.* ii. 3).

When a hired keeper (or a hirer) lends the thing to another, who as borrower is bound for destruction by superior force, he may collect compensation from the latter, but only for the benefit of the owner (*ib.* i. 6).

**4. The Hirer ("Soker"):** The hirer is liable in all cases in which the hired keeper is, unless, like the borrower, as shown above, he is discharged from liability by the presence or constructive presence of the owner (*ib.* i. 2).

**III.** While it is often said that stipulations running counter to the Mosaic law are void, and though among the early sages R. Meir sought to apply this rule even where nothing but the payment of money was involved, such stipulations are held good as to contracts involving money only when they precede the act by which the contract takes effect. Hence a gratuitous keeper can exempt himself by contract from the oath of exoneration, the borrower from payment in all or in any cases, the hirer or receiver of hire from oath and payment; or any keeper may stipulate for a less than the customary degree of care. Under an institution of the early ages a bailment, like a sale (see ALIENATION), becomes effectual only when the thing entrusted, loaned, or hired comes to the bailee's hand: thus the word limiting the bailee's duties can be spoken or written before the bailment takes effect (Mishnah B. M. vii. 10, 11, and Gemara on same, 94*a*).

Where a man receives money, not for the purpose of keeping it for the owner, but to apply it to a charity or to distribute it among the poor—the special objects of the bounty not being named—the Biblical law on Bailments does not apply in express terms, nor does the rabbinic interpretation which requires a certain degree

**Exceptions** to Bailee's of care. Nor do the above rules apply **Responsi-** to a bailment of slaves, or to one of **bility.** deeds or bonds; or to the goods of the sanctuary or to those of Gentiles (Hoshen Mishpat, 301, 1).

Disputes often arise on other questions than the cause of the loss, and these are settled by the ordinary presumptions and rules of evidence. Thus the Mishnah (B. M. viii. 2) already puts the case of A letting B have one cow for hire, and lending him another cow gratis. One cow dies. A says it was the loaned cow; B says he does not know which it was; or vice versa. The Mishnah says that in all such cases the party making the certain statement wins; which position is controverted in the Gemara on general grounds reaching beyond the law of Bailments (B. M. 97*a et seq.*).

When the delivery of a thing as a deposit is proved by witnesses, the depositary can not by his unsupported word claim the thing as having been subsequently bought by him or received as a gift. Hence the owner can without oath reclaim the thing from the depositary's heirs. And further, even without witnesses the owner may recover from such heirs if he can give a striking description, can show that he was not a frequent visitor at the depositary's house, and that the latter was not reputed to be the owner of the thing in question (Ket. 85*b*; She'elah, vi. 4).

In speaking of the gratuitous keeper, the text says: "If the thief be found, he shall pay twofold" (Ex. xxii. 6 [A. V. 7]). Whom must he pay? Ordinarily he must pay the owner; but if such keeper or any other bailee has already for any reason satisfied the owner, the right in the stolen thing enures to such bailee, and the thief must give him—the bailee, not the owner—the double compensation (B. M. iii. 1; Maimonides, "Yad," Genebah, iv. 8).

The provisions for a guilt-offering and for the restitution of one-fifth in addition to the value by a faithless but repentant bailee, in Lev. v. 21–26 (A. V. vi. 1–7), are also discussed in the Mishnah and Talmud. For this phase of the subject see EMBEZZLEMENT.

**IV.** What has been said in ASSAULT AND BATTERY as to the qualification of the judges applies with even greater force to the trial of causes arising out of the loss or destruction of property left in the hand of bailees. For thrice in the verses of Ex. xxii. (7, 8, bis), which refer to a deposit, the title of "Elohim"

—God or gods—is given to the judges;

**Distinction** they must therefore be ordained judges **Between** who have received their "semikah" **Compensa-** (ordination) in the Holy Land from **tion and** an unbroken line of ordained elders. **Penalty.** Nevertheless, in the Babylonian Talmud (B. M. 96b and elsewhere) reports

of cases are given in which one or the other of the chief rabbis at Sura or Mata Mahasia of the Babylonian academies decide cases of bailment; but in no case does the judge award a double compensation: none but an ordained judge would have attempted to impose such a penalty ("kenas"). The Hoshen Mishpat also, while it only deals with the law as actually practised at a much later period, discusses (291–305 and 340–347) the responsibilities of the four kinds of bailees without referring to double compensation or to the penalty of one-fifth which, under the ordinance in Leviticus, the repentant bailee was to add to the principal.

**BIBLIOGRAPHY:** This article follows in the main the guidance of Maimonides in *Yad ha-Hazakah*, *She'elah u-Pikadon*, and *Skirut*. The Talmud deals with the subject in chapters iii., vii., and viii. of *Baba Mezi'a*. The Talmudic law of Bailments has been treated by the following modern authors: I. M. Rabinowicz, *Législation Civile du Talmud*, ii., Introduction, pp. 64–84, Paris, 1877; Spiers, *School System of the Talmud*, pp. 58–106, London, 1898.

L. N. D.

**BAIRAMCHE.** See BESSARABIA.

**BAJA:** City on the Danube, in the county of Bács-Bodrog, Hungary. As early as the end of the eighteenth century, Baja, owing to its favorable location, was a bustling commercial town. The first Jewish families probably settled there toward the middle of that century and formed a small community. The great conflagration that swept over the city, May 1, 1840, destroyed the synagogue and the Jewish school, together with the communal archives, so that no reliable data remain concerning the organization of the community and the first decades of its existence. The first entries in the old "Hebra" book are dated March 6, 1791, the names being those of persons deceased in 1789. The beginnings of the community therefore probably do not date much earlier.

One of the earliest rabbis, and perhaps the very first, was Isaac Krieshaber (later in Paks); and he was succeeded in 1794 by Isaiah Moorberg, or, as he calls himself, Isaiah Kabane, who devoted himself to cabalistic studies, and resigned in 1805. The community then chose for its rabbi MEIR ASH (a surname abbreviated from "Eisenstadt"), distinguished for his piety, firm character, and Talmudic learning. He was an intimate friend of GÖTZ SCHWERIN, a considerably older man, who had settled at Baja a few years earlier. In order to enable his friend to succeed to the rabbinate, Ash resigned his office in 1815, continuing his rabbinical activity in other circles. Under the new rabbi the community grew in numbers and reputation, becoming one of the most flourishing and important in the whole district.

In the midst of this prosperity, that boded well for the future of the community, a conflagration occurred in Baja, as stated above, which destroyed 2,000 houses, the synagogue, the communal house, the school, the hospital (that also served as a shelter for homeless strangers), and the bath-house. The whole city, in fact, was a mass of smoking ruins. All the members of the community, except three, were rendered destitute. Götz Schwerin (now an octogenarian) found refuge in a house on the outskirts of the city. He manifested an untiring activity in the relief of his flock and the rebuilding of the synagogue, appealing to communities and rabbis far and near, and to his many friends and disciples both at home and abroad. His efforts were very successful, and he received large contributions. The scattered members of the community returned, and were joined by others who were attracted by the business activity incident to the rebuilding of the city.

Within two years the new synagogue was begun. Some influential members took this occasion to press for the introduction of changes in the ritual which they had seen adopted in the progressive synagogue of Budapest. Schwerin offered little opposition; and the Orthodox interior arrangement was therefore abandoned, and a modern order of services adopted, which subsequently served as model for many other communities. The new building was dedicated Sept. 26, 1845. Jacob Steinhardt, rabbi of Arad, delivered the address in Hungarian, while Schwerin lighted the perpetual lamp and pronounced the benediction. After thirty-six years of beneficial activity, Schwerin died Jan. 15, 1852. He was succeeded by Moses Nascher, upon whose death, Feb. 13, 1878, Dr. Leopold Adler was called to the rabbinate.

With the reform of the services, reform of the system of education went hand in hand. In the thirties the congregation established an elementary school, which was reorganized in 1846 under the name of "Israelitische Deutsch-Ungarische Primär Schule." This school consisted of four classes. Employing superior teachers, it was attended even by non-Jews, and stood high with the educational authorities. In the fifth decade the community also established classes for girls. In all its intellectual endeavors it was supported by the old Talmud-Torah Society, which attended to the poor and took its share of the communal burdens. In 1901 the community supported a kindergarten, a primary school for boys and girls (four classes), and a grammar

school for boys and girls (four classes) with 12 teachers and 428 pupils. A more thorough instruction in religion is provided in the Talmud-Torah school recently erected, in which the more advanced scholars are introduced to the study of Scripture. Many who have achieved distinction in various departments of activity have received their education here.

The philanthropic institutions include a Hebrah Kaddishah, a Jewish Women's Society, and a Young Women's Society, which supports a kitchen for poor school-children.

**BAJAZET II.:** Turkish sultan; born 1447; succeeded in 1481; died 1512. During his reign the Jews enjoyed a period of complete and uninterrupted peace, which was reflected in the flourishing condition of Jewish culture and letters. Under Bajazet II. there were learned Sephardic Jews who occupied themselves not only with the Talmud, but also with the secular sciences. Among such scholars were Mordecai Comtino (1460-90), an astronomer and mathematician, whose Jewish and Karaite disciples included Elijah Bashyatzki, Caleb Afendopolo, and Joseph Ravizi; Solomon ben Elijah Sharbit ha-Zahab of Salonica and Ephesus (1470-1500), preacher, poet, and grammarian; Shabbethai ben Malkiel Cohen, who had gone to Turkey from Greece; and Menahem Tamar, a liturgical poet (1446-1500). As early as 1483 there was a Jewish printing establishment in Constantinople.

The moral condition of the native Jews was, however, not entirely satisfactory, as is proved by incidents in their communal history, such as the quarrel between Rabbi Joseph Colon of Mantua and Moses Capsali, chief rabbi of Turkey, about a collection for the poor of Jerusalem. But the situation improved with the arrival of exiles from Spain (1492), who were received most kindly by the sultan. Bajazet showed himself at this critical moment not only more compassionate toward them, but also more prudent and politic than the Christian princes. He recognized that these refugees from Spain, Portugal, and others later from Naples were of value to his empire by reason of their intellectual capacity.

In 1492 Bajazet ridiculed the foolish conduct of Ferdinand and Isabella of Spain in expelling a class of people so useful to their subjects. "You venture to call Ferdinand a wise ruler," he said to his courtiers—"he who has impoverished his own country and enriched mine!"

Bajazet addressed a firman to all the governors of his European provinces, ordering them not only to refrain from repelling the Spanish refugees, but to give them a friendly and welcome reception. He threatened with death all those who treated the Jews harshly or refused them admission into the empire. Moses Capsali, referred to above, who probably helped to arouse the sultan's friendship for the Jews, was most energetic in his assistance to the exiles. He made a tour of the communities, and was instrumental in imposing a tax upon the rich,

to ransom the Jewish victims of the persecutions then prevalent.

Thus several thousands of emigrants established themselves in Turkey; and in less than a generation they possessed themselves of the administration of the Jewish communities and exercised a preponderant influence upon them, creating, as it were, a species of Oriental Spain.

**BAK:** A family of Hebrew printers in Italy and Prague, who exercised their craft for two centuries. The name is said to be an abbreviation of "Bene Kedoshim" (Children of the Holy), an assumption, however, which is somewhat improbable. The principal members of the family were the following:

1. **Gerson Bak:** Progenitor of the family; flourished during the first quarter of the sixteenth century in Italy.

2. **Israel ben Joseph Bak:** Son of Joseph. Pressman from 1686 to 1691 with the firm of Judah Bak's Sons, and in 1695 with that of Judah Bak's Grandsons. The last-mentioned establishment, also called "Bakische (or Pakische) Buchdruckerei," flourished after 1697, and was conducted by Israel and Moses Bak (No. 9). Afterward the business was carried on by the sons of Judah Bak (No. 8) and of Yom-Tob Lipman Bak (No. 11).

3. **Jacob ben Gerson Bak** (also called **Wal** or **Wohl**): Son of Gerson. Printer; died in 1618. In 1595 he published at Verona the Midrash Tanhuma, with an elaborately embellished title-page. After 1605 he was engaged in printing at Prague. His first work published there (1605) was the "Sabbat-Yozerot," based upon the Polish ritual and written in the Judæo-German dialect. Until 1615 he was occasionally associated with Jacob Stabnitz. Jacob left two sons, Joseph (No. 5) and Judah (No. 7).

4. **Jacob ben Judah Bak:** Son of Joseph. Pressman at Lublin about 1648; died in 1685. In 1680 he completed, at Weckelsdorf, the "Mahzor," based on the German ritual, which had been begun at Prague in the previous year—the only Hebrew work ever published at the former place.

5. **Joseph ben Jacob Bak:** Brother and partner of Judah (No. 7). Together, under the firm-name of "The late Jacob Bak's Sons," they conducted the business from 1620 to 1660.

6. **Joseph ben Judah Bak:** Son of Judah. Printer of the seventeenth century. In 1679 and 1684 he was in the printing business by himself and in 1686 in association with his nephew Moses (No. 9).

7. **Judah ben Jacob Bak:** From 1661 to 1669 sole proprietor of the printing business formerly carried on by himself and his brother Joseph (No. 5). He died in 1671 and left the establishment to his sons Jacob (No. 4) and Joseph (No. 6) who, under the firm-name of Judah Bak's Sons, conducted it from 1673 to 1696.

8. **Judah ben Moses Bak:** Composer of the eighteenth century. He was first engaged in the printing-house of his father, from 1705 to 1720, but carried on an independent establishment from 1736 to 1756, when he became associated with his brother,

Yom-Tob Lipman (No. 11). His wife died in Elul, 1760, and he was already advanced in years when he lost his son Moses Löb (No. 10).

**9. Moses ben Jacob Bak:** Printer, and partner of Joseph ben Judah (No. 7). Died Tammuz 14, 1712.

**10. Moses Löb Bak:** Compositor in the printing-office of his father, Judah (No. 8), in 1757, and son-in-law of Mendel Steinitz.

**11. Yom-Tob Lipman Bak:** Printer from 1757 to 1789. The firm of Bak was still in existence in 1784 under the title of "Bakische und Cazische Privilegirte Buchdruckerei."

A. F.

**BAKBUK, SONS OF:** A family of Nethinim that returned with Zerubbabel (see Ezra ii. 51 and the corresponding list of Neh. vii. 53). The identification of these with "the sons of Acub" mentioned in I Esd. v. 31 (compare Ezra ii. 45) is doubtful.

J. JR.

G. B. L.

**BAKBUKIAH.** A Levite who returned with Zerubbabel (Neh. xii. 9); "second among his brethren" (Neh. xi. 17). He was one of those that lived in Jerusalem, and was a porter of the storehouse at the gate (Neh. xii. 25).

J. JR.

G. B. L.

**BAKER:** Among the Hebrews the task of preparing the daily supply of fresh bread fell to the housewife. It was only in the larger cities that professional bakers were found, and, even in these, not at a very early date. Bakers and baking are mentioned in Gen. xl. 2; Hosea vii. 6. Mention is made

Egyptian Baker.

(From "Zeitschrift der Egyptischen Sprache.")

of a "street of bakers" in Jerusalem in the days of Jeremiah (Jer. xxxvii. 21); and one of the towers at the city wall bore the rather curious name of "Tower of the Ovens" (Neh. iii. 11, xii. 38; see Josephus, "Ant." xv. 9, § 2). See BREAD and BAKING.

J. JR.

I. BE.

**BAKEWELL HALL:** A large building in the neighborhood of the Guildhall, London, on the site now occupied by Gresham College. In a document at the British Museum (Add. MS. 4542, f. 37), a syn-

agogue of the Jews is described as being on the same site; and Stow ("Survey of London," ed. Thoms, p. 108) refers to the tradition that Bakewell Hall was once a Jewish synagogue. It was built on land that originally belonged to Josce of York. At his death it escheated to the king and passed to Samuel

Old London Jewry, Showing (A) Location of Bakewell Hall.

(From Ralph Aggas' "Map of London," 1586.)

Hoppocole, and then to Ysaac the "Cyrographer," who handed it over to his son Samson. It ultimately came into possession of Aaron fil. Vives in 1281, and was in the hands of his mother at the expulsion in 1290. It was the only synagogue in London in preexpulsion times that was not confiscated and remained in possession of the Jews down to the expulsion in 1290. It has been suggested that the name was derived from "Bathwell Hall," and that the "mikweh," or ritual bath, of the London Jewry was also situated in the same building.

J.

**BAKHCHI-SARAI** (Tatar for "a palace surrounded by gardens"): Former residence of the Tatar khans (fifteenth century to 1783); now a town in the government of Taurida (Crimea), Russia, situated on the rivulet Churuksu, nearly midway between Simferopol and Sebastopol. In a total population of 13,377, mostly Tatars (in 1881), about seventy families were Karaites and about twenty families Talmudical Jews. The Karaites trade largely in dress-stuffs, mercery, and groceries, while most of the Talmudical Jews are artisans. Both communities have their synagogues.

G.

H. R.

**BAKHMUT:** City in the government of Yekaterinoslav, Russia. It has 4,000 Jews in a population of 19,000. The district of Bakhmut, including the city, has a Jewish population of 9,469 in a total of 332,171. Until 1882, the Jews of the vicinity of Bakhmut rented land for cultivation; but since the law of May 3, 1882, only 10 or 15 of them hold land in Christians' names and sublet it to peasants. There are 583 artisans among the Jews, including 185 tailors. The lamentable condition of the latter is due

to the steady influx of other Jewish artisans. The city has a Talmud Torah, a private school for Jews, and 9 "heders" with 155 male pupils.

S. J.

**BAKI, SIMSON:** 1. Born either in Germany or Italy, and very probably related to the Bachi family, members of which flourished successively at Vercelli and Casale. He lived about 1582-84, and wrote at these dates from Safed and Jerusalem three letters, which were recently published by David Kaufmann in A. M. Luncz's "Jerusalem," vol. ii., Jerusalem, 1887, Hebrew section, pp. 141-147; compare also Steinschneider in the same periodical, vol. iii., Jerusalem, 1889, pp. 56, 57, No. 336, who calls him "Bach."

L. G.

G. A. K.

2. Rabbi at Casale; flourished about the middle of the eighteenth century. He was a contemporary of Moses Zacuto, and was, it is assumed by some, the descendant of Simson Baki, 1, or in some way related to him. According to Rabbi Benjamin Cohen of Reggio, who was Baki's pupil, he died on the 11th of Sivan, 5451 (=1691; compare "Gebul Binyamin," ii., No. 44). Baki seems to have been a mystic. From one of the epistles of the cabalist Moses Zacuto, bearing the date 1672 (אנרות הרמ"ז, No. 2), it appears that he was very superstitious, for he complains of his ill-success at exorcising the evil spirit with which a woman was possessed, whereupon Moses Zacuto recommended the burning of sulfur along with the use of the Ineffable Name to obtain the desired effect. In common with all his countrymen, Baki was a fervent champion of Shabbethai Zebi, and transmitted to him from Italy a letter avowing allegiance to his cause. As a writer he does not appear to have been active beyond the composition of a commentary on Lamentations and the Song of Songs mentioned in the "Epistles of Moses Zacuto," entitled רפואה למכה, which latter is still extant in manuscript. Bibliographers do not allude to it at all, except Benjacob, "Ozar ha-Sefarim," p. 549, note; 217.

**BIBLIOGRAPHY:** Nepi-Ghirondi, *Toledot Gedole Yisrael*, 1856; p. 321; Grätz, *Gesch. der Juden*, 2d ed., x. 323; Brüll, in *Hakarmel*, new series, iv. 168; Brüll's *Jahrb.* ix. 175, note 1; D. Kaufmann, in Luncz's *Jerusalem*, ii., Jerusalem, 1887, Hebrew section, p. 142; A. Jellinek, in the *Zunz-Jubelschrift*, Berlin, 1884, Hebrew section, p. 86; Mortara, *Indice Alfabetico*, Padua, 1886, p. 5, s.v. *Bachi*, who mentions two Simsons, who are, without doubt, identical. Another died in 1885.

K.

G. A. K.

**BAKING.—Biblical Data:** The bread of the ancient Hebrews, like that of the Palestinians to-day, was not in the shape of thick loaves, but of thin cakes (see BREAD). Originally these were baked by kindling a fire on the sand or on small stones, and then, when the sand or stones had become sufficiently heated, brushing away the fire and ashes and laying the thin cakes of dough upon the sand or stones and covering them with glowing ashes. A few minutes sufficed to bake this bread. Such is the description given by Epiphanius (De Lagarde, "Symmicta," ii. 188), who explains the Septuagint *ἐγκυβλία* as referring to "the hiding" of the cakes under the ashes (compare the Vulgate *panis subcinerarius*). The

Hebrew expression ענת רצפים in I Kings xix. 6, rendered as "cakes baked on the coal," is also most probably to be understood as meaning cakes baked on glowing stones (see Robinson, "Biblical Researches," ii. 416; Doughty, "Arabia Deserta," i. 131). Another method of baking, prevalent still among the Bedouins, is to employ a heated iron plate in lieu of sand or stones (מחבת ברזל, Lev. ii. 5; Ezek. iv. 3). The reference in I Chron. ix. 31 is probably to bread baked in this way.

The Jews that were settled in the land, no doubt, as a general thing, had ovens in their houses (תנור, "tannur"). The modern Palestinian oven, which, in ancient times, could certainly not have been more primitive, consists generally of a clay pan, which is placed upon small stones with dung-fuel heaped around and over the pan. The dung is kindled and

Modern Baking-Oven in Syria.  
(From Benzinger, "Hebräische Archäologie.")

the bread then laid upon the heated stones under the pan. This is evidently an elaboration of the process above described. Another form of oven, however, is also used, consisting of a clay cylinder narrower toward the top. Fire is kindled inside this, and the cakes of bread are stuck upon the heated inside walls. The ancient Egyptians laid the cakes upon the external walls of the oven, as the drawings show.

**BIBLIOGRAPHY:** Wilkinson, *Ancient Egypt*, 1878, ii. 34; Erman, *Aegypten und Aegyptisches Leben*, 1885, pp. 191 et seq.; see also the cuts of the modern oven in Benzinger, *Archäologie*, 1894, pp. 86, 87; Nowack, *Lehrbuch der Hebr. Archäologie*, 1894; Vogelstein, *Die Landwirtschaft in Palästina zur Zeit der Mishnah*, Berlin, 1894; and the works referred to in this article.

I. BE.

—**In Rabbinical Literature:** Rabbinical, and especially tannaitic, literature gives more detailed information respecting baking than any other handicraft. This is due to the fact that the Temple ritual included no less than twelve distinct meal-offerings which were of the greatest importance in the Halakah. The flour used was made from wheat crushed

with a pestle; the grains being ground for fine pastry. It was then strained through a sieve once or oftener, and, after being mixed with water, was kneaded thoroughly. Leavened dough or other leavening material was generally used for baking outside the Temple. The process of fermentation is minutely described in the Talmud in passages relating to the making of the unleavened bread for Passover (Pes. 36*b*, 37*a* and *b*, 41*a*, and in many other places; see Mazzot).

Besides the ordinary mode of preparing dough in

Temple being of metal. They were a handbreadth narrower at the top, where the opening was made. After the oven was filled, this orifice was closed with a lid, and in order to avoid too rapid

**Ovens.** cooling the edges of the cover were cemented with clay. The lower and smaller opening, which served for the removal of the ashes, was also cemented. This primitive oven was not, however, the only one known in ancient times, the פורני, *φούρνος*, imported from Greece as its name shows, being also used (Bezah 34*a*; Kelim xi. 4; and in many other places). This oven rested upon a

EGYPTIAN ROYAL BAKERY, SHOWING VARIOUS PROCESSES OF BAKING.  
(From Wilkinson, "Ancient Egyptians.")

a kneading-trough, there were other methods. It was sometimes made by pouring flour into boiling water; sometimes by pouring the boiling water on the flour, after which the mass was kneaded (Hallah i. 6; Pes. 37*b*; Tosefta, Hallah, i. 2; Yer. *ib.* i. 58*a*; compare Maimonides, Commentary to Mishnah). When thoroughly mixed, the dough was placed on boards ("arukot"), to be stretched, rolled, and molded into the desired shape. Usually it was shaped by hand, but occasionally special forms were used. The size and weight of the bakers' loaves were always uniform (Mishnah B. M. ii. 1; compare Rashi, *ib.*); those made at home differed according to individual taste and desire (Mishnah B. M. ii. 2).

Ovens were of clay, stone, or metal; those in the

round or four-cornered foundation; sometimes a cupola-shaped dome was placed upon the ground and the loaves upon it were baked by a fire beneath. The loaves were placed against the inner wall of the oven, and considerable dexterity and practise were required to remove the baked bread without injuring it (Kelim viii. 9; v. 10, 11; compare Gershon of Radzyn's Maseket Kelim (Yosefow, 1873), *ad loc.* and "Zeit. Deutsch. Paläst. Ver." iii. 111, 112).

As stated above, the Talmud pays particular attention to the bread or cakes used in Temple offerings. With the exception of the bread of the thank-offering (לחמי תודה) and the two breads (שתי הלחם) used at Pentecost, all meal-offerings were unleavened. The priests, who kneaded the dough with

lukewarm water, took great care to prevent fermentation. The "two loaves" were both kneaded as well as baked separately; they were

**The "Two Loaves."** long, four handbreadths wide, with corner-pieces ("horns") of four fingers' length (Men. xi. 1, 4).

A special knack and dexterity were necessary for the baking of the showbread (לֶחֶם הַפְּנִיִּים), which the Talmud describes in detail. Each loaf

**The Show-bread.** was kneaded singly, but every two loaves were baked together. Three (golden) forms or molds were used in the course of preparation; in the first the dough was kneaded, in the second the bread was baked, and into the third it was put, immediately after being taken from the stove, in order to preserve its shape (Men. xi. 1, 94a; see Maimonides, "Yad," Temidin u-Musafin, v. 6-8). The preparation of this bread was so intricate that only one family, the GARMU, was deemed sufficiently expert in the art, and accordingly its members charged high prices for their services (Yoma 38d).

Baking was a developed trade even in Jeremiah's time (Jer. xxxvii, 21), and was continued as such in the Talmudic period. It is remarkable, therefore, that in the Hebrew as well as in Aramaic portions of the Talmud the baker bears an Assyrian appellation, נַחְתוּם (for the Assyrian derivation of this word, see Zimmern, "Z. D. M. G." liii. 115 *et seq.*; see, however, Jastrow, "Dictionary," *s.v.* נַחְתוּם). In Talmudic times, women followed the baker's trade, selling their wares in the market-

**Women as Bakers.** places (Hallah ii. 7; see also Ber. 58b). In the larger cities, the bakers did not sell their own bread, but disposed of it to dealers (Demai v. 4; 'Ab. Zarah 35b, 55b, where the Tosafists give the correct explanation). In addition, there were large bakeries where dough was baked which had been prepared at home. Since many different individuals had bread baked in these ovens, each loaf, to prevent disputes, was distinguished by some little token, such as a pebble, a bean, etc., which was pressed upon the loaves (Tebul Yom i. 3). See DIETARY LAWS, MAZZOT, HALLAH.

L. G.

**BAKONYI, SAMUEL:** Hungarian deputy and publicist; born in Debreczin July 22, 1862. After graduating in law at the University of Budapest, he settled in his native town, where he soon became prominent in the public affairs of the city and the Jewish congregation, through his journalistic activity and his exceptional oratorical powers and wide juristic knowledge. He became one of the leaders of the liberal ecclesiastical reform movement, which began in Debreczin, called "the Calvinistic Rome," with the result that, although a Jew and dwelling in a Protestant town, he was elected in 1901 to the Parliament on the platform of the liberal Kossuth party. As an expert criminal lawyer he holds an appointment upon the law committee of the Hungarian Parliament.

L. V.

**BAKRI, DAVID BEN JOSEPH COEN:** Chief of the Algerian Jews; financier; born about 1770; decapitated Feb. 4, 1811. His great financial abilities placed him early at the head of the important firm "Bakri Brothers," founded by his father. In 1797 David married Aziza, a niece of the powerful Naphtali Busnash, who at that time became a partner in the firm, which then assumed the name "Bakri Busnash." Supported by the regency, which was but a tool in the hands of Busnash, and skilfully managed by David, the extent of the company's transactions attained the highest proportions. Their vessels plowed the seas; and many European governments entrusted them with the management of their Algerian money affairs. On several occasions they dared to defy the British government in purchasing from French privateers the vessels that they had captured from the allies. During the dearth in France they supplied the latter with a considerable quantity of wheat on credit; and on their advice the dey authorized a loan to the French Directory of five million francs, the credit for which was eventually transferred to them. The settlement of this loan brought about thirty years later the definite rupture between the regency and France, and, finally, the conquest of Algeria by the French. On the assassination of Busnash and the anti-Jewish riots which followed it, the firm "Bakri Busnash" became insolvent; and David himself was thrown into prison under the pretext that the firm owed the regency a sum of five million francs. Set free on a promise to pay the alleged debt, he soon built up the firm "Bakri," owing to the help he received from several European governments for the services he had rendered them. He even succeeded in winning the confidence of the new dey, who appointed him in 1806 chief of the Algerian Jews. This post proved fatal to him. His irreconcilable enemy, David Duran, who coveted this office, was unscrupulous in his efforts to undermine Bakri's position. The latter was accused of high treason and decapitated.

**BIBLIOGRAPHY:** Bloch, *Inscriptions Tumulaires*, pp. 88 *et seq.* D. I. BR.

**BAKRI, JACOB COHEN:** French consul at Algiers before its conquest by France; born in Algiers in 1763; died at Paris Nov. 23, 1836. Immensely rich, and highly esteemed for his abilities and character, he was appointed consul under the Restoration. In 1827, under Charles X., he negotiated with the dey, Hasan, in reference to a claim made by the French government. In the course of this negotiation, Bakri, defending with vehemence the French interests, was insulted by the dey. The French government regarded this as a national affront, and declared war, the result of which was the conquest of Algiers and the banishment of the dey.

Leaving Algiers at the outbreak of the war, Bakri settled in Paris, where he was continually annoyed by his creditors, by reason of his inability to avail himself of a debt due to him from the Spanish government, amounting to 35,000,000 francs.

**BIBLIOGRAPHY:** Jost, *Neuere Gesch. der Israeliten*, ii. 210; *Allg. Zeit. des Jud.* 1838, p. 216. See ALGIERS. S. I. BR.

**BAKRI, JOSEPH COEN:** Chief of the Algerian Jews; financier; born at Algiers in the middle

of the eighteenth century: died at Leghorn in 1817. He was the founder of the renowned firm "Bakri Brothers," which played so great a part in the politics of Algeria during half a century. At the death of his son David, Joseph undertook the management of the affairs of the firm, and was appointed by the dey chief of the Algerian Jews. This dignity, which had been so portentous to his son, brought him misfortune too. In 1816 he was banished from Algeria, and his possessions were confiscated by the dey. Subsequently he removed to Leghorn, where he spent the closing years of his life unbefriended and in poverty.

**BAKST, NICOLAI IGNATYEVICH:** Russian physiologist; born in 1843. He studied at St. Petersburg University, from which he graduated Bachelor of Natural Science in 1862. He was then sent abroad by the Ministry of Public Instruction for a period of three years to prepare himself for the professorship of physiology. Upon his return he lectured at the St. Petersburg University as privat-docent; he also lectured to the women medical students from 1881 till the separate lectures for women were abolished. In 1886 he was appointed member of the committee of science at the Ministry of Public Instruction.

Bakst's principal physiological writings are: "Versuche über die Fortpflanzungsgeschwindigkeit der Reizung in den Motorischen Nerven des Menschen" (published with the approval of Helmholtz in the "Monatsberichte der Akademie der Wissenschaften zu Berlin," 1867); "Neue Versuche über die Fortpflanzungsgeschwindigkeit der Reizung in den Motorischen Nerven des Menschen" (*ib.*, 1870); "Ueber die Zeit, Welche Nöthig Ist, Damit ein Gesichtseindruck zum Bewusstsein Kommt" (*ib.*, and more extensively in "Pflüger's Archiv für Physiologie," iv.); "Die Folgen Maximaler Reize von Ungleicher Dauer auf den Nervus Accelerans Cordis" (in the "Archiv für Anatomie und Physiologie," 1877); "Die Verkürzung der Systolenzeit Durch Nervus Accelerans Cordis" (in the "Arch. f. Anat. und Physiol." 1878); "Kalorimetrisches Opreedyenie Krovi" (in S. I. Chirgev's work "Statika Krovi," St. Petersburg, 1881); "Kurs Fiziologii Organov Chuvstv" (St. Petersburg, 1886); "O Materializmye Yestestvennykh Nauk" (in "Znanie," 1871, No. 10); "O Znachenii Fiziologii pri Izuchenii Meditsiny" (St. Petersburg, 1881); "Pamyati N. I. Pirogova," in commemoration of N. I. Pirogov (St. Petersburg, 1882); and "R. Stolyetnemu dnyu Konchiny Moiseya Mendelsona" (St. Petersburg, 1886).

H.—30

Besides these contributions, Bakst, in the eighties, wrote numerous articles on various public topics in the "Golos," and has translated from the German and from the English Karl Ritter's lectures on geography under the title "Istoriya Zemlevyedeniya i Otkryti po Etomu Predmetu" (St. Petersburg, 1864); Odling's lectures on chemistry under the title "Zhivotnaya Khimiya" (St. Petersburg, 1867); and M. Schleiden's "Das Alter des Menschlichen Geschlechts" ("Drevnost Chelovecheskaya Roda") (St. Petersburg, 1865).

**BAKU:** Seaport, in the government of the same name, Transcaucasia, Russia, situated on the peninsula of Apsheron, on the west coast of the Caspian sea. The naphtha-wells of Baku have long been known to fire-worshippers. It is supposed that in the early time of the Sassanids the city of Bagahan occupied the site of Baku. Baku is known to have existed in the fourth century. The name is derived from the Persian *Bad-Kube*, which denotes "the blow of the wind," signifying the strong north-north-west winds that blow there. In the eighth century Baku came into the possession of the Arabs, and, after the downfall of the califate, into the hands of the princes of Shirvan.

The monk Wilhelmus de Rubruquis, who was sent as ambassador by King Louis IX. to the Tatar khan in 1254, in describing the old walls near the sea and the road to Baku, relates that the whole country was largely inhabited by Jews.

In 1794 about a dozen Jewish families from Jilan, Persia, settled in Baku, and lived in rented houses in the fourth or outer wall of the city. Their synagogue was also in a rented building, and they had two rabbis, Ephraim and Abraham ben Joseph. After the annexation of Baku by Russia, in 1806, the Persian inhabitants started a riot in the Jewish quarter, and although it was quelled by the Russian general, the Jews decided to remove to Kuba, which then had a Jewish population of from 700 to 800 families. From that time until late in the eighties, only a few Jewish soldiers—veterans of the time of Emperor Nicholas I.—and some privileged merchants were permitted to live in Baku. With the development of the petroleum trade, in which the Rothschilds, who have established an office in Baku, were largely interested, Baku became one of the larger cities of Russia, the total population increas-

ing from 12,333 in 1867 to 112,000 in 1897. The Jewish population increased proportionately, numbering 2,000 in 1899.

The Jewish community of Baku is now one of the most advanced, and its affairs are well managed. It possesses a religious school for children, and a new synagogue was erected in 1901 at a cost of 100,000 rubles.

In the government of Baku the Caucasian Jews in 1900 numbered 8,630, and were distributed as follows: city of Kuba, 7,000; Mudzy, 950; Aftaran-Mudzy, 680.

In the country round Baku Professor Hahn of Tiflis discovered in 1894 a Jewish tribe which had never before been recognized as descendants of Israel. The members of this tribe lived in villages in the neighborhood of Baku and Elizabetopol, shut in by insurmountable mountains, and occupied themselves with cattle-breeding and agriculture. They claim to be the remainder of the exiles from the land of Israel in the time of the First Temple. The language of these mountain Jews, which contains unmistakable traces of Hebrew, is related to that of the Ossetines, who are also considered to be of Israelitish origin.

**BALAAM** (Hebr. בִּלְעָם, Bil'am; Septuagint, *Balaam*).—**Biblical Data:** A son of Beor and a

Balaam and the Ass.  
(From a "Teutsch Chumesh.")

prophet of Pethor in Mesopotamia. The narrative relating to Balaam is found in Num. xxii.-xxiv. According to this narrative, Balak, king of Moab, sent messengers to the soothsayer, requesting him to come and pronounce a curse against Israel, with whom the Moabites were at war, and of whom they stood in dread. Balak hoped, with the aid of the soothsayer's powerful curse, to overcome his foe. His confidence in Balaam is illustrated by the declaration he makes to him: "I know that he whom thou blessest is blessed, and he whom thou cursest is cursed" (ib. xxii.

**Balak Solicits** 6, R. V.). Balaam, after consulting

**His Aid.** God, is forbidden to go back with the Moabites, and he accordingly refuses, despite the gifts that the messengers of Balak had brought with them for him. Balak, being deter-

mined to secure the prophet's services, sends other and more distinguished messengers, who, as the narrative puts it, are empowered to promise still greater rewards and honor to the soothsayer if he will accede to Balak's wishes. Balaam, although anxious to go, again refuses; declaring that even if Balak were to give him his house full of silver and gold, he can not do contrary to God's command. However, he begs the embassy to await a second consultation with the Lord. This time God permits the soothsayer to go to Balak, but enjoins upon him to do only "the word which I shall say" (xxii. 20). Balaam then arises and departs with the Moabites, riding upon his ass. But notwithstanding the previous permission, God's anger is kindled at Balaam as he goes; and the angel of the Lord with a drawn sword in his hand shows himself accordingly to the ass, which refuses to proceed along the road despite Balaam's efforts to urge it. Three times the angel, invisible as yet to Balaam, puts himself in the path of the ass, which is beaten by its master for its refusal to proceed. The ass is then given the power of addressing its rider in human speech, and asks him

**His Ass Speaks.** reproachfully why it has been smitten. The soothsayer, apparently not astonished by the miraculous speech, replies angrily that, were a sword in his hand, he would willingly kill the ass. The angel then becomes visible to Balaam, and the soothsayer falls on his face before the vision. Balaam confesses his sin to the angel and offers to return to his own land, but the divine messenger permits him to go on with the Moabites, enjoining him to say "only the word that I shall speak unto thee" (xxii. 35).

Chapters xxiii.-xxiv. contain the detailed account of four oracles that Balaam uttered to Balak concerning Israel. The soothsayer directs Balak to offer sacrifices to God of seven oxen and seven rams on seven altars built on a high place, Bamoth-baal, where he could see "the utmost part" of Israel (xxii. 41). Balaam then utters the first inspired oracle in favor of Israel, a people that "shall not be reckoned among the nations" (xxiii. 9). Impressively he concludes:

"Who can count the dust of Jacob,  
Or number the fourth part of Israel?  
Let me die the death of the righteous,  
And let my last end be like his" (xxiii. 10, R. V.).

Balak moves the seer to another point of outlook, the top of Mt. Pisgah, where the entire Israelitish camp is visible. Here again Balaam receives an oracle even more strongly commendatory of Israel than the first: "The Lord his God is with

**His Four Oracles.** him; . . . he hath, as it were, the strength of the wild ox" (xxiii. 21, R. V.). What Israel accomplishes is not

by enchantment, but by God's own might. Comparing Israel to a lion, he says:

"Behold, the people riseth up as a lioness,  
And as a lion doth he lift himself up:  
He shall not lie down until he eat of the prey,  
And drink the blood of the slain" (xxiii. 24, R. V.).

Balak then begs Balaam neither to curse nor to bless, but to remain silent as to Israel's future. Balaam replies that he must do as directed by God. The king then takes the soothsayer to Mt. Peor, but is once more disappointed. The prophet in his third utter-

ance is impressed by the magnificent sight of Israel's encampment (xxiv. 5b-6, R. V.):

"As valleys are they spread forth,  
As gardens by the river-side,  
As lign-aloes which the Lord hath planted,  
As cedar-trees beside the waters."

Balak is at last infuriated and would dismiss Balaam at once, but the latter pours forth his fourth and last prophecy of the rise of a tribe in Israel that will secure for the Hebrews decisive victories over Moab and Edom; to which are added short denunciations of Amalek and the Kenites. The king then permits the prophet to return to his home. The four oracles are in poetic form and belong to the best specimens of a certain species of ancient Hebrew poetry. They are all characterized by a rich imagery, and the diction is at once impressive and stately. The third, xxiv. 5, beginning,

"How goodly are thy tents, O Jacob!  
Thy Tabernacles, O Israel,"

is particularly fine.

Balaam is mentioned in Micah vi. 5. Very suggestive is the article "Haman, Bileam, und der Jüdische Nabi," by Steinthal, in "Zur Bibel- und Religionsphilosophie," Berlin, 1890.

I. M. P.

—**In Rabbinical Literature:** Balaam is represented as one of seven heathen prophets; the other six being Balaam's father, Job, and his four friends (B. B. 15b). He gradually acquired a position among the heathen as exalted as that of Moses among the chosen people (Num. R. xx. 1). At first a mere interpreter of dreams, Balaam later became a magician, until finally the spirit of prophecy descended upon him (ib. 7). He possessed the special gift of being able to ascertain the exact moment during which God is wroth—a gift bestowed upon no other creature. Balaam's intention was to curse the Israelites at this moment of wrath; but God purposely restrained His anger in order to baffle the wicked prophet and to save the nation from extermination (Ber. 7a). When the law was given to Israel, a mighty voice shook the foundations of the earth; so that all kings trembled, and in their consternation gathered about Balaam, inquiring whether this upheaval of nature portended a second deluge; but the prophet assured them that what they heard was the voice of the Almighty giving the sacred Law to His children of Israel (Zeb. 116a).

Nevertheless, it is significant that in rabbinical literature the epithet "rasha" (the wicked one) is often attached to the name of Balaam (Ber. l.c.; Ta'anit 20a; Num. R. xx. 14). He is pictured as blind of one eye and lame in one foot (San. 105a); and his disciples (followers) are distinguished by three morally corrupt qualities, viz., an evil eye, a haughty bearing, and an avaricious spirit—qualities the very opposite of those characterizing the disciples of Abraham (Ab. v. 19; compare Tan., Balak, 6). Balaam received the divine communication at night only—a limitation that applies also to the other heathen prophets (Num. R. xx. 12). The Rabbis hold Balaam responsible for the unchastity which led to the apostasy in Shittim, and in chastisement of which 24,000 persons fell victims to a pestilence (Num. xxv. 1-9). When Balaam, "the wicked,"

saw that he could not curse the children of Israel, he advised Balak (intimated in Num. xxiv. 14) as a last resort to tempt the Hebrew nation to immoral acts and, through these, to the worship of Baal-peor. "The God of the Hebrews," adds Balaam, "hates lewdness; and severe chastisement must follow" (San. 106a; Yer. ib. x. 28d; Num. R. l.c.).

The Rabbis, playing on the name Balaam, call him "Belo 'Am" (without people; that is, without a share with the people in the world to come), or "Billa' 'Am" (one that ruined a people); and this hostility against his memory finds its climax in the dictum that whenever one discovers a feature of wickedness or disgrace in his life, one should preach about it (Sanh. 106b). In the process of killing Balaam (Num. xxxi. 8), all four legal methods of execution—stoning, burning, decapitating, and strangling—were employed (Sanh. l.c.). He met his death at the age of thirty-three (ib.); and it is stated that he had no portion in the world to come (Sanh. x. 2; 90a). The Bible devotes a special section to the remarkable history of the prophet, in order to answer the question, why God has taken away the power of prophecy from the Gentiles (Tan., Balak, 1). Moses is expressly mentioned as the author of this episode in the Pentateuch (B. B. 14b).

J. SR.

H. M. S.

—**Critical View:** Nearly all modern expositors agree that the section xxii.-xxiv. belongs to the composite document JE.

In xxii. Balaam, according to J, is requested by the messengers of Balak to come and pronounce a curse against the Israelites, of whose growing power the Moabite chief is not unreasonably in dread. Balaam is willing to go, but assures Balak that he can not exceed the command of יהוה, even though Balak were to give him his house "full of silver and gold" (xxii. 18). The episode of the ass is then told.

The E account simply states that Balaam was summoned by Balak, but that he did not consent to go until God (Elohim) appeared to him in a dream and gave him permission (xxii. 19-21). The episode of the journey (xxii. 22 *et seq.*) belongs entirely to J.

A comparison between xxiii. (E) and xxiv. (J) will show that the J account is much more picturesque than that of E, and has, moreover, none of the latter's elaborate and somewhat stilted detail. Whether the four poems are to be attributed, just as they stand in xxiii. and xxiv., to E and J respectively, is a matter of doubt. It is much more probable that an ancient poem about Balaam had been used by both the J and E accounts, which the later J and E redactor divided in the manner in which it now appears.

As to the age of the respective accounts, the nucleus of the narrative must have originated at a comparatively late date, after Israel had

**Age of Narrative.** acquired a permanent ascendancy over the other Canaanitish nations. The tale of the talking ass must be regarded as a bit of primitive folk-lore, introduced into the narrative as a literary embellishment.

It is generally supposed by critics that the three short oracles in xxiv. 20-24 are a later accretion by

a writer other than the author of the four longer poems.

A different tradition about Balaam exists in the Priestly Code (P), where Balaam is represented as a Midianite, who attempted to seduce Israel by immoral rites (Num. xxxi. 16). According to this account, which probably depends upon Num. xxv. 6-15, Balaam was afterward slain with the Midianitish princes (Num. xxxi. 8; Josh. xiii. 22).

The allusion to Balaam in Deut. xxiii. 4, 5 (compare Neh. xiii. 2) states that the prophet was hired to curse Israel and that YHWH turned the curse into a blessing, thus implying that the prophet was anxious to accede to Balak's desire (compare also Josh. xxiv. 9). Such an idea might have been obtained from Num. xxiii. 4, where Balaam tells Elohim explicitly that he has offered a bullock and a ram on seven altars, thereby implying a hope that God will inspire Balaam to curse Israel.

Opinions vary greatly as to the derivation and meaning of the name Balaam. It is generally considered to be a compound of "Bel" and "Am," and since both "Bel" and "Am" are names of deities among Semites, the name may either represent a combination of two deities ("Am" is "Bel") or "Bel" may be used in the general sense which it acquired of "lord": the name would then be interpreted "Am is Lord."

J. JR.

J. D. P.

—**In Mohammedanism:** It is very doubtful whether there is any reference to Balaam in the Koran. The commentators apply to him, but with reservations, sura vii. 174 *et seq.*: "And recite against them [the Jews] the story of him to whom we brought our signs, but he separated himself from them; then Satan followed him, and he was of those that go astray. And if we had willed, we had exalted him through them, but he inclined toward the earth and followed his desire. His likeness was the likeness of a dog; if you attack it, it pants, and if you leave it alone, it pants." The Moslem commentators explain that Balaam was a Canaanite who had been given knowledge of some of the books of God. His people asked him to curse Moses and those who were with him, but he said, "How can I curse one who has angels with him?" They continued to press him, however, until he cursed the Israelites, and, as a consequence, they remained forty years in the Wilderness of the Wanderings. Then, when he had cursed Moses, his tongue came out and fell upon his breast, and he began to pant like a dog.

The story as told by Tabari ("Annales," ed. De Goeje, i. 508 *et seq.*) is somewhat more Biblical. Balaam had the knowledge of the Most Sacred Name of God, and whatever he asked of God was granted to him. The story of the ass, etc., then follows at length. When it came to the actual cursing, God "turned his tongue" so that the cursing fell upon

his own people and the blessing upon Israel. Then his tongue came out and hung down on his breast. Finally, he advised his people to adorn and beautify their women and to send them out to ensnare the Israelites. The story of the plague at Baal-peor and of Cozbi and Zimri (Num. xxv. 14, 15) follows. According to another story which Tabari gives, Balaam was a renegade Israelite who knew the Most Sacred Name and, to gain the things of this world, went over to the Canaanites. Al-Tha'labi ("Kışas al-Anbiyya," pp. 206 *et seq.*, Cairo ed., 1298) adds that Balaam was descended from Lot. He gives, too, the story of Balaam's dream, his being forbidden by God to curse Israel. Another version is that Balak, the king of Balqa, compelled Balaam to use the Most Sacred Name against Israel. The curse fell automatically, and Moses, having learned whence it came, entreated God to take from Balaam his knowledge of the Name and his faith. This being done, they went out from him in the form of a white dove.

Other interpreters, however, refer the passage in the Koran to Umayya b. Abi al-Salt al-Tha'labi, one of the seekers of religious truth in the time of Mohammed, who had read the books and aspired to be the expected prophet. He refused to embrace Islam, and this passage was revealed in consequence (Herbelot, "Orient. Bibliothek"). Some scholars find in Lokman the Arabic parallel to Balaam.

M.

—**In Hellenistic and Haggadic Literature:**

The Alexandrian Jews made Balaam an object of popular legend as a great sorcerer. Philo ("De Vita Moysis," i. 48) speaks of him as "a man renowned above all men for his skill as a diviner and a prophet, who foretold to the various nations important events, abundance and rain, or droughts and famine, inundations or pestilence." Josephus ("Ant." iv. 6, § 2) calls him "the greatest of the prophets at that time." He has been identified with Bela, the son of Beor, and first king of Edom (Gen. xxxvi. 32; Targ. Yer., Ibn Ezra and Ziuni to the passage); with Elihu, the friend of Job (Yer. Soṭah v. 20*d*); with Kemuel, the father of Aram (Gen. xxii. 21; compare Targ. Yer., "head of the enchanters of Aram"; and Yalk., Num. i. 766), and with Laban (Targ. Yer. to Num. xxii. 5; compare Gen. R. lvii., end; and Sanh. 105*a*, where Laban is identified with Beor, the father of Balaam), being a master of witchcraft, the skill of the sons of the East (Gen. xxx. 27; Isa. ii. 6; Num. xxiii. 7).

Balaam's residence was Padan-aram, but his fame as "interpreter of dreams" gave his city the name "Petor" (פֶּתוֹר = "to interpret"). His great wisdom made him vain, and he became a foolish man—"ben be'or" (בֶּנֶּבֶּר = "fool"; Targ. Yer. to Num. xxii. 5). The story of Moses' war with the Ethiopians, as related by Josephus ("Ant." ii. 10) after Hellenistic sources, was in olden times brought into connection with Balaam. Balaam (see Sanh. 106*a*; Soṭah 11*a*; Jellinek, "B. H." ii. 3; "Chronicles of Jerahmeel," translated by Gaster, xlv. 9, xlv. 15) was one of the three counselors consulted by Pharaoh in regard to the Hebrews whose rapid increase provoked his fear. Jethro spoke in their favor and fled to Midian to

escape the king's anger; Job withheld an opinion and was punished afterward by a life of suffering; Balaam advised Pharaoh to drown all the Hebrew babes. Again, when the child Moses had taken the crown from the king's head and put it on his own, thus recalling to Pharaoh his dream foreboding evil to the kingdom, Balaam advised Pharaoh to slay Moses.

When Pharaoh's daughter threatened to take the life of Balaam, he fled with his two sons, JANNES and JAMBRES, the renowned wizards, to Ethiopia; there, during the absence of the king, who had gone to war against the people of Syria, he instigated a rebellion, making himself king, and his sons captains of the host. He raised high walls on two sides of the capital, dug pits on the third side, filling them with water, and on the fourth side, by means of witchcraft, placed serpents to render the city unapproachable. For nine years the king's army besieged the capital, unable to enter; then Moses on his flight from Egypt

**Balaam and Moses.** came there and became the king's counselor and, as the king's death soon followed, his successor. He required each warrior to fetch young storks (or ibises) from the forest, and soon the serpents disappeared and the city was captured. Balaam and his sons fled to Egypt, where they became the master-magicians who opposed Moses and Aaron at the court of Pharaoh (Targ. Yer. to Ex. vii. 11; "Chronicles of Jerahmeel," xlvii. 6, 7; Yalk., Ex. 168).

When Balaam went forth later to curse the Israelites in the wilderness, he again had with him his sons Jannes and Jambres (Targ. Yer. to Num. xxii. 22). His witchcraft had no effect on Israel, because the merits of their ancestors shielded them and angels protected them (Tan., ed. Buber, Balak, xvii., xxiii.; Targ. Yer. to Num. xxiii. 9, 10, 23; Samaritan Book of Joshua, ch. iii.). He then resorted to the stratagem of seduction. After having, by divine inspiration, predicted the destiny of the people of Israel, and having spoken even of the Messianic future (Josephus, "Ant." iv. 6, §§ 4, 5; Philo, *l.c.* 52),

he advised Balak to select the handsomest daughters of the Midianites, who should lead the Israelites to idolatry (Josephus, *l.c.*, §§ 6-9; Philo, *l.c.* 54-56; Samaritan Book of Joshua, iv.).

This plan was executed, and 24,000 Midianite women caused as many Hebrew men to fall (Targ. Yer. to Num. xxiv. 25; Samaritan Book of Joshua, iv.). Phinehas decided to avenge the wrong upon Balaam. Seeing his pursuer, the latter resorted to witchcraft and flew up into the air; but Phinehas made use of the Holy Name, seized him by the head, and unsheathed his sword to slay him. In vain did Balaam entreat his conqueror, saying: "Spare me and I will no longer curse thy people." Phinehas answered, "Thou Laban the Aramean, didst intend to kill Jacob our father, and thou didst invite Amalek to make war against us; and now, when thy wiles and sorceries were of no avail, thou didst lay pitfalls for 24,000 Hebrews by thy wicked counsel. Thy life is forfeited." Whereupon Balaam fell, pierced by the sword (Targ. Yer. to Num. xxxi. 8; Sanh. 106b).

Henceforth he became the type of false prophets seducing men to lewdness and obscene idolatrous practises (Rev. ii. 14; II Peter ii. 15; Jude 11; Abot v. 19). The name "Nicolaitanes," given to the Christian heretics "holding the doctrine of Balaam" (Rev. ii. 6, 15), is probably derived from the Grecized form of Balaam, בלעם = Νικο-λάας, and hence also the pseudonym "Balaam," given to Jesus in Sanh. 106b and Git. 57a. See Geiger, "Bileam and Jesus," in "Wissenschaftliche Zeitschrift für Jüdische Theologie," vi. 31-37).

The life of this sorcerer was further detailed in the "Sefer ha-Yashar" legends and by the later cabalists (Yalk., Reubeni to Balak). Balaam's ass formed an especial object of haggadic interpretation and embellishment. "The speaking mouth of the ass" was declared to be one of the ten miraculous things that God had created in the twilight of the sixth day (Abot v. 6). Targ. Yer. to Num. xxii. 30 gives a long monition which the ass offers to her foolish master.

K.

**BALADAN.** See BERODACH-BALADAN.

**BALAK.**—**Biblical Data:** According to Num. xxii.-xxiv., Balak was king of Moab when the Israelites emerged from their wanderings in the wilderness to the conquest of the East Jordanic land. Alarmed by the victories and numbers of the invaders, he summoned the prophet Balaam, who lived on the banks of the Euphrates, to curse them, believing, like most of the ancients, in the potency of a curse to work evil upon those against whom it was pronounced. In his zeal Balak offered rich sacrifices in order to place the Deity under obligations to grant his heart's desire; but he met with disappointment, for the prophet, acting under the directions of YHWH, uttered blessings instead of curses upon his foes, the Israelites, and predicted for them victories and glories.

J. JR.

C. F. K.

—**In Rabbinical Literature:** Balaam prophesied that his fellow-countryman Balak would one day be king. Balak was the son, not of a king, but of an unimportant prince, and was for some time a vassal of Sihon, king of the Amorites. When Sihon died, Balak became his successor, and, seeing the prophecy of Balaam fulfilled, he sent for the latter. Balak was himself a skilful sorcerer and knew that a great calamity was to befall Israel, but did not know how he could be instrumental in bringing it about, so he desired the assistance of Balaam. His fear of Israel was chiefly due to the fact that the Israelites were at peace with Ammon, while Moab, his own kingdom, suffered from their arrogance, though God had forbidden them to wage actual war against it. Balak knew human nature well, and, aware of Balaam's greed, promised him wealth and honor in return for his assistance. But, after the latter came, Balak showed himself a niggard.

"The pious," says the Midrash, "promise little, but do much; Abraham invited the angels to a bite of bread and entertained them royally. The godless promise much and do little, as is shown by the example of Balak" (Num. R. xx. 2, 3, 17; Tan., ed.

Buber, Balak, 3-9, 15). His hatred of Israel was so great that he even gave his own daughter to seduce the Israelitish noblemen. She was the woman slain by Phinehas (Num. xxv. 15). Here "Zur" is only another name for "Balak" (Num. R. l. c. 7, 24; Sanh. 82a).

L. G.

—**Critical View:** The narrative is drawn from the two old prophetic sources designated (J and E) of the Pentateuch. These in turn may have as their basis some historical incident. In any case the story is a very ancient testimony to the early opposition between the Moabites and the Israelites. The aim of the story is to show that the Hebrews were from the first especial objects of YHWH's favor. See BALAM.

J. JR.

C. F. K.

**BALANCE:** The word is used for three Hebrew words: (1) "mo'znaim" (Jer. xxxii. 10; Job vi. 2;

Egyptian Weighing Money.  
(From Lepsius, "Denkmäler.")

Ps. lxii. 9; Isa. xl. 12, 15; Lev. xix. 36; Job xxxi. 6; Prov. xi. 11, etc.). (2) "kanah" (Isa. xlv. 6), and (3) "peles" (Prov. xvi. 11). The Balance, as used among the Hebrews, consisted probably of a horizontal bar either pivoted on a perpendicular rod (for a similar Egyptian Balance see Erman, "Ägypten," i. 615) or suspended from a cord and held in the hand. At the end of the horizontal bar were either pans or hooks from which the things to be weighed were suspended in bags. Abraham is represented as weighing money (Gen. xxiii. 16); and although the Balance in early days was rather rudely constructed, the weighing could be done accurately. The system was, however, very liable to fraud; and the necessity of righteous weights is enforced again and again (Lev. xix. 36; Prov. xvi. 11, xx. 23; Amos viii. 5; Micah vi. 11). See also WEIGHTS AND MEASURES.

L. V.

**BALDACHIN.** See HUPPAH.

**BALDNESS:** The Hebrews gave much care to the cultivation of their hair, which they kept long (compare Ezek. xlv. 20) except on such occasions as are mentioned, Lev. xiii. 45, x. 6, etc. (R. V.), and always well oiled; and accordingly considered Baldness as a still greater reproach than did the classical nations (compare II Kings ii. 23, "bald head," as an abusive term). Nevertheless, Baldness could not have been very rare, if it be considered that the Egyptian wall-paintings figure the old princes and chiefs of the Semites, more often than not, as bald-headed. The same conclusion may be drawn from such passages as Lev. xiii. 40, 41, where Baldness on the crown is referred to, and Baldness in front—euphemistically designated as "high forehead," it would seem. Names like Kareah and Korah, which signify "bald," are also quite common.

Most of the passages of the Old Testament, however, in regard to Baldness refer to the total or partial shaving of the head as a sign of mourning—like cutting the beard, wearing sackcloth, and other disfigurements. In Deut. xiv. 1, "baldness between the eyes [that is, perhaps, on the forehead] for the dead" is forbidden; "to make baldness upon the head" is specially prohibited to priests (Lev. xxi. 5; compare Ezek. xlv. 20).

Numerous passages show that, in pre-exilic Israel, such shaving (or clipping) was general (compare Amos viii. 10; Isa. xv. 2, iii. 24 [of women], xxii. 12; Ezek. vii. 18; Job i. 20; Micah i. 16). A complete shaving, a "baldness as the eagle" (or rather "vulture"; compare R. V. margin), is mentioned. Partial shaving of the corners of the head and beard is referred to and prohibited (Lev. xix. 27). The long temple-locks of the Ashkenazim ("peles") can be traced back to this passage. Opposed to the custom of wearing temple-locks is that of the desert tribes, of always cutting the hair at the sides of the forehead and neck, compare Jer. ix. 26, xxv. 23, xlix. 32; Herodotus, iii. 8; Egyptian representations; and see BEARD.

The mourning custom of "shaving" the head is attributed to the Philistines (Jer. xlvii. 5), to the Moabites (Isa. xv. 2; Jer. xlviii. 37), to the Tyrians (Ezek. xxvii. 31). The customs of most ancient nations were analogous. If Herodotus is to be trusted, the Egyptians formed an exception, and shaved the head regularly (Her. iii. 12), but allowed the hair to grow in mourning (*idem*, ii. 36); see, however, Wiedemann, "Herodot's Zweites Buch," p. 157, on these statements of Herodotus, which are, to say the least, of too general a nature to warrant definite conclusions.

**BALEARIC ISLES:** A group of islands in the Mediterranean, belonging to Spain, situated to the east of Valencia, the three principal of which are named Majorca (Spanish, Mallorca), Minorca (Menorca), and Iviça or Iviza (Ibiza). The group first formed the kingdom of Majorca; later it became a Spanish province under the domination of Aragon. According to the chroniclers, there were Jewish inhabitants in the Balearic Isles as early as the second century. In the fifth century, at the

**Early History.** instigation of Bishop Severus, a persecution of the Jews took place in Mahon (Magona), the capital of Minorca. As a result, a number of Jews, including Theodore, a rich representative Jew who stood high in the estimation of his coreligionists and of Christians alike, underwent baptism.

In consequence of the persecutions of the Almohades in Spain (1146), the number of Jews on the islands increased, and in Palma, the capital of Majorca, a large synagogue and two smaller ones were erected. The Jews engaged in trade and agriculture; and estates, both hereditary (*rahals*) and leasehold (*alguerias*), were held in Inqia, Petra, and Montuiri by the community (*almodayna*), as well as by individual Jews. Among the latter were Almo, Zadic, Astruc de Tortosa, and his three brothers (Dameto, "Historia General del Reyno Balearico," pp. 277 *et seq.*; "Coleccion de Documentos Ineditos para la Historia de España," ix. 14, 18, 20, and elsewhere, Barcelona, 1856).

Jaime I. (1213-76) of Aragon, who carried in his train Don Bachel of Saragossa to act as interpreter, conquered Majorca on the last day of the year 1229, and annexed it to his

**Under Aragon from 1229.** kingdom. He gave the Jews a quarter in the neighborhood of his palace for their dwellings, granted protection to all Hebrews who wished to settle on the island, guaranteed them the rights of citizens, permitted them to adjudicate their own civil disputes, to kill cattle according to their ritual, and to draw up their wills and marriage contracts in Hebrew. Christians and Moors were forbidden, under severe penalties, to insult the Jews or to take earth and stones from their cemeteries; and the Jews were ordered to complain directly to the king of any act of injustice toward them on the part of the royal officials. They were allowed to charge 20 per cent interest on loans, but the amount of interest was not to exceed the capital.

In case a Jew practised usury, the community was not held responsible. The penalty for lending money on the wages of slaves hired out by their masters was loss of the capital. Jews could buy and hold houses, vineyards, and other property in Majorca as well as in any other part of the kingdom. They could not be compelled to lodge Christians in their homes: in fact, Christians were forbidden to dwell with Jews; and Jewish convicts were given separate cells in the prisons. If the slave of a Jew or Moor adopted Judaism or Mohammedanism, he had to be set free and was required to leave the island.

Jaime II. (1291-1327) confirmed the Jews in all the privileges conferred on them by his predecessor: he

also allowed them to build a synagogue in the new "Calle" (Jews' quarter), and to own a cemetery. Unlike the Jews of Aragon, the Jews from the Balearic Isles were exempt from the duty of furnishing beds and bread to the royal family or to the governor. Moreover, they were not forced to pay the special taxes demanded of the Jews of Catalonia and Aragon.

The Jews of Majorca, Minorca, and Iviça always formed one congregation. The Christian propaganda, here as well as elsewhere, grew ever stronger. Endeavors were made to convert Jews, and a similar theological controversy to that which occurred in Aragon took place in 1286 (Fr. Carben, "Flagellum Hebraicum," Venice, 1672). Some-

**Growth of Intolerance.** what later, priests forced themselves into the Jewish quarter; a tumult arose, representative Jews made complaint (1305), and the clergy were ab-

solutely forbidden to enter the Jewish quarter or the homes of Jews unless accompanied by a bailiff or an official of the governor. Fearing expulsion, the fate of their coreligionists in France (1306), the Jews of Majorca, after the death of the humane Jaime I., addressed themselves (1311) to the new king, Sancho I., with a request for protection; and he confirmed their privileges.

Evil times for the Jews in the Balearic Isles began with the Council of Vienne (1312), which prohibited all intercourse between Jew and Christian, and urged the clergy to the conversion of

**Persecutions by the Church.** Jews. Unfortunately the Jews of the islands were thoughtless enough to convert to Judaism (1314) two Christians from Germany, who had been refused admission to Judaism by a

number of Spanish rabbis, even by those of Gerona and Lerida. As soon as Bishop Villanova of Majorca heard of the conversion, he imposed a fine of 150,000 florins on the Jews. The king, besides, confiscated their books and all their personal property and real estate, and converted into a church their beautiful synagogue which had been scarcely completed. On payment of 95,000 florins they were granted immunity from further penalties, and they were allowed to build another synagogue in the place of that taken from them. In order to raise the enormous sum, the heads of the congregation placed (1315) a tax upon everything—on wine, meat, bread, whatever was bought and used, on their stock of merchandise, and even on new clothes. The tax was to be levied for ten years, and was sanctioned by a royal statute. At the same time a petition was addressed to the king, praying him to restore to the Jews all their former privileges, and to order that in the future no Jew should be forcibly baptized; that a Jew sentenced to death should be hanged, like a Christian, by the head and not by the feet; that the inquisitor should always examine a Jew in the presence of a bailiff or his representative; and that a Jew should be free to have an advocate. The Jews strained every effort in order to pay the fine, and in 1328 the amount was cleared. The avaricious Sancho in his own interest granted them freedom to trade, and in 1318 gave them the assurance that neither they nor their descendants should be expelled

from the Jewish quarter, which was surrounded with walls and provided with gates.

Jaime II., the nephew of Don Sancho, succeeded him, but was under the guardianship of his uncle Philip. At the beginning of his regency, Philip, in the king's name, confirmed all the privileges of the Jews, and in 1325 bestowed on them the right of citizenship. He protected them from forcible baptism, and strictly forbade the baptism of their children against the parents' will. Permission was granted them (1331) to build a new synagogue in their quarter, but it was not to be too elaborate. As one means of preventing the erection of a handsome building, Jaime collected all their money into the state treasury. Under Pedro IV. (1336-87), who in 1344 united Majorca with the kingdom of Aragon, the Jews of the Balearic Isles lived unmolested, with all their rights safeguarded; but at the time of the hostile agitations against the Jews in Spain their peaceful condition likewise came to an end.

The greater the indebtedness of the Christians to the Jews, the more inimical became their attitude. As a result of this state of affairs, the governor of the islands forbade (1390) all Jews to carry weapons, even in their own quarter, or to leave their homes two hours after sunset without carrying a light. After the outbreaks in Valencia and Barcelona (1391), the governor had to interfere for the safety of the Jews' quarter in Palma. On Aug. 24,

**The Massacre of 1391.** 1391, the long-dreaded calamity fell upon the community of Majorca. Jewish homes were sacked; and even the houses of Christians sheltering Jews in concealment were not spared. About 300 Jews were put to death, 800 saved themselves in the royal castle, and the rest underwent baptism. When Queen Violante was informed of the outrage, she condemned the inhabitants of the islands to pay a fine of 150,000 florins (or, according to some authorities, 104,000 florins). A year later (1392), however, Juan I. granted full amnesty to all who had practised violence against the Jews or "the Calle," because they had done it for the welfare of king and state; and he further declared all debts of the Christians to the Jews to be null and void.

Soon after the catastrophe of 1391 the Jews began again to settle on the island, and on Jan. 21, 1393, the governor issued an edict for their protection, providing that a citizen who should injure a Jew should be hanged, and that a knight for the same offense should be subjected to the strappado. The advantageous position of the islands, the trading-point midway between Catalonia, Provence, and Sicily, attracted thither many of the Jews of Provence and Sicily, besides some from Tunis, Algiers, and other African cities. In the height of their prosperity there were in Majorca more than a thousand Jewish families. Among those

**Re-settlement.** who settled there were a number of people of treacherous character, who acted as informers against their fellow-Jews, and, through malice and envy, or in order to extort money, bore false witness against men of blameless reputation, until, at the request of the community, they were expelled from the island.

The Jews, with the sanction of the king, had their

own organizations and secretaries or representatives appointed by themselves. The following are frequently mentioned as acting in that capacity in the first half of the fourteenth century: Abraham Malaquin, Hayum Cohen, Jucef Barqui, Vital and Judah Cresques, Jacob Cohen, Rafael Dayen (ר״י), the families Natgar, Sasportas, Xulelli, Moses Ramon, Sadon (Sadoc) b. Dahut (David). The last is probably not the same as the Sayd b. David who was publicly burned (Aug. 12, 1381) for incontinence with a nun.

The congregation had the Catalanian-African ritual, with regulations similar to those of the congregation at Perpignan: among others was the enactment (1319) that Jews and Jew-

**Internal Conditions.** esses should not wear clothes of finer material than that specified in the code of the organization. Transgressors of this law were to be punished bodily after the king's consent had been obtained, or were to be excommunicated.

The Jews of the islands soon forgot their bitter experiences of 1391. Waxing arrogant from wealth, they became indifferent to religion, disregarded the most important religious obligations, assumed Christian names, and intermarried with Christians. The deep-rooted hate of the passionate folk of Majorca was nourished by the bigoted Ferdinand of Aragon (1412-16), who issued a decree against the Jews (March 20, 1413), by

**Renewed Oppression 1413.** which they were compelled to dwell exclusively in the Jewish quarter, and were forbidden to eat or drink with Christians; to employ Christian nurses

or other servants; to attend Christian marriages or funerals; to adopt the title "Don"; to hold any public office; to carry weapons, such as swords or daggers; to use any costly material for their clothes; to wear silk, fur, or any ornaments; to sell any food-stuffs to Christians; to make them gifts of pastry, meats, or drinks; to be physicians to them, or to give them any medicine. Moreover, they had to wear the badge that marked the Jew. Christian women, whether married or unmarried, and courtezans, were strictly prohibited from visiting the Jews' quarter by day or night. Jews who wished to be baptized were not to be deterred by any one from their resolve; and the officers of the king were ordered to prevent Jewish women converted to Christianity from emigrating to Africa, since they reverted to Judaism when there and sent for their children to follow them. Toward the end of August, 1415, Vincente Ferrer came to Majorca in order to convert the Jews, and pursued this work for nearly six months.

Twenty years later (1435) occurred the calamity long dreaded by Simon Duran. In order to set the gullible people against the Jews, a malevolent report was spread that the Jews of Palma had crucified a Saracen during Holy Week. The Jews charged with this crime were promptly put in chains. Their fellow-Jews interceded for them, and at the bidding of the governor they were removed from the episcopal keep and taken to the state prison. The clergy, enraged at this step, incited the people against the governor, and still more violently against the Jews. A tribunal, composed chiefly of Dominicans and

Franciscans, was formed. One of the imprisoned Jews was stretched on the rack; he confessed to everything asked of him, and named as partners in the crime all whose names were suggested to him. Suddenly a wretched creature, the merchant Astruc Sibili, had himself brought before the governor and laid the blame on the whole Jewish community.

Palma fell into an uproar. The Jews fled to the mountains; but the infuriated mob dragged them from their hiding-places, and led most of them back to Palma in exultation. After five days' proceedings, the expectant populace was notified of the sentence pronounced on the innocent Jews. Astruc Sibili and three accomplices were to be burned alive, but in case they submitted to baptism they should be pardoned to the extent of dying upon the gallows. Astruc Sibili accepted baptism, and all the others seduced by promises followed his example. On the representations of the clergy the governor granted them their lives.

A few faithful Jews succeeded in making their escape. The synagogue had been ruined several years before, and though now and then a Jew settled on the islands, there came to be practically no Jews there. The Inquisition began its horrible work. In 1506, twenty-two Jews, condemned, though either dead or absent, were burned in effigy; again, in 1509 and 1510, some Jews and Jewesses were publicly burned in effigy; and in 1511 sixty-two Jews who had escaped from the Inquisition were punished in the same way.

The secret Jews, in great number on the island of Majorca, were not called "Maranos" or "New Christians," but "people from the Calle" or CHUETAS.

A number of well-known rabbis and scholars from Catalonia and Provence dwelt on the island of Majorca. Among them were: Shem-Tob Falcon, who instituted there a number of ritual observances; Aaron ha-Kohen, who wrote his ritual code, "Or-hot Hayyim," at Majorca; Joseph Caspi, a well-known writer; Isaac b. Nathan, diligent translator from the Arabic; and the physicians Moses Rimos and Eleazar Ardor, the latter of whom was born on Majorca, as was also Simon ben Zemah Duran.

Minorca became an English possession in 1713, and willingly proffered an asylum to a number of Jewish families from African cities. A synagogue was soon erected in Mahon. The fact that Jews and Moors were settled there was sufficient reason for Spain to join with France in order to drive the English from the island. When the Duke of Crillon landed on the island (August, 1781), Jews, Greeks, and Moors, three thousand men in all, rose up and threatened the life of the duke. After a short resistance, however, Mahon surrendered; and, with the English garrison, the Jews abandoned the city and the island.

M. K.

**BALI, ABRAHAM BEN JACOB:** Karaite physician and ḥazan; lived at Foli (פולי) in the second half of the fifteenth century. He was the pupil of Shabbethai ben Melkiel Cohen, and the author of

the following works, for the most part still in manuscript (St. Petersburg MSS. Nos. 631, 648, 659, 695, 696): (1) "Iggeret Issur Ner Shel Shabbat"—on the prohibition against using fire on the Sabbath. The work is divided into three chapters, and was written, as the author states in the introduction, at the request of his disciples, Joseph ben Moses Bagi and Joseph ben Caleb. It is especially directed against Elijah Bashyatzi, who, like his father Menahem, permitted the use of fire; (2) "Iggeret ha-Zom be-Shabbat," on fasting on Saturdays, ed. by Firkowicz; (3) "Iggeret be 'Inyan ha-Kohanim," on the question whether a Rabbinite Cohen on becoming a Karaite can continue to enjoy the privileges of a Cohen; (4) "Ma'amar be 'Inyan ha-'Ibbur," a treatise on the calendar; (5) "Perush 'Inyan Sheḥitah," a commentary on the laws concerning the slaughtering of animals, as these laws are expounded by Aaron ben Elijah in his "Gan 'Eden"—Bali endeavoring in this work to refute the criticisms made against the Karaites by Solomon Sharbit ha-Zahab, Mordecai Comtino, and Moses Capsali; (6) "Perush 'al-Hegyonot," a commentary on the first chapter of Gazzali's "Muḳaṣid al-Filasufah," treating of logic. In the preface to this work Bali says that he made use of the translation of Moses Narboni. (7) A commentary on Al-Farabi's five chapters on logic. Besides these works, Bali wrote many liturgical poems which are printed in the Karaite prayer-book.

**BIBLIOGRAPHY:** Steinschneider, *Hebr. Bibl.* xx. 96; idem, *Hebr. Uebers.* pp. 45, 321; Neubauer, *Aus der Petersburger Bibliothek*, p. 63; compare, also, Fürst, *Geschichte des Karäerthums*, ii. 293-294; Jost, *Gesch. des Judenthums und seiner Secten*, ii. 369.

I. BR.

**BALI, MOSES BEN ABRAHAM:** Karaite physician and ḥakam at Cairo at the end of the fifteenth century and at the beginning of the sixteenth. He was the author of 224 poems, finished in 1489, on the weekly lessons, entitled "Sefer Zerah." Another selection of 237 poems for Saturdays and feasts was written by him about 1500 under the title "Taḥ-kemoni." Both works are still extant in manuscript in the Firkowicz collection at St. Petersburg. Besides these Bali wrote many liturgical poems which have been wrongly ascribed to Moses Dari, who bears the same Hebrew name, "Moses ben Abraham" (compare Pinsker, "Liḳḳuṭe Kadmoniyot," p. 124).

I. BR.

**BALLADS, JEWISH.** See FOLK-SONGS.

**BALLADS ON JEWISH SUBJECTS:** In the folk-poetry of Europe a certain number of ballads deal with Jewish subjects or with Jewish persons. Of these may be mentioned a Neo-Greek ballad on a Jewess given in Fauriel, "Chantes Néohelliniques"; but the ballads generally deal with the deeds of Jews corresponding to the anti-Semitic conception of them current in the popular mind. Thus the legend of the death of Little St. Hugh of Lincoln is enshrined in several ballads in French, English, and Scottish, to be found in Child's "English and Scottish Ballads," iii. 233-254, where a full bibliography is given (see also HUGH OF LINCOLN). Another popular ballad is that of the Jewish boy who, after accompanying his Christian playmates to confession,

becomes a Christian, but is thrown by his inhuman father into a furnace, whence he is rescued by the Virgin Mary. Nearly forty different versions of this ballad are known: five in Greek, nineteen in Latin, eight in French, one in Spanish, two in German, two in Arabic, and one in Ethiopic. Many of these are given and the rest referred to in G. Wolter, "Der Juden Knabe," in "Bibliotheca Normannica," No. 2, Halle, 1879. The original story appeared in Evagrius Scholasticus (died after 594), "Historia Ecclesiastica," iv. 35, whence it was taken into Gregory of Tours and probably from oral tradition into Botho's "Liber de Miraculis St. Mariæ Virginis." Besides the foregoing, the story of SHYLOCK occurs in the "Ballad of Gernuto the Jew," in Percy's "Reliques of Ancient Poetry."

**BALLAGHI, M.** See BLOCH, M.

**BALLARAT:** City in Victoria, Australia. Three years after the discovery of gold, in 1851, a congregation was formed with Henry Harris as president and Julius Wittowski as treasurer; and the Mount Zion synagogue was built the next year. In 1861 a more commodious building, which included rooms for a minister's residence and a Hebrew school, was erected at the corner of Barkly and Princess streets, on land granted by the government. The successive ministers have been Revs. S. Herman, I. Stone, D. Isaac Ollendorf, and I. M. Goldreich, the last of whom was installed in 1867. The community maintains a Philanthropic Society founded in 1857, which is affiliated with the Anglo-Jewish Association.

**BALLIN, ADA SARA:** English author and journalist; born in London, England; educated at University College, London, where she obtained scholarships in Hebrew and German. She devoted herself to the subject of sanitation, and lectured for the National Health Society for several years. Mrs. Ballin devoted herself especially to the hygiene of children, and produced a monthly journal entitled "Baby, the Mother's Magazine," which is still current and which was followed by "Womanhood," an illustrated journal dealing with feminine matters in general.

Mrs. Ballin has published an extensive series of works, the first of which was a "Hebrew Grammar with Exercises," written conjointly with her brother, 1881. This was followed by: "The Science of Dress in Theory and Practice," 1885; "Health and Beauty in Dress," 1892; "Personal Hygiene," 1894; "How to Feed Our Little Ones," 1895; "Bathing Exercise and Rest," 1896; "Early Education," 1897; "Children's Ailments," 1898.

J.

**BALLIN, JOEL:** Danish engraver, born in Vejle, Jutland, March 22, 1822; died in Copenhagen, March 21, 1885. He was a son of a merchant, Joseph Ballin, and his wife, Hanne Peiser. At the age of eleven he went to Copenhagen to study art in order to become a painter; but his studies at the Academy of Art progressed slowly, as he was obliged

to work for his living, and he was twenty years old when he entered the modeling class. The year before this he had exhibited his painting, "The Procession in the Synagogue at the Feast of Tabernacles." A new method of reproduction, "the chemotype," which was at that time invented, attracted Ballin's attention, as he hoped by the study of this specialty to secure himself a position in the world. In 1846 he left Denmark and went to Leipsic to finish his artistic education; but he soon saw that he had no prospect of reaching any degree of perfection in this branch of the art without a thorough study of engraving. Meanwhile he exhibited some samples of "chemotypes" which showed so much talent that the Danish government supplied him with sufficient means to go to Paris, where he arrived Oct. 5, 1848. He would probably never have left that city if the Franco-German war of 1870 had not forced him to move to London.

In Paris he finished the studies of engraving that he had commenced in Leipsic, and in 1850 exhibited two engravings. They attracted the attention of the Academy of Art in Copenhagen, and he received from that institution 600 rigsdaler a year for two years, and in 1853 from the Danish government 350 rigsdaler. This recognition helped to make his fame, and to place him financially in such a position that in 1853 he was able to visit Copenhagen and marry Helene Levin.

Ballin's first large engravings were Ostade's "Le Maître d'Ecole" and Jean Victor's "A Young Girl." His publishers in Paris preferred to have the engravings made on steel plates, as these could stand a larger number of impressions, and Ballin therefore adopted a new method for the hard plates—a method which he brought to such perfection that they could scarcely be distinguished from copper-plates.

He took the gold medal of the third class at the Paris exhibition in 1861; and in 1862 he was made a knight of the Dannebrog, after having exhibited a large collection of engravings at the Charlottenborg exposition, Copenhagen.

From 1870 to 1883 he lived in London, where he engraved Edward Long's "The Pool of Bethesda." This he sent to the Academy of Art in Copenhagen in acknowledgment of his election in 1877 to membership in that institution.

In 1883 Ballin was called to Copenhagen to become a teacher of young engravers and to reproduce important Danish works of art. He did not, however, live long enough to become the founder of any artistic school.

His most important engravings from famous paintings, besides those mentioned above, were Knaus's "The Baptism"; Gustave de Brion's "Saying Grace" and "The Wedding"; Protais' "Before the Battle" and "After the Battle"; and Carl Bloch's "Bishop Rønnow Protected by Hans Tavsén," and Marstrand's "Christian IV. on His Ship Trefoldigheden."

**BALLIN, SAMUEL JACOB:** Danish physician; born at Copenhagen, Oct. 21, 1802; died there March 24, 1866. He was the son of a merchant, Jacob Levin Ballin, and his wife, Susanne Melchior.

His parents died early, and he was brought up by his uncle L. S. Trier, whose daughter Dorothea later became his wife. Until 1820 he attended the *Borgerdykskols* in Copenhagen, when he entered the university, where he passed the medical examination in 1826. For some years he was assistant physician at the Frederik's Hospital in Copenhagen, and took an active part in founding the society of physicians called "*Philiatrien*," 1829. From 1831 to 1832 he traveled, by royal order, in foreign countries, studying the Asiatic cholera; and after his return published a valuable dissertation on this subject for the degree of licentiate. In 1836 he took the degree of M.D., and after that practised medicine in Copenhagen, at the same time holding the public position of district physician. Later he was appointed parish physician of the Jewish community in Copenhagen, and held that position for a number of years. In 1853, during the cholera epidemic in Copenhagen, he became chief physician of the cholera hospital and a member of the board of health, receiving also the title of professor.

Besides Ballin's extensive practise as physician and his activity for the advancement of the science of medicine, he took an active part in the political and national movements of his time. He was a member of the National Liberal Party and was enthusiastic for the then prevailing idea of a Scandinavian union (Scandinavism).

**BALLY, DAVICION**: Rumanian patriot; born at Bucharest Jan. 29, 1809; died at Jerusalem May 2, 1844. His great-grandfather, **Chelebi Mentesh Bally**, banker to the grand vizier of Constantinople, aided Nicolas Mavrocordato to ascend the throne of Wallachia in 1716, and was taken by him to Bucharest, where, in recognition of his services, he was made a court counselor and received various privileges and exemption from taxation for himself and his descendants.

Bally's grandfather, **Isaac**, inherited the privileges of his father, and became the intimate counselor of many of the Phanariot princes: he was especially favored by Mavrogheni, whom he aided to mount the throne. His father, **Abraham**, studied at Leipsic, then established himself as wholesale merchant in Bucharest, and exercised considerable influence with the Boyars. When Davicion Bally was twelve years old his father died, and it seemed as if the son would have to terminate his studies at that age, for the father's partner defrauded the family out of almost all their possessions; but, thanks to an excellent library which the elder Bally left Davicion, he familiarized himself with the Rumanian, Greek, French, Italian, and German languages, in addition to Spanish, which he had learned in his father's house. He also made considerable progress in the study of Hebrew.

Bally occupied himself at first in the law office of his uncle, who had studied law at Leipsic, but was soon appointed "*camarash*" (treasurer) of the salt magazines established in the Danube ports; in this capacity in 1829 he saved from destruction the large stores of provisions and ammunition which the Russians had gathered at Zimnicea during the war

against Turkey. In recognition Czar Nicholas I. conferred upon him the Order of St. Anne, sending it personally by the hand of General Kisselef, and awarded him the privilege of trading unrestrictedly throughout the Russian empire. In

**His Public Services.** 1836 Bally was appointed cashier of the "*agie*" (police department), an

office which he occupied for ten years without any remuneration. An ardent patriot, he even frequently provided the necessary funds for his office, at the same time contributed to the establishment of the first fire-brigade in Bucharest, and maintained at his own expense a band of Italian artists who were invited to that city to foster a taste for the theater in Wallachia. In 1848 Bally embraced the cause of the Revolution, and united himself intimately with its leading spirits, whom he saved from death by proclaiming the Revolution before the instant agreed upon. He had learned, in fact, that the minister had become aware of their preparations, and was proceeding to crush the movement by the execution of its chief promoters. Bally rendered great services to the revolutionary government, and at the risk of his life helped certain members of the fallen régime to places of safety. But the Revolution failed three months later, and Bally aided those banished, and only escaped exile himself through his intimate relations with certain influential Boyars. Nevertheless, he was the subject of sharp animosity; he was trapped in a snare set for him, and lost the greater part of his fortune.

Jew at heart he always was, and permitted no journalistic attack upon his people to pass without protest. When in 1858 there appeared in Bucharest a venomous pamphlet entitled "*Prashtia*" (The Sling) and issued from the printing-office of the archbishop, C. A. Rosetti, chief of the Liberal party, flayed the publication in the "*Romanul*" at Bally's request; and at the same time the latter made representations to the prince-kaimacam, requesting the confiscation of the defamatory libel.

Bally was repeatedly elected member of the administrative council of the Sephardic community, and there maintained himself as a champion of much-needed progress and reform. He had the statutes amended so as to permit a fairer representation, introduced the distribution of clothing and shoes to poor children, projected a series of reforms for the Talmud-Torah (1863), which later became a modern school, established a free loan institution (1860), and a society for free medical attendance (1872). He found time withal for literary pursuits, and left behind him many manuscripts in Judæo-Spanish.

His patriotic dreams for his people underwent a rude awakening by the continuous persecutions of the Jews inaugurated in 1866 by his former friends and allies of the Revolution of 1848; his old age was embittered by this experience, and he left Bucharest for Jerusalem in August, 1882, dying there two years later.

E. SD.

**BALM**: A term used six times in the A. V. as a translation of the Hebrew words צֶרֶךְ, צָרִי, and צָרִי. It is everywhere rendered *resina* in the Vulgate.

The margin of the A. V. in Ezek. xxvii. 17 reads "rosin." The six passages in which the word is found show that Balm was a useful article of commerce and presumably a product native in Palestine, especially in Gilead. Its first mention is (Gen. xxxvii. 25) in connection with the caravan of Ishmaelitic traders who were taking it, with spicery and myrrh, down to Egypt. The next mention (Gen. xliii. 11) gives it as one of the articles which formed the present that Jacob's sons carried to Joseph as Egyptian ruler, on their second journey in quest of food. Neither of the above references is determinative of the nature of Balm, beyond the fact that it was classed with spices, myrrh, honey, nuts, and almonds as an article of noteworthy value. The three passages in Jeremiah are of especial interest, in that they specify it as containing peculiar and important healing properties. In the first (*ib.* viii. 22), the questions "Is there no balm in Gilead; is there no physician there?" point both to its medicinal properties and to its source. The second (*ib.* xlvi. 11), "Go up into Gilead, and take balm, O virgin, the daughter of Egypt: in vain shalt thou use many medicines; for thou shalt not be cured," confirms both inferences of the first. The third (*ib.* li. 8), "Babylon is suddenly fallen and destroyed: howl for her; take balm for her pain, if so be she may be healed," testifies to the commonly accepted healing value of this Balm. The last passage (Ezek. xxvii. 17) specifies Balm simply as one of the products that were prominent in the commercial exchanges which Palestine made with Tyre. Taken together, these passages determine (1) that Balm was native in Palestine, particularly in Gilead; (2) that it was a valuable article of commerce; and (3) that it possessed remarkable healing properties.

Now, what is the modern representative of this ancient article; and what is the tree, if tree it was, that produced it? The R. V. of Gen. xxxvii. 25, margin, reads "mastic," which would be the resin yielded by the *Pistacia Lentiscus* (Thiselton-Dyer, "Ency. Bibl." col. 465), a tree that flourishes on the coast and lower mountains of western Palestine, but not on the east of the Jordan (Post, in Hastings' "Dict. Bible"). Tristram, however (in "Nat. Hist. of the Bible"), says that it is found to-day in all parts of Palestine. There is no evidence in the passages in O. T. above noted that the Balm was aromatic as well as medicinal (compare Post, *l.c.*). It may be that this Balm included (as hinted in Gesenius-Buhl, "Wörterb." 13th ed.) the gum which was exuded from the terebinth. In fact, Tristram (*ib.* p. 400) and Thomson ("The Land and the Book," ii. 20) state that the terebinth is to-day tapped for turpentine by the natives. There is another shrub, "zakḳūm" or "zōkōm," from which the Arabs to-day manufacture an oil that they sell to pilgrims as Balm of Gilead (Tristram, *ib.* p. 366); this, however, is regarded merely as a modern substitute ("Ency. Bibl." *l.c.*).

**BALSAM:** Word used as the translation (R. V., margin) of the Hebrew בָּשֶׂם (Cant. v. 1) and of עֲרִינֵת הַבְּשָׂם (*ib.* v. 13, vi. 2), for which the A. V. has "spice." An aromatic gum or spice, probably the

product of a Balsam tree or plant. The Balsam tree of Jericho is noted among ancient writers—Theophrastus, Strabo, Pliny—for its medicinal and highly agreeable aromatic qualities. The so-called Mecca Balsam is generally conceded to be the product of the *Balsamodendron opobalsamum*. It is reported that the Balsam has disappeared from Jericho. The product of the Balsam is known in Arabic as *balasān* from a *balasān* tree, from which *balsamon* (Greek), *balsamum*, *balsam*, and *balm* are probably derived. The so-called "balm of Gilead"—made by the monks of Jericho and sold to travelers to-day—is a product of the *Balanites Aegyptiaca*. See BALM.

I. M. P.

—In Hellenistic and Rabbinical Literature:

Balm or Balsam (Aramean, בלסם, בלסמון, אפֿלסמון, אפרסמון, and for opobalsamum אפובלסמון and אפופלסמון), called by Pliny ("Naturalis Historia,"

The Balsam Plant, Showing the Flower (1) and Fruit (2).

xii. 53) "a plant which nature has bestowed only upon the land of Judea," was cultivated especially in what Pliny (*l.c.*) and Strabo (p. 763) call the royal gardens near Jericho (פרדיסות יריחו), Tosef., 'Ar. ii. 8), the juice obtained by incision being used for medicinal purposes, and the wood for its fragrant odor. According to Diodorus Siculus (ii. 48, xix. 98), a certain hollow in the neighborhood of the Dead Sea was the chief home of the Balsam, which was "found nowhere else in the world." Both statements are confirmed by Josephus, who relates that, according to popular belief, Queen Sheba brought the root from Arabia to King Solomon as a gift, and that the Balsam trees of Jericho yielded the most precious products of the land, the "only balsam in the world," thus making that part most valuable as a royal revenue; wherefore Antony took it away from the Jews and gave it to Cleopatra ("Ant." viii. 6, § 6; xv. 4, § 2; "B. J." i. 6, § 6; 18, § 5; iv. 8, § 3). In "Ant." ix. 1, § 2, he speaks of the opobalsamum that grows at Engedi.

The words in Jer. lii. 16, "Nebuzar-adan, the captain of the guard, left the poor of the land to be vine-dressers and husbandmen," are referred, in Shab. 26*a*, to the gatherers of the opobalsamum in the neighborhood of Engedi and Ramata. Jerome also, in his commentary to Cant. i. 14, refers the "vineyards" there mentioned to the Balsam plantations of Engedi (compare Eusebius, "Onomasticon," *s.v.* "Engedi"). With what feeling the Romans looked upon the Balsam of Judea may be learned from the fact that Vespasian and Titus exhibited the Balsam shrub of Judea as one of the trophies at their triumphal procession (Pliny, *l.c.*); but no less characteristic are the rabbinical ordinances: "Blessed be the Lord who has created fragrant trees," recited only over either the opobalsam belonging to the house of Rabbi Judah of Tiberius or the one belonging to the imperial house of Rome; and the benediction recited over the oil of the opobalsam: "Blessed be the Lord who created the (fragrant) oil of our land," or, according to one authority, simply "fragrant oil" (Ber. 43*a*; see Rashi, *l.c.*, and Musafia to 'Aruk, *s.v.* אֵיפֹפֶלֶסֶמֶן, where the name "Jericho," as the home of the Balsam, is combined with the noun "reah" = fragrant odor). Many passages in the Talmud and Midrash mention opobalsam (אֵפֹפֶלֶסֶמֶן) as used for the anointment of kings (Yer. Soṭah viii. 22*c*), or as an alluring ointment employed by the frivolous women of Jerusalem (Lam. R. to iv. 15), or as a merchandise (Yoma 39*a*), or by thieves as a means of scenting the strong boxes of rich people (Sanh. 109*a*), or as carried about in a flask (Gen. R. xxx., xxxix., and elsewhere); and there is also special mention of streams of opobalsam oil which flow for the enjoyment of the righteous in the world to come (Yer. 'Ab. Zarah iii. 42*c*; Ta'anit 25*a*; compare Apoc. Paul xxiii., xxviii.).

**BALTA:** A town in Russia, situated near the Rumanian and Turkish frontiers. Its Jewish community dates from about the middle of the eighteenth century. When Balta was founded, it was divided into a Polish part, called "Josephgrad," under the dominion of Poland, and a part called "Balta," under the rule of Turkey, the River Kodyma separating these districts and serving as boundary line between them. Jewish settlements were established in both sections when the rebellion of the Cossacks or the Haidamaks broke out in 1768. These bandits perpetrated a terrible massacre among the Poles and Jews of Uman and its neighborhood. A large number of Jews sought to flee to the frontier town Balta, seeking the protection of the Turkish government. The Haidamaks pursued and overtook a part of them in the open steppe near Balta, and slaughtered them ([Tammuz] July, 1768). The Jewish community of Balta sent messengers offering a large amount to redeem from the bandits the bodies of the slain, in order to bury them according to Jewish rites. But the Jews of Balta themselves were made to feel the heavy hand of the Haidamaks. A new band entered Balta and was opposed by a regiment of Tatars, but during the struggle many

Jews were slain and their property seized by both sides. After this uprising war broke out between Russia and Turkey, lasting some years and ending in the victory of the former.

By the treaty of Jassy, in 1791, Balta came, with other Turkish cities, under the domination of Russia. In 1797 Balta was made a district town of the government of Podolia. Commerce in grain and horses largely developed, and the Jewish population increased, until in 1890 the number of the Jews in Balta was about 27,000 (79 per cent of the total population of the town). The number of synagogues and houses of prayer was seventeen. In 1882, at the time of anti-Jewish riots (see Pogromy) in South Russia, the riot in Balta, March 30, surpassed all others in extent and violence and attained mournful celebrity among the Jews of Europe and America. A letter sent by the committee organized to succor the destitute Jews of Balta, to the editor of the "Voskhod," on April 9, and signed by the rabbi, runs as follows: "Balta is turned into a desert. All the merchandise and household goods of the [Jewish] inhabitants are plundered. The number of wounded reaches two hundred, of whom three have already died. The loss of property amounts to one and one-half million rubles. More than 5,000 families are utterly ruined. Mothers and daughters were violated." But in reality the calamity was much greater, for this information was published under Russian censorship, and the hands of the Russian officials, especially those of the minister Ignatiev, were not innocent of the blood spilled in Balta. It is an established fact that the anti-Semites among the authorities secretly encouraged the rioters.

In later years the commerce of Balta, consisting mainly of the export of grain to Odessa, has declined.

**BALTHAZAR.** See BELSHAZZAR.

**BALTHAZAR, OROBIO DE CASTRO.** See CASTRO, BALTHAZAR OROBIO DE.

**BALTIC PROVINCES:** The three Russian governments bordering the Baltic sea—Courland, Livonia, and Esthonia; belonging formerly to Sweden, with the exception of Courland, which was a dependency of Poland and came into possession of Russia, in part at the beginning of the eighteenth century, and the remainder in 1809. The Jewish population was (1897) about 100,000, out of a total population of 2,386,998.

The Jews of the Baltic Provinces differ considerably from other Russian Jews. Their habits, language, and dress are generally much like the German, and, being less crowded and more prosperous than their Lithuanian or Polish coreligionists, their physical development is more satisfactory. The average height of the Baltic Jews called to military service is 163-164 centimeters, while that of the Polish-Lithuanian is only 161-162. In the cities near the German boundary they are more Germanized than in those adjoining Lithuania and White Rus-

sia. The commercial affairs of the Baltic Jews were long governed by "kahals," who were abolished June 5, 1893. While the legal status of the Jews of the Baltic Provinces has varied under different rulers, they are not included in the list of governments issued by Russia in 1890, but belong to the Pale of Settlement. Jews from other governments have no right to live there. In Courland as well as in Shlock, only those have the right of permanent settlement who were registered in the census of April 25, 1835. From among the Jews of Shlock, only those may permanently reside in Riga (Livonia) who actually lived there before Dec. 29, 1841. Among the Slavonic inhabitants of the empire, the Baltic Jews are treated with more toleration than the others, as they have generally passed as Germans in the interior of Russia. A large number are artisans, and when Emperor Nicholas I. issued the order, April 13, 1835, permitting his Jewish subjects to join the peasant class in New Russia in agricultural colonies, the first who sought to be colonized were seventy families from Courland. The Jews of the Baltic Provinces are fond of emigrating, and are occupied as artisans, teachers, clerks, bookkeepers, and small traders all over the world. In the United States alone, according to the "Courländer Vereine," and congregations, there are probably about 25,000 Jews from the Baltic Provinces, and about 10,000 of that number live in Greater New York and vicinity.

From the Church statutes of the archbishop Henning of Riga for the year 1428, it is evident that Jews lived at that time in the Baltic Provinces as occasional traders. But they did not settle there permanently until the adoption of Courland by Poland in 1561. Even later they were without clearly defined privileges, with the exception of the district of Pilten and the town of Hasenpot, where they enjoyed the rights of citizens. On the annexation of the "Inflandt" territory by Russia under Peter the Great, no reference was made to the Jews; but under Anna Ivanovna the deputies of the Livonian nobility complained of the influx of foreigners to the senate, and especially of Lithuanian and Courland Jews.

For a detailed history of the Jews in the separate governments of the Baltic Provinces, see COURLAND, RIGA, MITAU.

**BALTIMORE:** Port of entry and principal city of the state of Maryland, situated on an estuary of the Patapsco river about 12 miles from Chesapeake bay.

It can not be determined when Jews first settled in Baltimore. There were none among the buyers of lots when Baltimore Town was laid out in 1729-30; but as Jews are known to have been resident in Mary-

land in the middle of the seventeenth century (see AMERICA), it is not hazardous to suppose that the quickly growing town attracted some of their descendants early in its history. Family traditions, not yet verified, seem to point to the presence of Jews in Baltimore in the middle of the eighteenth century. In his "The Hebrews in America" (p. 93), Isaac Markens mentions Jacob Myers as the earliest Jew in Baltimore, probably basing his assertion upon the following passage from Griffith's "Annals of Baltimore" (1824), p. 37: "In 1758 Mr. Jacob Myers took the southeast corner of Gay and Baltimore streets and built an inn." There is reason to believe, however, that Myers was not a Jew. "The Maryland Journal and Baltimore Advertiser"—the earliest paper published in Baltimore—the first issue of which appeared in 1773, shows by its advertisements for that year that Jews were then settled

Temple Oheb Shalom, Baltimore.  
(From a photograph.)

in Baltimore as traders, especially in West Indian products. The most substantial of these merchants apparently was Benjamin Levy, probably the same mentioned in the "Publications of the American Jewish Historical Society" (i. 21). In 1781 Jacob Hart, father-in-law of Haym M. Salomon, headed a subscription of £2,000 (\$10,000) loaned to Lafayette for the relief of the detachment under his command.

The existence of a Jewish cemetery in 1786 indicates a Jewish community of some size. How long previous to that year the cemetery had been established is not known. The earliest mention of it occurs in a document (in the possession

of Mr. Mendes Cohen of Baltimore). **Cemetery as Early as 1786.** dated July 12, 1786, headed "Mr. Carroll's [Charles Carroll of Carrollton] claims." It is a "list of the names of

the Persons who occupy the ground (supposed to be about 2 acres) on the east side of Jones's Falls, . . . with an account of the improvements." One of the items is "The Jews burying-ground, 1 small lot enclosed," situated in Ensor's Town, now Jew alley,

near East Monument street. At present one part is occupied by the meeting-house of an African congregation; and the rest is a dumping-ground for refuse. A deed dated Dec. 26, 1801, conveys this same burying-ground from Charles Carroll to Levi Solomon and Solomon Etting, for a consideration of five shillings; and another, dated Dec. 29, 1801, for a consideration of \$80 current money, conveys it to the same parties from Wm. McMechen and John Leggett. Interment is known to have been made in it as late as 1832, the very year in which the oldest Jewish cemetery now in use was established. No indications can be discovered of the removal of remains buried in it when the cemetery was abandoned. On the testimony of a resident close by, the last tombstone was removed, surreptitiously, presumably for building purposes, as recently as from forty to fifty years ago.

With the advent of the Etting family the history of the Jewish community in Baltimore becomes more consecutive. It is uncertain when the Etting brothers, Reuben and Solomon, together with Levi Solomon, their uncle, came to Baltimore. **The Etting Family.** From York, Pa. On Jan. 4, 1796, Solomon Etting's name appears in the "Advertiser" as one of five persons authorized "to receive proposals in writing for a house or suitable lot" for a bank to be established in Baltimore Town. But there are indirect indications that the family settled in Baltimore before 1787. In the list of stockholders of the same bank, published at the end of 1796, appear the following names: Solomon, Kitty, Reuben, Shinah, and Hetty Etting; Jacob F., Philadelphia, Benjamin, and Hetty Levy; and Levy and Myer Solomon. In the first directory of "Baltimore Town and Fell's Point," also published in 1796—the year of the incorporation of Baltimore as a city—there are, in addition to the above, two Harts, three Jacobs, Philip Itzhikin, — Kahn, Benjamin Lyon, Solomon Raphael, and Isaac Solomon; and in the lists of letters remaining at the post-office occur the names of Hym Levenstene and Benjamin Myers. It is a conservative estimate, then, to put the Jewish population of Baltimore in 1796 at fifteen families.

In 1798 the Collmus family arrived from Bohemia; and in 1808 the six sons of Israel J. Cohen came, with their mother, from Richmond, Va. The Cohens and the Ettings played a prominent part in the history of Baltimore Jewry, and in that of the city also. Both families acquired an enviable reputation for integrity and business tact; and their members were honored with offices of trust, by corporations and in the city government. Their names figure most prominently in the emancipation struggle of 1818-26, during which time the "Jew Bill" was debated in the legislature of Maryland. This bill proposed "to consider the justice and expediency of extending to those persons professing the Jewish religion the same privileges that are enjoyed by Christians." Immediately upon its passage, and its ratification in the legislative session of 1825-26, it was applied practically in the election of Solomon Etting and Jacob I. Cohen, Jr., to seats in the city council of Baltimore.

After 1826 the recorded history of the Jews of Baltimore ceases to be the history of prominent individuals, and becomes that of a community. Almost coincidentally with the removal of civil disabilities occurs the first of a series of regular meetings for religious services, whose continuity has been uninterrupted. According to the recollections of one participant still living, this meeting took place in Holliday street, near Pleasant street, at the house of Zalma Rehiné, a former resident of Richmond, Va., and an uncle of Isaac Leeser. This may possibly have been the beginning of the congregation Nidche Israel, now known as the "Baltimore Hebrew Congregation," or more familiarly as the "Stadt-Schul," probably because almost simultaneously with its origin another settlement of Jews, at Fell's Point—an outlying and at first separate district—began to crystallize into a congregation, still called the "Fell's Point Hebrew Friendship Congregation," and regularly organized since 1838. The Nidche Israel soon found it necessary to rent rooms on North Exeter street, near what is now Lexington street. Thence the congregation moved to a one-story dwelling off High street, near the bend between Fayette and Gay streets, or near what is now Lexington street, the entrance being through a narrow alley. In 1837 a three-story brick building was bought, at the southwest corner of Harrison street and Aetna lane. In 1845 the congregation removed to Lloyd and Watson streets, the new synagogue being dedicated by the Rev. S. M. Isaacs of New York and the Rev. Isaac Leeser of Philadelphia, together with the ministers of the congregation, A. Rice and A. Ansell (Anshel). Here it worshiped until April 6, 1889, when the fine building now occupied was erected on Madison avenue and Robert street. The date of the congregational charter is Jan. 29, 1830 (supplementary act, 1851). The incorporators were Moses Millem (Mulheim), Joseph Osterman, John M. Dyer, Louis Silver, and Levi Benjamin.

The first rabbi of the congregation was the above-mentioned Abraham Rice (Reiss), whose piety and upright character have left a lasting impress upon the community, especially through his influence upon the youths he taught, some of them its present leaders. Rice established a school for instruction in Hebrew in 1845, and he officiated as the rabbi of the congregation from 1840 to 1849, and again from the spring of 1862 to Oct. 29 of the same year, the date of his death. The other rabbis of the congregation have been: Julius Spiro, in conjunction with Mr. Rice (1846-47); Henry Hochheimer (1849-59); B. Iloway (1859-61); Abraham Hofman (1868-73); Maurice Fluegel (1881-84); A. S. Bettelheim (1886-90); and the present incumbent, Adolf Gutmacher (1891). The burial-ground belonging to the congregation was bought in 1832, at which time it covered three acres.

The rabbis of the Fell's Point Congregation, now worshipping on Eden street, have been: Aaron Günzburg (1848-56); Henry Hochheimer (1859-92), now rabbi emeritus; W. Willner (1892-94); Clifton H. Levy (1894-96); and the present incumbent, M. Rosenstein (1896). This congregation, as well as the

the one or two "hebrót" of which records up to 1842 have been preserved, had separated from, or organized themselves independently of, the mother congregation, Nidche Israel, only for reasons of convenience, on account of the extended space over which the community was scattered.

In 1842 the desire for a radical change in the liturgy resulted in the formation of the Har Sinai Verein, whose rabbis have been: Max Sutro (about 1842); Moritz Brown (about 1849-55); David Einhorn (1855-61); S. Deutsch (1862-73); Jacob Mayer (1874-76); E. G. Hirsch (1877-78); S. Sale (1878-83); David Philipson (1884-88); Tobias Shanfarber (1888-98); and the present incumbent, Charles A. Rubenstein (1898). The congregation recently erected a new house of worship on Bolton and Wilson streets.

A similar desire for a revised liturgy, but along more conservative lines, led to the formation of the Oheb Shalom Congregation in Sept., 1853, on the part of a number of dissidents from the original body. The rabbis of this congregation, whose new synagogue on Eutaw place and Lanvale street is considered one of the most beautiful structures in the city, have been the following: — Salomon (1854); S. M. Landsberg (1856-57); Benjamin Szold, now rabbi emeritus (1859-92); and the present incumbent, William Rosenau (1892). Alois Kaiser, known as a composer of synagogue music, has been the cantor of this congregation since 1866.

This was followed by the formation of three Orthodox congregations, the earliest of which was the Bikur Cholim Congregation, incorporated in 1865. The Chizuk Emoonah Congregation was formed in 1871 by dissidents from the Baltimore Hebrew Congregation, which had begun to introduce innovations into the synagogue service. The only rabbi of the Chizuk Emoonah has been Henry W. Schneeberger, who has occupied the rabbinate since 1876. A new synagogue has recently been built by the congregation at McCulloh and Mosher streets. In 1878, the Shearith Israel Congregation was formed by the consolidation of two small congregations. S. Schaffer has been its rabbi since 1893.

Since then, in the organization of the twenty other congregations existing in Baltimore,—only eight of which have a house of worship of their own,—the determining factor, in a few cases, has been convenience of locality, but more frequently the bond of national affiliation brought from European countries and reinforced by conservatism in religious sentiment.

An attempt was made in 1856-59 to hold services according to the liturgy of the Sephardim, of which S. N. Carvalho was the chief promoter. The congregation was regularly organized in 1857, under the name "Beth Israel," with Jacob M. De Solla as minister. This completes the religious history of the community.

Of the eight large cemeteries in the city, one, called "Rosedale," is used by seven congregations and three societies; another, on the Philadelphia road, by eight congregations and two societies; and a third, on the Washington road, by three congrega-

tions and one society. Each of five congregations, the Baltimore Hebrew, the Fell's Point, the Har Sinai, the Oheb Shalom, and the B'nai Israel, has a cemetery of its own. Besides, there is a small cemetery, now disused, on the Philadelphia road, which was formerly maintained by what was called, for unknown reasons, "Die Irische Hebra." The Cohen family and the Etting family own private cemeteries.

The first charitable association was the Hebrew Assistance Society (1843?), incorporated in 1856 as the "Hebrew Benevolent Society of Baltimore."

In the latter year was founded also the Hebrew Ladies' Sewing Society, which, though an independent body, has always adapted its activities to those of the general organization. The building of the Hebrew Hospital and Asylum Association—a society for the care of the sick and the shelter of the aged—was dedicated in 1868, the first steps toward this end having been taken in 1859; and in 1872 the Hebrew Orphan Asylum, which now cares for seventy-five inmates, was established. Both these institutions have active auxiliary organizations. The other charitable institutions with permanent homes are the Hebrew Friendly Inn and Aged Home, established in 1891, and the Working Girls' Home, founded in 1899 by the Daughters in Israel, and supported by that association.

There are, besides, two Hebrew free burial societies, a Hebrew free loan association, the Daughters in Israel of Baltimore City (a personal service sisterhood with various activities), and a number of mutual benefit and relief associations. The Baron de Hirsch Fund from the first established a local committee in Baltimore, whose affairs have been administered by Dr. A. Friedenwald.

Congregational schools, at which daily instruction was given in Hebrew and German, and later in English, flourished until after 1870. The most successful were conducted by Joseph Sachs and Jonas Goldsmith. The Society for Educating Poor and Orphan Hebrew Children (now named "Hebrew Education Society of Baltimore") was founded in 1852, and incorporated in 1860. At present (1901), it has two schools, a daily Hebrew school, and a weekly mission school for religious instruction, whose work is supplemented by that of the Frank Free Sabbath School, established and supported by Mrs. S. L. Frank. The first Sunday-school, patterned after the one founded by Miss Rebecca Gratz in Philadelphia, was opened in 1856. In it a large number of children were taught during the years preceding the establishment of congregational religious schools. The Talmud-Torah School, with a building of its own, was established in 1889, and the Hebrew Free Kindergarten and Day Nursery in 1895. The organization known as "The Maccabees" maintains an evening class and a library for the use of boys and young men; continuing in a measure the work begun by the Night School, existing from 1889 to 1899 under the auspices of the Isaac bar Levison Hebrew Literary Society, and supported in part by the Baron de Hirsch Fund, for the purpose of teaching English to immigrants.

At three different times short-lived attempts have

been made to maintain Young Men's Hebrew associations, the first of which existed from 1854 to 1860. At present there are several clubs, three with club-houses, and a number of pleasure societies and literary and musical associations.

There are three Zionist societies; a branch of the Alliance Israélite Universelle; a section and a junior section of the Council of Jewish Women; six lodges of the Independent Order B'nai B'rith; three of the Independent Order B'rith Abraham; one of the Independent Order Free Sons of Israel; three of the Independent Order Free Sons of Judah; four of the Independent Order Sons of Benjamin; five of the Order Ahawas Israel; seven of the Order B'rith Abraham; and one of the Order Keshet Shel Barzel.

The Jewish newspapers published in Baltimore have been the following: "Sinai" (a German periodical, edited by Dr. D. Einhorn, 1856-61, and one year in Philadelphia); "The Jewish Chronicle" (1875-77); "Der Fortschritt" (Yiddish, June-July, 1890); "Der Baltimore Israelit" (Yiddish, 1891-93); "Ha-Pisgah" (Hebrew, 1891-93, continued in Chicago); "Jewish Comment" (1895); and "Der Wegweiser" (Yiddish, 1896).

The Jews of Baltimore have participated fully in the civic life of the town and the state, and have taken some part in national affairs. In the city,

Jews have filled numerous minor offices, notably as councilmen, justices of the peace, supervisors of elections, and in the city law department, as well as on boards and special commissions. Myer Block is judge of the Orphans' Court in Baltimore; Jacob H. Hollander was secretary to the International Bimetallic Commission, and the first treasurer of Porto Rico under American jurisdiction. Isidor Rayner served as representative in the fiftieth, the fifty-second, and the fifty-third congresses, after having sat in the House of Delegates and the Senate of the state; at present he is attorney-general of the state. Among the state senators have been Jacob M. Moses and Lewis Putzel; and among the delegates the following: Mendes I. Cohen, Martin Emerich, Harry A. Fuld, M. S. Hess, Emanuel H. Jacobi, Martin Lehmayr, Lewis Putzel, and Charles J. Wiener. In the business world the Jews of Baltimore occupy an important position. The clothing manufacturing trade is entirely in their hands, and to a great extent they control the manufacture of all wearing apparel for men, including straw hats. Several of the largest department stores are conducted by Jews; and as financiers they bear an enviable reputation for probity and for a spirit of far-sighted and cautious enterprise.

Baltimore Jews have had prominent representatives in all the professions. Jewish physicians, men and women, have occupied positions as professors in the medical colleges, among whom may be mentioned A. B. Arnold, Joshua I. Cohen, Aaron Friedenwald, Harry Friedenwald, and Julius Friedenwald; a few Jews have devoted themselves to the writing of medical and legal works; there are Jewish journalists on the editorial staffs of several of the daily newspapers; the following Jews have been connected with Johns Hopkins University in the

capacity of professors and instructors: J. J. Sylvester, Fabian Franklin, Abraham Cohen, Maurice Bloomfield, Cyrus Adler, J. H. Hollander, Simon Flexner, Caspar Levias, and William Rosenau; in the public schools upward of sixty Jewish teachers are employed; Ephraim Keyser has won reputation as a sculptor, and Mendes Cohen as a civil engineer.

The wider educational life has found promoters among the Jews. Jacob I. Cohen, Jr., was active in the establishment of the public-school system of Baltimore; and his nephews were instrumental in placing in the Johns Hopkins University the "Cohen Collection of Egyptian Antiquities," collected by his brother, Col. Mendes I. Cohen, in Egypt. At the same university Leopold Strouse established a rabbinical library, to which he makes annual additions; Mrs. S. L. Frank and Albert W. Rayner have founded a Semitic fellowship in memory of their father, William S. Rayner; and Henry and Mrs. Sonneborn have presented the university with a collection of Jewish ceremonial objects. At the Cohen residence is a library valuable to Bible students, collected by Dr. Joshua I. Cohen (a catalogue of this library, compiled by Cyrus Adler, was privately printed in 1887).

Jews enlisted from Baltimore for service in each of the national wars. Nathaniel Levy fought under Lafayette in the campaign of 1781; and Reuben

Etting (not the one mentioned above) was taken prisoner by the British at **Military Services.** Charlestown. Among the defenders of Fort McHenry, near Baltimore, during the War of 1812-14, were the brothers Mendes I. and Philip I. Cohen. In the Mexican war, Moritz Henry Weil served as a private in Company A, Third Regiment, United States Artillery, and Louis Hamburger as a private in Company C, Baltimore Battalion. A company of militia composed entirely of Jews was formed, with Levi Benjamin as first lieutenant; but it is not probable that it saw active service. In the Civil war there were as many Baltimore Jews in the Confederate as in the Federal army. Leopold Blumenberg served as brevet brigadier-general, United States Volunteers, Fifth Maryland Infantry (see S. Wolf, "The American Jew as Patriot, Soldier, and Citizen," pp. 199, 200, 412). To the Spanish-American war, Baltimore Jewry sent its due quota of soldiers (see "American Jewish Year Book," 5661, pp. 563-565).

A few street names reveal the early presence of Jews: There are two alleys, each called "Jew alley," one in the eastern section of the city, on which the old burying-ground is situated; and the other in the western section, probably deriving its name from residences of Jews on Eutaw street; Abraham street, in close proximity to the old burying-ground; Cohen alley, so named from the residence of one of the Cohen brothers on Mulberry street; and Etting street, of obvious derivation.

In 1825, while the "Jew Bill" was under discussion, Solomon Etting computed the number of Jews in Maryland to be 150. A directory

**Statistics.** of 1835 gives the names of 40 householders in Baltimore, identified as Jews by a Jewish resident whose memory goes back to that year. To these can be added at least 15 more

names culled from the records of the Baltimore Hebrew Congregation, making a Jewish population of about 300 souls, bearing such names as Cohen, Dyer, Friedenwald, Horwitz, Kayton, Keyser, Preiss, and Rosenstock, whose descendants are still prominent in Baltimore and other cities. In the "Occident" of Dec., 1856, an anonymous correspondent puts the number of Jews then residing in the city at 8,000—obviously an exaggerated estimate. In 1901 estimates of the Jewish population vary from 35,000 to 40,000, in a total population of 508,957.

**BAMAH:** This word, which ordinarily designates a "high place" (see **HIGH PLACES**), is introduced in Ezek. xx. 29 as a generic name for an idolatrous place of worship for the purpose of playing upon the word, as though "Bamah" were compounded from "ba" (come) and "mah" (whereunto); the term being thus interpreted as a place to which people come—that is, for worship.

**BAMBERG:** City in Upper Franconia, Bavaria. As early as the beginning of the eleventh century Jews had settled at Bamberg. In the second half of the twelfth century Benjamin of Tudela, at the end of his "Travels," mentions its large congregation, which included many scholars and rich men. In 1096 Emicho of Leiningen instigated a massacre among the Jews; in 1218 two Jews were martyred; and in 1298 the Jews suffered terribly at the hands of Rindfleisch and his bands, one hundred and thirty-five of them being murdered. They were persecuted so atrociously at the time of the Black Death, in 1349, that they set fire to their own houses and sought death in the flames. The prince-bishop then took possession of such of their houses as were left, and also of the synagogue. Bishop Anton protected them because a rich Jew of Bamberg lent him large sums of money. They were expelled in 1442, but returned in 1453.

In 1451 Johann von Capistrano, the "Scourge of the Hebrews," preached against the Jews in the cathedral of Bamberg. They were forced to listen to the mission sermons of a Dominican monk, and, as they steadfastly refused to be converted, they were once more expelled in 1478. Within twenty-five years, however, they had again returned to Bamberg. In the sixteenth century they were often threatened with expulsion. During the Thirty Years' war they, together with their fellow-citizens, suffered at the hands of the Swedes. Better days came with the second half of the seventeenth century. In 1683 they prevented an expulsion by sacrificing large sums of money. During a commercial crisis in 1699 the populace rose up against the Jews, and one Jew saved himself by throwing prunes from a gable-window down upon the mob. That event, the 29th of Nisan, called "Zwetschgen-Ta'anit" (Prune-Fast), is still commemorated by a fast and a Purim festivity. At that time many communities in the vicinity

of Bamberg were plundered. Emperor Leopold ordered an investigation of the affair and had the leaders punished. In 1737 the number of Jews permitted to live at Bamberg was fixed at forty-eight, each of whom must possess 2,000 thalers, a sum that was increased in 1747 to 4,000. Not until 1813 was the Jews' matriculation ("Judenmatrikel") substituted for the letter of protection.

The first synagogue of the community became the "Marienkirche" after the persecution of 1349, and when it fell into decay in 1470 a new church was built on the site. The second synagogue escaped a similar fate after the expulsion of 1478, being bought by Jacob Kerpf, a Jew of Nuremberg. In 1561 the community rented a rear building for its third place of worship, which was changed into a synagogue in 1679. The fourth synagogue was erected on the same site in 1853. Bamberg at all times had a ghetto. The cemetery was outside of the Sandthor until 1478, having been enlarged in 1407. In the sixteenth century the Jews of Bamberg buried their dead in Zeckendorf, and after the middle of the eighteenth century in Walsdorf; but since 1851 they have had a cemetery of their own.

In harmony with the importance of the community the rabbinate was occupied by eminent men. Samuel of Bamberg, well known as halakist, exegete, and piyyut expounder, lived there about 1220. Israel of Bamberg, author of *Tosafot* (about 1250), succeeded him. Rabbi Feyst is mentioned about 1403. More famous than any of these was David Sprinz (about 1445), who went later to Nuremberg. Moses Minz, the last great representative of Talmudic learning among the German rabbis of the Middle Ages, lived at Bamberg from 1469 to 1474. Rabbi Samuel Meseritz, author of the collection of formulas and documents "Nahalat Shib'ah" (Amsterdam, 1667-68), was at Bamberg from 1661 to 1665. His successors were: Moses Fürth, 1665-67; Enoch Levi, 1674-78; Mordecai Lipschütz, 1678-85; Mendel Rothschild, 1686-1718; Moses Broda, 1718-33; Nathan Utiz, 1734-42; Joseph Breslau, 1743-52; Abraham Maler, 1752-57; Teweile Scheuer, 1759-67; Judah Katz, 1770-88; Löb Berlin, 1789-94; Uri Feist, 1797-1802; Joseph Gersfeld, 1802-14; Samson Wolf Rosenfeld, Joseph Kobak (b. 1864), and Dr. A. Eckstein (in 1901). The Jews in Bamberg numbered, in 1403, 37; in 1633, 10; in 1664, 10; in 1690, 24; in 1737, 60; in 1763, 69; in 1901, the community numbered 1,350 persons.

A. F.

**BAMBERG, FELIX:** German publicist; born at Unruhstadt, Germany, May 17, 1820; died in Saint-Gratien, near Paris, Feb. 12, 1893. He studied philosophy and history in Berlin and Paris; became consul at Paris for Prussia and Brunswick in 1851, and for the North-German Federation in 1867. In 1870 Bamberg was despatched to the headquarters of the Germany army in Versailles, where he was placed at the head of the press department; and a year later, in the capacity of political adviser, he became attached to Manteuffel, then commander-in-chief of the troops occupying France. In 1874 Bamberg became German consul at Messina, and

during 1881-88 served as consul-general at Genoa. His principal works are: "Geschichte der Februar-Revolution und der Ersten Jahre der Französischen Republik von 1848," Brunswick, 1849; "Ueber den Einfluss der Weltzustände auf die Richtungen der Kunst und über die Werke F. Hebbel's," Hamburg, 1846; "Türkische Rede," Leipsic, 1856, a history of the Eastern question, which has also been translated into French; "Geschichte der Orientalischen Angelegenheit im Zeitraum des Pariser und Berliner Friedens," published in Oncken's "Allgemeine Geschichte," Berlin, 1888-92. In addition to these works, Bamberg edited Hebbel's diaries, under the title of "Tagebücher Hebbel's," Berlin, 2 vols., 1884-87; and Hebbel's correspondence, entitled: "F. Hebbel's Briefwechsel mit Freunden und Berühmten Zeitgenossen," Berlin, 1890-92, 2 vols.

**BAMBERG, SAMUEL** (known also as **Samuel of Bamberg** or **Babenberg**, שמואל מבבנבורק (שמואל מבונבערק): Halakist and liturgist; lived about 1220. He was born in Metz, where he attended the rabbinical school, and was one of the best-known German Talmudic scholars. His teachers were his father, Baruch ben Samuel, the well-known poet and halakist, and Eliezer b. Samuel of Metz. He was himself the teacher of Meïr of Rothenburg, to whom he must have been related, since he is cited by Meïr as "my revered relative." He was in correspondence with Eliezer ben Joel ha-Levi, Simḥah of Speirs, and Isaac ben Moses of Vienna. Of Bamberg's private life nothing is known, though it is hardly probable that he spent some time in France, as Cohn ("Monatschrift," 1878, p. 177) and Perles (Grätz, "Jubelschrift," p. 18) think. He had two daughters, named Yiska and Gentil. Samuel is mentioned in the "Memorbuch" of Nuremberg, though it is hardly possible that he ended his life in that city.

As a halakist Samuel was inclined to a liberal interpretation of the Law, especially when it did not concern a direct Biblical command. For this at times he was called to account by his famous pupil Meïr of Rothenburg, who, however, thought so highly of him as to write: "No thought escapes thee; thou bringest light to that which is hidden, and thou art armed with learned weapons as is a hero for the strife." As a jurist Samuel is especially mentioned in matters relating to marriage laws. No separate work on Halakah is left by him; but his responsa on various questions are to be found in the works of others; e.g., Mordecai b. Hillel and Meïr of Rothenburg. For a long time Bamberg was supposed to have been the author of the "Liḳḳuṭe ha-Pardes"; Moses Isserles believed even that he was the pupil of Rashi. Eckstein has proven that these surmises are impossible; and Epstein has shown that the work comes from the school of Isaiah of Trani ("Monatschrift," lxiv. 29 *et seq.*, 53 *et seq.*). A few of his exegetical remarks are mentioned by later scholars also. His explanations of various parts of the Maḥzor are several times cited, and it is probable that he composed a commentary on this work, a copy of which is perchance in the library of David Kaufmann (Grätz, "Jubelschrift," p. 18).

Characteristic of the man is his saying. "It is more praiseworthy to make a gift for the education of the young than for the keeping up of the synagogue," especially as Samuel was influential in the formation of the South-German ritual and was always anxious that the synagogue service should be carried on in an orderly fashion.

**BAMBERGER, BÉLA**: Hungarian lawyer and writer on political economy; born at Szegedin, Hungary, in 1854; studied law at Vienna and Budapest. He is an authority on the currency question. His works, "Die Vorgeschichte und Finanziellen Folgen der Nordamerikanischen Valuta-Frage" (Budapest, 1890) and "Die Börsen-Steuer" (Budapest, 1895), were awarded a prize by the Royal Hungarian Academy of Sciences.

**BAMBERGER, ÉDOUARD ADRIEN**: French deputy and physician; born at Strasburg Sept. 25, 1825. After obtaining the degree of B.A. in 1843 he devoted himself to medicine, in which he obtained a doctor's degree in 1847. Although active in the medical profession, he devoted himself to philosophy and general literature. He moved to Metz in 1858, and in 1867 he was elected member and later vice-president of its Educational League, before which he delivered a great number of lectures on philosophy, science, and hygiene. He also contributed to divers journals essays advocating compulsory education, abolition of capital punishment, and freedom in thought. Attached as he was to republican ideas, he strenuously opposed the policy of Napoleon III. and indicated its dangers. At the election of a national assembly to consider the peace preliminaries of Feb. 8, 1871, he was elected parliamentary representative for the Moselle district with 33,632 votes. Having voted against the treaty which severed his native country (Alsace-Lorraine) from France, he tendered his resignation, together with his colleagues of the annexed departments. However, after the insurrection of March 18, 1871, following a call of Thiers, he resumed his seat as a deputy at Versailles. At the election of Feb. 20, 1876, he was elected representative for Neuilly-on-the-Seine with 4,893 (of 9,536) votes. He took his seat among the republican majority and voted steadily with them. After May 16, 1877, he was a member of the protesting group of 363, and at the dissolution of Parliament (by MacMahon) he was reelected Oct. 14, 1877, in the second parliamentary district (conscription) of St. Denis, with the strong vote of 8,871 against 3,204 obtained by his opponent, Pierre Leonce Detroyat, editor of "Liberté," a Bonapartist paper. But at the elections of August, 1881, owing to the indifference of a certain number of moderate republicans, he was defeated by his opponent, Dr. Villeneuve, a socialist and communist. In 1881 Bamberger was appointed assistant librarian to the Museum of Natural History, which position he occupied until near the close of his life.

Although detached from practical Judaism, Bamberger remained a Jew by conviction, and he never concealed the religion in which he was born. During the parliamentary debates on the law concerning child-labor he urged that Jewish apprentices be exempt from working on Saturday. His amendment was, however, rejected. Bamberger published: "Etude sur le Travail des Enfants dans les Manufactures" (1873-74); "Etude sur le Socialisme en Russie," etc. He died July 15, 1910.

**BAMBERGER, ISAAC:** German rabbi; born at Angenrod, in the grand duchy of Hesse-Darmstadt, Nov. 5, 1834; died at Königsberg Oct. 26, 1896. He received elementary instruction in Hebrew from his father, Mayer Bamberger, who was for fifty years a teacher in Angenrod, attended the Realschule in Alsfeld, and Dr. Miller's institute in Fulda. He finished his preparatory education at the gymnasium in Giessen. Afterward he entered the University of Giessen, where he studied philosophy and philology; receiving at the same time instruction in rabbinical branches from Dr. Levi, the local rabbi. After having graduated as Ph.D. at the University of Giessen in 1861, he went to the Breslau Jewish Theological Seminary, where he devoted himself to the study of Jewish theology. He was graduated as rabbi in 1861, and in 1865 he was called to Königsberg as rabbi of the Reform congregation to succeed the late Rabbi Saalschütz. He held this position until his death, devoting himself entirely to philanthropical, educational, and communal work.

Bamberger distinguished himself especially by his untiring efforts for the amelioration of the condition of the Russian Jews, who flocked to Königsberg in large numbers after 1882, when the persecutions assumed a serious extent; but the needs of his own community also found in Bamberger an equally ardent worker. He organized the following societies and institutions: A society to assist indigent Jewish students; the union of the Jewish congregations of East Prussia; a society for the prevention of pauperism; an orphan asylum, known as "Dr. Koch's Waisen-Erziehungs-Anstalt"; a society for providing the poor with fuel; a union of Jewish Sabbath-school teachers in East Prussia; and a society for providing poor school-children with winter clothes. He was also a zealous member of the Alliance Israélite Universelle, which he represented for more than twenty years in eastern Prussia. He was one of the founders of the "Deutsch-Israelitischer Gemeindebund" (Union of German Congregations); and of the Deutscher Rabbiner-Verein (Union of German Rabbis); the latter elected him several times as presiding officer at its meetings.

Bamberger was a man of thorough training, and a forcible speaker, justly esteemed for his tact in public addresses. His death occurred before the dedication of the beautiful new synagogue at Königsberg, for the erection of which he had worked so zealously.

**BAMBERGER, LUDWIG:** German deputy and political economist; born in Mayence July 22, 1823; died in Berlin March 14, 1899. He studied law in 1842-45 at the universities of Giessen, Heidelberg, and Göttingen; and during the following two years he was attorney at law in his native city. He became involved in the revolutionary movement of 1848, being at that time editor of the "Mainzer Zeitung"; enlisted in the ranks of the volunteers; and took an active part in the insurrection of the Lower Palatinate in 1849. When, with the assistance of Prussia, the rising was quelled, Bamberger, among others, was sentenced to imprisonment by the tribunals of Mayence, and condemned to death by the Bavarian authorities. He fled to Switzerland,

Ludwig Bamberger.

and thence went in succession to England, Belgium, and Holland, earning a living mainly by work for different commercial houses; and, finally, took up his abode in Paris, where he became manager of the large banking firm of Bischoffsheim & Goldschmidt in 1853. He remained in this position until the general amnesty granted to political offenders in 1866. Bamberger thereupon returned to Mayence, and, two years later, was elected to the newly established Parliament of the Zollverein.

At the beginning of the Franco-Prussian war the reputation of Bamberger as a talented and successful writer on political and economic subjects, his well-known sympathies for the so-called "Deutsch-National Liberalen," and his exceptional familiarity with existing conditions in France induced Prince Bismarck, in August, 1870, to entrust to him the management of a considerable part of the political

campaign waged in the interests of his national policy. In 1871 Bamberger was elected to the first German Reichstag, and from 1873 represented in it the electoral district of Alzey-Bingen; at the beginning of his parliamentary career faithfully clinging to the National Liberal party, of which he became a leader. He exercised great influence on financial and economic legislation, especially in giving support to the maintenance of a gold standard. He was an enthusiastic champion of free trade, and president of the association, which he founded, for the promotion of that ideal. Loud in his denunciations of the professorial socialists, "Katheder Socialisten," he at the same time courageously assailed the protection policy which was inaugurated by Bismarck in 1879 for the purpose of accomplishing the economic unification of Germany. Thus brought into opposition with the majority of the National Liberal party, Bamberger resolved to break away from it, and in 1880, with a number of political followers, formed the so-called "secessional faction," afterward named "Liberale Vereinigung." To justify his course, he published (anonymously) a pamphlet entitled "Secession," which passed through four editions within a year (Berlin, 1881). After the fusion of the secessional faction with the German Liberal party in 1884, Bamberger became identified with the latter, and bitterly opposed Bismarck's administration, especially at the time when the government recklessly plunged into a colonial policy. Upon the disintegration of the German Liberal party in 1893, Bamberger attached himself to that faction known as the "Deutschfreisinnige Vereinigung." This was his last parliamentary record, as he failed to be elected to the next Reichstag.

Among his numerous contributions to political and national-economic literature may be mentioned: "Die Flitterwochen der Pressfreiheit," Mayence, 1848; "Erlebnisse aus der Pfälzischen Erhebung," an interesting and instructive tale of the author's experiences during the insurrection of the Palatinate, Frankfort-on-the-Main, 1849; "Juchhe nach Italia" (anonymous), Bern, 1859—in which the author exhorts the Germans to take sides with Italy in her struggle with Austria, and thus accomplish the unification of Germany by the exclusion of Austria; "Adam Lux," in the "Revue Moderne," 1866; "Monsieur de Bismarck," Paris, 1868 (in the same year a German edition appeared in Breslau, and one in English in 1869); "Vertrauliche Briefe aus dem Zollparlament," Breslau, 1870; "Zur Naturgeschichte des Französischen Krieges," Leipsic, 1871; "Die Aufhebung der Indirecten Gemeinde-Abgaben in Belgien, Holland, und Frankreich," Berlin, 1871; "Die Fünf Milliarden," *ib.* 1873; "Zur Deutschen Münzgesetzgebung," *ib.* 1873; "Die Arbeiterfrage Unter dem Gesichtspunkte des Vereinsrechts, Stuttgart, 1873 (an attack on socialist professors, which evoked a reply from Brentano under the title, "Die Wissenschaftliche Leistung der Herrn Ludwig Bamberger," Berlin, 1873; "Die Zettelbank vor dem Reichstag," two editions, Leipsic, 1874; "Reichsgold: Studien über Währung und Wechsel," three editions, Leipsic, 1876; "Deutschland und der Socialismus," two editions, *ib.* 1878; "Deutschland und Judenthum," two editions, *ib.* 1880; "Die

Verschleppung der Deutschen Münz-Reform," Cologne, 1880; "Die Schicksale des Lateinischen Münzbundes"; "Ein Beitrag zur Währungspolitik," Berlin, 1885; "Die Socialistische Gefahr: Ein Nachwort zu den Verhandlungen des Reichstags vom März und April d. J.," Minden, 1886; "National," Berlin, 1888; "Die Nachfolge Bismarcks," *ib.* 1889; "Zum Jahrestag der Entlassung Bismarcks," *ib.* 1891; "Silber," three editions, Berlin, 1893; "Die Stichworte der Silberleute," five editions, *ib.* 1893.

He contributed, moreover, to the "Deutsche Rundschau," the "Allgemeine Zeitung," "Unsere Zeit," "Die Gegenwart," "Die Tribüne," etc. During his last years he was engaged in collecting his works, of which a complete edition appeared in Berlin, in five volumes (1895-97). Among his contributions to the weekly, "Die Nation," the following have appeared in book form under separate titles: "Wandlungen und Wanderungen in der Sozialpolitik," Berlin, 1898; "Bismarck Posthumus," being discourses on Bismarck's "Gedanken und Erinnerungen," *ib.* 1899.

A. S. C.

**BAMBERGER, SELIGMAN BAER** (Hebrew name, **Isaac Dob**): Talmudist of the old school and leader of the Orthodox party in Germany; born at Wiesenbrunn, near Kitzingen, Bavaria, Nov. 6, 1807; died at Würzburg Oct. 13, 1878. His strictly Orthodox parents sent him, when he was fifteen years old, to the yeshibah at Fürth, where he pursued exclusively the study of the Talmud under Wolf Hamburger and Judah Löb Halberstadt. He was an eager and able student, and at the end of five years obtained his diploma as rabbi. In accordance with the olden pious standpoint, the idea of making a profession of the Torah did not enter Bamberger's mind; and he opened a general business store in his native town. Rabbinical studies, however, continued to be his chief employment. The following episode shows his enthusiasm for things spiritual: A customer once came into his place of business while he was deeply absorbed in his folios, and he called out impatiently: "Is there no other shop in this place, that you must come and disturb me?"—and continued his reading. When Bamberger left

the synagogue early in the morning, he was wont to say: "If only no customers come to-day, so that I may not be bothered in my studies!" With such commercial principles it is no wonder that his trade decreased; and as his family grew larger, the capital with which he started—the dowry of his wife, daughter of Rabbi Seckel Wormser of Fulda, to whom he was married in 1829—dwindled away, and his business had to be liquidated. But Bamberger's reputation as a Talmudist and a zealous representative of Orthodoxy was ever on the increase; and while he was still a

tradesman, pupils came to him from all parts of Germany. Among them were some who later attained to prominence, especially in Orthodox circles.

Through contact with his pupils, who prepared for the university while pursuing their rabbinical studies, Bamberger gradually came to see that a representative of Orthodoxy ought to have some knowledge of secular science also, though he himself possessed no systematic knowledge of the German language or of literature in general. Though no profound scholar, he was endowed with a fine tenacious memory which stood him in good stead in his endeavors to familiarize himself with what he called "secular knowledge." In 1836 the Bavarian government convoked an assembly of Jewish notables

to report on various points in the Jewish religious law. The Orthodox staked their hopes on Bamberger, whom they delegated in place of Abraham Bing, rabbi at Würzburg, who was unable to represent them. It was chiefly due to Bamberger's energy and tenacity of purpose that the results of the meeting accorded with the wishes of the Orthodox party and not of the liberal-minded, who had expected much from it.

In consequence of his success, Bamberger's friends and colleagues begged him to become a candidate for the rabbinate of Würzburg, which Bing's death in 1839 had left vacant. By its choice of a rabbi, Würzburg, the seat of a university attended by many Jewish students of theology, would in a certain sense be a determining factor in the conflict between Reform and Orthodoxy. Bamberger's victory after a long and severe struggle had in fact been the triumph of Orthodoxy.

As soon as Bamberger assumed the office of district rabbi at Würzburg (April, 1840), he opened a yeshibah, probably the last important one in Germany. Through his learning and extreme piety,

but chiefly through the real nobility and modesty of his nature, he exerted a great influence on those who came into personal relations with him; his pupils especially, to whom his attitude was that of a fatherly friend, loved and honored him. His capacity for work was remarkable. His duties as rabbi of a large congregation and district, and as director of a rabbinical school, did not keep him from devoting time to other philanthropic and practical affairs. There was a great lack of Jewish teachers in Bavaria, and, after exerting himself two years in promoting the establishment of a Jewish teachers' training institution, in 1864 he succeeded. He obtained the necessary money, undertook the whole organization of the work, and even provided for the board and lodging of the pupils, who were generally poor. Bamberger worked also in behalf of the proper education of children, and by 1855 he obtained from the Würzburg congregation enough money for a Jewish elementary school, one of the first of its kind in Germany.

Bamberger was one of the last rabbinical writers in Germany. Though his works show him to have been a great Talmudist, they have a practical end, the instruction of the people in the scrupulous adherence to the Jewish laws as codified in the Shulhan 'Aruk.

His first work was "Meleket Shamayin" (The Work of the Heaven, Altona, 1853; 2d ed., Hanover, 1860). It puts in clear, easy form the Talmudic-rabbinical regulations for the making of Torah-scrolls, tefillin, and "mezuzot," and thoroughly explains them.

The book is specially meant for the writers of Torah-scrolls, giving all the details concerning the preparation of the parchment to be used, the mode of writing, and so on. Another work by Bamberger, a short book written in the Ger-

man language in Hebrew characters, is entitled "Amirah le-Bet Ya'akov" (An Address to the House of Jacob; Fürth, 1858, and several other editions). It is on the three ceremonial chief duties of Jewish housewives, **HALLAH**, **NIDDAH**, and the kindling of the Sabbath light (see **SABBATH**, **LIGHTS OF**), and has done more than the oratory of Orthodox rabbis for the preservation of these customs. Bamberger's "Moreh la-Zobehim" (Fürth, 1863) is a good text-book on the slaughtering of animals for food, and gives many learned elaborations of the ritual laws concerning "shehitah." "Naḥalat Debash" (Inheritance of Honey, 1867), a compendium of the laws concerning **Ḥalizah**, is intended mainly for scholars; while the commentary "Yizhak Yerannen" (Isaac Will Rejoice), (Fürth, 1861-62) on Isaac b. Judah ibn Gayyat's "Sha'are Simḥah" is of a wholly Talmudic-scientific character. This last is an excellent work of great use for the proper understanding and appreciation of the old system of codifications. "Kore be-Emet," in two volumes (vol. i., Frankfort-on-the-Main, 1871; vol. ii., Mayence, 1878), is devoted to those passages of the Bible which the Talmud and Midrash explain either by the substitution of a consonant, the change of a vowel, or the transfer of letters. Bamberger points out that in these cases the Talmud and the Midrash do not aim at critical textual changes, their method being merely that of their general hermeneutics. On the whole, Bamberger's view is correct; but his attempts to prove the necessity for the method from the context of the passages are unscientific.

Bamberger wrote a pamphlet on the emancipation of the Jews, in which he gives a clear and trustworthy statement of the attitude of the Talmud toward non-Jews. The occasion of the pamphlet was the action of the Bavarian chamber in 1850 in regard to granting civic rights to the Jews.

Bamberger's energies were bent on the one task of preserving and spreading Orthodox Judaism. He was no fanatic, however; and his disputes with his opponents never became personal. His attitude in regard to the question of the withdrawal of Jews

from the community affords an instance of this moderation. The question arose when on July 28, 1876, the German law permitted Jews to secede from their religious community. Samson Raphael Hirsch thereupon declared

that it was the duty of the Orthodox to separate from an un-Orthodox community; and this led to conflicts in many congregations in Germany; but the final result was unfavorable to Hirsch, whose efforts for separation were limited to a comparatively small field. This was due chiefly to Bamberger; for his reputation as a great Talmudist and as a veteran in

the cause of Orthodoxy gave weight to his opinions. In contrast to Hirsch, Bamberger was no extremist, but a conservative. Hirsch opposed Reform on the principle that "history must turn back"; and he had his own system for a "scientific construction of Judaism." Bamberger, however, resisted Reform simply because it was an innovation in opposition to traditional Judaism; and this reverence for the old prevented him from denying the term "Jewish" to communities whose history had been known as Jewish for hundreds of years. The dispute continued with some heat, and ended only with Bamberger's death.

L. G.

**BAMBERGER, SOLOMON:** German rabbi and Talmudic author; born in Wiesenbronn, Bavaria, May 1, 1835. He is the son of the eminent rabbi Seligman Baer Bamberger, from whom he received his first instruction in Talmud. After having privately acquired the necessary knowledge in secular branches, he passed his examination as rabbi at Würzburg in 1860, and in the following year was appointed substitute rabbi (*Rabbinatsverweser*) at Hassfurt. From 1864 to 1872 he was Klaus rabbi of Sulzburg; from 1872 to 1880 of Lengnau-Endingen, Switzerland; from 1880 to 1887 of Niederhagenthal, Alsace; and since 1887 of Sennheim, Alsace.

Bamberger wrote lexicographic notes on various Talmudic treatises, under the title "Limmud 'Aruk," of which there have appeared those on Shabbat (Fürth, 1868), Berakot (1872), Rosh ha-Shanah, Ta'anit, Sukkah (Mayence, 1890), and Megillah (Berlin, 1897). In the last-named are included some responsa of his father's. Additions to Bamberger's notes on Berakot and Shabbat are published under the title "Hegyon Shelomo" (Mayence, 1898). He also translated his father's manual on Sheḥitah, "More la-Zobehim" (Frankfort-on-the-Main, 1894).

M. L. B.

**BAMOTH-BAAL** ("The Heights of Baal"): An elevated point in the land of Moab (Num. xxii. 41), which was allotted to the Reubenites (Josh. xiii. 17). It is probably identical with the Bamoth between Nahaliel and the "valley that is in the country of Moab, to the top of Pisgah," mentioned in the list of stopping-places in Num. xxi. 19 *et seq.* Beth-bamot in the MOABITE STONE, line 27 (perhaps this is also the reading of Isa. xvi. 2), may also be considered as connected with it. According to the allotments in Josh. xiii. 17, some take the place to be on Mount 'Aṭṭārūs. G. A. Smith ("Historical Geography of Palestine," p. 562) is inclined to the opinion of Conder ("Heth and Moab," pp. 189 *et seq.*) that it is located at one of the many cromlechs above the Wady Dehided, northeast of the Dead Sea. The statement of Eusebius, which places it on the Arnon, can not possibly be correct.

**BAMPI, ISSACHAR DOB BAER:** Scholar and philanthropist; born 1823 at Minsk, Russia; died there March 10, 1888. He received a thorough

Biblical and Talmudical education, was a good Hebraist, and every day for the last thirty years of his life lectured on a chapter of the Bible in his private synagogue. Bampi devoted himself specially to tracing the Jewish religious customs to their sources in both Talmuds and in the Midrashim, and is said to have left in manuscript a work on that subject entitled "Meḳor Minhagin" (Source of Customs). A few extracts from that work were published in the year-book "Keneset Yisrael," 1888, ii., and in the "Ha-Kerem."

Bampi was on equally good terms with the orthodox Talmudists and with the progressive "Maskilim." Among the many Hebrew scholars whom he aided in the publication of their works was Kalman Schulman, who dedicated to Bampi the third volume of his "Toledot Ḥakme Yisrael" (Wilna, 1883).

Besides being one of the first and most enthusiastic members of the old Hobebei Zion of Minsk, Bampi was also a contributor to most of its charitable institutions and an active worker in communal affairs. After his death Bampi's valuable library, comprising about 6,000 volumes—mostly Hebraica, which he had collected at great cost during many years—was sold to A. L. Friedland. These books formed an important part of the Friedland collection, which was later donated by its owner to the library of the Asiatic Museum in St. Petersburg. Many of Bampi's books contain marginal notes in his handwriting.

P. WI.

**BAN** "herem": A proclamation devoting or consecrating to the Deity persons or things to be excluded from use, or, as was the rule in Biblical times, to be utterly destroyed. The noun "herem," or the verb "heherim," translated in A. V. "utterly destroyed" (Ex. xxii. 19 [R. V. 20]; Num. xxi. 2, 3; Deut. ii. 34, vii. 2; I Sam. xv. 3), "devoted" (Lev. xxvii. 28, 29; Num. xviii. 14), "dedicated" (Ezek. xlv. 29), or "consecrated" (Micah iv. 13), also, rather inaccurately, "accursed" (Josh. vi. 17; vii. 1, 11-15), denotes, like "heḳdesh" from "ḳodesh" (Jer. xii. 3), consecration or separation; being derived from the same root as the Arabic "ḥaram" (sacred territory) and "ḥarim" (forbidden ground) or "ḥarem" (forbidden person; compare the Assyrian "ḥarimtu," hierodule). Whatever is devoted or banned ("herem") is "most holy unto the Lord" ("ḳodesh ḳodashim"; Lev. xxvii. 28). The practise of devoting to the Deity the spoils of war, persons or things, found among all ancient nations and primitive tribes, is inseparably connected with the idea of a holy warfare which claims all booty for the god who leads to victory and in whose honor the captured foes, as well as goods, are destroyed on the spot (see, concerning the Teutonic and Celtic tribes, Tacitus, "Annales," i. 61, xiii. 57; Caesar, "De Bello Gallico," vi. 17; respecting the Indians, Waitz, "Anthropologie," iii. 157; and for the Arabs, the passages quoted by Schwally, "Kriegsalterthümer," pp. 35-38).

King Mesha of Moab tells in his inscription (lines 16-18) how, after having carried off the vessels of YHWH from the city of Nebo and dragged them before Kemosh, his god, he devoted ("heheramti") 7,000 prisoners to Ashtor-Kemosh, and how he

"slew the inhabitants of Attarot as a spectacle to his god Kemosh" (line 12). As a rule, the people, before going to war, devoted, in the form of a vow, the whole booty to the deity in order to secure its victorious aid. So did the Teutons and Gauls, according to Tacitus and Caesar; and in like manner did Israel vow to "ban" the Canaanites and their cities in case God would deliver them into his hand: "and they banned [A. V. "utterly destroyed"] them and their cities: and he called the name of the place Hormah" (Num. xxi. 3).

The people of Israel being throughout the entire pre-exilic history engaged in a warfare against idolatrous nations, the view of the consecration of the booty, whether expressed beforehand in a vow or not, lent its coloring to every battle; consequently, the doom of the Ban fell not only upon the persons and things captured, but also upon him who appropriated them, and even upon the very house where the devoted thing was sacrilegiously placed. Thus, before the capture of Jericho, Joshua (vi. 17, 18) proclaimed that the city and all that was therein should be devoted to the Lord; and he warned the people, saying: "Keep yourselves from the ban [A. V. "accursed thing"], lest ye make yourselves ban [A. V. "accursed"], when ye take of the ban [A. V. "accursed thing"], and make the camp of Israel a ban [A. V. "a curse"], and bring doom upon it [A. V. "trouble it"]." Accordingly, "all the silver and gold and the vessels of brass and iron are consecrated ["*kodesh*"] unto the Lord: they shall come into the treasury of the Lord . . . and they devoted

["*vayaharinu*"]; A. V. "utterly destroyed"] all that was in the city, both man and woman, young and old, and ox, and sheep, and ass, with the edge of the sword" (Josh. vi. 19-21). In taking of the devoted booty, Achan, therefore, brought doom upon the whole people; and they themselves came under the ban (A. V. "curse") until he and his household, upon whom the Ban rested, were exterminated (Josh. vii. 11-15, 25). Likewise, in the war against Amalek, Samuel caused the people to devote (A. V. "utterly destroy") all that Amalek had, without sparing any one, and to "slay both man and woman, infant and suckling, ox and sheep, camel and ass" (I Sam. xv. 3). Saul, however, "banned [A. V. "utterly destroyed"] all the people with the edge of the sword, but . . . spared Agag and the best of the sheep, and of the oxen, and of the fatlings, and the lambs, and all that was good" (*ib.* 8, 9); banning only that part of the property which was vile and refuse. He thereby provoked the wrath of God; and in fulfilment of the Ban, Agag was hewn in pieces before the Lord (*ib.* 32). The oath of King Saul not to eat anything until the battle with the Philistines was decided, the violation of which almost cost Jonathan his life (I Sam. xiv. 24-46), does not fall under the category of "*herem*," or Ban; it was a vow like Jephthah's.

The Ban as a primitive war measure was especially enforced in the Deuteronomic legislation: "When the Lord thy God shall deliver them before thee thou shalt smite them, and ban [A. V. "utterly destroy"] them" (Deut. vii. 2). "Thou shalt not covet [A. V.

"desire"] the silver or gold that is on them [the graven images] . . . neither shalt thou bring an abomination unto thine house, lest thou

be a ban [A. V. "accursed thing"] like it" (*ib.* vii. 25, 26; compare *ib.* xx. 16-18). This is accordingly related as having been carried out by Joshua (Josh. x. 1, 28-40; xi. 11-21; but compare I Kings ix. 21). With some modification it is told of Sihon, king of Heshbon: "We took all his cities at that time, and banned [A. V. "utterly destroyed"] the men, and the women, and the little ones . . . only the cattle we took for a prey unto ourselves, and the spoil of the cities which we took" (Deut. ii. 34, 35).

The idolatrous Israelite city was to be treated in the same way as the Canaanite: "Thou shalt surely smite the inhabitants of that city with the edge of the sword, banning it [A. V. "destroying it utterly"], and all that is therein, and the cattle thereof, with the edge of the sword. And thou shalt gather all the spoil of it into the midst of the street thereof, and shalt burn with fire the city and all the spoil thereof as a holocaust [A. V. "every whit"] to [for] the Lord thy God: and it shall not be

built again [A. V. "a heap forever"], and there shall cleave nought of the devoted [A. V. "cursed"] thing to thine hand" (Deut. xiii. 16-18 [15-17]). The banned city was made a place of desolation. So in the case of Jericho (Josh. vi. 26; I Kings xvi. 34) and Ai (Josh. viii. 28, "*shemamah*"; compare Judges ix. 45); and this probably led later on to an identification of "*herem*" with "*shammata*" (desolation; see ANATHEMA). Somewhat modified for the occasion, the Ban was also proclaimed in the Benjamite war: "Ye shall ban [A. V. "utterly destroy"] every male, and every woman that hath had intercourse with [A. V. "lain by"] man" (Judges xxi. 11, 12; compare Num. xxxi. 17 *et seq.*); I Kings ix. 21; II Kings xix. 11; Jer. xxv. 9, l. 26, li. 26; Mal. iii. 24; Zach. xiv. 11).

The man or the people under the Ban ("*ish hermi*" = a man of my ban [A. V. "a man whom I appointed to utter destruction"], Kings xx. 42; or "*hermi*" = the people of my ban [A. V. "of my curse"], Isa. xxxiv. 5) must not be allowed to escape their doom. All the idolatrous nations are under the Ban (Isa. xxxiv. 2; Jer. xxv. 9; Micah iv. 13).

In the same degree as the Ban proved to be a rigid war measure against idolatrous nations, it was resorted to also in the case of idolatrous individuals. Hence the law set down already in the oldest legislation, "He that sacrificeth unto any god, save unto the Lord only, he shall be banned" (A. V. "utterly destroyed," Ex. xxii. 19 [20]), and the one in Lev. xxvii. 29, "None devoted, which shall be devoted of men, shall be redeemed; but shall surely be put to death," seem to deal with the case of an idolater (see the commentaries of Dillmann, Driver, and Kalisch).

In an altogether different sense is the word "*herem*" (devotion) used in the last-mentioned verse, as well as in Ezek. xliv. 29, and Num. xviii. 14. It is the thing devoted by virtue of a simple vow which is declared to belong not to the Lord, but to the priest. In this sense the Rabbis read also Lev. xxvii.

29 (see Sifra and Targ. Yer.) as referring to the vow of the value of a criminal guilty of capital punishment. Here "herem" is the same as the rabbinical "hekdesb."

In post-exilic times the herem as a war measure against idolaters no longer found any application.

Nevertheless it was employed as a means of ecclesiastical discipline to keep the community clear of undesirable, semi-heathenish elements; and when the new constitution was to be adopted for the new colony, those that would not participate in the assembly of the children of the captivity, had, according to the counsel of the princes and elders, all their substance devoted (A. V. "forfeited"), and were themselves separated from the community (Ezra x. 8). Here the Ban, or herem, assumed a new meaning: it meant no longer destruction, but confiscation of goods, and excommunication—possibly exposure to starvation ("shammatta"; see ANATHEMA)—of the person; see BANISHMENT, EXCOMMUNICATION.

**BANAAH, TANNA.** See BANNAAH.

**BAND, MORITZ:** Austrian writer and art critic; born Oct. 6, 1864. At an early age he began to write for the press, chiefly feuilletons, humorous sketches, and sporting news. He published: "Enzyklopädie des Buchhändlerischen Wissens," Weimar, 1887; "Semmering-Führer," Vienna, 1888; "Rosl," an operetta, 1888; "Dur und Moll," 1888; "Der Letzte Bombardier," a comedy, 1889; "Aus dem Pensionat," a comedy, 1889; "Handbuch des Radfahrersports," 1895; "Angiolina," a novel, 1896; "Die Hochzeitsreise," an operetta, 1900; "Die Sphynx," an operetta, 1900. In addition to these, Band edited: "Unsere Kunst" in "Wort und Bild," 1889; and "Wiener Künstler-Dekameron," 1891.

M. B.

**BANDMANN, DANIEL E.:** German-American actor; born at Cassel, Germany, in 1840. He made his debut at the Court Theater, Neu Strelitz, when eighteen years old, playing for the next five years mainly in German versions of Shakespearian plays. In 1863 he left Germany for the United States, where he appeared in an English part, Jan. 15, at Niblo's Garden. During the five years following he toured throughout the United States, his principal and most popular rôle being *Shylock*. Early in 1868 he went to London, where he appeared at the Lyceum Theater (Feb. 17) in the title-rôle of Brachvogel's "Narciss," founded on Diderot's "Neveu de Rameau" (1760). His next rôle was *Vyryan* in Bulwer Lytton's "The Rightful Heir" (Oct. 3, 1868), followed by the title part in "Othello" (Nov. 30). In the following year he went to Australia, whence he returned to England by way of the United States (1870-71). His next appearance was at the Queen's

Theater, London, in Tom Taylor's "Dead or Alive" (June, 1871). Next he played *Hamlet* at the Princess Theater (Feb. 10, 1873). Since then Bandmann's appearances were mainly in the United States, where he bought a ranch. In 1901 he appeared in vaudeville in a condensed version of "The Merchant of Venice." He died Nov. 25, 1905.

**BANDOFF (BENDOFF or BENDORFF), BENJAMIN:** English pugilist; born in the first quarter of the nineteenth century; died after 1865. Bandoff entered the prize-ring to meet Jerry Duggan, Sept. 20, 1853, having been matched against him for £10 a side. The battle, which continued for seventy-five rounds, was interrupted by the approach of darkness, and the match was drawn. Bandoff next fought George Sims, and was beaten by him on two occasions; namely, on Nov. 8, 1854, and on May 17, 1858. Four years later, however, Bandoff retrieved his reputation as a fighter when he met and defeated Hopkinson after a battle of twenty-eight rounds (April 9, 1862). This victory was followed by another on Sept. 8, 1863, when Bandoff defeated the colored Australian, Jackson, at Home Circuit, after a battle of forty rounds. On the same spot he fought eighty-six rounds with Callaghan; but owing to darkness the match terminated in a draw. Bandoff's last appearance in the prize-ring was at Thames Haven on Feb. 14, 1865, when he was beaten by John Smith, the "Brighton Doctor," after a contest of sixteen rounds.

F. H. V.

**BANETH, EDUARD (EZEKIEL):** German rabbi and scholar; born at Liptó-Szent-Miklós, Hungary, Aug. 9, 1855; son of Bernhard Baneth. After receiving his preparatory education in his native city, at the Israelitische Normalschule, and studying the Talmud privately under his father and under R. Sofer and others at Presburg, he entered the rabbinical seminary of Berlin in 1873, passing thence to the gymnasium in Gnesen. In 1878 he entered the University of Berlin, studying philosophy and Oriental languages, especially Arabic. In July, 1881, he received from the University of Leipsic his doctor's degree, "summa cum laude," and shortly afterward he received from Dr. Israel Hildesheimer a diploma as rabbi. In January, 1882, he entered upon the rabbinate of Krotoschin. This office he resigned in April, 1895, when the administration of the community introduced, against the wishes of the majority, certain innovations which he could not countenance. In December of the same year he accepted a call as instructor in Talmudic studies at the Lehranstalt für die Wissenschaft des Judenthums at Berlin, which position he still (1901) holds.

In addition to essays published in various periodicals, Baneth has written: (1) "Samuel ha-Nagid als Staatsmann und Dichter" ("Monatsschrift," 1881. Nos. ii.-viii.; appended is a collection of his poems in metrical translation); (2) "Ursprung der Sadokäer und Boëthosäer," Frankfurt-on-the-Main, 1882; (3) "Maimunis' Commentar zum Tractat Abot," the

Arabic original with a new translation in Hebrew, together with many notes (the first chapter only has been published in the "Hildesheimer Jubelschrift," but without the German translation or the notes), and (4) "Mischna, Seder Mo'ed," critical edition with German translation and commentary (Berlin); (5) "Maimunis' Neumondsrechnung," scientific supplement to the sixteenth, seventeenth, and twentieth annual reports of the Lehranstalt für die Wissenschaft des Judenthums of Berlin. S.

**BANETH, EZEKIEL:** Hungarian rabbi; born 1773 at Alt-Ofen; died Dec. 28, 1854. He was the son of the learned rabbi Jacob Banét, an eminent member of the rabbinate of Alt-Ofen, and early distinguished himself by his penetrating knowledge of Talmudic literature, to the study of which he devoted all his leisure time, even after he had established himself in the wool business and married. Forced by the loss of his property to seek an office, he officiated as rabbi first at Széchény, then at Páks, and finally at Neutra, where he died at the age of 82.

Baneth was highly successful in his rabbinical activity, gathering around him large numbers of devoted students, many of whom came from great distances, for his reputation had spread beyond the limits of his own country. In method he was opposed to the "pilpul," which was then flourishing in Hungary, his models being the great authors of the Middle Ages. He paid little attention to the works of later periods; applying his acumen to the investigation of abstruse questions, and never indulging in his lectures in hair-splitting casuistry or in witticisms. Questions were addressed to him from far and wide regarding difficult problems of the religious law, which he willingly answered. His responsa, had he preserved copies of them, would have filled several large volumes; but he left no notes of any description. The authors of important books considered it an honor to obtain from Baneth an approbation of their works; but it seems to have been his principle not to write any books himself. A commentary on Tosefta, which, according to the unconfirmed statement of an intimate friend, he wrote and kept secret, is said by the same authority to have been burned by him shortly before his death. Many anecdotes, shrewd sayings, and witticisms of his have been preserved.

His scrupulous conscientiousness, self-effacement, and piety earned for Baneth wide-spread esteem. Jews and Christians alike revered him as a saint. The legend that peasants had seen repeatedly a fiery column over his grave was believed by many, and is even credited to-day. In conformity with his will, Baneth was not buried in the place of honor assigned to rabbis, but in a location set apart for infants. His grave is surrounded by a railing, the gate of which is opened only for his descendants, and for visitors of signal piety. S.

E. BAN.

**BANETH, JERAHMEEL DOB (BERNHARD):** Hungarian rabbi; born 1815 at Széchény; died Oct. 21, 1871. The youngest son of Ezekiel Baneth, he was one of the most gifted pupils of his father, from whom he inherited, together with a

love for Talmudic studies, his amiable character. After attending for some time the lectures of R. Moses Sofer of Presburg, he married, Sept. 3, 1840, Golde, daughter of the merchant David Stössl of Liptó-Szent-Miklós. Settling in the latter place, he assiduously devoted himself to the study of the Talmud. His reputation for scholarship brought him a number of devoted pupils. In 1868 he accepted, without compensation, the office of rabbi of the Orthodox congregation of Liptó-Szent-Miklós, compelling through his uprightness, peaceable disposition, and piety the esteem of the opposing party. He left a manuscript volume of valuable notes on the whole Talmud. S.

E. BAN.

**BANISHMENT** (נִרְשָׁה, or הִרְיָה, "hiddiah," from נָרַח).—**Biblical Data:** In ancient Israel an exclusion, permanent or temporary, from the native land, as a divine punishment. Adam's Banishment from the garden of Eden (Gen. iii. 24) and Cain's from the presence of the Lord (Gen. iv. 16) were of this nature. It occurred in ancient times only as a divine, not as a human, punishment. "Karet" (excision of the soul from among the people; Gen. xvii. 14; Ex. xii. 19) was a divine punishment only and may perhaps have implied EXCOMMUNICATION, certainly not expulsion from the country. To be driven away from the land, the inheritance of יְהוָה, seemed actually tantamount to saying, "Go, serve other gods" (I Sam. xxvi. 19; compare Deut. xxviii. 64). The flight of Absalom was regarded in this light, as "a destruction from the inheritance of the Lord" (II Sam. xiv. 16), unless David would permit his return to the land. Similarly, Amos speaks in the name of God to the sin-laden people: "Thou shalt die in a polluted land: and Israel shall surely go into captivity forth of his land" (Amos vii. 17). The same view is expressed by Hosea ix. 3: "They shall not dwell in the Lord's land, but Ephraim shall return to Egypt and they shall eat unclean things in Assyria"; and by Ezek. iv. 13: "Even thus shall the children of Israel eat their defiled bread among the Gentiles, whither I will drive them"—the reason being that, owing to the cessation of the sacrificial worship in the sanctuary, the relation to the God dwelling there was regarded as broken. Only the assurance that "when they are in the land of their enemies, the Lord will not cast them away nor break His covenant with them" (Lev. xxvi. 44), but "gather them and bring them again to the land of their fathers" (Deut. xxx. 4, 5), lent to Banishment the character of a temporary punishment, of a trial and test of faith; and the prayers offered on foreign soil were heard because they were directed toward the sacred dwelling-place, in order to meet with favor from the Lord in heaven (I Kings viii. 46-49; Dan. vi. 11). J. JR.

K.

—**In Rabbinical Literature:** With reference to Hosea vi. 7 (Hebr.), "They, like Adam, have transgressed the covenant," the Banishment of Israel from the Holy Land is compared with the Banishment of Adam from paradise after his transgression, both being, as it were, a divorce subsequent to faithlessness in the conjugal union (Gen. R. xix.). Ban-

ishment ("galut") is the name given in rabbinical law to the fleeing of the manslayer, in case of an unintentional murder, to one of the cities of refuge (Sifre. Num. 60; Mak. ii.-6). "Banishment as a divine punishment comes upon men on account of idolatry, incest, murder, and neglect of the year of release" (Ab. v. 9 based on Lev. xxvi. 30-34, xviii. 24-28). The Banishment (galut) spoken of by Abtalion (Ptolion) in Ab. i. 11 as befalling the wise is an allusion to political events of the time. The Pharisees during the reign of Queen Salome Alexandra exerted "the power and authority of banishing and of bringing back [*διδόκειν τε καὶ κατὰγειν*] whomsoever they chose," says Josephus ("B. J." i. 5, § 2).

Emigration from the Holy Land, if a voluntary exile, is regarded a great sin by the Rabbis (Ket. 110b *et seq.*; B. B. 91a; Maimonides, "Yad," Melakim, v. 9-12). See EXILE.

J. SR. K.

**BANK, EMANUEL:** Russian lawyer; born at Luknik, government of Kovno, 1840; died at St. Maurice, Switzerland, July 29, 1891. He was the son of Baruch (Boris) Bank; but, his parents being in poor circumstances, he was brought up by his aunt, Soloveitchik, in company with her son, Emanuel, who later became famous in Odessa. On leaving "heder" he attended the school for noblemen at Ponevich, and later obtained a gold medal at the gymnasium of Kovno. In 1860 Bank entered the University of St. Petersburg, where, under the tutelage of an uncle, B. Rosen, who had attained the rank of privy councilor in the ministry of marine, he was introduced into influential circles. But the disturbances fomented by the university students, and the consequent closing of the lecture-rooms, compelled him to go to Moscow to continue his studies. In May, 1864, he entered the service of the minister of justice, and, after one year, was honored by an expression of imperial satisfaction for his having unraveled the intricacies in the accounts of the Black Sea division of the fleet, which had been in a confused state for ten years.

In 1866 Bank was admitted to practise in the fourth section of the Senate Court of Appeals at St. Petersburg. There he was brought under the supervision of Valerian Polovtsov, who became president of the great railroad association, and of Ratkov-Rozhnov, afterward mayor of the city. For his début Bank committed to memory a mass of material for a report in a very complicated case, and astonished his hearers by the accuracy of his memory and the clearness of his presentation of the most involved details.

Bank was twice appointed as president of the Tribunal of Commerce; but Count Pahlen intimated to him that as a Jew he could not be allowed to rise higher than general secretary of the Senate, which post he had occupied since 1868. He was admitted to the bar in 1870, and later elected to the municipal council of St. Petersburg; ultimately coming to be regarded as its special jurist, and representing it two successive years in the provincial assembly. Mayor Likhatchov, also a jurist, joined cordially in the appreciation expressed for Bank by his colleagues of the city hall; and Koni, the Rus-

sian Cicero, was wont to describe the debates between Bank and Passover, during the lawsuit of the founders of the "Great Company," as the most brilliant oratorical tournament he had ever witnessed.

Bank's legal and social successes never caused him to forget his coreligionists; and as soon as he was able to champion the cause of the Jews, he immersed himself in the affairs of the community and bore his part in all undertakings for the amelioration of its wretched condition. He took part in the deputation presented by Baron Günzburg to Czar Alexander III., after the horrible crime of March 1-13, 1881, assuring him of the loyalty of the Jews. From 1875 until his death Bank was a constant member of the committee of the Society for the Propagation of Education Among Russian Jews. His death occurred suddenly, while he was in Switzerland, seeking relaxation from the fatigues of office and from the rigor of the St. Petersburg climate.

Bank married the sister of Dr. Levinson-Lessing. Although able to install his nephews in the profession he had so successfully followed, the unjust laws of his country closed the bar to Bank's children on account of their Jewish faith. No printed or manuscript record remains of his numerous orations, beyond two or three expositions of important civil suits. In his youth he translated into Russian an English grammar by Nurok, and performed other literary work for the publisher J. Bakst.

I. BR.

**BANKING:** Speaking strictly, Banking means the taking of money on deposit (banks of deposit), and loaning it out on interest (banks of issue). In this sense Banking is comparatively recent; only a few banks of deposit existing in the Middle Ages, in Italy (Florence, Genoa, Lucca), while the earliest banks of issue of consequence were those of Amsterdam and Hamburg at the beginning of the seventeenth century. The financial activity of the Jews in the Middle Ages is generally called Banking; but this is erroneous, as they did not receive money of others on deposit, which is an essential element of Banking. Their operations were more of the nature of finance banks—that is, loan corporations—and were conducted under special economic conditions and relations to the state (for further particulars see also the article USURY).

All the great Jewish financiers of the Middle Ages, such as Aaron of Lincoln and Aaron of York in England, Jahudan Cavalleria and Benveniste da Porta in Aragon, Esmel de Ablitas in Navarre, and

Nathan Official in France, were associated with the royal treasuries of their respective countries, and in every instance their property fell into

**Medieval Finance.** the hands of the crown; so that their banking operations were in the nature of indirect taxation. Details are not sufficiently clear to make a general statement. In several cases, however, the capital utilized by these financiers probably belonged in some measure to other Jews; so that their operations were really in the form of banking corporations, though the conditions were so dissimilar from those of modern Banking that it would be misleading to treat them as of the same order. In more modern times the financial operations of Jews have been more of the order of finance loan corporations than of banks of deposit and issue; but as a large part of the business of modern Banking consists of similar loan operations, there is less impropriety in using the word for the modern form of Jewish financial transactions (see also FINANCE, STOCK EXCHANGE).

With the spread of the Maranos throughout the world-empire of Spain and Portugal (which countries were united 1580-1640), Jewish commerce entered a new phase, which is represented by the career of Don Joseph Nasi, who began his life as a banker in the firm of Mendes at Antwerp, the center of Spanish commerce. The Maranos became large factors or merchants, and, owing to the unwise economic policy of the Spanish monarch, were enabled to accumulate large capital from the profits of importation into Europe of the raw products of the East and West Indies. The firm of Gradis at Bordeaux, a branch of the Mendes family, established relations with Amsterdam as well as with the New World; so that ultimately they became the chief exporters from France to Canada (9,000,000 francs during the Seven Years' war), besides maintaining relations with the Maranos in Spain itself (Jacobs, "Sources," No. 13, p. 5; Grätz, in "Monatsschrift," new series, vii.-viii.). But among the chattels imported by such merchants was bullion; and thus their operations as merchants led to their activity as bankers. Ferdinand de Carvajal is

**Source of Jewish Fortunes.** thus reported to have brought into England no less than £100,000 per annum ("Trans. Jewish Soc. England," ii. 18). During the latter part of the seventeenth century and the early part of the eighteenth, a number of Marano merchants are found acting as loan agents for European monarchs. Thus Isaac Suasso, Baron Auvernes de Gras, is said to have advanced 2,000,000 florins to William of Orange for the invasion of England. With the great movements of Continental armies in connection with the wars of Louis XIV. large fortunes were gained by the Jews as commissaries; and these were then loaned out in banking operations. Thus, on the one side, Marlborough's troops were supplied by Sir Solomon Medina ("Dict. National Biography," x. 336) and Joseph Corticos; while Jacob Worms performed a similar office for the opposing army of Louis XIV. Worms afterward settled in Paris as a banker (Kahn, "Histoire des Juifs à Paris dans la XVIII<sup>e</sup> Siècle," p. 39).

Meanwhile in Hamburg a bank had been opened in

imitation of the Amsterdam bank; this still exists under the name of the "Hamburger Bank." Among the chief founders of the new venture was a Marano named Diego Teixeira de Mattos; and of the forty original members of the bank twelve were Jews (Grätz, "Gesch. der Juden," x. 17, note). Later on, in connection with the Hamburg bank were the two ABENSURS, financial representatives of the king of Poland. They represent another source from which

**Hamburg and Amsterdam.** Jewish capital was drawn; the position of the Jews as "factors" to the Polish nobility in some degree resembling the standing and functions of the COURT JEWS who slowly collected

around the smaller German courts and who managed their finance much in the way modern banks do in the case of court estates. Among these may be mentioned Michael of Berlin, court Jew to Joachim II. of Brandenburg (Grätz, *ib.* ix. 305, 314); Samson Wertheimer at Vienna, and Bassevi von Treuenberg at Prague (the last two connected with the imperial finances of the Hapsburgs). In the middle of the eighteenth century the Pintos, Delmontes, Bueno de Mesquita, and Francis Mels of Amsterdam were the leading financiers of northern Europe; while in London, which, owing to the relations of William III. with Holland, was financially dependent on Amsterdam, Mendes da Costa, Manasseh Lopez, and Baron d'Aguilar held prominent positions. The very first work on the operations of the Amsterdam Exchange was written by a Spanish Jew named Joseph de la VEGA.

When French influence became prominent in Holland in 1803, the financial operations of the powers opposing Napoleon were transferred to Frankfurt-on-the-Main (Ehrenberg, "Das Zeitalter der Fugger," ii. 318), and the financial control of the anti-Napoleonic League fell into the hands of Mayer Amschel Rothschild, court Jew of William I., elector of Hesse-Cassel. His father, Frederick II., had died in 1785, leaving about £8,400,000, derived chiefly from the hire of soldiers to the British government to suppress the rebellion in America. As the fortune of the Rothschilds was ultimately dependent on the manipulation of this, it is curious to reflect that their financial predominance in the nineteenth century is in the last resort due to America. It is impossible

in this place to pursue the financial career of the Rothschilds, which is the key to the history of Jewish Banking in the nineteenth century; but it may be remarked that the London house between 1818 and 1832 undertook loans amounting to £21,800,000, and that as early as 1824 the Paris house had risen to the position of financial magnates, undertaking in conjunction with Lafitte and Baring the French loan of 1824 (Nervo, "Les Finances Françaises sous la Restauration," ii. 294). (For the ramifications built up by Mayer Amschel Rothschild throughout western Europe, see ROTHSCHILD.) The plan adopted by him of establishing branches in the more important European capitals, over which he placed his sons, was followed by other Jewish banking-houses.

With the reconstruction of Europe, after the fall of Napoleon in 1815, a new financial era began in

which the capital hitherto diverted to warlike operations was transferred to industrial enterprise, owing to the introduction of steam. This was mainly operated from London with English capital; and the Jews did only a small portion of the business connected with the introduction of machinery and railroads into European commerce. But the international connections of great Jewish families, such as the Rothschilds, Sterns, Péreires, Hirschs, and Bishoffsheims caused them to be of considerable importance in the issuing of state loans between 1820 and 1860. Up to 1848 the practise of apportioning loans to large banking firms, who then distributed them to the public in smaller lots, was carried out; and in this way the Rothschilds especially had a quasi-monopoly of the loan market. In the fifties, however, their monopoly of international finance was broken down by the formation throughout western Europe of credit banks, many of them founded by associations of Jewish bankers of smaller caliber than the great financial families. Thus the *Crédit Mobilier* of 1852 was founded by the Péreires, Solomon Heine, and D'Eichthal (M. Aycard, "*Histoire du Crédit Mobilier*," 1867). The practise, after the year 1848, of opening the subscription to the loans to the public in general also tended to break down the monopoly of the great Jewish financial firms.

It may be worth while to remark here that the idea promoted generally by anti-Semitic writers that the resources of all Jewish capitalists formed one fund is ludicrously at variance with the facts of the case. Heine, in a correspondence to the Augsburg "*Allgemeine Zeitung*," dated May 27, 1840, and reprinted in "*Französische Zustände*," refers to Rothschild and Fould as two "rabbits of finance," opposed just as strenuously to each other as were once "Rabbi Shammai and Rabbi Hillel in the old city of Babylon" (*sic*). Jewish firms competed with one another with as much eagerness as they did against non-Jewish firms. The Péreires, for example, obtained a concession for South Russian railways against the Rothschilds in 1856 (Reeves, "*The Rothschilds*," p. 334). With the introduction of railroads on the Continent many of the firms previously mentioned were closely connected, the Péreires with those of northern France, the Bishoffsheims with those of Belgium, and Baron de Hirsch with those of Turkey. Many Jewish firms and credit banks, especially the house of Bleichroeder, were concerned with the growth of railways in Germany and Austria. It was Baron Bleichroeder who operated the transfers of the milliards from France to Germany after the Franco-Prussian war. But with the nationalization of the German railroads the field of operation of the Jewish banking-houses in Germany was transferred from railroads to other industries which they have largely helped to create.

Throughout the latter half of the nineteenth century, however, others had been learning the secret of international connections, and by 1900 the monopoly of international finance had largely passed from Jewish hands. An organized attempt to precipitate this was made about 1885 by a number of Catholic financiers in France, who constituted the Union

Générale to overcome the financial predominance of the Jewish capitalists (Rothschilds, Pereires, etc.); but it proved a disastrous failure, and much of French anti-Semitism has been traced to this cause. Similarly, it is stated that the financial crisis of Germany and Austria in 1873, in which the inflation due to the introduction of the milliards came to an end, was also a source of anti-Semitism, because the shrewdness of the Jewish bankers had foreseen the crash, and they were enabled to evade it.

After the Crimean war, Jews contributed largely to the development of Banking in Russia; Barons Joseph and Horace Günzburg and Leon Rosenthal, of St. Petersburg, organized many commercial banks, and placed government loans in the German and French money-markets.

The Kronenbergs and Ivan Blioch, of Warsaw, as well as Efrussi and Rafalovich, of Odessa, should be mentioned in connection with Russian banking.

Attention may be drawn to one side of Italian Banking with which the name of a Jew is prominently connected, though he himself is not a banker. The finance minister Luigi Luzzati introduced into Italy about 1864 the Schultze-Delitzsch method of agricultural cooperative banks. This system has been very effective in helping the Italians to tide over times of distress, and has quite revolutionized the condition of Italian agriculture.

In the United States there has never been any marked influence of capital controlled by Jews either on the stock exchanges or in the great industrial connections, the opportunities for international connections being only slight.

But in the two great wars Jewish financiers played a considerable rôle, owing doubtless to their European connections: Haym Solomon in the Revolutionary war (see "*Transactions of the Jewish Historical Society of America*," *passim*), while Seligman Bros. and Speyer & Co. financed the North, and Messrs. Erlanger the South (J. C. Schwab, "*Confederate States of America*," p. 102, New York, 1901), in the great Civil war. More recently, in the great development of railway finance, the firm of Kuhn, Loeb & Co. has taken a prominent position.

Altogether, the influence of Jews on Banking has been only short-lived, and was due to the preliminary advantage given to them by their international position, which is nowadays shared by them with others. It is a significant fact that at the beginning of the twentieth century the typical Jewish banking-house of Rothschilds gave up its original foundation at Frankfurt.

**BANKRUPTCY:** In modern law, the proceeding taken by the courts of justice with regard to debtors unable to pay their debts in full, when all the creditors become parties to the proceeding. The object of bankruptcy laws is twofold: first, equality among creditors; second, the discharge of the debtor, so that his future earnings may be free from levy for his old debts. There is no trace in the rabbinical jurisprudence of anything like a discharge in

Bankruptcy; on the contrary, Hillel already found means to abrogate the effect of the Biblical year of release, the simplest of all laws for the discharge of poor debtors (see PROSBUL). As to equality among creditors, the Talmud tends very much the other way; for every "sheṭar" or sealed bond (obligation attested by two witnesses) operated from its date as a mortgage on all of the debtor's land; only bonds of the same date stood on an equal footing; and in many places the custom was to mark the hour, and thus to give preference even between bonds of the same date. Among debts by simple contracts the one first ripening into judgment would take priority. In the later Middle Ages, when the Jews became landless, and when their little wealth was invested in jewels, in merchandise and shipping, in silver and gold, or in loans to the Gentiles, the priority among bondholders was extended to such personal property as might be in hand at the time of the insolvency (as to nature and effect of bonds, see DEEDS).

Cases would, however, occur in which execution was levied on behalf of several creditors of the same rank, and in which the law had to contrive some plan of distribution. Here the method of the Rabbis differs widely from that of modern courts. The division of the fund is not made in proportion to the demands, but according to the number of creditors; none of course to be paid more than the full amount of his claim. If there are five creditors, and the smallest claim is less than one-fifth of the fund, it is paid in full; the rest of the fund being divided, on the same principle, among the other four creditors. The example given in the Hoshen Mishpat puts it thus: Suppose the fund be 300 dinars, and there are three creditors with claims for 300, 200, and 100 dinars respectively, each claimant receives one-third of the fund; *i.e.*, 100 dinars. Again, suppose the fund be more than 500 and less than 600 dinars, each claimant receives an amount equal to the smallest claim, *i.e.*, 100 dinars, and, of the remainder, each of the two remaining creditors receives an amount equal to the smallest claim, *i.e.*, another 100 dinars; and the rest goes to the third claimant (Shulhan 'Aruk, Hoshen Mishpat, iv. 10).

Another case is mentioned: Where two Jews hold bonds against a Gentile whose property is proved insufficient to pay both in full, and the proceeds come to a Jewish tribunal for distribution, the interest ranks with the principal, and an objection from the holder of the junior bond, because the interest arose after the date of the elder bond, will not be considered (*ib.* 15).

These views are sustained by the corresponding passages in Maimonides, "Yad," Malveh xx., and in the Tur, Hoshen Mishpat, civ., and "Bet Yosef," *ad loc.*, and run back—that about the manner of distribution among creditors, to Ket. x. 4, 93a; and that about interest, to a principle set forth in Ket. xii. 1. R. Moses Isserles (to Hoshen Mishpat, lxxxvi. 1), however, thinks that the junior creditor may redeem by paying interest up to the day.

L. N. D.

**BANNAAH, BANNAY, BANNAYAH** (not Benajah): A Palestinian semi-tanna (see BAR

KAPPARA) at the beginning of the third century. Not much of a halakic nature from him has been preserved; but he is distinguished as one of the great haggadists of his time. Probably he also enjoyed the reputation of a saint, as is shown by the marvels related of him in later legends. Regarding Bannaah's relation to Rabbi, the collector of the Mishnah, the following utterance is characteristic: "Man should ever penetrate deep into the study of the Mishnah; for if he knock it will be opened to him, be it the Talmud [= Halakah] or the Haggadah" (Pesik. xxvii. 176a; compare Matt. vii. 7: "Knock, and it shall be opened unto you"). Bannaah therefore belongs to the few of the semi-tannaim who fully acknowledged the merit of Rabbi's collection of the Mishnah, regarding it as a progressive step in the development of the tannaitic literature (compare Yer. Hor. iii. 48c). To the Mishnah of Rabbi in particular, and to the Halakah in general, might be applied Bannaah's remark on Joshua, that he acted "in accordance with the spirit of the Law as revealed by God to Moses, also in instances when not directly instructed by the latter" (Yer. Peah i. 15b).

Bannaah's view on the origin of the Pentateuch is remarkable as almost bordering on Biblical criticism. "The Torah," he says, "was given in rolls" (Git. 60a), meaning to say that the Pentateuch was promulgated in sections, which were afterward joined into a unity. In haggadic exegesis Bannaah frequently applies symbolism. For instance, he thinks that God demanded gold for the Tabernacle, in order that Israel might in this way do penance for the sin committed in worshiping the golden calf (Sifre, Deut. i.). The following words of Bannaah are also noteworthy: "Saul began to subtilize over the order which he had received to exterminate Amalek. 'If the men have sinned,' said he, 'in what manner have the women, the children, or the cattle?' Whereupon there came a voice from heaven that cried, 'Be not righteous overmuch' (Eccl. vii. 16); that is, 'Be not more just than thy Creator'" (Eccl. R. vii. 16; and compare Jerome's commentary, *ad loc.*).

Neither the foregoing nor any other passage of the Haggadah justifies the rôle of a saint ascribed to Bannaah in the Babylonian Talmud; the following can therefore be accepted only as a legend:

"Bannaah," relates the Babylonian Talmud, "was in the habit of marking tombs, in order that persons might guard themselves against ritual impurity, and, when engaged in this manner, chanced one day to come upon the cave of Abraham. At the entrance he found Eliezer, Abraham's faithful servant, and, being announced by him, thereupon entered. When Bannaah, however, endeavored to view the grave of Adam, which was situated in the same cave [see ADAM IN RABBINICAL LITERATURE], a voice came from heaven, saying: 'Thou mayest look upon the image of My image [Jacob], but not upon My direct image [Adam].' But Bannaah had already seen the soles of Adam's feet, which were like unto two suns" (B. B. 58a).

In another legend the practical wisdom of Bannaah is extolled. On one occasion, a man had ordered that only one of his (supposed) ten sons was to be his heir, knowing that only one was his true son. Naturally all claimed this distinction; whereupon Bannaah told them to visit the grave of their father, and to strike upon it until he should awaken and tell

them which was the true heir. To this proposition all assented except the real son, whose filial piety rebelled against so unnatural an action; whereupon Bannaah decided in favor of the latter. In consequence of this judgment, Bannaah was brought into conflict with the authorities upon the charge of deciding legal cases without witnesses or convincing proofs. He was imprisoned; but his astuteness in explaining a puzzle not only spared him further punishment, but led to his being installed as judge over the people. By his advice, certain legal inscriptions, which had been cut into the gateway of the city, were changed (B. B. *l.c.*). Bannaah counted among his pupils also Johanan b. Nappaha.

**BIBLIOGRAPHY:** Bacher, *Ag. Tan.* ii. 539-543; Z. Frankel, *Mebo ha-Yerushalmi*, 69a; Weiss, *Dor Dor ve-Dorshau*, iii. 510. A Midrash fragment on the Redemption, with the title *Derashot R. Bannaah*, appeared in Hayyim M. Horowitz's edition of the *Tanna debe Eliyahu Zutta*, pp. 20-26, Frankfurt-on-the-Main, 1882.

L. G.

**BANNAIM** or **BANAIM** (בנאים): A supposed sect of an Essene order, among Palestinian Jews of the second century. The only passage in which the name occurs is Mikwaot ix. 6 (Tosef. *ib.* vi. 14 [vii. 1]), where the following Halakah is recorded by a tanna of the middle of the second century, concerning the question of dipping the clothing for Levitical purification: "Garments belonging to the Bannaim may not have a mud-stain even upon one side, because these people are very particular concerning the cleanliness of their clothing, and any such spot would prevent the purifying water from actually penetrating the garment as it is usually worn; but with a 'bor' [explained as an unlearned and uncultured man], it matters not if his clothing contain a mud-spot at the time of dipping, for such a one is not so particular about cleanliness."

The identity of these Bannaim was lost to the amoraim of a century later. Hence the term was explained as "scholars who occupy themselves with the study of the world's construction"; so that "Bannaim" would mean "building-masters" or "building-students," from "banah" (to build) (Shab. 114a). Similarly to this explanation, Frankel (see below) understood the Bannaim to be an Essene order who were employed with ax and shovel (compare Josephus, "B. J." ii. 8, § 9); while other scholars, such as Sachs and Derenbourg ("Essai sur l'Histoire de la Géographie de la Palestine," p. 166), agree in the main with Frankel, but explain "Bannaim" to mean "those who bathe," from the Judæo-Aramean word "banna'a," equivalent to the Greek βαλανειον (bath). Thus the name of this order would then be identical in meaning with the "Tobele Shaharit" (Hemerobaptists), as the Essenes are sometimes called. Nevertheless it is highly probable that the word "Bannaim" in the above-mentioned Mishnah means simply "bathers," without reference to any particular sect, but in connection with the clothing used at the bath. This is, according to Rashi, the conception of the Mishnah held by the amora Simeon b. Lakish, who explains בנאים של בלים האולרין (clothes used in the bath or immediately afterward) (Shab. *l.c.*; but Jastrow, "Dict.," and Krauss, "Lehnwörter," assign a quite different meaning to אולרין).

The misunderstanding of this Mishnah originates in taking "Bannaim" as an antithesis to "bor," and this latter as meaning "an uncultured person." But "bor" is never found as the antithesis of Essene: a proper opposition would be "haber" and "Am ha-Arez." A comparison of the passage with its parallel in the Tosefta, *l.c.*, shows that "bor" means nothing more than a "well," which explanation casts a quite different light upon the Mishnah and its exposition. The Tosefta reads: "When mire from a roadside strip [יְהוּרֵת הַרְרִים; see Mishnah, *l.c.* 2] has fallen upon clothing, there are three varying opinions whether such mud prevents Levitical purification. One holds it to be a preventive only when it goes through both sides of the garment; a second, that it prevents purification even though it adhere only to one side; while an intermediate opinion claims that if the garment be one belonging to the Bannaim, the second opinion must be upheld, and if not, then the first." So far the Mishnah, to which the Tosefta adds, "but if the mire comes from a pit ["bor"]; the Mishnah, *l.c.* 2, calls it מִיט הַבּוֹרֹת, the solution depends upon whether the pit is large and containing much mud, or small" (the text is corrupt in the usual editions, but may be found correct in ed. Zuckermann and in Hai Gaon's commentary on the Mishnah, *l.c.*). According to this view, the Mishnah says nothing about the clothing of a bor, but speaks of the mire from a pit (bor), which is declared a preventive of Levitical purification, even though it be upon only one side of the garment. This explanation of the Mishnah, current in the gaonic period, was revived by Elijah Wilna in modern times (see his gloss on the passage); and it takes the foundation from under the interpretation of "Bannaim" as a class of persons opposed to the bor. The Mishnah simply says that bathing-clothes must be scrupulously clean, and that the smallest stain prevents their Levitical purification. Compare BANUS, BANNAAH, ESSENES.

**BIBLIOGRAPHY:** Derenbourg, as above; Frankel, *Zeitschrift für die Religiösen Interessen*, iii. 455 (the word "Bannai" in Kelim xiv. 3, which he includes, can only mean "building-master" or "builder," as the context shows); Hamburger, *R. B. T.* ii. 84; Jastrow, *Dictionary*, s.v., who considers "Bannaim" a contraction of בְּנֵי נֵאִים ("one of becoming conduct, refined"); Levy, *Neuhebräisches und Chaldäisches Wörterbuch*, i. 241; Sachs, *Beiträge*, ii. 199.

L. G.

**BÁNÓCZI, JOSEPH:** Hungarian scholar; born at Szt. Gál, county of Veszprém, Hungary, July 4, 1849. He was educated at the schools of his native town, and afterward at the universities of Budapest, Vienna, Berlin, Göttingen, and Leipsic, and then went to Paris and London to finish his studies. Bánóczi became in 1878 privat-docent of philosophy at the University of Budapest, in 1879 member of the Hungarian Academy of Sciences, and in 1892 member of the Landesschulrath (royal board of education).

Bánóczi has also occupied various positions in the Jewish community. From 1877 to 1893 he was professor at the Budapest Jewish Theological Seminary, and became in 1887 principal of the Budapest normal school for the education of teachers. In 1896 he was secretary of the Hungarian Society for the Promotion of Jewish Literature, and in 1897 member of the Delegation of Hungarian Jews.

At the insistence of the Bucharest rabbi, Dr. Beck

Bánóczy, together with Prof. W. Bacher, took the necessary steps to save from certain ruin the congregation and schools of the sect of Sabbatarians in Transylvania who in 1868 became converted to Judaism.

Bánóczy has written the following works: (1) "Kant's Lehre von Raum und Zeit" (1875); (2) translation of G. H. Lewes' "History of Philosophy" into Hungarian, 3 vols., 1876-78; (3) "Révai Miklós Elete és Munkái," crowned by the Hungarian Royal Academy of Sciences in 1879; (4) "Magyar Romanticismus"; (5) translation of some of Schopenhauer's works into Hungarian, 1882; 2d ed., 1892; (6) "Emlékezés Greguss Agostról," 1889; (7) translation of Kant's "Kritik der Reinen Vernunft" into Hungarian, jointly with Professor Alexander, 1891; (8) translation of Burckhard's "Cultur der Renaissance in Italien" into Hungarian, 2 vols., 1895-96.

Bánóczy, together with Professor Alexander, edits the "Filozofiai Járók Tára"; he has also edited Erdélyi's philosophical writings (1885), and the works of Kisfaludy Károly, 6 vols., 1893.

Bánóczy's contributions to Jewish literature are: (1) "A History of the First Decade of the Budapest Jewish Theological Seminary" (Hungarian and German), 1888; (2) he edited, jointly with W. Bacher, the "Hungaro-Jewish Review" ("Magyar Zsidó Szemle"), 7 vols., 1884-90; (3) he edited, also with Bacher, "Eokönyv," the year-book of the Hungarian Society for the Promotion of Jewish Literature, 3 vols., 1897-99.

Bánóczy is a contributor to the "Philosophische Monatshefte" and many Hungarian literary magazines; and he has published some very valuable papers in the programs of the Normal School for Teachers.

**BANQUETS** (Hebrew, "mishteh," from "shatah" = drinking-feast; Talmudical, "se'udah," from "sa'ad" = sustenance): Festive meals on occasions of the celebration of domestic, communal, and religious joy, and on welcoming as well as on parting from friends. Social in character, they originated, as is now generally assumed, in sacrificial feasts.

As W. Robertson Smith tersely puts it: "A sacrifice was a public ceremony of a township; the law of the feast was open-handed hospitality; no sacrifice was complete without guests, and portions were freely distributed to rich and poor within the circle of a man's acquaintance; universal hilarity prevailed" ("Religion of the Semites," 1889, pp. 236-258, with special reference to I Sam. ix. 13, xx. 6; II Sam. vi. 19; Neh. viii. 10). Participation in sacrificial meals was equivalent to covenanting with the Deity; hence the prohibition not "to eat of the sacrifice" of the heathen (Ex. xxxiv. 15; Smith, *l.c.* pp. 252-300; Trumbull, "The Blood Covenant," 1885, pp. 268 *et seq.*).

In Biblical times the religious nature of these meals predominated, whether in the harvest

**In Biblical Times.** feast (Deut. xvi. 10, 14; xii. 7, 12, 18; Judges ix. 27), or in the covenant feasts at the union or parting of friends (Gen. xxvi. 30, xxxi. 54; Ex. xxiv.

5), to which category belongs also the wedding-feast (Gen. xxiv. 54, xxix. 22; Judges xiv. 10) or

the thanksgiving feasts (Job i. 4; Ps. xxii. 26, 27; Esth. viii. 17, ix. 22) or the feast of sheep-shearing (I Sam. xxv. 36; II Sam. xiii. 23), and probably also the feast of house dedication, according to Prov. ix. 1-4. The weaning of a child, usually after its second year, was an occasion of feasting (Gen. xxi. 8; see Knobel-Dillmann on the passage). Birthday feasts are mentioned, but only of non-Jewish kings (Gen. xl. 20; II Macc. vi. 7; that of Herod, in Matt. xiv. 6, may have been on the day of his accession to the throne, as seems to be the case with Esth. i. 3, 4, and Dan. v. 1). The sacrificial feasts, however, in the course of time, to the chagrin of the Prophets, had become carousals void of all religious spirit. "The harp and the viol, the taboret and pipe, and wine are in their feasts; but they regard not the work of the Lord, neither consider the operation of his hands" (Isa. v. 11, 12; compare xxviii. 7, 8, and Amos vi. 5, 6).

The Talmud discriminates between religious Banquets ("se'udah shel mizwah"), in which the student of the Law should participate, and Banquets of a non-religious, voluntary character ("se'udah shel reshut"), in which the student of the Law should not participate (Pes. 49a). In the former are included:

**In Post-Biblical Times.** 1. **The Betrothal and the Wedding-Feast** (*l.c.*): The latter, called also "hillula" (feast of joyful song,

Ket. 8a; Ber. 31a), lasted seven days (see Judges xiv. 17; in Tobit viii. 19, twice seven days), a three days' preparation being deemed necessary for the banquet (Ket. 2a, 7b).

2. **The Circumcision Feast** (Ket. 8a): The father of Elisha ben Abuyah invited all the great and learned men of Jerusalem to the circumcision feast of his son (Yer. Hag. ii. 77b). The Midrash ascribes the celebration of this feast to Abraham, taking the word הנמל in Gen. xxi. 8, "Abraham made a great feast the same day that Isaac was weaned," as a NOTARIKON, הָרַג מַלְאָכִים, "on the eighth day when he circumcised Isaac" (Pirke R. El. xxix.; Midr. Teh. to Ps. cxii.; Lekah Tob to Gen.; Shab. 130a, Tos.). Josephus does not seem to know of the custom as yet, for he writes ("Contra Ap." ii. 26): "The law does not permit us to make festivals at the births of our children and thereby afford occasion for drinking to excess." This is an allusion to the Greek festival called "Onomathesia" (giving of name), and "Hebdomeneumenia" (feast of the week) (Hermann, "Lehrbuch der Gottesdienstlichen Alterthümer der Griechen," § 26, note 6), which occurs as "shabua' ha-Ben" in the Hadrianic time in the Talmud (Yer. Ket. i. 25c; B. B. 60b; Sanh. 32b), but has been identified with the circumcision feast (Löw, "Die Lebensalter," p. 89; Spitzer, "Das Mahl bei den Hebräern," p. 41, note 4).

3. **The Bar Mizwah Feast** (see BAR MIZWAH): According to some commentators, the passage in Gen. xxi. 8, quoted above, refers to the banquet given by Abraham on the day that Isaac was weaned from the "Yezer ha-Ra'" (the evil spirit), and became Bar Mizwah (Gen. R. 53).

4. **Feast of the Redemption of the First-Born Son**, see PIDYON HA-BEN. Some find this referred to under the name of "Yeshu'a ha-Ben"

(salvation of the son), mentioned in B. K. 80a (see Tos. and 'Aruk, *s.v.* **יָצָא**; Solomon ben Adret, Responsa, Nos. 200 and 758; Shulhan 'Aruk, Yoreh De'ah, 305, 10). The feast given on the night before circumcision, called the "Zakor"-meal, and the one given at the naming of the new-born daughter on the fourth Sabbath, called "Hollekreisch," are of late and foreign origin. They are not mentioned in the older codes, but Israel Isserlein refers to them in "Terumat ha-Deshen," p. 269, as does Mordecai Japhet in "Lebush," Yoreh De'ah, 265, 12.

**5. The Finishing of a Talmudical Treatise Called Siyyum:** This was also regarded as an occasion for feasting by students, sufficient even to permit them to eat meat when otherwise forbidden (Shulhan 'Aruk, Orah Hayyim, 1058, 1; Magen Abraham).

**6. The Sabbath and Holy-Day Meals:** These, which in later times assumed the character of simple family repasts permeated by the spirit of genuine domesticity, were originally Banquets of the Pharisaic brotherhood, enlivened by song and discussions, at which the men reclined; the women and children—if they took part at all—not being considered as among the number present. Wine at the opening and closing of the meal was deemed an indispensable feature; over it the benediction and a blessing of sanctification of the day were offered by the one who presided at the table and broke the bread. Perfumes and ointments as well as a variety of dishes were characteristics of these meals, to the preparation of which some would devote a whole week (Ber. viii. 5; Tos. Ber. vi. 5; Tos. Beza, ii. 13, 14; Beza 16a; Pes. R. xxiii.; Geiger, "Urschrift," p. 128; *idem*, "Jüd. Zeit." iv. 105 *et seq.*). These Banquets might not be held, however, at the time of the public discourses. "Two great families held such on Sabbath eve and Saturday noon at such an improper time, and were exterminated for such transgression" (Git. 38b). Three meals are prescribed for the Sabbath; one on the preceding evening; another at noon (to which some add a breakfast in the forenoon); and the third in the late afternoon (Shab. 117b *et seq.*). The Passover-eve meal also, although eminently a family feast, perhaps as early as Mishnaic times (Pes. x. 4), had originally the character of a banquet, at which the Pharisaic brothers sat together eating and drinking, singing hymns, and reciting or expounding chapters from Holy Scripture, as may be learned from the Pesah Haggadah and the New Testament story of the last supper (Matt. xxvi. and parallels). Especially were the poor invited as guests. When Tobit had a rich meal prepared for him for Pentecost, he sent out his son to invite any poor Israelite he could find to participate therein (Tobit ii. 1, 2). While the feasters often sat after Greek fashion with garlands on their heads (Isa. xxviii. 1; Wisdom ii. 7, 8; Josephus, "Ant." xix. 9, § 1), some deemed it especially obligatory to place wreaths on their heads at the celebration of the Feast of Tabernacles (Book of Jubilees, xvi. 24). New moons also were occasions of great festive meals for the ancient Pharisaic brotherhoods, as is learned from R. H. ii. 5, and Maseket Soferim, xix. 9; whereas the merry Purim Banquets, at which drinking was a prominent feature (Meg. 7b), appear to be older

II.—32

than the Book of Esther itself (see PURIM and the modern literature on Purim in Wildeboer's commentary on Esther; Marti, "Kurzer Hand-Commentar," xvii. 172-177).

**7. Feasts of Joy and Thanksgiving for Victories of the Jews:** Such a one is mentioned (III Macc. iii. 30-36) as having lasted, like Hanukkah (I Macc. iv. 59), eight days.

**8. Meals of Comfort, "Se'udat Habraah," Given to the Mourners** (II Sam. iii. 35; Jer. xvi. 7; Tobit iv. 17; Hosea ix. 4; Josephus, "B. J." ii. 1, § 1; *idem*, "Ant." xix. 9, § 1; Ket. 8b; M. K. 5b, 25a; Mas. Soferim, xix. 11): These, forming a totally different class, may have originally been farewell Banquets to the dead (see Spitzer, *l.c.* pp. 65 *et seq.*; Schwally, "Das Leben nach dem Tode," 1892, p. 23), which were changed into gifts to the mourners (Maimonides, "Yad," Abel, xiii.; Yoreh De'ah, 378). See MOURNING.

The various rules regarding the invitation and the seating of the guests, the mixing of the wine and the serving of the dishes, to be observed by the master of the banquet, called in Greek "*ἀρχιτεράκιλος*," by the cook, and the servant of the house ("sham-mash"), were no less strictly observed by the Jews than by the Greeks and Romans, as may be learned from Ber. vii.; Tosef., Ber. iv.-vii.; Derek 'Ereẓ Rabba and Zuṭṭa. For the Babylonian Jews, the Persians were guides and patterns (Ber. 61b). The wealthy Jews often followed the ex-

**Greek and Roman Influences.** ample of the Romans in indulging in sumptuous and boisterous Banquets such as are described in Philo, "De Vita Contemplativa," §§ 5-7, and Wisdom ii. 7 *et seq.* All the more do the Rabbis warn against luxurious meals (Pes. 49a), and insist that discussions of Scripture, sacred songs, and, above all, the presence of students of the Law should give each banquet a sacred character (Ab. iii. 3). "All tables are full of vomit and filthiness without Maḳom" (= the name of God) (Isa. xxviii. 8; see Taylor, "Sayings of the Jewish Fathers," who refers to Cor. x. 31; Ber. 64a; Sanh. 101a; compare Ber. 43b).

Portions from the Banquets were sent to the poor, "to them for whom nothing is prepared" (Neh. viii. 10), especially on Purim (Esth. ix. 19, 22). Greater than the Banquets given by King Solomon (B. M. vii. 1) were, according to B. M. 86b, those of Abraham, because his hospitality was the greater. Nehemiah also kept open house (Neh. v. 17, 18). The Hasidic Banquets described by Philo (*l.c.* §§ 8 *et seq.*) and Josephus ("B. J." ii. 8, § 5) gave rise to the idea of a great banquet of the righteous in the world to come, also called "se'udah" (Ab. iii. 25; compare Taylor, *l.c.*; Rev. xix. 9, "Se'udah shel Liviatan"; see LEVIATHAN and ESCHATOLOGY).

K.

**BANU AUS:** An Arab tribe that came to Medina together with the Banu Khazraj (about 300), and settled there among the Jewish inhabitants of the place. For some time they lived under Jewish protection and intermarried with them; but, getting

stronger, they gradually made themselves masters of the place, and oppressed the Jews. Eventually they invited Mohammed to live in Medina. This ended in the complete overthrow of the Jews, who were partly expelled and partly massacred.

G.

H. HIR.

**BANU BAHDAL:** A Jewish tribe in Medina which dwelt with the BANU KURAIZA. There is some uncertainty as to the correctness of the name, as the sources give also the names "Hadal" and "Handal."

G.

H. HIR.

**BANU KAINUKA'A:** A Jewish tribe in north Arabia, apparently the first Jews that settled at Medina, and the most powerful of all the Jewish tribes of the peninsula before Islam. They formed a gild of goldsmiths. They had also a market-place, known under the name "Market of the Banu Kainuka'a," which was the general market-place of the city before Mohammed laid out the great market-place. Besides this they possessed two strong castles in the north of Medina. After Mohammed had come to Medina, he endeavored to win all the Jews over to Islam. Failing in his efforts, he assumed a more threatening attitude and first declared war on the Banu Kainuka'a. They retired to their fortresses, but after a siege which lasted fifteen days, they surrendered. Mohammed put them in chains, and wished to have all the men executed. He was, however, persuaded to spare them on condition that they quitted the town, leaving their goods and chattels in the hands of the conquerors. Subsequently they settled in Adra'at in the north.

H. HIR.

**BANU KURAIZA:** One of the Jewish tribes in Medina that, like the Banu al-Nadir, seem to have consisted chiefly of descendants of Aaron. They inhabited the villages Mahzur, Bir Abba, and Buath on the eastern side of Medina; and also held fortified positions in the neighborhood. Toward the end of the fifth century many notable Jews, the majority of whom appear to have belonged to the Banu Kuraiza, were massacred in consequence of the treachery of one of the Arab chiefs. A Kuraizite woman, named Sarah, bewailed the disaster in a dirge, which is still extant.

The Banu Kuraiza were the last tribe to be attacked by Mohammed, and, as the power of the latter was on the increase, they had no allies. In order to have a pretext to fight them, Mohammed charged them with treason, and declared war against them. They retired to their castles, hoping for assistance from the heathen Arabs. The chief of the latter, Ka'ab ibn Asad, advised them to make a sortie on the night of Sabbath, but they refused. Some of them are said to have embraced Islam. Among these converts was also a woman who tried to convert her husband. He, however, rebuked her, and in a short poem, still extant, exhorted her to return to her old faith.

The Banu Kuraiza were eventually obliged to

surrender. Mohammed submitted the decision of their fate to one of his most fanatical followers, who ordered the men to be killed and the women and children to be kept prisoners. Seven hundred and fifty Kuraizites were executed, among whom were the Rabbi Hukaik of the Banu al-Nadir. The fate of those slain was bewailed in verse by the Jewish poet Jabal b. Jawwal. The captive children were converted to Islam, and one of the women, named Reihana, was married to Mohammed. For some time she remained a Jewess, but ultimately adopted her husband's faith. The booty was considerable, and the gain of the Moslems was all the greater, as many Israelites came to redeem the captive women.

H. HIR.

**BANU AL-NADIR:** A Jewish tribe in Medina. It appears to have been chiefly composed of priestly families, as this, together with the BANU KURAIZA, was styled "Alkahinan" (The Two Priests). Their habitations were situated in the northern environs of Medina, notably Bu'airah, al-Nawa'im, Muqainib, and the castles of Al-Buwailah, Baraj, Ghars, and Fadija. At the time of Mohammed the following persons were their leaders: Huyayy ibn Akhtab, his brothers Abu Jāsir and Juday, Sallam ibn Mishkam, and some others. The poet Ka'ab b. al-Ashraf, a member of this tribe, the son of an Arab father and a Jewish mother, was an enemy of Mohammed and composed poems hostile to his cause. Mohammed, therefore, wished to be rid of him, and accepted the services of an Arab who offered to assassinate him. The deed was done and approved of by Mohammed. The simile in the Koran (vii. 175), "His likeness is as the likeness of a dog" (*kalb*), etc., is probably an allusion to "Ka'ab." After his death Mohammed proceeded to attack the whole tribe. He besieged them and burnt their palm-trees, which was against the customs of war in Arabia. The Jews were obliged to surrender, but were permitted to depart. Their estates, goods, and chattels were confiscated, and they were only allowed to take one camel-load for each group of three persons. They left for the north, and founded new habitations partly in Khairbar and partly in Syria, near the refugees of the Banu Kainuka'a. The chief cause of their disaster was lack of unity.

**BANUS:** A teacher of Josephus ("Vita." § 2, Βάνος; in ed. Niese, Βάνος). He "lived in the desert, used no other clothing than grew upon trees, had no other food than what grew of its own accord, and bathed himself in cold water frequently, both by night and by day" (*ib.*) like the Essenes. Josephus stayed with him three years. Chajes ("Beiträge zur Nord-Semitischen Onomatologie," p. 13, Vienna, 1901) connects the name "Banus" with the Talmudic "Bannaah."

**BIBLIOGRAPHY:** Grätz, *Gesch. der Juden*, 4th ed., iii. 482.

S. KR.

**BAPTISM:** A religious ablution signifying purification or consecration. The natural method of cleansing the body by washing and bathing in water was always customary in Israel (see **ABLUTION**, **BATHING**). The washing of their clothes was an important means of sanctification enjoined on the Israelites before the Revelation on Mt. Sinai (Ex. xix. 10). The Rabbis connect with this the duty of bathing by complete immersion ("tebilah," Yeb. 46b; Mek., Bahodesh, iii.); and since sprinkling with blood was always accompanied by immersion, tradition connects with this immersion the blood lustration mentioned as having also taken place immediately before the Revelation (Ex. xxiv. 8), these three acts being the initiatory rites always performed upon proselytes, "to bring them under the wings of the Shekinah" (Yeb. *l.c.*).

With reference to Ezek. xxxvi. 25, "Then will I sprinkle clean water upon you, and ye shall be clean," R. Akiba, in the second century, made the utterance: "Blessed art thou, O Israel! Before whom dost thou cleanse thyself? and who cleanses thee? Thy Father in heaven!" (Yoma viii. 9). Accordingly, Baptism is not merely for the purpose of expiating a special transgression, as is the case chiefly in the violation of the so-called Levitical laws of purity; but it is to form a part of holy living and to prepare for the attainment of a closer communion with God. This thought is expressed in the well-known passage in Josephus in which he speaks of John the Baptist ("Ant." xviii. 5, § 2): "The washing would be acceptable to him, if they made use of it, not in order to the putting away of some sins, but for the purification of the body; supposing still that the soul was thoroughly purified beforehand by righteousness." John symbolized the call to repentance by Baptism in the Jordan (Matt. iii. 6 and parallel passages); and the same measure for attaining to holiness was employed by the Essenes, whose ways of life John also observed in all other respects. Josephus says of his instructor Banus, an Essene, that he "bathed himself in cold water frequently, both by night and by day" ("Vita," § 2), and that the same practise was observed by all the Essenes ("B. J." ii. 8, § 5).

The only conception of Baptism at variance with Jewish ideas is displayed in the declaration of John, that the one who would come after him would not baptize with water, but with the Holy Ghost (Mark i. 8; John i. 27). Yet a faint resemblance to the notion is displayed in the belief expressed in the Talmud that the Holy Spirit could be drawn upon as water is drawn from a well (based upon Isa. xii. 3; Yer. Suk. v. 1, 55a of Joshua b. Levi). And there is a somewhat Jewish tinge even to the prophecy of the evangelists Matthew (iii. 11) and Luke (iii. 16), who declare that Jesus will baptize with fire as well as with the Holy Ghost; for, according to **ABBAHU**, true Baptism is performed with fire (Sanh. 39a). Both the statement of Abbahu and of the Evangelists must of course be taken metaphorically. The expression that the person baptized is illuminated (*φωτισμός*, Justin, "Apologia," i. 65) has the same significance as is implied in telling a proselyte to Judaism, after his bath, that he now belongs to Israel, the people beloved of God (Yeb. 47a; Gerim i.).

According to rabbinical teachings, which dominated even during the existence of the Temple (Pes. viii. 8), Baptism, next to circumcision and sacrifice, was an absolutely necessary condition to be fulfilled by a proselyte to Judaism (Yeb. 46b, 47b; Ker. 9a; 'Ab. Zarah 57a; Shab. 135a; Yer. Kid. iii. 14, 64d). Circumcision, however, was much more important, and, like baptism, was called a "seal" (Schlatter, "Die Kirche Jerusalems," 1898, p. 70). But as circumcision was discarded by Christianity, and the sacrifices had ceased, Baptism remained the sole condition for initiation into religious life. The next ceremony, adopted shortly after the others, was the imposition of hands, which, it is known, was the usage of the Jews at the ordination of a rabbi. Anointing with oil, which at first also accompanied the act of Baptism, and was analogous to the anointment of priests among the Jews, was not a necessary condition.

The new significance that Christianity read into the word "Baptism," and the new purpose with which it executed the act of Baptism, as well as the conception of its magical effect, are all in the line of the natural development of Christianity. The original form of Baptism—frequent bathing in cold water—remained in use later among the sects that had a somewhat Jewish character, such as the Ebionites, Baptists, and Hemerobaptists (compare Ber. iii. 6); and at the present day the Sabians and Mandaeans deem frequent bathing a duty (compare Sibyllines, iv. 164, in which, even in Christian times, the heathens are invited to bathe in streams).

[Baptism was practised in ancient (Hasidic or Essene) Judaism, first as a means of penitence, as is learned from the story of Adam and Eve, who, in order to atone for their sin, stood up to the neck in the water, fasting and doing penance—Adam in the Jordan for forty days, Eve in the Tigris for thirty-seven days (Vita Adæ et Evæ, i. 5-8). According to Pirke R. El. xx., Adam stood for forty-nine days up to his neck in the River Gihon. Likewise is the passage, "They drew water and poured it out before the Lord and fasted on that day, and said, 'We have sinned against the Lord'" (I Sam. vii. 6), explained (see Targ. Yer. and Midrash Samuel, *eodem*; also Yer. Ta'anit ii. 7, 65d) as meaning that Israel poured out their hearts in repentance; using the water as a symbol according to Lam. ii. 19, "Pour out thine heart like water before the Lord." Of striking resemblance to the story in Matt. iii. 1-17 and in Luke iii. 3, 22, is the haggadic interpretation of Gen. i. 2 in Gen. R. ii. and Tan., Buber's Introduction, p. 153: "The spirit of God (hovering like a bird with outstretched wings), manifested in the spirit of the Messiah, will come [or "thé Holy One, blessed be He! will spread His wings and bestow His grace"] upon Israel," owing to Israel's repentance symbolized by the water in accordance with Lam. ii. 19.

To receive the spirit of God, or to be permitted to stand in the presence of God (His Shekinah), man must undergo Baptism (Tan., Mezora', 6, ed. Buber, p. 46), wherefore in the Messianic time God will Himself pour water of purification upon Israel in accordance with Ezek. xxxvi. 25 (Tan., Mezora', 9-17, 18, ed. Buber, pp. 43, 53). In order to pronounce the name of God in prayer in perfect purity,

the Essenes (צנתיים) underwent Baptism every morning (Tosef., Yad. ii. 20; Simon of Sens to Yad. iv. 9; and Ber. 22a; compare with Kid. 70a, "The Name must be guarded with purity"). Philo frequently refers to these acts of purification in preparation for the holy mysteries to be received by the initiated ("De Somniis," xiv.; "De Profugis," vii.; "Quis Rerum Divinarum Heres Sit?" xviii. xxiii.; "Quod Deus Sit Immutabilis," ii.; "De Posteritate Caini," xiv., xxviii.).

The Baptism of the proselyte has for its purpose his cleansing from the impurity of idolatry, and the restoration to the purity of a new-born man. This may be learned from the Talmud (Sotah 12b) in regard to Pharaoh's daughter, whose bathing in the Nile is explained by Simon b. Yohai to have been for that purpose. The bathing in the water is to constitute a rebirth, wherefore "the ger is like a child just born" (Yeb. 48b); and he must bathe "in the name of God"—"leshem shamayim"—that is, assume the yoke of God's kingdom imposed upon him by the one who leads him to Baptism ("matbil"), or else he is not admitted into Judaism (Gerim. vii. 8). For this very reason the Israelites before the acceptance of the Law had, according to Philo on the Decalogue ("De Decalogo," ii., xi.), as well as according to rabbinical tradition, to undergo the rite of baptismal purification (compare I Cor. x. 2, "They were baptized unto Moses [the Law] in the clouds and in the sea").

The real significance of the rite of Baptism can not be derived from the Levitical law; but it appears to have had its origin in Babylonian or ancient Semitic practise. As it was the special service administered by Elisha, as prophetic disciple to Elijah his master, to "pour out water upon his hands" (II Kings iii. 11), so did Elisha tell Naaman to bathe seven times in the Jordan, in order to recover from his leprosy (II Kings v. 10). The powers ascribed to the waters of the Jordan are expressly stated to be that they restore the unclean man to the original state of a new-born "little child." This idea underlies the prophetic hope of the fountain of purity, which is to cleanse Israel from the spirit of impurity (Zech. xiii. 1; Ezek. xxxvi. 25; compare Isa. iv. 4). Thus it is expressed in unmistakable terms in the Mandaean writings and teachings (Brandt, "Mandäische Religion," pp. 99 *et seq.*, 204 *et seq.*) that the living water in which man bathes is to cause his regeneration. For this reason does the writer of the fourth of the Sibylline Oracles, lines 160-166, appeal to the heathen world, saying, "Ye miserable mortals, repent; wash in living streams your entire frame with its burden of sin; lift to heaven your hands in prayer for forgiveness and cure yourselves of impiety by fear of God!" This is what John the Baptist preached to the sinners that gathered around him on the Jordan; and herein lies the significance of the bath of every proselyte. He was to be made "a new creature" (Gen. R. xxxix.). For the term φωτισθείς (illuminated), compare Philo on Repentance ("De Poenitentia," i.), "The proselyte comes from darkness to light." It is quite possible that, like the initiates in the Orphic mysteries, the proselytes were, by way of symbolism, suddenly brought from darkness into light. For the rites of immersion,

anointing, and the like, which the proselyte has or had to undergo, see PROSELYTE, ABLUTION, and ANOINTING.—K.]

**BAPTISTA** or **BATTISTA, GIOVANNI GIONA GALILEO**: Baptized Jew, professor of Hebrew, and librarian of the Vatican; born in Safed Oct. 28, 1588; died May 26, 1668. His Jewish name was Judah Jonah ben Isaac. He studied the Talmud and traveled as a rabbi through Italy and Poland; visited Amsterdam; and was finally elected dayyan in Hamburg. In 1625 he returned to Poland, and was converted to Christianity in Warsaw. Expelled from Poland, he came to Italy; was appointed professor of Hebrew, first in the University of Pisa, then in the Neophyte College of Rome; and later was one of the librarians of the Vatican.

The most important of his numerous works are: (1) a sermon in Hebrew and Latin on the Messiah and the outpouring of the Holy Spirit on the Apostles, Rome, 1653; (2) "Limmud ha-Meshihim" (Doctrines of Christianity), a Hebrew translation of the Italian catechism of Robert Bellarmine, 1658; (3) "Berit Hadashah," a Hebrew translation of the New Testament with a preface by Clement IX., to whom the translation was dedicated; (4) "Hebrew-Chaldaic Lexicon"; (5) a "Treatise on the Name of Jesus" (in manuscript); (6) "Hillufin Sheben Shelo-shah Targumim," a collection of the differences in the three Targumim. This work was left unfinished; the manuscript is preserved in the Vatican Library.

A. R.

**BAPTISTA, GIOVANNI SALOMO ROMANO ELIANO**: Baptized Jew; ecclesiastical writer; born at Alexandria, Egypt; died in Rome March 3, 1589. He was a grandson of Elijah Levita, the famous Hebrew grammarian. Baptista traveled extensively in Germany, Turkey, Palestine, and Egypt; was a master of Latin, Spanish, and Turkish; and taught Hebrew and Arabic in Rome. His elder brother, Eliano, embraced Christianity, became a priest, and later a canon, under the name of "Vittorio Eliano." Exasperated by his brother's conversion, Baptista hastened to Venice to rebuke him and, if possible, win him back to Judaism. But instead of converting his brother to Judaism, Baptista was himself converted to Christianity. First, Cantareno, a Venetian nobleman, made an effort to persuade him; then a Jesuit, Andreas Frusius, succeeded in convincing him. In 1551, under the name of "Giovanni Baptista," he openly declared himself a Christian, to the great mortification of his mother.

Baptista became a Jesuit; an ecclesiastical writer; composed a catechism in Hebrew and Arabic; and was the author of other works of the same character. The Jews that still remembered his famous grandfather naturally despised him for his desertion, and he determined to wreak vengeance on his former coreligionists. An opportunity soon presented itself

Two Venetian patricians, Bragadini and Giustini, were bitter competitors in the Hebrew printing-trade, and, in their eager desire to crush each other, hit on the scheme of sending Jewish converts to Rome to denounce the Talmud and all Hebrew writings as dangerous to Christianity. Baptista, with two other baptized Jews, Joseph Moro and Ananel di Foligno, undertook the mission, and appealed to Pope Julius III. to destroy the Talmud because of its alleged denunciation of Jesus, the Church, and Christianity, which denunciation, they claimed, prevented the conversion of the Jews. Julius III., though rather friendly to the Jews—as is shown by the fact that he had two Jewish private physicians, Vital Alatino of Spoleto, and the Marano Amatus Lusitanus—had, unfortunately, no power to settle the question about the Talmud, as such matters belonged to the jurisdiction of the Inquisition, which was then under the control of Caroffa, a notorious Jew-hater. Accordingly, the pope was forced, at the instance of the grand inquisitor, to issue a bull (Aug. 12, 1553) “to the princes, bishops, and magistrates,” ordering them to confiscate and burn all books of the Talmud. The Jews were ordered, under penalty of the confiscation of their property, to deliver all such books to the officials of the Inquisition; and Christians were warned not to conceal such books, nor to assist in writing or printing them. On the Jewish New-Year’s day, Saturday, Sept. 9, 1553, the officers of the Inquisition carried the pope’s edict into effect. Despite the petitions and entreaties of the Jews, all Talmudic, and a great many other, Hebrew books were publicly burned on the Campo di Fiore in Rome. Similar outrages were committed in Ravenna, Ferrara, Mantua, Padua, Venice, in the island of Candia (Crete), which was then under Venetian rule, and in all Romagna. The despair of the Jews was indescribable, and their feelings toward the apostates that were the cause of their suffering can be easily imagined. When Baptista came to Egypt in 1561 on a mission of Pope Pius IV., he was bitterly persecuted by the Jews of Alexandria at the instigation of his own mother.

**BAPTISTS:** A Christian denomination or sect denying the validity of infant-baptism or of any baptism not preceded by a confession of faith. Baptists and their spiritual progenitors, the Anabaptists of the sixteenth century (including the Mennonites), have always made liberty of conscience a cardinal doctrine. Balthasar Hubmaier, the Anabaptist leader, in his tract on “Heretics and Their Burners” (1524), insisted that not only heretical Christians but also Turks and Jews were to be won to the truth by moral suasion alone, not by fire or sword; yet as a Catholic, but a few years before, he had cooperated in the destruction of a Jewish synagogue in Regensburg and in the expulsion of the Jews from the city. Hans Denck and Ludwig Hetzer—among the most scholarly of the Anti-Pedobaptists of the sixteenth century, who had devoted much time to learning

Hebrew and Aramaic—made, in 1527, a highly meritorious translation of the Prophets from the Hebrew text, and contemplated a mission to the Jews. Their early death prevented the execution of this purpose. The Mennonites of the Netherlands, who became wealthy during the seventeenth century, were so broad-minded and philanthropic that they made large contributions for the relief of persecuted Jews. In England, Henry Jessey, one of the most learned of the Baptist ministers of the middle decades of the seventeenth century (1645 onward), was an enthusiastic student of Hebrew and Aramaic, and an ardent friend of the oppressed Hebrews of his time.

The Seventh-Day Baptists of England and America, from the seventeenth century onward, have insisted on the perpetual obligation of Christians to observe the Jewish Sabbath, and have made this obligation the distinctive feature of their creed. Many of the Seventh-Day Adventists, especially those that practise believers’ baptism, have still more in common with Judaism than have the Seventh-Day Baptists proper, and their ideas of the Messianic Kingdom are in many respects Jewish. The colony of Rhode Island was founded by Roger Williams and John Clarke—the former for a time and the latter throughout his life connected with the Baptists—on the principle of liberty of conscience for all. Jews early availed themselves of the privileges thus offered, and became influential citizens. In the latter part of the eighteenth century, Baptists were foremost in the struggle for civil and religious liberty throughout the British colonies (United States); and to Baptists was due, in large measure, the provision in the United States Constitution against religious tests of any kind.

**BAR**, Aramaic equivalent of Hebrew BEN, “a son” or “son of.”

**BAR:** Town in the district of Mohilev, province of Podolia, Russia, on the River Rov, affluent of the Bug; with a Jewish population of 8,000, of a total population of 10,614 (1897). The Jewish community of Bar is one of the oldest of Podolia. The town was formerly called “Rov,” and was destroyed by the Tatars in 1452. In the sixteenth century it received its new name in honor of the queen Bona Sforza, who was born at Bari, in Apulia, Italy, and by whom it was rebuilt.

Among the seventeen landlords entered in the lists of the aldermen of Bar in 1565, there are mentioned

some Jews who bear Slavonic names; *e.g.*, in the Polish part of the city: Moshko, Volchko, Schmoila; and in the Jewish street: Tzimlya (a Jewess), Zhivnitza (= Chaja, a Jewess), Maiko, Sablika, Moshechko, Volchkov, Kostzina (a Jewess), Marechko, Biskova (a Jewess) ("Regesty i Nadpisi," No. 541).

In 1648 Krivonos, by order of Bogdan Chmielnicki, destroyed the town of Bar (then a fortress) and killed all the Poles and Jews. An old Russian chronicle of this persecution says that the Cossacks "flayed the Jews alive" (*ib.* No. 901). The number of Jews killed at Bar is given as 15,000 by Samuel Faibush and Kostomarov, and as 2,000 by Nathan Hannover. The latter is probably correct, as may be seen from the South Russian chronicles published by Byeloozerski (*ib.* Nos. 902 and 903) that Krivonos killed Poles and Jews, together over 15,000. Samuel Phorbus, in "Tif ha-Yawen," says that there were only about six hundred Jewish families in Bar at that time. They were thought to be the wealthiest of the Jews of Ukraine. "They were killed, together with the other Jews who had taken refuge there, making in all about fifteen thousand souls." One of those who escaped was Rabbi Joseph, great-grandfather of the poet Naphtali Herz Wessely. In commemoration of this massacre, the order of some of the prayers was changed in the synagogue of Bar. In Bar the Jews and Poles fought against the Cossacks. In 1661 there were in the town only twenty houses owned by Jews. It came into the possession of Russia in 1793 (*ib.*, No. 995). Unfortunately, the "pinkeses" (documents) of the Jewish community of Bar, containing much valuable historical material, have been removed, by order of the government, to Kiev, and are not now accessible.

In the cultivation of tobacco the Jews of Bar are prominent. In the vicinity of the town are numerous plantations owned and worked by Jews.

**BAR ANINA** or **HANINA** (בר חנינה): Palestinian scholar of the end of the fourth century; lived in Bethlehem, where he was the teacher of the church father Jerome. The Talmudic and Midrashic literature mentions many halakists and haggadists whose fathers were named Hanina, and who, therefore, were called "Bar Hanina" or "Bar Anina." It is, however, impossible to identify any of these with Jerome's teacher; nor can it be proved with certainty from the above-mentioned literature that any one of such name lived when Jerome studied Hebrew in Bethlehem in the year 386. Jerome mentions his teacher by name only twice: once to relate how the Christians, who held it unseemly that he should receive instruction from a Jew, ridiculed his teacher's name by corrupting it to "Barabbas" (Jerome, "Apologetici Adversus Ruffinum Libri III." i. 13; ed. Migne, ii. 407). His teacher, too, would no doubt have encountered the animosity of his coreligionists had they learned that he was teaching the Bible to a monk (for the prohibition against teaching the Bible to heathen, see Hag. 13a). Bar

Anina, therefore, could give his instruction only at night, and probably Jerome paid highly for the books which his teacher borrowed from the synagogue (Jerome, "Epistola lxxx. ad Pammachium," ed. Migne, i. 745).

It is impossible to form any opinion as to the knowledge and importance of Bar Anina; for Jerome had other Jewish teachers, and Hebrew traditions in his works can not, therefore, be attributed specifically to Bar Anina. Jerome's complete lack of grammatical knowledge of Hebrew, and the defective etymology of this, the greatest Hebraist among the church fathers, can, therefore, not be laid upon the shoulders of his teacher; for, in many cases, it is evident that Jerome has misunderstood his instructors. The fact, however, may be taken to indicate that Bar Anina was himself not a very distinguished scholar. When Jerome says (commentary on Hab. ii. 16), concerning another teacher, that he was called "Sapiens" (חכם) and "Deuteroses" (דוטרס) among the Jews, one may infer that Bar Anina possessed neither of these titles. Be that as it may, this Bethlehemite teacher can at least boast of having exerted a commanding influence, through his pupil, upon the development of the Christian Church. Without his assistance, the Vulgate—the accepted form of the Old Testament in the Catholic Church for fifteen centuries—would hardly have come into existence; and he was, likewise, undoubtedly the means of introducing to the Church some of the rabbinical exegesis.

**BAR COCHBA, BAR COCHBAH.** See BAR KOKBA.

**BAR DALA, BARDALA, BAR DALIA, BARDALIA:** A place near Lydda, which once harbored a rabbinic seat of learning (B. M. 10a *et seq.*; see Rabinowicz, "Dikduke Soferim," *ad loc.*; Bezah 14a, see Rabinowicz, *ib.*; Yer. 'Er. vi. 24a; Yer. Kil. i. 27a; Yer. Sheb. ii. 33d). It is supposed to be identical with Bet-Deli ('Eduy. viii. 5; Yeb. xvi. 7, in Yer. Mish. and Gemara 16a, "Badla"), which is recognized by some in Wady Ed-Dalia, between Tibnin and Safed in Galilee; by others, in Bet-Ulia (Dulia) on the road from Hebron to Jaffa. As the place was not far from Lydda—so that a Bardalian was sometimes considered as a Lyddan (Yer. Sanh. i. 18c)—the latter conjecture is the more probable. The local name is used in rabbinical literature as a surname, designating several scholars who hailed from that place (ABBA COHEN OF BARDALA, AHA BARDALA), and is occasionally employed as a prænomen; *e.g.*, Bardala b. Tabyome (Hag. 5a; see also Zeb. 33b).

**BAR ELASHA.** See BEN ELASAH.

**BAR GIORA, SIMON** (called also **Simon Giora**): Jewish leader in the revolt against Rome; born about the year 50, at Gerasa. To judge from his name he was the son of a proselyte. The date of his birth is determined by the fact that he was

very young at the time of the war with Nero. He was distinguished for bodily strength and reckless courage. After Cestius had been put to flight he surrounded himself with a band of men and devastated the lands of the Idumeans about Akrabattene; but, being pursued by troops from Jerusalem, he threw himself into the fortress of Masada (Josephus, "B. J." ii. 22, § 2; iv. 9, § 3). He kept up his guerrilla warfare, however, gradually increasing his troops until they numbered many thousand Sicarii; and, after fortifying Nain, he encamped in the valley of Paran. Having conquered the Idumeans and mastered Hebron, he swept up to the very gates of Jerusalem. Here an ambush was laid by the Jews of the city, and his wife and some of his soldiers were seized; but Bar Giora compelled them to be delivered up to him (*ib.* iv. 9, §§ 8, 10). In the mean time the Idumeans and the Zealots in Jerusalem came into conflict (April, 68); and the Idumeans, suffering defeat, called Bar Giora into the city. Though Matthias, high priest at the time, had been instrumental in summoning him, Bar Giora later put him to death (*ib.* iv. 9, § 11; v. 13, § 1), henceforth considering himself lord of the city, and maintaining constant strife with John of Gischala, leader of the Zealots, the latter being outdone in their frenzy by Bar Giora's followers, the Sicarii.

The Idumeans, though formerly oppressed by Bar Giora, now joined their forces to his. From his strong fortification at Phaselis—in which he garrisoned his ten thousand soldiers—he could command the whole of Jerusalem (*ib.* v. 3, § 1; 6, § 1). When Titus moved up to the walls of Jerusalem, Bar Giora made peace with John and the Zealots, and in a number of sallies inflicted serious losses on the Romans (*ib.* v. 2, § 4; vi. 1, § 7). After Jerusalem had been almost entirely taken and the Temple had been burned down (on the Ninth of Ab), Bar Giora and other fearless men withdrew to the upper city, from which they negotiated with Titus, offering to surrender on condition that they should be allowed to go free under oath not to draw their weapons. The Romans refused, and the struggle broke out afresh. On the eighth of Elul the upper city also fell a prey to the flames. John surrendered, but Bar Giora, resisting to the last, took flight through subterranean passages. Hunger, however, drove him to come forth. He startled the Roman soldiers by his sudden appearance in a white shroud; but they quickly recovered from their fright, seized him, and led him to Titus. He was kept for the emperor's triumph at Rome, where he was dragged through the streets and then hurled from the Tarpeian rock (Josephus, "B. J." vii. 2, § 1; vii. 5, § 6; 8, § 1).

**BAR HEBRÆUS.** See GREGORY BAR HEBRÆUS.

**BAR JESUS** ("son of Jesu or Joshua"): A Jewish magician described in Acts xiii. 6–11 as a "sorcerer, a false prophet," who, when Paul and Barnabas came to Cyprus, was found in the company of Sergius Paulus, the Roman proconsul. He also

bore the title of "Elymas" (= sorcerer; perhaps related to *חלם*, Deut. xiii. 2; explained also from the Arabic *alim* = wise). He opposed Paul in his attempt to convert the proconsul; whereupon Paul, "filled with the Holy Ghost, set his eyes on him," and cursed him with temporary blindness, calling him "son of the Devil" ("Ben Belial"); and "immediately there fell on him a mist and a darkness," and he had to be led by the hand. The proconsul, "when he saw what was done," was converted. Simon Magus, to whom Bar Jesus bears a striking resemblance, is apparently the person mentioned by Josephus ("Ant." xx. 7, § 2), as "Simon . . . a Jew, born in Cyprus," who "pretended to be a magician," one of the friends of Felix, the procurator of Judea, and employed by him to seduce Drusilla from her husband, Azizus, king of Emesa. The same Simon Magus occurs in the story of Peter the Apostle (Acts viii. 20–24), of which the Paul story obviously forms a counterpart. New Testament critics therefore doubt the authenticity of the whole story (see Holzmänn, on Acts xiii., and P. W. Schmiedel, in "Encyc. Bibl.")

The Syriac, taking offense at "Son of Jesus" being called "Son of the Devil," has changed the name "Bar Jesus" into "Bar Shuma" (Son of the Name); one Latin translation has "Bar Jesuba," which again has led modern writers like August Klostermann to new conjectures.

T.

K.

**BAR KAPPARA** (Aramaic; Hebrew, "Ben ha-Ḳappar"): Palestinian scholar of the beginning of the third century, occupying an intermediate position between tanna and amora. His real and complete name was Eleazar (there seems to be no ground for the form "Eliezer") ben Eleazar ha-Ḳappar. This is the form appearing in the tannaite sources, Tosefta (Bezah i. 7; Hullin vi. 3) and Sifre (Num. 42, ed. Friedmann, p. 120); the usual Talmudic form, "Bar Kappara," and the frequent appellation, "Eleazar ha-Ḳappar Berabbi" (see BEREBI), are abbreviations of this.

Like nearly all those who occupied the intermediate positions between tannaim and amoraim (called "semi-tannaim" for convenience' sake), Bar Kappara was a pupil of Judah I. ha-Nasi; but he seems to have counted among his teachers, in addition, R. Nathan the Babylonian (Midr. Teh. xii. 4, ed. Buber; other editions and MSS. read "Jonathan") and R. Jeremiah ben Eleazar, probably identical with the Jeremiah mentioned in the Mekilta and Sifre (Pesik. xxvii. 172b; Tan., Ahare Mot, vi. [ed. Buber, vii.]; and parallel passages cited by Buber). The strained relations between Bar Kappara and the patriarchal house, of which mention will shortly be made, induced him to withdraw to the south of Palestine. Bar Kappara set up his academy at Cæsarea (concerning פְּרִיר or פֶּאֶרִיר, the alleged residence of Bar Kappara, in the passage

**His Academy** 'Ab. Zarah 31a, nothing further is known; according to Bacher, "Agada der Tannaiten," ii. 505, it may have been a suburb of Cæsarea); and his school came to be a serious rival of Rabbi's. Among the most

important of its scholars were Hoshaya, "the father of the Mishnah" (Ker. 8a), and Joshua b. Levi, the distinguished haggadist, who to a large extent transmitted the Haggadah of Bar Kappara (Shab. 75a). The greatest admirers of Rabbi and the best supporters of the patriarchal house, Hanina b. Hama and Johanan b. Nappaha, could not refrain from acknowledging Bar Kappara's greatness (Niddah 20a; 'Ab. Zarah *l.c.*). It is related of him that once while walking on the mole of Caesarea and seeing a Roman that had escaped from shipwreck in utter destitution, he took him to his house and provided him with clothing and all necessities, including money. Later this castaway became proconsul of Caesarea, and occasion soon offered itself to show his gratitude to his rescuer, when Jews involved in a political disturbance were arrested, and he released them on Bar Kappara's intervention (Eccl. R. xi. 1, on "Cast thy bread upon the waters").

Of more interest than his contemporaries' recognition of his greatness as a halakist and a humanitarian, are the many characteristic utterances of his that mark him as a phenomenal personality in his day. Some examples may be given. He said: "He who can calculate the solstices and movements of the planets [that is, understands astronomy] and fails to pay attention to these things, to him may be applied the verse [Isa. v. 12] 'They regard not the works of the Lord, nor the operation of his hands'" (Shab. 75a). This statement about the duty of studying astronomy and physics gains in significance if placed in juxtaposition with Bar Kappara's totally different opinion in regard to the study of the Torah. According to him, if a Jew read only two portions from the Torah daily—one in the morning and one in the evening—he fulfils the precept to meditate in God's law by day and night (Ps. i. 2; Midr. Teh. *ad loc.*). Bar Kappara not only admired natural science, proscribed though it was by most Jews of the time, who considered it "Greek learning," but he also appreciated the Hellenic love of the beautiful; and probably he was the sole Palestinian who judged the literary activity of the Alexandrian Jews favorably. A truly liberal exposition of his on Gen. ix. 27 was: "The words of the Torah shall be recited in the speech of Japheth [Greek] in the tents of Shem" (in the synagogues and schools) (Gen. R. xxxvi. 8).

Bar Kappara's respect for the exact sciences was equaled by his aversion for metaphysical speculation, which just at his time flourished in the form of Gnosis among Jews and Christians. Referring to Deut. iv. 32, "Ask now of the days that are past, which were before thee," Bar Kappara says, "Seek to know only of those days that followed the Creation; but seek not to know what went before" (Gen. R. i. 10), meaning to say that the world and the history of man in the world provide sufficient matter for the mind's employment without subtle investigations into hidden mysteries.

Highly characteristic of Bar Kappara's conception of life and its ideals is his opinion concerning self-abnegation: "The Scriptures [Nun. vi. 11] say: 'The priest shall . . . make an atonement for him [the Nazarite] for that he sinned by the soul'" [A.

V. "dead"; Hebrew text, "nefesh," means also "soul"]. By what soul did he sin? He denied himself wine. Now, if the Nazarite who denied himself wine only is called a sinner, how much more is he a sinner who has denied himself everything?" (B. K. 91b; Ta'anit 11a and parallels; compare Rab's similar saying in Yer. Kid., end; see ABBA ARIKA). It required not a little courage and self-confidence to declare asceticism sinful at a time when fasting and abstinence of all kinds were held to be the greatest virtues.

A comparison of this view of Bar Kappara concerning abstinence with Rabbi's declaration before his death that he had not experienced the slightest sensual gratification in his life (Ket. 104c), reveals the striking contrast in the conceptions of the two men. This difference was true no less

in regard to the affairs of daily life than to matters of the intellect. No greater dissimilarity is possible than was presented by the majestic repose and princely grandeur of Rabbi, and the poetic abandon and gay address of Bar Kappara. Since Rabbi's mere presence sufficed to put a check upon Bar Kappara, it is possible that a breach between the two men might not have come to pass had their personal relations alone been concerned. But the members of the patriarch's family, especially Simon, his son, and Ben Elasa, his son-in-law, rich but unlettered (Ned. 51a), were frequently subjected to Bar Kappara's biting satire. A somewhat irreverent remark about Rabbi, which he let slip in Simon's presence, was reported by Simon to Rabbi, who informed Bar Kappara of his firm resolve never to grant him ordination (M. K. 16a).

According to the Yerushalmi, however, the final rupture was induced by the following incident: During a gathering at Rabbi's house Bar Kappara remarked to Rabbi's unlearned son-in-law that it was conspicuous in him to maintain complete silence while all others present were asking Rabbi for opinions on subjects of learning. Ben Elasa was at a loss as to what question to put to his father-in-law, but Bar Kappara prompting him by whispers in his ear, he propounded to Rabbi the following riddle:

"High from Heav'n her eye looks down;  
Constant strife excites her frown;  
Winged beings shun her sight;  
She puts youth to instant flight;  
The aged, too, her aspect scout;  
Oh! oh! the fugitive cries out.  
And by her snares whoe'er is lured  
Shall never more from sin be cured!"

(Translation by A. Sekles, in "The Poetry of the Talmud," pp. 87, 88, New York, 1880.)

When Rabbi turned round after hearing the riddle of his son-in-law, he discovered Bar Kappara smiling, and exclaimed: "I do not recognize you, old one!" (meaning also, "I do not recognize you as an elder, a sage!"). Bar Kappara now understood that he would never receive ordination (Yer. M. K. iii. 81c).

What the riddle really signifies is not known, despite many attempts to explain it. The most probable view is the one taken by Abraham Krochmal that Bar Kappara intended it as a criticism of Rabbi's unrelenting severity toward young and old. The verse

is extremely valuable as a specimen of Neo-Hebraic poetry in Talmudic times; its few lines furnish, perhaps, the sole testimony to the activity of the Jews of that time in secular poetry. Its language is classic, but

**His Poetry.** not slavishly so; forceful and pure, yet easy and flowing. It is a curious coincidence that the one other specimen of Bar Kappara's poetry which has been preserved in the sources should be the eloquent words in which he proclaimed Rabbi's death to the assembled people of Sepphoris. They are: "Brethren of the house of Jedaiah [an epithet of the inhabitants of Sepphoris], harken unto me! Mortals and angels have long been wrestling for the possession of the holy tablets of the Law; the angels have conquered. They have captured the tablets" (Yer. Kil. ix. 32b; Yer. Ket. xii. 35a; Bab. Ket. 104a; Eccl. R. vii. 11, ix. 10, with many variants of the text, which is here given according to Eccl. R. l.c.). Bar Kappara's presence in Sepphoris at Rabbi's death shows that, despite Rabbi's unjust attitude toward him, he duly appreciated his great obligations to his teacher; and there is no cause to doubt the sincerity of his grief for Rabbi's death.

Bar Kappara was especially known to the Amoraim as the author of a Mishnah called the Mishnah of Bar Kappara (Pesik. xv. 122a; Yer.

**Mishnah of Bar Kappara.** Hor. iii. 48c; and many other places). This Mishnah compilation has not been preserved, and probably at the final redaction of the Talmud it was no

longer extant (Meiri, in commentary on Abot, ed. Wilna, p. 14, does not mention the fact of having had such a Mishnah collection [thus Schorr, "He-Haluz," i. 44, and A. Krochmal, *ib.* iii. 118], but a Baraita cited in Bar Kappara's name in the Talmud). Nevertheless, the numerous passages from his Mishnah that found their way into the Talmud suffice for judgment upon its character.

Meiri (*l.c.*) quite correctly designates it as a supplement to the Mishnah of Rabbi, intended chiefly to explain it, and, on rare occasions, to give differing opinions (see BARAITA). Bar Kappara's Mishnah also presented variants to Rabbi's Mishnah, and later on became occasionally so interwoven in the text of the latter that doubt arose whether the Mishnah in question belonged to the one or to the other (Yer. Pes. x. 37d). The Mishnah of Bar Kappara was also used by the redactor of the Tosefta, who derived many decisions from it (for instances, see Weiss, "Dor Dor we-Dorshaw," ii. 219). Whether Bar Kappara's Mishnah ever reached Babylonia has not been definitely ascertained, the one passage in the Babli referring to it having originated with Simon b. Lakish, a Palestinian (B. B. 154b). [Compare also Is. Halevy, "Dorot ha-Rishonim," ii. 123-125, who, without sufficient reason, denies the existence of Bar Kappara's Mishnah.]

Bar Kappara is the last one in Talmudic times who is stated to have had knowledge of fables. The Midrash (Lev. R. xxviii.

**His Knowledge of Fables.** 2) relates that because Rabbi did not invite Bar Kappara to the wedding of

his son, Bar Kappara revenged himself in the following way: At the feast which Rabbi subsequently gave in Bar Kappara's honor, the latter told

a vast number of fox fables—300, it is reported—and the guests left the food untouched in order to listen to him.

#### BAR KOKBA AND BAR KOKBA WAR:

The insurrection of the Jews of CYRENE, CYPRUS, and EGYPT in the last years of the emperor Trajan had not been entirely suppressed when Hadrian assumed the reins of government in 118. The seat of war was transferred to Palestine, whither the Jewish leader Lucius had fled (Abulfaraj, in Münter, "Der Jüdische Krieg," p. 18, Altona and Leipsic, 1821). Marcus Turbo had pursued him, and had sentenced to death the brothers Julian and Pappus, who had been the soul of the rebellion. But Turbo was himself executed upon special orders sent from Rome,

and the lives of the brothers were saved (Sifra, Emor. viii. 9 [ed. Weiss, p. 99d]; Meg. Ta'anit xii.; Ta'anit 18b; Sem. viii.; Eccl. R. iii. 17). Lucius

**War of Quietus.** Quietus, the conqueror of the Jews of Mesopotamia, was now in command of the Roman army in Palestine, and

laid siege to Lydda, where the Jews had gathered. The distress became so great that the patriarch Rabbān Gamaliel II., who was shut up there and died soon afterward, permitted fasting even on Hanukkah; though other rabbis, such as the peace-loving R. Joshua b. Hananiah, condemned this measure (Ta'anit ii. 10; Yer. Ta'anit ii. 66a; Yer. Meg. i. 70d; R. H. 18b). Soon afterward Lydda was taken and masses of the Jews were executed; the "slain of Lydda" are often mentioned in words of reverential praise in the Talmud (Pes. 50a; B. B. 10b; Eccl. R. ix. 10). Pappus and Julian were among those executed by the Romans in the same year (Ta'anit 18b; Yer. Ta'anit 66b). The foregoing are the most important events of the campaign of Quietus as mentioned in rabbinical sources (see also "Revue Etudes Juives," xxx. 212).

An ancient Jewish source states that sixteen years elapsed between the "polemos" (= war) of Quietus and the rebellion of Bar Kokba (Seder 'Olam R., at

the end; compare Azariah dei Rossi, in "Me'or 'Enayim," xix.), and both the Armenian chronicle of Eusebius ("Chronicorum Canonum," ed. Mai and Zohrab, p. 383, Milan, 1818) and that of Jerome

mention a Jewish war as occurring during the first year of the reign of Hadrian. Later events can be interpreted only by bearing this war in mind. For if Hadrian, immediately after his accession to the throne, pursued a pacific policy toward the Jews, and made concessions to them, he must previously have felt their resistance (Grätz, "Gesch. der Juden," 3d ed., iv. 410). Spartian, the biographer of Hadrian ("Hadrian," v. 2), also states that the emperor wished to have peace throughout the Roman world, and refers to the restlessness among the people of Libya and Palestine—a reference undoubtedly pointing to the Jews. It appears that Hadrian had already granted permission for the rebuilding of the Temple; that the Jews of the diaspora had already begun to return to Jerusalem, and that the brothers Pappus and Julian had already provided for the exchange of foreign money into Roman coin, when, through the calumny of the Samaritans, Hadrian ordered the cessation of work upon the **Rebuilding Temple** (Gen. R. lxiv.). Of the intended rebuilding of the Temple under **Temple**. Hadrian, mention is made by Chrysostom ("Orat. iii. in Judæos"), "Chron. Alex." (on the year 118), Nicephorus ("Hist. Eccl." iii. 24), and Cedrenus ("Script. Byz." xii. 249). A coin of the period, representing a portico with four

columns, is referred to this movement. The leader and superintendent of the building—either of the city of Jerusalem or of the Temple—is said to have been the pious proselyte AQUILA (Epiphanius, "De Pond.

et Mens." xiv.). Hadrian had not yet dared openly to prevent the rebuilding of the Temple, but requested that the site of the new structure be somewhat removed from its former location—a condition which the Jews of course could not accept. They took up arms and assembled in the Valley of Rimmon, on the celebrated historical plain of Jezreel; and a rebellion seemed imminent, when R. Joshua b. Hananiah, by convincing the people of the danger which they were incurring, ultimately succeeded in pacifying them (Gen. R. lxiv.). But the Jews remained quiet only on the surface; in reality, for over fifteen years they prepared for a struggle against Rome. The weapons that the Romans had ordered to be made by them they intentionally constructed poorly, so that they might keep them when rejected and returned to them. They converted the caves in the mountains into hiding-places and fortifications, which they connected by subterranean passages (Dio Cassius, lxix. 12). It is thought that the travels of the celebrated teacher of the Law, Rabbi Akiba, were made with the intention of interesting the Jews of the most remote countries in the coming struggle; and these travels extended through Parthia, Asia

Minor, Cappadocia, and Phrygia, and perhaps even to Europe and Africa. Preparations devised on so large a scale could hardly have been instituted without organization, and it may therefore be assumed that the leader, Bar Kokba, was already quietly preparing for this war in the first years of the reign of Hadrian.

Bar Kokba, the hero of the third war against Rome, appears under this name only among ecclesiastical writers: heathen authors do not

**Bar Kokba;** mention him; and Jewish sources call **His Name.** him Ben (or Bar) Koziba or Kozba.

Many scholars believe this name to have been derived from the city of Chezib (Gen. xxxviii. 5) or Chozeba (I Chron. iv. 22), although it is more likely that it was simply the name of his father. Others believe that Bar Koziba was a contumelious appellation ("Son of Lies") bestowed after the unfortunate issue of the revolt. Although this also seems to be implied by the words of the patriarch, R. Judah I. (Lam. R. ii. 2), it merely proves that the luckless hero was early held responsible for the misfortune that had befallen the nation. On the other hand, it is certain that the name Bar Kokba is only an epithet derived from R. Akiba's application of the verse to Koziba: "There shall come a star ["kokab"] out of Jacob who shall smite the corners of Moab

and destroy all the children of Seth" (Num. xxiv. 17). Eusebius also ("Hist. Eccl." iv. 6, 2) adds to the name *βαρκοχάβας* the remark that it signifies "star," and so does Syncellus ("Chronographia," in the "Script. Byz." ix. 348), indicating that they knew that the name was only a figurative one. It is singular that Syncellus also calls Bar Kokba "an only son" (*μονογενής*), which corresponds with the Hebrew "yahid." If this is not a Messianic name, as Renan surmises ("L'Eglise Chrétienne," 2d ed., p. 200), one must understand by it the interesting family fact that Bar Kokba was the only son of his parents; even in this trifling circumstance the heated imagination of the champions of liberty endeavored to find some special merit. The attempt was also made to discover in the name of a certain counterfeit coin ("mahaginot," Yer. Ket. i. 25b) the word *μνογενής* (N. Brüll, in "Jahrbücher," i. 183; compare Rapoport, "Orient," 1840, p. 248); and so refer it to Bar Kokba; just as the Talmud mentions "Kozbi-coins"; that is, coins of Bar Kokba (Tos. Ma'as. Shen. i. 6, and Bab. B. K. 97b); but such an interpretation of the word is rendered impossible by the context. These latter coins would intimate that Bar Kokba's name was Simeon, similar examples of the omission of this name being afforded by the names Ben Zoma and Ben Azzai, each of whom was also named Simeon; but, as the coins in question have been traced to Simeon the Hasmonean, their association with Bar Kokba is untenable (Renan, *ib.* p. 197).

This is about all that is known concerning the personality of Bar Kokba; and even the meager data here presented are so uncertain that the very name of the hero is doubtful. Everything else pertaining to him is mythical. Like the slave-prince, "Eunus of Sicily," he is said to have blown burning tow from his mouth (Jerome, "Apol. ii. adv. Ruf.");

such was his strength that he was able to hurl back with his knees the stones discharged from the Roman ballistæ (Lam. R. ii. 2). Bar Kokba is said to have tested the valor of his soldiers by ordering each one to cut off a finger; and when the wise men beheld this, they objected to the self-mutilation involved, and advised him to issue an order to the effect that every horseman must show that he could tear a cedar of the Lebanon up by the roots while riding at full speed. In this way he eventually had 200,000 soldiers who passed the first ordeal, and 200,000 heroes who accomplished the latter feat (Yer. Ta'anit iv. 68d). It must have been during the war, when he had already performed miracles of valor, that R. Akiba said of him, "This is the King Messiah" (*ib.*); but he had the presumption—so runs the legend—to pray to God: "We pray Thee, do not give assistance to the enemy; us Thou needst not help!" (*ib.*; Lam. R. ii. 2; Git. 57a *et seq.*; Yalk., Deut. 946); and it was inevitable that many persons, among them his uncle R. Eleazar of Modi'im, should disbelieve in his Messianic mission.

Jewish medieval sources also mention a son and a nephew of Bar Kokba. After the death of the latter, his son Rufus—whose name is rightly explained as "red"—succeeded him as ruler, and he, again, was followed by his son, Romulus; and it was only in the days of Romulus, the son of Rufus, the

son of Koziba, that the emperor Hadrian succeeded in quelling the insurrection (Abr. b. David, in Neubauer's "Medieval Jewish Chronicles," i. 55). Joseph ibn Zaddik (*ib.* p. 90) mentions Romulus, but not Bar

**Jewish Medieval Sources.** Kokba. The earlier Nizzahon (ed. Hackspan) on Dan. ix. 24 adds that Bar

Kokba was of the house of David, an assertion which appears genuine, inasmuch as such relationship would have been essential to the Messianic mission. Both Gedaliah ibn Yahyah, in "Shalshelet ha-Kabbalah" (*s.v.* "R. Akiba"), and Heilprin, in "Seder ha-Dorot" (i. 126a, ed. Wilna, 1891), mention three generations of these kings—a fact controverted by David Gans in "Zemah David" (part i. for the year 880), who adds, however, that Romulus, like his grandfather, was called Koziba, and that there is no discrepancy with the Talmudic records. The twenty-one years claimed by Gans for Bar Kokba and his sons can be explained if the whole period from 118 to 135 be accepted, which, however, would only amount to seventeen years. Singularly enough, Graetz and other Jewish historians fail entirely to speak of these Jewish traditions, whereas Münter (*ib.* pp. 47, 75) and Gregorovius ("Der Kaiser Hadrian," p. 195, note 1, Stuttgart, 1884) considered them at least worthy of mention.

As if to increase the irritation of the Jews, it so happened that the government of Judea had at this time been entrusted to one of the most rascally subjects of the Roman empire, the governor-general Tinnius RUFUS, as he is probably correctly called (Borghesi, Gregorovius, Renan, Mommsen, and Schürer; whereas others call him variously Tinnius, Titus Annius, or Tacinius, Rufus).

**Cause of the War.** Rufus offended the Jews in their most sacred relations. He was reputed to be a regular debaucher of young women (G. Röscher, in "Theol. Studien und Kritiken," 1873, pp. 77 *et seq.*), and was probably the prototype from whom was taken the description of the voluptuary Holofernes, as given in the Book of Judith. Associated with this is the Talmudic saga that the immediate cause of the war was the insult offered by the Romans to a bridal couple (Git. 57a). So long as the emperor Hadrian remained in the vicinity—that is, in Syria and Egypt (about 130 common era)—the Jews kept still (Dio Cassius, lxix. 12) and even struck coins in his honor, which bore the motto "Adventui Aug. Judææ," in commemoration of the visit of the emperor to Judea. It was probably at this time that Hadrian desired to erect the Roman colony *Ælia Capitolina* upon the ruins of Jerusalem, and to replace the old Temple by one dedicated to Jupiter Capitolinus. Dio Cassius, at least, mentions this fact as the cause of the war, while Eusebius and other ecclesiastical historians refer to them as a result. It is therefore assumed that the building was already begun before the war, but interrupted by it (Münter, Graetz, Gregorovius). The report (Spartian, ch. xiv.) that the Jews were forbidden to exercise the rite of circumcision may also have originated after the war; but Jewish sources state that in the days of Bar Kokba many who had before endeavored to disguise the Abrahamic covenant submitted themselves anew to circumcision.

(Shab. ix. 1; Yer. *ib.* 17*a*; Yeb. 72*a*; Yer. Yeb. viii. 9; Gen. R. xlv.). It does not follow, however, from the preceding passages that the Judæo-Christians were compelled by Bar Kokba to submit to circumcision (Basnage, "L'Histoire des Juifs," xi. 361, Rotterdam, 1707), and the statement that the Christians were tortured by Bar Kokba if they did not deny Jesus, is made only by Christian authors (Justin, "Apologia," ii. 71; compare "Dial." ex.; Eusebius, in "Hist. Eccl." iv. 6, § 2, and in his "Chronicle," where he therefore calls Bar Kokba a robber and murderer; Jerome, in his "Chronicle"; Orosius, "Hist." vii. 13). The actual reason seems to have been that the Christians refused to unite with the Jews in the struggle. The Samaritans, however, participated in the conflict, to which Jews residing in foreign countries also flocked in masses, the number of combatants being further swelled by pagan accessions; and there ensued, as Dio Cassius observes, a war which was neither of small proportions nor of short duration.

Rufus could not at first resist the onslaught of the Jews, to whom he was compelled to relinquish one place after another almost without a struggle; and thus about fifty strongholds and 985 undefended towns and villages fell into their hands (Dio Cassius, lxi. 14). These fifty strongholds were situated in Palestine, and may be located with tolerable accuracy ("Magazin für die Wissenschaft des Judenthums," xix. 229; "Monats-

**Publius Marcellus.** schrift," xliii. 509). But although the Jewish arms did not penetrate beyond the Palestinian border, their success caused the Romans to become conscious of their danger. They despatched Publius Marcellus, legate of Syria, to the aid of Rufus; but this general also was defeated. It is uncertain whether the insurgents acquired possession of Jerusalem; the Jewish sources contain no mention of it; and the coins bearing the inscription, "In Commemoration of the Liberation of Jerusalem," are unreliable because they may have originated with Simon the Hasmonean. Among the historians, Graetz is almost the only one that accepts the supposition of a conquest of Jerusalem. But if this had been the case, the insurgents would not have made Bethar, but Jerusalem, their center of operations. Moreover, Bethar, according to Eusebius, was situated in the vicinity of Jerusalem, a statement which may apply equally to a place north or south of the Holy City. However this may be, a city of the size ascribed to Bethar in Jewish sources could never have arisen in the immediate vicinity of Jerusalem.

Hadrian was now compelled to summon the greatest general of his time, Julius Severus, from Britain, to conduct the campaign against the Jews; and Severus was accompanied by the legate Hadrianus Quintus Lollius Urbicus, former governor of Germania. Hence it follows (contrary to

**Julius Severus.** the opinion expressed in the Jewish sources, in Moses of Chorene's "Hist. Arm." ii. lvii.; and in the writings of Münter and Lebrecht) that Hadrian did not personally participate in the war. The Roman troops engaged in Palestine were the Tenth Legion (Fretentis), the Second (Trajana), the Third (Gallica), and the Fourth (Scythica), all drawn from Syria; but even with so considerable an army, Severus did not ven-

ture to engage the Jews in open battle. He sought gradually to dislodge them from their strongholds. The Romans were compelled to enter from the north, and here they captured the populous and well-fortified cities, Kabul, Sichin, and Magdala, surnamed Zebuaya ("City of the Dyers"). The next city invested was the so-called "Har ha-Melek" (Tur Malka, "Mountain of the King"), where a certain "Bar-Deroma," possibly identical with Bar Kokba, commanded on the Jewish side. The Valley of Rimmon, perhaps also called Bik'at-Yadayim, the starting-point of the rebellion, became the scene of a murderous conflict (Eliyahu R. xxx.; compare Lam. R. i. 16; Gen. R. lxiv.). The Romans are said to have fought fifty-two battles—according to certain writers, fifty-four—until, at last, Bethar alone remained; and this place finally fell, through treachery, into the hands of the Romans, who would not for a long time afterward give permission for the interment of the slain.

The war was ended, and Bar Kokba met his death upon the walls of Bethar. Indescribable misery

spread over Palestine; the land became a desert; the Jews were slaughtered *en masse*; and Talmud and Mid-

**End of the War.** rash bewail the horrors of the Roman conquest. According to Dio Cassius, 580,000 Jews fell in battle, not including those who succumbed to hunger and pestilence. It must have been regarded as an evil omen by the Jews that the pillar of Solomon in Jerusalem fell of itself. Indeed, the end of the Jewish nation had come. The Romans also had sustained heavy losses; and it is reported that Hadrian did not even send the usual message to Rome that he and the army were well (Dio Cassius, *ib.*)—a story which can not be true in view of the opinion already expressed that Hadrian was not present during the conflict (see, however, "Revue Etudes Juives," i. 49). Hadrianus was for the second time elected imperator by the Senate, and Julius Severus was honored with the *ornamenta triumphalia*. (The governor of Bithynia, named Severus, so highly praised by Dio Cassius, was another person, Sextus Julius Severus.)

This war, designated by the Mishnah (Soṭah ix. 14) as "the final polemos," had lasted three and one-half years (Seder 'Olam R., toward the end, according to the reading of Dei Rossi; not two and one-half, as in the common reading; Yer. Ta'anit iv. 68*d et seq.*; Lam. R. ii. 2; Jerome on Dan, ix.). But this applies only to the actual struggle for Bethar; after the fall of that city, which, according to the tradition, took place on the Ninth of Ab, 135, two brothers in Kephars-Haruba, in the vicinity of Tiberias, had still to be overcome (Yalk., Deut. 946; the Venice ed., however, reads here "Kephars-Hananyah," otherwise as in Yer. Ta'anit and Lam. R. *l.c.*). In three cities—Hamath near Tiberias, Kephars-Lekutyah, and Bethel—Hadrian had garrisons posted for the purpose of capturing Jewish fugitives (Lam. R. i. 16; slightly different in ed. Buber, p. 82). Here, as in the before-mentioned Valley of Rimmon, the Jews are said to have been brought in by false promises. Many were sold into slavery; and for this purpose a market was held under the terebinth, which tradition identified with ABRAHAM'S OAK, where Jews were sold for the price of a horse. Others were sold at the market

at Gaza, and the remainder were transported to Egypt ("Chronicon Alexandrinum," 224th Olympiad, in Münter, *ib.* p. 113; Jerome on Zech. xi. 5; Jer. xxxi. 15). Some were fortunate enough to be able to flee either to Asia Minor (Justin, "Dialogus cum Tryphone," i.), or even to Armenia (Lam. R. i. 15. ed. Buber, p. 77).

The subsequent era was one of danger ("sha'at ha-sekanah") for the Jews of Palestine, during which the most important ritualistic observances were forbidden; for which reason the Talmud states (Geiger's "Jüd. Zeit." i. 199, ii. 126; Weiss, "Dor," ii. 131; "Rev. Et. Juives," xxxii. 41) that certain regulations were passed to meet the emergency. It was also called the age of the edict ("gezerah") or of persecution. ("shemad," Shab. 60a; Cant. R. ii. 5).

The ten martyrs, glorified in legend, in those days suffered death for their faith; for it was the aim of the government to destroy the very essence of Judaism by preventing the study of the Law. Other prohibitions were promulgated concerning the Sabbath, circumcision, tefillin, and mezuzah, and constituted a mass of ordinances usually embraced in the term "the Hadrianic persecution." A positively inhuman prohibition was issued which prevented the Jews from walking in the vicinity of Jerusalem, so that they could not even pour out their griefs on hallowed soil. The former plan of Hadrian was now also put into execution: after the plow had been drawn over the Temple mountain, Jerusalem became a pagan city under the name of "Ælia Capitolina."

**BIBLIOGRAPHY:** The history of the Bar Kokba war was written by the rhetor Antonius Julianus, whose work, however, has been lost. An extract from the report of Ariston of Pella is given in the *Hist. Eccl.* iv. 6 of Eusebius. But the principal source of information is the *Hist. Rom.* lxix. ch. 12-14 of Dio Cassius, while the *Chronicon Alexandrinum* and the work of Moses of Chorene are also valuable. The Jewish sources are rich in information, but should be consulted with caution; and this applies also to the *Samaritan Book of Joshua*, ed. Juynboll, Leyden, 1848. Among modern authors, Münter, Renan, Gregorovius, Jost, and Graetz are noteworthy; see also Derenbourg, *Essai sur l'Histoire et la Géographie de la Palestine*, pp. 415 *et seq.*, Paris, 1867; Schürer, *Gesch.* i. 583 *et seq.*; Mommsen, *Römische Gesch.* v. 544 *et seq.*; Schlatter, *Die Tage Trajans und Hadrians*, Gütersloh, 1897; *Magazin f. d. Wissenschaft d. Judenthums*; Derenbourg, *Quelques Notes sur la Guerre de Bar Kozeba*, in *Mélanges de l'École des Hautes Études*, Paris, 1878.

G. S. KR.

**BAR KOZIBA.** See BAR KOKBA.

**BAR MIZWAH** (literally, "the son of command," "man of duty"): Hebrew term applied to a boy on completing his thirteenth year, who has then reached the age of religious duty and responsibility. The name "Bar Mitzwah" occurs in B. M. 96a, where it is applied to every grown Israelite; but in the sense now used it can not be clearly traced earlier than the fourteenth century, the older rabbinical term being "gadol" (adult) or "bar 'onshin" (son of punishment); that is, liable to punishment for his own misdoings; see Rashi

**Religious Maturity.** Nid. 45b, on the word לענינים. The age of puberty being attained at about the fourteenth year, the boy that is over thirteen years of age has the power of making vows or of consecrating property to holy purposes (Nid. v. 6); he is held to account for his own sins, whereas a child before that age may die on account of his

father's sins (Midrash Zutta, Ruth, ed. Buber, p. 47; Yalk., Ruth, 600); and, according to some, the father's merit confers benefits upon the son only until he has reached his "pereh"; that is, the age of maturity (Tosef., 'Eduy. i. 14).

The solemnization of the attainment of the age of religious maturity takes place on the first Sabbath of the fourteenth year, when the Bar Mitzwah is called up (see 'ALIYAH) to read a chapter from the weekly portion of the Law, either as one of the seven men or as the eighth, where it is customary to read the closing chapter and the HAFṬARAH; and if he be unable to read, to recite at least the benediction before and after the reading, while the father offers silently the rather strange benediction: "Blessed be He who has taken the responsibility for this child's doing from me" (see Shulhan 'Aruk, Oraḥ Hayyim, ccxxv. 2, note of Isserles, and "Magen Abraham," cclxxxii., note 18).

This event is celebrated by joyous festivity, the Bar Mitzwah boy delivering on this occasion a learned discourse or oration at the table before the invited guests, who offer him presents, while the rabbi or teacher gives him his blessing, accompanying it at times with an address (see **Celebration of Event.** Solomon Luria, "Yam Shel Shelomoh" to B. K. vii. 37, and other authorities in "Magen Abraham," *l.c.*;

Löw's "Lebensalter," pp. 210-217, 410-412). Henceforth he is reckoned among the adults to fill the MINYAN, or required number of ten (Shulhan 'Aruk, Oraḥ Hayyim, lv. 9 *et seq.*). Regarding the time when the boy's initiation into his religious duties is to commence, when he is to begin putting on the tefillin, or when to fast on the Day of Atonement, see Yoma 82a; Shulhan 'Aruk, Oraḥ Hayyim, xxxvii. 3, cxvi. 2). Leopold Löw (*l.c.*) has shown that the Bar Mitzwah rite had become a fixed custom only in the fourteenth century in Germany.

Nevertheless there are many indications, overlooked by Löw, that its origin must be sought in remote antiquity. Samuel ha-Katan, at the close of the first century, gives in his saying on the Ages of Man in the Baraita attached to Abot v. 21 (see Maḥzor Vitry, p. 549) the completion of the thirteenth year as the age for the commandments ("le-mizwot"); and the commentary to the passage refers to Levi, the son of Jacob, who, at thirteen, is called "ish" (= man; Gen. xxxiv. 25). Simon Zemah Duran, in his "Magen Abot" to the Baraita, quotes a Midrash interpreting the Hebrew word יֵשׁ (= "this") in Isa. xliii. 21—"This people have I formed for myself, they shall pronounce [A. V. "set forth"] my praise"—as referring by its numerical value to those that have reached the age of thirteen. This seems to imply that at the time the Midrash was composed the Bar Mitzwah publicly pronounced a benediction on the occasion of his entrance upon maturity. This is confirmed by the Midrash Hashkem

**How It Originated.** (see Grünhut's "Sefer ha-Likḳuṭim," i. 3a): "The heathen when he begets a son consecrates him to idolatrous practises; the Israelite has his son circumcised and the rite of 'pidyon ha-ben' performed; and as soon as he becomes of age he brings him into the synagogue and school ('bet ha-keneset' and 'bet ha-mid-

rash'), in order that henceforth he may praise the name of God, reciting the 'Bareku' (Benediction) preceding the reading from the Law." Masseket Soferim xviii. 5 is even more explicit: "In Jerusalem they are accustomed to initiate their children to fast on the Atonement Day, a year or two before their maturity; and then, when the age has arrived, to bring the Bar Mizwah before the priest or elder for blessing, encouragement, and prayer, that he may be granted a portion in the Law and in the doing of good works. Whosoever is of superiority in the town is expected to pray for him as he bows down to him to receive his blessing." This then helps to illustrate the Midrash (Gen. R. lxiii.), which, in commenting upon the passage (Gen. xxv. 27), "and the boys grew," says: "Up to thirteen years Esau and Jacob went together to the primary school and back home; after the thirteen years were over, the one went to the bet ha-midrash for the study of the Law, the other to the house of idols. With reference to this, R. Eleazar remarks, 'Until the thirteenth year it is the father's duty to train his boy; after this he must say: "Blessed be He who has taken from me the responsibility [the punishment] for this boy!"' "Why is the evil desire ('yezer hara') personified as the great king? (Eccl. ix. 14). Because it is thirteen years older than the good desire ('yezer ha'tob')." That is to say, the latter comes only with the initiation into duty (Ab. R. N., A. xvi., B. xxx.; Midr. Teh. ix. 2; Eccl. R. ix. 15). According to Pirke R. El. xxvi., Abraham rejected the idolatry of his father and became a worshiper of God when he was thirteen years old. In the light of these facts the story related in Luke ii. 42-49, as observed by the elder Lightfoot, Wetstein, and Holtzmann in their commentaries to the passage, finds its true significance: The child Jesus when only twelve years of age, having not yet attained the religious maturity, joined, of his own accord, the teachers of the Law, and astonished all by his understanding and his answers, being, as he said, concerned only about the things of his Father in heaven (במלאכתו של הק"ב), "Wist ye not that I must be about my Father's business?". Compare with this what Josephus writes of himself: "When I was a child about fourteen years old, I was commended by all for the love I had for learning, on which account the high priest and principal men of the city came to me in order to know my opinion regarding the accurate understanding of points of the Law" ("Vita," 2).

In Morocco the boy becomes Bar Mizwah when he has passed the age of twelve years. He usually learns one of the Talmudical treatises by heart, and after he has passed an examination, the rabbis and the parnasim of the congregation, together with his relatives and friends, are invited to a dinner the Wednesday before the Sabbath on which he is to be "called up" to the Law. The following morning (Thursday), at the service which takes place in the boy's house, the chief rabbi puts the tefillin upon his arm, and his father those upon his head, while the choir accompanies the initiation rite with a hymn. He is then "called up" to the Law; and before the close of the service he delivers a discourse, partly in the vernacular, for the benefit of the women who are

present. The rabbis follow with a discussion, and the Bar Mizwah is then blessed aloud by the whole assembly. After this he goes around with his tefillin-bag, and first the men, then the women, and finally his parents throw silver coins into the bag, which he then presents to his teacher. A breakfast follows, in which all take part. On the next Sabbath, the Bar Mizwah reads the "Haftarah." When he is called up to the Law, a piyyut is recited, the text of which is given in the "Allgemeine Zeitung des Judenthums," 1839, p. 278, whence the above account has been taken. See also BANQUETS.

Regarding a strange custom of cutting a boy's hair when he became Bar Mizwah, see Abrahams' "Jewish Life in the Middle Ages," p. 144, note 2. For Bar Mizwah in modern times, see CONFIRMATION.

**BAR SHALMON** (בר שלמון): Legendary son-in-law of Ashmedai, king of the demons. Bar Shalmon, the scholarly and pious son of a rich merchant who had accumulated great wealth through maritime ventures, promised his father under oath, when the latter was on his death-bed, never to undertake a sea voyage. Indeed, the fortune accumulated by the old merchant was so considerable that it was not necessary for the son to expose himself to the dangers of the sea. A few years after his father's death, there entered the harbor of the city where Bar Shalmon resided a richly laden merchant vessel, the captain of which informed him that all its cargo of gold, precious stones, and other valuables were part of his father's estate abroad. Bar Shalmon learned further that this cargo represented but a very small part of his father's possessions in foreign lands; and he was earnestly requested to return in the ship in order to take possession of his inheritance. Bar Shalmon pleaded his inability to do so because of his vow. The captain declined to accept this excuse, on the ground that he believed Bar Shalmon's father to have been mentally incompetent at the time of his death, as evidenced by the fact that he had not alluded, even by a hint, to his vast treasures abroad.

After considerable parleying, Bar Shalmon permitted himself to be persuaded to break his oath; and he entered upon the voyage. As soon as the ship was upon the high seas, it sank with all on board, Bar Shalmon alone. **Breaks His Oath to His Father.** naked and destitute, being dashed by the waves upon a desert island. There he was pursued by a lion, and sought refuge in a gigantic tree, upon which there was perched a fierce vulture (ק'פופא, not to be translated here as "owl"). In his terror Bar Shalmon climbed upon the back of the bird, which was so astonished by its sudden burden that it remained motionless all night; and its fright increased when, in the morning, it saw clearly the man sitting upon it. In its

dismay the bird flew swiftly across the sea; and toward evening Bar Shalmon discerned land beneath him, and even distinguished the voices of children declaiming the verse of Exodus, "If thou buy a Hebrew servant," etc. (xxi. 2). Firmly believing that the country was inhabited by Jews, Bar Shalmon plunged from his great height to the ground. Bruised in all his limbs and exhausted by hunger, he crept to the synagogue, which he found locked. Introducing himself to a boy, with the words of Jonah, "I am a Hebrew; and I fear the Lord, the God of heaven" (Jonah i. 9), the latter conducted him to the rabbi. To Bar Shalmon's dismay, he learned that certain death now awaited him; for he had fallen into the realm of the demons (see DEMONOLOGY), who would surely kill him at sight. His prayers and lamentations, however, aroused the compassion of the rabbi, who promised to exert his influence in the wanderer's behalf. Concealing him in his house for the night, on the following morning he conducted him to the synagogue. With a noise like thunder and with the rapidity of lightning, thousands of demons flew into the synagogue; but, although conscious of the presence of a man, they remained quiet out of respect to their rabbi. When the *hazan* had completed the introductory psalms ("pesuke de-zimrah") the rabbi directed him to pause (this presupposes the Sephardic ritual; for according to the German *minhag* these psalms are an integral part of the regular prayers), and requested the congregation not to harm his charge.

After a long debate, during which the fact was emphasized that Bar Shalmon, the perjurer, was deserving of death, it was decided to bring the matter before King Ashmedai; whereupon the *hazan* declared that none should harm Bar Shalmon under penalty of excommunication. Ashmedai summoned a tribunal, the members of which were to decide whether, according to the Torah, Bar Shalmon was deserving of death. The judges found him guilty, and did not consider the death-penalty too severe for the perjurer. Ashmedai recommended, however, that execution be postponed for a day; and he kept Bar Shalmon at his house in order the more effectually to protect him. Meanwhile Ashmedai found an opportunity of making the closer acquaintance of Bar Shalmon, in whom he recognized a great scholar. The king promised to save him from death provided he would pledge himself on oath to impart all his wisdom to Ashmedai's son. Bar Shalmon agreed to this; and it was arranged that, before the execution, he should express the desire to be brought before the king, in order that the latter might as a scholar pass judgment on a point in Bar Shalmon's favor (compare ASHMEDAI). The arrangement was carried out; and Ashmedai announced publicly that Bar Shalmon had not broken his oath, inasmuch as he had believed that his father was mentally incompetent at the time of its exaction.

Bar Shalmon was now exonerated, and he received the position of teacher in the house of Ashmedai. Three years later, when the latter undertook a

campaign against a country which had revolted, he left Bar Shalmon at home as his representative, entrusting him with the keys of all the apartments in his palace excepting one. Bar Shalmon was curious to learn what this secret chamber contained; and, opening the door, he discovered the beautiful daughter of the king seated upon a splendid throne. The princess informed him that her father had long intended to bestow her upon Bar Shalmon, and that he was only waiting for the latter to sue for her hand. She further counseled him to plead his love for her in defense of his intrusion into the secret apartment, in case her father should reproach him for his breach of faith. Thus it came about that Bar Shalmon soon afterward married the princess; the wedding being attended not only by demons, but also by numerous animals and birds. The bridegroom was compelled to take a solemn oath that he married the princess solely because of his love for her, and that he would never desert her.

Bar Shalmon, however, felt a yearning for his seaport home which constantly increased in intensity, so that once, when he beheld the little son with which the princess had presented him, he sighed deeply, and his thoughts reverted to his other children. The princess questioned him as to the cause of his sadness, asking whether he had tired of her beauty or whether there was anything lacking to his happiness—a situation that vividly recalls the interview between Venus and Tannhäuser. When she found that his yearning for home could not be appeased, she granted him a year's leave of absence, after he had made both a verbal and a written oath to return within the appointed time.

A demon transported him to his former home in a single day, and upon his arrival there Bar Shalmon told his escort to inform the princess that he would never return to her. The princess at first refused to believe this report, and waited until the expiration of the year, when she despatched the same demon to Bar Shalmon to bring him back. Neither he nor the many other distinguished demons who were sent could prevail upon Bar Shalmon to keep his promise; and all the threats and exhortations of the princess were unheeded. Ashmedai now became enraged, and declared his intention of going in person to compel Bar Shalmon to return. The princess, however, pacified her father, and, accompanied by a great army of demons, proceeded herself in quest of her recalcitrant husband. Arrived at her destination, she at first despatched her son Solomon to his father; but his efforts were fruitless, Bar Shalmon refusing to return to the demons. The princess thereupon summoned him before the court, after she had rejected proposals of her followers to put her husband to death. The court decided that Bar Shalmon must either return with the princess or become divorced from her, in which latter case he must return her dowry (KETUBAH). Bar Shalmon thereupon disdainfully agreed to return all the wealth of the princess, so long as he should not be compelled to follow her. This so enraged the princess that she forthwith renounced her husband;

**He Deserts the Princess.**

requesting, however, as a boon, that she be permitted to kiss him before departing. He acceded to the request; but no sooner had their lips

**She Slays** met than Bar Shalmon fell dead, the Him. princess exclaiming: "This is the punishment for thy perjury and thine infidelity to God, thy father, and myself." Thereupon she returned to her own people, but left her son behind, fearing that his presence might remind her of his father.

The purpose of the legend, as evident from the narrative, is to inculcate the sacredness of an oath; nor can there be the slightest doubt as to its Jewish origin, the usual superscription, according to which it is represented as a translation from the Arabic, being evidently false. The statement that Abraham Maimon was the translator and even the author of the legend is likewise incorrect; for this Abraham—by whom probably no other than the son of Maimonides was meant—in all likelihood did not even believe in the existence of demons. It is probably true, however, that the legend originated in the circle of the Arabian Jews, as demonstrated by the many points of resemblance it bears to the "Arabian Nights," the similitude between the characters of the Jewish legend and the Jewish merchant Benesdra (בן עזרא) and his son Solomon in the "Arabian Nights" ("Les 1,000 Quarts d'Heure," Paris, 1715; German ed. by Dessauer, 1844, i. 497 *et seq.*), as Steinschneider observes, being especially striking. The names also seem to correspond somewhat; for "Bar Shalmon" in the Arabian version becomes "Solomon," who in the Ashmedai legend, again, is mentioned as the son of Bar Shalmon. Indeed, the name "Bar Shalmon" is itself to be suspected, and is probably corrupted from בר תלמיך (Bartholomæus). In Lev. R. vi. 3 a certain Bartholomæus is mentioned as an example of a perjurer.

The legend of Bar Shalmon, in the Hebrew literature known under the title "Ma'aseh Yerushalmi," belongs to the most widely popular stories of this class; and even to-day in Russia it is a great favorite with the children. There are three Latin and two German translations of it, and one in Judæo-German—a fact which furnishes the best proof of its popularity. There is besides an adaptation in French by Carlotta Patino Rosa, "Mitra, ou la Démone Mariée" (Padua?, 1745?).

**BAR YOKNI** (בר יוכני and בר יכני): A gigantic bird mentioned several times in the Talmud. An authority at the beginning of the third century, in relating a number of wonders, says that this bird was so large that once one of its eggs dropping from a height flooded sixty cities and shattered three hundred cedar-trees (Bek. 57b). In two other passages the egg and the bird are similarly used as examples of huge size (Yoma 80a; Suk. 5b, top). The Talmud identifies Bar Yokni with the ostrich, mentioned in Job xxxix. 13, and says that the bird lifts its egg from the place where it happens to lay it and flies with it at a great height until it reaches its nest,

where it puts it gently down (Rashi on Bek. *l.c.*; Rashi and Tos. on Men. 66b; compare Sifra, Wayikra, Nedabab, xiv. 13; ed. Weiss, 12b). The opinion that the bird was reserved for the food of the pious in Messianic times occurs only in Elijah Levita, Tishbi, *s. r.* יוכנה.

The name of the bird, "Bar Yokni" (Son of the Nest; "Yokni" = Arabic "wukanatun," nest), is probably due to a prevailing belief that the female ostrich does not sit upon her eggs, but merely lets them lie in the nest. Some scholars connect Bar Yokni with Vâraghna, the swiftest bird mentioned in the Zend Avesta; but the two do not resemble each other in their characteristics.

**BARABAS:** The principal character in Christopher Marlowe's "The Rich Jew of Malta," first produced at the Rose Theater, Bankside, London, in 1591, and entered in the Stationers' Books May 17, 1594. The rôle of *Barabas* was created by Edward Alleyn, the founder of Dulwich College. The play was revived in 1818 at Drury Lane Theater by Edmund Kean, but failed to secure popular approval. *Barabas* is an inhuman fiend, with an occasional lapse into humanity. His predominating traits are vicious ingenuity, intensity of vengeful emotions, a lustful love of gold, and a degenerate desire to kill. He is the embodiment of all that is thoroughly bad, and as a character-drawing must rank high—during the first two acts of the play almost as high as the Shakespearian *Shylock*. The latter—harsh though his methods be—seeks payment of a just claim; *Barabas* seeks revenge on all humanity—Christian, or Turk, or Jew. He prostitutes his own daughter and uses her as a bait for which her two lovers fight to the death. *Shylock* has some nobility of character; *Barabas*, none. His money and estates confiscated by the governor of Malta to pay an overdue indemnity to the Turks, *Barabas*, who has hidden the greater part of his gold and jewels in his former home, induces his daughter, *Abigail*, to feign conversion to Christianity, that she may reenter the home, now a cloister, to obtain the hoard. When *Abigail* protests, *Barabas* reassures her with:

"... Tush!

As good dissemble that thou never mean'st  
As first mean truth and then dissemble it:  
A counterfeit profession is better  
Than unseen hypocrisy."

Having obtained the hoard, *Barabas* buys a palace to shame the Christians, and plots vengeance against the governor of Malta and incidentally against *Mathias*, the Christian lover of *Abigail*. By means of a forged letter he brings *Mathias* and *Lodowick*, son of the governor, into a duel, in which both die. When *Abigail* learns of her father's deed, through his slave *Ithamore*, she turns Christian and retires to the nunnery, her former home. On hearing this, *Barabas* sends poisoned broth to the nuns.

*Abigail*, dying, confesses her father's villainy to the two friars, *Jacomo* and *Bernardine*, and they become the next victims of *Barabas*' wrath. He lures *Bernardine* into his home by promises of money, and, aided by *Ithamore*, strangles him. Then he places

the dead body in a natural attitude. When *Jacomo* arrives he becomes jealous of his brother friar and brains him. Thereupon *Barabas* turns him over to the authorities, who hang him on a charge of murder.

In the mean time *Ithamore* has been ensnared by *Bellamira*, a courtesan; and to her and her lover, *Pilia-Borza*, he confesses. They seek to blackmail *Barabas*; and he kills them by means of poison sprinkled on flowers. When taken into custody, he swallows a sleeping-draft of "poppy and cold mandrake juice." He is left for dead, and betrays the city into the hands of the Turks, who make him governor.

*Barabas'* next desire is vengeance on the Turks, the prime instigators of his troubles. He invites their commander-in-chief to a banquet, prepared in a room so built that by the cutting of a rope all in the room would be precipitated into a caldron of boiling oil. As the Turks arrive, *Ferneze*, the ex-governor of Malta, cuts the rope, and *Barabas* is thrown into the caldron, from which, dying, he exclaims:

"Die, life! fly, soul! tongue, curse thy fill, and die!"

Such is *Barabas*, the embodiment of devilishness. It is only fair to say that three of the Christian characters in the play—the two friars and the courtesan—are fully as repulsive as *Barabas*. Remarkable as was Marlowe's perception of human nature, his knowledge of Hebrew nomenclature was decidedly defective; for in Act 1, *Barabas* indicates other Jews by such names as "Zaareth," "Temainte," "Nones," and "Kirriah."

**BARABBAS**: Prisoner of the Romans released by the procurator Pontius Pilate. The reason for his incarceration is given differently in various books of the New Testament. In Matt. xxvii. 16, he is called "a notable prisoner"; according to Mark xv. 7, and Luke xxiii. 19, he had been implicated in some insurrection and had committed what was known to the Romans as murder; John xviii. 40 represents him as a robber. According to the New Testament account there was a custom to release, at the request of the people on the day preceding the festival of Passover, one prisoner condemned to punishment. When they were given the choice between Barabbas and Jesus after the latter had been condemned, they selected Barabbas, possibly on the ground that he had been engaged in an insurrection against the Romans. Brandt, following Jerome on Matt. xxvii. 16, who quotes the gospel of the Hebrews as containing the explanation of Barabbas as "filius magistri eorum," gives as the reason that, being the son of a rabbi or teacher, he was popular among the people. This assumes that "Abba" is used in the name "Barabbas" as a common noun, whereas "Abba" is found as a prænomen as early as tannaitic times (Yeb. 15a). If "Abba" were merely a title of Barabbas' father, his name could not have been simply "Son of Abba." In fact Origen reports that in several manuscripts of the Gospels he had seen the name given as "Jesus Barabbas" or "Jesus,

II.—33

son of Abba." Accordingly, the first name was afterward omitted from the manuscripts of the Gospels when the name of Jesus had become sacred. Chajes (in Hilgenfeld's "Zeitschrift," xliii. 280) thinks of the Talmudical name בִּרְכִי (Mak. 5b), which, however, still awaits a satisfactory explanation.

With regard to the Roman custom of selecting a mock king who should die, and another who should represent the local deity and have all the privileges of a sacred person, compare Philo, "In Flaccum," §§ 5, 6; Fraser, "The Golden Bough," 2d edition; and article JESUS.

**BARACH, M.** See MAERZROTH.

**BARACH, ROSA**: Austrian authoress and educator; born at Neu-Rausnitz, Moravia, May 15, 1841. Educated at her native place and at Vienna, she settled in the latter city, where she founded a high school for girls. In 1882 she made a professional tour in Germany as a reciter. She published the following novels: "Aus Eigener Kraft," 1880; "Soldaten Fritz," 1881; "Gefesselt," 1882; "Liebesopfer," 1884; "Aberglauben," 1890; "Stiefmütterchen," 1892; "Alle Drei," 1893. She wrote also: "Aus Oesterreichs Herzen," patriotic songs, 1882; "Franz Josef I.," a biography of the Austrian emperor, 1889; "Ein Abend Unter Freimaurern," a sketch, 1893.

**BARAFFAEL (BARUFFALL), ISAAC**: Italian officer and communal worker; lived in Rome at the end of the eighteenth century and the beginning of the nineteenth. On the occupation of Rome by the French, Baraffael was appointed major of the national forces on March 18, 1798. After the reconquest of the city by the Neapolitans and their allies, when a heavy tribute was exacted from the Jews, Baraffael paid 700 scudi (about \$700). In 1811 he was elected deputy-representative of the Jewish community of Rome.

**BARAITA** (plural *Baraitas*; Hebrew plural, *Baraitot*): An Aramaic word designating a tannaitic tradition not incorporated in the Mishnah; later it was applied also to collections of such traditions ("Barayata," plural of Baraita). The Aramaic form is בְּרִייתָא, which in an old manuscript in Grünhut, "Sefer ha-Likkutim," ii. 20b, is vocalized בְּרִייתָא ("Barayta"). The form frequently used, "Boraitha" or "Boraita," is certainly erroneous; for it assumes the rendition of "kamez" by both "a" and "o" in the same word. The word means "the outside" מִתְּנִיתָא or tradition, and is probably an adaptation of the Neo-Hebraic term

**Definition.** "sefarim ha-hizonim" (outside books), denoting the Apocrypha (employed by so early a teacher as Akiba, Sanh. x. 1). The relation of the Baraita to the Mishnah is thus represented as similar to that of the Apocrypha to the canonical Biblical writings.

Another explanation of the term "Baraita" is the following: The Mishnah—that is, the collection of tannaite traditions compiled by Judah ha-Nasi—formed the authoritative subject of instruction in both the Palestinian and the Babylonian academies; whereas the Baraitas were taught in private schools for the academies (Sherira, "First Letter," ed. Neubauer, p. 14). Now these preparatory schools, existing alongside the academies, were designated by the term "bara" (the outside) (Shab. 106*a*; Bezah 12*b*; Yeb. 77*b*; Sanh. 62*b*); and later in Babylonia they were called "tarbiza" (Isaac Halevy, "Dorot ha-Rishonim," iii. 226, was probably the first to prove the identity of the tarbiza with the bara). A Baraita, accordingly, is teaching delivered in such schoolhouses. A point in favor of this explanation is that it makes clear also the striking designation for the teacher of a Baraita, "tanna bara," instead of "tanna baraya," the proper form of an adjective. Thus "tanna bara" is neither more nor less than a "tanna of the bara" (outside school); and his teaching is the Baraita. The fact that the Yerushalmi (Pes. vii. 34*a*; Hallah iv. 59*d*; Yoma vi. 43*d*) has "tanna baraya" does not disprove this explanation, as the adjective "baraya" merely means "belonging to the bara."

Whatever may have been the original meaning of the word "Baraita," it is certain that in the Babylonian Talmud it designates the most varied kinds of tannaite traditions not contained in the Mishnah, such as SIFRA, SIFRE, MEKILTA, and TOSEFTA. In the Talmud Yerushalmi, "Baraita" rarely occurs, but it is not wholly lacking as Frankel maintains ("Mebo," 12*a*); see, for instance, Yer. Niddah iii. 50*d*. According to Weiss ("Dor," iii. 3), Yerushalmi once gives the Hebrew equivalent "Mihuzah" for the Aramaic "Baraita." His statement—which he fails to verify by any reference—is, however, scarcely correct. (The expression "mishnah ha-hizonah" occurs in Num. R. xviii. 21, a work which, in its present form, is hardly older than the twelfth century; in 'Aruk, s. v. מִיְּזָה, and s. v. קִרְיָה; in the writings of the Karaite, Judah Hadassi; in those of Judah of Barcelona, and in Halakot Gedolot.

The contents of a Baraita are either haggadic or halakic, more frequently the latter; but the proportion of Haggadah to Halakah in the Baraita is quite different from their proportion to each other in the Mishnah. For, while the Mishnah rarely gives haggadic matter, the Babylonian treatise Berakot alone cites fifty Haggadot from the Baraita. The halakic

Baraitas are either purely halakic or Midrashic-halakic; that is, they either **Nature and Sources.** simply state a law independently of Scripture, or deduce legal decisions from some passage in the Bible by means of certain hermeneutic rules. The sources used by the Talmud, especially for the halakic Baraitas, are the extant halakic Midrashim, Mekilta, Sifra, Sifre, Sifre Zutṭa, Mekilta de R. Simon, and Mekilta on Deuteronomy (the last three only partially preserved in manuscript form), as well as various tannaitic collections which did not survive the redaction of the Talmud and of which nothing is now known. To

these lost Midrashic collections, which were still in existence at the time of the Amoraim and were the sources for a large number of the halakic Baraitas, belong the following: first, those named after the originator from whose school they issued, as the Baraita collections of R. Simon, of R. Eliezer b. Jacob, and of R. Ishmael (the last is often called "The Baraita of the school of R. Ishmael"); then those which are named after their last redactor; e. g., R. Hiyyah, R. Hoshaya, and R. Hizkiyah, the last of whom may be regarded, if not as a tanna, at least as a semi-tanna (see BAR KAPPARA), and whose collection marks the transition from the tannaitic to the amoraic Baraita collections. Concerning the older pupils of Rabbi—namely, Bar Kappara, Levi, Abba Arika, and Samuel—it is known that they collected Baraitas and arranged them according to the Orders of the Mishnah (for instance, Kid. 76*b*; B. B. 52*b*, where the Baraita collection of Levi is cited as the "Kiddushin debe Levi"; see Rashbam, *ad loc.* But compare also I. Halevy, "Dorot ha-Rishonim," ii. 119–161).

The great mass of traditional matter presented by these widely varying Baraita collections may be separated into two large divisions—the pre-Mishnaic Baraita and the post-Mishnaic. The **Tannaitic Baraita Collections.** origin and development, form, and contents of the two are so essentially different that they may be readily distinguished. Even in the first arrangement of the Mishnah made by the pupils of Shammai and Hillel in the time of the Temple, considerable portions of the traditional subject-matter were omitted. Thus, as was noted by Sherira (First Letter, ed. Neubauer, p. 16), the Talmud ('Er. 19*a*) speaks of a Baraita of the school of R. Johanan b. Zakkai, which can be taken to mean only that so far back as the time of Johanan b. Zakkai certain things were excluded from the authoritative teachings, which, nevertheless, continued to be transmitted. When Akiba undertook for the first time a comprehensive and systematic collection of the traditional matter, much was omitted by him, not only through his frequent and intentional disregard of the old Halakah, but for the purely economical reasons that he had to limit himself to a selection from the vast amount of material at hand. According to a Talmudic passage, not to be taken literally, but doubtless containing a foundation of fact, Eliezer b. Hyrcanus alone transmitted 300 Halakot in a special case (Sanh. 68*a*). Most of the tannaim of Akiba's time, like Ishmael and Abba Saul, also occupied themselves with collections and arrangements of the old traditions; and their collections, as well as those of others from which very many Baraitas are derived, have been preserved in more or less lengthy fragments. Unfortunately, Akiba's peculiar hermeneutics undid much of the good accomplished by his methodology; and, indeed, his pupils, R. Meir, R. Judah, R. Simon, and R. Nehemiah, felt themselves compelled to modify essentially the collection begun by him; and in the process many old Baraitas were again excluded.

The redaction of the Mishnah by Judah ha-Nasi, which followed, was based chiefly on R. Meir's recension of Akiba's Mishnah. It was owing to the

great authority with which Rabbi's redaction became invested, that that branch of literature was produced to which later usage gave the name "Baraita." The vast amount of

**Effect of the Mishnah.** Hillel's activity—possibly from earlier generations—to the time of Judah

ha-Nasi was divided into two groups by his Mishnah. It excluded from its contents nearly the whole halakic Midrash. Since the Mishnah is concerned chiefly with judicial statements, and not with causes, the reason for a Halakah and the means by which it was produced remain for the most part unknown. Often no regard is paid in the Mishnah to the opinions of individual authorities; the most recognized and most wide-spread view is adopted as law; and, even where varying opinions are cited, the editor omits, in most cases, the prolix discussions of his predecessors.

The halakic Baraitas, therefore, if only those up to the time of the Mishnah are regarded, consist of tannaite traditions of the school of Shammai, which were neglected even by Akiba in his Mishnah, and naturally were still less heeded by Judah ha-Nasi. To give an example: In the Mishnah the rule **אין שליח לדבר עברה** ("One can not constitute another a representative ["messenger"] for a crime") obtains (see ACCESSORY); whereas a Baraita (Kid. 43a) has preserved the following tradition: "Shammai taught, 'If some one bade a person, Go and kill so-and-so, he (the sender) has incurred the death-penalty.'"

Another highly characteristic instance **Halakic Baraitas.** is the following: The pharisaic conception, according to which the Biblical *lex talionis* is valid only in case of murder, while for other crimes money compensation satisfies the law, was no longer an open question for the Mishnah. Hence, while the Mishnah (B. K. viii. 1) begins by determining the damages for bodily injuries, it is learned from a Baraita (*ib.* 84a) that this principle was not recognized by the school of Shammai, and that Eliezer b. Hyrcanus still upheld the old Sadducean view of the *lex talionis* (compare Mek., Mishpatim, 8; Geiger's "Nachgelassene Schriften," v. 162).

It is evident, then, that the Baraita not infrequently gives the old Halakah, while the Mishnah gives the later development (see BARAITA DE-NIDDAH). In the above-mentioned Talmud passage (B. K. 83b, 84a), ten Baraitas and MEMRAS present ten different Midrashic reasons for the principle concerning money compensation for bodily injuries which the Mishnah assumes to be self-evident. This furnishes an example of the wealth of the halakic Midrash in the Baraita, contrasted with its comparative absence in the Mishnah.

As has already been observed, some of these halakic Midrashim have been preserved; but the purely halakic Baraita collections—*i.e.*, those without Midrashic support from Scriptures—were completely supplanted by the Mishnah, and, with the exception of a few citations in the Talmud, they have entirely disappeared.

The same was the fate of the haggadic Baraitas; for it is highly probable that even Akiba, or at least his disciples, began Haggadah collections,

arranged according to a certain system. The Book of Jubilees, as well as scattered haggadic Baraitas, furnishes plausible grounds for the supposition that homiletic elucidations and legendary amplifications based on the Bible text existed at a very early time. From such Haggadah collections many of the haggadic Baraitas cited in the Talmud and the Midrash were drawn, and there are numerous indications that haggadic opinions were early arranged by numbers (see BARAITA OF THE FORTY-NINE RULES), from which, probably, many Baraitas in numerical form have been derived (see, for instance, Ber. 3a, 3b, 10b, 43b, and many others enumerated by Weiss, "Dor," ii. 240).

Though the old Baraita, as has been shown, is not only quite independent of the Mishnah, but entirely different from it in character and contents, the distinguishing feature of the later Baraita, which originated among the disciples of Judah ha-Nasi, is its constant relationship with the Mishnah. Explanations and elucidations of the Mishnah, supplements to it, and opposing opinions were all contained in the Baraitas of Hiyiah, Levi, Bar Kappara, and the other pupils of Rabbi. To give an idea of these Baraitas, the following may serve as an example: The first Mishnah (Ber. i. 1), which gives the time set for the reading of the Shema', certainly originated in the period preceding the destruction of the Temple; and the time-limits which it sets for this reading were actually unintelligible and pointless at a later date. Judah ha-Nasi, who desired his Mishnah to be a text-book for instruction rather than a code of laws, preserved the old formula for the time of the Shema'-reading current in the academies. Not so Hiyiah, who in his Baraita changed the formula of the Mishnah in accordance with the conditions prevailing in his day (Yer. Ber., beginning).

At the first blush, these post-Mishnaic Baraitas frequently give the impression of presenting something quite new. Closer examination, however, reveals the fact that general rules laid down in the Mishnah are given a special application in the Baraita. The Talmud relates that an amora of the second generation made an interesting wager that he would give the source in the Mishnah of every teaching in a Baraita whose author was a disciple of Judah ha-Nasi (Ket. 69b). Cases in which these Baraitas present a view differing from that of the Mishnah are not very frequent; but they often give opinions disregarded in the Mishnah, at the same time naming the authority for them together with the opinion which the Mishnah holds to be the standard. The origin of these Baraitas, then, is not to be sought in any feeling of opposition to the Mishnah—though this may have played some part—but rather in a desire to supplement that work. Various passages of the Talmud, in fact (Naz. 52b; B. M. 51a), create the impression that the disciples of Judah ha-Nasi were prompted to undertake their work by Rabbi himself.

Of these Baraita collections only fragments have been preserved in the Talmuds and Midrashim; and probably the Tosefta was in part prepared in accordance with them.

The diverse origins of the Baraitas explain the varied estimation put upon them during the period

of the Amoraim, and its unequal influence upon the development of the Halakah. The time of the first amora'im was a time of conflict between the Mishnah and the Baraita; but at so early a period as that of the most prominent Palestinian amora'im of the second generation the rule had been established that the teachings not officially delivered in the academies could not lay claim to authority (Yer. 'Er. i. 19b). In the same spirit was the rule

**Authority of the Baraita.** embodied in the collections of Hiyyah and Hoshaya (Hul. 141a *et seq.*); for

these were the only Baraita collections taught in the academies (Sherira, First Letter, ed. Neubauer, p. 15). But even these favored Baraitas possessed authority only in so far as they did not clash with the Mishnah (for numerous instances see Sherira, *ib.*).

Cases in which the Talmud sides with the Baraita in opposing the Mishnah are very rare; indeed, only one such case can be adduced with certainty (Lampronti, "Pahad Yizhak," i. 52). Nevertheless, certain amora'im gave special attention to the study of the Baraita. The principal of these in Babylonia were Sheshet and Joseph b. Hiyyah, of the third generation of amora'im, who prided themselves on their knowledge of the Baraita ('Er. i. 67a; compare also the remark of R. Joseph in Git. 6b). In general, however, the Babylonians did not possess so intimate a knowledge of the Baraita as did the Palestinians, who could state the origin and development of each Baraita with exactitude. If, nevertheless, some Baraitas remained unknown to the Palestinians, though familiar to the Babylonians, it was due to the fact that independent Halakot collections were made in Babylonia, prior to the redaction of the Mishnah, which never became widely known in Palestine (Sherira, *ib.* p. 16). Weiss, however, is not quite right in asserting ("Dor," iii. 32) that the many scholars during the amoraic period, who are called "Tannaim" and are referred to in the Talmud as "arrangers of 'Mishnayot' before the Babylonian scholars," were those who carried the Baraitas from Palestine to Babylonia (I. Halevy, "Dorot ha-Rishonim," iii. 4, 5; see also TANNAIN). They, in fact, were the very ones who transmitted numerous Halakot and halakic Midrashim, which remained wholly unknown to the Yerushalmi, and for whose sources the Palestinian Baraita collections might have served just as well as the Babylonian.

In post-Talmudic times, "Baraita" came to be the general designation of those works which either originated or were claimed to have originated in the time of the Tannaim. Hence, in a wider sense, the word can be applied to the Tosefta and the halakic Midrashim.

It is probable that the Geonim and later generations of scholars were acquainted with some Baraita collections now unknown. Hai Gaon reports that he saw in the possession of an old scholar supplements to the Mishnah ("Sha'are Teshubah," 1858, No. 143). A Baraita on the stones in the "hoshen" (breastplate) and "ephod" and on the "degallim" (banners) was consulted by so late a writer as Maimonides, but seems now to be entirely lost (Epstein,

"Mi-Kadmoniyot," pp. 83-90; compare MISHNAH, MIDRASH, TOSEFTA.

L. G.

**BARAITA ON THE (TREATISE) ABOT** (בריתא דאבות), called also **Perek R. Meir**; and **Perek Kinyan ha-Torah** ("Chapter About Acquisition of the Law"): A Baraita consisting of eleven paragraphs on the excellences of the Torah and on the right way to become acquainted with it. This Baraita claims to be a supplement to the treatise Abot, having as a superscription the words: "The sages taught ["shanu hakamin"] in the language of the Mishnah." The first part of the sentence, "The sages taught," shows that this section constitutes a Baraita which in the Talmud is cited with the formula, "The sages taught."

The Baraita mentions, besides R. Meir, author of the first sentence (whence the Baraita is known by his name), Joshua b. Levi, Simon b. Menasia, José b. Kisma, and Simon b. Yoḥai, whose teaching was transmitted by Simon b. Menasia or, as some versions have it, by Simon b. Judah. The mention of the amora Joshua b. Levi in a work claiming tannaite origin justifies the supposition that the redaction of this Baraita is of comparatively recent date, belonging to a time in which there no longer existed an exact knowledge of the chronology of the Tannaim and Amoraim. Most of the sayings of this Baraita, with greater or slighter variations, occur in the Babylonian and the Palestinian Talmud, and in different Midrash collections, in such a way as to make it apparent that the Baraita de-Abot is more recent than these works. Coronel, in his "Hamishah Kun-fresim," published (Vienna, 1864), from a manuscript, a Gemara to this Baraita which was known to many of the old authorities (compare KALLAH). In the edition of the Talmud by Romm, of Wilna, the Gemara is reprinted. In the middle of the ninth century, however, the Baraita already formed a part of the treatise Abot, and was recited with it in the synagogue on the Sabbath afternoon (Sar Shalom Gaon, cited in "Siddur R. Amram," 30a). This was the custom later, also, both in the Spanish and the German rituals.

For the criticism of the text special regard must be paid to the seventeenth chapter of the Tanna debe Eliyahu Zutṭa, in which the Baraita is given in its entirety, but with different textual readings. The following two sayings may serve to illustrate its character: "Every day a voice goes forth from Mount Horeb and cries out, saying: 'Wo unto the creatures [mankind] for the insult they offer to the Law'" (ii.). "Seek not greatness for thyself, and desire not honor. Practise more than thou learnest. Lust not for the table of kings: for thy table is greater than their table, thy crown greater than their crown; and faithful is thy taskmaster who will pay thee the wage of thy work" (v.).

Under the title "Baraita Kinyan Torah" R. Noah Hayyim (Warsaw, 1874) made a collection of all the passages in the Midrashic and Talmudic literature bearing upon this Baraita. "Baraita de-Abot" is a designation also for ABOT DE-RABBI NATHAN.

**BIBLIOGRAPHY:** Since most editions and translations of *Abot* contain this Baraita, see the bibliography to ABOT; compare also Baer's prayer-book, *Abodat Yisrael*, pp. 289 *et seq.*; Zunz, *G. V.* 2d ed., pp. 122, 438.

**BARAITA OF R. ADA** (בריתא דר' אדא): A Baraita on the calendar. The only one who speaks of such a Baraita is Abraham b. Hiyya ha-Nassi ("Sefer ha-'Ibbur," iii. 4), to whom probably are to be ascribed the words on the Baraita which occur in the commentary by Obadiah b. David on Maimonides' "Hilkot ha-Hodesh," x. Abraham b. Hiyya does not seem to have believed that the Baraita originated in Talmudic times, but rather that it was composed at the end of the gaonic period. This is probably true, and does not prejudice the question of the origin and age of the so-called "Tekufat R. Ada," concerning which compare CALENDAR.

L. G.

**BARAITA OF R. ELIEZER** (בריתא דר' אליעזר): The customary name for the PIRKE R. ELIEZER among the older scholars, as Rashi and in the 'Aruk. Some recent scholars follow their example in using this title.

J. SR.

L. G.

**BARAITA OF R. ELIEZER** (more exactly OF R. ELIEZER B. JOSE HA-GELILI). See BARAITA OF THE THIRTY-TWO RULES.

**BARAITA ON THE ERECTION OF THE TABERNACLE** (בריתא דמלאכת המשכן): A Baraita cited several times by Hai Gaon, by Nathan ben Jehiel in the 'Aruk, as well as in Rashi, Yalkut, and Maimonides. Rashi calls it a Mishnah. It treats in fourteen sections (in the Munich MS., sections i. and ii. constitute one section) of the boards (sec. i.), woolen carpets (ii.), and carpets made of goat-hair (iii.), the curtain (iv.), the courtyard (v.), the Ark of the Covenant (vi.-vii.), the table (viii.), the candlestick (ix., x.), the altar of incense (xi.), the goblets (xii.), the Levitical services (xiii.), and the wandering in the wilderness (xiv.). The authorities mentioned in this Baraita are: Rabbi (Judah ha-Nasi I.), José, Nehemiah, Judah, José b. Judah, Judah b. Lakish, Eliezer, Abba Saul, Meïr, Joshua b. Korha, Isi (= Isai) b. Judah, Nathan, Simon b. Yohai, and a pupil of Ishmael not otherwise designated.

With the exception of Isi b. Judah and Judah b. Lakish, no authority is here mentioned whose name does not occur in the Mishnah; and these two are as old as Rabbi, the author of the MISHNAH. From this fact, and from the fact that many teachings of the Baraita on the Erection of the Tabernacle are cited in the Talmud with the formula "de-tania" or "tanu rabbanan" (see proofs in Flesch, p. 7), it may be assumed that this Baraita was available to the Amoraim in a fixed form. It is questionable, however, whether the redactor of the Mekilta and the redactor of the Sifre drew upon this Baraita. Mekilta Beshallah, introduction (30b, ed. Weiss), seems to have preserved the Haggadah on the seven clouds in the wilderness in an older form than that given by the present Baraita in section xiv. It is true that this very section may not pertain to the real Baraita; yet it is quite possible that Sifre, Num. 59, originated from section x. of the Baraita.

Lewy inclines to the supposition that the Baraita was originally a constituent of the Mekilta of R. Simon. But an argument against such a hypothesis is the fundamental difference in the two writings; the Baraita containing almost no Midrash, while the Mekilta is composed chiefly of halakic Midrash. The same reason may serve to refute Brüll's view ("Jahrbücher," v. 134 *et seq.*, and "Central-Anzeiger für Jüdische Literatur," p. 32), according to which the Baraita is an addition to the Mekilta.

The text of the Baraita is in general free from interpolations (the words of Isi b. 'Akkabyah in section x. do not occur in the Munich MS.; they found their way later into the Baraita from Men.

**Elements of the Baraita.** 29a). Nevertheless, the last two sections seem to be later additions from another Baraita (they occur already in Rashi), which is indicated by the haggadic character of the two sections, and by the fact that the author of "We-Hizhir," who copied the Baraita in full, omitted them—probably because he did not know of them. There is much in favor of the view of Grünhut and, before him, of Hayyim M. Horowitz, in "Tosefta 'Attikata," i. 7, that both sections were constituents of the "Baraita of the Forty-nine Rules." It is especially noteworthy that the numbers "four" and "seven" are the ones on which the sections hinge.

**BARAITA OF THE FORTY-NINE RULES** (בריתא דארבעים ותשע מדות); usually written רמ"ט מדות: Rashi, the Tosafists, Abraham ibn Ezra, Yalkut, and Asher ben Jehiel mention a work, "Baraita of the Forty-nine Rules," and make citations from it (thus, Rashi, ed. Berliner, on Ex. xxvi. 5; Yalk. Gen. 61, calls it "Midrash"; Rashi on Ex. xxvii. 6 calls it "Mishnah"). Ibn Ezra ("Yesod Moreh," ed. Königsberg, 6a) mentions R. Nathan as the author of the Baraita. Zunz showed, by referring to a number of

passages in the Talmud, that the tanna R. Nathan, in the Halakah as well as in the Haggadah, was accustomed to group things arithmetically, and to arrange his sayings accordingly. On this observation, Zunz based the conjecture that "this lost work of R. Nathan contained a large portion of his Mishnah, and was arranged in rubrics from one to forty-nine; so that each rubric, under the introductory formula "Middah," mentioned halakic, haggadic, and, in general, scientific subjects which belonged in that particular place in regard to number" ("G. V." 2d ed., pp. 95-97).

From the few fragments of this Baraita preserved by the above-mentioned authors, only one fact pertaining to its character can be ascertained, viz., that it contained haggadic (Yalk. *l.c.* on the seventy nations) as well as halakic matter, especially such portions of the Halakah as are concerned with exact measurement; for instance, the measurement of the Tabernacle and its furnishings (Rashi, *l.c.*). If from these short fragments an opinion could be formed concerning the composition of the Baraita, Zunz's assumption would be justified that it contained Haggadah and Halakah numerically arranged. Another assumption of his, however, that it represents the "Mishnat R. Nathan" mentioned elsewhere, is highly improbable; R. Nathan's Mishnah was in all likelihood only a version of Akiba's Mishnah differing from the authoritative Mishnah. Against Zunz's opinion, compare Eliakim Milsahagi, "RABIII," pp. 4b, 7b.

Steinschneider believed that he had put an end to all conjecture concerning the Baraita through a happy find. In the introduction to an edition of the "Mishnat ha-Middot, die Erste Geometrische Schrift in Hebräischer Sprache" (Berlin, 1864), he maintains

that this mathematical work, edited by him, is identical with the Baraita under consideration. Were this the case, the "Mishnat ha-Middot" Baraita would be a product of the ninth or, at the earliest, of the eighth century, and its birthplace would have to be Babylonia. For, although the scientific terminology of this, the oldest, mathematical work of the Jews shows its origin to have been in a time previous to Arabic influences on Jewish scholarship, yet expressions like חץ = Arabic *ṣāḥ* ("arrow") for *sinus versus*, or משיחה = Arabic *ṣāḥ* for measure, area, show that the work could not have been written before the contact of the Jews with the Arabs.

But Steinschneider's assumption can hardly be supported. The "Mishnat ha-Middot" has nothing in common with the Baraita cited by the old scholars under that name: for the citations leave no doubt that the Baraita, even in its mathematical parts, was founded on the Bible; whereas the "Mishnat ha-Middot" is a purely secular work, and, possibly, it drew upon the same source as did Mohammed b. Musa, the oldest Arabic mathematician. The plea that the "Mishnat ha-Middot" has not been preserved in its entirety, and that in its original form there were references to the Bible for special points, is of no weight, since it is absolutely incomprehensible that haggadic or halakic matter should fit into the frame of the work as it now is.

The same reason demolishes the hypothesis of

the German translator of the "Mishnat ha-Middot" ("Abhandlung zur Geschichte d. Mathematik," in Supplement to "Zeitschrift für Mathematik und Physik," 1880; H. Schapira, "Mishnat ha-Middot . . . ins Deutsche Uebersetzt"), who assumes that there was a Mishnah with the Gemara on it, and that citations of the old scholars refer to the Gemara, whereas the printed text represents the Mishnah (compare the tanna NATHAN, and BARAITA ON THE ERECTION OF THE TABERNACLE).

**BARAITA ON THE HEAVENLY THRONE** (בריתא מפרקי מרכבה): See MA'ASE MERKABAH.

**BARAITA OF R. ISHMAEL** (בריתא דר' ישמעאל): A Baraita which explains the thirteen rules of R. Ishmael, and their application, by means of illustrations from the Bible. The name is inaccurately given also to the first part of the Baraita, which only enumerates the thirteen rules. The Baraita constitutes the introduction to the Sifra, and precedes it in all editions, containing principles which in the Sifra are given their application. The Baraita probably originated in the school of R. Ishmael; and in this regard the name is not wholly erroneous. For details see ISHMAEL, TANNA, and HERMENEUTICS. The HEKALOT are also called by some the "Baraita of R. Ishmael."

J. SR. L. G.  
**BARAITA OF R. JOSE** (בריתא דר' יוסי): Name given by some of the old scholars to the SEDER 'OLAM RABBAH. Concerning another Baraita of the same name, see Brüll, "Jahrbücher," v. 99. J. SR. L. G.

**BARAITA OF JOSEPH B. UZZIEL** (בריתא דיוסף בן עזיאל): A cabalistic Baraita, several times mentioned by Recanati. It is in manuscript form at Oxford, and is a commentary to the SEFER YEZIRAH (compare JOSEPH B. UZZIEL). J. JR. L. G.

**BARAITA OF JOSHUA B. LEVI** (בריתא דר' יהושע בן לוי): See "Revelation of Joshua b. Levi," in article APOCALYPTIC LITERATURE, NEO-HEBRAIC, § 5. J. SR. L. G.

**BARAITA ON THE MYSTERY OF THE CALCULATION OF THE CALENDAR** (בריתא דסוד העיבור): A Baraita cited in the Talmud (R. H. 20b). Since special care was taken to keep it secret, it has not been preserved; but it is probable that the BARAITA OF SAMUEL incorporated a considerable portion of it. The Talmud citation from this Baraita has completely puzzled the commentators, as well as modern students of the Jewish calendar; and despite many attempts to explain it, it remains obscure. Compare CALENDAR.

BIBLIOGRAPHY: Slonimski, in *Ha-Maggid*, 1864, p. 166; idem, *Yesode ha-Tibbur*, 2d ed., pp. 55, 56. J. SR. L. G.

**BARAITA DE-NIDDAH** (בריתא דנדרה):

This Baraita, expressly mentioned by Nahmanides, and probably known to the Geonim and the German-French Talmudists of the thirteenth century, was until recently supposed to be lost. It was not published until 1890, when it was edited and provided with an elaborate introduction by H. M. Horowitz. He gives it in seven recensions, most of which contain only portions of the Baraita, only one manuscript containing the complete Baraita.

The Baraita consists of Haggadah and Halakah relating to the Biblical and post-Biblical precepts in regard to the Niddah (Lev. xv. 19-33). The prolix, and in a certain sense exhaustive, introduction does not succeed in clearing away the obscurity which envelops everything concerning the Baraita. The Baraita mentions about twenty-five tannaim and as many amoraim, among whom, it is noteworthy, there is not one Babylonian. Its origin, then, is assured as Palestinian; but this is the only certain point. There are facts mentioned in the Baraita which clearly indicate a time when any idea of the chronology of the Tannaim and Amoraim was lacking. Akiba is represented as conversing with Rabbi; Hanina b. Dosa with Hiyah; and so on. In the present condition of the Baraita it is almost impossible to decide what is of early and what of recent times. Consequently, the question must remain unsettled as to the originality of the various citations which this Baraita has in common with other Midrashim. Horowitz, however, regards this Baraita as the original in every point. Only this much must be conceded; viz., that a large part of the Baraita is of ancient origin.

The pervading tendency of the Baraita is to oppose the lenient halakic rulings of the Hillelites and of Akiba, and to take a standpoint which, on the one hand, touches the Sadducean Halakah,

**Sectarian** and, on the other hand, the strict interpretation of the Essenes. The well-known story of the Talmud ('Er. 13b;

**Stand-point.** Yer. Ber. i. 3b) that a heavenly voice

decided in favor of the Hillelites, runs in the Baraita as follows: "Blessed be the strict! These as well as those [the Hillelites as well as the Shammaites] speak the words of the living God; but we must regulate ourselves according to the teachings of the school of Shammai" (p. 21). The old Halakah, probably influenced by the Essenes and abrogated for the first time by Akiba (Sifra, Meẓora', end), by which a woman is virtually prevented at a certain time from all intercourse with the outer world, is declared to be binding in a number of passages in the Baraita (pp. 13 *et seq.*, 21).

The medical and physiological rules in the Baraita (twenty-six, according to the enumeration of Horowitz, Introduction, pp. 56, 57) give rise to the supposition that it originated in a place where medicine was studied assiduously. The Baraita, not unknown to the Geonim, gradually came to be forgotten in consequence of its many points of contact with the teachings of the Karaites, who also accepted the old Sadducean view of Lev. xii. 4 *et seq.*; for such similarity tended to bring it into disfavor.

L. G.

**BARAITA OF R. PHINEHAS B. JAIR**

(בריתא דר' פנחס בן יאיר): 1. See MIDRASH TADSHÉ.  
2. A Baraita printed by Grünhut, in "Sefer ha-Likḥuṭim," ii. 20b-21a. It contains the sayings of R. Phinehas b. Jair and R. Eliezer ha-Gadol on the Messianic times and on the various degrees of piety given in Soṭah ix. 15. The character of these sayings vividly recalls that of the apocalyptic writer. This, together with the fact that the aphorism on the degrees of piety is ascribed to Phinehas b. Jair, who may be correctly designated as an Essene, gives likelihood to the assumption that the passages in consideration are really the fragments of a Baraita collection with Essenic tendencies in apocalyptic manner. The doubt that exists whether or not the sayings of Phinehas b. Jair on the degrees of holiness belong to the Mishnah (see Lipmann Heller, *ad loc.*) strengthens the supposition. A saying derived from the Baraita collection of so holy a person as R. Phinehas may have been considered worthy of incorporation into the Mishnah (see Brüll, "Jahrbücher," iii. 125).

L. G.

**BARAITA ON SALVATION** (בריתא דישועה):

A haggadic Baraita, which Schönblum (Lemberg, 1877) published for the first time in the collection "Sheloshah Sefarim Niftahim." It enumerates twenty-four sins which delay the [Messianic] salvation and prolong "the end" ("ha-keẓ"); i.e., the destined redemption.

For each of these sins a Bible verse is quoted, which illustrates its gravity. In most cases haggadic narratives are adduced for the same purpose. These are taken from the Talmud and from Lam. R. It is questionable whether the Baraita availed itself of Num. R. as is assumed by the editor. The citation which might imply such a fact may have been derived from a source common to the Baraita and Num. R. Every clue is lacking for a determination of the exact age of this Baraita. At all events, a very early Palestinian origin is indicated by the frequent use of Yerushalmi and Lam. R., and the possible lack of all citations from Babli.

Some kinship must exist between the Baraita and the enumeration by Alfasi (Yoma, toward end) of twenty-four hindrances to repentance. This catalogue of sins Maimonides ("Yad," Teshubah iv.) reduced to a system in which every point was accompanied by an illustrative commentary. In Maimonides' time the source on which Alfasi drew was no longer known, and Maimonides merely supposes that it was of recent origin ("Peer ha-Dor," No. 12). Joseph Caro (in his Commentary on Maimonides, or "Yad," Hilkot, Teshubah, iv. 1), however, gives information of a manuscript, according to which the twenty-four hindrances to repentance formed an independent Baraita, "in small tracts" ("be-masseketot keṭanot"; see Brüll, "Jahrbücher," ii. 127).

The Baraita on Salvation and Alfasi agree not only in regard to the number of the things that prevent the salvation of mankind in general as well as of the individual, but also in regard to the nature of these obstacles. Thus, both enumerate seduction to evil,

the use of pledges entrusted to one's keeping, uncontrolled temper, discouragement of good deeds, and others. It is highly probable that the sources of Alfasi and the Baraita on Salvation are only two different versions of one and the same Baraita. This provides the latest possible date for the time of its origin, since it could not have been more recent than the beginning of the eleventh century. The *Maḥzor Vitry*, ed. Horwitz, pp. 724, 725, gives the catalogue of sins as Alfasi has done in his version of the tractate "Derek Erez R."

The narrative concerning the judgment of Solomon, at the end of the Baraita on Salvation, is a later addition having no connection with the real Baraita.

**BARAITA OF SAMUEL (ברייטא דשמואל):**

A Baraita of Samuel was known to Jewish scholars from Shabbethai Donolo in the tenth century to Simon Duran in the fifteenth century; and citations from it were made by them. It was considered as lost until quite recently, when it unexpectedly appeared in print.

In its present form, the Baraita is composed of nine chapters, treating promiscuously of astronomy and astrology. The first chapter deals with the form of heaven, of Orion, of the Pleiades, of Draco, and of the planets and their light. The second and third treat of the movements of the moon and the course of the Zodiac. At the same time directions are given for adjusting the gnomon of a sun-dial. The fourth defines the character of the seasons and the planets; the fifth, the orbits of the planets. Directions are given for calculating *MOLAD* and *TEKUFAH*. The sixth imparts the teachings of the Egyptian sages on the original position of the planets and the division of the Zodiac. The seventh chapter mentions the exact distances of the planets from the earth: the moon is considered the nearest; Saturn, the most distant. The eighth chapter deals with the altitudes of the planets. The ninth chapter discusses the influence of the heavenly bodies on earthly affairs. It is conceded that "the planets in themselves can not make for good or evil, unless empowered by God."

The older scholars considered the author of the Baraita to be the amora Samuel b. Abba, who, according to the statements in the Talmud, was a great astronomer (it is doubtful whether "Cuzari," iv. 29, refers to an actual astronomical work of Samuel, or to his astronomical knowledge). The editions have Samuel ha-Katan as the author. This is hardly based on a tradition, but rather is due to a combination of the name "Samuel" with Samuel ha-Katan, who is mentioned as possessing knowledge of the 'Ibbur (*Sanh.* 11a). These suggestions of names have no material value. The very contents and language of the Baraita contradict the assumption that it is the work of amoraim or tannaim. Moreover, ch. v. designates the year 4536 (= 776 C.E.) as the one which, with but a slight difference, resembles the year of the Creation. The courses of the sun and moon, leap-years, and *Tekufah* will repeat themselves, and calculations must begin anew from this year.

The earliest date, then, at which the Baraita could have been written is 776. It is more difficult to

determine the latest date. This question is connected with that of the relationship of the Baraita to the *Pirke de-Rabbi Eliezer*. Some have endeavored to conclude, from citations of the Baraita by Abraham b. Hiyyah and Judah ha-Levi, that the Baraita and the *Pirke de-Rabbi Eliezer* originally formed one work. The portions of the Baraita now existing prove clearly that the two are fundamentally different; neither diction, subject, character, nor aim of the two works bearing any resemblance. There is, however, distinct kinship between the two astronomic chapters of the *Pirke de-Rabbi Eliezer* (vi. and vii.) and the Baraita of Samuel; but it can not be decided which author borrowed from the other. In fact, there may have been a third source from which both drew. Zunz supposes that the astronomic chapters in the *Pirke* originally had a slightly varying form from that of the Baraita, and that portions from each found their way into the other. This would explain how Abraham b. Hiyyah came to designate a Baraita as being the work of Samuel and R. Eliezer. It is certain, however, that all that is known at present consists of fragments of the Samuel Baraita.

Steinschneider correctly characterizes the Baraita as somewhat fantastic in its conception of the construction of the world, containing Talmudic elements, but uninfluenced by Greco-Arabic science. Its unscientific, half-mystic tendency caused it to be thrust aside in the Orient through the rising Arabic science; while in Europe, especially in France and Germany, it was regarded with special respect. From constituents of the Baraita joined with various elements of mysticism originated the cabalistic cosmography, first presented by the Book of Razi'el, and which appears in later works influenced by the latter (compare *CALENDAR*; *PIRKE DE-RABBI ELIEZER*; *RAZIEL*, BOOK OF).

**BARAITA DE-SIFRE (ברייטא דספרי).** See *SIFRE*, *ZUTTA*.

**BARAITA OF THE THIRTY-TWO RULES**

**דל"ב בריתא דשלשים ושתים מרות (מרות):** A Baraita giving the thirty-two hermeneutic rules according to which the Bible is interpreted. Abul-Walid ibn Janah is the oldest authority who drew upon this Baraita, but he did not mention it by name. Rashi makes frequent use of it in his commentaries on the Bible and the Talmud. He either briefly calls it the thirty-two rules (*Hor.* 3a) or designates it as the "Baraita (or sections פרקי) of R. Eliezer b. Jose ha-Gelili" (*Gen.* ii. 8; *Ex.* xiv. 24). Also the Karaite Judah Hadassi, who incorporated it in his "Eshkol ha-Kofer," recognized in it the work of this R. Eliezer.

It has not been preserved in an independent form; and knowledge of it has been gathered only from the recension transmitted in the methodological work "Keritot," by Samson of Chinon. The beginning

of the Baraita in this recension reads as follows: "Whenever you come across the words of R. Eliezer b. Jose ha-Gelili, make a funnel of your ear." Though this sentence already existed in the Baraita as known to Hadassi (see Bacher, in "Monatsschrift," xl. 21), it is naturally a later addition taken from the Talmud (Hul. 89a); but it shows that the Baraita of the Thirty-two Rules was early regarded as the work of Eliezer b. Jose ha-Gelili. There are strong grounds for the supposition that the opening sentence of the Baraita ran: "R. Eliezer, the son of R. Jose the Galilean, said." This is the reading of Joshua ha-Levi and Isaiah Horowitz (see Bloch, p. 53); and it is believed that the name of the author did not drop out until the addition of the sentence from the Talmud. Consequently, no adequate reasons exist for doubting the authorship of R. Eliezer.

Distinction must, however, be made between two different constituent elements of the Baraita. The enumeration of the thirty-two hermeneutic rules in the first section constitutes the real Baraita as composed by R. Eliezer; and the explanations of each rule in the following thirty-two sections form, as it were, a Gemara to the real Baraita. In these thirty-two sections sayings are cited of the tannaim Akiba, Ishmael, Jose, Nehemiah, Nehorai, Rabbi, Hiyyah, and of the amoraim Johanan and Jose b. Hanina. Although these names, especially the last two, show that portions of the Baraita were interpolated long after Eliezer b. Jose, yet no general conclusions may be drawn from it with regard to the whole work. The terminology is prevailingly tannaitic, even in the second portion. Bacher ("Terminologie der Jüdischen Schriftauslegung," p. 101) correctly remarks that the exclusively tannaitic expression "zeker le-dabar" is found at the end of section ix. (compare also the archaic phrase "ha-shomea' sabur" for which "at sabur" is usually said). The second part, therefore, leaving later interpolations out of consideration, may also have sprung from the tannaitic period, probably from the school of R. Eliezer. It is noteworthy that the old scholars make citations from the Baraita which are not found in its present form, thus casting a doubt upon the correctness of the present recension (see Reifmann, pp. 6, 7).

The thirty-two rules are described as those which are applied in haggadic interpretations (הגדה is the right reading and not התורה). This entirely characterizes the method of the Baraita; for although the most important of the halakic rules of interpretation which originated in the schools of Akiba and of Ismael (Hillel) are incorporated in it, the Baraita deals principally with the syntax, style, and subject-matter of the Bible. Such treatment is of first importance for the interpretation of the Scriptures; but in the Halakah it is of subordinate value. The Baraita, then, written about 150, may be regarded as the earliest work on Biblical hermeneutics, since Philo's fantastic allegories can hardly be regarded as such.

Following are two examples from the Baraita, which illustrate its method. Section ix. (on the elliptical phraseology of the Bible) says: "I Chron. xvii. 5 reads, 'I have gone from tent to tent, and from

tabernacle' (וּמִמִּשְׁכָּן). It should read: 'and from tabernacle to tabernacle' ('u-mimishkan el mishkan'); but the Bible here employs ellipsis." Section xxi. says that sometimes a clause which ought to stand at the end of sentences, conveying one idea, is interposed between them. Thus, the correct place for verse 17 of Psalm xxxiv. would be after 18. According to the last rule, whole chapters of the Bible should be transferred. Thus, Gen. xv. chronologically precedes xiv. These examples suffice to show that in Palestine scholars early began to devote themselves to a rational Bible exegesis, although free play was at the same time yielded to haggadic interpretation (compare HERMENEUTICS; ELIEZER B. JOSE HA-GELILI; SAMSON OF CHINON).

**BARAK.**—**Biblical Data:** A warrior; the son of Abinoam mentioned in Judges iv. 6, v. 12, as the most important ally of Deborah in the struggle against the Canaanites. Deborah summoned Barak, the son of Abinoam, from his home at Kedesh in Naphtali, and ordered him, in the name of YHWH, to take ten thousand men to Mount Tabor. Here he was attacked, as Deborah had expected, by Sisera, whose forces were put to flight, and the greater part of them slain, by Barak's army. It is noticeable that Barak appears throughout as secondary to, and dependent upon, Deborah. For example, when directed to receive Sisera at Mount Tabor, he agrees to obey on condition only that Deborah should go with him. The fact that the honor of the expedition is given to Deborah rather than to him is not to be regarded as derogatory to Barak. It is merely another indication of his subordinate position (see, however, Moore, "Judges," p. 117). Barak joins in the song of triumph with Deborah (v. 1). According to v. 15, Barak was probably a member of the tribe of Issachar. It is interesting to note that the name "Barak" occurs also in Sabea (ברקם) and Palmyrene (ברק) inscriptions. "Barcas," the surname of the famous Hamilcar, is the Punic equivalent; in Assyrian there are various names compounded with "birka," and the Babylonian Talmud has also a name "Baroka."

J. JR.

J. D. P.

—**In Rabbinical Literature:** According to the Rabbis, "Barak" is merely another name for "Lappidith," Deborah's husband (not her son, as Ambrosius says in "De Viduis," i. 8, 45). A third name given him was "Michael." The reason for the three names is thus given: Barak was an ignorant but pious man; and not knowing how he could otherwise especially serve God, he accepted his wife's proposal to make candles to be offered by him at the sanctuary of Shiloh. Deborah, therefore, is designated as "the wife of Lappidith [Torchlights]." God, who

alone knows the inward thoughts of man, said to the worthy couple, "You have had a pious intention in making large candles, that their light may be bright; I, too, will make your light shine brightly." Barak's real name was Michael, because, like his namesake, he was to be a messenger of God (Eliyahu R. ix., quoted in Yalk., Judges, 42 with some variants; compare also Targ. on Judges v. 23).

According to another explanation Barak received this name after the victory over the Canaanites, because he flashed bright like lightning ("barak"), while before that event he was merely a small light, or "lappidot" (Pseudo-Jerome on Judges v. 1, ed. Migne, "Patrologiæ Cursus Completus," Latin series, xxiv. 1322). According to others, he was a pupil of Joshua, and after the latter's death, of the elders; hence, at the time of Deborah, the only one who remained from the olden time (Eliyahu R. l.c.; Yalk. l.c.). Barak's modesty is especially praised; although he was the actual leader in the expedition against Sisera, he was content to take a secondary place, giving to Deborah the credit of the undertaking (Judges iv. 8), and would not go to war without the prophetess (Gen. R. xl. 4; Yalk. l.c. 43).

J. SR. L. G.

**BARASCH, JULIUS:** Rumanian author and physician; born at Brody, Galicia, 1815; died at Bucharest, Rumania, March 31, 1863. His early education included Talmudic disciplines; but having been married against his own desire at the age of sixteen, and having lost his fortune in disastrous speculations, he emigrated to Germany to study medicine, and in 1841 graduated at Berlin University as M.D. He practised for a short time in Amsterdam, and then returned to Brody, presently proceeding to Jassy, the capital of Moldavia, with the intention of establishing himself there; but he found he could obtain no patients among the Galician Jews, who were numerous there, and who had no confidence in a physician whom they had known as a child. He therefore went to Bucharest (November, 1841); but, finding difficulty there also in acquiring recognition, he accepted in 1843 the post of quarantine physician at Calarash, and remained there until 1847, when he was appointed chief state physician for the district of Dolj, which post he retained until July, 1851.

While yet a student he published (under the pseudonym "Julius Marcussohn B.") in the "Allgemeine Zeitung des Judenthums," 1839, "Der Chasidismus in Polen," an essay upon Hasidism in Poland, exposing the practises of this peculiar sect of Judaism. Before leaving Berlin he commenced in the "Literaturblatt des Orients" (under the pseudonym "Julius Friedson") the publication of "Gedanken über Religionsphilosophie des Judenthums," a series of reflections on Jewish religious philosophy. At Bucharest, in 1842, he published in the "Allgemeine Zeitung des Judenthums" a review of Isaac Erter's "Häufige Lebet Yisrael," in which the latter satirized the Jews of Galicia. In the same periodical, he published (under the pseudonym "Raphael Sincerus") from time to time an ac-

count of his travels in Galicia, Bukowina, Moldavia, and Wallachia. It is about the only description extant of the inner and social life of the Jews of the Rumanian principality. He meditated at the same time the publication of a vast Jewish encyclopedia to embrace literature, science, history, etc., and in 1844 issued an appeal for assistance. Only one volume appeared, in 1856. He next devoted himself to the regeneration of his Rumanian fellow-citizens. Science did not exist in those sections of Europe; the Rumanian language had no terms for scientific expressions; Barasch created a terminology and transplanted science thither. He published in 1850

his first work in this field of popular science, on the miracles of nature, **As Pioneer of Science.** which very soon made his name familiar throughout the country. He resigned his official post in 1851, traveled through Germany, France, and England, and on his return, in 1852, was appointed professor of natural science at the college at St. Sava in Bucharest. Appointments as professor at the school of medicine, at the military school, and at the college of forestry followed quickly; and he was also elected city physician.

Passionately devoted to science, Barasch made himself its favorite interpreter to his fellow-citizens, teaching both with the pen and with the living word. One after the other he put forth works upon hygiene, botany, zoology, and forestry, "Isis," a scientific journal (the first in Rumania, and on which he remained for five years the chief collaborator), and inaugurated a series of popular "free talks" upon hygiene, every Sunday, which were numerous attended. In 1858 Barasch founded at his own expense the first hospital for children in Bucharest, and served gratuitously as its chief physician.

In order to remedy some of the evils existing in the Jewish community of Bucharest—divided and subdivided as it was into small cliques of Austrian, Prussian, Russian, and Hungarian Jews—he succeeded, in 1852, in opening a school upon modern lines specially for the children of Jews of Austrian and Prussian descent, an event which stimulated the native Jews to open one also. In

1854 he published in Isidor Busch's **As Communal Worker.** "Jahrbuch" an essay upon the Jews of Rumania, and also a pamphlet against Israel Pick, a rabbi of Bucharest, who had been dismissed from his post and had embraced Christianity. In his reply to Pick, Barasch evidences the warmest attachment to his ancestral faith. When, in 1857, the question of the union of the Rumanian principalities was agitated, Barasch, with two friends, founded "Israelitul-Roman," the first Jewish newspaper in Wallachia, published in French and Rumanian, and in which he pleaded with earnestness for the Jews. He took an active part in the foundation of the Jewish temple at Bucharest and in the remodeling of its worship, and founded the first Jewish literary society, Societatea de Cultura Israelita, of which he was president (1862). In 1861 he issued a work upon the emancipation of the Jews in Rumania, which was the first work devoted to the interests of the Rumanian Jews. Barasch's death, two years later, was considered a national calamity.

In addition to those works already enumerated, Barasch published many books on popular science.

In 1886 (July 4) a society was founded in Bucharest for the investigation of the history of the Jews in Rumania, which received, in honor of Julius Barasch, the name "Societatea Istorică Julius Barasch."

S.

E. SD.

**BARASSA, DIEGO:** Spanish physician and Marano, who openly avowed himself a Jew at Amsterdam about 1640. He was conversant with astronomy, medicine, and botany, and was acquainted with Arabic and Syriac. Manasseh b. Israel dedicated to him the essay entitled "De la Fragilidad Humana." He wrote: "Prognostico e Lunario de Anno de 1635, Conforme as Noticias . . . Tirado de Arabigo que Traduzzio do Syriaco de Jonathan Abenizel [b. Uziel] R. Ismael de Ulmazia," Seville, 1630.

**BIBLIOGRAPHY:** Kayserling, *Bibl. Esp.-Port.-Jud.* p. 16.

G.

M. K.

**BARATIER, JEAN PHILIPPE:** Christian translator of Benjamin of Tudela's travels; born at Schwabach, Bavaria, in 1721; died in 1740. He was only thirteen years old when he published his first work, "Voyages de Rabbi Benjamin Fils de Jona de Tudèle. Traduits de l'Hébreu et Enrichi de Notes et de Dissertations Historiques et Critiques sur ces Voyages, par J. P. Baratier, Etudiant en Théologie. A Amsterdam, aux Dépens de la Compagnie." 1734.

It is difficult to believe that the translation in two large volumes is the work of a child of eleven; but the preface, dated Schwabach near Nuremberg, 1733, contains an affirmation of the fact by a modest pastor of the Reformed Church, who knew Hebrew and called himself the sole preceptor that Jean had yet had.

Besides the running commentary on the translation in the form of explanatory notes at the bottom of each page, the volumes contain a number of essays on the Jews and their rabbis whom Benjamin met on his travels; on the Hebrew terms used; on Benjamin himself, and on the exilarchs, the Chazars, and the Ten Tribes. Unfortunately, the author repeats many of the errors of his predecessors and makes many statements that show how biased he was against those about whom he was writing. These essays show, however, the learning of this short-lived prodigy.

**BARATZ, HERMAN (HIRSCH):** Russian lawyer and censor of Hebrew books; born at Dubno 1835; graduated from the Rabbinical School of Jitomir in 1859, and from the University of Kiev in 1869. In 1871 he was appointed by the governor-general of Kiev censor of Hebrew books and consulting official on Jewish affairs. Baratz wrote

some articles on the Jewish question in the periodicals "Razsvyet," "Ha-Karmel," and "Syvernaya Pchela." See **CENSORSHIP OF HEBREW BOOKS IN RUSSIA**.

H. R.

M. R.

**BARBADOS:** Island of the British West Indies in the Windward Group; colonized in 1625. It is probable that Jews were among the earliest settlers on this island. The statement is made by Sir Robert

H. Schomburgk that their arrival dates from 1628. Some confirmation is given to this assertion by a letter from one of Jews. Abraham Jacob to the earl of Carlisle, the proprietor of the island, dated London, Sept. 22, 1628, complaining that the island business was exceedingly unprofitable ("Publications Am. Jewish Hist. Soc." v. 46). As late as 1844 a tombstone was standing in the congregational cemetery bearing the date 1658, though the name was obliterated ("Occident," ii. 294). Upon petition the Jews were granted, on Aug. 12, 1656, the enjoyment of the "privileges of Laws and Statutes of ye Commonwealth of England and of this Island, relating to foreigners and strangers" (E. S. Daniels; see Bibliography).

From 1661 more definite data are available. On April 8 of that year Benjamin de Caseres, Henry de Caseres, and Jacob Fraso petition the king to permit them to live and trade in Barbados and SURINAM. As their petition is supported by the king of Denmark, they were probably not residents of England, and were therefore prohibited by the terms of the Navigation Act from trading in the English plantations ("Publications Am. Jewish Hist. Soc." v. 47). It is more than likely that these Caseres were relatives of Simon de Caceres, one of the leading members of the Crypto-Jewish community in London, who, according to Lucien Wolf, had established a branch of his business in Barbados ("Transactions Jewish Hist. Soc. of England," i. 73).

Though remonstrances were made by English merchants against granting the petition, the Council for Foreign Plantations advised that, inasmuch as the petitioners had "behaved themselves well, and with general satisfaction, many years upon Barbados," the desired privileges be accorded them ("Publications Am. Jewish Hist. Soc." v. 47). On July 24, 1661, Daniel Bueno Henriques is granted

letters of denization (*ib.* p. 65); but in 1677 he and Manuel Martinez Dormido complain that their letters have never been issued to them. The residence of the former is given as in Barbados, and that of the latter as in London ("Calendar of State Papers, Colonial America and West Indies," 1677-80, p. 201, No. 556).

Upon the dissolution of the Jewish community of Cayenne in 1664, some of its members emigrated to Barbados ("Publications Am. Jewish Hist. Soc." ii. 95). About this time (March, 1664) Isaac Israel de Piso, and Aaron Israel de Piso, with his sisters and two brothers, "also Moses and his mother, sent thither by Abraham Cohen," are deprived of their letters of denization and ordered to be banished from the island, by reason of their failure to discover gold-

mines as had been promised. Isaac Israel de Piso is further punished by having taken from him a gold chain previously given him as a mark of royal favor (*ib.* v. 57, 90-92). In 1667 the Jews of the island are accused of carrying on illicit trade with the Dutch, then at war with England, and in January, 1669, the king issues orders to the governor that vessels which are reported to have sailed from Amsterdam on the account of certain Jews, shall be seized immediately upon their arrival (*ib.* v. 94, 95).

In 1668 the Jews are spoken of as extensive owners of sugar-works. On Oct. 23 of that year the grand jury includes among its presentments that no Jews be suffered to sell goods at retail (*ib.* v. 58). This would make it appear that the colony had increased considerably, and that the inhabitants other than Jews feared that the latter might be getting too great a control of the trade of the island.

In January, 1671, Moses Pereyra is made a free denizen, and shortly thereafter Lord Willoughby, the governor, is instructed to dispense with the administration of the oaths of allegiance and supremacy in the cases of Jews admitted to denization, and

to molest no man in the peaceable exercise of his religion (*ib.* v. 58, 59).  
**Free**  
**Exercise of** Having become a community of considerable importance, the Jews now began a period of agitation for the admission of their testimony in courts of law.

This privilege had been denied them hitherto, because of their refusal to take oath except upon the Five Books of Moses. Accordingly, on Oct. 29, 1669, they presented to the king a petition in which they stated that measures were taking to deprive them of the benefits of trade (referring to the above-mentioned presentment of the grand jury), and that their testimony was not admitted in the courts when the parties were others than those of their own race. This petition was signed by Antonio Rodrigues Rezio, Abraham Levi Rezio, Lewis Dias, Isaac Jeraio Coutinho, Abraham Perriera, David Baruch Louzada, and others (see Daniels, *ib.*). Upon its reference to the governor, he gave it a favorable recommendation, but for several years no action was taken.

However, on Feb. 14, 1674, a law was passed granting to them the privilege of taking oath on the Five Books of Oath, 1674. Moses, and of giving testimony in cases relating to "trade and dealings, and not otherwise." In 1675 the attempt was made without avail to have this law amended so as to admit their testimony in all courts and causes. Such an act passed the Assembly, but appears to have received no further sanction ("Publications Am. Jewish Hist. Soc." v. 59, 96).

In February, 1679, a levy of taxes "in pounds of Muscovado Sugar on the Hebrew Nation Inhabitants in and about Bridgetown toward defraying the charges of the Parish," produced from 59 persons 13,299 lbs. Some names already mentioned appear in this list. Those paying the highest amounts were: David Raphael de Mercado, 1,260 lbs.; Abraham Obediente, 1,044; Laodrel Obediente, 938; Anthony Rodrigues, 580; Lewis Dias, 580; Daniel Bueno, 383. The remainder was paid in quantities varying from 350 to 25 lbs. The names of fourteen women are to

be found in the list, paying quantities of from 125 to 25 lbs. (Daniels).

In November of the same year complaint was made to the Assembly by sundry merchants that the Jews were procuring control of more than their fair share of trade; and in the same month the Assembly passed an act restraining them from keeping or trading with negroes ("Calendar of State Papers, Colonial America and West Indies," 1677-80, p. 446, No. 1190). In 1680 there were living at St. Michaels a Jewish population numbering 184, of whom 54 were adults, owning 163 negroes and

**Numbers** indentured servants ("Publications in 1681. Am. Jew. Hist. Soc." i. 105 *et seq.*), and in June, 1681, the total Jewish population of the island was 260 ("Calendar of State Papers, Colonial America and West Indies," 1681-85, p. 72, No. 136). The latter year witnessed several petitions presented to the Assembly against the Jews, and a presentment of the grand jury in August "against the evil done to the island by vagrant and poor Jews" (*ib.* p. 102, No. 206). The falsity of this charge is proved by the large proportion of persons out of the total population who were able to and did pay taxes. On Aug. 9 Aaron Baruch Louzado, Daniel Bucino, and Jacob Founzeke (Fonseca) prayed for, and were granted on behalf of the Jews of the island, the use of the courts for their protection as traders, and the right to trade (*ib.* p. 99, No. 198). This indicates that though the act allowing their testimony to be taken in certain causes had been passed six years before, it was not until now enforced. In 1688 the Jews who were not denizens, residing in the seaport towns or islands, were restricted to the holding of one slave apiece, under penalty of the forfeiture of the slaves. This act continued in force until Sept. 30, 1706, when, by reason of the increased importance and influence of the Jewish community, it was unconditionally repealed ("Publications Am. Jewish Hist. Soc." v. 60).

In 1756 a special tax of £210 per annum was levied on them, apportioned so that those in Bridgetown should pay £190 of that sum, and those of Speights-town the remainder. This indicates the localities then inhabited by Jews. On Oct. 8, 1761, this additional burden was lifted, and after that date the Jews were rated and paid taxes on the same scale as the other inhabitants (*ib.* pp. 60, 61).

From this time for a period of seventy years the Jewish community grew in numbers and became increasingly prosperous. By act of the

**Period** local government in 1802, and of Parliament in 1820, all political disabilities  
**of Greatest** were removed, and Jews were granted  
**Prosperity,** even greater privileges than were accorded to other inhabitants of the island; for by the terms of the latter act they were entitled to have five representatives from among themselves who were to determine what share of the taxation of the island should be levied upon them (Daniels, *l.c.*; and "Jewish Year-Book," ed. Jacobs, 5657, p. 129).

**Communal Interests:** In common with all early Jewish communities, it is altogether probable that the first place of meeting for worship of the Barbados Jews was at the house of some member of the

community. Though the exact date of the erection of the synagogue in Bridgetown has not been ascertained, it is likely that one was erected before 1679. This continued in existence until destroyed by the hurricane which devastated the island in 1831. The

ministers of the congregation were all selected by the vestry of the Spanish and Portuguese synagogue in London, and until 1844 all offerings and prayers for government were said in Spanish. For a time previous to 1752

Rev. Meir A. Cohen Belinfante was the minister of the congregation (called "Kahal Kadosh Nidhe Israel"). He died Sept. 25, 1752, and was succeeded by Rev. Raphael Haim Isaac Carrigal, who retired in 1772 and died May 5, 1777. His successors and their times of service were: Daniel Baruch Louzado, 1772; Israel Abbady, 1772 to 1794; David Sarfaty de Piné, till April 14, 1797, when he died; Emanuel Nunes Carvalho, March, 1799 to 1808, when he left for the States; Abendana, January, 1809 to 1813; Moses H. Julian, October, 1819, to December, 1820, when he died; Moses Belasco, November, 1824, to November, 1834. In the intervals between the elections of ministers members of the congregation read the services (Daniels).

Toward the end of the eighteenth century and at the beginning of the nineteenth, various grants were made by the Jews of Barbados in aid of suffering congregations and brethren in different parts of the world. The first of these was in November, 1772, to St. Eustatius, in the Dutch West Indies, for the rebuilding of the synagogue at that place. In June, 1792, they sent £25 for the building of a synagogue in Charleston, and in March, 1819, \$500 for a similar purpose to the Congregation Mickvé Israel in Philadelphia. In 1791 they contributed £15 in aid of the Jews of Tetuan, and in 1798 the members of the congregation subscribed £1,152 to assist the home government in carrying on the war against Napoleon. In 1801 £25 was appropriated for the relief of suffering Jews in Tiberias, and in 1840 £50 to those in Damascus and Rhodes (see Daniels, *l.c.*).

The period of greatest prosperity extended from 1792 until the hurricane of 1831. In the former year the congregation at Bridgetown had a

**Prosperity and Decline of the Community.** contributing membership of 147 persons, with an income from dues of £116 per annum. Seventeen pensioners were then supported at an outlay of £18 per month. In 1831, previous to the devastation wrought by the hurricane, the

total income of the congregation was £387. From that time dates the decline of the community; though a new synagogue was built and consecrated in March, 1833, in the presence of the chief dignitaries of the island, and in January, 1844, the first Jewish religious school was established, with Mrs. Judith Finzi as superintendent ("Occident," ii, 102). Many emigrated to the United States, principally to Philadelphia. In 1848 there were but 71 Jews in Barbados, 38 of whom belonged to the congregation. In 1873 they petitioned for the relief from taxation of property held by the congregation, the income of which was devoted to the support of the needy poor and the synagogue; and in the following year the peti-

tion was granted. In June, 1899, the number had dwindled to 17 or 18, including women and children. Through the activity of E. S. Daniels, the synagogue is kept open on Saturdays and holidays, though he is often the only person in attendance (Daniels, *l.c.*).

H. F.

**BARBARY STATES:** A region comprising the northwest of Africa from the Mediterranean to the Sahara, including Morocco, Algeria, Tunis, and Tripoli. The words "Barbaria" (ברבריא) and "Barbarians" (ברבריים) are found in the Midrash; in Gen. R. lx. the Barbarian is the neighbor of the Ethiopian (נוטי); and in Sifre, Deut. 320 (ed. Friedmann, p. 137*a*) Barbaria and Mauretania are mentioned side by side. The Arabs also (Yaḳuṭ i. 543, 9) called this region "Barbara"; and this name has become common in Europe. In later Jewish writings, however, the region is commonly called "Africa" (Abraham ibn Daud, in "Sefer ha-Ḳabbalah," ed. Neubauer, pp. 68, 73), but occasionally also "the land of the Philistines" (*l.c.* p. 60; Ibn Ezra on Dan. vii. 4), because, according to the legend found in the Byzantine writer Procopius, the Canaanitish (Palestinian) races who fled before Joshua afterward settled in North Africa. Sometimes "Africa" means only the former Roman province of Africa; while the rest of Barbary is distinguished from it under the name "Ma'arab" (Maghreb; Abraham Zacuto, in "Yuḥasin," ed. London, p. 209*a*, 211*b*). Occasionally the name "Libya" occurs (Benjamin of Tudela).

The inhabitants are called "Maghrebim" (מערבים) or "Mustharbim" (מסתערבים), and by a Spanish designation, "Moriscos" (מוריסקוס; Sambari, ed. Neubauer, p. 116; an anonymous writer of the year 1495, in "Jahrbuch für Geschichte der Juden," iii. 218). Maghrebin Jews are now living in Egypt, Palestine, and Syria, but always retaining this name. The Moors call them "Yahoodi," and their language "Hebrani."

No historical records remain of the first immigration of Jews into Barbary. The legends of the country say that they came direct from Jerusalem; and, in fact, they were found all over north-

**Settlement.** ern Africa at the time of the Roman dominion (Schürer, "Gesch." 3d ed., iii. 19-26). In gaonic times Barbary was one of the centers of Jewish life. The Jews sided with the conquering Arabs against the Christians, though it occasionally happened that the Berbers and Jews combined against the Arabs, as in 688. Legends mention in this connection a Jewish tribe called "Jerooa," under a Jewish queen. Many Arabian tribes bear unmistakable traces of their Jewish origin, and these are still treated with a certain contempt.

In addition to the Jews from Palestine, the Jewish population of Barbary is largely composed of immigrants from Spain and Portugal. The "Spaniards," indeed, constitute the better class, and live mostly in cities; while the others lead a nomadic life in the Atlas mountains and beyond, being found far within the Sahara and even among the Kabyles. In

Tunis there are also many Italian Jews. The majority of the 400,000 Jews now (1902) resident in Africa are living in the Barbary States (H. Schurtz, "Kathchismus der Völkerkunde," p. 326, Leipsic, 1893).

All reports agree that the Jews of Barbary represent the unmixed Oriental Jewish type. They are strong and well built; their women are beautiful; and, since they have always been hated and oppressed, it is impossible to assume in explanation an admixture of other races. In dress, mode of life, and general customs they follow the Arabs. They are strictly religious, observing to the letter the commands of the Bible and the Talmud; but, like all their neighbors, they are very superstitious. As an example of their severity, the place where adulterous women were stoned to death is still shown.

The language of the descendants of the original inhabitants is Berber; that of the immigrants, Spanish; but both speak also Arabic. Because of their linguistic attainments they monopolize almost the entire commerce of the country; and for this reason they are so much hated by the Moors that some of the tribes will not suffer a Jew among them. It is said that they have their own alphabet; since, because of religious prejudice, they object to the use of the Arabic script. A specimen of their writing may be seen in "L'Univers Israélite," 1885, p. 98. In Oran, Fez, and Morocco a peculiar pronunciation of Hebrew prevails (Bargès, "Tlemçen," p. 10, Paris, 1859). They are butchers, silversmiths, engravers, tailors, shoemakers, and leather-workers, but never masons, blacksmiths, potters, saddlers, or curriers. They prefer to engage in peddling and small traffic. A French officer expresses himself as follows: "The Jews, who were our first middlemen and interpreters in Algeria, obtained a long time ago the rights of citizenship, in spite of the pronounced aversion which the Mohammedans, and especially the people of Barbary, have always shown toward them. They have been the agents, and often the martyrs, of a providential *rapprochement* between rival peoples and religions." See ALGERIA, MOROCCO, TUNIS.

S. KR.

**BARBASTRO, BARBASTE:** A city of Aragon, containing a Jewish community with special privileges that were confirmed by successive kings from time to time (as late as 1336). In 1257, this community was so poor that the king found it necessary to reduce its taxes by the amount of 500 maravedis jaceses. In 1271 it paid 2,200 sueldos. In 1331, owing to internal dissensions, the community was managed by two Christians. Ten years prior to this, at the time of the "Shepherd-Persecution," the community of Barbastro was in danger of sharing the fate of Jaca, where 400 Jews had been massacred by the Shepherds; but it found favor in the eyes of the nobility, and remained unmolested. In Barbastro dwelt Samuel the Pious, who was personally

acquainted with Samuel ben Meïr, the grandson of Rashi.

**BARBER, IDA:** German authoress; born at Berlin July 9, 1842. She began her literary career when quite young, and published the following novels either in book form or as serials in magazines: (1) "Gebrochene Herzen"; (2) "Russische Mystereien"; (3) "Gerächt, doch Nicht Gerichtet"; (4) "Verkaufte Frauen"; (5) "Der Mann Zweier Frauen"; (6) "Aus der Russischen Gesellschaft"; (7) "Clara"; (8) "Wandlungen." Since 1880 Ida Barber has contributed to many German and Austrian papers.

**BARBERS.** See BEARD.

**BARBY, MEÏR B. SAUL:** Talmudist and rabbi; born about 1725 at Barby, a small city near Halberstadt, Prussia; died July 28, 1789, at Presburg. His father, a tradesman, was so poor that when he took Meïr, a weak, thirteen-year-old boy, to the yeshibah at Halberstadt, he carried him on his back part of the way to save traveling expenses. This very poverty, however, and the desire to aid his family, acted as a spur upon the lad; and he developed into one of the keenest and most learned pupils of the yeshibah, of which Hirsh Bialeh was the head. Indeed, a prominent member of the Halberstadt community was proud to have him as a brother-in-law.

Being thus freed from care, Barby went to Frankfurt-on-the-Main, where he studied for two years under Jacob Joshua. Soon after his return to Halberstadt he was made dayyan, and in 1756 became acting rabbi. This position he held until 1763, when he accepted a call to Halle-on-the-Saale. After staying there one year, he assumed the rabbinate at Presburg, holding this position together with leadership of the yeshibah for twenty-five years.

Barby was considered one of the greatest dialecticians of his time; and his novellæ on the Talmud, "Sefer Hiddushe Halakot" (Book of Novellæ of the Laws), Dyhrenfurth-Prague, 1786-92, brilliantly confirm his reputation for acumen which gave him the surname "Harif." His method contrasts favorably with that of his colleagues, who recorded the results of their scholasticism in the form of responsa, and desired them to be accepted as rules for the regulation of practical matters. Barby, on the contrary, remarked that he wrote only explanations of the Talmud, because their theoretical character would relieve the author from presenting his subjective views as rules for practical guidance.

Barby's personality was remarkable for the times in which he lived. He devoted himself to secular studies, more especially to medicine; and he endeavored to impress upon those with whom he came in contact the necessity for a rational diet. He went so far as to forbid one of his pupils to study for half a year, advising him to employ that time in a tour on foot to some interesting localities with beautiful scenery, and thus to refresh both soul and body.

To another pupil he recommended the study of music as a remedy against moodiness. This appreciation of nature and music by a profound Talmudist of the eighteenth century is indeed rare, perhaps unique.

L. G.

**BARCELONA** (ברצלונה, ברצלונה): Capital of Catalonia, Spain; much praised by Jewish travelers and poets for its beauty and its picturesque situation; was inhabited by Jews as early as the ninth century. According to tradition, the Jews dwelling there assisted the Arabs in the conquest of the city. The favorite of Charles the Bald (815-817), Judah ("Judas Hebraeus, fidelis noster"), settled in Barcelona, his arrival being announced to the inhabitants by a letter from the king's own hand. At the time of the count Ramon Berenguer I. (1035-65), the Jews

Monzon ("Boletin," xxv. 489). The physician Sheshet Benveniste was employed in diplomatic affairs in 1170. The *aljama* (community) of Barcelona was of considerable importance at this time. It paid in

direct taxes 24,000 sueldos annually, **Communal** which was more than half that paid **Customs.** by the Jewish communities of Aragon; and in "cenas reales" (allowance

for the king's table-expenses) it paid 500 sueldos in 1282. Besides this, the Jews were compelled, whenever the king and queen came on a visit to the city, to have at the disposal of the attendants, the valets, cooks, etc., a certain number of beds. Such customs were easily made sources of hardship and imposition, and the delegates of the communities of Aragon, assembled at Barcelona in 1354, presented a petition for the adjustment of this tax ("Documentos Ineditos del Archivo de Aragon," vi. 292; "He-Ḥaluz," i. 25). The Jews were also required to find

MONJUICH, OR "JEW MOUNT." SUPPOSED SITE OF THE JEWISH CEMETERY AT BARCELONA.  
(From a Photograph.)

of Barcelona were already landowners; among them are mentioned R. Makir and a certain Reuben, who had his estate at the foot of Monjuich. This mountain, which is near the sea, and which is also called "Mons Judaicus" (= Monjuich), was used as early as the middle of the tenth century (perhaps earlier) as a cemetery for the Jews ("Boletin de la Real Academia de la Historia de Madrid," xii. 6 *et seq.*). Barcelona grew to be one of the most important mercantile centers of Europe, and its commercial code became the foundation of modern maritime law. The part taken by the Jews in this expansion has not been fully worked out, but is shown by the succession of important Jewish financiers like Jahudano de Cavalleria and Benveniste de Porta.

The Jewish community of Barcelona, "a community of princes and aristocrats," as Al-Harizi calls it, prospered further under Don Ramon Berenguer IV. and those following him. When Don Ramon Berenguer undertook a military expedition against Provence, there were in his company his Jewish physician, Abraham, and a certain Shealtiel, perhaps a son of Samuel b. Shealtiel ha-Nasi, who died in August, 1097, and whose gravestone was lately found at

lodging for such of the king's retinue as needed it; but in 1260 they were freed from this duty (Jacobs, "Sources," No. 184).

As in other cities, the Jews here dwelt in a "juderia" (ghetto). This was situated near the Cathedral and the Plaça del Rey, in several long and narrow streets, now in ruins, surrounded by the Plaças Santa Anna and San Domingo. By permission of the king, certain Jewish families, expelled from France, settled here in 1311; while others settled in the suburbs. Those Jews who acquired wealth through enterprise and industry in trade, or who commanded respect by their learning, continued on good terms with the inhabitants of the city for a long time. In 1237 the Jew Benveniste

**Restrictive** de Porta was bayle (mayor). This **Leg-** friendly relationship ceased with the **isolation.** growing influence of the priesthood.

In July, 1263, a religious disputation was held between Moses ben Nahman (Nahmanides) and the convert Pablo Christiani in the king's palace, and in the presence of the court and many prominent priests. The Jews were compelled to listen to the sermons of Dominican friars; immunity

from attendance upon such occasions could be purchased only at large figures. Inspired by the priesthood, exceptional laws were passed against them, and statutes already existing were rendered more stringent. Jews were forbidden to live outside of the juderia, or even to seek temporary shelter in the house of a Christian. No convert to Christianity, no Christian woman, could enter the juderia, which was kept closed during every Good Friday. Christian women were not permitted to visit the house of a Jewess by night or by day. A decree, issued April 11, 1802, compelled a Jew or a Jewess, meeting a priest with the sacrament, to kneel down in the street. Trading in Christian prayer-books and holy pictures was strictly forbidden them. They were not permitted to sell the ritually slaughtered (kosher) meat anywhere outside of the juderia or at the entrance to it. In 1338 a nobleman named Jordan de Illa wished to celebrate a "divinum mysterium" at the house of the wealthy Samuel Benveniste. As soon as the king, Pedro the Elder, heard of this, he had Benveniste imprisoned and his estates confiscated, "to serve as a warning to other Jews."

At the head of the aljama were thirty men, elected by the members of the community and confirmed by the king. They were the administrators and secretaries, to whom were added official auditors and a manager of the poorhouse. According to the statutes, the election of three members took place every three years under the management of the three departing members and by the vote of the majority. These three election-managers were required to take oath in the presence of ten members of the community, and holding the Torah in their arms, to promise that they would faithfully carry out the election to the best interests of the community; and that they would consult nobody.

The election often led to dissensions and to rupture in the aljama (see Responsa of Isaac b. Sheshet, Nos. 214 and 228). The religious affairs of the community were under the guidance of several famous rabbis, as Abraham b. Hasdai, son of Samuel b. Abraham b. Hasdai; and Solomon ben Adret, whose contemporary, Aaron ha-Levi, also lived in Barcelona. The following personages among many others that could be mentioned were born in Barcelona: Isaac b. Reuben, called "al-Bargeloni" (the Barcelonian); Judah b. Barzilai, author of the valuable "Sefer ha-'Ittim"; Abraham b. Hiyya ha-Nasi; the poet Joseph ibn Sabara; Hasdai Crescas. Astruc Bonsenyor and Judah Bonsenyor, his son, scholars and physicians, enjoyed the respect of the court of Aragon.

The Jewish community of Barcelona came to a disastrous end, earlier than any other in Spain. The disastrous year 1348 did not pass without leaving its traces. Toward the end of June, on a Sabbath eve, the mob banded together against the Jews, killed twenty, and plundered the Jewish houses. Meanwhile the nobility and some prominent citizens espoused the cause of the Jews, and dispersed the deluded crowd the more easily because a fearful storm accompanied by terrible lightning set in, and the rain poured down in streams (Joseph ha-Kohen, "Emek ha-Baka," p. 66).

In 1391, during the great persecutions which began at Seville and spread over all Jewish communities of Spain, the community of Barcelona was destroyed. Three days after the massacre at Palma in Majorca, on Saturday, August 5, 1391, on the feast of San Dominic, two vessels containing fifty Castilians landed at Barcelona. As if by appointment, those who landed rushed, with the native sailors, laborers, peasants, and women, into the Calle Mayor, the principal street of the juderia, and murdered and plundered indiscriminately the entire night long and all of the following day. In the first assault, a hundred Jews lost their lives; the rest fled to the Castello Nuevo, which, with the juderia, was manned by troops by order of the governor. Several of the Castilians were imprisoned; and the city council acquiesced in the suggestion of the governor and the most prominent citizens to have them forthwith executed as ringleaders. The enraged citizens angrily protested against this decision, and attacked the governor and the members of the council. One of the latter was killed, and several others seriously injured. The infuriated mob forced an entrance into the prison and freed the condemned. The castle was taken by storm; all Jews that had not left it—about three hundred in number—were killed. Many committed suicide, many threw themselves from the wall or lost their lives in frenzied combat with their assailants. A great number—though not eleven thousand as Grätz has it ("Geschichte Juden," viii. 68)—accepted baptism as salvation ("Revue Etudes Juives," iv. 57 *et seq.*).

At first the king of Aragon decided, by a decree dated Sept. 10, 1392, to abolish the Jewish community of Barcelona forever. Considering, however, what advantages had accrued to trade through the Jews, and what great services they had rendered the state, he publicly announced, on Oct. 2 (only two weeks later), that it was his wish to establish a new aljama there, and to grant it the same privileges that the former one had possessed. He promised to the new settlers possession of the Calle de Sanahuja, in the neighborhood of the Castello Nuevo, with all the houses as residences. He also promised them, for the holding of services, the synagogue already existing there (perhaps the one built by Bonafos Solomon), and likewise the use of Monjuich as a cemetery for the burial of their dead. They were to be freed, for three years, from all direct and indirect taxes; and to be protected from molestation by the government and the authorities for five years.

No amount of promises, however, could induce the Jews to settle again at Barcelona. At the request of some converts, and by permission of the king, a church to the Holy Trinity was erected on the site of the above-mentioned synagogue. In 1392, there were no longer any Jews or synagogues at Barcelona. On Dec. 26, 1424, Don Alfonso V. granted to the city of Barcelona the privilege that a Jewish community should never again be established there, and that no Jews were ever to settle there again. All Jews that were still in the city were either to leave it within sixty days or to become converts. But a Jew might

**Church** Synagogue. In 1392, there were no longer any Jews or synagogues at Barcelona. On Dec. 26, 1424, Don Alfonso V. granted to the city of Barcelona the privilege that a Jewish community should never again be established there, and that no Jews were ever to settle there again. All Jews that were still in the city were either to leave it within sixty days or to become converts. But a Jew might

stop at Barcelona provided he lived in a public hotel and wore the Jew-badge. The time of his stay was limited to fourteen days, after which term he had to leave the city, and, according to the decrees of Feb. 12, 1479, and of Aug. 10, 1480, he was not permitted to return to the city for two months, and then only for fourteen days.

At present there are in Barcelona a number of Jews from France, Germany, and America, who, however, have not formed a community, and who do not possess a house of prayer.

**BARCELONI, ISAAC BEN REUBEN.** See ISAAC B. REUBEN of Barcelona.

**BARCHES** (more correctly **BERCHES**): Judæo-German for an oblong loaf of twisted bread, called in some countries also "Taatscher" or "Datscher." Both names are by popular etymology wittily applied to the words "birkat" (blessing) and "ta'ashir" (maketh rich) in the Hebrew verse "Birkat Adonai hi ta'ashir" (The blessing of the Lord maketh rich, Prov. x. 22), which is expounded by the Rabbis as referring to the Sabbath (Gen. R. xi.; Yer. Ber. ii. 7). Both words, however, seem to be derived from the twisted form of the bread. "Taatscher" is a corrupt form of "tartche," the diminutive of *tart* (English), *tarte* (French), and *torta* (Latin), meaning, in the last, twisted; while the name "Berches," like "Berges" in North Germany among non-Jews, seems to be connected with the bread offered to Berchta, the Teutonic goddess of vegetation—"Zöpf" (the twisted hair) being the common German name for twisted loaves (see Jahn, "Die Deutschen Opfergebräuche," 1884, pp. 204 *et seq.*, 282 *et seq.*, 287 *et seq.*; and BREAD.

As may be learned from the story of the wife of the saint Hanina ben Dosa (Ta'an. 24b), the Jewish housewives used to bake bread for the whole week on the eve of the Sabbath, in order to have fresh bread on that day. Consequently, the offering of a portion of the dough to the priest, in the time of the Temple, as prescribed in Num. xv. 20—and after the destruction of the Temple to be cast into the fire instead (Shulhan 'Aruk, Yoreh De'ah, 322, 3; Maimonides, "Yad," Bikkurim, iv. 9)—was especially incumbent upon the housewife on the eve of the Sabbath, and it was conscientiously practised by her (Shab. ii. 6). Therefore the name "hallah" (Num. xv. 20) was also given to the Sabbath loaf of bread.

K.

**BARDA, BARDAA, or BERDA:** Formerly an important city (often mentioned by the Arabic geographers of the ninth and tenth centuries in connection with the invasions of the Russians in 880, 910, 914, and 943), now a Tatar village on the Terter river, in the district of Dzhevanshire, government of Elizabetopol, Transcaucasia. That it was formerly a large Jewish community is evident from Hasdai ibn Shaprut's letter to King Joseph of the Chazars (about 960), in which he tells the king that he first

intended to send his letter by way of Jerusalem, Nisibis, Armenia, and Bardaa, but that the ambassadors of the czar of the Slavonians ("Gebalim") advised him to take the route via Hungary and South Russia. The city was demolished by Tamerlane in the fourteenth century. See CHAZARS.

M. R.

**BARDACH, ELIJAH:** Merchant and Hebrew scholar; born at Lemberg 1794; died at Vienna April 11, 1864. He devoted his leisure time to the study of Hebrew literature, and is the author of "Akedat Yizhak" (The Sacrifice of Isaac), Vienna, 1833—a drama adapted from the Italian of Metastasio's "Isacco"; and of a Hebrew-German dictionary, "Ma'arik ha-Ma'arakot" (The Arranger of the Battle-Rows). The latter contains many philological notes on difficult expressions in the Bible. It was published by Max Letteris of Vienna in 1868, after the death of the author. Bardach also contributed many articles to Jewish periodicals.

**BIBLIOGRAPHY:** Zeitlin, *Bibliotheca Hebraica*, p. 14; Ben-Jacob, *Ozar ha-Sefarim*, p. 448.

S.

I. BR.

**BARDACH, ISRAEL ISAAC BEN HAY-YIM MOSES:** Grammarian; lived in Lithuania at the end of the eighteenth century. He was the author of "Ta'ame Torah" (The Accents of the Law), which forms the second part of a treatise of his on grammar. This work was published at Wilna in 1822 by his brother Meir, who added to it an essay of his own, entitled "Ta'ame Elyon," containing a defense of the Law. In the introduction to his work, Israel Bardach claims to have written commentaries upon the Idra Rabba, upon the Talmuds of Jerusalem and Babylon, upon the Shulhan 'Aruk, Oraḥ Hayyim, etc., and an ethical work, "Darke ha-Shem."

**BIBLIOGRAPHY:** Zedner, *Cat. Hebr. Books Brit. Mus.* p. 391; Ben-Jacob, *Ozar ha-Sefarim*, p. 211.

I. BR.

**BARDACH, JULIUS:** Russian writer and teacher; born at Turijsk, province of Volhynia, 1828; died in Odessa in 1897 (?). He is said to have descended from Samuel b. David, author of the "TaZ" (commentary on the Shulhan 'Aruk; the initials of Ture Za-hab), who in his younger days was called BaRDaCH (the initials of בן ר' דוד חריף). His father was the author of "Ta'ame Torah," Wilna, 1822, and of many other works left in manuscript. From him he received his first instruction in Hebrew grammar, Bible, and Talmud. Bardach also acquired sufficient secular knowledge to pass his examinations as a teacher in Hebrew and Russian. In 1851 he received the position of instructor at the Russo-Hebrew school in Khotin, Bessarabia; and in 1857 was appointed instructor at the Talmud Torah in Odessa, which position he held until 1882. The government entrusted him in 1871 with the position of censor of Hebrew books, which he held until his death. He held also the position of instructor of Jewish religion in some of the high schools of Odessa. The Russian government awarded him the title of hereditary honorary citizen. Bardach is the author of: "Hikre

Leshon Arami," studies in the Aramaic language, Odessa, 1865; "O Yevreiskom Sklonenii Pinskera," on the declension of Hebrew nouns according to Pinsker, Odessa, 1886; "Mazkir li-Bne ReSHeF," catalogue of the Hebrew and Arabic manuscripts left by Simhah Pinsker, Vienna, 1869; a Russian translation of Geiger's "Lehrbuch zur Sprache der Mischnah," Odessa, 1871; "Polny Kurs Yevreiskavo Zakonoycheniya," a complete course in Jewish religion; a Russian translation of the Prayerbook and Haggadah; "O Yevreiskoi Stilistike," on Hebrew style. These last three works were left in manuscript. Many of his articles in Hebrew and in Russian were published in "Ha-Maggid," "Ha-Shahar," and the two publications known as "Razsvyet."

**BAREFOOT.**—**Biblical Data:** In II Sam. xv. 30 it is mentioned that David, on his flight before Absalom, went Barefoot to show his grief. Micah i. 8, "to be barefooted" (according to LXX; "stripped," A. V.) is, likewise, a sign of mourning. In Isa. xx. 2 the nakedness and the bare feet of the prophet may be intended to symbolize the neglected condition of captives (compare Job xii. 17, 19, where probably the true translation is "barefoot"; "spoiled," A. V. and R. V.). All these passages seem to refer to the discomfort of going without sandals on long journeys over stony roads. On the other hand, in and around the house the wearing of sandals seems to have been very uncommon. For a different explanation of the custom of going Barefoot as a sign of mourning and then of grief in general, see Jastrow on "Tearing of Garments" ("Journal of the Amer. Oriental Society," xxi. 23-39). See SHOE.

J. JR.

W. M. M.

—**In Rabbinical Literature:** To go Barefoot is the common custom in the Orient when walking about one's house or on holy ground, or even in the street in cases of mourning. The shoes

**Historical** worn in antiquity were only sandals—  
**Survey.** that is, soles tied upon the feet to protect them against the pricking of the hard stones or thorns of the road—whereas stockings were altogether unknown. It therefore appeared as desecration of a holy place to walk thereon with dust-covered shoes, instead of having the feet perfectly cleansed by ablutions, as was the custom before sitting down to a meal.

The priests in the sanctuaries wore no shoes (see "Silius Italicus," iii. 28; Theodoret on Ex. iii., quæstio 7; Yer. Shek. v. 48*d*). Moses and Joshua were told to take off their shoes on holy ground (Ex. iii. 5; Josh. v. 15). "No one was allowed to walk on the Temple ground with shoes on or with dust on his feet" (Ber. ix. 5; compare Iamblichus, "Pythagoras," § 105). Similarly, in Islam no one is allowed to enter the mosque except when barefooted. For the same reason the priests, when going upon the platform before the sacred Ark in the synagogue to bless the congregation, must take off their shoes; though to-day they wear stockings and are not supposed to be Barefoot (Sotah 40*a*; R. H. 31*b*; see Shulhan 'Aruk, Oraḥ Hayyim, 128, 5).

Modern opinions differ as to the reason for the removal of the shoes as a sign of mourning; some scholars see in the custom a trace of ancestor worship, others a return to primitive modes of life, while others again, in agreement with the Jewish view, suggest that it is a symbol of humility appropriate to occasions of grief or solemnity. For this latter reason shoes are not worn on the Day of Atonement or on the Ninth of Ab.

Occidental life, however, did away with the custom of going Barefoot; stockings and the like being worn on all occasions for which removal of shoes is prescribed (see Shulhan 'Aruk, Oraḥ Hayyim, 614, 2; 554, 16).

J. SR. K.

**BAREHEADEDNESS:** Jewish custom has for ages required women to cover the hair as an evidence of their modesty before men, and required men to cover the head in order to show their humility and reverence before God.

In ancient Biblical times there is no indication that women covered their hair except with head-gears for ornament. The Shulammit's long flowing locks are an object of admiration in the Song of Songs (iv. 1; vi. 5; vii. 5; compare Ezek. xvi. 7); and much art is bestowed in coquetry upon the braiding (see Isa. iii. 24; II Sam. xiv. 26; Judges xiii.). The

**Barehead-** woman suspected of adultery was  
**edness** therefore signally disgraced, or humil-  
**edness** iated like a mourner, when for punish-  
**of Women.** ment her head was disheveled by the priest (Num. v. 18; compare Lev. xxi.

10; A. V. "uncover"); and shaving off the hair was an insult inflicted only on captive women (Jer. vii. 29; I Cor. xi. 15). In Mishnaic times, however, it was regarded as an inviolable Jewish custom ("dat Yehudit") that women should not be seen in the streets with uncovered hair (Ket. vii. 6); and the infringement of that rule by a married woman was deemed sufficient ground for divorce, a view stated also in Roman law (Marquardt and Mommsen, "Handbuch der Römischen Alterthümer," vii., part 2, pp. 554 *et seq.*). Accordingly, the

**Biblical** Mosaic law (Num. v. 18) mentioned  
**and** above is taken by the Septuagint and  
**Mishnaic** the Rabbis to mean "the priest shall  
**Times.** uncover the woman's head"; and, consequently, R. Ishmael derives from it

the law forbidding the daughters of Israel to walk abroad with uncovered hair (Ket. 72*a*; Sifre, Num. 11). The great importance of the traditional custom may be inferred from the following story, related in Num. R. xviii. 20:

"On, the son of Peleth, companion of Korah, was saved through the device of his wife, who, having made him so drunk that he fell asleep, sat with her daughter in front of the tent, both having their hair uncovered. When On's companions came to call for him, and saw the women in such an attitude, they turned away; for no one would enter a house where this Jewish custom was so openly disregarded."

The distinction of Kamhit, who saw seven of her sons made high priests, and two officiate on one and the same day, one of them being Simon ben Kamhit, mentioned by Josephus ("Ant." xviii. 2, § 2) as

"Simon, the son of Camithus," is ascribed by the Rabbis to the fact that even the ceiling of her house had not seen the hair of her head (Yer. Meg. i. 72a).

Bareheadedness in a woman was, therefore, considered to be an indecorous form of "ervah" (nakedness, Deut. xxiv. 1), an incentive to improper glances, and it was declared unlawful to recite the Shema' in the presence of a woman whose hair was uncovered (Ber. 24a; Shulhan 'Aruk, Oraḥ Ḥayyim, 75, 2; Eben ha-'Ezer, 21, 2). Originally, this custom included both married and unmarried women, as may be learned from Ned. 30b. Nor does the law (B. K. 90a), which sets a fine of 400 drachmas upon a man who tears off a woman's head-gear in the street, make any distinction between a married and an unmarried woman. Also Paul (I Cor. xi. 3-12),

**Married and Unmarried Women.** when declaring that the woman should have her head covered in recognition of the man being her lord, refers to women in general, not to married women exclusively (see also "Apostolic Constitutions," i. 8). According to Pirke R. El. xiv., it is a result of Eve's curse that women must go about with the hair covered like mourners. Still, instances are given in the Talmud of unmarried women going about bareheaded, as when the Mishnah speaks of the bride being carried in the procession in her litter, with her hair hanging down (Ket. ii. 1); or when the daughter of Nakdemon ben Gorion covers her face with her hair when seen by Johanan ben Zakkai in her humble condition (Ket. 66b). Later, particularly in Occidental countries, it was not considered indecorous for unmarried women to go about bareheaded (Shulhan 'Aruk, Oraḥ Ḥayyim, 75, 2, against "Yad," Issure Biah, xxi. 15).

The married woman was henceforth all the more scrupulous in covering every part of her hair, probably because its concealment was the mark of distinction of married women among the people surrounding the Jews, as indicated in such expressions as "nubere" and "unter die Haube bringen." It seems that the Slavonian marriage-custom—according to which, with many lamentations over the destroyed beauty of her hair, the "kosah" (the girl's long plait) is taken off and at times sold (Ralston, "Songs of the Russian People," pp. 272-277, 288-292), and the strange practise of clipping the hair of the bride before the cap (the sign of marriage) is put upon her, were adopted by the Jews of Poland in the sixteenth century. Thence it spread to Germany. The Haggadist, however, does not hesitate to represent God Himself as plaiting the hair of Eve before ushering her as a beautiful wife into the presence of Adam (Ber. 61a; Gen. R. xviii.). Emperor Nicholas I. of Russia issued an edict in 1845 prohibiting this usage, against which a pseudonymous article, entitled "Shelomoh ben Yo'eḏ," was written in Geiger's "Wissenschaftliche Zeitschrift," 1837, pp. 354-375.

When, in order to conceal the women's own hair, wigs were introduced in modern times, prominent rabbis of the sixteenth and seventeenth centuries, as Moses Isserles and Abraham Gumbiner, found this objectionable, notwithstanding the Mishnah Shab. vi. 5 (see Shulhan 'Aruk, Oraḥ Ḥayyim, *l.c.*; Eleazar Flekeles, "Teshubah me-Ahabah," i. 48). On

the other hand, Moses ALASHKAR, in his Responsa (No. 35), boldly decided that the covering of the hair was only a matter of custom, and that where women were accustomed to go about bareheaded they might properly do so. This is now the almost general custom among Jewish women of the Occident.

Bareheadedness was customary among men in Biblical times, as shown in the story of Samson (Judges xiii.-xvi.) and in that of Absalom (II Sam. xiv. 26), and by the use of the name "crown" for the long hair of the Nazarite (Num. vi. 5). Still,

**Bare-headedness of Men.** the covering of the head was a sign of dignity, wherefore the head-tires of the priests are prescribed to be "for glory and beauty" (Ex. xxviii. 40, R. V.); the high priest's golden diadem

upon the miter bearing the sign, "Holy to the Lord" (*l.c.* 36, R. V.). In fact, the head-gear itself bore the name "pe'ēr" (beauty); and when taken off by the mourner, ashes were put in its place (Isa. lxi. 3; II Sam. i. 2; Job ii. 12). But, exceptionally, Ezekiel is told to bind the head-tire upon him while mourning for his wife. In this sense the Septuagint interprets the words addressed to the priests (Lev. x. 6), "Uncover not your heads" (so also A. V., while the real meaning is, as in R. V., "Let not the hair of your heads go loose"). The morning benediction; "Blessed be thou, O Lord, who crownest Israel with beauty," was originally prescribed for the putting on of the turban (Ber. 60b). The hair was regarded so sacred by the Jews that they often swore by it or by the head (Matt. v. 36; Sanh. iii. 2).

While it was customary among the Greeks to offer sacrifices with uncovered head—"capite aperto"—a form adopted by Paul for the Christians in his first

**Greeks, Romans, and Mohammedans.** Epistle to the Corinthians (xi. 2 *et seq.*), the Roman priests sacrificed with covered head—"capite velato" (Marquardt and Mommsen, *l.c.* vi. 183). Among Mohammedans it is indispensable that the head be covered during prayer; the turban itself is a sacred thing by which they swear; and it is disrespectful to receive visitors with uncovered head (Lane, "Customs of the Egyptians," transl. by Zenker, i. 30, 173; Hughes, "Dictionary of Islam," pp. 170, 647).

The Midrash contrasts the attitude of Moses in hiding his face before the Shekinah at the burning bush (Ex. iii. 6) with that of Nadab and Abihu, who

looked on with uncovered heads (Ex.

**Covering the Head During Prayer.** xxiv. 9, 10): the one showing reverence and awe; the other, insolence (Ex. R. 3). The proper attitude, therefore, of

one called upon to pronounce the name of God in prayer, the "Sheliḥ Zibbur," is to be wrapped in the mantle or tallit (R. H. 17b; Ber. 51a; Yer. Ber. vii. 11d; compare the dictionaries, *s.v.* שָׁלַח). Accordingly, a man with uncovered head is, like one in rags and half-covered, forbidden to recite the Shema'—or, at least, to officiate as Reader or to read aloud from the Torah or to recite the priestly benediction—he not being in a position to pronounce the name of God with proper dignity (Mas. Soferim xiv. 15; compare ed. Joel Müller, p. 199; Azulai, Responsa "Ḥayyim Sha'al," ii. 35). Still, the Palestinian custom did not insist

on the covering or veiling of the head at the priestly benediction (see Müller, "Hilluf Minhagim," p. 839). Isaac of Vienna (thirteenth century), in "Or Zarua," ii. 43, states that the rabbis of France say the prayer with uncovered heads, and that on Simhat Torah the boys are called up to the Torah bareheaded.

It was deemed necessary that the fear of God should manifest itself also in man's general bearing; and after R. Joshua ben Levi had taught that "a man ought not to walk four cubits in an erect position, which suggests overbearing

**Walking****Bare-****headed.**

pride, ignoring God's omnipresence," Rab Huna, the son of Joshua, would not walk four cubits without having his head covered, for he said: "The

Shekinah is above my head" (Kid. 31a). He declared this custom to be especially meritorious (Shab. 118b), and in the course of time it was adopted as a general rule of Jewish conduct (Shulhan 'Aruk, Oraḥ Hayyim, 2, 6). Children were not included in the rule requiring the head to be covered (Ned. 30b). The mother of Rab Nahman bar Isaac, having been told by an astrologer that her son would become a thief, kept his head always covered in order that the fear of God might be always with him; but on one occasion, as he was studying under a palm-tree, his head-covering fell off, and when he looked about, the desire to steal dates came upon him (Shab. 156b).

Unmarried men did not wear a turban. When Rab Hamnuna was introduced to Rab Huna as a great scholar, he was astonished to see that the latter wore no turban (Kid. 29b). In Maseket Kallah, ch. i., and in Kallah Rabbati, *ib.*, it is related that R. Akiba, seeing a child with uncovered head, said he was sure that the child was the offspring of an incestuous marriage, which passage is in contradiction with the above-quoted Talmudic passage (Ned. 30b), which speaks of the uncovered heads of children as common. Of rather late origin, and evidently pointing to Christian surroundings, is the following Midrashic passage: "My people, wherein have I wearied thee?" (Yalk., Micah vi. 3). R. Berekiyah says, "When a king sends an order to a city, the people rise to their feet, uncover their heads, and read it with fear and awe, trembling and obedient. But God says: 'This Shema' is My order; I have not wearied you, and have not said unto you, 'Read it standing and with uncovered heads,' but 'when thou sittest in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up'" (Lev. R. xxvii. 6; Tan., Emor., ed. Buber, p. 92; Pesik. xii. 102a; Yalk., Micah, 554).

The medieval codes, almost without exception, embodied the prohibition against uncovering the head (Alfasi, Kid., ed. Vienna, 217b; Maimonides, "Yad," De'ot, v. 6; Tefillah, v. 5; Yoreh

**Medieval** De'ah, 91, especially Bet Joseph on the passage; further references in Codes. Löw, "Gesammelte Schriften," ii.

321). Of special interest is the report of Abraham ben Nathan of Lunel ("Ha-Manhig," ed. Berlin, p. 15), that he found in Spain that the people covered their heads during prayer, a comment which indicates that the practise was not customary in France in the thirteenth century. The Cabalists have, in their usual way, attempted to find in the custom a

certain mysterious meaning. Thus, the Zohar (Par. Naso, p. 122b, in Ra'ya Mehemna): "Because the Shekinah is above him, it is forbidden to the son of man to walk four cubits with uncovered head." This passage is quoted by Josef Solomon del Medigo with the addition: "It is, however, customary in all parts of Italy, in Crete, and in many countries under the dominion of the emperor [of Germany] and other Christian rulers." Evidently they accept the view of Maimonides, quoted by Joseph Caro, in "Bet Joseph," 91 ("Mazref Laḥokmah," ed. Odessa, 1865, p. 74). Another interesting contribution is found in the responsa of Israel Isserlein with reference to a law promulgated in Breslau about 1450, requiring the Jews when taking an oath to pronounce the holy name of God (YHWH) with uncovered head. Isserlein declares that while the pronunciation of the name YHWH is prohibited, yet if the law were made with the intention of forcing the Jews to transgress a religious law, he would not object to swearing with uncovered head ("Terumat ha-Desheu," 203). The same view is taken by Solomon Luria (16th century), who rebukes his contemporaries for paying no attention to the Talmudic prohibition against walking (בְּקוּמָה וְזָכוּת) four cubits in an erect position as an attitude of insolence, while they are very punctilious in regard to the injunction to keep the head covered, which after all is not a law, but a mere custom (Responsa, No. 72).

David Halevi of Ostrog (17th century) was the first to declare that the prohibition against uncovering the head was based on religious law, in opposition to the Christian mode of worship. He founded his decision on the Talmudic interpretation of Lev. xviii. 3: "Ye shall not walk in their ordinances" ("ḥukkat ha-goy," Ture Zahab, Oraḥ Hayyim, viii. 3). The same view is taken by the physician Solomon Levi of Verona, Amsterdam, 1731 (see Lampronti, "Paḥad Yizḥak," s. v. נִלְי רֵאשׁ). On the other hand, Elijah of Wilna, like Solomon Luria, holds that the prohibition is based merely on custom or propriety.

The principle of reform in modern Judaism hinges upon this question, whether any religious form should be excluded from the synagogue because it

**Reform** is taken from another religious sect, and is, therefore, "ḥukkat ha-goy"  
**View.** (heathen rite). The leaders of radical Reform claim that, as it is more in

keeping with the Occidental view to stand bareheaded before persons who claim our respect, so should men stand before God in prayer or in the house of worship, this being the attitude which suggests respect and awe. The Conservatives maintain that to pray with the head uncovered is to imitate a non-Jewish custom ("ḥukkat ha-goy"). The first attempt to combat the Oriental view in theory was made by Aaron Chorin (1766-1844), who, in a pamphlet entitled "Iggeret Elasaf" (Prague, 1826), advocated the uncovering of the head during worship; the first in practise, by the Reformgemeinde in Berlin, in 1845, when the removal of the head-gear was made obligatory during services, while the worshipers were permitted to wear a skull-cap (Levin, "Die Reform des Judenthums, Festschrift," p. 43, Berlin, 1895). This congregation

has, however, been the only one in Europe to adopt such a practise, and Grätz sees in it the chief reason for its failure to make propaganda ("Volksthümliche Gesch." iii. 737). Occasionally the parnas Hellwitz in Soest preached with uncovered head ("Allg. Zeit. des Jud." 1847, p. 448), while both Ludwig Philippson and Abraham Geiger preached in the Berlin Reformgemeinde with their heads covered (*ib.* 1845, p. 622). In America, praying with the head uncovered was first introduced in the Har Sinai Gemeinde in Baltimore and Temple Emanu-El and Adath Jeshurun of New York, and is now the prevalent custom in the Reform congregations of the United States, though in some it is optional with the members whether they worship with the head covered or uncovered.

As part of the requirements of the Oath ("More Judaico"), most of the nations of Europe demanded (and some still demand) that the Jews swear with their heads covered (see OATH, JEW-ISH).

**Political** **Laws.** A law of Hungary, issued in 1517, demands that a Jew should swear "Pileum Judaicum in capite

habens" (Busch, "Jahrbuch," vol. 82). Similar are the laws of Saxony, Nov. 22, 1838; May 13, 1839; and May 30, 1840; of Schaumburg-Lippe, March 19, 1842; of Denmark, 1843 ("Allg. Zeit. des Jud." 1843, p. 395); of Brunswick, Jan. 14, 1845; of Austria, 1846 ("Wiener Zeitung," 1846, No. 338); of Meiningen, July 25, 1844; of Mecklenburg, April 8, 1848; of Birkenfeld, 1852; of Oldenburg, Nov. 2, 1854; and of Sardinia, 1855. In a trial at a police-court in London, a Jew swore with uncovered head, and the attorney for his opponent objected to the oath, because, as he said, the Jews did not consider such an oath valid; and the judge sustained the objection ("Jewish Chronicle," Aug. 9, 1901, p. 17).

The conservative Jews in civilized countries insist on the covering of the head merely during the performance of religious acts, while the rigid adherents to the ancient custom keep their heads constantly covered, and therefore wear **Modern** **Orthodoxy.** recent times the government of Rumania issued a decree prohibiting Hebrew instruction in the Jewish schools to children with covered heads with the ostensible purpose of keeping the children of Orthodox parents from these schools ("Jewish Chronicle," Feb. 22, 1901). A great many difficulties were encountered ("Orient," 1843, p. 6) when the reform was introduced in modern days of teaching school-children without hats (Wolf, "Gesch. der Juden in Wien," p. 180, Vienna, 1876).

**BIBLIOGRAPHY:** *Shuḥan 'Aruḥ, Oraḥ Hayyim*, and its glossarists, §§ 2, 6, viii. 2, lxxv. 1, cxi. 3, cli. 6; Azulai, *Hayyim Sha'al*, part ii., p. 35, where the subject is exhaustively treated. The Liberal standpoint is taken by Aaron Chorin in *Iggeret Eliaf oder Sendschreiben eines Afrikanischen Rabbi an Seinen (sic) Kollegen in Europa, mit Einem Vorworte, Herausgegeben von Aaron Choriner (sic), Ober-rabbi zu Arad, Prague, 1826*; Hellwitz, *Das Unbedeckte Haupt, Predigt am Pfingstfeste 1847, Soest, 1847*; *Zulässigkeit und Dringlichkeit der Synagogenreformen, Begutachtet von Vorzüglichen In- und Ausländischen Rabbinern*, Vienna, 1845; Shelomo ben Yo'ez and Abraham Cohn, in Geiger's *Wissenschaftliche Zeit. für Jüdische Theologie*, 1837, pp. 354-375; idem, for 1838, pp. 333-345; S. **BARFAT:** Name used by Jews in Provence and northern Spain; *e.g.*, ברפ"ת מורה נר = "Barfat certifies as witness," found in an agreement between Pedro II. of Aragon and the Knights of St. Jean (MS. Paris, Bibliothèque Nationale); "Niçak Barfat" ("Literaturblatt des Orients," 1841, cols. 235, 312), in Spain in 1346. Isaac ben Sheshet ("Ribash") and his brother Don Crescas bore also the surname Barfat (Responsa, Nos. 370, 387, 390). As to its etymology and significance, many hypotheses have been propounded. The most probable of these is the one given by Bloch ("Revue Etudes Juives," x. 255); namely, that the name ought to read "Berfet," and is abbreviated from "Perfetto," which latter occurs in the Barcelona list of Jews, and is the equivalent of "Shallum." Indeed, in Hebrew, "Barfat" is sometimes written "Parfat" (compare "Yuhasin," ed. Philipowski, p. 22, col. a; "Shalshet ha-Kabbalah," ed. Venice, p. 61). Gross adopts this interpretation and connects the name "Barfat" with that of "Profiat," although the latter is nowhere to be found as a family name.

**BIBLIOGRAPHY:** Gross, *Gallia Judaica*, pp. 371-372; Renan-Neubauer, *Les Rabbins Français*, p. 766; idem, *Les Ecrivains Juifs Français*, p. 600.

**BARGAINS AND SALES.** See SALE.

**BARGAS, ABRAHAM DE:** Translator into Ladino of the prayers composed by Malachi ben Jacob on the occasion of the earthquake at Leghorn, in January, 1742, under the title "Traduccion de la Oracion del Ajuno de los Temblores de Tierra que en Ladino Español Ilustro," Pisa, 1746. He lived in Italy during the middle of the eighteenth century. An Alonzo de Bargas of Palma (in Majorca of the Balearic islands) was burned in the auto da fé held in Seville Feb. 24, 1722. The name "Bargas" may possibly be connected with the city Barga in the Italian province of Lucca.

**BARGÈS, JEAN JOSEPH LEANDRE:** Honorary canon of Notre Dame of Paris, abbé and Orientalist; born in 1810 at Auriol (Bouches-du-Rhône); died in 1896 near Marseilles. From 1835 he was a member of the Asiatic Society of Paris. After delivering lectures on Arabic as assistant in the chair of Arabic at Marseilles, he made an extensive trip through Algeria, the literary results of which were numerous. They first appeared only as notes in the "Revue de l'Orient" and in the "Journal Asiatique," as, for example, his article on the pronunciation of the Hebrew, entitled "Souvenir d'Oran" ("Journal Asiatique," 1848, ii. 172; translated into German, "Z. D. M. G." iii. 374). Later he published a complete itinerary in book form. In 1842 he became professor of Hebrew in the faculty of theology at the Sorbonne in Paris, retaining the position until the faculty was abolished in 1885.

Special interest attaches to the fact that his Arabic knowledge was placed at the service of Hebrew literature. In collaboration with Beer Goldberg, who had transcribed Arabic texts in Hebrew characters, in the Bodleian Library at Oxford, he published the following work: "R. Judah b. Koreish, ad Synagogam Judæorum Civitatis Fez Epistola de Studii Targum Utilitate et de Linguae Chaldaicæ . . . Vocabulorum item Nonnullorum Barbaricorum Convenientia cum Hebræa," 1857. His other works in chronological order are: "Le Livre de Ruth, Expliqué par Deux Traductions Françaises," 1854; "Les Samaritains de Naplouse," 1855; "Libri Psalmorum David, Versio a R. Japheth b. Heli Basorensi Karaïta," 1861 (he had given a specimen of this work as early as 1846; and Munk, on presenting the work to the Academy, pointed out its interesting character ["Revue Orientale et Américaine," 1861, vii. 1-12; see M. Schwab, "Vie et Œuvres de Munk," p. 190]; "Hébron et le Tombeau du Patriarche Abraham, Traditions et Légendes Musulmanes Rapportées par les Auteurs Arabes," 1863; "Notice sur Deux Fragments d'un Pentateuque Hébreu-Samaritain Rapportés de la Palestine par F. de Sauley," 1865; "Sefer Taghin, Liber Coronularum," Latin introduction, Hebrew text, with a Hebrew preface by Senior Sachs, 1866 (this publication is omitted by bibliographers, even by Isidore Loeb in his article on Bargés in the "Grande Encyclopédie"); "Inscription Hébraïque de la Chaire de St.-Marc à Venise" ("Annales de Philosophie Chrétienne," 1880, ii. 222); the Song of Songs by Japheth b. Ali (1884); six monographs on Phenician inscriptions, published at different times (1847-88); a study of the Arabic inscriptions which once existed at Marseilles (1889); and various other works.

**BIBLIOGRAPHY:** A. de Gubernatis, *Dictionnaire International des Ecrivains du Jour*, i. 166-167; *Archives Israélites*, lvii. 143; I. Loeb, in *Grande Encyclopédie*, s.v. T. M. S.

**BARI** or **BARI DELLA PUGLIE**: Seaport town in Apulia, Italy, on the Adriatic; capital of the district of the same name. As the center of an extended trade with Trieste, Corfu, Messina, and the Orient, Bari was at all times a place of importance; information, however, concerning the history of the Jews there is very scant. According to tradition, the settlement of the Jews in southern Italy is connected with the captives brought there by Titus after the sack of Jerusalem (Jerahmeel, in Neubauer, "Medieval Jewish Chron." i. 190; Ahimaaz, "Chronicle," *ib.* ii. 112, line 4; "Jewish Quart. Rev." iv. 623). If there is any truth in this tradition, then together with Naples, Venosa, Otranto, Taranto, and Oria, Bari must at an early date have become a seat of Jewish influence.

A similar tradition seems, also, to have found its way into Yalkuṭ on Psalm cxxxvii. After speaking of the Jews deported to Babylon by Nebuchadnezzar, it adds:

"The inhabitants of Bari (בָּרִי) came out to meet them, together with the people of the other cities (perhaps Taranto and Otranto, "Revue Etudes Juives," xxxiii. 40). They saw that the Jews were naked. What did the people of

**Legends.** Bari do? They unclothed their male and female slaves, and brought them as a present to Nebuchadnezzar, saying, 'Perhaps thou art a king that taketh delight in the naked?' He answered, 'Go, and put

thou garments upon the Israelites.' And what was the reward of the people of Bari? God Almighty endowed them with more grace than that possessed by all the land of Israel; and [therefore] they are more beautiful. The saying was current, 'No one who enters the city [Bari] leaves it without having committed a sin' [referring to the beauty of its women]."

The same account is found in Midrash Tehillim; and with a few additions in the Pesikṭa Rabbati (28; ed. Friedmann, p. 135b), a work composed about the year 845. The historical background of the legend is not quite apparent. Israel Lévi supposes that the reference is to some intervention on the part of the Jews of Bari in favor of their brethren captured either by the Byzantines or the Arabs; but Bacher, with perhaps more reason, sees in Nebuchadnezzar a typical reference to Titus, in agreement with the tradition referred to above, even if the expression in the Ahimaaz "Chronicle" (p. 112, line 4), בְּיוֹפִי כְּלִילָה ("crowned with beauty"), has no connection with the traditional beauty of the women of Bari. The reference, however, of the Yalkuṭ and Pesikṭa to Bari can hardly be questioned; though Friedmann (*ib.* commentary) connects the name with Beri (I Chron. vii. 36) of the tribe of Asher; Harkavy with the Iberians or Caucasians; Jastrow ("A Dictionary of the Talmudim," p. 136) with בִּירֵי in Galilee; while Krauss elaborately argues in favor of an identification with Berytus (Beirut).

According to the Ahimaaz "Chronicle," Aaron ben Samuel, the wonder-worker (870), came from Oria to Bari on his way back to Babylonia.

**Under Various Governments.** The Arabic invasion of southern Italy had by this time spread over Apulia and Calabria. Bari fell into Mohammedan hands, and became the seat of the governor Sandan; though the Arabic chroniclers (as, for example, Ibn al-Athir, viii. 117) know nothing either of him or of Sandan. For six months Aaron remained here, so highly honored by the governor that he had to have recourse to a miracle in order to be able to leave the city (Ahimaaz, "Chronicle," 118, 8; 119, 4). Bari fell again into the hands of the Byzantines, when Basil and the German emperor Ludwig II. broke the Arab power. It was still a place of importance; for Ahimaaz tells us that the news of the death of Basil was sent to Italy by way of Bari (*ib.* 124, 10). When Oria was taken in 963 by Al-Muizz Ma'add, many of its inhabitants—Jews being no doubt among them—fled to Bari. A little later an uncle of Paltiel, the vizier of Al-Muizz and 'Abd al-Mangur—by name Hananeel ben Paltiel—made use of his nephew's influence to regain some of the family property, and came hither with a bull from the Byzantine court. The rabbis were at first unwilling to accede to his request; but finally gave way to the power of the state (*ib.* 127, 11-21).

That a rabbinical school or, at least, famous teachers of the Law existed here at this time is attested by the old saying cited by Rabbenu

**Jewish Scholars at Bari.** Tam ("Sefer ha-Yashar," p. 74a, No. 620, ed. Vienna) in the twelfth century: "From Bari shall the Law go

forth, and the word of the Lord from Otranto"—a paraphrase of Isa. ii. 3 (Grätz, "Gesch. der Juden," vi. 280; Güdemann, "Erziehungswesen der Juden in Italien," p. 17). Another tradition, re-

lated by Ibn Daud in his "Sefer ha-Kabbalah" ("Med. Jewish Chronicles," i. 67, line 24), connects Bari with the four teachers who in 960 set out from that port for the purpose either of providing dowries for brides, or, as Graetz thinks, of seeking aid for the languishing schools in Babylonia. On their way to Sebaste, their ship is said to have been captured by the Moorish admiral Ibn Rumahis, and the teachers were sold into slavery (see the references in "Migdal Hananel," p. 28, and Graetz, "Hist. of the Jews," Hebr. tr., iii. 478). It is quite uncertain if these teachers came from Babylon, as is usually held (see, even, Halberstamm, in "Jewish Quart. Rev." vi. 596). They may have been Italians from Bari itself (Weiss, "Dor," iv. 265; Schechter, in "Jewish Quarterly Review," xi. 645), as the extant manuscripts of the "Sefer ha-Kabbalah" say simply, "four renowned scholars from the city of Bari."

Nothing further is known of the fortunes of the Jews in this place: Benjamin of Tudela does not even speak of it in his travels. Mention is made of a Moses Khalfo of Bari in 1025 (Carmoly, in "Revue Orientale," ii. 116) and of a physician and copyist, Isaac ben Solomon, whose family name was "del Bari," in the middle of the fifteenth century (Carmoly, *ib.* i. 435, ii. 108; *idem*, "Notice Histor. sur Benj. de Tudèle," p. 14). According to Porges, the manual for the reader of the Law, called *הוריות הקורא*, was brought from Jerusalem to Bari ("Revue Etudes Juives," xxiii. 310; "Jewish Quart. Rev." iv. 613).

J.

**BARIS.** See ANTONIA.

**BARIT, JACOB** (sometimes called **Jankel Kover**): Russian Talmudist and communal worker; born at Simno, government of Suwalki, Sept. 12,

Jacob Barit.

1797; died at Wilna March 6, 1883. He lost his parents early in life, and at the age of fourteen came to the city of Kovno, where he studied Talmud in the "bet ha-midrash" of the suburb Slobodka. At the age of eighteen he married the daughter of a wealthy relative, and with the financial assistance of that relative continued his Talmudic studies for another six years, when his wife died and he removed to Wilna. There he entered the bet ha-midrash of Rabbi Hayyim Nahman Parnes, at the same time studying modern languages and sciences; and he soon acquired a fair knowledge of Russian, German, French, algebra, and astronomy. Like many of the Russo-Jewish scholars of that time, he

started a business, a whisky distillery, and with his versatility and energy made quite a success of it. But unfortunately, private distilleries in cities were prohibited by the Russian government by the law of 1845, and as a consequence Barit was financially ruined.

When Sir Moses Montefiore visited Wilna in 1846, he spent considerable time in Barit's house, and was guided by his advice as to the form of the petition to Emperor Nicholas I. in behalf of the oppressed Russian Jews.

In 1850, when Hayyim Parnes established a "yeshibah" (college) for the education of rabbis, Barit was appointed principal ("rosh-yeshibah"), which position he held for twenty-five years, until sickness forced him to resign. About twenty-five learned Talmudic students attended his lectures daily, and many of the eminent Russian rabbis and scholars were graduates of his yeshibah. He was much admired for the logical and shrewd style of his lectures, which differed much from the scholastic and sophistic style of the Polish Talmudists of his time. While he refused to hold the office of a rabbi, he was for many years one of the "dayyanim" (judges) of the Wilna community.

But his chief merit, in addition to his work in these two posts, was his valuable services rendered to the Jews of Wilna and to those of all

**His Authority as Delegate.** Russia in representing their interests before the Russian government. From 1849, when he was chosen as a delegate by the Jewish community of Wilna, he

was always the representative speaker in behalf of that important community. In 1852 he was one of the delegates from Wilna to petition the czar Nicholas I. in regard to the oppressive conscription duties of the Jews by the ukases of Jan. 8, 1852 ("Second Complete Russian Code," xxv., No. 24, 768) and of Aug. 16, 1852 (*ib.* xxvii., No. 26, 502). Barit was a man of great tact and political wisdom, a pleasant and impressive speaker and conversationalist. In 1855, when a project was laid before the government to appoint chief rabbis in the capitals of the various governments of Russia, Vladimir Ivanovich Nazimov, then governor-general of Wilna, recommended Barit to be chief rabbi of the government of Wilna. In 1857, when the Rabbinical Committee—which was established by the law of May 26, 1848, to be attached to the Ministry of the Interior, to sit upon questions involving the Jewish religion, but had rarely been called together—was again summoned to St. Petersburg, by the edict of May 25, Barit was appointed as one of the members, and during the whole session of six months acted as its chairman. He acted in the same capacity at the Rabbinical Conference of 1861, which lasted about five months. In both of these assemblies Barit bravely defended the honor of his coreligionists against the calumnies of their enemies, and his arguments, coming from the heart, found their way into the hearts of the authorities—the judges of the Jewish question. In 1862 he was one of the delegates that were elected by the Jewish communities to congratulate Emperor Alexander II. at the one thousandth anniversary of the foundation of the Russian empire. In 1871, when Governor-General

Kaufman called an assembly of specialists to investigate the accusations against the Jews made by the baptized Jew Jacob Brafman, in his work, "Kniga Kahala" (The Book on the Kahal), published at Wilna, 1869, Barit was appointed member of the assembly, and fully convinced the Christian members of the evil design and the unfounded and false character of Brafman's statements. The president of the assembly, Spasski, was so pleased with Barit's able and truthful defense of the Jews, that he paid him a visit and presented him with his photograph. Barit was appointed by the government as one of the inspectors of the Wilna City Hospital, and was of great help there to A. Lebensohn in rebuilding it, when it was in a dilapidated condition. He was also a useful member of the Wilna Talmud Torah, which made good progress by his aid to the president, Jonah Gerstein.

In 1873 Barit had an attack of apoplexy, from which he never recovered fully. Still he continued his work in the yeshibah until 1877, when his malady prevented him from continuing the work. Barit was strictly orthodox, yet he was highly esteemed by the progressists, Jewish and Christian. Governor-General Nazimov was his real friend, and when he left Wilna in 1863, and Barit came to take leave of him, Nazimov, in the presence of many members of the aristocracy, kissed Barit on the forehead, and afterward sent him his portrait as a memento of his friendship.

**BARKANY, MARIE**: Austrian actress; born at Kaschau, Hungary, March 2, 1862. She was one of the six daughters of a merchant at Kaschau, and was sent to Vienna to learn bookkeeping. Instead, she occupied her time studying for the stage, taking Charlotte Walter as her ideal. Laroche and Sonnenthal became interested in her and obtained an engagement for her at Frankfort, where, at the age of fifteen, she made her debut as *Adrienne Lecouvreur*. The next two years were profitably employed in study under Barnay. In 1880 Miss Barkany went to the Thalia Theater, Hamburg, and then to the Hoftheater, Berlin. Soon after she visited Moscow, Riga, Hanover, Dresden, Leipsic, Budapest, New York (1892), and St. Petersburg, where she met with enthusiastic receptions. At the last place Miss Barkany appeared simultaneously with Sarah Bernhard, playing the same rôles as the French actress, deliberately challenging comparison. That she survived the ordeal without loss of artistic prestige is a good indication of her standing in the profession.

She is at her best in *Fedora*, *Juliet*, *Gretchen*, and the title rôles in "Die Jungfrau von Orleans," "Maria Stuart," and "Jane Eyre."

**BARKI** (בִּרְקִי, or בִּרְקִי, called בִּרְקִי), **ISAAC BEN ELIJAH**: Writer; flourished in the seven-

teenth century at Salonica. He was, according to Azulai, a pupil of Hayyim Shabbethai (died 1647), otherwise called מַהֲרַ"שׁ. Of his literary activity little is known. There is a decision of his published in Hayyim Shabbethai's responsa, "Torat Hayyim," part iii. § 29, Salonica, 1722; and another opinion on ritual questions, printed as an appendix to Samuel ben Isaac Sardi's "Sefer ha-Terumot," ed. Salonica, 5388 (= 1628 (?), not 1596, as in Fürst). He also annotated the Arba'ah Turim, which comments are given in Michael Cohen's "Moreh Zedek," Salonica, 1655.

G. A. K.

**BARLAAM AND JOSAPHAT**: A romantic tale under this title, giving extracts from the life of Buddha and some of his parables in Christian form, which has led to the adoption of the two titular heroes, as unofficial saints, into the calendar of the Catholic Church, thus making Buddha a saint of the Christian Church. The story is of a heathen king who was warned that a son would come to him and would change his faith in later years. In order to prevent this, the king keeps his son shut up from all knowledge of sin, disease, and death, until, going out one day from his palace, he sees a leper and a funeral, and so learns of the existence of evil. A sage comes to him and teaches him a new faith; he exchanges clothes with the sage and goes away. On his return there is a public disputation between the old and new faiths, in which the latter is victorious; thereupon the prince becomes an ascetic.

The Hebrew version of the tale was identified by Steinschneider ("Z. D. M. G." v. 91) under the title בֶּן הַמֶּלֶךְ וְהַנְזִיר ("Prince and Dervish"), translated or adapted by Abraham ibn Hasdai, the first edition of which appeared in Constantinople, 1518, and others at Mantua 1557, Wandsbeck 1727, Frankfort-on-the-Oder 1766 (with German translation), Frankfort-on-the-Main 1769, Zolkiev 1771, Fürth 1783, Leghorn 1831, Lemberg 1870, Jitomir 1873, and Warsaw 1884. A German paraphrase by W. A. Meisel appeared at Stettin in 1847, and a second edition at Budapest in 1860. An earlier translation into German is contained in a Munich manuscript, written in Hebrew characters, No. 345. A Yiddish version appeared at Lublin in 1874. The exact origin of Ibn Hasdai's version is difficult to trace, though several Arabic translations and one Georgian have been recently discovered.

The relation of these various editions to one another and to the Greek, which is the original of the western European versions, may be indicated by a comparative table of the chief parables contained in most of them.

The Hebrew contains, besides those mentioned in the following table, ten which are not found in most of the other versions: Bird and Angel (ix.), Cannibal King (xii.), Good Physician (xiv.), King and Pious Shepherd (xvi.), Oasis and Garden (xvi.), Hungry Bitch (xvii.), Power of Love (xviii.), Eel and Dog (xxiii.), Language of Animals (xxiv.), and Robbers' Nemesis, only in Hebrew (= Jataka, No. 48).

The numbers in the subjoined table are those in the respective editions.

	Georgian.	Hebrew.	Arabic.	Greek.
Death Trumpet.....	1	viii.	1	2
Four Caskets.....	2	viii.	2	3
Sower.....	3	x.	3	1
Man in Well.....	4	....	4	5
Three Friends.....	5	xi.	5	6
King of Year.....	6	xiii.	6	7
King and Vizier.....	7	xvi.	7	8
Rich Man and Beg- gar's Daughter....	8	xviii.	8	9
Men and Nightingale..	9	xxi.	9	4
Tame Gazelle.....	10	....	..	10
Amorous Wife.....	11	....	..	..
Demon Women.....	12	....	..	11

The last two are certainly from Indian sources, and yet are found only in the Hebrew version of the "Barlaam," which would seem to imply that it is closer to the original Buddhist source than any of the others. This is, however, not definitely proved, as the latter part of the Hebrew version diverges after chapter xxvi. from the legend of the life of Buddha, and does not resume the ordinary course of the legend until chapter xxxv. According to F. Hommel, Ibn Hasdai took his tales from an original Arabic source, an abstract of which exists in a Halle manuscript. The exact position of the Arabic versions must be settled before Ibn Hasdai's source can be determined. There are a few traces of the use of "Barlaam and Josaphat," or at least of the tale of "The Three Friends," in Jewish literature, by Bahyah, "Kad Hakemah," p. 12, and in Pirke R. El. cxxxiv.; but there is no evidence in either case that the story was taken direct from the "Barlaam."

**J.**  
**BARLEY**: A cereal often mentioned in the Old Testament as one of the common food-products of Palestine. It was and still is used as second only to wheat as an ingredient for bread, and as such was indicative of poverty, as seen in several notable instances (Judges vii. 13; Ruth ii. 17; II Kings iv. 42; John vi. 9, 13); indeed, it seems to have been the chief food of the poorer people. It is cultivated everywhere in Palestine, principally as provender for horses (I Kings v. 8 [A. V. iv. 28]) and asses. In Europe and often in America its place is taken by oats, and the cut straw of barley and wheat is sometimes used for fodder. In the lowest depressions of the Jordan valley the seed is always sown in the autumn, and the harvest begins in April, and advances with the season, until on the heights it reaches into July and August. The most frequently cultivated barley in antiquity seems to have been the six-rowed (*Hordeum hexastichon*), noted on the most ancient Egyptian monuments and on the coins of Metapontum, 600 B.C. "The meal offering of jealousy" (Num. v. 15) seems to have been the only use made of barley in the Hebrew ritual.

**J. JR.** **I. M. P.**  
**BARLOW, THOMAS**: Bishop of Lincoln; born in Westmoreland in 1607; died Oct. 8, 1691. He

was educated at Appleby, and removed thence to Queen's College, Oxford. In 1654 he was appointed keeper of the Bodleian Library. Afterward he was made provost of his college; Lady-Margaret professor; and in 1675 bishop of Lincoln. Among his numerous theological writings there is an essay entitled "The Case of Lawfulness of the Toleration of the Jews," published much later, but seemingly composed about 1654, when the question of the readmission of the Jews to England had been raised by Manasseh ben Israel. In this essay Barlow gives his opinion on the question, having been asked for it by a "person of quality." Barlow advocates the readmission, not because of his tolerance, but rather because the current of public opinion, and especially that of Cromwell, was at the time of writing well disposed toward the Jews. "The Trimmer," as Barlow was called on account of his coquetry with all régimes, displays his usual tendency on this occasion. According to Barlow, the Jews ought to be admitted on the ground that the state can derive pecuniary advantage from them, and because of the spiritual gain to the Church in their possible conversion, which latter is "a sacred and heavy obligation upon Christians." For the government of the Jews, Barlow propounds a special system of legislation not far removed from the restrictions of the medieval canon law: Let them profess, but not propagate, their religion. They might repair their old synagogues, but were not tolerated to build new. By the canon law they might not come abroad on Good Friday. They were not permitted to wear garments exactly of the Christian fashion, but were to have distinct habits that all might know them to be Jews.

**J.** **I. BR.**  
**BARNABAS, Joses**: One of the Apostles, of the tribe of Levi and of the country of Cyprus. In Acts iv. 36 his name is given as "Bar Nahamah" (son of consolation), of which "Barnabas" is the Grecized form. Some explain the name as equivalent to "Bar Nebuah" (son of exhortation), while Deissman, and recently Dalman, refer to "Barnebo" (son of Nebo). Barnabas was the elder companion of Paul in his journeys as apostle—that is, delegate commissioned to bring the charity collection to the mother-church at Jerusalem; wherefore the two together are called "apostles" (Acts xiv. 4, 14; see APOSTLE). He joined the "Apostle." early Christian community by selling his property and laying the proceeds "at the apostles' feet" (ib. iv. 37). According to Acts ix. 27, the admission of Paul as a convert to the Church was recommended by Barnabas; and when the latter was sent to Antioch as preacher of the new faith, he went to Tarsus to secure Paul as coworker. For a whole year they remained together in Antioch, establishing there the first important church of Gentiles and called by the name of "Christians" (Acts xi. 22-26).

After this, Barnabas (who, as the elder of the two, is mentioned first) and Paul were sent with the collected gifts to their brethren in Jerusalem (ib. xi. 30, xii. 25), and on their return were sent forth

together, by direction of the Holy Spirit and with laying on of hands, to do missionary work for the Church (*ib.* xiii. 2 *et seq.*), Barnabas, as the elder and probably more dignified, being taken by the pagans as Zeus, and Paul, the eloquent speaker, as Hermes (*ib.* xiv. 12). It seems, however, that the radical views of Paul in regard to the Mosaic law caused dissension between the two, and, finally, their separation (see Gal. ii. 1, 9, 13), though the narrative in Acts xv. 39 refers "the contention" to the fact that they could not agree on taking Mark with them as companion. Barnabas takes Mark and sails for Cyprus; and nothing further is recorded of him. He is referred to once more, in Cor. ix. 6, as an apostle who, like Paul, supported himself by his own labor.

The identification of Barnabas with Joseph Barsabas (Acts i. 23) is probably the cause of his having been counted among the seventy apostles (see Clement of Alexandria, "Stromata," ii. 20, 116; Eusebius, "Hist. Eccl." i. 12). The Judæo-Christians claimed him as one of their own, and spoke of him as having preached in Rome and Alexandria (see "Clementine Recognitions," i. 7-11; "Clementine Homilies," i. 9-14). A fifth-century legend speaks of him as having been martyred at Cyprus. To Barnabas was ascribed by Tertullian and others the authorship of the Epistle to the Hebrews; and a "gospel according to Barnabas" is mentioned among the canonical writings in the decree of Gelasius (Zahn, "Geschichte des Kanons," ii. 292).

Barnabas is also the supposed author of the "Epistle of Barnabas," a work in twenty-one chapters, a complete Greek copy of which was published in 1862 by Tischendorf (in the "Codex Sinaiticus"), only the Latin translation and a fragmentary copy of the Greek having been known previously; and another copy was discovered in Constantinople in 1875 by Bryennios. The "Epistle," regarded as canonical by Clement of Alexandria ("Stromata," ii. 6, 7) and Origen ("Contra Celsum," i. 63), exhibits, on the one hand, an astonishing familiarity with the Jewish rites, and, on the other, shows an anti-Judaic spirit of great bitterness: so that only the internal strife between the Paulinians and the Judæo-Christians, who still clung to the Jewish nation in its last struggle against Rome under Bar Kokba, can sufficiently account for its characteristic features.

**"Epistle of Barnabas."** Addressing the Christian readers as sons and daughters, the author declares the Jewish sacrifices to be abolished ("Epistle of Barnabas," ii.); the Jewish feasts of no value (*ib.* iii.); the Temple of the Jews, then recently destroyed by the heathen, to be rebuilt only in a spiritual sense by the Christians (xvi.); the Christians to be the true heirs of the covenant (xiii.); the whole atonement rite—especially the scapegoat, driven away amid curses and pulling off of hair, and with the scarlet rope about its neck—to be a type of suffering Jesus (vii.); likewise the Red Heifer, the ashes of which were taken up by boys, who sprinkled the people with them for purification (viii.; compare Parah iii. 3). Circumcision was not to be of the flesh, which was but a delusion of the devil, but of the heart: even Abraham's circumcision of the 318 men of his household (Gen. xvii. 27;

compare with xiv. 14) referring, by a GEMATRIA of the Greek alphabet, to Jesus and the cross ("Epist. of Barnabas," ix.). The "clean" and "unclean meat" was likewise to be taken allegorically only.

On the other hand, the writer finds the baptismal water and the Christian cross prefigured in the Old Testament (*ib.* xi. and xii.)—the latter particularly in the bronze serpent, and Jesus in Joshua the son of Nun (xii.). The Tables of the Law given by Moses having been broken by him, the testament was to be received anew from the hands of Jesus (xiv.); and the Sabbath of Creation points to the millennium after six thousand years, when all life shall have been sanctified by the Messianic advent, whereas the Jewish Sabbath and holidays have been declared to be unacceptable.

The second part of the "Epistle," corresponding (except in some Christian details) with the DIDACHE, a Jewish manual of instruction for proselytes (or a Jewish-Christian manual of conduct), betrays an altogether different spirit, and was probably attached to it by some copyist at a much later time. As pointed out by Güdemann ("Zur Erklärung des Barnabasbriefes" in his "Religionsgeschichtliche Studien," 1876, pp. 109-131), the writer seems to have been a converted Jew whose fanatic zeal rendered him a bitter opponent of Judaism within the Christian Church.

**BARNACLE-GOOSE:** A curious notion prevailed in the Middle Ages, that this bird (*Branta leucopsis*) was generated from the barnacle, a shell-fish growing on a flexible stem, and adhering to loose timber, bottoms of ships, etc., a metamorphosis to which Shakespeare alludes and to which reference is made in the verses of Bishop Hall, Butler, and others, as well as in the more serious scientific works of a great number of writers in the thirteenth, fourteenth, fifteenth, and sixteenth centuries. Against F. Max

Müller's hypothesis, that the myth is to be derived from Hibernian geese, **Early Belief in the Myth.** are the statements of Gerald of Wales (twelfth century) and of Gervase of Tilbury (1211), the latter of whom locates these birds on the Kentish shore. It is curious to note that Gerald turns the myth to good account against "obstinate" Jews, for whose conversion he appears zealous:

"Be wise at length, wretched Jew, be wise even though late! The first generation of man from dust without male or female [Adam] and the second from the male without the female [Eve] thou dardest not deny in veneration of thy law. The third alone from male and female, because it is usual, thou approvest and affirmest with thy hard heart [brazen face?]. But the fourth, in which alone is salvation, from female without male—that, with obstinate malice, thou detested to thy own destruction. Blush, wretch, blush, and at least turn to nature! She is an argument for the faith, and for our conviction procreates and produces every day animals without either male or female."

Such argument failed to convince Jews of the truth of the Immaculate Conception, though they too

believed the myth. How long before Giraldus the fable existed, Max Müller is not able to determine. It is therefore significant that it was already known to the Venerable Bede, the father of English history (673-735). He says, in all earnestness, in his work on natural history, "De Natura Rerum," that the goose "Barliata" grows on rotten wood by the sea. It hangs by its beak until it falls.

The earliest trace of this fable in Jewish literature seems to be in the "Ittur" of Isaac ben Abba Mari of Marsailles (about 1170). The reference is found in a volume of manuscript responsa (Halberstamm, *קהלת שלמה*, p. 66) in the following

**Earliest** words: כתב בעל העיטור אלו העופות  
**Trace in** הינאים מן האילן וכו'. Rabbenu Tam's  
**Jewish** (about 1100-71) opinion is given in  
**Literature.** the responsa of R. Meir of Rothenburg (about 1225-93). In discussing the question whether such birds must be slaughtered according to the ritual method (Responsa, ed. Leunberg, 1860, p. 126, § 160), he says: "My teacher, the Lion [Sir Léon of Paris = Leo Blundus? 1166-1224], told me that he had heard from his father, R. Isaac, that R. Tam directed that they should be slaughtered after Jewish fashion, and sent this decision to the sons of Angleterre [England]." According to Jacobs, this is the earliest notice of the legend; and it militates against its alleged Irish origin, since R. Tam, who was a grandson of Rashi, lived before the conquest of Ireland. R. Tam allowed them to be eaten. Jewish scholars in France and Germany discussed whether they were fish or fowl, and whether, according to the dietary laws, they were permissible as food. Some authorities answered in the affirmative; others declared them unlawful. R. Samuel Haḥasid of Speier (about 1150), and his son, R. Judah Haḥasid of Regensburg (died 1216), allowed them to be eaten, if, in common with other species of fowl, they were slaughtered after Jewish fashion.

An anonymous Hebrew translator of the French cosmography called "Image du Monde," who compiled his work in 1245, speaks of geese growing on trees in Ireland and of people with tails in Brittany. He is the first Jewish author to locate the birds on Irish shores. R. Isaac b. Joseph of Corbeil, in his "Sefer Mizwot Kaṭan" (סמך), written in 1277, was the first to forbid them as food on the plea that, according to their origin, they were neither

**Neither** fowl nor fish, but belonged to the shell-  
**Fowl nor** fish species. He seems to have cred-  
**Fish.** ited the popular belief, then current, that these shells grew on trees, and

opened in time of maturity, and that "out of them grow those little living things which, falling into the water, do become fowls, whom we call barnacles." Moses Taku (Tachau) of Regensburg (about 1250) wrote a curious treatise against mystic-theosophic speculations, entitled "Ketab Tamim" (published in "Ozar Nehmad," iii. 58-99, Vienna, 1860), wherein he says that birds growing on trees, *if it be true that they grow on trees*, are not forbidden food. Gerson b. Salomo of Arles (about 1270) speaks of barnacle-geese, which he calls ברנטיאגש (so in Steinschneider's "Hebr. Bibl." xxi. 54; *ib.* vi. 94, n. 6, reads: (ברנטיאגש). He refers, in this connection, to Aris-

totle's "Zoology," which was one of the sources of this early encyclopedist.

The next reference to the legend is found in the Zohar, now generally assumed to have been written in the middle of the thirteenth century by Moses b. Shem-Tob de Leon (1250-1305). He says that R. Aba saw a tree from whose branches geese grew (Zohar iii. 156). Mordecai b. Hillel of Regens-

**In** burg (about 1300), possibly influenced  
**the Zohar** by the views of various divines who  
**and in** declared against their suitability for  
**"Kol Bo."** food during Lent, hesitates to say whether these birds are to be slaughtered as fowl, or, in view of their peculiar origin, if they may be eaten unslaughtered as fish (Hul. 735). Jacob b. Asher (died 1340) follows the view of R. Isaac of Corbeil in his decision. The anonymous compiler of the legal compendium "Kol Bo" (fourteenth century) refers twice to the subject, mentioning the views of R. Isaac and of R. Jehiel b. Jose (of France, 1240?), and concludes that they are forbidden (ed. Venice, 1572, p. 113a-b). Among later authorities who mention the legend are: Jacob b. Moses Molin or Maharil (died 1427), in his responsa, No. 144; Simon b. Zemah Duran (died 1444), who, according to a manuscript citation, speaks somewhere of עופות הנדל' באילן (Halberstamm's "Catalogue," p. 66, n. 345, § 479); Joseph Caro (1488-1575), Shulḥan 'Aruk, Yoreh De'ah, 84, 15; Solomon Luria (died 1573) ("Yam Shel Shelomoh," ed. Stettin, p. 1006); Yair Hayyim Bacharach (died 1702), in the unpublished index to his writings, MS., p. 92a: בענין עופות שתלויים בחרטומיהם מה שכתוב בספריהם, taken from non-Jewish sources; Hezekiah de Silva (about 1692), in "Sefer Peri Ḥadash" to Yoreh De'ah, *l.c.* p. 70b, Amsterdam, 1682. Phineas Elijah b. Meir of Wilna (about 1790) says in his "Sefer ha-Berit" (i. 11, § 4) that "in Ireland, near England, in a place called Scotland, there are geese which grow on trees planted by the water; and in spring they fall from the trees into the water and live and grow larger in the water." His friend, R. Eliakim Gottschalk b. Abraham of London, refers him to the above-quoted passage in the Zohar. He seems to have believed the fable (compare the Warsaw ed., 1869, p. 606). As recently as 1863, to judge from a note in "Ha-Maggid," 1863, vii., No. 42, p. 335b, the story was accredited in Russia.

According to a statement made by Alberuni (about 1000), it seems possible that the story may have originated in the East. He writes: "Aljaiḥani [a contemporary of Alberuni] relates that in the Indian Ocean there are the roots of a tree which spread

**Possible** along the seacoast in the sand; that  
**Oriental** the leaf is rolled up and gets separated  
**Origin of** from the tree; and that it then changes  
**Myth.** into a king-bee, and flies away" (see his "Chronology of Ancient Nations,"

Eng. transl. by Sachau, p. 214, London, 1879). According to Steinschneider the idea of *generatio æquivoca* and the Oriental fable of the trees bearing maidens on a mythical island called Wak-wak are closely related to the barnacle-geese story. Mas'udi, Ibn Tufail, Pseudo-Callisthenes, and others mention this wonder, and reference thereto is made in the "Thousand and One Nights." The maidens

of Wak-wak (*Mädchenblumen*) are known to Jewish writers. Judah Hadassi, the Karaite (about 1148), the anonymous translator of Ibn Tufail's work, *דן יקטן* (about 1349), and Simon Duran of Algiers (1423-25) mention the fable (see "Z. D. M. G." xxxi. 493; Steinschneider, "Pseudepigraphische Literatur," p. 25; *idem*, "Hebr. Bibl." iv. 15; *idem*, "Hebr. Uebers." pp. 12, 366).

G. A. K.

**BARNATO, BARNETT ISAACS** (commonly called "**Barney Barnato**"): English "diamond king," promoter, and speculator; born in London July 5, 1852; committed suicide by jumping from the deck of the steamship "Scot," June 14, 1897. His father, Isaac Isaacs, was a small general dealer with a prosperous business. Both Barnett and his elder and only brother, Henry, were educated at the Jews' Free School, Spitalfields, the head master of which was Moses Angel.

In 1871 Henry went to try his fortune at the Kimberley diamond-fields, South Africa; and, his means being at first slender, he endeavored to raise money by appearing as a conjurer and entertainer under the professional name of "H. I. Barnato." A little later he became a diamond-dealer, and wrote home advising his brother to join him. Barnett sailed for Cape Town in 1873 and reached Kimberley with about £50. Finding his brother to be generally known as "Harry Barnato," he decided to adopt the same surname. Thenceforward he signed himself "B. I. Barnato," and was popularly referred to as "Barney Barnato."

In 1874 Barney and his brother commenced business as diamond-dealers under the firm-name of "Barnato Brothers"; and in 1876 Barney, who was then worth about \$15,000, purchased four claims in the Kimberley mine, which soon brought in an income of \$9,000 a week. In 1880 he visited London and established the firm of "Barnato Brothers," financiers and diamond-dealers. On his return to Kimberley he floated his first company, "The Barnato Diamond Mining Company," for \$575,000, which paid a dividend of 36 per cent per annum. The same year the late Cecil John Rhodes floated the first De Beers Diamond Mining Company; he and Barnato continued rivals until the amalgamation of that company with the Kimberley Central Company. Barnato next turned promoter. In the Rand he organized the Glencairn, New Cræsus, Primrose, and Roodeport companies. He invested in the Johannesburg Water Company, and became a mem-

ber of the Johannesburg Stock Exchange and of other concerns. At the height of his financial career he enjoyed the confidence of the public to such an extent that in a single day \$5,500,000 was subscribed for shares in one of his enterprises.

Barnato was returned for the Legislative Assembly of Cape Colony as member for Kimberley, after a fierce contest, in 1888, and was reelected in 1894, although he had been burned in effigy a short time before.

Barnato's success as a speculator caused him to revisit London, where he became known as a daring operator; and for a short time his companies received some public support. In July, 1895, he attained the height of his popularity in England and was lionized; but his career was meteor-like. His experience in the London stock-market, with which he was unfamiliar, was disastrous. He formed a trust company which he named "The Barnato Building Company"; and the demand for participation in this enterprise was so great that the £1 shares rose to £4 at the opening of the subscription lists, though they fell below par soon afterward, owing largely to the fact that the securities held by the company were of uncertain value. In November, 1895, the lord mayor of London gave a banquet in honor of Barnato, who, wishing to be under no obligation, handed a check for \$50,000 to him as a donation to the fund for the benefit of the poor in Spitalfields, in whose welfare the lord mayor was then actively-interested.

Events resulting from the Jameson raid into the Transvaal, which jeopardized Barnato's interests, compelled him to return to South Africa, where he remained to adjust his affairs; but the strain was more than he could stand. Hoping to benefit his health by a sea voyage, he sailed for England in the care of his wife and two nurses; but he grew no better. While in a state of frenzy, he succeeded in eluding his attendants, and, jumping overboard, was drowned. His body was recovered, and now lies in Willesden cemetery, near London. Although Barnato was at one time reputed to be worth \$85,000,000, it is doubtful if he ever had more than \$35,000,000. At the time of his death his estate was valued at \$3,000,000. As an amateur actor, Barnato was a never-failing attraction, especially as *Matthias* in "The Bells"—a part he often played in the early Kimberley days.

F. H. V.

**BARNAVE, ANTOINE PIERRE JOSEPH MARIE:** French politician; member of the Assemblée Nationale; born at Grenoble in Dauphiny Oct. 22, 1761; guillotined in Paris Nov. 29, 1793. He was of a Protestant family. Barnave received his education in the law at home; and at the age of twenty-two he made himself known as a political orator.

In 1789 Barnave was elected by the *Tiers état* deputy to the States General. Owing to his oratorical ability he soon became one of the leaders of the popular party. Imbued from his childhood with liberal ideas, and having himself suffered, as a Protestant, from restrictive laws, Barnave ardently pleaded at

the Assembly the cause of the Jews, and joined his efforts to those of Mirabeau to carry his followers in their favor. On Dec. 23, 1789, he delivered a great discourse, defending the Jews against the attacks made at the tribune by the abbé Muray and the bishop of Nancy, both of whom endeavored by all means to check the complete emancipation of the Jews. Barnave contributed on this occasion in great measure to the final triumph of justice.

I. Br.

**BARNAY, LUDWIG:** German actor; born at Budapest, Hungary, Feb. 12, 1842. He was the son of the secretary of the Jewish congregation at that

Ludwig Barnay.

place. Barnay was destined for the building trade, but induced his father to send him to Vienna to study for the stage under Adolf Sonnenthal. Though but fifteen years of age, he made so good an impression on Sonnenthal that the latter took him in charge. For some time Barnay devoted himself to study in the polytechnic school; but its curriculum proved irksome, and he finally gave all his attention to histrionic studies.

His father, angered by his son's course, disowned him. In 1860 Barnay, then eighteen years old, went to Trautenau, Bohemia, and made his début with the local company under the name of "Lacroix" as *Baron von Heeren* in Töpfer's "Zurücksetzung." Although he made a fiasco, the management allowed him to play in "Tische und Sesseln," in which he acquitted himself with more credit. When the company went to Braunau, Bohemia, Barnay accompanied it, receiving five gulden and fifty-one kreutzers (\$2.67) for his work during June and July.

Next he headed a company of "barnstormers" which played in small towns in Moravia and Austrian Silesia. When the tour proved a financial failure, Barnay returned to his home and became reconciled to his father. This proved the beginning of his real career, for he was asked to appear at a benefit, at which he did so well (under his own name) as *Prince Leopold* in Hersch's "Anna-Liese," that Heinrich Laube invited him in 1863 to become a member of the Vienna Burgtheater ensemble. Barnay refused this, however, declaring himself as yet unfit for the work. Instead, he went to Mayence, where he played minor rôles for a time, returning to Vienna to appear at the Burgtheater as *Ludovic* in Mosenthal's "Deutsche Komödianten." Later he played *Karl Moor* in Schiller's "Räuber," and *Lord Rochester*. In 1864 he played at Prague, and in 1865 at Riga, where he made his début as *Faust* and *Tell* and as *Orestes* in Goethe's "Iphigenie auf Tauris." His next appearance was at Mayence in 1866, then at Erfurt, and in 1867 at the Stadttheater of Leipzig.

A year later he appeared at Weimar with the Meiningen company, playing *Schüller* in "Karlschüler," *Graf Essex*, and leading parts in other plays.

In 1870 Barnay joined the Stadttheater in Frankfurt-on-the-Main, where he remained for five years. It was during this time that he accomplished his greatest service to the German stage—the convening of the stage-congress at Weimar July 17, 1871, which, on the day following, organized the alliance of German stage associates under the name of "Genossenschaft Deutscher Bühnengehöriger," which welded into one body the hitherto semi-antagonistic players, authors, and managers. So greatly was Barnay's share in this undertaking appreciated, that in 1872 an address of thanks, signed by four thousand actors, was presented to him.

From 1875 to 1880 Barnay held the position of stage-director of the Stadttheater in Hamburg, although in the interim he starred at the Hoftheater in Stuttgart (1873), at Munich, Frankfurt, and Berlin, appearing also with the Meiningers. In 1883 he became one of the founders of the Deutsche Theater in Berlin, but two years later resigned to convert the old Operetten-Walhalla-Theater into a playhouse of his own, which he named the "Berliner Theater." Here he remained until 1894, when he retired from active participation in affairs of the stage.

Barnay played also in London and New York, at both places duplicating his German successes.

Opinions as to Barnay's artistic standing in his profession are unanimous so far as German critics are concerned. By them he has been acclaimed a histrionic genius, possessed of versatility, intensity, and emotional power of the first order. Judged by the standards of the English-speaking stage, however, Barnay belongs to the declamatory school of two generations ago. But in rôles such as *Uriel Acosta* and *Moor*, Barnay is undoubtedly good. His *Tell* is a noble impersonation; but his *Marc Antony* savors too much of the elocutionary school. Other parts in which he acquitted himself with credit are *Graf Waldemar*, *Essex*, *Othello*, *Hamlet*, *Kean*, and *Wallenstein*.

**BARNETT, ARYEH LOEB:** Dayyan in London; locally known as "Rabbi Aryeh Loeb"; born at Krotoschin, in the grand duchy of Posen, in 1797; died in London Feb. 10, 1878. For many years his father had been head of the "bet din" of his native place; and he himself was a pupil of the eminent rabbi Akiba Eger of Posen. Jointly with Rabbi Aaron, Barnett discharged the duties of dayyan in London for nearly half a century, causing him to become one of the best-known figures in the London community. He was a rabbi of the Orthodox stamp, and an earnest student of the Talmud. About five years before his death he was stricken with blindness.

**BIBLIOGRAPHY:** *Jewish Chronicle*, Feb. 15, 1878; *Jewish World*, same date.

G. L.

**BARNETT, JACOB:** Hebrew teacher at Oxford about 1613. He gave instruction to the students, under the direction of Richard Killye, regius

professor of Hebrew. When Isaac Casaubon visited the university in 1613, he was much struck by Barnett's abilities, and, in order to perfect his own knowledge of Hebrew, carried him off to London. There Barnett showed signs of attraction toward Christianity; and elaborate preparations were made for his reception into the Church at Oxford, under the auspices of the vice-chancellor. On the appointed day, however, Barnett was not to be found; and the preacher of the special sermon delivered one instead on Jewish perfidy. Barnett was discovered and put in prison, but on Casaubon's entreaty was released, and banished from the kingdom Nov. 16, 1613. His subsequent fate is unknown.

**BARNETT, JOHN** (family name **Beer**): English composer; born at Bedford, England, July 1,

John Barnett.

1802; died at Cheltenham April 17, 1890. He made his début as a singer at the Lyceum in 1813, when only eleven years of age; but two years later the breaking of his voice led him to devote himself to musical composition, for which he studied under Ferdinand Ries and under Perez, organist of the

Spanish embassy to London.

Barnett, while still a child, wrote masses and lighter pieces, several of which were published. His first great success, however, was an operetta entitled "Before Breakfast," produced at the Lyceum in 1825. This was followed in 1831 by "The Pet of the Petticoats," regarded as his most important dramatic production up to that time. In 1832 he was made music-director of the Olympic Theater, and two years later his first opera, "The Mountain Sylph," was produced at the Lyceum. This work, which met with immediate success, was followed by the operas "Fair Rosamond," produced at Drury Lane in 1837, and "Farinelli," brought out in 1838.

The following year Barnett spent in study at Frankfurt, and on his return to London in 1839 was associated with Morris Barnett, the dramatist, in opening St. James's Theater. Unfortunately the theater was closed at the end of the first week. In 1841 he settled at Cheltenham, where he was engaged as a singing teacher until his death. In addition to the works mentioned, Barnett's productions include three operas which have never been performed, two unfinished oratorios, many part-songs and duets, two string quartets, and about 4,000 detached songs.

M. W. L.

**BARNETT, JOHN FRANCIS**: English musician; born at London Oct. 16, 1837; nephew of John

BARNETT. He was a pianoforte pupil of Dr. Wylde, and in 1850, and again in 1852, received the queen's scholarship at the Royal Academy of Music. In 1853 he made his début as a pianist at the New Philharmonic concerts, and in 1856 went to the Leipsic Conservatory, where he studied for three years with Moscheles, Plaidy, and Hauptmann. In 1860 he played at the Gewandhaus, and then returned to England, where he has since been established as teacher, concert-pianist, and composer. In 1883 he received a professorship at the Royal College of Music.

His principal compositions are: "The Raising of Lazarus," an oratorio, 1876; a number of cantatas, "The Ancient Mariner," Birmingham Festival, 1867; "Paradise and the Peri," *ib.* 1870; "The Good Shepherd," Brighton, 1876; "The Building of the Ship," Leeds, 1880; "The Harvest Festival," Norwich, 1881; an orchestral composition, "The Lay of the Last Minstrel," Liverpool, 1874; a symphony in A minor; "Ouverture Symphonique," 1868; "Overture to the 'Winter's Tale,'" 1873; a concerto for the pianoforte in D minor; and a great number of pianoforte pieces, songs, part-songs, quintets, quartets, and trios.

J. So.

**BARNETT, LIONEL D.**: English author; born at Liverpool 1871, educated at the High School, Liverpool, and Trinity College, Cambridge, where he had a phenomenally successful career in the classical tripos, showing particular eminence in Greek, taking four medals for Greek epigrams and odes. He also obtained the Craven scholarship, 1894.

He has written a short history of the Greek drama, 1900, and translated Koch's "Roman History." He is now (1902) in the Oriental Department of the British Museum.

BIBLIOGRAPHY: Harris, *Jewish Year Book*, 1901, p. 244.

J.

**BARNETT, MORRIS**: Dramatist and actor; born in 1800; died at Montreal March 18, 1856. He was originally trained for the musical profession, but decided to become an actor. After a provincial tour he appeared in 1833 at Drury Lane Theater, London, where he scored a success in Douglas Jerrold's play, "The Schoolfellows." He afterward performed in "Capers and Coronets." His first composition was "Monsieur Jacques," a musical play which met with great success in 1837 at the St. James's Theater. In this he played the title-rôle and, as a result, obtained considerable vogue as a delineator of French characters. His next appearance was at the Princess' Theater, where his portrayal of the "Old Guard" attracted great attention. He then joined the editorial staff of the "Morning Post" and the "Era," and was the musical critic of the latter paper for about seven years. In September, 1854, he determined to go to America and gave a series of farewell performances at the Adelphi Theater. His tour was not successful, its failure being due to Barnett's illness which ended in his death.

After the success of "Monsieur Jacques," Barnett composed several dramatic productions. These were chiefly comedies, and included: "The Serious Family," an adaptation from "Le Mari à la Campagne";

"Lilian Gervais," a drama in three acts, adapted from the French play, "Marie Simon"; "Married and Unmarried," a drama; "The Bold Dragoons," a comic opera; "Mrs. G. of the Golden Pippin," an operetta; and "Circumstantial Evidence," a comedy.

**BARON, HENRY:** French painter; born at Besançon in 1816; died at Geneva in 1885. He was one of the foremost representatives of the historic genre in France, and depicted chiefly the lighter side of the social life of the Renaissance and of the rococo period. His paintings are distinguished by the facile and skilful touch suggestive of the French school of the eighteenth century and also by brilliancy of color, and great variety of detail. Among the best known of his works may be mentioned: "Andrea del Sarto Painting His Wife as Madonna del Sacco"; "Palestrina in the Midst of an Assemblage of Musical Ladies"; "Venetian Painters with Their Inamoratas Assembling in a Tavern upon the Great Canal to Celebrate the Feast of Their Patron, Saint Luke"; "An Assemblage upon the Green," and "A Harvest-Festival in the Campagna." Both of the last-mentioned works, as well as the well-known water-color, "Feast in the Tuileries During the Paris Exposition of 1867," are in the Luxembourg Gallery. Baron's water-colors were deservedly popular; and he is equally well known for his numerous illustrations to the works of J. J. Rousseau, the "Tales of Boccaccio," the "Adventures of Télémaque," and the "Fairy-Tales of Perrault."

Baron received second-class medals in 1847-48 and in 1855; a decoration in 1859, and a third-class medal at the Universal Exposition of 1867. He also received several commissions from Napoleon III., among which were the water-colors, "The Official Fête," and two paintings, "The Bouquet," and "The Sense of Touch"—placed over the entrance to the Ministry of the Interior.

**BARON DE HIRSCH FUND.** See HIRSCH FUND, BARON DE.

**BARON, JONAS:** Hungarian physician, surgeon, and lecturer on surgery at the University of Budapest, Hungary; born at Gyöngyös Nov. 23, 1845; educated at Budapest. His father was secretary of the Jewish community in Gyöngyös. In 1870 Báron acted as medical assistant to the various hospitals of Budapest; from 1871 to 1873 to the Jewish hospital there, of which institution he has since 1874 been senior surgeon. He is the author of a work on surgical pathology and therapeutics (Budapest, 1871), and of articles in the periodicals, "Orvosi Hetilap," "Gyógyászat," and "Pester Medic. Chirurg. Presse"—all of Budapest; and in "Wiener Med. Presse" and "Wiener Med. Wochenschrift."

A. L. L.

**BARREN, BARRENNESS:** The Hebrew word for "barren"—עקרי ('akar); feminine, עקרה

(‘akarah)—denotes probably "uprooted," in the sense of being torn away from the family stock, and left to wither without progeny or successors. A similar import attaches to the word "ariri" (from ערר), "bared," "stripped," translated "childless" in the A. V. and applied generally only to the male (Gen. xv. 2; Jer. xxii. 30; but see Lev. xx. 20, 21).

A race that piously looked upon children as "an heritage from the Lord" (Ps. cxxvii. 3), seeing in them sources of strength as well as of blessing—"Happy is the man that hath his quiver full of them" (*ib.* verse 5); "thy children, like olive-plants, round about thy table . . . thus shall the man be blessed that feareth the Lord" (Ps. cxxviii. 3, 4)—very naturally looked upon the opposite state of childlessness as a grave misfortune. The wife who presented her husband with no such

**Biblical Examples.** tangible blessings or supporters felt that her aim in life had been missed.

"Give me children or else I die!" was the plea of Rachel (Gen. xxx. 1) when she saw Leah adding child after child to Jacob's household; and the desperate remedy for her own childlessness, suggested (*ib.* verse 3) and carried out (*ib.* verse 4), showed how keenly she felt her position. In a later age Peninnah taunted Hannah with her unfruitfulness, "provoked her sore, for to make her fret" (I Sam. i. 6). Later yet, the best return that Elisha could make—at the suggestion of Gehazi—to the Shunammite was to pray to the Lord for the termination of her childlessness (II Kings iv. 16).

But the good sense of the people in the age of the Apocrypha, when intercourse with the world had brought broader views, drew a finer

**Change of Attitude After Bible Times.** discrimination between mere prolific-ness and Barrenness. It took into account the possibility that so many

children might not always be so many blessings; that sons and daughters might be bad as well as good. "Desire not a multitude of unprofitable children," wrote Sirach; "though they multiply, rejoice not in them, except the fear of the Lord be with them . . . better it is to die without children than to have them that are ungodly" (Ecclus. [Sirach] xvi. 1-3). The Book of Wisdom even asserts that there are better and more lasting monuments than children; intimating that it is better to have virtue than offspring, for the memorial of the former is immortal, known to both God and men (iv. 1; compare Isa. lvi. 3-5).

The Talmud marks another stage in the attitude of the popular mind toward Barrenness or childlessness. The development of the Law, and the duty of teaching it diligently to one's children, brought additional pain to the heart of the pious but childless Jew, who gloried in the performance of all the commandments, but found he could not impart them to "those who should come after him." Such a one is reckoned as if "menuddeh," cut off from all communion with God, like unto him who voluntarily disregards all the precepts of the Law (Pes. 113b); he is accounted as already dead, together with the pauper, the leper, and the blind (Ned. 64b), for all the enjoyment that is left to him in life. "Weep sore for him that goeth away, that shall return no more nor see his native country" (Jer. xxii. 10), was

interpreted by R. Judah as being applicable chiefly to him who dies without children (M. K. 27b); his quiver is not full with those that shall represent him in the study-house or the Temple. But at times the ethical side rose superior to the religious view also among the doctors of the Law of the Talmudic age: "A man's good deeds are his best posterity" (Tan. vii.).

A remarkable light is likewise thrown upon the usual conception of the supreme importance of a numerous progeny by the provision—probably intended for certain obstetrical cases well known to modern surgery—that while it is always forbidden for a man to partake of a defertilizing draught, such may sometimes be permitted to a woman (Tos. Yeb. viii. 4; see Levy, "Neuhebr. Wörterb." s. v. עקרין). A passage in Shab. 110a *et seq.* gives the alleged ingredients of such a drink (כוס עקרין, "the cup of barrenness").

Medieval Judaism, taking its coloring from the superstitions of its surroundings, saw an additional source of sorrow in Barrenness, in the consequent impossibility of having the Kaddish recited by children for the repose of the souls of the parents upon their demise. See article KADDISH.

For the legal aspects of Barrenness, see MARRIAGE LAWS.

**BARRIOS, DANIEL LEVI (MIGUEL)**  
**DE:** Spanish poet and historian; born 1625 at Montilla, Spain; died Feb., 1701, at Amsterdam. He was the son of a Marano, Simon de Barrios—who also called himself Jacob Levi Caniso—and Sarah Valle. His grandfather was Abraham Levi Caniso. To escape the persecutions of the Inquisition, Simon fled to Portugal, and remained for a time at Marialva, and also in the vicinity of Villa-Flor. Not feeling safe in Portugal, he went to Algeria. Miguel, his son, went to Italy and dwelt for a time at Nice, where his paternal aunt was married to the otherwise unknown Abraham de Torres. He then stayed for a longer time at Leghorn, where another sister of his father, wife of Isaac Cohen de Sosa, prevailed upon him to declare himself publicly a Jew. Soon after this he married Deborah Vaez, a relative of his brother-in-law, Eliahu Vaez, from Algeria, and afterward determined to leave Europe.

On July 20, 1660, he with 152 coreligionists and fellow-sufferers set sail for the West Indies. Soon after his arrival at Tobago his young wife died, and he returned to Europe. He went to Brussels and there entered the military service of Spain.

De Barrios, who in the course of his long life had to undergo a hard struggle against fate, spent his

happiest years at Brussels, where he came much in contact with Spanish and Portuguese knights, and where he was soon advanced to the rank of captain. Here he wrote his best poetical work—his "Flor de Apolo" (see below)—his dramas, and "Coro de las Musas," in which he sang the praises of the reigning princes of Europe and of the then most flourishing cities, Madrid, Lisbon, Paris, London, Rome, Amsterdam, and others. Here also he planned his greatest poetical work, which was to deal with the Pentateuch, and which was to be divided into twelve parts, each part to be dedicated to a European ruler. He intended to call it the "Imperio de Dios" or "Harmonia del Mundo." Several potentates had already sent the poet their likenesses, their genealogies, and their coats of arms, and had promised the means for the production of the work, when the board of wardens ("ma'amad") and the rabbis of the Amsterdam community refused to give the necessary "approbation" for the publication of the work, through which, they held, the law of God might be profaned.

In 1674 De Barrios left the Spanish service and removed to Amsterdam, where he joined the numerous followers of Shabbethai Zebi. He firmly believed that the Messiah would appear on the Jewish New Year of 5435. On the Passover preceding that holy day he suddenly became insane, fasted for four days, refused to take any nourishment, and in consequence was so weakened that his life was despaired of. Only the earnest remonstrances of the eminent Rabbi Jacob Sasportas, who had given him advice in regard to the compilation of his "Harmonia del Mundo," and who possessed his full confidence, prevailed with him and induced him to take food and thus by degrees to regain his strength. De Barrios remained in poor circumstances all his life. In order to earn bread for those nearest to him, he sang the praises of the rich Spanish-Portuguese Jews on sad and joyous occasions, or dedicated his minor works to them. His writings are frequently the only sources of information concerning the scholars, philanthropic institutions, and Jewish academies of his time, though the information given is not always reliable. He was buried in the cemetery of Amsterdam, next to his second wife, Abigail, daughter of Isaac de Pina, whom he had married in 1662, and who died in 1686.

He composed for himself the following epitaph:

"Ya Daniel y Abigail  
Levi juntarse bolvieron.  
Por un Amor en las Almas,  
Por una losa en los cuerpos.  
Porque tanto en la vida se quisieron  
Que aun despues de la muerte un vivir fueron."

(Daniel and Abigail  
Levi have here become united again.  
Love joined their souls;  
A stone now joins their remains.  
So deeply they loved each other in life  
That even after death they shall be one.)

De Barrios was the most fruitful poet and author among all the Spanish-Portuguese Jews of his time. Hardly a year passed that did not see the publication of one or more of his writings. His principal works are: "Flor de Apolo," containing romances, "dezi-

mas," 62 sonnets, and the three comedies, "Pedir Favor al Contrario," "El Canto Junto al Encanto," and "El Espanjol de Oran," Brussels, 1663; "Contra la Verdad no ay Fuerca," Amsterdam, 1665-67, a panegyric on Abraham Athias, Jacob Rodrigues Caseres, and Rachel Nuñez Fernandez, who  
**His Works.** were burned as martyrs at Cordova; "Coro de las Musas," in nine parts, Brussels, 1672; "Imperio de Dios en la Harmonia del Mundo," Brussels, 1670-74 (the second edition contains 127 verses; the first, but 125); "Sol de la Vida," Brussels, 1673; "Mediar Estremos, Decada Primera en Ros Hasana," Amsterdam, 1677; "Metros Nobles," Amsterdam, n. d.; "Triumpho Cesareo en la Descripcion Universal de Panonia, y de la Conquista de la Ciudad de Buda," Amsterdam, 1687; "Dios con Nos Otros," *ib.* n. d. (1688); "Historia Real de la Gran Bretaña," *ib.* 1688; "Arbol de la Vida con Raizes de la Ley," *ib.* 1689.

The opuscula, or minor literary and biographical works, of De Barrios appeared under various titles at different periods, in two different editions. They treated of the various "hermandades academicas" and "academias caritativas." The often-quoted "Relacion de los Poetas, y Escriptores Españoles de la Nacion Judayca" and "Hez Jaim (Hayyim), Arbol de las Vidas," which treat of the Amsterdam scholars, are of most value. Both have been reprinted, with explanatory notes, in "Revue Etudes Juives," xviii. 281-289, xxxii. 92-101. His last work bears the title "Piedra Derribadora de la Sonjada Estatua Desde el Año de 1689 al de 1700" (no date).

A certain **Daniel Lopes Barrios** lived in America in 1748.

**BARRUCHIUS (BARUCH?), VALENTINUS:** Spanish poet; lived probably in the twelfth century. He is said to have been a native of Toledo. He wrote in clear and ornate Latin the history of the Count Lyonnais (Palanus)—an old romantic legend recounted by early Catalanian chroniclers, and found in various versions in the folk-tales

of many countries. Its most popular form in England is to be found in a Norman ballad of William of Malmesbury. Voltaire has utilized the story in his tragedies "Artémire" and "Tancrèd." Boastuan (sixteenth century), in the preface to his version of the legend ("Histoires Tragiques par Boastuan et Belleforest," Lyons, 1596), refers to the work of Baruchius in eulogistic terms.

**BARSIMSON, JACOB** (also known as **Barsimson**, **Bersimson**, and **Barstinsen**): One of the earliest Jewish settlers at New Amsterdam (New York). He arrived at that port on the ship "Pear Tree" July 8, 1654, it is believed from Holland, which country he seems to have left in company with a coreligionist named Jacob Aboab (Aboast or Aboaf?), also bound for New Amsterdam. It is doubtful whether Aboab ever reached the New World. Early records refer to some transactions between these emigrants when their vessel was off the Isle of Wight; hence, in view of the date and the circumstances, the Dutch origin attributed to these early emigrants. Barsimson was succeeded by a party of twenty-three Jews, who arrived at New Amsterdam the following October and who came, it is believed, from Brazil. This fact makes Barsimson the earliest identified Jewish settler within the present limits of the state of New York; though there is reason to believe that there were still earlier Jewish residents whose identity is to-day lost.

References to Barsimson in the early tax-lists indicate that he was a man of small means, as about a year after his arrival he was taxed voluntarily at a sum very much lower than the majority of Jewish and non-Jewish residents. This did not prevent him, however, from vigorously insisting upon his rights, and from freely appealing to the courts for redress, no matter how influential his opponent. In 1658 he succeeded in securing from the Dutch municipal court in New Amsterdam a ruling which is surprising even in the light of latter-day principles of religious liberty. He was summoned to court as defendant on a Saturday; but the court decided, in the terse language of the record, that, "though defendant is absent, yet no default is entered against him, as he was summoned on his Sabbath." Three years earlier Barsimson and another early Jewish settler, Asser Levy, joined in a petition to the governor and council of New Netherland to be permitted to stand guard like the other burghers, or to be relieved from the special tax imposed upon their nation in lieu thereof by resolution of governor and council; but their request was curtly refused, with the remark that they might go elsewhere if they liked. Instead of following this latter advice, Barsimson and his coreligionists succeeded before long in obtaining instructions to Governor Stuyvesant from his superiors—the Dutch West India Company of Holland—condemning such unjustified and illiberal discriminations. There is reason to believe that the heavy Jewish holding of stock of the company

in Holland was a potent factor in securing the removal of these disabilities.

M. J. K.

**BARTENORA.** See BERTINORO, OBADIAH BEN ABRAHAM.

**BARTER:** The exchange of things of value, none of them being money. Barter is distinguished from a sale, where one of the things is money. As trading must have existed long before even the rudest kind of money was invented, Barter must have preceded sales properly so called. In the "Iliad" the Greeks before Troy buy wine of the ships coming from Lemnos, some of them with bronze or iron, some with skins, others with oxen or with slaves: this was many centuries after Abraham had bought a field with ready money. But little or nothing is found in the ancient laws of Greeks, Romans, or Hebrews to regulate Barter as distinguished from sale. It has been shown in the article ALIENATION that the form of Barter was often given to a purchase and sale; a handkerchief or some implement ("keli") being received as the equivalent for a house or field, or for a draft-animal. This was done, of course, as a mere formality, the real price being paid thereafter, or perhaps before, in money, or in a written or oral promise of money, this mode of passing the title being known as exchange ("ḥalippin").

From the treatment of this matter in Mishnah and Gemara it is pretty evident that a real Barter was seldom in contemplation when the parties went through its forms. Where the Babylonian Talmud speaks of overreaching (B. M. iv. 3, 4)—that is, buying goods at one-sixth below, or selling them at one-sixth above, the market price—it does not specially apply the rule to Barter, where the goods on both sides would have to be valued. Exchanges between goods of different kind are, however, alluded to in the treatment of the laws of usury (B. M. v. 1), as such an exchange may be resorted to where one of the commodities is about to rise in value, to cover up usury.

The Palestinian Talmud, however, where it discusses "ona'ah" (overreaching, B. M. v. 10b), intimates that it may apply in cases of actual Barter. Maimonides ("Yad," Mekirah, xiii. 1) draws the conclusion that where an animal is exchanged for an animal, or an implement for an implement, mere inadequacy of values is no ground for complaint by either party, because each may have a predilection for the article he gets, but that it is otherwise in exchange of produce ("perot"), as here the value given on either side is strictly commercial. The commentators on Maimonides, *ad loc.*, are strangely divided on this passage; and the subject is evidently one which came but seldom, if ever, into practical discussion before the judges.

In cases, however, in which a purchase or sale might be set aside for fraud, accident, or mistake ("mikḥalah ṭa'ut"), a trade by Barter would fall under like rules; thus the case is put (Hoshen Mishpat, 224, 1) where A trades his cow with B for an ass;

the latter takes possession of the cow, but before A can take possession of the ass, the ass dies; B would have to bring forward proof that his ass was alive when the trade was clinched by the taking possession ("meshikah") of the cow (see ALIENATION and FRAUD AND MISTAKE).

L. N. D.

**BARTH, JACOB:** German professor of exegesis, religious philosophy, and Semitic languages; born at Flehingen, Baden, 1851. He studied Orientalia at Leipsic under Fleischer, and at Strasburg under Nöldeke, and later at Berlin University, where he subsequently (1880) became professor of Semitic languages. In 1874 he was appointed professor of Hebrew, exegesis, and religious philosophy in the Rabbiner Seminar of the same city. For the last ten years he has lectured on Semitic and Jewish literature at the Veitel Heine Ephraim Institute.

In the field of Jewish literature Barth has published the following works as programs of the Seminary: "Beiträge zur Erklärung des Buches Hiob," 1876; "Maimonides' Commentar zum Tractat Makkoth," 1880; "Beiträge zur Erklärung des Jesaja," 1885; "Etymologische Studien zum Hebräischen Lexicon," 1893. He has also contributed numerous valuable papers to the leading periodicals devoted to Oriental philology, among which those in the "Z. D. M. G." vols. xli.-xlv., xlviii., liii., on comparative studies in Semitic grammar, are deserving of especial mention, as adding much to this field, particularly to the Hebrew portion of it.

But Barth's greatest work, and one which stamps him as one of the foremost Semitic scholars and investigators of the day, is his "Die Nominalbildung in den Semitischen Sprachen," 1889-91; 2d ed., 1894. This work endeavors to trace for the first time the genetic development of Semitic noun-forms, and may be considered epoch-making in this department of knowledge. Many literary opponents, adopting the theories of Lagarde, who published a work at the same time, uttered protests; but their opposition is becoming weaker, and most of Barth's results are now rapidly being recognized as the standard teachings of philological science.

Barth is also the editor of "Tha'lab's Kitab al-Fasih," edited and commented, Leipsic, 1876; of two volumes in the series "Tabari's Annalen," parts i., ii. (1879-81) in De Goeje's edition of Tabari and of the "Diwan des Qutâmi," Leyden, 1902.

F. H. V.

**BARTHOLDY, JACOB SALOMON:** Prussian diplomat and art patron; uncle of the composer Felix Mendelssohn-Bartholdy; born May 13, 1779, in Berlin; died in the Protestant faith July 27, 1825, in Rome. He was of a prosperous Jewish family, and received a careful education. After attending the University of Halle for some time, he made a tour through Greece with the artist Gropius. From Greece he brought home the manuscript of an unfinished book, the first part of which was published in 1805 under the title "Bruchstücke zur Näheren Kenntniss des Heutigen Griechenlands," Berlin; a French translation appeared in Paris in

1807. He traveled extensively in Italy and in Asia Minor; but Holland and France likewise attracted him, and he spent much of his time in Paris. In Dresden he became an intimate friend and admirer of the noted pastor Reinhard, by whom he was converted to Protestantism in 1805.

As first lieutenant of the Vienna militia, Bartholdy took an active part in the campaign of 1809 against Napoleon, distinguishing himself especially in the battle of Ebersberg, where he was severely wounded. In 1813, while attached to the bureau of Prince von Hardenberg, he accompanied the allied armies to Paris, and went thence to London. On the latter journey he met Cardinal Consalvi, with whom he formed a lasting friendship, and whose life he afterward described in his book, "Züge aus dem Leben des Cardinals Hercules Consalvi," Stuttgart, 1824.

In 1815 Bartholdy received the appointment of Prussian consul-general to Italy and established himself in Rome. While he strongly opposed the policy of the eminent historian Niebuhr, then Prussian ambassador at the papal court—a policy which to him seemed weak and unnecessarily lenient toward the Holy See—he gave his firm support to Cardinal Consalvi and the Romanists at the Vienna Congress. After the Congress of Aix-la-Chapelle, 1818, he was appointed Prussian business representative, with the title of privy counselor of legation, at the court of Tuscany. In 1825 he was pensioned by the Prussian government.

Bartholdy is the author of the following works, in addition to those mentioned above: "Der Krieg der Tyroler Landleute im Jahre 1809" (1814), and an unfinished work (in manuscript) on ancient glass and glass materials.

An enthusiastic patron of art, great credit is due to Bartholdy for giving a fresh impulse to the revival of fresco-painting. He engaged four German artists—Cornelius, Overbeck, Schadow, and Veit—to adorn his house with frescos, the well-known Casa Bartholdy, or Casa Zuccari, in the Via Sistina in Rome. In 1887 the house was torn down, and the famous frescos representing the story of Joseph were bought by the Prussian government and transferred to the National Gallery in Berlin (Donop, "Die Wandgemälde der Casa Bartholdy," Berlin, 1889). The Museum of Berlin bought Bartholdy's important collection of antiques, comprising Etruscan vases, bronzes, ivories, majolicas, etc., which are now displayed in the National Gallery.

**BARTHOLOMAION.** See BEN TEMALION.

**BARTHOLOMEW** (בר תלמי): One of the apostles; mentioned only in Matt. x. 3; Mark iii. 18; Luke vi. 14; Acts i. 13. Some writers identify him with the Nathanael of John i. 45 *et seq.*, xxi. 2, but on insufficient grounds. He is mentioned by Eusebius ("Church History," v. 3, 10) as having preached the Gospel in India (which name included Arabia Felix). According to other legends he suffered martyrdom (Assemani, "Bibl. Orientalis," iii. 2, 20; see also Lipsius, "Apocryphe Apostelge-

schichten," ii. 2, 54-108). In Coptic Gnostic literature he is often mentioned (see Carl Schmidt, "Gnostische Schriften in Koptischer Sprache," 1892, p. 451).

**BARTHOLOMEW RAYMUNDO.** See RIMOS, MOSES.

**BARTOLOCCI, GIULIO:** Italian student of Jewish literature; born at Celleno April 1, 1613; died Oct. 19, 1687. He was a pupil of a baptized Jew, Giovanni Battista, who instructed him in Hebrew; and on completing his studies he became a priest of the Cistercian order. It was from Battista

Giulio Bartolucci.  
(From Bartolucci, "Bibliotheca Rabbinnica.")

that Bartolucci obtained his great knowledge of Hebrew and rabbinical literature, on account of which he was appointed, in 1651, professor of Hebrew and Rabbis at the Collegium Neophytorum at Rome, and likewise "Scriptor Hebraicus" at the Vatican Library. It was in the Vatican, and with the assistance of his teacher and guide, Battista, who was his coworker at the library, that Bartolucci received his preparation for the work that was to give him lasting fame in the world of Jewish bibliography; and it was at the Vatican and its subsidiary libraries that he obtained his chief materials. In 1675 he began in Rome the publication of his "Bibliotheca Magna Rabbinnica"—a bibliography, in Latin and Hebrew, of Hebrew literature, arranged according to the names of the authors. This work appeared in four folio volumes, 1675-93 (with the Hebrew title קריית ספר), three of which were published by the author and the fourth by Carlo Giuseppe Imbonati, his disciple. Imbonati's supplement contained a list of authors arranged according to the subjects on

which they wrote. The latter added to this work a fifth volume, the "Bibliotheca Latina Hebraica," Rome, 1694, which contained the works and the names of Christian authors who had written in Latin on Jews and Judaism.

It was from Battista that Bartolucci obtained the idea and plan of the "Bibliotheca Magna Rabbinica," as well as part of the material. Battista began the composition of the book in a chronological order, which order was abandoned by Bartolucci. Richard Simon, in writing in his "Bibliothèque Critique" about Bartolucci's work, says: "It contains much of Jewish learning, but little of judgment, and is conspicuous for a profound ignorance in the most common matters that concern criticism." Complaints were also made that he devoted too much space to refutations of Jewish arguments and that his translations from the Talmud were faulty. On the other hand, Wolf attributes to Bartolucci the motive and stimulus for his own work, which has more than superseded Bartolucci's.

Even with its faults, the "Bibliotheca Rabbinica" was a great undertaking. It was the first attempt on a large scale to give to the world an account of the literature of the Jews. It is not a mere bibliographic and biographic compilation, but contains also a number of dissertations on Jewish customs, observances, religious ideas; on the River Sambation, on the beginnings of Hebrew typography, and the like. Some Hebrew treatises are reprinted in full; for example, "Alphabet of Ben Sira," "Megillat Antiochus," "Otiot de-R. Akiba," and a part of Eldad ha-Dani's mythical journey.

Several attempts were made to render Bartolucci's work more accessible. The first who thought of publishing Bartolucci's work, with the omission of its Hebrew texts, etc., was the Oxford scholar Edward Bernard. Adrian Reland of Holland even attempted to publish in Amsterdam such an extract of the "Bibliotheca." But he failed to execute the plan, there appearing in print the biographies alone of such famous exegetes as Rashi, Ibn Ezra, Kimhi, Levi ben Gershom, and Abravanel, which were embodied in his "Analecta Rabbinica" (Utrecht, 1702). Bartolucci left in manuscript a work on the difficult expressions in the Mishnah.

**BARUCH:** 1. Son of Zabbai or Zaccai, who took part in strengthening the wall of Jerusalem in the time of Nehemiah (Neh. iii. 20).

2. A priest who signed the covenant with Nehemiah (Neh. x. 7).

3. A Judahite whose son Maaseiah was a resident of Jerusalem (Neh. xi. 5).

J. JR.

G. B. L.

4.—**Biblical Data:** The disciple, secretary, and devoted friend of the prophet Jeremiah. He was a son of Neriah, and brother of Seraiah, King Zedekiah's chamberlain (Jer. li. 59), and, according to Josephus ("Ant." x. 9, § 1), a member of a very distinguished family. That he had ambitions which he had reason for believing he was capable of reali-

zing is suggested by Jeremiah's solemn warning, uttered during the fourth year of Jehoiakim, when Baruch was deciding upon his life-work: "Seekest thou great things for thyself? seek them not" (Jer. xlv. 5). To the teachings and ideals of the great prophet he remained true, although like his master he was at times almost overwhelmed with despondency. He it was who wrote down the first and second editions of Jeremiah's prophecies as they were dictated to him by the prophet (Jer. xxxvi.). The supreme test came when he was commanded by his master to read to the people gathered in the temple on a fast day certain of the prophecies of warning (Jer. xxxvi. 1-8). Jeremiah himself was in concealment to avoid the wrath of the unprincipled Jehoiakim, and the task was both difficult and dangerous; but Baruch performed it without flinching. It was probably on this occasion that the prophet gave him the personal message preserved in Jer. xlv. In the final siege of Jerusalem (586 B.C.), Baruch was present with Jeremiah in person and witnessed the purchase by the prophet of his ancestral estate in Anathoth (Jer. xxxii.). Josephus states that he continued after the fall of Jerusalem to reside with Jeremiah at Mizpah ("Ant." x. 9, § 1). That his influence with the latter was great is shown by the fact that the people suspected that it was on account of his advice that Jeremiah urged them to remain in Judah after the murder of Gedaliah (Jer. xliii. 3). He was carried with Jeremiah to Egypt, where, according to a tradition preserved by Jerome (on Isa. xxx. 6, 7), he soon died. Two other traditions state that he later went, or was carried, to Babylon by Nebuchadnezzar after the latter's conquest of Egypt.

Baruch's prominence, by reason of his intimate association with Jeremiah, led later generations to exalt his reputation still further. To him were attributed two later Jewish books (see **BARUCH, APOCALYPSE OF**).

C. F. K.

—**In Rabbinical Literature:** Faithful helper and blood-relation of Jeremiah. Both Baruch and Jeremiah being priests and descendants of the proselyte Rahab, they served as a humiliating example to their contemporaries, inasmuch as they belong to the few who hearkened to the word of God (Sifre, Num. 78 [ed. Friedmann, p. 206], and elsewhere; compare also Pesikta xiii. 3b). Baruch is identical with the Ethiopian Ebed-melech, who rescued Jeremiah from the dungeon (Jer. xxxviii. 7 *et seq.*); and he received his appellation because of his piety, which contrasted with the loose life of the court, as the skin of an Ethiopian contrasts with that of a white person (Sifre, Num. 99). As his piety might have prevented the destruction of the Temple, God commanded him to leave Jerusalem before the catastrophe, so as to remove his protective presence (Syriac Apoc. Baruch, ii. 1, v. 5). Baruch then saw, from Abraham's oak at Hebron, the Temple set on fire by angels, who previously had hidden the sacred vessels (*ib.* vi. vii.).

The Tannaim are much divided on the question whether Baruch is to be classed among the Prophets. According to Mekilta (Bo, end of the introduction), Baruch complained (Jer. xlv. 3 *et seq.*) because

the gift of prophecy had not been given to him. "Why," he said, "is my fate different from that of all the other disciples of the Prophets? Joshua served Moses, and the Holy Spirit rested upon him; Elisha served Elijah, and the Holy Spirit rested upon him. Why is it otherwise with me?" God answered him: "Baruch, of what avail is a hedge where there is no vineyard, or a shepherd where there are no sheep?" Baruch, therefore, found consolation in the fact that when Israel was exiled to Babylonia there was no longer occasion for prophecy. The "Seder 'Olam" (xx.), however, and the Talmud (Meg. 14b), include Baruch among the Prophets, and state that he prophesied in the period following the destruction. It was in Babylonia also that Ezra studied the Torah with Baruch. Nor did he think of returning to Palestine during his teacher's lifetime, since he considered the study of the Torah more important than the rebuilding of the Temple (Meg. 16b); and Baruch could not join the returning exiles by reason of his age (Cant. R. v. 5; see also Seder 'Olam, ed. Ratner, xxvi.).

Baruch's grave became the subject of later legends. An Arabian king once ordered it to be opened; but all who touched it fell dead. The king thereupon commanded the Jews to open it; and they, after preparing themselves by a three days' fast, succeeded without a mishap. Baruch's

body was found intact in a marble coffin, and appeared as if he had just died. The king ordered that it should be transported to another place; but, after having dragged the coffin a little distance, the horses and camels were unable to move it another inch. The king, greatly excited by these wonders, went with his retinue to Mohammed to ask his advice. Arrived at Mecca, his doubts of the truth of the teachings of Islam greatly increased, and he and his courtiers finally accepted Judaism. The king then built a "bet ha-midrash" on the spot from which he had been unable to move Baruch's body; and this academy served for a long time as a place of pilgrimage.

Baruch's tomb is a mile distant from that of Ezekiel, near Mashhad 'Ali; and a strange plant, the leaves of which are sprinkled with gold dust, grows on it ("Gelilot Erez Yisrael," as quoted in Heilprin's "Seder ha-Dorot," ed. Wilna, i. 127, 128; variant in "Itinerary" of Pethahiah of Regensburg, ed. Jerusalem, 4b). According to the Syriac Apocalypse of Baruch, he was translated to paradise in his mortal body (xiii., xxv.). The same is stated in "Derek Erez Zutta" (i.) of EBED-MELECH, and since, as shown above, Baruch and Ebed-melech were held to be identical, the deduction is evident.

—**In Arabic-Christian Legend:** The Arabic-Christian legends identify Baruch with Zoroaster, and give much information concerning him. Baruch, angry because the gift of prophecy had been denied him, and on account of the destruction of Jerusalem and the Temple, left Palestine to found the religion of Zoroaster. The prophecy of the birth of Jesus from a virgin, and of his adoration by the Magi,

is also ascribed to Baruch-Zoroaster (compare the complete collection of these legends in Gottheil, in "Classical Studies in Honor of H. Drisler," pp. 24-51, New York, 1894; Jackson, "Zoroaster," pp. 17, 165 *et seq.*). It is difficult to explain the origin of this curious identification of a prophet with a magician, such as Zoroaster was held to be, among the Jews, Christians, and Arabs. De Sacy ("Notices et Extraits des MSS. de la Bibliothèque du Roi," ii. 319) explains it on the ground that in Arabic the name of the prophet Jeremiah is almost identical with that of the city of Urmiah, where, it is said, Zoroaster lived. However this may be, the Jewish legend mentioned above (under BARUCH IN RABBINICAL LITERATURE), according to which the Ethiopian in Jer. xxxviii. 7 is undoubtedly identical with Baruch, is connected with this Arabic-Christian legend. As early as the Clementine "Recognitiones" (iv. 27), Zoroaster was believed to be a descendant of Ham; and, according to Gen. x. 6, Cush, the Ethiopian, is a son of Ham. It should furthermore be remembered that, according to the "Recognitiones" (iv. 28), the Persians believed that Zoroaster had been taken into heaven in a chariot ("ad cœlum vehiculo sublevatum"); and according to the Jewish legend, the above-mentioned Ethiopian was transported alive into paradise ("Derek Erez Zutta," i. end), an occurrence that, like the translation of Elijah (II Kings ii. 11), must have taken place by means of a "vehiculum." Another reminiscence of the Jewish legend is found in Baruch-Zoroaster's words concerning Jesus: "He shall descend from my family" ("Book of the Bee," ed. Budge, p. 90, line 5, London, 1886), since, according to the Haggadah, Baruch was a priest; and Maria, the mother of Jesus, was of priestly family. Compare EBED-MELECH IN RABBINICAL LITERATURE.

L. G.

**BARUCH, APOCALYPSE OF (Greek):** An apocryphal work, in which Baruch, the disciple of Jeremiah, gives an account of the revelation which he received in heaven. The existence of this work (which is wholly different from the Syriac Apocalypse of Baruch published by Ceriani in 1866, 1871, 1883, and translated by Charles in 1896; see BARUCH, APOCALYPSE OF [SYRIAC]) was unknown until 1886, when a Slavonic Baruch Apocalypse was published by Stojan Novakovic in the magazine "Starine" (vol. xviii.). But the attention of scholars was first drawn to this work through the German translation of the Slavonic text by N. Bonwetsch ("Nachrichten von der Königlichen Gesellschaft der Wissenschaften zu Göttingen, Philologisch-Historische Klasse," 1896, pp. 94-101); and a year later the world of learning was astonished by M. R. James's publication of the Greek text, until then entirely unknown, in "Texts and Studies: Contributions to Biblical and Patristic Literature," edited by J. Armitage Robinson, v., No. i., pp. 84-94, Cambridge, 1897. The Slavonic text is an abbreviated form of the Greek, sometimes merely an abstract of it. Consequently, the Greek text must be considered as the basis of the other, though the Slavonic text seems in some places to have preserved the correct reading.

The contents of the Apocalypse are as follows:

Baruch, bewailing and lamenting the fall of Jerusalem, is addressed by an angel of God sent to reveal great mysteries to him (ch. i.). He goes with the angel, and after crossing a stream at the place where heaven is fastened (not the ocean, but the "mayim ha-'elyonim" [upper waters]; Gen. R. iv.

**Baruch** 3; Hag. 15*a*; compare ABRAHAM, TESTAMENT OF), they reach the first heaven. The angel tells Baruch that the **First Heaven.** heaven's thickness equals the distance from heaven to earth, or the distance from east to west (thus the Slavonic text: the Greek reads "from north to south"; Tamid 32*a*; Hag. 13*a*). Baruch sees men in animal form, who, as the angel explains, "are they who built the tower, and God has transformed them" (ii.). This means that the builders of the tower ("dor haflagah") were transformed into demons (Sanh. 109*a*, שרפים ולילים). For this reason they are not in the place of torment, which is in the third heaven, but at the entrance to heaven (Hag. 16*a*; compare DEMONOLOGY).

The third chapter gives the reason for the punishment inflicted on the tower-builders. They were so inhuman that they would not let a woman who helped with the building leave her work during travail. A similar rabbinical legend about a Jewish woman in Egypt (Pirke R. El. xlviii.; compare "Sefer ha-Yashar, Shemot," ed. Leghorn, p. 113*b*) is probably the original of this. The fourth chapter, describing the third heaven, seems to have been badly mutilated in the Greek text; the Slavonic version must therefore be followed. Baruch sees a dragon as long as the distance from

**The Third Heaven.** east to west. It drinks an ell from the sea daily; because three hundred and sixty rivers constantly empty into the sea, and would cause it to overflow, so that there would be nothing left dry on earth. The inside of the dragon is as large as the belly of Hades. The Greek text adds that it is this dragon which eats the bodies of those that have spent their lives in evil. The dragon seems to be identified with Hades in other respects also; and the representations of the dragon (the Leviathan) and Hades are confused.

There is no connection between this part of the chapter and the section immediately following, in which Baruch asks which tree seduced Adam, and the angel answers that it was the vine planted by Samael (this view is widely spread in the apocalyptic and rabbinical literature; compare Ginzberg, "Die Haggada bei den Kirchenvätern," pp. 38-41). In this connection, too, it is stated that the Deluge washed the vine bodily out of the Garden of Eden; whereupon Noah took possession of it and planted it (Ginzberg, *l.c.* p. 40). In its present form the section on the vine is a Christian interpolation intended to reconcile the harmfulness of wine with its use in the communion service. In this way the original legend on the planting of the vine by Noah and the arch-fiend becomes radically changed. See ASMODEUS.

Chapters vi. to ix., treating of the sun, moon, and stars, are the most interesting part of the work. The sun is represented as a man with a crown of fire, sitting on a chariot. This is probably derived from the Greek conception, but found also elsewhere in rabbinical literature, as in Slavonic B. of Enoch;

Pirke R. El. vi.; Num. R. xii. 4. The phenix attends the sun in its course as guard; catching on its wings the rays, in order to keep them from scorching everything. At daybreak the rustling of the phenix awakens the cocks on earth, who then give the signal of dawn in their peculiar utterance (compare Targ. on Job xxxviii. 36). The Zohar (iii. 22*b*, 23*a*, 49*b*) also tells of a heavenly wind, or some other celestial manifestation, which causes the crowing of the cocks; even the Talmud knows the blessing ברוך אשר נתן לשבוי בונה ("blessed be He who has given the cock intelligence [to distinguish between day and night]," Ber. 60*b*). As in the rabbinical sources (Pirke R. El. vi.; Yalk., Eccl. 967), the angels draw the sun's chariot (ch. vii., viii.), and at night four angels remove the sun's crown (according to Pirke R. El. *l.c.*, the sun is attended by different angels by night and by day; and since, accord-

**Celestial Phenomena.** ing to Yalk. *l.c.*, there are eight in all, the number in the Baruch Apocalypse tallies with that in rabbinical literature). They remove the crown in

order to cleanse it of the impurities with which it becomes spotted through the sins of man on earth (Test. Patr., Levi, 3; Eliyahu R. ii.); and for this reason it is renewed every day (compare the words in the morning service מחדש בכל יום תמיך מעשה בראשית, "who reneweth every day the work of creation"). The conception of the moon is also Greek. It is represented as a woman sitting on a chariot drawn by oxen and lambs. It was once as large as the sun and even more beautiful; but at Adam's fall it did not display the proper compassion, and it was therefore made to wax and wane. This agrees only in part with the Haggadah variously given in the Talmud and Midrash, that the moon suffered this decrease in its size through its pride and guilt (Shebuot 9*a*; Hul. 60*b*; Gen. R. vi. 3).

In the fourth heaven Baruch first sees in a wide plain a pond about which are large numbers of birds. The angel explains that this is the place to which the souls of the righteous go in order that they may live together in choirs. The idea that the souls of the righteous are transformed into birds frequently occurs in the Cabala (compare "Tikkune Zohar," ed. Lemberg, vi. 22*b*; see also Sanh. 92*b*); this idea is probably of Egyptian origin. The fourth heaven also contains the water which descends to earth in the form of rain. For although the original source of rain is the sea, it must first ascend to heaven to

**The Fourth and Fifth Heavens.** mingle with the water there in order that it may bring forth fruit, since seawater is salt. In this way, according to Gen. R. xiii. 10 and Eccl. R. i. 7, the passage at the end of ch. x. is to be explained. In the fifth heaven Baruch meets Michael, prince of the angels and keeper of the celestial keys, who is descending to receive the prayers of men and to carry a report of their virtues to God. The expression "gates of prayer" ("sha'are tefillah") already occurs frequently in the Talmud (Ber. 32*b*) and in the liturgy. Concerning the office here ascribed to Michael, compare Ginzberg, in *l.c.* p. 13.

The conclusion of the Apocalypse (ch. xii.-xvii.) describes the acts of the angels who accompany men on earth (Hag. 16*a*) and report in heaven concerning

them. The angels that accompany the righteous hand baskets of flowers to Michael, who gives them to God; but other angels stand downcast and with empty baskets, not daring to draw nigh. These latter are the angels that accompany the evil-doers. They beg Michael to free them from their duties; for they do not wish to gaze any longer upon the sins of man. After Michael has brought the virtues of men to God, he returns and tells the angels what God has communicated to him. He gives the angels of the righteous a reward for the righteous, and bids the other angels inflict punishment of all kinds on the evil-doers. Then the angel that has guided Baruch takes him back to the place whence he started.

The latest date at which the Apocalypse of Baruch could have been written is determined by the fact that Origen (185-254) made a citation

**Relation** from it ("De Principiis," ii. 3, 6). The

**to Other** question as to the earliest date depends

**Works.** upon the relation of this Baruch Apocalypse to the other works ascribed to the same author, and to the apocryphal and pseud-epigraphic literature in general. It is certain that the Apocalypse was influenced by the (Slavonic) Book of Enoch, a work of about the middle of the first Christian century. It is, however, a question whether the Greek version employed the Syriac Apocalypse of Baruch, since ch. lxxvi. of the latter, in which Baruch receives a promise of cosmic revelations, affords arguments rather against than for such a supposition. The assumption is untenable that the Greek Apocalypse was written to show the actual fulfilment of the promise. The critical point in the Syriac Apocalypse lies in this chapter when Baruch, before leaving earth, obtains a full survey of it in order that he may see what he is leaving and whither he is going. This idea is based upon an opinion held by Akiba b. Joseph (Sifre, Num. 136) and others, that God allowed not only Moses, but other favored pious men to behold before their death the whole world and all the mysteries of nature. Now, if the Greek Apocalypse was complementary to the Syriac, the author of the former would not have failed to join his story of Baruch's passage through heaven to this account of his last act on earth.

The alleged connection of the Apocalypse with other pseud-epigraphic works is only vaguely indicated, and proves nothing. The same is true of the linguistic relation which, it is asserted, exists between the Apocalypse and the New Testament. For instance, *ἡμέρα τῆς κρίσεως* is not taken from the New Testament, since "Yom ha-Din" (the Day of Judgment) is an expression used before Christian times, and occurs more frequently in rabbinical literature than in the New Testament. Only one passage can with certainty be considered a Christian interpolation: and that is the one concerning the vine already referred to as occurring in ch. iv. The interpolation here is very unskillfully made. It interrupts the sequence, and adds entirely foreign elements. There are also other evidences that the Apocalypse has not been preserved in its original form. For example, it is natural to expect descriptions of the sixth and seventh heavens; but these are lacking.

The following two points show the position of the Apocalypse in relation to other literature of a simi-

lar nature: (1) It is perhaps the one Jewish work which undoubtedly betrays Indian influence. The phenix, referred to in this Apocalypse

**It Betrays** as the companion of the sun, and the

**Indian** wonderful description of it, are prob-

**Influence.** ably of Indian origin; for Indian mythology relates much that is similar concerning the bird Garuda, the companion of the sun-god Vishnu ("Mahabharata Adi Parva," xvi.-xxxiv.; compare James, "The Apocalypse of Baruch," Introduction, pp. lxiii.-lxvi., in "Texts and Studies," l.c.).

(2) Michael's office, as described in ch. xi.-xvi., is significant. The resemblance between his functions and those ascribed to Jesus by the early church is striking; and the relation between the two is obvious. It is probably not correct, however, to consider Michael in the Apocalypse as the Logos or Jesus in a Jewish garb. The explanation of the similarity between the two must be sought in the fact that, at the time when Christianity arose, the carrying out of a too transcendental conception of monotheism required, in order that the relation of God to man might be explained, the supposition of some mediator; and no one was better suited for this part than Michael, the prince of the angels. With the advent of Christianity the duties of Michael were ascribed to Jesus or Logos (compare W. Lucken, "Michael," 1898). In view of these facts, it may be assumed as certain that the author of the Apocalypse was not a Pharisee, since the Pharisees opposed decidedly such doubtful angel-lore. He must have been one of the Gnostics, who revered equally the Haggadah, Greek mythology, and Oriental wisdom. To consider the Apocalypse a Jewish Gnostic work would also be in accordance with the date arrived at for its origin; namely, the beginning of the second century, when gnosis was at its height among both Jews and Christians.

L. G.

**BARUCH, APOCALYPSE OF (Syriac):** A pseud-epigraphic work in which Baruch narrates his experiences during the periods just before and after the destruction of the Temple, and gives an account of the revelations received by him concerning the future. With the exception of a small fragment, chapters lxxviii.-lxxxvi., the work has become known only recently. It has been preserved in Syriac. In 1866 Ceriani published a Latin translation of the Syriac text ("Monumenta Sacra," I. ii. 73-98), the Syriac text itself in ordinary type in 1871, and in facsimile in 1883. Following is an outline of the contents of the work:

**Chapters i.-v.:** God reveals to Baruch the impending destruction of Jerusalem, and bids him leave the city along with all other pious persons, since their presence there would preserve it from destruction. Baruch, at first hopeless over the sad tidings, is comforted by God, who assures him that Israel's woes will not be permanent, but that after the nation's chastisement a glorious heavenly Temple

will arise for it. Then Baruch, Jeremiah, and all other pious ones go to the brook Kidron, where they await the sad event.

**Chapters vi.-viii.:** On the following day the Chaldeans surround the city; and while Baruch stands sorrowing at the fate of the people, a wind carries him up to the walls of Jerusalem. He sees four angels with torches firing the walls, but not before another angel has consigned the sacred vessels of the Temple to the earth, which swallows them up till the latter days.

**Chapters ix.-xii.:** Seven days after the capture of Jerusalem, Baruch again receives a revelation. He is told that Jeremiah should accompany the captives to Babylon, but that he himself must remain at the ruins of Jerusalem, where God will reveal to him what shall happen at the end of days. Then Baruch sings a dirge on the destruction of Jerusalem and the sorrows of Israel, beginning "Happy he that was not born, and he that, being born, hath died" (compare Job iii. 11).

**Chapters xiii.-xv.:** After fasting seven days, Baruch receives a revelation concerning the future punishment of the heathen and of all godless persons; and he is told that he will live until the consummation of the time, that he may bear witness in the hour of their punishment against those nations who now prosper.

**Chapters xvi.-xx.:** God cuts short Baruch's reflections on the just course of history by referring to the end of days soon to come, and promising to reveal it.

**Chapters xxi.-xxx.:** After another seven-day fast and long prayers the heavens open and Baruch hears a heavenly voice. First he is blamed for the doubt and timidity expressed in his complaints and prayers, and then he learns that the "future time" will come only when the earth shall have brought forth all her fruit; that is, when all the souls destined to be born shall have seen the light of day. He is told of the twelve divisions of the time of oppression, and of the following Messianic era of joy and glory.

**Chapters xxxi.-xxxiv.:** Baruch assembles the elders of the people and tells them that Zion will soon be restored, but destroyed once again, then to be rebuilt for all eternity.

**Chapters xxxv.-xli.:** Baruch, while sitting in the ruins of the Temple lamenting, receives a new revelation in the form of the following vision: In his sleep he sees a wood surrounded by rocks and crags, and, opposite the wood, a growing vine, beneath which flows a spring. The spring runs quietly as far as the wood, where it waxes to a mighty stream, overwhelming the wood and leaving only one cedar standing. This cedar, too, is finally swept away and carried to the vine. God explains the meaning of the vision to Baruch. The wood is the mighty fourth power (Rome); the spring is the dominion of the Messiah; and the vine is the Messiah Himself, who will destroy the last hostile ruler (of Rome) on Mt. Zion.

**Chapters xlii.-xlviii. 24:** Baruch is directed to warn the people and to prepare himself for another revelation, which he does.

**Chapters xlviii. 25-lii.:** In this revelation Baruch is told of the oppressions in the latter days,

of the resurrection and final destiny of the righteous, and of the fate of the godless.

**Chapters liii.-lxxiv.:** A second prophetic vision follows, whose meaning is explained by the angel Ramiel. A cloud which arises from the sea rains down twelve times alternately dark and bright waters. This indicates the course of events from Adam to the Messiah. The six dark waters are the dominion of the godless—Adam, Egypt, Canaanitic influence, Jeroboam, Manasseh, and the Chaldeans. The six bright waters are Abraham, Moses, David, Hezekiah, Josiah, and the time of the Second Temple. After these twelve waters comes another water still darker than the others and shot with fire, carrying annihilation in its train. A clear flash puts an end to the fearful tempest. The dark cloud is the period between the time of the Second Temple and the advent of the Messiah, which latter event determines the dominion of the wicked, and inaugurates the era of eternal bliss.

**Chapters lxxv.-lxxxvii.:** After Baruch has thanked God for the secrets revealed to him, God bids him warn the people, and keep himself in readiness for his translation to heaven, since God intends to keep him there until the consummation of the times. Baruch admonishes the people and, besides, writes two letters: one to the nine and one-half tribes; the other to the two and one-half tribes exiled in Babylon. The contents of the first letter only are given. In it Baruch justifies the deeds of God concerning the kingdoms of Samaria and Judah, and reveals God's judgment on Israel's oppressors. His call to the people to repent before God and His Law ends the letter and the book.

Many parallels exist between the Apocalypse and rabbinical literature, a consideration of some of which will throw light upon certain misunderstood passages in the former, and, at the same time, be of material assistance in forming a judgment upon the whole work.

'Arakin 17a, in which the last king of Judah is said to be pious, while his people are godless, corresponds to i. 3 of the Apocalypse. Pesik. R. 26 (ed. Friedmann, 131a), in which God causes Jeremiah to leave Jerusalem, since his presence would preserve it from destruction, corresponds to ii. 1, 2; and the rabbinical passages in which the heavenly Temple (Sifre, Deut. 37; for details, compare Ginzberg, "Die Haggada bei den Kirchenvätern," p. 13) is revealed to Adam and Abraham in the night during the "covenant between the pieces" (Gen. R. xvi. 8; xlv. 20, 22) correspond to iv. 3, 4, 5. Of the persons mentioned in v. 5 of the Apocalypse, Seraiah is a prophet, according to Sifre, Num. 78; Seder 'Olam R. xx.; Gedaliah, a righteous man ("zaddik"), according to R. H. 18b; and Jabez (probably יַעֲזֵבֶק), one of those who reach paradise alive (Derek Erez Zut'a i.; Kohler, in "Jew. Quart. Rev." v. 418; for the correct reading here see Tawrogi's ed., Königsberg, 1885, and Epstein, "Mi-Kadmoniyot ha-Yehudim," p. 111, note). The account of the destruction of Jerusalem by angels in vi.-viii. of the Apocalypse is in parts almost word for word the same as in Pesik. R. (l.c.). Here, also, the destruction is wrought by four angels with torches in their hands, while another angel invites

the "haters" ("soneim") to enter the house deserted by its inmate. The difference between this Midrash and the Apocalypse in regard to the utterance of the angel is to be explained by the variant of a single word. The Midrash has לְבִית, while the Apocalypse reads הָאֵיכִים. The sacred objects which the earth swallowed, mentioned in vi. 7, are correctly given in rabbinical literature. "Holy Ark" should be substituted for "holy ephod"—אֲרוֹן הַקֹּדֶשׁ is the later Hebraic term (compare, for instance, II Chron. xxxv. 3; Ket. 104a)—because אֲרוֹן also signifies "coffin." In fact, it is probable that originally only those articles were mentioned in this passage of the Apocalypse which were missing in the Second Temple (Yoma 21b), and for whose disappearance (Shek. vi. 1) an explanation had to be given, but compare also the later Midrash "Masseket Kelim," in Jellinek's "B. H. ii.," which treats of the numerous sacred objects hidden in the earth. Zeb. 88b affords an explanation of the forty-eight gems. These are to be taken as the thirty-six bells bordering the hem of the priestly robe ("me'il") and the twelve stones in the breastplate of the high priest; and an explanation of x. 2 is provided by the Haggadah in which Jeremiah accompanies the exiles a part of the way to Babylon, but then returns (Pesik. R. 26 [ed. Friedmann, 131b]; Introduction to Lam. R. xxxiv.).

A comparison of x. 9-16 with the last Mishnah of Soṭah; B. B. 60b; Tosef., Soṭah, xiv. 11, shows that the Apocalypse alludes to facts. What is given as a poetic fancy in x. 18 is treated in rabbinical literature as an actual occurrence; e.g., in Ta'anit 29a; Lev. R. xix. 6; Pesik. R. l.c.; Ab. R. N. [i.] iv. [ii.], vii. In the last passage an eye-witness of the catastrophe of the year 70 testifies that certain noble young priests threw the keys of the Temple toward heaven and exclaimed: "Here are Thy keys! We have been found untrustworthy guardians of Thy house." Likewise, a clear understanding of the following verse (x. 19) can be obtained only by a comparison of it with Pesik. R. l.c. The virgins who "weave linen and silk threads with gold from Ophir, and who are bidden now to cast their work into the flames," are the women who made the hangings ("paroket") for the Temple (Ket. 106a), and who are mentioned, for this reason, along with the priests. The promise that Baruch should not die (xiii. 3) and his translation to paradise in his mortal body (in chap. xxv.) are suggested by the combination of Sifre, Num. 99 and Derek Erez Zutṭa i. The vast size of Sennacherib's host, given in lxiii. 6, 7, accords with the description in Sanh. 95b; and the miracle of the burning of their bodies while their garments remained unconsumed (lxiii. 8) is given in Sanh. 94a. The list of the wicked deeds of Manasseh, set forth in lxiv. 2-4, agrees with the catalogue of his sins in Sanh. 103b. Likewise, the legend of the brazen horse, given in lxiv. 8, occurs in as early a work as the Pesikṭa de-Rab Kahana (xxv. 162), from which it was borrowed by various Midrashim. The sorrow of the angels over Zion and Israel (lxvii. 2) is a favorite theme of the Midrash; for instance, in Pesik. R. 28 [ed. Friedmann, 134a]. The passage in the Apocalypse (lxxvii. 25) in which the messenger-bird of Solomon is mentioned should be compared with Eccl. R. to ii. 25.

The Apocalypse, it is important to note, has also many points of agreement with the Pharisaic doctrines, especially in regard to sin and the Law. It assumes that the world was created for Israel's sake:

that is, for those Israelites who fulfil the Law; and Baruch even thought that with the extinction of the Jewish point.

state the world would end (iii. 7, xiv. 18, xv. 7, xxi. 24; Tan., ed. Buber, Bereshit v.; Pesik. R. 28 [ed. Friedmann, 135b]; a full discussion by Ginzberg, "Haggada bei den Kirchenvätern," pp. 8-10). The views of the Apocalypse on the relations of sin and death, of the first man and his descendants, seem to be contradictory; and for this reason some scholars consider the Apocalypse to be the work of more than one author. But a consideration of the rabbinical theories will throw light upon these apparent inconsistencies. The fall of the first human pair brought death upon them, though it had not been intended that they, being the creatures of God's own hands, should be mortal (Eccl. R. iii. 14). Their descendants, though they may have no direct claim upon immortality, may nevertheless gain it if they are wholly free from sin (Tan., ed. Buber, Emor, and the passages given there by Buber). But the primal sin produced such conditions that it is almost impossible for the very noblest of men to win immortality.

Adam, then, is responsible for the death of the pious on account of the trivial offenses ("aberot kallot") which are caused by the present state of things. The pious would not have had to suffer death if Adam had not brought it into the world; and the only way to avoid death, when its dominion is once established, is to lead an absolutely blameless life (Tan., ed. Buber, Hukkat, xxxix.; compare ABRAHAM, TESTAMENT OF, in which the same views are expressed). The same idea occurs in the Apocalypse in xviii. 2, xix. 8, xxiii. 4, liv. 15, lvi. 6. The following ideas are common to the Apocalypse and the Rabbis: In consequence of the corruptibility of the world since the fall of Adam, the soul of man hesitates to enter it. "We come not voluntarily into the world, and we depart not of our own will" (xiv. 11, xlviii. 15; Ab. iv., end; Tan., Pekude, ii. [ed. Vienna, 127b]). A certain number of souls must be born before the advent of the Messiah can occur (xxiii. 4, 5; Yeb. 62a). The souls of the pious are kept in a storehouse ("ozar," xxx. 2; Sifre, Num. 139; Ab. R. N. xii. [ed. Schlechter, p. 50]; Shab. 152b). The departed, though they are susceptible of pain and pleasure, live in a world of their own, and know nothing of the events on earth (xi. 5, 6; Ber. 18b). It is, therefore, erroneous to stigmatize this passage (xi. 5, 6) as Sadducean, as some critics have done.

The same inconsistency has been ascribed to the eschatological views of the Apocalypse as to its theological. In reality they combine standpoints which contradict one another because derived from divergent sources, but such contradiction is found in many works. In the very beginning of the Apocalypse (iv. 2-7) mention is made of the heavenly Temple which will appear in the future time, and shortly after (vi. 7-9) it is said that the sacred objects of the Temple, swallowed by the earth, will

reappear at the reconstruction of Jerusalem. Now, a tanna about the middle of the second century speaks in one and the same sentence of the heavenly Temple and of the fact that it will be sent down to Jerusalem in order that sacrifices may be offered in it (Suk. 41*a*; see especially Rashi's explanation of the passage. Concerning other relations between the earthly Temple [בית המקדש של מטה] and the heavenly one [בהמקדש של מעלה], which in the future time will in certain respects be one, compare Yalk., Isaiah, 472; Ta'anit 5*a*).

There are no grounds for the belief that the Apocalypse unites contradictory views on the Messianic era and the future world, and that, therefore, it must have been written by more than one person. It is true that it contains various revelations, independent of each other, on the Messianic era, the Messiah, and the future world; but a Pharisaic work, eschatological in character, and written at the time of Jesus or even some decades before, must have treated of these three subjects. In some passages one point is more strongly dwelt upon; in other passages another point. The reconstruction of Jerusalem (xliv. 7, lxxi. 1), the gathering together of the Ten Tribes ("Kibbuz Galuyot," lxxviii. 7, lxxxiv. 10), and the doom of the heathen (lxxxii. 2-9, lxxxv. 9) form only one side, the national side, of Jewish eschatology. The hope of national redemption was connected with the hope of individual redemption. The Messianic era will not only bring Israel to its rights, but in the future world ("olam ha-ba") reward or punishment will be meted out to the individual according to his deeds. The description of the Resurrection in the Apocalypse is significant for the agreement of its eschatological doctrines with those of the rabbinical authorities. "The earth will give up her dead as she received them, . . . for it is necessary to show those who live that the dead have arisen, and that they have returned who had departed" (l. 2-4). This same idea and the same reasons for it are given in "Milhamot Melek ha-Mashiah" (Jellinek, "B. H." vi. 119).

The words of the Apocalypse concerning the pious in the future world are also noteworthy. "They will shine with a varying glory, their countenances will glow with a new beauty, so that they may partake of the immortal world" (li. 3). This glory ("ziw") is frequently referred to in rabbinical eschatology; for example, in Ber. 17*a*, and Gen. R. xi. 2; and, as can be seen from these passages, the "varying glory" of the Apocalypse shows the degree of piety of the righteous (Sifre, Deut. 10, 47).

Modern critics who doubt the unity of the Apocalypse do not agree as to the authorship of its parts. Two theories have been advanced concerning the various sources of this Apocalypse. Kabisch (in "Jahrbücher für Protestantische Theologie," xviii. 66, 107) considers the groundwork to be i.-xxiii., xxxi.-xxxiv., xli.-xlv. 7, lxxv.-lxxxvii. In addition to this there are three old documents: (1) the fragmentary Apocalypse, xxiv. 3.-xxix. 8; (2) the vision of the wood, cedar, and vine, xxxvi. 1-xl. 4; and (3) the vision of the clouds, lii. 8.-lxxiv. 4. Besides these elements there are certain shorter sections, the work of a final redactor. Kabisch's theory is in

part supported by De Faye ("Les Apocalypses Juives," 1892, p. 195). But De Faye goes further and divides the groundwork into two parts, the "Assumption of Baruch" and the "Baruch Apocalypse." Charles, however ("The

**Com-** position of Apocalypse of Baruch," London, 1896), though basing his theories on similar analyses, considers the Apocalypse to be the work of six or seven authors.

He ascribes those parts which do not speak of a personal Messiah to three or four authors whom he calls (Baruch) B 1, 2, 3, and S. B 1 is a Pharisee who expects the reconstruction of Jerusalem and the return of the Diaspora, and who hopes for a Messianic era, but no Messiah. He is the author of i.-ix. 1, xliii.-xliv. 7, xlv.-xlv. 6, lxxvii.-lxxxii., lxxxiv., and lxxxvi. B 2 also is a Pharisee; but he expects nothing more of this wicked world, and bases his hopes entirely upon the future world, where the pious, risen from the dead, will be rewarded, and the godless will be punished. He is the author of ix.-xii., xiii.-xxv., xxx. 2-xxxv., xli.-xlii., xlv. 8-15, xlvii.-lii., lxxv., and lxxxiii. B 3 is the author of lxxxv. The chief difference between him and the other authors lies in the fact that he wrote in exile, while they wrote in Palestine. S is the author of x. 6-xii. 4. He is possibly a Sadducee, but perhaps identical with B 2. All these sections, according to Charles, date from the period after the destruction of the Temple, but the Apocalyptic parts, xxxvi.-xl. and liii.-lxxiv.—as to which Charles agrees with Kabisch in assigning them to two authors (xxxvi.-xl. to A 2; liii.-lxxiv. 1 to A 3)—date from the time of the existence of the Temple. To this period, but to another author called A 1, Charles ascribes also xxvii.-xxx. 1. These three apocalypses, the work of A 1, A 2, and A 3, have one point in common; namely, they express Messianic beliefs, though they disagree as to the characteristics of the Messiah. It is this Messianic tendency which distinguishes these parts from the other constituents of the work. The various elements of the Apocalypse, according to Charles, were united by a redactor who was himself the author of the shorter sections.

Though it is true that the Apocalypse consists of some dissimilar elements, the divisions of the work made by Charles are hardly justifiable. It is Clement ("Theologische Studien und Kritiken," 1898, pp. 227 *et seq.*) who has most fully shown that many supposed contradictions are not wholly such. The section x. 6-xi. 4, which Charles ascribes to a Sadducee, not only has its parallels in rabbinical literature, as shown above, but is based on Pharisaic institutions. Nor is it in conflict with this view that the author should have used some old material, such as the vision of the cedar, which dates from before the destruction of the Second Temple, while the greater part of the work originated in the time following this catastrophe.

The integrity of the Apocalypse is also disputed by some scholars who believe that originally it was longer than at present.

**Its Integrity.** The missing parts are the cosmic revelations promised to Baruch in lxxvi. and the letter to the two and one-half tribes spoken of in lxxvii. 9. Now, it is probable that the author

did not mean to give a full account of the cosmic revelations, but merely mentioned them because, according to a wide-spread opinion (Sifre, Num. 136; compare ASCENSION), every pious man before his death obtained a view of the world and its doings, and the experience could not fail to be ascribed to Baruch. In regard to the letter to the two and one-half tribes, Charles (*ib.*, Introduction, p. 65) has propounded a very likely theory. He suggests that a part of the Book of Baruch—namely, iii. 9–iv. 29—is a recast of the letter to the two and one-half tribes mentioned in the Apocalypse of Baruch, and that i. 1–3 of the Book of Baruch was originally the introduction to the letter. But it is not impossible that both letters—the one to the two and one-half tribes and that to the nine and one-half tribes—originally formed one work, from which both the Book of Baruch and the Apocalypse of Baruch were derived. Details concerning the destruction of the Temple, which were merely touched upon in the letters, were added; and, with the addition of other kindred material, each letter gave rise to a new book.

If it be granted that with the exception of a few additions the Apocalypse is the work of one writer, the question arises as to the time of its authorship. The earliest possible date is 70; for though the author is silent concerning the overthrow of the Temple, and seeks to convey the idea that Baruch is the real author, he betrays the fact that the destruction has taken place (xxxii. 2–4). There is only one datum for a decision of the latest possible date, and that is derived from an investigation of the relationship of IV Esdras and the Apocalypse. That some relationship does exist between them is indubitable. The mode of expression, the line of thought, and the arrangement agree in a number of instances (these are enumerated by Charles, *ib.* pp. 170

**The Apocalypse and IV Esdras.** *et seq.*). It is difficult to determine which is the earlier work, since there are no internal evidences to judge by.

The fact that the author of IV Esdras was a far better stylist than the author of the Apocalypse is not to be disputed; but the deduction made by Gunkel (Kautsch, "Apokryphen und Pseudepigraphen," ii. 351), that IV Esdras is the earlier work, is not necessarily to be drawn from it: a better style does not bespeak originality. Wellhausen ("Skizzen und Vorarbeiten," vi. 249) argues no better for the opposite view, that the Apocalypse is the earlier work. He bases his opinion on the choice of the name "Baruch": since Baruch preceded Ezra in time, having actually witnessed the destruction of Jerusalem, therefore the work bearing his name should be the earlier. But that Ezra lived after the destruction of the city is no argument for the later date of the Ezra Apocalypse. In rabbinical literature Ezra holds a position similar to that of Moses (Sifre, Deut. 48 [ed. Friedmann, 84b]); while Baruch is not generally recognized as a prophet (compare BARUCH BEN NERIAH IN RABBINICAL LITERATURE). Ezra, as the more important person, might naturally have been first thought of as the author of an apocalypse. The name once adopted, the situation had to be in accordance with it; and, therefore, in the Baruch Apocalypse the period of the destruction of Jerusalem is described, and, imme-

diately after, Baruch sees his visions; while Ezra gives his revelations thirty years after the destruction. Consequently, the exact date can not be determined; but it is probable that it was written between the years 70 and 130. Though there is no evidence that Papias, the disciple of the apostles, used the Baruch Apocalypse, yet, since there are no allusions to the persecutions of Hadrian, the Apocalypse was in all likelihood written before Bar Kokba's revolt.

There is no doubt that the present Syriac form of the Apocalypse was derived from the Greek; but that language is scarcely to be regarded as the one in which it was originally written. Though the many Hebraisms do not necessarily indicate a Hebrew original, certain passages distinctly point to a Hebrew source. For instance, verse 13 of chapter x. can not be fully understood unless it is assumed that the Neo-Hebrew כנס stood originally in the passage. The betrothed men are told not to marry (ואתם חתנים); and the Syriac "enter" could have come only from כנס with its double meaning of "marry" and "enter a house." A translation into Hebrew of xxi. 14 would read שבעת לחיל, נהפך לחיל, המ יועיל חיל, מוזן לרוח יופי לרופי; and this affords a pretty example of the favorite Neo-Hebraic paronomasia. In the same chapter the "holy beings," who elsewhere can not be identified with angels, are properly the "hay-yot ha-kodesh" of Jewish angelology. This expression was rendered by the Syrians and before them by the Greeks as "holy beings" instead of "holy animals." In lvi. 6 it is said that the fall of man brought mourning, sorrow, misery, and boastfulness into the world. The term "boastfulness" is evidently inappropriate: the translator may have mistaken the Hebrew חבלים ("pangs") for הבלים ("nothings," "vanity"), which would then easily suggest "boastfulness."

It is noteworthy that the Apocalypse contains many idiomatic expressions peculiar not to the Hebrew of the Bible, but to Neo-Hebrew, especially to the old liturgy. "The righteous who sleep in the earth," in xi. 4, is a phrase occurring in the "Shemoneh 'Esreh"; and the exaggerated figure in liv. 8 is remarkably like similar phrases in the NISHMAT prayer. The expression in xli. 4, "have taken refuge under Thy pinions," is modeled after the Neo-Hebraic "to run away from the pinions of the Shekinah" (Sifre, Deut. 306 [ed. Friedmann, 130b], but comp. Ruth ii. 12).

Another proof that Hebrew was the original language of the Apocalypse is its almost literal agreement with the Pesikta Rabbati in several passages. There is no reason to suppose that the author—or, to be more exact, the redactor—of the Pesikta used the Apocalypse in its present form; and the agreement is to be explained on the ground that the old Midrash upon which the Pesikta drew in describing the destruction of the Temple was derived from a time when the Apocalypse was still read by the Jews. The poetical parts of the Apocalypse are especially Hebraic in character. Following is a specimen taken from Baruch's lament over the destruction of Jerusalem and the Temple; it is one of the few existing specimens of Hebrew poetry from the period immediately following Scriptural times:

"Happy he who is not born, or he who was born and has died!  
But wo unto us who live and have seen thy distress, O Zion,  
thy fate, O Jerusalem!  
I will call the sirens from the sea; and you, ye Liliths, come  
from the desert,  
And ye demons and jackals, come forth from your forests;  
Arise, gird your loins to lament; let us sing our sad lay and  
make moan" (x. 6-8).

The Apocalypse is full of truly poetic passages, occurring in the visions and prophecies as well as in the laments. It shows that the Pharisees were not so narrow-minded as the New Testament books, written at the same time, represent them. There were still among them those who could bewail their sorrows with poetic fire, and portray the future in a strain of holy inspiration.

L. G.

**BARUCH, BOOK OF:** One of the Apocryphal or so-called deuterocanonic books of the Old Testament. It consists of two parts. The first (i. 1-iii. 8) is in the form of a prose letter with a historical introduction. Baruch, the secretary of Jeremiah, having written a book, reads it before King Jehoiachin and the exiles in Babylon. The people weep, fast, and pray. Then they make a

**Contents.** collection of money, which they send to Jerusalem to be used for the Temple service, with an injunction to pray for the life of Nebuchadnezzar, king of Babylon, and that of Belshazzar, his son, so that the people may dwell in peace under the shadow of these princes (i. 1-14). A letter follows, which is presumably the one written by Baruch, although not expressly mentioned as such. This letter (i. 15-iii. 8) is a confession of national sin, a recognition of the justness of the nation's punishment, and a prayer for mercy.

The second part of the book (iii. 9-v. 9), which differs greatly in form and tone from the first, consists of two poems, the first of which (iii. 9-iv. 4) is an exhortation to Israel to learn wisdom, which is described as the source of all happiness, and as "the book of the commandments of God." The second poem (iv. 5-v. 9) is a picture of the suffering of Israel, and an exhortation to Jerusalem to take heart and await hopefully the salvation of God, Jerusalem being here represented as a desolate widow mourning over the distress of her children.

That the first part of the book was originally written in Hebrew is probable, both from the Hebraic character of the diction and from the fact that

certain errors in the Greek are explicable as misunderstandings of Hebrew words; thus "manna" (i. 10) is a misreading of "cereal offering" (מנחה); "dead" (iii. 4) is error for "men" (מתים); "to pay the penalty" (iii. 8), for "dismay" (perhaps שמה, or משה—read משא); and the enigmatical river "Sud" (i. 4) is possibly an erroneous writing of "Kebar" (כבר for כור).

(i. 4) is possibly an erroneous writing of "Kebar" (כבר for כור).

The book properly begins (after the superscription, i. 1, 2) with i. 15. The confession and prayer seem to consist of two parts; namely, i. 15-ii. 5 and ii. 6-35; and these are possibly (as Marshall holds) two separate productions, the first being the confession of the Palestinian remnant, the second that of the exiles. Still, "them" (ii. 4, 5), which appears to refer to the exiles, may be a scribal slip; and it seems more probable that the letter is a juxtaposition of two forms of confession. Very few scholars now hold that the book was composed by Jeremiah's secretary, as its relation to the books of Jeremiah and Daniel precludes such an origin. The remarkable

verbal agreement between the confession (i. 15-iii. 8) and Dan. ix is most naturally explained by the supposition that Baruch borrows from Daniel; the hypothesis that Daniel borrows from Baruch or that both draw from earlier material being less satisfactory. Here, however, a difficulty is encountered. In ii. 26 the Temple is said to be in ruins—a statement which accords with two periods only, those of the Chaldean and the Roman conquests. As the former period is out of the question, certain scholars, such as Kneucker, for example, assign this part of the book to a time later than the destruction of Jerusalem by Titus. It is difficult, however, to reconcile with such a date the view of the dead given in ii. 17, where it is said that those whose spirits have been taken from their bodies will not ascribe honor and righteousness to the Lord. This statement is in accordance with the Old-Hebrew conception of the life in Sheol, which can scarcely have been current after the year 70 of the common era. Hence, in the text as it stands, there are discordant data; but if (as Kneucker holds) ii. 26a is to be rejected as an interpolation, there is no reason why the confession and prayer should not be assigned to the Maccabean time.

The historical introduction is confused, and does not readily attach itself to the body of the confession; indeed, it appears to have been an afterthought. The singular historical statements (such as that King Zedekiah made silver vessels), as well as the injunction to pray for Nebuchadnezzar and Belshazzar, all indicate a late period, and strongly suggest dependence on the Book of Daniel. It is impossible, however, to say how early the view arose that Belshazzar was a son of Nebuchadnezzar. Some recent writers see in the names of the two Babylonian princes an allusion to Vespasian and Titus, which is a plausible assumption if ii. 26a be retained. The date given in i. 2, the "fifth year," is obscure; it may mean the fifth year after the fall of Jerusalem (B.C. 581), or, more probably, may be taken from Ezekiel, whose epoch is the fifth year of Jehoiachin's captivity (B.C. 592). But there is no reason for supposing (as, for example, from Jer. xxix. and li.) that Baruch was ever in Babylon. Though there are difficulties in any hypothesis, it seems probable, upon the whole, that the first part of Baruch is composed of two confessions, which an

The historical introduction is confused, and does not readily attach itself to the body of the confession; indeed, it appears to have been an afterthought.

The singular historical statements (such as that King Zedekiah made silver vessels), as well as the injunction to pray for Nebuchadnezzar and Belshazzar, all indicate a late period, and strongly suggest dependence on the Book of Daniel. It is impossible, however, to say how early the view arose that Belshazzar was a son of Nebuchadnezzar. Some recent writers see in the names of the two Babylonian princes an allusion to Vespasian and Titus, which is a plausible assumption if ii. 26a be retained. The date given in i. 2, the "fifth year," is obscure; it may mean the fifth year after the fall of Jerusalem (B.C. 581), or, more probably, may be taken from Ezekiel, whose epoch is the fifth year of Jehoiachin's captivity (B.C. 592). But there is no reason for supposing (as, for example, from Jer. xxix. and li.) that Baruch was ever in Babylon. Though there are difficulties in any hypothesis, it seems probable, upon the whole, that the first part of Baruch is composed of two confessions, which an

editor in the Maccabean time combined, prefixing the statement about Baruch.

The obvious imitation of Job and Ecclus. (Sirach) in the second part of the book (see Job xxviii.; Ecclus. (Sirach) xxiv.) makes it impossible to assign this piece to a time earlier than the second century B.C.; and the conditions seem to accord with the early Maccabean period. Kneucker,

**Date of** Marshall, and several other recent  
**Second** critics, however, place its composition  
**Part.** after the capture of Jerusalem by Titus, holding that the "strange nation"

of iv. 3 ("give not thine honor . . . to a strange nation") refers to the Christians, and relates to a time when the antagonism between Judaism and Christianity had become pronounced. While this is possible, the expression may also be understood to allude to the antagonism between Judaism and Hellenism in the second century B.C. The verse iii. 37 ("afterward did he [or it] show himself [or itself] upon earth and converse with men"), which was much quoted by early Christian writers, interrupts the connection and is undoubtedly a Christian interpolation.

The second poem (iv. 5-v. 9) belongs to the same general period as the first. It is divided into a number of strophes, each beginning with the words "Be of good cheer." The people, scattered and afflicted, are exhorted to trust in God; and Jerusalem, mourning over her children, is urged to take courage. The picture accords either with the late Maccabean period or with the time soon after the Roman capture of Jerusalem. The resemblance between iv. 36-v. 9 and Psalms of Solomon, xi. is striking. Whichever may have been the borrower, the two probably belong to the same period; and the Psalms of Solomon were composed not far from 48 B.C.

The Book of Baruch was never accepted as canonical by the Palestinian Jews (Baba Batra 14b). According to the "Apostolical Constitutions," it was

**Canonic-** read in public worship on the tenth  
**ity.** day of the month Gorpaios (probably Ab). This statement, however, can hardly be considered authoritative;

and even if it be correct, it can refer only to the usage of some group of Hellenistic Jews. If, as is probable, the first part of the book was written in Hebrew, its exclusion from the Palestinian canon must have been owing to its supposed lack of prophetic authority. It was, however, accepted by the Alexandrian Jews as a work of edification; and through the medium of the Septuagint it passed into the hands of the Christians, among whom it speedily became popular, being often quoted by Athenagoras, Clement of Alexandria, and many others as a work of Jeremiah and as sacred Scripture. In a number of early Christian canonical lists the work was included in Jeremiah, and together with the other Apocryphal books was pronounced canonical (deuterocanonical) by the Council of Trent (1545-63). Its canonicity, however, is not accepted by the Protestant churches. Besides its value as a mirror of the time, the book, though devoid of new ideas, contains many liturgical and poetical passages of great beauty and power.

The Epistle of Jeremiah is usually printed as an appendix to the Book of Baruch and marked as ch. vi. of that book. It is, however, an independent work (see JEREMIAH, EPISTLE OF).

**BIBLIOGRAPHY:** The Greek text is given in Swete's *Septuagint*. For an account of the Greek MSS., see Swete and Gifford; for the other ancient versions (Latin, Syriac, Coptic, etc.) see Kneucker and Schürer. There are modern Hebrew translations by Fränkel, 1830; Plessner, 1833; Kneucker, 1879. The best general discussion of the book is that of Kneucker, *Das Buch Baruch*, 1879; the largest list of citations by early Christian writers is in Reusch, *Erklärung des Buches Baruch*, 1853. Other authorities are: Fritzsche, in *Exegetisches Handbuch zu den Apokryphen*, 1851; Hitzig, in *Hilgenfeld's Zeitschrift*, 1880; Hilgenfeld, *ib.* 1879-1880; Ewald, *Gesch. des Volkes Israel*, 1864; idem, *Propheten*, 1868; Bissell, *Apocrypha*, in the Lange series, 1880; Gifford, in *Speaker's Commentary*, 1888; Reuss, *Gesch. der Heiligen Schriften des Alten Testaments*, 1890; Schürer, *Hist. Jewish People*, 1891; Ryle, in *Smith's Dict. of the Bible*, 1893; Marshall, in *Hasting's Dict. of the Bible*, 1898; Bevan, in *Cheyne's Encycl. Bibl.* 1899; Introductions of Eichhorn, Welte, and others. For other works attributed to Baruch see Charles, *Apocal. of Baruch*, 1896, and article *Apocrypha*, in *Encycl. Bibl.*

T.

**BARUCH:** Polish mechanic of the beginning of the eighteenth century; lived in Pogrebishche. He produced two magnificent brass candelabra for the synagogue there, which are still extant. One of them was intended for the Hanukkah festival, and has the traditional form of the "menorah"; the other represents an upright, four-cornered tablet, from both sides of which project arms.

Baruch was poor and earned a livelihood by repairing metal-work. For eight years he collected scraps of metal, which he used in the construction of the candelabra, on the work of which he was engaged for six years more.

A prayer-book, written on parchment and decorated with fine arabesques and initials, preserved in the same synagogue, seems to have been the work of a son of Baruch and to have been dedicated to the synagogue.

H. G. E.

**BARUCH, BARUCH B. MOSES IBN:** Italian philosopher, Talmudist, and Bible commentator; lived at the end of the sixteenth century. He belonged to the old noble Spanish family of Baruch, also called "Bet Ya'aqob" (introduction to his work mentioned below, 8d). His father was apparently a scholar and a rich man, and Baruch himself was (1598-99) a member of the Venetian rabbinate (*l.c.* 9b), where he speaks of the many legal questions which he had to answer in that city. He is also said to have been a proof-reader of Hebrew books. In 1602 he was at Constantinople (Joseph b. Moses Trani, *Responsa*, i., No. 89) in scientific intercourse with the scholars of that city. Baruch was a prolific author in the field of the Halakah, writing explanations and comments on the Tosafists, on Maimonides' "Yad ha-Hazakah," etc. Very little has been preserved of these literary productions, except some extracts in the responsa of Joseph b. Moses Trani (Nos. 68,

69, 89). Characteristic of his legal attitude is his decision (*l.c.* 68) that in communal questions the vote of the whole community must decide, even if the matter in question refer only to the rich class. Baruch's colleagues at Venice and elsewhere held that in those questions which affect only the well-to-do classes, these only should decide.

The work which gives Baruch an honorable place among Jewish philosophic writers is his double commentary on Ecclesiastes. It consists of two parallel sections, a rabbinic-exegetic and a philosophic-discussive commentary. The philosophic exposition of the book would hardly rank as a commentary, were it not that Baruch's method shows his keen critical insight. In order to have ground for his philosophical speculations, Baruch assumes the following genesis of the book: Ecclesiastes is a dialogue of Solomon, in which the wise king has grouped Epicurean sentences and opinions side by side with the views of the pious, Ecclesiastes being the representative of the former, and Ben David of the latter. As Ibn Baruch has no knowledge of the modern historico-critical method, it is extremely interesting to note how nearly he approaches the newer so-called "gloss-hypothesis" in criticizing Ecclesiastes. Although he offers lit-

**His View of Ecclesiastes.** In explanation or exposition of the book, his many comments on haggadic passages of the Talmud and Midrash are not only ingenious, but also very apt. Baruch's work may be regarded as the last produced by Jewish medieval religious philosophy, having as such a considerable historic importance in addition to its intrinsic value. The following philosophical themes are, according to Baruch, treated in Ecclesiastes, he dilating upon them: the Creation, the reasons for creating man, the life of the senses and salvation, immortality of the soul, freedom of the will, Providence, spirit and matter, perfection of the human soul, Revelation as a means to perfection, the responsibility of man, predestination, retribution, instinct and will, bliss, the good. Such are the chief points discussed at length by Baruch, his work containing 229 folio pages.

Although he can not claim to be a philosopher of any originality, Baruch has a wide and comprehensive knowledge of philosophy. He is acquainted not only with the Jewish-Arabian school, but also with Christian scholasticism, especially with Thomas Aquinas, whose works he studied assiduously. Baruch's method deserves especial mention. Comparing him with Isaac Arama and Isaac Abravanel, who wrote similar works, he shows neither the dullness of the one nor the prolixity of the other. The many homiletic passages which he introduces serve to interpret and explain the train of thought, which he traces at first in general outlines and then in particular. The logical method of carrying out his assumption that Ecclesiastes is a dialogue is remarkable, each verse seeming to fit into the general system. The fourth section or root, as Baruch calls it, deserves especial notice for its ethical import, being a very clear exposition of his doctrine of true felicity. With him, felicity is not a superficial and transient joy, but is eternal; not a passive and passing sense of happiness, but a continuous activity of the soul,

which victoriously rises above all material tribulations.

Baruch is also known as a ritual poet, three of his *seliḥot* having been printed; they are, however, of little poetic value.

L. G.

**BARUCH OF BENEVENTO:** Cabalist in Naples during the first half of the sixteenth century. He was the teacher of Cardinal Ægidius of Viterbo and of Johann Albrecht Widmanstadt in the Zohar and other cabalistic works, and lectured upon these subjects in the house of Samuel Abravanel. In a note at the end of one of his manuscripts, Widmanstadt says: "Eodem tempore (MDXLI) audivi Baruch Beneventanum optimum cabalistam, qui primus libros Zoharis per Ægidium Viterbieusem Cardinalem in Christianos vulgavit." Graetz, Perles, and others (see also ÆGIDIUS OF VITERBO) have taken this to mean that Baruch translated the Zohar, or parts of it, into Latin; but Steinschneider has correctly remarked that it means nothing more than that he made the Zohar known to Christian scholars.

**BIBLIOGRAPHY:** Grätz, *Gesch. der Juden*, ix. 48, 95, 161; Perles, in *Revue Etudes Juives*, i. 239; idem, *Beiträge zur Gesch. der Hebr. und Aramäischen Studien*, Munich, 1884, pp. 154, 180; Steinschneider, in *Hebräische Bibliographie*, xxi. 81.

G.

**BARUCH B. DAVID:** A Talmudic author; lived at Guesen (near Posen) in the beginning of the seventeenth century. He wrote: "Gedullat Mordecai" (The Greatness of Mordecai), containing annotations and painstaking corrections to the work of Mordecai ben Hillel. Appended to it is his "Aggudat Ezob" (A Bundle of Hyssop), an epitome of the laws and regulations of the Talmudic treatises Baba Mezi'a and Baba Batra, showing their bearing on the civil code, "Hoshen Mishpat," of Joseph Caro (Hanau, 1615 or 1616). The "Aggudat Ezob" was only a part of a greater, but unpublished, work of the author.

M. B.

**BARUCH DE DIGNE:** Rabbi of central France toward the end of the thirteenth and the beginning of the fourteenth century; surnamed "Ha-Gadol" (the Great) in the responsa of Isaac b. Immanuel de Lattes. His first studies were made in Provence. An animated and bitter discussion took place (1305) between him and his master, Isaac Cohen of Manosque, in which the latter offended Baruch's dignity, and Baruch replied with violence. Isaac in revenge pronounced the sentence of excommunication against Baruch, who refused, however, to submit. The anathema was condemned on many sides, and was considered unjustifiable because the sentence was founded on personal motives. A lively controversy then arose between the various scholars of Provence. Solomon b. Adret declared against Baruch and for the excommunication. The scholars who favored Baruch were: Jekuti'el b. Salomon of Montpellier, Meir b. Isaiah of Lunel, Nehemiah b.

Shealtiel of Avignon, Joseph Samuel b. Abraham of Aix, David b. Samuel of Estella, Abraham b. Isaac of Carpentras, Solomon b. Judah, as well as the whole rabbinical college at Arles. In consequence of the quarrel, Baruch left Digne and settled in central France, as Isaac de Lattes states in his responsa. He was doubtless the same as the Baruch of **בִּרְחִיָּה** or **בִּרְחִיָּה** (possibly Buseins in the department of Aveyron), who corresponded with Eliezer b. Josef of Chinon and Simon b. Isaac of Rodez.

**BIBLIOGRAPHY:** *Rev. Etudes Juives*, xii. 91; Gross, in *Monatsschrift*, 1879, p. 423; idem, *Gallia Judaica*, pp. 106, 155. G. M. S.

#### BARUCH BEN GERSHON OF AREZZO:

Italian writer; lived in the seventeenth century. He was the author of "Zikkaron li-Bene Yisrael" (Memorial for the Children of Israel), containing a short account (in the Almanzi manuscript, four small folios) of the agitation caused by Shabbethai Zebi and his prophet Nathan of Gaza, from the years 5425 to 5436 (1665 to 1676). The account has never been published; it exists in MS. 2226 of the Bodleian collection; MS. 204 of the Almanzi collection (now in the British Museum), and in part in the collection of Baron de Günzburg at St. Petersburg. Baruch was a follower of Shabbethai, and wrote the account with the view of persuading others to join the ranks of the Shabbethaians. According to Grätz, the account is not of much historical value. It must not be confounded with an anti-Shabbethaian account published anonymously in Venice, 1668, and reprinted in Tobiah Cohen's "Ma'aseh Tōbiah," fols. 27a et seq., Venice, 1707, and bearing the same title.

#### BARUCH, ISAAC. See ALBALIA.

**BARUCH B. ISAAC (ha-Kohen?):** Tosafist and codifier; flourished about 1200. He was born at Worms, but lived at Regensburg; hence he is sometimes called after the one and sometimes after the other city. A pupil of the great Tosafist Isaac b. Samuel of Dampierre, Baruch wrote Tosafot to several treatises (*e.g.*, Kiddushin, Nazir, Shabbat, Hulin); nearly all those extant on the order Zebahim are his. A. Epstein believes that the commentary on the Sifra contained in the Munich MS. No. 59 is the work of this Baruch. He is the author also of the legal compendium, "Sefer ha-Terumah" (Book of the Heave-Offering, Venice, 1523; Zolkiev, 1811), containing the ordinances concerning slaughtering, permitted and forbidden food, the Sabbath, tefillin, etc. The book is one of the most important German codes, and was highly valued by contemporaries and successors. It is noteworthy by reason of the author's attempt to facilitate its use by presenting a synopsis of its contents, the first attempt at making a practical ritual codex in Germany.

#### BARUCH BEN ISAAC YAISH. See IBN YAIISH.

**BARUCH, JACOB:** President ("Baumeister") of the Jewish congregation of Frankfort-on-the-Main at the beginning of the nineteenth century; father of Ludwig Börne. Jacob's father was financial agent of the elector of Cologne. Baruch is described by his contemporaries as a "man of sense, a courtier, sometimes orthodox, sometimes modern." Because of the confidence of his coreligionists and also because he had patrons at that court, he was elected to be the representative of the Frankfort community at the Congress of Vienna (Oct., 1814), and the bearer of a memorial concerning the rights of the Jews of Frankfort. A gift of 8,000 gulden, offered to Baruch by the community, in recognition of his services, was refused by him.

**BIBLIOGRAPHY:** Gutzkow, *Börne's Leben*, pp. 27 et seq., Hamburg, 1840; Grätz, *Gesch. der Juden*, xi. 296 et seq.; Schnapper-Arndt, in *Zeit. für die Gesch. der Juden in Deutschland*, iv. 214; G. Brandes, *Die Litteratur des 19. Jahrhunderts in Ihren Hauptströmungen*, 1891, vi. 51, 52; Schuman, *Mimakor Israel*, 1894, ii. 10 et seq. S. A. F.

**BARUCH B. JACOB (Shklover):** Talmudist, physician, and scientist; born at Shklov, White Russia, about 1740; died about 1812. He was one of the old-style Jewish scholars, more common in the Middle Ages than in the eighteenth century, in whom piety and rabbinical learning were combined with thorough scientific training. Baruch, descending from a family of scholars, was educated for rabbi and received the "semihā" (ordination) from Rabbi Abraham Katzenellenbogen of Brest in 1764. He afterward became a dayyan in Minsk, but a craving for knowledge impelled him to leave his native country and visit the great seats of learning in western Europe. He studied medicine in England; and his "Kenah ha-Middah," on trigonometry (Prague, 1784, and Shklov, 1793), is a translation from the English. He was in Berlin in 1777, where he published his "'Ammude Shamayim," on astronomy, with an appendix, "Tiferet Adam," on anatomy. He found at the house of Rabbi Hirschel Levin of Berlin a defective manuscript copy of the "Yesod 'Olam," by Isaac Israeli, of the fourteenth century, and published it there with his annotations in the same year. His booklet, "Derek Yesarah," on hygiene, appeared in The Hague in 1779, and his Hebrew translation of six books of Euclid was published there in the following year.

In his later days Baruch found, for a few years, a refuge in the mansion of Court Councilor Rabbi Joshua Zeitlin, the great government contractor. Zeitlin, who was himself a distinguished Talmudical scholar, assembled about himself in his palace in Ustye, near Cherikov, in the government of Mohilev, White Russia, a group of rabbinical and secular scholars; and Baruch, who was his townsman, had there a separate room in which he established a chemical laboratory and made various scientific experiments. Baruch left Ustye some time before 1812 (see Fuenn, "Kiryah Ne'emanah," pp. 277, 278), and from a manuscript note by his grandson Censor Margolin on a copy of the "'Ammude Shammayim" (see Maggid, "Geschichte und Genealogie der Günzburge," St. Petersburg, 1899), in the Jewish depart-

**Complaint Against Him.** Baruch, and even put into irons, for having delivered himself of public utterances against the Jewish faith, and that as a consequence of the outrage he had fallen ill and died. It has been conclusively shown that this accusation, which was brought by the merchants of Smolensk, was aimed against the Jews as a body; and that it was inspired by hatred of them as competitors in business. The Holy Synod gave orders to demolish the synagogue and to burn up the books and all the appurtenances connected with the "magical" teachings and practices of the Jews. These instructions were carried out to the letter; but the authorities, probably on technical grounds, declined to give effect to the order of the Holy Synod for the annulment of the leases held by the Jews, and for the expulsion of the Jews from the province. Baruch Leibov was per-

mitted to remain and to continue unmolested in his occupation, in spite of the fact that his case had been turned over to the court of "secret investigation cases." In the reign of Catherine I. the order was issued to expel him from Russia.

Long after the above-described incident had been forgotten, he had to pay the penalty in a tragic manner for his zeal as a Jew. In 1783 an officer in the navy, named Voznitzyn, was accused of "having been converted to Judaism and circumcised by the Jew Baruch Leibov in the town of Dubrovna, government of Mohilev, in the house of the Jew Maier, the son of Baruch."

The accusation was brought conjointly against Voznitzyn and Baruch, and both perished at the stake. It would appear that those who conducted the prosecution had doubts as to the legality of the sentence, which was executed at the mandate of the Empress Anna. The case is unique in Russian history, and it was the cause of repressive measures against the Jews under Anna Ivanovna in 1739, and under Elizabeth Petrovna in 1740.

**BARUCH, LOEB.** See BÖRNE, LUDWIG.

**BARUCH B. MOSES OF PROSSNITZ.** See CHRISTIANI, F. A.

**BARUCH B. SAMUEL:** Rabbi of the Ashkenazim at Constantinople or in its neighborhood, in the last half of the sixteenth century. He is mentioned in the responsa "Ohole Tam" of Tam ben Yahya, with whom he carried on a learned correspondence (*ib.* Nos. 44, 45).

**BIBLIOGRAPHY:** Michael, *Or ha-Hayyim*, No. 638. G.

M. B.

**BARUCH B. SAMUEL** (also called **Baruch of Mayence**, to distinguish him from Baruch b. Isaac): Talmudist and prolific "payyetan"; flourished at the beginning of the thirteenth century; died at Mayence April 25, 1221. He was a pupil of Moses b. Solomon ha-Kohen of Mayence and of Eliezer b. Samuel of Metz; the judicial sentences of both of whom he frequently cites. Baruch was one of the most eminent German rabbis of his time, and one of the leaders of the rabbinical synod of Mayence in 1220. Several of his responsa have been preserved in the German collections; most of them refer to the rabbinic civil law. His "Sefer ha-Hokmah" (Book of Wisdom), still extant in the time of Bezalel b. Abraham ASHKENAZI, but now lost, appears also to have been largely legal in character. Early writers cite also a commentary by Baruch on the treatise Nedarim, which was lost at an early date.

Of Baruch's poetical activity more is known. His penitential poems and dirges, as well as his hymns for the Sabbath and for weddings, which made him one of the most popular of the payyetanim, were incorporated into the German and the Polish rituals. Baruch displays a great command of language; the *selihot*, in particular, being frequently character-

II.—36

ized by genuine poetic fervor. The following is a specimen of these poems, translated into English from a German version by Zunz:

"Jeshurun's God, beyond compare,  
Enthroned above the clouds,  
Who dwelleth in the heavens high,  
Yet still on earth is ever nigh;  
Mid tears and sadness, songs and gladness,  
To Him my gaze I turn.  
Who all my feeling, thought, and action,  
Is ever sure to learn."

Baruch, the subject of this article, should not be confounded with Baruch of Greece, a Tosafist quoted several times in the Tosafot and in Mordecai (compare TOSAFOT).

M. B.

**BARUCH, SIMON:** American physician; born at Schwesenz, Prussia, July 29, 1840; educated at the Royal Gymnasium, Posen. Emigrating at an early age to America, he studied at the medical colleges of South Carolina and Virginia, obtaining his diploma in 1862. He immediately entered the Confederate army, serving for three years at the front and participating in all the battles of the army of northern Virginia. He was twice captured, at South Mountain and at Gettysburg. Among his contributions to the literature of the military surgery, an essay on "Bayonet Wounds" attracted much attention. At the close of the war he organized and was in charge of the General Hospital at Thomasville, N. C.

In 1874 Baruch was elected president of the State Medical Association of South Carolina, and in 1880 was appointed on the state board of health, as chairman of which he made a report on vaccination, which resulted in the first legislative action on the subject in the state.

In 1881 Baruch removed to New York, and later became consulting physician and surgeon to the New York Juvenile Asylum, a position he held for many years.

Baruch's contributions to medicine have been chiefly in the diagnosis and treatment of diseases. His principal writings are on malarial diseases, appendicitis, diseases of childhood, and the uses of water in medicine.

Baruch in 1881 investigated the subject of malaria,

and in a series of articles ("Medical Record," 1883) showed that malarial diseases are very rarely fatal in temperate climates, basing his study upon observations in the South extending over fifteen years. Although his views were not accepted at the time, they were confirmed ten years later by Professor Osler of Johns Hopkins University and Dr. James, chief of the New York Vanderbilt Clinic.

Another subject that attracted Baruch's attention was the fatality of appendicitis when treated medically only, as was then the custom. Baruch's insistence on the need of operation in a

**Pioneer in the Surgery of Appendicitis.** certain case, and his subsequent contributions to the diagnosis of appendicitis, make him the pioneer of this beneficent revolution in surgery. Dr.

J. A. Wyeth, an eminent surgeon, stated before the New York Academy of Medicine that "the profession and humanity owe more to Dr. Baruch than to any other one man for the development of the surgery of appendicitis" (report in "American Medical and Surgical Bulletin," March, 1884).

A larger field in the treatment of diseases awaited Baruch's cultivation. He contended that the physician's chief reliance should be on the agents which maintain health—food, cleanliness, exercise, rest, water taken internally and externally. By various addresses, essays, and as editor of the "Dietetic and Hygienic Gazette," of the "Journal of Balneology," and of "Gaillard's Medical Journal," Dr. Baruch made propaganda upon the natural remedies and especially the uses of water; and in 1892 his book on "The Uses of Water in Modern Medicine" was published in Detroit. Being the first work on this subject in the English language, it created much interest, and served to call the attention of

**His Work on Hydrotherapy.** medical men to the valuable results of hydrotherapy, and to the scientific basis upon which water should be established as a remedy. The book was translated into German and published in Stuttgart, receiving in Germany similar high encomiums to those it had gained in America.

Baruch succeeded in establishing water treatment in acute diseases. In February, 1888, he made the plea for the treatment of typhoid fever by the Brand system—a cold bath of definite temperature, duration, and method ("Successful Treatment of Typhoid Fever," St. Louis, 1893)—which in Munich had reduced the mortality of typhoid fever to the lowest possible rate (3 per cent).

In pneumonia and other ailments also Baruch's advocacy of water has successfully replaced spoliative remedies, by substituting this vivifying and invigorating agent for depreciating ones.

Another movement which Baruch has espoused as a pioneer, not alone in America, but in the whole world, is that for "free public cleansing baths," in New York, Chicago, and other large

**Pioneer of Free Public Baths.** cities, replacing the river (pool or tank) baths by cleansing (rain) baths, which carry off foul matter. In order to encourage the establishment of free cleansing baths in other parts of the world, Baruch sent an exhibit of plans, furnished by Dr. Welling-

ton and Mayor Harrison of Chicago, and by Dr. Wende, health officer of Buffalo, together with statistics, to the section on Social Science of the Paris Exposition, 1900. This exhibit was awarded a silver medal and a diploma.

**BIBLIOGRAPHY:** Markens, *The Hebrews in America*, p. 197; private sources.

F. DE S. M.

**BARUCH B. SOLOMON KALAI.** See KALAI.

**BARUCH OF TULCHIN:** Russian rabbi and leader of the Hasidim of the Ukraine; born at Medzhibozh, government of Podolia, about 1750; died there in 1810. He was the son of Adele, who was the only daughter of Israel Ba'al Shem-Tob, founder of Hasidism, and who, on account of "the supreme qualities of her soul," had conferred upon her the epithet of "the most righteous." According to Walden ("Shem ha-Gedolim he-Hadash," B. 55), Adele gave birth to twins, Moses Hayyim Ephraim of Sudilkov, author of "Deget Mahaneh Ephraim" (The Flag of the Camp of Ephraim), being Baruch's twin brother. While Ephraim was a man of letters and a theorist, Baruch was practical, and for more than thirty years held the leadership of the Hasidim of Podolia at Tulchin, and later at Medzhibozh, the former seat of his grandfather. He ruled with great adroitness; traveling around his diocese in luxurious carriages, and collecting large sums of money and presents from his numerous disciples. Baruch was everywhere received with great enthusiasm. The rich and influential looked for his protection; the masses, for his help. His income was immense. In Medzhibozh he held a court, famous for its splendor, and rivaling those of reigning princes and Polish magnates. He even kept a court-jester, Hirschele of Astropol. There were continuous noisy festivals, carousals, and dances, attended by an excited crowd of enraptured Hasidim.

Baruch did not possess great intellect, but was fond of power. Unlike his grandfather and brother, he never wrote on Hasidic doctrines. A few of his sermons were published long after his death (in 1851, as a supplement to Abraham Malak's "Hesed le Abraham," Czernowitz, 1851, pp. 99-116). Another work ascribed to him, a book of aphorisms, entitled "Buzina de-Nehorah" (The Luminous Torch), Lemberg, 1880; 2d enlarged edition, Petrokov, 1889, is, in all probability, apocryphal. It is said that Baruch in his early youth had gained the love and admiration of his grandfather's followers; that Baer of Meseritz had called him a phenomenon, and that the elderly Rabbi Phinehas of Koretz used to rise before the youth, predicting that he would become famous. Though Baruch did not realize these expectations, his conceit was unlimited. He claimed that nothing was hidden from him, and that to him were revealed all the mysteries of theology. He boastfully said, "If I were to know that I had neglected even one of the commandments of the Talmud, I should not care to live." On one occasion Rabbi Simon ben Yohai, the alleged author of the Zohar, appeared to him in a dream, and said: "Baruch, my beloved, you are a perfect man."

Notwithstanding all this, Baruch, at the height of his career, had won the name of "the quarrelsome zaddik," on account of his contentious disposition.

and imperious attitude toward other zaddikim in southwestern Russia, notably in his great conflict with Shneur Zalman of Lyady.

Baruch was the typical latter-day zaddik of the Ukraine, with all his unattractive and unsympathetic features, a proud ecclesiastic, who traded upon his supposed holiness, and aimed only at power, honors, and wealth. He was probably to a great extent responsible for the rapid degeneration of the Hasidim.

**BARUCH UZIEL B. BARUCH.** See FORTI, BARUCH UZIEL.

**BARUCH YAVAN** (called also **Baruch Me-erez Yavan-Baruch of the Land of Russia**): Polish financier; agent of the Polish prime minister Count Brühl; born at Starokonstantinov, government of Volhynia, in the beginning of the eighteenth century; died probably between 1770 and 1780. His father's name was David ben Shachneh, his brother's name Shachneh, and according to his own statement (letter to Jacob Emden, September, 1758) he was a descendant of the celebrated rabbi Shalom Shachneh of Cracow, the founder of the yeshibah of Lublin, who died in 1558. He received an education far superior to that of the Polish Jews of his time. He was well versed in Talmudic literature; spoke and wrote Hebrew, Polish, German, and probably French. By his accomplishments and address he won the favor of the extravagant Count Brühl, who virtually ruled Poland in the reign of August III., 1733 to 1763. This enabled him to exert his influence at the Polish court and with the nobles (see Jacob Emden, "Torat ha-Kenaot") in behalf of his coreligionists, who at this time had to endure much at the hands of the Catholic clergy and the merchants. When the teachings of the pseudo-Messiah Shabbethai Zebi began to spread through South Russia, Baruch took an active part in the fight against them. In 1751, as may be seen from his letter to Aryeh Loeb of Amsterdam, he prosecuted the prominent members of the Shabbethaian sect, Abraham Hayyim (ben Hayyim) of Lublin, and his son Hayyim, the former being one of the directors ("parnas") of the Council of the Four Lands, which was then being held at Starokonstantinov. The wealthy and influential Abraham having the support of many rabbis and of the members of the council, Baruch had to use the influence of the secretary of the Polish treasury, Shidlinsky, who ordered Abraham's arrest, and censured the rabbis, pointing out the great danger which sectarianism might bring to the Jewish religion. He ordered them to obey Baruch Yavan, and to present to the next council his son Hayyim, who had taken to flight. Abraham sought to bribe Baruch Yavan to drop the case, but Baruch rejected his offer with contempt, and spent considerable money in the prosecution of the sectarians (see "Torat ha-Kenaot," pp. 123-127).

When the zealous Bishop Dembowski of Kamenetz-Podolsk, after a religious disputation which he had ordered to be held between the rabbis and the FRANKISTS, or followers of Jacob Frank, the reckless apostle of Shabbethai Zebi, instructed his agents to seize copies of the Talmud and to bring them to Kamenetz-Podolsk, Baruch implored the aid of Count Brühl, who advised him to apply to the papal nuncio Nicholas Serra. Before instructions were received from Rome, thousands of copies of the Talmud were burned, and it is hard to say how far this persecution of the Jews would have been carried had not the zealous bishop suddenly died, November, 1757. On another occasion, when, owing to the machinations of the Frankists, the blood accusation was brought against the Jews, Baruch exerted all his energy to ward off danger from his hunted people, being one of the most prominent counsel before the nuncio, who reported the case to the pope (A. Kraushaar, "Frank i Frankisci Polscy," Cracow, 1895; Emden, "Edut be-Ya'akov").

When Russia began to interfere more actively in Polish affairs, and Frank—who had been kept in prison—seeking, in January, 1768, to obtain his release by securing Russian influence in his favor, despatched his agents to Moscow armed with recommendations from influential persons in Warsaw, Baruch, who was informed as to Frank's movements, forestalled his emissaries. Baruch was then in St. Petersburg, where he enlightened the Polish representatives as well as those of the Russian authorities. From a letter written by Judah Loeb of Pinchov to Jacob Emden, it is evident that Baruch exercised considerable influence among the officials of St. Petersburg. The Jew Bima Speier of Mohilev, who had thorough command of the Russian language and was posted in all Russian affairs and in Russian history and literature, labored actively with him in exposing the Frankists (see Judah of Pinchov's letter in Emden's "Hitabkut" and in Grätz's "Frank und die Frankisten," Supplement 7, pp. 33 *et seq.*). Baruch succeeded in convincing the Russian synodical authorities that Frank, who had four times changed his religion and was trying to change it for the fifth time, was pursuing merely selfish aims, and, being a follower of the pseudo-Messiah Shabbethai Zebi, could never make a faithful Christian. The agents of the Frankists returned home without having accomplished anything, and had even great difficulty in getting away from Russia, being without the hoped-for protection and without the necessary passports. "Covered with shame," they returned to Poland in March, 1768. Of the further career of Baruch nothing is known, nor are any data extant of the life of his son Lazar, who in 1758 married the daughter of Jacob Emden, as is evident from his letter to Emden, published in "Shot-la-Sus," p. 5.

**BARUCH B. ZEBI HIRSCH**: A casuist; lived in Poland at the end of the eighteenth century and the beginning of the nineteenth. He wrote "She-

ma'tata de-Rab" (Teachings of the Master), containing elucidative discussions of halakic questions that had been propounded but left unsolved by Samuel Edels (מדרש א). It consisted of four parts, of which but one part was published, and this under the title "Sheṭara Berurin," Wilna, 1819.

**BARUK SHE-AMAR**, ברוך שאמר ("Blessed be He who spoke"): The initial words of the introductory benediction recited before the reading of the Psalms ("Zemiroth") or selections of the Psalms ("Pesuke de-Zimrah") in the daily morning service; the corresponding closing benediction being "Yishtabbah," the whole to precede the "Shema'," with its introductory benedictions. The "Baruk She-Amar" consists of two parts: a solemn invocation, probably originally recited with responses and intoned as a recitative, and the main benediction preceding the Psalm-reading. It is composed in the style of the ancient Ḥasidean haggadists, and reminiscences of it occur in the Midrash (Tanna debe Eliyahu, Zutta, iv.; Sifre, Deut. 49; Mek., Yitro, 8; Shab. 139a; Ber. 57b; Ta'an. ii. 1; Gen. R. vii.). It was in common use in the oldest gaonic period (see Kohut, "Aruk," s.v. ברוך, and Alfasi on Ber. 32a; "Seder Rab Amram," ed. 1865, p. 2), and, to judge from Mahzor Vitry (ed. 1889, p. 5), known already in Talmudic times. It was invested with mystic awe and significance (see Ture Zahab Shulhan 'Aruk, Oraḥ Hayyim, 51, 1); the number of "Baruk" (benedictions), which is fifteen, and of all the words, which is eighty-seven (= פ"ז), having received a peculiar meaning at the hand of the cabalists (see Isaac Aboab, "Menorat ha-Maor," xciii.). Still the additions, made in the Sephardic liturgy on Sabbath and the festival days, and other alterations, caused slight divergences (compare also the version given in Mahzor Vitry, ed. 1889, p. 61), whereas the German liturgy appears to have adhered more closely to the original form. The position of "Baruk She-Amar" varies also in the Sephardic liturgy. While the German has it at the beginning of the Psalms, the former has it placed—probably on account of late comers—after the recitation of a number of psalms.

Rapoport, in "Bikkure ha-Ittim," x. 117, has made it probable that originally each of the invocations recited by the reader was followed by the response, "Blessed be He and blessed be His name"; but Baer, in his prayer-book notes, contradicts this. The following is a translation of the "Baruk She-Amar," with additions in parentheses, according to the Mahzor Vitry, the Seder Rab Amram, and the Abudarham, the latter two corresponding with the Sephardic liturgy:

Blessed be He who spoke and the world sprang into existence; blessed be He! (and blessed be His name).  
Blessed be the Maker of Creation! (blessed be He and blessed be His name).  
Blessed be He who speaketh and doeth; blessed be He who decreeth and performeth!  
Blessed be He who hath mercy upon the earth; blessed be He who hath mercy upon His creatures!  
Blessed be He who payeth a good reward to those that fear Him! (blessed be He and blessed be His name).

Blessed be He who liveth forever and endureth for eternity; blessed be He who redeemeth and delivereth!  
(Blessed be He who removeth darkness and bringeth light; blessed be He before whom there is no injustice nor forgetfulness, no regard of countenance nor taking of bribes.  
Blessed be He who gave to His people Israel the inheritance of Sabbath rest! [On Sabbath.]  
Blessed be He who gave festivals of gladness to His people of Israel! [On festivals.]  
Blessed be He who gave to His people Israel this day of memorial! [On New-Year's Day.]  
Blessed be He who gave to His people Israel the inheritance of rest and of forgiveness and of atonement for the erring; blessed be He! (and blessed be His name!) [On the Day of Atonement.])  
Blessed art thou, O Lord our God, King of the world, O God and merciful Father; praised by the mouth of Thy people, lauded and glorified by the tongue of Thy pious ones [Ḥasidim], and Thy worshipers! As we praise Thee, O Lord our God, with the songs of David Thy servant, with praises and psalms we will magnify, laud, and glorify Thee, and make mention of Thy name, and proclaim Thee our King, O our God, the Only One, the One who liveth throughout all eternity; O King, praised and glorified be Thy great name for ever and ever. Blessed art Thou, O Lord, the King who is extolled with praises.

**BARUN IBN ISAAC**. See IBN BARUN.

**BARZHANSKY, ADOLPH SOLOMONOVICH**: Russian composer and pianist; born at Odessa 1851; died there 1900. His father, a member of a prosperous firm well known both in Russia and abroad, gave him a commercial training; but the young Adolph, who from childhood was drawn to music, soon abandoned business pursuits and went to Vienna, Paris, and Leipzig, where he attended the musical high schools, surprising his masters by his remarkable talent.

Among Barzhansky's numerous compositions may be mentioned: (1) "On the Sea"; (2) "Recollections"; (3) "Cradle-Song"; (4) "Glückliches Heim"; (5) "Scherzo"; and (6) "Andacht." They were all published by Breitkopf & Härtel of Leipzig.

**BARZILAI**. See JUDAH BEN BARZILAI.

**BARZILAI, GIUSEPPE**: Italian lawyer and Biblical commentator; born at Gradisca, near Trieste, Austria, in 1828; studied at Casalmaggiore, province of Cremona. After having completed his law studies at the University of Padua, Barzilai established himself as attorney at law at Trieste, where he distinguished himself by successfully carrying through several criminal lawsuits. An excellent Hebraist and archeologist, he published the following works: (1) "I Treni di Geremia" (transl. of Lamentations, with notes), Trieste, 1867; (2) "Il Cantic di Salomone," a metrical translation of The Song of Songs, with notes; (3) "Il Beemoth" (Mammut), a contribution to Biblical paleontology; (4) "Il Leviatan"; (5) "Un Errore di Trenta Secoli," Trieste, 1868; (6) "Gli Abraxas" (an archeological study); (7) "Nuove Ipotesi Intorno a due Celebri Versi della Divina Commedia"; (8) "Ideografia Semitica e Trasformazione della Radice Ebraica Nelle Lingue

Indo-European," a contribution to Semitic ideography; (9) "Sul Nuovo Indirizzo da Darsi all'Aeronautica."

Barzilai was secretary of the Jewish congregation in Trieste.

**BIBLIOGRAPHY:** Boccardo, *Nuova Enciclopedia Italiana*, Supplement II., 1891.

S.

**BARZILAI, SALVATORE:** Italian deputy; born in Trieste, Austria, July 5, 1860. Son of the Orientalist and archeologist Giuseppe Barzilai; studied law at the University of Bologna.

In 1878 Barzilai was tried and condemned for treason against Austria, but, after a year in prison, was acquitted by the court of appeal of Gratz. After his release he, in 1882, began his practise as advocate, especially in criminal cases, and became one of the most eminent legal authorities in Italy. He became deputy for Rome in 1890, belonging to the extreme Republican Left. He takes part principally in the debates on the foreign policy of the government. After the battle of Adna, in Abyssinia, he fought a duel with the minister of war, General Mocenni.

Barzilai has contributed articles to some of the most important Italian political papers.

He is author of "La Criminalita in Italia," "La Recidiva," "Il Nuovo Codice Penale," "L'Immunita degli Deputati," "Le Case di Correzione." S.

**BARZILLAI:** A wealthy Gileadite noble of Rogelim, who, together with two other prominent chieftains of the east-Jordanic territory, met David at Mahanaim, when he was fleeing with only a few followers from Absalom, and provided the king and his weary men with food (II Sam. xvii. 27-29). After the death of Absalom, Barzillai again appeared to escort David across the Jordan on his triumphant return to his capital. In gratitude for his loyalty the king invited Barzillai to become his permanent guest; but the aged Gileadite declined the honor, preferring to spend his few remaining years in his native town. In his stead he sent his son Chimham (II Sam. xix. 32-41 [R. V. 31-40]). On his death-bed David remembered the service of Barzillai, commending his sons to the special care and favor of Solomon (I Kings ii. 7).

Even after the Captivity the name of the loyal Gileadite was preserved in tradition; for in the census of Ezra (ii. 61) and Nehemiah (vii. 63) a priestly clan bears the name "Children of Barzillai," its members tracing their descent to a marriage with one of Barzillai's daughters.

J. JR.

C. F. K.

**BASAN, ABRAHAM HEZEKIAH B. JACOB:** Corrector of the press and author; lived in the second half of the eighteenth century at Amsterdam and Hamburg. He was at first corrector at Amsterdam, where he also wrote eulogiums and poems on some works printed there. Especially noteworthy are his poems in Raphael ben Gabriel Norzi's "Se'ah Solet" (Amsterdam, 1757), and in Mordecai b. Isaac Tama's "Maskiyot Kesef" (ib. 1765), which show the author's command of language. Basan left Amsterdam and went to Hamburg, where he became hakam of the Portuguese-Spanish community, probably succeeding his father, Jacob b. Abraham Hezekiah. He is the author of

"Sermones Funebres" (Amsterdam, 1753), funeral sermons in Spanish on David Israel Athias and Solomon Curiel. According to Ghirondi, he wrote also "Yashresh Ya'akob" (Jacob Takes Root), Nuremberg, 1778, on the text of the prayer-books. Ghirondi assumes that the name "Jacob Babagi," on the title-page of the book, is a pseudonym, adopted to protect the author from opposition aroused by his textual corrections. The fact that Nuremberg is given as the place of printing, while the book really was printed in Altona, may be taken to support Ghirondi's assertion.

L. G.

**BASAN, JACOB BEN ABRAHAM:** Hakam of the Portuguese community of Hamburg. In 1755 he published a prayer for a fast-day by the Portuguese congregation, proclaimed on the occasion of the great earthquake in Lisbon.

D.

A. FE.

**BASCH, ABRAHAM:** German poet and teacher; born at Posen July 17, 1800; died at Berlin Sept. 24, 1841. Basch was a somewhat precocious child, being able to expound the Talmud when twelve years old. A year later he became secretary to the mayor of Landsberg, but resigned the position to attend the yeshibah at Prenzlau, where he studied German, French, and Latin under Rabbi Josef Albu.

In 1817 Basch went to Berlin, and eked out a precarious existence—living in a garret in the Rosenstrasse—by copying Hebrew manuscripts and contributing articles and verse to "Wadzecks-Wochenblatt." In 1825 he traveled through South Germany, making the acquaintance of Goethe. On his return to Berlin the same year, he became teacher of Hebrew at Weyl's seminary.

Owing to the failure of the seminary, Basch was again thrown on his own resources, but on account of his unpractical nature was reduced to penury.

**BIBLIOGRAPHY:** *Allgemeine Zeitung des Judenthums*, 1841, p. 677.

S.

E. MS.

**BASCH, ÁRPÁD:** Hungarian painter; born at Budapest 1873. He purposed at first to follow an industrial career, and attended the department of metallurgy at the Staatliche Mittelschule (government school) for one year. He then went to Munich, where he became a pupil of Simon Hollósy. Upon his return to Budapest he worked in the academies of Bihari and Karlovsky and then went to Paris, where, for three years, he was a pupil of Bonnat, Dousset, and Jean Paul Laurens. On his return to Budapest he undertook the redaction of the art division of the "Magyar Genius." Several commissions for the Millennia Exposition were executed by him. To the painting of posters he devoted considerable attention. Basch is a collaborator on "The Poster" and on "Les Maitres de l'Affiche." At present his principal occupation, however, is in water-color decorative painting.

**BIBLIOGRAPHY:** *Pallas Lexikon; Magyar Genius*.

M. W.

**BASCH, GYULA:** Hungarian painter; born at Budapest April 9, 1859. After completing his studies at the gymnasium, he attended the polytechnic

institute at Zurich (1867-72), where he obtained his diploma as engineer. He devoted himself, however, exclusively to painting, and became first a day-scholar at the Ecole des Beaux-Arts at Paris (1873-74), and afterward a pupil of T. Paczka (1885) and of the painter L. Horovitz in Budapest (1888), finally occupying himself with genre and portrait painting. His principal works are: "Habt Acht!" "Die Erste Uniform," "More Patrio," and "Nie!" Among his portraits are those of the cellist David Popper, and the Hungarian statesman Dr. Max Falk.

BIBLIOGRAPHY: *Pallas Lexikon*.

M. W.

**BASCH, RAPHAEL:** Austrian writer and politician; born at Prague, Bohemia, in 1813. After acquiring at that city a thorough familiarity with Hebrew and the Talmud, and with classics and philosophy, he went as teacher in the primary school of Presburg, which had been founded by progressive Jews, admirers of Moses Mendelssohn, in opposition to the Orthodox Jews there. At the first disturbances preliminary to the Revolution of 1848, he went to Vienna, and took an active part in the insurrection. Here he founded the "Reichstagblatt," which he continued at Kremsier until the dissolution of the Constitutional Assembly, in March, 1849. He then joined the staff of the "Oesterreichische Post" of Vienna, which he represented at Berlin; subsequently he was the Paris correspondent of several papers. He returned to Vienna in 1855 and assumed the editorship of the "Oesterreichische Zeitung," occupying a position of importance as the official mouthpiece of the minister Bruck, the opponent of the clerical minister Bach. After the promulgation of the constitution of Feb. 26, 1861, he acted in a similar capacity to the Schmerling ministry, with which political party he remained connected until its fall.

Until 1875 Basch was engaged only in economic questions, but in that year he returned to political journalism. He represented the "Neue Freie Presse" at Paris; and in close fellowship with Thiers, Gambetta, and Barthélemy St.-Hilaire he defended the republican policy against the men of the 16th of May. In 1883 he retired from journalism, but remained at Paris. He has published a number of political pamphlets; two of these, entitled "Deutschland, Oesterreich, und Europa," and "Oesterreich und das Nationalitätenrecht," Stuttgart, 1870—which appeared under the pseudonym "Ein Altoesterreicher"—created, on their appearance, a great sensation in Austria.

S.

V. B.

**BASCH, SAMUEL SIEGFRIED KARL RITTER VON:** Austrian physician; born at Prague Sept. 9, 1837; best known as the body-physician of the emperor Maximilian of Mexico. Basch was educated at the universities of Prague and Vienna. In 1857 he studied chemistry at the laboratory of Brücke, in Vienna, and five years later began the practise of medicine. From that time until 1865 he was assistant to Dittel, Jäger, Türk, Kolisko, and Haller in their lectures at the University of Vienna. In the last-named year Basch was appointed chief surgeon of the military hospital at

Pueblo, Mexico, and soon after he was called to Maximilian's side; remaining with the unfortunate monarch for ten months, until his death, June 19, 1867.

When, at Queretaro, Maximilian realized that a few days at the most would decide his fate, he commissioned Basch, Lieutenant Pitner, and Major Becker to keep daily records of all that happened. At the time when the emperor and his entourage were betrayed to Juarez by Lopez, May 14, 1867, Basch lost most of his memoranda, saving only cursory notes. When the alarm was sounded, Basch rushed to saddle his horse, but was at once overpowered by the Mexicans.

After the execution of Maximilian he took charge of the body and returned to Austria with it (Nov. 26, 1867) on the "Elizabeth."

In 1870 Basch was appointed lecturer on experimental pathology at the University of Vienna, and in 1877 assistant professor. He was ennobled by Emperor Franz Joseph for his share in Maximilian's enterprise.

Basch's best-known work is "Erinnerungen aus Mexico" (1868), written at the request of Maximilian. In addition, he has written for technical journals a number of articles on the histology of the duodenum, the anatomy of the bladder, and the physiological effects of nicotin.

E. Ms.

**BASCH, VICTOR:** Professor of philosophy at the University of Rennes; born at Budapest, Hungary, in 1863; son of Raphael Basch. Removing in childhood to France, he studied at the Sorbonne; in 1885 he was appointed professor at the University of Nancy, and in 1887 at the University of Rennes. During the Dreyfus affair he was the leader of the Dreyfusards at Rennes, who were placed in a serious and difficult position when the case was tried in that city. Basch as a Jew and a Dreyfusard was subjected to downright persecution at the hands of the fanatical anti-Semitic populace; but he championed the cause of his race and fought and suffered for the principles of legal and social justice. His published works include an important study, "L'Esthétique de Kant," Paris, 1896; the first volume of a work in four volumes on the history of esthetics; "Poétique de Schiller"; "La Vie Intellectuelle à l'Etranger"; "Les Origines de l'Individualisme Moderne." He also contributes frequently to the "Siècle" and the "Grande Revue" of Paris.

S.

**BASCHWITZ:** A family of printers, of which the following were the most prominent members:

1. **Meïr Baschwitz:** Born at Dyhernfurth; son of Zebi Hirsch ben Meïr (No. 2). In 1731-32 he worked in the establishment of Israel b. Abraham in Wandsbeck, near Hamburg, and after 1733 in Berlin. He published a prayer-book in 1742. Until 1782 he was engaged partly in Berlin and partly in Frankfurt-on-the-Oder, so that his career as a printer extends over a period of nearly fifty years.

2. **Zebi (Hirsch) b. Meïr Baschwitz:** Born

(3) Zebi (Hirsch)  
(1788-1813)

A. F.

A decree, forced from the council in 1349, to the effect that no Jews were to settle in Basel for the next 200 years, did not remain in force very long. As soon as the excitement caused by the Black Death had subsided, the city again opened its gates to the Jews, and in 1361 they were once more living there. In 1365 the emperor Charles commanded the mayor, the council, and the citizens "to protect and to keep the Jews now living within Basel and those that will hereafter move there and settle, as the emperor's Kammerknechte, and to make the taxes as moderate as seems best to them." In 1366 Eberlin and his son, and Jutin the Jewess, were received under the protection of the city on payment of an annual sum. Eight years later, by a letter dated Nov. 25, 1374,

Emperor Charles presented to Duke Leopold of Austria the taxes of the Jews at Basel. Most of the Jews who settled in Basel had come from Colmar and other Alsatian cities, and were wealthy. In 1367 they presented to the council 200 gulden "for the journey of the emperor." The expenses for the fortification of the city were defrayed by voluntary—probably also by involuntary—contributions and loans from the Jews. In 1374 the Jews of Basel loaned to the council 5,000 gulden, one Jew advancing 4,000. In 1375 the Jews Menlin and Helya gave 20 pounds; others, as much as 50 and 100. In 1385 the Jew Moses donated "for the wall" 50 gulden, and a year later another Moses gave 70 gulden. In general, the Jews were merely protected; but some were received as citizens, though only for a limited number of years. On being accepted as citizens, they received a so-called letter of protection (*Schirmbrief*), enumerating all the rights and privileges which were to be theirs (see letters of protection of 1386 issued for Slemme, wife of Moses de Colmar, the Jew, and for Joseph of Richenweiler, the Jew, uncle of the above-mentioned Slemme, in "Beiträge zur Vaterländischen Geschichte," vi. 279 *et seq.* Basel, 1857).

The franchise was in some cases revoked. For instance, in 1382 an order was issued that Umelin, the son of Menlerin the Jewess, should "never again become a citizen, nor is he to be accepted as a citizen; and he is forbidden to exchange or to buy horses." He was, however, again accorded citizenship on payment of 400 florins.

Religious tolerance was assured to the Jews. In 1370 they already had a synagogue in a house which until recently was called the "Judenschule." They were compelled to remove their dead from Basel and to bury them elsewhere. In 1394,

**Religious In-** four years after King Wenzel had again given the city the right to admit  
**tolerance.** Jews, the council permitted them to lay out a cemetery in a garden bought by them in the neighborhood of the Spahlenthurm, in the suburb of Spitalschüren. For every interment they had to pay to the council a tax of a half-florin for a resident and of one florin for a stranger.

The legal and social position of the Jews differed here, as elsewhere, from that of the Christians. In a lawsuit of a Christian against a Jew there had to be a Christian and a Jewish witness. Jews could not be called before an ecclesiastical court, but only before the Schultheiss, or into the synagogue before the rabbi, who also acted as judge. They took an oath on the Pentateuch, according to a special formula, which included the following:

"True shalt thou swear,  
Dathan and Abiram forget not,  
Their fate shalt thou share  
Whom the earth swallowed."

Even in outward appearance they were distinguished from the Christians by the so-called "Jew's hat." In 1374 a Jew was executed in Basel.

Mathys, the son of Eberlin the Jew, who spoke disrespectfully of the Christian religion in 1377, was exiled from the city. Another Jew who had spoken ill of St. Catherine in 1392 was fined no less than 500 florins. A Jew who had kissed the daughter of a

Christian citizen of Basel was sentenced to remain three days in the pillory and to imprisonment for life. The girl was imprisoned for five years; and the servant who had kept at a distance, so as not to disturb the lovers, was imprisoned for two years.

In spite of their isolated social position, Jews were appointed by the council as town physicians. As such are named Master Josset in 1372 and Master Gutleben in 1379. The first received 25 pounds, the other 18 (or, according to others, 50) pounds, besides his fees.

In 1543 the Jews were for the second time exiled from Basel; on this occasion, it is said, to please the citizens of BERN. At first they were permitted to enter the city accompanied by some official, but in 1549 this also was prohibited. In 1552 they were again allowed to enter the city once a month on payment of a body-tax of 5 batzen (= 10

**Second** cents) and 1 batz to the gatekeeper.

**Expulsion.** In spite of this prohibition several Jews were employed as correctors of the press by the publishers Froben, Conrad Waldkirch, and Ludwig König, who printed a number of Hebrew works, among them the Babylonian Talmud. Abraham BRAUNSCHWEIG, the corrector of the large Buxtorf Bible, had special permission to live at Basel until the work was completed. Although no Jews were permitted to live in Basel until the beginning of the nineteenth century, the Jews who were expelled from Alsace at the time of the French Revolution were given temporary shelter and treated compassionately. This noble deed of the inhabitants of Basel was celebrated by Hartwig Wessely in a Hebrew poem printed in the "Meassef," 1789.

Basel for a long time resisted the readmission of Jews. Gradually a small number of Alsatian and French Jews settled there. In 1845 there were thirty Jewish families in the city. The law of 1849 decreed that no Jews were to settle in Basel beyond those already residing there and their children; and they might only remain at the pleasure of the government. Since 1862 residence has been freely accorded to Jews, and in 1872 full civic rights were granted to them. The Jewish community of Basel began the building of a synagogue in 1866, and held the dedication service on Sept. 9, 1867. In 1901 the congregation consisted of about 220 families, with a rabbi (Arthur Cohn) and several charitable organizations.

M. K.

**BASEL CONGRESS:** An international Zionist convention held at Basel on Aug. 29, 30, and 31, 1897, in the Stadt Casino, and which was called at the instance of Dr. Theodore Herzl. It was attended by Jews from all parts of the world, its purpose being to consider how best to relieve the misery of the Jews, particularly those of eastern Europe, Russia, Rumania, and Galicia, who had suffered so much, both morally and materially, through the anti-Semitic movement. The second Basel Congress met Aug. 28-31, 1898; the third, Aug. 15-18, 1899. The fourth Congress was transferred to London, where it took place on Aug. 13-16, 1900; the fifth was again held at Basel, Dec. 29-30, 1901.

MEETING OF THE SECOND ZIONIST CONGRESS AT BASEL.  
(From a Photograph.)

Dr. Karpel Lippe of Jassy, Rumania, well known by his work in the Jewish colonization movement in Rumania, acted as honorary president of the first Congress; while Dr. Theodore Herzl was on each occasion unanimously elected as chairman. The resolutions as well as the reports of the meetings of each Congress were noted in the stenographic records and were soon afterward printed.

The first Basel Congress stated, in the BASEL PROGRAM, the aim and purpose of Political Zionism. The Congress was attended by about one hundred and fifty delegates; the second and the third each by about two hundred and fifty. The fourth was held in London, but the fifth, held at Basel, was attended by 300 persons. These delegates were elected according to a statute of organization, which

A Basel newspaper writes, at the close of the third Congress: "Every parliament might take this Jewish Congress as an example."

**BASEL-LAND:** A canton of Switzerland. It did not admit the French Jews, who had bought property in Liestal, the capital of the canton, notwithstanding the treaties existing between Switzerland and France. Jews have only recently resided in Liestal. The few Jews who had nevertheless settled there were expelled in 1839, in spite of the

DELEGATES' CARD AT THE SECOND ZIONIST CONGRESS AT BASEL.

was accepted at the third Congress. This statute provides that every hundred contributors of one shekel are entitled to one representative. The minimum shekel for the various countries is as follows: one franc for every country using the franc as current coin; Germany, one mark; Austria, one crown; Russia, 40 copecks; America, 25 cents; Great Britain, one shilling; Holland, 50 cents. As most of the delegates were commissioned by more than one group, it may be said that they represented Jews from all parts of the globe, a unique occurrence in the history of the Jewish Diaspora. The reception given them by the inhabitants of Basel was in every respect excellent. This was largely due to the authoritative articles on the aim and purpose of the Congress and of the "Zionist Movement," which were published in the daily press; and still more to the fact that the proceedings were conducted publicly, under well-known leadership, and according to parliamentary rules.

protests of the French government. Even as late as Nov. 17, 1857, a law was passed decreeing that "the rights of settlement, of plying a handicraft, and of trading are forbidden to every Jew without exception." Whoever received a Jew into business or into his family was liable to a fine of 300 francs, and on repetition of the act was to be imprisoned. Whoever rented a store to a Jew incurred a penalty of 50 francs. The Jews were, however, permitted to visit the regular fairs, to pass through the canton, and to stay there temporarily.

**BASEL PROGRAM:** By this term is understood the program of POLITICAL ZIONISM drawn up at the first BASEL CONGRESS, as the aim of the political-Zionist movement. The Basel Program was unanimously accepted at the morning session of the

second day of the first Congress, after a report by Max NORDAU, chairman of the executive committee. It is as follows: "Zionism aims at establishing for the Jewish people a publicly and legally assured home in Palestine. For the attainment of this purpose, the Congress considers the following means serviceable: (1) the promotion of the settlement of Jewish agriculturists, artisans, and tradesmen in Palestine; (2) the federation of all Jews into local or general groups, according to the laws of the various countries; (3) the strengthening of the Jewish feeling and consciousness; (4) preparatory steps for the attainment of those governmental grants which are necessary to the achievement of the Zionist purpose."

In the course of the proceedings it was found necessary to explain, first, that the struggle for a publicly and legally assured home was meant to be only for those Jews who either could not or would not

way resembled a territorial menace to the Ottoman empire. It hoped to achieve its goal by rendering service to Turkey; thus procuring a Turkish charter, in order that it might secure for the Jewish AGRICULTURAL COLONIES IN PALESTINE already existing, and to be established there, an autonomous government under the suzerainty of Turkey.

The second statement was due to some fears expressed by the Basel rabbi Dr. Cohn. He voiced the sentiments of the Orthodox, and said "that the party, of which it is known that it does not subscribe to the opinions of Orthodoxy, might oppress the Orthodox." To this is due the declaration, made by the chairman of the Congress and reenforced on every occasion, that political Zionism aims exclusively at the *improvement* of the political condition of the Jews. It thinks that this improvement is to be found if those Jews who only possess political

BRONZE MEDAL STRUCK AT THE SECOND ZIONIST CONGRESS AT BASEL, 1897. (Exact Size.)

assimilate in their respective dwelling-places; secondly, that (political) Zionism did not intend to take any steps that would offend the religious sentiment of any Jew, whatever his opinions.

The first statement was made for the reason that the opponents of the movement had used all conceivable means to prevent and to discredit the Congress and its aims. They had succeeded in frustrating the original intention to hold the Congress in Munich, and they made it a prominent argument that the assertions of the anti-Semites were confirmed by the holding of this Congress. They held that the entire idea was Utopian; that a transfer of all Jews to Palestine would be materially impossible if for no other reason than that Palestine could not hold them all. Furthermore, that in some countries Jews enjoy all political rights and privileges; that the emigration of these Jews would be therefore not only unnecessary, but highly ungrateful toward those countries in which they enjoy such rights, etc.

Others thought they found in the Basel Program a menace directed against the independence of Turkey. It was, however, repeatedly emphasized in precise terms by the leaders of the movement that political Zionism had nothing in view which in any

privileges in a limited measure or not at all, or who in any other way occupy an inferior position with respect to their fellow-citizens of other religions, are provided with better political, and thereby better social, conditions. The satisfaction of religious needs is left to the individual.

On account of a question addressed to the president as to the meaning of the term "expedient settlement of Palestine" (Point 1 of the Basel Program), it was found necessary to discuss the question of colonization in the second Basel Congress. This was done through a resolution brought up by the Zionist executive committee and accepted by a majority vote. The resolution referred to a plan drawn up by the colonization committee, which was as follows:

"This Congress, in approval of the colonization already inaugurated in Palestine, and being desirous of fostering further efforts in that direction, hereby declares, that

1. For the proper settlement of Palestine, this Congress considers it necessary to obtain the requisite permission from the Turkish government, and to carry out such settlement according to the plan, and under the direction of a committee, selected by this Congress.

2. This committee to be appointed to superintend and direct all matters of colonization; it shall consist of ten members, and have its seat in London. England shall send three delegates to this committee; Russia, two; Galicia, one; Germany, one;

Rumania, one; and the executive committee shall appoint two. At least three of the members must reside in London. The executive committee will defray the necessary expenses of its administration.

3. The first action of this committee shall be taken in connection with the Jews now residing in Turkey.

4. The Colonial Bank shall cooperate in obtaining the desired permission for colonization from the Turkish government.

5. The Congress enjoins upon all Zionists the duty of influencing all colonization societies to work in harmony with the above plan.

6. The Congress requests the executive committee to undertake accurate investigations to ascertain the legal position of the Jews in Turkey, and particularly in Palestine.

Another important resolution of the second Zionist Congress was the founding of the **JEWISH COLONIAL TRUST**, which is to be the financial instrument of political Zionism. The second Zionist Congress also gave

widely known as the founder of the "Beethoven Matinées" (1859), which eventually culminated in the well-known Società del Quartette, which exerted a great influence upon the musical life of Florence, and of Italy in general; and in connection with which Basevi offered an annual prize for the best string-quartet. Basevi founded in 1863 the *Concerti Popolari di Musica Classica*. He was a frequent contributor to musical periodicals, and is the author of "Studio sulle Opere di G. Verdi" (1859), "Introduzione ad un Nuovo Sistema d'Armonia" (1862), and "Compendio della Storia della Musica" (1866).

(From a photograph.)

to the female delegates the right of voting and rendered them eligible to office in all Zionist matters.

The third Zionist Congress made the Zionist organization complete, by accepting a statute which regulates the organizations and elections. Finally, it drew up a definite order of business. The fifth Congress established the Jewish National Fund.

**BASEMATH.** See **BASHEMATH**.

**BASEVI, ABRAMO:** Italian composer and writer on music; born at Leghorn Dec. 29, 1818; died at Florence November, 1885. At first a physician in Florence (1858), he later devoted himself exclusively to the study of music, and achieved, after hard struggles (his first attempts as composer and as editor of the musical paper "L'Armonia" failed), some distinction as composer of operas ("Romilda ed Ezzelino," 1840; "Enrico Howard," 1847). He is

**BASEVI, EMMANUELE:** Italian physician and medical writer; born at Pisa in 1799; died in Florence Sept. 18, 1869. Basevi studied at the high school of his native city and later at the university there, obtaining his degree in 1817. He devoted the next six years to further study. In 1823 he published his first work "Discorso," following it in 1824 with "L'Esposizione della Medicina Fisiologica di Broussais."

His other works were "Cenni sulla Medicina Fisiologica Confrontata Colla Dottrina Medica Italiana" (1825); "Sugli Uffici del Medico" (1826); "Sul Magnetismo Animale" (1828), and "Sulla Conducibilità Elettrica del Vetro Ridatto in Fili o Lamine" (1841).

In 1825 the grand duke of Tuscany appointed Basevi secretary of the Jewish community of Leghorn.

**BASEVI, GEORGE (JOSHUA):** Architect; born in London in 1794; died at Ely in 1845. He was the son of George Basevi, whose sister, Maria, had married Isaac Disraeli and was the mother of the earl of Beaconsfield. Educated at first by Dr. Burney at Greenwich in 1811, Basevi became a pupil of Sir John Soane, the architect and antiquary; made a tour in 1816 through Italy and Greece, and returned to England in 1819. In 1821 he was appointed surveyor to the Guardian Assurance Company, and for the next few years was engaged in the construction and superintendence of two churches, and of the houses in Belgrave square. He was almost the last and one of the best of the school that sought for inspiration in the architecture of imperial Rome, before the influence of Pugin turned the fashion in favor of Gothic. His best work was the Fitzwilliam Museum at Cambridge (see illustration on p. 572), and carried out in the best classical style (1837). He erected a prison at Wisbeach, and enlarged one at Ely. With Sydney Smith he was associated from 1843 to 1845 in the construction of the Conservative Club-House, London. In the latter year the same architects undertook the rebuilding of the Carlton Club premises. Basevi died from an accident Oct. 16, 1845, before he had started on the work. He was inspecting the bell-tower of Ely Cathedral when he fell and was killed instantly. He was buried in the chapel at the east end of the cathedral.

G. L.

**BASEVI, JOACHIM:** Italian jurisconsult; born at Mantua 1780; died at Milan 1867. His intelligence and culture procured him so much celebrity that he was chosen to defend Andreas Hofer, the Swiss patriot, before the court martial. When the Austrian government displaced the French government, Basevi went to Milan, where he remained till his death. His principal works are: "Dello Scioglimento dei Feudi nel Territorio della Repubblica Cisalpina" (1844); "Il Commento al Codice Civile Austriaco" (passed through seven editions from 1845 to 1857); "Il Trattato delle Leggi Astinenti al Processo Civile," 1850; and "Il Commento alla Legge di Cambio Austriaco."

**BIBLIOGRAPHY:** Private sources.

B.

**BASHAN** or **HA-BASHAN** ("fertile, stoneless ground"): The tract of country north of Gilead, the Yarmuk being the dividing-line. It stretches eastward along this southern limit as far as Salchah or Salecah (Deut. iii. 10), the modern Salkhat; thence northward to Hermon (Deut. iii. 8, iv. 47), which may be inferred from the passage in Deut. xxxiii. 22, which speaks of Dan leaping from Bashan, and referring to the time when Dan had emigrated to the extreme north. In the west, Bashan did not extend quite to the Jordan; the territory of the Maachathites and the Geshurites intervening between it and the river (Deut. iii. 14; Josh. xii. 5, xiii. 11,

13). The land was probably rather well settled in early times, since Deut. iii. 4 speaks of sixty cities; there are many ruins remaining to this day. The names of very few cities have, however, been preserved. Edrei (Deut. i. 4; iii. 1, 10; Josh. xii. 4; Num. xxi. 33), apparently a royal city, was the scene of the battle which ended in the defeat of Og, and gave the Hebrews possession of the land. It is now known as "Ed-deraah." Generally mentioned in connection with Edrei is another royal city, Ashtaroth, perhaps the modern Tell-Ashtera. Golan was set aside by Joshua as a city of refuge (Josh. xx. 8), and was held by the Gershon branch of the Levites (Josh. xxi. 27; I Chron. vi. 56). Of Salecah nothing is known but the fact that it was a boundary city (Josh. xii. 5; Deut. iii. 10; Josh. xiii. 11).

The land of Bashan is characterized by its volcanic formation: the hills have craters and are picturesquely called "har gabnunnim" (mountain of summits; A. V. "high hills," Ps. lxxviii. 16). The soil is very fertile and provides excellent pasture for flocks, which in ancient times were noted for their size and breed (Deut. xxxii. 14). The powerful cattle of Bashan are referred to in the orations of the Prophets as designations for the strong, overbearing inhabitants of Samaria (Amos iv. 1), and for wicked people in general (Ps. xxii. 13). In the eastern portion oaks grew quite plentifully (Isa. ii. 13), and were used in making oars for the Tyrian trade (Ezek. xxvii. 6). In figurative language, Bashan is often linked with the Lebanon and Carmel as designative of mourning (Zech. xi. 2), languishing (Nahum i. 4), or casting away its fruit (Isa. xxxiii. 9).

According to Biblical tradition, Bashan was conquered from the mythical Og by the Hebrews in the days of Moses, and was handed over to the half-tribe of Manasseh (Deut. iii. 13; Josh. xiii. 29; I Chron. v. 23). According to I Chron. v. 11, Gad also had some land in Bashan, but this late passage is hardly sufficient evidence. In Solomon's reign a commissariat officer was stationed in Bashan (I Kings iv. 13, 19). In the days of Jehu, Hazael began to devastate the land (II Kings x. 33), but in the invasion of Tiglath-pileser (II Kings xv. 29) it is not mentioned. See G. A. Smith, "Historical Geography of the Holy Land," ch. xxvii. The name gave rise to the Greek "Batanaea" and to the modern Arabic "Buthaniyatun."

**BASHAR BEN PHINEAS.** See IBN SHUAIB.

**BASHEMATH, BASMATH** (R. V., **BASEMATH**): 1. One of the wives of Esau. In Gen. xxvi. 34 she is described as "the daughter of Elon the Hittite." According to the same source, Esau had another wife, Mahalath, the daughter of Ishmael, the sister of Nebajoth; but in Gen. xxxvi. 2 the first of Esau's wives is stated to be Adah, "the daughter of Elon the Hittite," and Bashemath is described as the daughter of Ishmael, the sister of Nebajoth. The Samaritan text avoids the conflict between the different narratives by substituting Mahalath for Bashemath in Gen. xxxvi.

2. A daughter of Solomon, and wife of Ahimaaz. The latter was one of the twelve purveyors for the

royal household, and was assigned to the district of Naphtali (I Kings iv. 15).

C. F. K.

**BASHUYSEN, HEINRICH JACOB:** Christian printer of Hebrew books and Orientalist; born at Hanau, Prussia, Oct. 26, 1679; died about 1750. He founded a printing-establishment in his native city between 1709 and 1712; and over 100 publications were issued from his press. He was a zealous promoter of Hebrew and rabbinical literature; and, among other works, he translated extracts from the rabbinical commentaries to the Psalms (Hanau, 1712). In one of his dissertations he translated a part of the "Mishneh Torah" of Moses Maimonides (Hanover, 1705; Frankfort, 1708); and it was his intention to translate the whole work, as well as the Hebrew grammar "Shoresh Yehudah," by Juda Neumark, director of Bashuysen's printing-office in Hanau. Bashuysen published Abravanel's commentaries on the Pentateuch, and intended to edit the entire work in four volumes. He also entertained the idea of amplifying Otho's "Historia Doctorum Mishnicorum" by adding the Amoraim.

Among Bashuysen's other works may be mentioned: "Panegyricus Hebr. de Ling. Hebr." (Hanover, 1706; also in German, *ib.* 1706); "Institutiones Gemarico-Rabbin." (Hanover, 1718); "Exercit. Paradoxa de Nova Methodo Discendi per Rabbinos Ling. Hebr." (Servestæ, 1720).

In 1701 he was appointed ordinary professor of Oriental languages and ecclesiastical history at the Protestant gymnasium of Hanau, and in 1703 became professor of theology in that institution (Bashuysen's father was preacher in the Dutch Reformed Church of the city). In 1716 he accepted the position of rector and "professor primarius" at the gymnasium of Zerbst. Bashuysen was a member of the Academy of Berlin and of the London Society for the Propagation of the Gospel.

A. F.

**BASHYAZI, ELIJAH B. MOSES B. MEN-AHEM OF ADRIANOPI.E:** Karaite hakam; born at Adrianople about 1420; died there in 1490. After being instructed in the Karaite literature and theology of his father and grandfather, both learned hakams of the Karaite community of Adrianople, Bashyazi went to Constantinople, where, under the direction of Mordecai Comtino, he studied rabbinical literature as well as mathematics, astronomy, and philosophy, in all of which he soon became most proficient.

In 1460 Bashyazi succeeded his father as hakam of the Karaite community at Adrianople. From the many letters addressed by him as representative of the Karaite community

**Becomes Hakam at Adrianople.** of Constantinople, from 1480 to 1484, to Karaite communities in Luska and Trok, Poland, Neubauer concludes that Bashyazi resided for the most of the time in Constantinople. In these letters he appears as a warm-hearted defender of the Karaite faith. He urges his coreligionists to send young men to

Constantinople to study their religious authorities, lest their faith die out, and to lead a pious life; otherwise he would pronounce an anathema on those derelict in their duties. He devoted himself to the improvement of the intellectual condition of the Karaite sect, which, in consequence of internal dissensions on religious matters, was at that time very low. In order to settle the religious laws he compiled a code entitled "Aderet Eliyahu" (The Mantle of Elijah). This code, which contained both the mandatory and prohibitory precepts, is rightly regarded by the Karaites as the greatest authority on those matters.

In it Bashyazi displays a remarkable knowledge, not only of the earliest Karaite writings, but also of all the more important rabbinical works, including those of Saadia, Ibn Ezra, and Maimonides, whose opinions he discusses.

The "Aderet" is divided into subjects and these again are subdivided into chapters. The subjects treated are: (1) the fixation of the months (42 chapters); (2) the Sabbath (22 chaps.); (3) Passover (10 chaps.); (4) unleavened bread (7 chaps.); (5) the Feast of Weeks (10 chaps.); (6) New-Year (2 chaps.); (7) the Day of Atonement (5 chaps.); (8) the Feast of Tabernacles (5 chaps.); (9) prayer. This last subject comprises three parts: theology; ethics; and laws concerning prayers, synagogues, slaughtering, clean and unclean, prohibited degrees in marriage, women, the years of release and jubilee, the prohibition of mingled seed, and oaths. The last three subjects were completed, after Bashyazi's death, by his disciple, Caleb Afendopolo.

Bashyazi's theological system is a masterpiece of clearness and logic. Following the example of Judah Hadassi and probably of still older masters of Karaism, he set up ten articles of belief, the veracity of which he demonstrates philosophically as follows:

(1) *All physical existence—that is to say, the spheres and all that they contain—has been created.*

There are two kinds of creations: creation from something else, and creation from nothing. The things now existing are creations from something else, such as the chicken created from the egg; but creation from nothing is by the will of God alone. All compound beings have been produced from the elements and the first matter by the movement of the spheres. But the question is whether the spheres and the first matter were created. The philosophers assert that they are eternal, because, they say, "nothing can be created from nothing." In Bashyazi's opinion this is an error arising from judging the past by the present. The philosophers, knowing of no creation from nothing in their own experience, conclude that such a creation never could have been. Supposing then that they had never seen the chicken emerge from the egg, they might as well maintain that the chicken was eternal, because they could not explain how it lived in the egg. The fact is that inferior beings can not be compared with superior ones which the reason is unable to conceive. In these things reliance must be placed upon revelation, which even philosophy

**His Views on Creation.**

admits to be true; and all prophets declare that the spheres have been created from nothing.

However, not satisfied with religious proofs only, Bashyazi tries to give philosophical arguments, and being unable to furnish them in the strictly Peripatetic way, he demonstrates his article of belief by Avicenna's theory of "the necessary."

**Relies upon** and "the possible," which he wrongly **Phi-** attributes to Aristotle. Since philos-  
**osophy.** ophy proves that the existence of all beings, except God, is only "possible," the spheres, as well as the first matter, must have been created; otherwise their existence would be a "necessary" one like that of God.

(2) *That all beings have a creator who has not created himself.*

This is the corollary of the first article of belief. As it was demonstrated that beings were created, they must have had a creator. All movement presupposes a motor either physical or spiritual. As the heavens are moved by a physical motor, this motor in its turn must have another motor; and so forth until the Prime Mover, God, is reached.

(3) *That God has no likeness and is absolutely one.*

The fact that the existence of God only is necessary proves that He has no likeness. He must also be one; for if there were two beings whose existence was necessary, one of them must have been the cause of the other. In that case there would be only one whose existence was necessary. On the other hand, in supposing each of them to be his own cause, one must have a distinguishing quality which the other does not possess; for if both were identical in all things they would form one; and a being to whom qualities can be attributed is necessarily composed, and must therefore have a creator. As for the attributes of God found in the Bible they must be taken negatively.

(4) *That God sent Moses.*

Bashyazi examines prophecy from the philosophical point of view; and, demonstrating it to be true, he claims that there is no hindrance to a belief in Moses' mission.

(5) *That He gave through Moses His Law, which is perfect.*

(6) *That the believer should know the language and the interpretation of the Law.*

All the existing translations of the Law have in many passages altered the sense; therefore, the believer must learn the Hebrew language in order to be able to read the Law in the original.

(7) *That God inspired the other prophets.*

(8) *That God will raise up the dead on the Day of Judgment.*

Bashyazi did not undertake to prove article 8 philosophically, accepting the tradition as satisfactory. Moreover, it is made plausible by the fact that God made Adam of clay.

(9) *That God rewards and punishes every one according to his merits or demerits.*

This article of belief being in close connection with Providence and Omniscience, Bashyazi refutes the opinion of certain philosophers who assert that God's knowledge bears only upon the universalities and not upon individual things.

(10) *That God did not reject the exiled [Jews], and*

*that although they are suffering, they should hope every day for their deliverance by the Messiah, the son of David.*

The other works of Bashyazi are: (1) "Iggeret ha-Zom" (Letter on Fasting on Saturday), divided into three sections. This letter was directed against Solomon Sharbit ha-Zahab, who opposed the opinion of Aaron b. Elijah the Karaite. (2)

**Bashyazi's** "Iggeret Gid ha-Nashh" (Letter on the  
**Other** Sinew Which Shrank, Gen. xxxii. 33),  
**Works.** discussing the question whether the prohibition extends to fowl. This,

too, was directed against Solomon Sharbit ha-Zahab. (3) "Iggeret ha-Yerushah" (Letter on Inheritance). These three works have been published by Firkowicz (Koslov, Eupatoria, 1835) with the second edition of the "Aderet." (4) "Halukat ha-Karaim" (The Schism of the Karaite). (5) "Keli Nehoshet" (Tool of Copper), on the use of the astrolabe and its construction, together with a treatise on astronomy. (6) "Melizat ha-Mizwot" (The Precepts in Verses), imitated from the "Azharot" of Ibn Gabirol. This was published in the Karaite prayer-book, ed. Vienna, ii. 175. Bashyazi wrote also many prayers which were embodied in the Karaite prayer-book (ed. Vienna, iii. 226).

I. Br.

**BASHYAZI, MOSES BEN ELIJAH:** Karaite scholar; great-grandson of Elijah Bashyazi; born at Constantinople in 1537; died in 1555. When but sixteen years of age, he displayed a remarkable degree of learning and a profound knowledge of foreign languages. He undertook for mere love of knowledge a voyage to Palestine and Syria in order to explore these countries and to collect old manuscripts. Though he died at such an early age, he had composed many works, four of which are extant in manuscript (Leyden, St. Petersburg, Paris): (1) "Sefer Yehudah" or "Sefer 'Arayot," on prohibited marriages. In this work he enumerates former authors who had written on the same subject, such as Al-Basir, Jeshua (Furkan) ben Judah Abu al-Faraj Harun, Aaron ben Elijah. (2) "Zebah Pesah" (The Passover Sacrifice), on the celebration of the festival days, in which he quotes many passages from the Arabic originals of Jeshuah ben Judah's commentary upon the Pentateuch, from the commentary of Joseph Kirikan, from Jeshua's other works, and from the "Sefer ha-Mizwot" of Kumisi. (3) "Matteh Elohim" (The Rod of God), which contains a history of the Karaite schism; the chain of

Karaite tradition, which the author claims to have received from Japheth ibn Saghir; interpretation of the Law, and particularly of the precepts which are arranged in numbers according to the Decalogue. (4) "Sefer Reuben" (The Book of Reuben), on dogmas and articles of belief.

I. Br.

**BASILEA, BASILA, BASSOLA, BASOLA, BASLA** (בַּסְלָא, בַּסְלָא, בַּסְלָא, בַּסְלָא, בַּסְלָא): A family originally from Basel in Switzerland (whence the name), but resident in the north of Italy and in Palestine from the fifteenth to the eighteenth century.

In 1489 **Mordecai Zarfati** (the Frenchman) **ben Reuben Bassola** corrected at Soncino the proofs of an edition of the Talmudical treatises *Hullin* and *Niddah*, with scrupulous exactness and knowledge (see Rabinowitz, "Dikduke Soferim"). His son **Moses ben Mordecai Bassola** (1480-1560), celebrated for his cabalistic attainments, was born at Pesaro, and was for a long time head of the Jewish Academy of Ancona. He was rabbi in Ancona when Paul IV. (1555-59) tried to take vengeance on Spain by persecuting the Maranos living in that city. A number of Maranos had fled to the East, and there conceived the idea of boycotting Ancona, and turning the Levantine commerce to Pesaro (Jew. Encyc. i. 572). It was Moses who wrote the letter to the Constantinople Jews, begging them not to carry out their threat, for fear of the reprisals that Paul might take (Grätz, "Gesch. der Juden," ix. 376, 378, 383, 444; x. 142; Kaufmann, in "Revue Etudes Juives," xxxi. 281; Zunz, "Gesammelte Schriften," i. 182). While at Pesaro he encouraged his pupil Emanuel Benevento to print the *Zohar* (Mantua ed. 1558-60), and he published at the head of the "Tikkune Zohar" his official approbation, an eloquent plea in behalf of the Cabala in general and of what claimed to be R. Simeon b. Yoḥai's work in particular. In his old age Moses journeyed to Palestine; his diary of the voyage, which Azariah dei Rossi examined with good results (see the Samaritan alphabet in ch. lvi. of "Imre Binah," part 3 of the "Me'or Enayim"), evidences his scientific inquisitiveness and the clearness of his thought. In Safed, Moses was welcomed with great honor by all the scholars there resident; and Moses Cordovero, it is said, on the authority of Leon de Modena ("Ari No'cm," xxvi.), ostentatiously kissed his hands, much disconcerting the modest old man. Rabbi Menahem Azariah de Fano eulogizes Moses in No. 67 of his responsa, in connection with certain commercial printing-offices in Italy (compare "Toledot Gedole Yisrael," p. 248). He is also quoted by R. Moses de Trani in No. 304 of the first part of his collection, and by Katzenellenbogen of Padua, in No. 13 of his responsa (Conforte, "Kore ha-Dorot," ed. Cassel, 34b, 37a); see also responsa in manuscripts 9 and 228 of the Halberstamm Library ("Kehilat Shelomo," Vienna, 1890). His family established themselves at Safed.

His son **Azriel ben Moses Bassola** gave lessons to the infant prodigy Leon de Modena, who enjoyed likewise, especially between 1582 and 1584,

the instruction of Moses, son of Benjamin della Rocca. The last-named, who was a grandson on his mother's side of the venerable Moses Bassola, whose family name he bore, came from Safed, where he had had as colleague Gedaliah, son of Moses Cordovero. When the latter also came to Italy, he associated him with himself, in pious tribute to the memory of Cordovero in the work "Or Ne'erab" (The Setting Luminary) (1587). In 1588 Moses Bassola received as a gift from the hands of R. Menahem Azariah de Fano, the manuscript of the work "Tomer Deborah" (The Palm-Tree of Deborah), which he also edited. His facility in writing is shown by the brief prefaces in prose and in verse, as well as by a homily preserved in the Italian manuscript of the Michael collection (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2192). He died soon after at an early age in the island of Cyprus, sincerely lamented by his pupil Leon of Modena (then thirteen years old), in the following elegy, which can be read both in Hebrew and in Italian:

קינה שמור. או. מה נפס אוצר בו.  
"Chi nasce muor ohmè che pass' acerbo.  
כל טוב עילום נוס. אור דין אל צלו:  
Colto vien l'uom così ordin' il cielo.  
משה מורי. משה יקר. דבר בו.  
Mose mori Mose già car de verbo.  
שם חושיה און. יום כפור הוא זה לו:  
Santo sia ogn' uom, con puro zelo.  
כלה מיטב ימי. שן צדי. אשר בו.  
Ch'alla meta, giammai senza riserbo.  
יחריב אום. מית רע. אין כאן ירפה לו.  
Arriv' uom ma vedran in cangiar pelo.  
ספינה בים קל. צל קובר ימנו.  
Se fin abbian, ch'al cielo vero o'meno  
היום יובא שבי ושי שמנו  
Ah l'uom va, se viva assai se meno."

This "kinah" was first published (the Italian in Hebrew characters) in Leon's "Midbar Yehudah," Venice, 1602; then in his "Pi Aryeh," Venice, 1640. It has since been often republished, notably by Bartolucci in "Bibliotheca Rabbinica," iii. 34; by Wagenseil in "Sotah," 50; in "The Occident," xiv., Philadelphia, 1856; and by N. S. Lebowitz, in "Leon Modena," 2d ed., 1901, p. 7. Compare Steinschneider, "Cat. Bodl." col. 1353; *idem*, in "Monatsschrift," xliii. 313, 315; Michael, "Or ha-Hayyim," No. 963; Grätz, "Gesch. der Juden," x. 142.

Another **Moses Basilea** or **Bassola** edited the "Or Ne'erab," Venice, 1587; and the "Tamar Deborah" of Moses Cordovero, Venice, 1589.

G.

A century later Rabbi **Ezekias de Basla** (דבאלא) was sent to Carpentras as representative of the city of Safed, which was in distress at that time (see Lunz, *ירושלים*, iii. 108).

Mordecai ben Reuben designates himself in all his letters as belonging to the junior branch of the family. Contemporary with him was Azriel, who was related to Rabbi Joseph Colon (see Mortara, "Indice Alfabetico"), and who died in 1480. Among his posterity (the Trabotti) the name "Azriel" recurs frequently; there is one of that name also in the above-cited branch of the Bassola family. The celebrated Rabbi Jehiel, son of Azriel Trabot(to), mentions in the sixteenth century a certain **Abraham ben Abraham Basola** living in Cremona. Possibly the Azriel b. Abraham Zarfati in Solmona (Abruzzi) in 1585 (Mortara, "Indice Alfabetico," p.

70) is to be mentioned in this connection. In 1652 **Moses Simon**, son of **Shabbethai Basilea**, had charge of an edition of "Tikkun 'Olam" (System of the Universe), a commentary on Isaiah, edited by Ortona and published at the press of Fr. Rossi at Verona.

Quite a long line of rabbis and writers is connected with **Samson Basola** of the sixteenth century, whose son Solomon, rabbi at Mantua in 1570, was drawn into the controversy which raged in 1572 concerning the levirate marriage. His opinion, which is based essentially upon the Zohar, is incorporated in the "Paḥad Yizḥak" (letter n, p. 24). One of his descendants, **Menahem Samson ben Solomon Basila** of Mantua, was rabbi at Alessandria in Italy, and chief rabbi at Mantua in 1670, where he died in 1693. The center of a constellation of noted men, he was an intimate friend of R. Moses Zacuto, and was eulogized by his favorite pupil, Benjamin Cohen de Reggio, in his book, "Gebul Binyamin." He turned his attention to the calendar; and one for the years 5431-32 (1671-72), which he published at Venice, has been preserved, as has also a manuscript letter in Italian of great interest, in which astronomy is still called astrology, and which reveals very clearly the ingenious artifices to which recourse was had in 1675 for the purpose of harmonizing the differences of opinion concerning the true time of the moon's phases. His decisions are scattered through the best collections of the period (Nepi, 225); one of them, addressed to a grandson of R. Joshua Boaz of the Baruch family, author of the "Shilṭe ha-Gibborim," forbids the use of brandy distilled in retorts as being forbidden (NESEK); it is printed at the end of the large work written by his son, **Solomon Abi'ad Sar Shalom**, whom he instructed in religion and Cabala.

This son, who in his name bears testimony to the Messianic hopes of his kinsman, was reared under the eyes of Moses Zacuto, of Vital Norzi, of the Segrès; his chief teacher was Judah Bréal; and his fellow-student was Isaac Lampronti, the author of "Paḥad Yizḥak." At the age of ten he commenced the study of the various sciences, and plunged with avidity into the theosophy of Moses Cordovero. He attempted poetry, and edited, with a commentary, the mystic poem of Moses Zacuto, "Aruk Tofteh" (alluding to Is. xxx. 33), (Venice, 1715, 1744; Metz, 1777). That he acquired a profound knowledge of the Talmud and of the casuists is shown by his correspondence with Judah Bréal, Gabriel Pontremoli, and Abraham Segrè ("Bibliotheca Friedlandiana," No. 727); and his decisions are incorporated in No. 59 of the Halberstamm collection, in the "Paḥad Yizḥak" by his fellow-student Lampronti, in the responsa of Jabez (R. Jacob Emden), and elsewhere.

Solomon enjoyed a deserved reputation for geometrical knowledge; he edited Euclid's "Elements" for the use of Abraham Segrè (Günzburg Collection, No. 215); and was also versed in astronomy. He exchanged letters in Italian with Samson Bachi the younger, of Casale, an uncle of R. Isaac Raphael Finzi (Nepi, 321), upon the principles of the calendar, between 1694 and 1701, and wrote a preface for his treatise entitled "Nayer ha-Yamim" (A Paper on the Years) (Günzburg Collection, Nos. 312, 579);

II.—37

in 1727 he commenced to publish "Lual" or Pocket Daily Calendar: it appeared at Mantua in 32mo, and included the dates of the Christian festivals.

At the age of forty-four, in company with Samuel Norzi, Solomon initiated himself into the intricacies of the cabalistic system of Isaac Luria, which to-day takes precedence of all others. He carefully prepared a very remarkable work, in which he reproached all philosophers and exegetes who had not taken part in the mystical movement, and adduced specious arguments for the authenticity of the Zohar. His work, even before it appeared in print, aroused a most heated opposition. Gad dell'Aquila implored the author most earnestly not to insult the memory of Abraham ibn Ezra by the publication of his book (Günzburg Collection, No. 179). He took some time to revise it, rather to amplify, however, than to moderate its expressions; and it appeared in 1730 under the title of "Emunat Ḥakamim" (The Faith of the Wise). The work is a veritable mine of knowledge; the whole of Hebrew literature is passed in review; and there are quotations from Pythagoras, Plato, Aristotle, Alexander of Aphrodisias, Averroes, Avicenna, Copernicus, Fr. Piccolomini, I. Cotugno ("De Triplici Statu Animi"), and others. Jacob Emden attempted to refute the book in his "Miṭpaḥat Sefarim."

Abi'ad naturally took the part of M. H. Luzzatto when the latter was persecuted: it was probably owing to this that a search-warrant was issued against him on the ground that he possessed forbidden books in his library. Being convicted of owning non-expurgated works, he was thrown into prison in June, 1733; May 28, 1734, he was reported sick at his house, and on June 23, 1738, was sentenced to three years' domiciliary arrest, which penalty was commuted June 18, 1739, by the curia of Rome into confinement within the ghetto-walls (Mortara, in "Hebräische Bibliographie," 1862, p. 100). In 1742 he affixed his approbation to Solomon Norzi's work "Minḥat Shay," having examined an incomplete manuscript of the same (Letter 36 of the epistolary collection in the Friedländ library); but he died on the last day of Tabernacles, 1743, without having witnessed its completion.

His brother **Abraham Jedidiah** is especially known for having superintended, under the auspices of David Finzi and Judah Bréal, an edition of the Shulḥan 'Aruk (Mantua, 1723), which contained a short commentary by Gur Aryeh ha-Levi, one of his father's friends. He was assisted in the work by Gur Aryeh Finzi. The edition was published at the expense of the physician Raphael Vital of Italy. Finally, a son of Abi'ad, by name **Raphael Vital**, deserves mention for having superintended and revised, while still very young, an edition of the "Minḥat Shay," that monumental production of the Italian Masorah, printed at the press of the same Raphael Vital, and at the latter's expense. Jellinek accuses him (Introduction to Norzi's writings, Vienna, 1876) of having taken liberties with his author; but before passing judgment it would be necessary to know if the Mantua manuscript which was communicated to Jellinek was in reality that which belonged to Abi'ad, and whether, moreover, the unexpected death of the latter did not necessitate an

abridgment of the work. Respect for the author is shown by the fact that he entitled his work "Minhat Shay."

**BASILISK**: The translation in the Revised Version of the Hebrew "zefa'" and "zif'oni" (Isa. xi. 8, xiv. 29, lix. 5; Jer. viii. 17; Prov. xxiii. 32), for which the Authorized Version has "cockatrice." The Septuagint uses the word *βασίλισκος* in Isa. lix. 5 for "ef'eh," and in Ps. xci. 13 for "peten." In all these places some variety of serpent is evidently meant, but the ancient versions do not indicate which. The rendering "basilisk"—so also Jerome and the Syriac Version—is correct in so far as that the Hebrew word likewise appears to designate some fabulous creature, though it is not known which was the particular kind of serpent that suggested the fanciful notions of the ancients. According to some, the Hebrew "zefa'" is the same species as "shefifon" (Gen. xlix. 17), the horned adder or cerastes, a very poisonous viper found in Arabia, in the Sinaitic peninsula.

**BASIN, or BASON**: The following Hebrew words are rendered "basin" in English: "ag-gan," "kefor," "mizraḳ," and "saf." Of these "ag-gan" and "kefor" are rare, the former occurring in Ex. xxiv. 6 as the name of the vessel in which the blood of the sacrifice was put, before the people were sprinkled with it; the latter, in I Chron. xxviii. 17; Ezra i. 10, xxviii. 27 (A. V. "bason"; R. V. "bowl").

The common Biblical word for Basin is "mizraḳ." Three metals are mentioned in the Bible in connection with the basins, copper or brass, silver, and gold. Brass basins were used as sprinkling-bowls in sacrificing (Ex. xxvii. 3, xxxviii. 3; I Kings vii. 40, 45). Basins of silver were offered with the meal-offering to the tabernacle by the "princes" of the congregation (Num. vii. 11, 13, 19, 25 *et seq.*). Solomon made basins of gold for the Temple (I Kings vii. 50), and those of gold and of silver were taken by Nebuzaradan when he plundered Jerusalem (II Kings xxv. 15; Jer. lii. 18, 19). In Zech. ix. 15 sacred vessels of this kind are spoken of in a way that indicates that they were used for wine; and in Amos vi. 6 the "mizraḳ" is mentioned as a drinking-bowl. Fifty basins were among the gift of treasure to the Second Temple (Neh. vii. 70). "Mizraḳ" is translated in both A. V. and R. V. sometimes as "bason" and sometimes as "bowl."

"Saf" (A. V. "bason"; R. V. generally "cup," but twice "bason") seems to have corresponded in a great measure to "mizraḳ." It is mentioned (Ex. xii. 22) as being used for holding the blood of victims in connection with the Passover sacrifice before the Exodus, and as a utensil for the Temple (II Kings xii. 14 [A. V.]; I Kings vii. 50; Jer. lii. 19). "Saf" is also used as a general term for Basin or bowl (II Sam. xvii. 28; Zech. xii. 2).

**BASKET-TAX**: The most burdensome and annoying of the special taxes imposed upon the Jews of Russia by the government. The edict concerning this medieval tax—one of the legacies inherited by the Russian government from the Catholic monasteries—was issued Dec. 31, 1844. The tax is divided into a general tax and an auxiliary one. The general tax is raised from the kosher meat used by the Jews, which is, therefore, little accessible to the Jewish masses; and the tax has consequently been inimical to the physical development of the Russian Jews. This tax is levied (1) on every head of cattle killed for kosher meat; (2) on every fowl killed for the same purpose; and (3) on every pound of meat sold in the market.

The auxiliary tax is derived from various trade licenses, and, as a kind of probate duty, from money inherited by Jews. To the Basket-Tax also belongs the tax on old-fashioned wearing apparel, such as the old Polish caftan, the skull-cap, and women's head-gear and perukes.

The Basket-Tax, because of its being leased by the government to the highest bidder, has always been a source of annoyance and corruption; and, notwithstanding the appointment of special commissions, and numerous protests published against it, it still exists, and exerts a demoralizing effect upon the Jews of the Russian empire. The income from this tax has been in part devoted to the maintenance of Jewish schools. It was formerly used also to pay for the transportation of Jewish agriculturists to the colonies, and for various other communal needs.

No complete statistics of the amount paid for the Basket-Tax by the tax-farmers are yet available; but the following figures may convey a general idea: Poltava (1889), 13,000 rubles; Nikolaiev (1895), 32,000 rubles; Kiev (1875), 40,000 rubles.

**BASKETS**: Four kinds of Baskets are mentioned in the Old Testament—"dud," "tene," "sal," and "kelub"—but unfortunately without any intima-

Egyptian Baskets.  
(From Wilkinson, "Ancient Egyptians.")

tion whatever of the differences of shape or size between them; and even as to their uses only uncertain conclusions can be drawn. "Dud" ("pot," A. V.)

is the carrying basket, borne in the hands (Ps. lxxxi. 7 [A. V. 6]; II Kings x. 7; Jer. xxiv. 2). It is used in Ps. lxxxi. 6 as a symbol of Egyptian bondage, connoting the basket in which the Israelites carried the clay for their bricks. This must therefore have been a large shallow basket such as the ancient Egyptians used for the purpose (Wilkinson, "Ancient Egyptians," i. 379). The term "dud" is applied also to the pot in which meat was boiled (I Sam. ii. 14), showing that not only the flat-formed basket but also a pot-shaped one was known by this name. "Dud" may possibly be a general expression for vessels of various kinds. "Sal" is the term for the basket in which the Egyptian court baker had his confectionery, and which he carried on his head (Gen. xl. 16). It is also the usual term for the basket in which was placed the meat of the offering (Judges vi. 19), and likewise the unleavened

a bird-cage. It was therefore no doubt a coarsely woven basket with a cover, such as a fowler would use to carry home his captives. The word *κοφινος* used in the New Testament (Matt. xiv. 20 and elsewhere) seems to have meant a specifically Jewish utensil (compare Juvenal, iii. 14, "Quorum cophinus fenumque suppellex," and Talmudic כַּפִּיפָה קופפה: Jastrow, "Dict." s.v.). In "Corpus Inscriptionum Græcarum," 1625, 46, the word denotes a Bæotian measure of about two gallons, from which fact a conclusion may perhaps be drawn as to the size of the basket.

I. BE.

**BASMATH**, daughter of King Solomon. See **BASHEMATH**.

**BASNAGE, JACOB CHRISTIAN** (called also **Basnage de Beauval**): Protestant pastor;

BASKETS USED IN MODERN PALESTINE.  
(From the Merrill Collection, Semitic Museum, Harvard University.)

bread (Ex. xxix. 3; Lev. viii. 2; Num. vi. 15). It is expressly stated that these unleavened cakes must be placed in such a basket and offered therein. "Sal" refers without doubt, therefore, to a small dish-shaped basket, perhaps of finer texture. Different from this was certainly the "tene," the large deep basket in which grain and other field-products were kept (Deut. xxviii. 5, 17), and the tithes transported to the sanctuary (Deut. xxvi. 2). Possibly this form of basket resembled that used by the Palestinian peasantry to-day for keeping wheat or oats; it is made of clay and straw and called "habya." This has somewhat the shape of a jar; at the top is the mouth into which grain is poured, and at the bottom a small orifice through which small quantities are taken out as wanted and the opening closed with a rag. The term *κατάλλος*, with which the Septuagint translates "tene," denotes a basket of the shape of an inverted cone. The term "kelub," finally, found in Amos viii. 1 for a fruit-basket, is used in Jer. v. 27 ("cage," A. V. and R. V.) for

born at Rouen, France, Aug. 8, 1653; died in Holland Dec. 22, 1725. At the age of twenty-three he took charge of the Protestant Church of Rouen, succeeding Etienne Le Moine, who had been called to Leyden as professor of theology. After the revocation of the Edict of Nantes, and the consequent suppression of the Reformed Church in his native city, Basnage was called in 1686 to the pastorate of the Walloon Church at Rotterdam; and in 1691, at the instance of his friend Heinsius, grand pensionary of Holland, he was chosen pastor of the Temple of The Hague.

Though Basnage acquired a reputation as a skilful diplomat (see analysis of his letters of 1713 by

M. Levesque, in "Les Mémoires de l'Académie des Sciences et Lettres de Rouen," 1859, pp. 269 *et seq.*), his interest for the present article consists

in the fact that, like his friend Fontenelle, he employed his leisure hours in writing on theology and on the history of religion. His works

on these subjects are enumerated as twenty-five in "La France Protestante" by Haag (Paris, 1846-58; 2d ed., 1877, vol. i., s.v.). Chief among them is "L'Histoire et la Religion des Juifs Depuis Jésus Christ Jusqu'à Présent," intended as a supplement and continuation to Josephus (Rotterdam, 1706-11).

This work is in five books, forming seven volumes, the sixth of which has the following title: "L'Histoire des Juifs Réclamée et Rétablie par Son Vérable Auteur, M. Basnage, Contre l'Édition Anonyme et Tronquée Qui s'en

**His** "History of Est Faite à Paris, chez Roulland, 1710; **the Jews.**" avec Plusieurs Additions pour Servir de Tome VI. à Cette Histoire." The mutilated edition mentioned in this remarkable title was by Du Pin. A long preface to the sixth volume,

Jacob Christian Basnage.  
(From Basnage's French translation of Josephus.)

in twenty-eight paragraphs, contains remarks on the criticisms passed upon Basnage's "History of the Jews" in the "Journal des Savants" of the time. Very justly Basnage protests against the accusation that he had "rejected the testimony of a contemporary author who states facts," whereas he had examined and discussed it ("Histoire des Juifs," 1st ed., book vi., ch. xiv. 1265), as he had done, for instance, in reference to the decree of Arcadius compelling the Jews to abide by the Roman laws (II Codex Theodosianus, i. 87).

This pirated edition testifies to the success of the book, which on its appearance was translated into English by Taylor, London, 1706, and later condensed into two volumes by Crull, London, 1708. In the same year was published "Remarks upon Mr. Basnage's History of the Jews," London, 1708.

A second and enlarged edition was brought out some years later (The Hague, 1716-26; 7 books in 15 volumes), revised in accordance with the criticisms made upon the first edition, and enriched by the author's new researches. The changes are apparent even in the first book, to which was added the genealogy of the Hasmoneans and of the Herodians in three parallel columns, the first of which is according to the first edition of the "De Numeris Herodidum" by P. Hardouin, disproved by Basnage; the second is the same changed by P. Hardouin in his reply to Basnage; the third is according to the system of Josephus, followed by Basnage.

Voltaire, in his "Siècle de Louis XIV.," 1830, xix. 55, in placing Basnage among the French writers of that period, says: "Among the most valuable of his books is his 'History of the Jews.' Books on current events are forgotten with the events; books of general usefulness survive." This history is in fact the most important of Basnage's works, in quality as well as in bulk. At the beginning of the work he calls it "a survey of all that pertains to the religion and the history of the Jews since Herod the Great." And he goes on to say: "I have followed this nation into every corner of the world where it has sought refuge, and have brought to Light the Ten Tribes that seemed buried in the East. I have studied the schisms, the sects, the dogmas, and the ceremonials found in that religion."

The contents of the seven books of the history are as follows:

Book i.: The condition and the government of Judea under the Herodians.

Book ii.: The history of the sects at the time of Jesus and the destruction of Jerusalem; the origin, dogmas, progress, and present condition of the Samaritans, the Sadducees, the Pharisees, the Essenes, and the Herodians.

Book iii.: The history of the patriarchs who ruled in Judea, the princes of the Babylonian captivity, and the successive generations of important rabbis since the destruction of Jerusalem; the character and works of the Talmudists, Amoraim, Pyrrhonists or Skeptics (perhaps he meant the Epicureans), "Excellents" or Geonim, Masoretes, and Cabalists, together with a description of the Cabala and of its famous teachers.

Book iv.: The Jewish dogmas and confession of faith, and the history of the Jewish religion from the destruction of the Temple.

Book v.: Jewish rites and ceremonies.

Book vi.: The dispersion of all the tribes in the Orient and the Occident, up to the eighth century.

Book vii.: The history of the dispersion from the eighth century to the eighteenth century.

Of these chapters, Richard Simon (according to Haag, "La France Protestante") praises especially those on the Karaites, the Masorites, and the Samaritans. It is a matter of regret that the portions relating to modern times are not more complete. Basnage apparently did not know that in his day there were already many European Jews in America, occasionally banded together in religious communities;

nor was he aware of the fact that Spanish Jews had accompanied Columbus to the New World; while he assumed, following Manasseh b. Israel (see the account of Aaron Levi, or Antonio de Montezinos, at the end of "L'Esperança d'Israel"), that the remnants of the Ten Tribes, after living in Tataria, had in the dim past crossed the Pacific to America. This defect is perhaps due to the motives which governed Basnage in his choice of sources. At the end of his preface Basnage says:

"In writing this history, we have given preference to the writers of the Jewish nation, so long as reason and the love of truth have not constrained us to discard them. The dogmas and the religion we have gathered from the writings of Maimonides, Abraham ibn Ezra, Abravanel, Manasseh b. Israel, and the chief Cabalists. The Mishnah and its commentators have furnished us with the rites and ceremonies. It has been more difficult to deduce the history, since the authors of chronicles, both short and long, Abraham b. Dfor, Gedaliah ibn Yahya, David Gans, and Solomon ibn Verga, dwell upon the names of the elders of tradition rather than on general and particular events. If Manasseh and Barrios ('Historia Universal Judaica,' Amsterdam, 1683) had fulfilled their promise to write this history, we should have found it most helpful. As they were not able to carry out their plans, we had to be satisfied with what we could find."

After this general résumé, Basnage gives a list of the authors he has cited, of which the following is a summary arranged according to subject-matter:

On Bible exegesis (of which, if he read English, he must have had first-hand knowledge): Henry Ainsworth, "Annotations upon the Five

**His** Books of Moses," London, 1639; John **Sources.** Edwards, "A Discourse Concerning the Authority, Style, and Perfection of the Books of the Old and New Testament," London, 1693; P. Alix, "The Judgment of the Ancient Jewish Church Against the Unitarians," London, 1699; Humphrey Hody, "Contra Historiam Aristee de LXX" (Oxford, 1685); *idem*, "De Bibliorum Textibus Originalibus Versionibus," etc., Oxford, 1705, in addition to the works of Everard van der Hoogt, Johann Heinrich Hottinger, and others. Here may be added the works on Hebrew philology cited by Basnage: Cappel, "Arcanum Punctuationis Revelatum"; Drusius, "Quæstiones Hebraicæ"; Fagius, "Targum Hierosolymitanum"; Gousset, "Commentarii Linguae Hebraicæ." The Hebrew writers, however, Basnage had to read in Latin versions, so far as they had been translated; and here again he made reservations in regard to dogmas contradictory to Christianity. Thus, in citing the commentary on Isaiah by "R. Moses Al-shik" he adduces for a corrective, as it were, C. L'Empereur (Leyden, 1631); and in order to provide a refutation of Abravanel, of whom he knew only his commentaries on Isaiah and Obadiah, he adduces C. L'Empereur against the former commentary (Leyden, 1613) and Sebal di Snell (Nuremberg, 1647) against the latter. Moreover, for historic purposes he did not make use of the prefaces written by the exegete Snell to the commentaries on other books. Of Abraham ibn Ezra he knew only three short treatises, extracted by Buxtorf from his large Bible commentary, and appended to the version of the "Cuzari," Basel, 1660.

Whatever knowledge of the Talmud he could under these circumstances possess, he derived from the Latin version of the Mishnah by Surenhuys, with the commentaries of Maimonides and Obadiah de

Bertinoro, Amsterdam, 1700; from a translation of the Pirke Abot; and from the Latin version of the two Talmudic treatises Sanhedrin and Makkot, by John Coch or Coccejus (Amsterdam, 1629). He had some knowledge even of the two Midrashim, one on the Book of Esther, the other on Lamentations; and he was well acquainted with all the works of Maimonides that had been translated into Latin, with the exception of "Yad ha-Hazakah."

Basnage's conception of Jewish theology and his interpretation of the religious controversies bear the marks of the same lack of direct knowledge. In this connection he cites Carpzov, "Introductio ad Theologiam Judaicam" (Amsterdam); Carret, "Judæus Convertus" (appended to the "Synagoga Judaica" of Buxtorf); "Colloquium Judæo-Christianum"; Fethius, "Ecclesia Judaica," Strasburg, 1670; St. Augustine, "Altercatio Synagogæ et Ecclesiæ" (ed. Benedictine, viii., Antwerp, 1700); and Wagenseil, "Tela Ignea Satanae." To these may be added, as a doubtful source, P. Alix, "De Adventu Messiae, Dissertationes Duæ Adversus Judæos," London, 1701. Through such reading the most impartial mind must become biased.

For purely historical material, Basnage consulted, in addition to the authors named in his preface, the writings of the bishop of Lyons, Agobard, Arias Montanus, Miguel de Barrios, Isaac Cardoso, "Las Excellencias de los Hebreos" (Amsterdam, 1683); Cunæus, "De Republica Hebræorum"; Frischmuth, "De Gloria Templi Secundi"; the works of Manasseh b. Israel, collections of the reports of councils, and the Roman codes, as well as others. For chronology, he cites, among others, Henry **Historical** Dodwell, "De Veteribus Græcorum **and Geo-** Romanorumque Cyclis, Obiterque de **graphical** Judæorum Cyclo Ætate Christi," Oxford, 1701; P. Hardouin, "De Paschate," Paris, 1691, and Selden. As a **Sources.** historian he was therefore a popularizer.

For geography, Basnage carefully read: Adrichom, "Descriptio Terræ Sanctæ," Cologne, 1682; "The Travels of Benjamin of Tudela," translated with notes by Constantin L'Empereur (Leyden); William Baldensel, "Odeporicon ad Terram Sanctam," in the "Lectiones Antiquæ" of Canisius, v.; Bochart, "Phaleg" (Caen), and "Hierozoicon" (London). When he refers to the book of Eldad ha-Dani in only its Hebrew form, he confesses thereby his ignorance of its contents. In the same way he shows lack of knowledge with regard to Pethahiah of Regensburg, and Abraham Farissol he misnames "Peritsul."

Basnage profitably used the five volumes of the "Bibliotheca Rabbinica" of Bartolucci, Rome, 1675, together with all the works of the two Buxtorfs. He also studied the Karaite sect in the extract from the Bible commentary of the Karaitic Jew, Aaron b. Joseph, translated and annotated by Louis Frey of Basel, Amsterdam, 1705, and in Simonville's "Supplement to Leou of Modena"; and information concerning the Samaritans he obtained from Christoph Cellarius, "Collectanea Historiæ Samaritanæ" (Cizæ [Zeit], 1688). He also could get a fair picture of Jewish rites and usages from the book of Rabbi Isaac Arias, "Tesoro de Preceptos Adonde se Encierran las Joyas de los 613 Preceptos que

Encomendos el Señor a su Pueblo con su Declaracion. Razon y Dinim Conforme a la Verdadera Tradicion," Amsterdam, 5449 (1689).

Jewish philosophy Basnage knew only at second hand, through Buddeus' "Specimen," Halle, 1702. He was acquainted also with the works of Maimonides and his followers; but of Moses Nahmanides, or of Hizzuk Emunah, he had at his command only the extracts given by Wagenseil in his "Tela Ignea." To judge from his knowledge of the mysticism of the Zohar, he must have read the analysis and the fragments found in Knorr von Rosenroth's "Cabbala Denudata," in four large volumes, containing a number of dissertations, including the "Sha'ar ha-Shamayyim" in Reading. of Abraham Cohen Herrera (whom Basnage calls Irira). The "Sefer Yezirah," which he used in the translated and annotated form by Rittangel, Amsterdam, 1642, like all his forerunners, he ascribed unhesitatingly to the patriarch Abraham; and, probably, had he known the "Sefer Raziel," he would have ascribed it to Adam. This one deficiency in his wide reading and deep study need not prevent due acknowledgment of the depth of his researches.

Basnage's other books also cover the field of his Jewish studies. Before publishing his large history, he issued a "Histoire du Vieux et du Nouveau Testament, Représentée par des Figures Gravées en Taille-Douce par Romain de Hooge, avec des Explications dans Lesquelles on Éclaircit Plusieurs Passages Obscurs," etc., Amsterdam, 1704. Under each one of these figures are verses by La Brune. The nine editions of this book prove its success. It was even pirated under the title "Grand Tableau de l'Univers." Basnage's part in the work, however, is confined to short explanatory notes on the pictures. In later editions he added annals of the Church and of the world, from the Creation to the death of the apostles, and a "Géographie Sacrée."

Later he published the "Antiquités Judaïques, ou Remarques Critiques sur la République des Hébreux," Amsterdam, 1713. Although this is hardly more than a sequel to G. Goerrée's translation and continuation of Cunaëus' "De Republica Hebræorum" (three volumes), it yet reveals Basnage's personality and independence. He does not believe, for instance, that Moses was the first of the world's lawgivers, nor that men like Lycurgus, Solon, and Pythagoras borrowed from the Bible whatever was excellent in their laws.

Not confining himself to political history, he touches upon theology; he discusses the ideas of the Jews on demonology and divine inspiration; and examining the opinions of the fathers of the Church on the pagan oracles, the Sibylline Books, and other fictitious works, he does not hesitate to accuse them either of ignorance or of unfairness.

Voltaire, in "La Bible Enfin Expliquée par Plusieurs Aumôniers" ("Mélanges," xlix., ed. Beuchot, p. 366), in speaking of a captive priest of Samaria, who had returned and taught his countrymen how to worship God, adds in a note:

"Basnage in his 'Jewish Antiquities' says that some scholars take this to be the Hebrew priest, sent to the new inhabitants of Samaria, who wrote the Pentateuch. They base their opinion

on the fact that the Pentateuch speaks of the origin of Babylon and of other Mesopotamian cities which Moses could not have known; that neither the ancient nor the later Samaritans would receive the Pentateuch from the Hebrews of the kingdom of Judah, their bitterest enemies; that the Samaritan Pentateuch was written in Hebrew, the language of this priest, who would not have had time to learn Chaldee; and finally they point out the essential differences between the Samaritan and our Pentateuch. It is not known who these scholars are; Basnage does not name them."

Le Vier, the editor of one of Basnage's posthumous works, pays the following tribute to his character in the preface to the second volume of the "Annales des Provinces-Unies": "In his works his candor, frankness, and sincerity are no less evident than his great scholarship and sound reasoning."

**BASON.** See BASIN.

**BASQUE PROVINCES:** A district of Spain, including Guipuzcoa, Biscay, and Alava, extending along both sides of the Pyrenees, where the Basques or Vasconians lived. Under an old fuero, or ordinance, Jews were never allowed in Guipuzcoa and Biscay. A Jew visiting Guipuzcoa for business purposes was not permitted to stop at one place longer than three days, and in the whole province not longer than fourteen days at the utmost. At Vitoria, the capital of the province of Alava, Jews lived from the twelfth century, but after 1203 in a special street, the "Calle Nueva," or

**In the Thirteenth Century.** "New Street." They grew to a considerable community, which was under Castilian rule, and which in 1290 paid a tax amounting altogether to 11,392 maravedis. The Jews of Vitoria were chiefly money-brokers. In 1332 Alfonso XI. of Castile issued a decree forbidding Jews to take promissory notes from the Christians of Vitoria. During his stay in the city it is said that Vincente Ferrer converted four of the leading families to Christianity.

The enactments against the Jews of Vitoria during the ten years immediately preceding the expulsion were devised to bring about their complete separation from the Christian inhabitants. According to the decree of Aug. 21, 1482, no Jew or Jewess was permitted, under heavy penalty, to enter the Franciscan monastery until after mass. On May 28 and July 24 of the same year a decree had been issued to the effect that no Christian woman, or Christian girl under ten years of age, might enter the

**In the Fifteenth Century.** ghetto by day or night unless accompanied by a man, on pain of being fined or imprisoned; nor should a Christian woman, either alone or accompanied by a man, light a fire—either on the

Sabbath, or on any other day—in the house of a Jew, or cook for him. Against this decree, which hindered the Jews in their religious observances, David Chacon appealed at once in the name of the community. The assembly of representatives forbade the Jews (June 16, 1486) "to bake their bread in the ovens of the Christians, to keep their shops open on Christian holidays, and to work in public on Sundays and festivals." Christians were forbidden to sell vegetables or fruit or any food whatever in the ghetto, to take service with Jews, or to live

with them. In 1484 Christians were also forbidden, on penalty of being fined 2,000 maravedis, to allow the Jews to read the decrees of the ecclesiastical authorities, or to permit them to act as lawyers in lawsuits.

Among the richest and most eminent Jews of Vitoria were various members of the Chacon family (Gacon, Gaon), Eleasar Tello, and Moses Balid.

The general edict of banishment from Spain naturally affected the Jews of Vitoria. On June 27, 1492, the above-mentioned Moses Balid, Ismael Moratan (the president of the community), Samuel Benjamin Chacon, his relations Abiatar and Jacob Tello, and Samuel de Mijaneas came before the councilors of Vitoria, and presented to the city, in the name of the Jewish community and in recognition of the friendly treatment received from

**After the** the city, their cemetery, "Judemendi"  
**Edict** (Jews' hill), adjoining the ghetto, to-  
**of 1492.** gether with all its belongings, on con-  
dition that no plow should ever furrow

it. The town council accepted the gift, and the condition has been faithfully observed ever since.

Before the end of July, 1492, the Jews left Vitoria; many went into the neighboring province of Navarre; others, such as members of the family Chacon, took passage for the Orient; while a few only renounced their faith. A very clever Jew of Vitoria, **Zentolla** by name, was baptized by Bernaldez, the priest of Los Palacios, and named by him **Tristan Bogado**. By the end of 1492 there were no Jews in Vitoria. The synagogue became the property of the town and was converted into a classical school. The Jews' street was called "Calle de la Puente del Rey" (Kingsbridge street); but later on it again received its old name, "Calle Nueva." On Aug. 20, 1493, the Maranos were ordered to leave this street and to live among the old Christians, in order that they might not continue their Jewish practises. The inhabitants of Guipuzcoa did not suffer any Jews to live among them.

In some places in the Basque Provinces French Jews have recently settled.

**BASRA.** See BASSORA.

**BASS** (called **Bassista** by Christians; in Hebrew, **Meshorer**), **SHABBETHAI B. JOSEPH**: Founder of Jewish bibliography; born at Kalisz 1641; died July 21, 1718, at Krotoschin. After the death of his parents, who were victims of the persecutions at Kalisz in 1655, Bass went to Prague. His teacher there in the Talmud was Meir Wärters (died 1693); and Loeb Shir ha-Shirim instructed him in singing. He was appointed bass singer in the celebrated Altneuschule of Prague, being called, from his position, "Bass," or "Bassista," or "Meshorer." His leisure time he devoted to literary pursuits, more especially to improving the instruction of the young.

Between 1674 and 1679 Bass traveled through Poland, Germany, and Holland, stopping in such cities as Glogau, Kalisz, Krotoschin, Lissa, Posen, Worms, and Amsterdam, the centers of Jewish scholarship. He finally settled at Amsterdam in 1679, where he entered into friendly and scholarly relations with the eminent men of the German and the Portuguese-Spanish communities. That city was the center of Jewish printing and publishing, and Bass, becoming thoroughly familiar with the business, resolved to devote himself entirely to issuing Jewish books. With a keen eye for the practical, he perceived that the eastern part of Germany was

a suitable place for a Jewish printing-establishment. The literary produc-  
**As** tivity of the Lithuanian-Polish Jews  
**Printer.** was at this time obliged to seek an

outlet in Amsterdam or Prague almost exclusively; Bass accordingly fixed upon Breslau as a suitable place for his purposes, on account of its vicinity to the Polish frontier, and of the large commerce carried on between Breslau and Poland. Hence, after a residence of five years, he left Amsterdam; going first, it seems, to Vienna, in order to obtain a license from the imperial government. The negotiations between Bass and the magistrates of Breslau occupied nearly four years, and not until 1687 or 1688 did he receive permission to set up a Hebrew printing-press. Thereupon he settled at

**At Dyhern-** Dyhernfurth, a small town near Bres-  
**furth.** lau founded shortly before (1663),

whose owner, Herr von Glaubitz, glad to have a large establishment on his estate, was very well disposed toward Bass. In order the more easily to obtain Jewish workmen, Bass united into a congregation the small band of printers, typesetters, and workmen who had followed him to Dyhernfurth, for whose needs he cared, acquiring as early as 1689 a place for a cemetery.

The first book from Bass's press appeared in the middle of August, 1689, the first customer being, as he had anticipated, a Polish scholar, Samuel b. Uri of Waydyslav, whose commentary "Bet Shemuel" on Caro's Shulhan 'Aruk, Eben ha-'Ezer, was printed at Dyhernfurth. The books that followed during the next year were either works of Polish scholars or liturgical collections intended for the use of Polish Jews. Being issued in a correct, neat, and pleasing form, they easily found buyers, especially at the fairs of Breslau, where Bass himself sold his books. But the ill-will against Jews, apparent since 1697 in Silesia, and especially at Breslau, greatly injured Bass's establishment; he was himself forbidden to stay in Breslau (July 20, 1706). Another stroke of misfortune was the partial destruction of his establishment by fire in 1708. To this were added domestic difficulties. When an old man he had married a second time, to the great dissatisfaction of his family and neighbors, his wife being a young girl. He finally transferred his business to his only son, Joseph, in 1711. His trials culminated in his sudden arrest, April 13, 1712, on the charge of having spread abroad incendiary speeches against all divine and civic government. The Jesuits, who looked with an evil eye upon Bass's undertaking, had endeavored, in a letter to the magistrate of

Breslau, as early as July 15, 1694, to have the sale of Hebrew books interdicted, on the ground that such works contained "blasphemous and irreligious words"; and they had succeeded. As the magistrate saw, however, that the confiscated books contained no objectionable matter, they were restored to Bass. In 1712 the Jesuit father Franz Kolb, teacher of Hebrew at the University of Prague, succeeded in having Bass and his son Joseph arrested, and their books confiscated. The innocent little book of devotions, Nathan Hannover's "Sha'are Zion" (Gates of Zion), which Bass reprinted after it had already gone through several editions, was transformed in the hands of the learned father into a blasphemous work directed against Christianity and Christians. Bass would have fared ill had not the censor Pohl, who had been commissioned to examine the contents of the books, been both faithful and competent. In consequence of his decision, Bass was released after ten weeks' imprisonment, at first on bail, and then absolutely. The last years of his life were devoted to the second edition of his bibliographic manual, which he intended to issue in enlarged and revised form. He died without completing the work.

Bass's works have the constant characteristic of answering practical needs. In 1669 he reprinted Moses Särtels' Judæo-German glossary

**Literary** on the Bible; adding a grammatical  
**Activity.** preface, a work intended to supply the lack of grammatical knowledge

among teachers of the young, and to furnish the latter with the correct German rendering in translating the Bible. Bass was greatly interested in improving the instruction of the young, and recommended the German-Polish Jews to imitate the methods of instruction obtaining in the Portuguese community of Amsterdam (Introduction to "Sifte Yesheanim," p. 8, translated by Güdemann, in "Quellenschriften zur Gesch. des Unterrichtswesens," pp. 112 *et seq.*), describing in detail their curriculum. His subcommentary on Rashi's commentary on the Pentateuch and the five Megillot (Amsterdam, 1680, and many times reprinted) is also intended for elementary instruction. In this little book he has summed up with admirable brevity and clearness the best work of his fifteen predecessors, who had commented on Rashi; the book being even to-day a most useful and almost indispensable aid toward understanding and appreciating Rashi. A most interesting and somewhat amusing little work is Bass's itinerary, entitled "Masseket Derek Erez," a treatise on the roads of the country (Amsterdam, 1680); the book, written in Judæo-German, contains also tables of all the current coins, measures, and weights in European countries, and a list of routes, post connections, and distances. Bass's chief work, however, is his bibliographical manual "Sifte Yesheanim" (Lips of the Sleepers; compare Cant. R. to vii. 10) (Amsterdam, 1680, frequently reprinted). This work contains a list of 2,200 Hebrew books, in the alphabetical order of the titles, conscientiously giving the author, place of printing, year, and size of each book, as well as a short summary of its contents. The majority of the books described he knew at first hand; the description of the others he bor-

rowed from the works of Buxtorf and Bartolucci (from the latter only in the first part).

Bass's work is distinguished not only by its brevity and accuracy, but by an entirely original feature, in respect to which he had no predecessor, and almost no successor; namely, a classification of the entire Jewish literature, as far as he knew it. He divides the whole into two chief groups, Biblical and post-Biblical, and each group again into ten subdivisions. Thus, dictionaries, grammars, and translations form a subdivision of the Biblical group; while Talmud commentaries and novellæ are included in the Talmudic group. Although this classification is still very superficial and primitive, it indicates its author's wide knowledge and astonishing range of reading. In addition to the list and classification of the books, Bass gives an alphabetical index of authors, including one of the Tannaim, Amoraim, Saboraim, and Geonim.

Bass's introduction to his work is most characteristic of the spirit prevailing among German Jews at that time: he cites ten "religious reasons" for the usefulness of his work. Not only was Bass's undertaking new to the German Jews, but it also appeared strange to them; and only the Portuguese Jews of Amsterdam, who had a leaning toward methods and systems, knew how to appreciate him. Christian scholars, however, were at once impressed by the scholarship, style, usefulness, and reliability of the bibliography. Latin as well as German translations, some of which are still extant in manuscript, were undertaken by Christian Orientalists. The greatest proof of Bass's merit lies in the fact that Wolf's "Bibliotheca Hebræa" is based chiefly on the "Sifte Yesheanim."

**BASSAI.** See BEZAI.

**BASSANI, HEZEKIAH MORDECAI B. SAMUEL:** Rabbi of Verona, Italy; lived at the end of the sixteenth century and at the beginning of the seventeenth. He was the author of "Miktab le-Hizkiyahu" (Letter of Hezekiah), on divorce, and "Ma'amar Mordekai" (Mordekai's Words), on the levirate marriage, both published under the title "Pene Yizhak" (Face of Isaac), Mantua, 1744. Bassani also wrote "Sefer Bikkurim" (Book of Visits), Verona, 1710, dealing with prayers to be recited on visiting the sick. It is partially based on Aaron Berechiah's "Ma'abar Yabbok" and on Isaiah Horwitz's theme, "Luhot ha-Berit."

M. B.

**BASSANI, HUGO:** Italian poet and composer; born in Padua June 5, 1851. He studied in Milan and was one of the favorite scholars of Anthony Bazzini, director of the Milan Conservatory. Bassani's romances—compositions for piano or orchestra—are highly appreciated and have been published

by Lucca and Ricordi in Milan. Bassani is now living in Venice.

S.

**BASSANI, ISAIAH**: Italian rabbi, of the first half of the eighteenth century; the son of Israel Hezekiah Bassani, who was a pupil of Moses Zacuto and of Judah Briel of Mantua. From 1702 to 1707 he was rabbi at Cento, as appears from the documents of the fraternity Shomerim Laboker at Reggio. In 1712 he was at Padua, as is proved by the approbation ("haskamah") he wrote to the "Hon 'Ashir" of Immanuel Ricchi, and he was still living there in 1716 (Lampronti, "Paḥad Yizḥak," § 34); from Padua he went to Reggio, where he died, some time after 1736. Moses Hayyim Luzzatto was one of his pupils.

The writings that Isaiah Bassani left prove him to have been a man of immense learning, with a wonderful versatility of mind. Many of his rabbinical decisions are contained in Lampronti's "Paḥad Yizḥak." One of his poems, written when Zebulon Conegliano passed his examination in medicine at Padua, Aug. 14, 1716, has been published by Abraham Baruch Piperno in his collection of Hebrew poems by Italian-Jewish authors (ענין ק"פ, 9a). Two of his letters have been published in "Kerem Hemed," iii. 163. In the library of the Talmud Torah of Ferrara is preserved the manuscript of an unpublished work by Isaiah Bassani, "Mishpat la-'Ashukim" (Judgment for the Oppressed; see Psalm cxlvi. 7).

V. C.

**BASSANI, ISRAEL BENJAMIN**: Rabbi at Reggio, Italy; born in 1708; died at Reggio Jan. 20, 1790 (5 Shebat, 5550); son of Isaiah Bassani. He was a skilful poet, both in Hebrew and in Italian. In honor of Francisco III. of Este, duke of Modena, Bassani composed eighty elegant Hebrew poems, to which he affixed Italian versions, in ottava rima (Venice, 1750). Many other poems of his are contained in the "Kol 'Ugab" of A. B. Piperno; among them may be mentioned especially the thirty sestinas on electricity (*ib.* 36b, below; 37b). Bassani is also the author of "La Corona Estense," Venice, 1753, a collection of sonnets in Hebrew, with a translation into Italian verse, dedicated to Francisco III., duke of Este; and "Moda'ah" (Announcement), Leghorn, 1771, a letter concerning the case of I. Natof. He also published "Todat Shelamim" (Thank-Offerings), Venice, 1741, a collection of various halakic writings. In the archives of the Jewish community of Reggio, there are hundreds of Bassani's Hebrew letters and several volumes of responsa and Hebrew sermons, besides a work on the principles regulating the Jewish calendar. A eulogistic biographical sketch of Bassani was written by Benedetto Frizzi (Ferrara, 1791).

V. C.

**BASSANI, JEHIEL B. HAYYIM**: Casuist and rabbi of Constantinople in the seventeenth cen-

tury. His responsa (Constantinople, 1737) are valued for their keen analysis and terse style. Bassani maintained a learned correspondence with the great Oriental teachers of his time; and he is several times mentioned in the responsa of Joseph di Trani and Meir de Boton. Judah Lerma, rabbi of Belgrade, was one of his pupils.

M. B.

**BASSANO**: City in the province of Venice, Italy. Here, as in all the surrounding places, Jews were living at a very early period, engaged in commerce and industry, and especially in money-lending, as is shown by contemporary documents dating back to 1264. In the first half of the fifteenth century, they formed a large and prosperous community. Subsequently they were persecuted; and, in 1468, a decree of perpetual banishment was issued against them. Nevertheless they returned, only to be again banished by the city council in 1481.

No documents are extant to show the existence of a Jewish congregation, recognized and regulated by law. The Jews were obliged to live huddled together in one little street, still called "Callesella dei Zudii"; but, as their numbers increased, more spacious quarters were assigned to them, which popular tradition still calls "Il Ghetto."

While some of the Jewish families, Bassan, Bassano, Bassani, may have been called from this city, the name is more probably of Hebrew origin. Some slight notices of the Jews of Bassano may be found in the rare pamphlet of Brenner, "Fondazione del Monte di Pietà," 1882. There are no longer any Jews at Bassano, nor are there any traces of a synagogue or a cemetery.

G.

V. C.

**BASSEVI, HENDEL**: Daughter of Ebert Geronim, and second wife of Jacob Bassevi, son of Abraham Bassevi and president of the congregation of Prague. She died in the summer of 1628. Her tomb is embellished with the family coat of arms—a blue lion with eight red stars upon a black field—which was bestowed upon her husband in recognition of his services by the emperor Ferdinand in 1622. Bassevi was also accorded free choice of residence, was allowed to engage in any form of trade, was exempt from taxes, and was permitted to enter the imperial dwelling. His family was ennobled and received the title "von Treuenberg."

Hendel was very charitable. She adopted orphans, endowed brides, supported needy scholars, paid for the illumination of synagogues, and equipped schools with books. Indeed, at the beginning of the Thirty Years' war, when Hebrew books were ruthlessly confiscated, Hendel did much to provide for the endowment of synagogues and the distribution of prayer-books in Austria, Moravia, and other countries.

A. F.

**BASSEVI VON TREUENFELD, JACOB** (called also **Jacob Schmiele** ["son of Samuel"]): Court Jew and financier; born in 1580; died at Jung-

Buntzlau May 2, 1634. He entered business early in life, ultimately became very wealthy, and stood in high favor with the emperors Rudolph II., Matthias, and Ferdinand II., to whom he, with other Jewish capitalists, frequently rendered financial assistance, particularly to Ferdinand, who needed large sums of money for the prosecution of the Thirty Years' war (1618-48).

Bassevi, in recognition of his services, was raised to the nobility by Ferdinand, receiving the title "von Treuenfeld," and a coat of arms consisting of a blue lion with eight red stars on a field of blue (according to Graetz; or of black, according to Lieben). Ferdinand also bestowed upon him the right "to engage in any business whatever, in any part of the empire, whether cities, towns, or market-places, in Prague and Vienna, and other places where Jews are allowed to reside or are not; to acquire property and to reside anywhere he pleases. His property in any form to be free from taxes, imposts, and duties; he is allowed to reside in the imperial quarters; and he is responsible to no tribunal, except that of the marshal of the court." Privileges were also granted to him by Rudolph and Matthias, all of them being hereditary. The supposition that he was minister of finance to Ferdinand is unfounded.

As a representative of the Jewish community, reference to Bassevi is first found in 1616. He always exerted his influence in behalf of the Jews of the empire and of Italy; and it was due to his efforts, combined with those of other Jewish capitalists, that the Hebrew quarter in Prague was protected by a military guard against the attacks of the soldiery after the decisive battle of White Mountain, Bohemia, in 1621.

Bassevi was a warm friend of Rabbi Lippman Heller, and befriended him during the latter's arrest (July 5, 1629) and dismissal from office (Aug. 14, 1629); contributing from his own funds one-fifth of the fine of \$12,000 imposed upon Heller. Bassevi was very charitable, and gave large sums for the support of the poor of Palestine.

On account of some trouble, the nature of which is not known, Bassevi in 1631 removed from Prague to Gitschin, where he lived for a year.

A. R.

**BASSIN, ELIEZER:** Missionary at Jassy, Rumania; born about 1840 in the government of Mohilev, Russia. In 1869 he went to Constantinople, where he made the acquaintance of English missionaries who persuaded him to embrace Christianity. He was the author of a work entitled "The Modern Hebrew, and the Hebrew Christian," London, 1882. The work opens with an interesting autobiography relating the difficulties the author had had to overcome, after having been transferred from Constantinople to Russia as a deserter. One part of the book deals with the Jewish religion and Jewish ritual ceremonies. In many passages the author gives information concerning the religious opinions of the Jews of Russia, and especially of those of the sect Habad,

founded at the end of the eighteenth century by Solomon Sncerson.

In September, 1881, Bassin published a German paper entitled "Eintracht," pleading the cause of the Jews against the anti-Semitic agitation in Germany.

**BASSORA:** City in a vilayet of the same name in Asiatic Turkey, about 54 miles from the Persian gulf and 1½ miles west of the Shatt al-Arab; founded by the Arabs in 636. Nothing is known of the early history of the Jews in this city, but the eminence to which it rose, especially as a center of learning, must have early attracted them thither. Together with Wasit it was under the spiritual jurisdiction of the school at Sura. Of the names of the learned Jews who lived there very few are known. Masarjawaih, one of the leading physicians and the oldest translator (883), was a Basrian; also probably Mashallah, one of the first Arabic astrologers (770-820), if his pupil Al-Khayyat is to be trusted, who calls him "Al-Basri" ("Z. D. M. G." liii. 428, 434). R. Joseph bar Saṭyah (942) settled in Bassora when the school at Sura was finally closed (Sherira, "Letter," ed. Neubauer, i. 40).

Benjamin of Tudela (twelfth century) gives the number of Jews there as about 2,000; and he found these to be learned men and rich merchants. They seem to have suffered with the other inhabitants during the Tatar invasion. It is said that 10,000 of them in Bassora, Mosul, and Hisn-Kef fell before the sword of Tamerlane (fourteenth century; see Jost's "Annalen," 1839, p. 197). Texeira, at the beginning of the seventeenth century, does not mention Jews there at all.

The modern community seems to date from the middle of the eighteenth century. According to local tradition, the new settlement was made by Jews from Bagdad. In 1854 Petermann found only thirty Jewish families, in a population of 5,000. On Shabuoth, he relates, all the inhabitants make pilgrimages to the grave of Ezra ("Reisen," i. 152; compare Pethaliah of Regensburg, "Travels," p. 51). Benjamin II. ("Eight Years in Asia and Africa," p. 137) relates that "a devastating epidemic decimated the population, so that a whole portion of the city is empty and the houses fallen into ruins. In the middle of these ruins stand four synagogues, of which, however, three are unused and empty." According to the latest official statistics, there are 1,900 Jews in the city of Bassora and its surrounding villages, and 4,500 in the vilayet, which has a general population of 950,000. There are Jewish rabbis in the cities of Bassora, Amara, and Muntefik of the vilayet; there are two schools at Bassora, two at Amara, and one at Naṣiriyyah (Cuinet, "La Turquie d'Asie," iii. 209, 220). The chief trade of the Jews is in dates. The Alliance Israélite Universelle gives to the Talmud Torah school at Bassora (attended by about 150 pupils) an annual subvention of five hundred francs ("Bulletin All. Isr." No. 24, p. 137). The rabbis in 1900 were Hakam Judah and Hakam Ezra.

G.

**BASSUS, LUCILIUS**: Governor of Judea after the conquest of Jerusalem by Titus (70). He had formerly been prefect of the fleet at Ravenna, and took the oath of allegiance to Vitellius; but, dissatisfied with not having been promoted to the dignity of prefect of the pretorium, he betrayed his master and delivered the fleet into the hands of Vespasian (compare Tacitus, iii. 12, 36, 40). Such a service could not remain unrewarded, and Vespasian appointed him governor of Judea and gave him the task of subjugating the fortresses that were still in arms, Herodium, Macherus, and Masada. Bassus displayed in this exploit more courage than strategical skill. Herodium surrendered at once without fighting. Macherus, however, offered a stubborn resistance, and Bassus would have been unable to conquer this place, but for the fact that the young commandant, Eleazar, was captured by the Romans. Bassus ordered him to be scourged before their eyes; and the besieged, desiring to save their chief, offered to give up the citadel if his life should be spared. Bassus agreed to this proposal and spared the garrison; but he inhumanly butchered the inhabitants, to the number of 1,700, and sold the women and children into slavery.

Bassus died at the siege of Masada; and the difficult task of subduing that fortress devolved upon his successor, Silva.

**BASTARD**: In the English use of the word, a child neither born nor begotten in lawful wedlock; an illegitimate child. There is no Hebrew word of like meaning. The mamzer, rendered "bastard" in the A. V., is something worse than an illegitimate child. He is the offspring of a father and mother between whom there could be in law no binding betrothal: issuing either from adultery between a married woman and a man other than her husband, or from incest within the forbidden degrees of kinship or affinity defined in Lev. xviii. and xx. The child of a marriage simply forbidden, as that between a cohen and a divorced woman, is legitimate but "profane"; that is, a son can not officiate as a priest, a daughter is not eligible to marry a priest. But a mamzer, according to Deut. xxiii. 3, must not "enter the congregation of the Lord," that is, marry an Israelite woman, "nor shall his tenth generation enter," etc., which includes also the female mamzer (Kid. iii. 12; Mak. iii. 1). The older Halakah, however, was more rigorous, Akiba declaring any child of a forbidden connection a mamzer (Yeb. iv. 12, 13; Yer. *ib.* 6b; Bab. *ib.* 44a, 49a).

Whether the child of a daughter of Israel and of a Gentile or bondman is a mamzer or not, was hotly disputed both among the early sages, down to Rabbi Judah the Patriarch, and among the later teachers in Palestine and in Babylonia (Yeb. 23a, 45a). But the rule finally adopted is that such a child is not a mamzer, even when the mother is a married woman. This is the decision in the modern code (Shulhan 'Aruk, Eben ha-'Ezer, 4. 19), though it is admitted that the child is unfit for the priesthood. Maimonides decides to the same effect (Issure Biah. xv. 3).

The law laid down in Deuteronomy against the mamzer and against his distant offspring seemed so harsh that every opportunity was taken to confine it to the narrowest limits.

Where incest or adultery takes place among Gentiles, and the offspring embraces Judaism, the flaw in his descent is ignored. He is not deemed a mamzer (Shulhan 'Aruk, Eben ha-'Ezer, 4. 21). The child of an Israelite by an unconverted Gentile mother is a Gentile, and when converted becomes an Israelite to all purposes, without regard to his father.

As shown under AGNATES, the illegitimate child of a Jew (unless born of a Gentile woman or a bondwoman), even a mamzer, inherits from his natural father and other kindred (for example, his father's legitimate sons), just as if he were legitimate; the words of Scripture, "if he have no son" (Num. xxvii. 8), being taken literally "a son from any source," except the son of a Gentile or bondwoman, who follows the status of his mother (Yeb. ii. 5); and the child being bound by all duties flowing from his or her natural kinship.

This construction of the law runs counter to ancient popular sentiment, which crops out in the historic books. The legitimate sons of Gilead drove Jephthah from his home because he was the "son of another woman" (Judges xi. 2). Where a child is born in wedlock, the presumption in favor of its being the offspring of the husband is very strong, as in other systems of law. The Roman law says: "pater est quem justæ nuptiæ demonstrant." But the Jewish law, unlike the English common law, does not uphold this presumption when the child is born so soon after the nuptials ("nissu'im") that it must have been begotten before them. Even when the date of birth points to conception after the betrothal ("erusin")—which in olden times preceded the wedding by several months—the presumption of the betrothed man being the father is comparatively weak, as a connection between him and the bride while she is "at her father's house," though not a deadly sin on the part of either, is an act of lewdness (Shulhan 'Aruk, Eben ha-'Ezer, 4. 27; see Ket. 36a).

On the general principle that a person's confession of his or her own turpitude is not admissible as legal testimony, the wife and mother can not, by her assertion, stamp her offspring as an adulterine Bastard. For the rules of presumption and evidence in cases of doubt, see Shulhan 'Aruk, Eben ha-'Ezer, 4. 14-16.

L. N. D.

**BASURTO, DIEGO ENRIQUEZ**: Marano poet of the seventeenth century; born in Spain. Like his father—the poet Antonio Enriquez Gomez—he resided several years at Rouen, and finally settled in Holland. The following curious description of him is given by the Marano poet Miguel de Barrios:

"Basurto had a broad nose, which was never clean; small sunken eyes, hidden behind a large pair of spectacles; and a mouth comparable to a mill in constant motion. He was short and stout; very carelessly attired, and always carried a cane."

Basurto was the author of "El Triunpho de la Virtud y Paciencia de Job" (Rouen, 1646), a poem

constructed in various meters and inscribed to the mother of Louis XIV.

**BAT:** This well-known winged mammal (in Hebrew עטלף, Lev. xi. 19; Deut. xiv. 18; Isa. ii. 20) was considered by the Hebrews as belonging to the class of birds. The ancients in general considered it as a creature belonging both to the birds and to the mammalia, and partaking of the nature of both classes (Bochart, "Hierozoicon." *s.v.*). Like all night-birds, the Bat was considered unclean by the Hebrews. The numerous caves and ruins of Palestine afford shelter to innumerable swarms of bats; and Tristram ("Natural History of the Bible," pp. 45, 46) enumerates no less than seventeen species indigenous to that country. Several of these are also found in Europe and America.

**BAT KOL** (Hebrew, בַּת קוֹל; Aramaic, בֵּרַת קְלָא): A heavenly or divine voice which proclaims God's will or judgment, His deeds and His commandments to individuals or to a number of persons, to rulers, communities, and even to whole nations. The meaning of the word is "sound," "resonance." In this sense it is used in Syriac and in the following Midrash and Talmud passages: "As oil has no Bat Kol [that is, gives no sound], so Israel is not heard of in this world; but, as it is said in Isa. xxix. 4, 6, Israel will enjoy great fame in the world to come" (Cant. R. i. 3). The most significant passage is Ex. R. xxix., end (compare xxviii., end):

"Johanan said, 'When God revealed the Torah, no sparrow chirped, no bird flew, no ox lowed; the heavenly Ofanim [wheels] moved not; the Seraphim did not chant the Thrice Holy; man spoke not; the sea roared not; no creature uttered a sound; and the world was silent, while God's voice resounded, 'I am the Lord Thy God.' This is the meaning of the words, 'With a great voice; and he added no more,' in Deut. v. 19 [A.V. 22] (וְיָסַף יְהוָה). 'These words,' says Simeon ben Lakish, 'are to be taken as follows: If one man calls to another, his voice has a Bat Kol; but the voice proceeding from God has no Bat Kol. If you marvel at this, think of the story of the prophet Elijah and the priests of Baal. God bade the upper and the lower world keep silence; and the world became like an empty desert, as if no living creature existed; there was neither voice, nor answer, nor attention' [I Kings xviii. 29, Hebrew]. For if a sound had been heard, the priests would have said: 'Baal has answered us.' On Sinai God caused the whole world to be silent, in order that mankind might know there is none besides Him."

It is clear that in this passage Bat Kol does not mean an echo, as is the general opinion (Lampronti, "Pahad Yizhak"; Levy, "Neuhebräisches Vörterbuch"; Kohut, "Aruch Completum," *s.v.*); but it means the reverberation or hum, caused by the motion of all things, which fills the whole world and which accompanies the human voice and every other sound. Of old the belief in the music

**Bat Kol**  
**Not**  
**an Echo.**

of the spheres was universal; and the Talmud says (Yoma 20b) that the noises of Rome would be heard all over the world but for the music of the spheres. Echo is called "kol habarah" (R. II. iii. 7; Yoma 19b). Nor is an echo referred to in the dispute between the schools of Shammai and Hillel as to whether a woman may marry if a Bat Kol has been heard saying

that her husband is dead (compare Yeb. 122a; Tosef., Nazir, i. 1). As Rashi remarked in his commentary (compare Lippman Heller, in "Tosafot Yom-Tob" to Yeb. xvi. 6), the Bat Kol here is more probably the same as when a voice is heard and no man is seen. A parallel is afforded in the case of Paul, when he heard a voice saying: "Saul, Saul, why persecutest thou me? . . . And the men which journeyed with him stood speechless, hearing a voice, but seeing no man" (Acts ix. 4, 7; compare xxii. 7, 9; xxvi. 14). On this account Bat Kol was called a voice which is heard behind the back (Meg. 32a). The same idea is expressed in Rev. i. 10: "And I heard behind me a great voice, as of a trumpet." In the Greek there is no adequate expression for Bat Kol [unless the *φωνή μαρτυρική* in Sophocles' "Œdipus," 723, are comparable; see S. Louis, in "Trans. of Soc. for Biblical Archeology," ix. 182 *et seq.*—K.]; consequently the New Testament renders it by *φωνή*, but not by *ἡχώ* [see Matt. iii. 17; Mark i. 11; Luke iii. 22; and John xii. 28: *φωνή ἐκ τοῦ οὐρανοῦ* ("a voice from heaven"); Matt. xvii. 5; Mark ix. 7; and Luke ix. 35: "a voice out of the cloud"; Acts x. 13, 15: "a voice"; compare Lightfoot to Matt. iii. 17—K.].

According to the Talmud (Yer. Soṭah ix. 24b; compare Tosef., Soṭah, xiii. 5) the high priest Johanan hears a Bat Kol in the sanctuary; according to Josephus ("Ant." xiii. 10, § 3), he hears a *φωνή*.

The expression בַּת קוֹל ("daughter of a voice"; that is, a small voice) is intended to distinguish it from the usual voice. Originally, however, it was also in the Hebrew called "kol" (voice) as is shown by the Aramaic קַל מִן שְׁמִיָּא נִפַּל. "There fell a voice from heaven, saying, O King Nebuchadnezzar, to thee it is spoken: The kingdom is departed from thee" (Dan. iv. 28 [A. V. 31]); and

**A Voice.** here and there in the Talmud it is briefly given as קוֹל ("voice") (Sanh. 96b; compare Ta'anit 21b; B. M. 85b, Rashi). In the Aramaic versions of the Bible, in the Midrash and Talmud, the heavenly revelation is usually introduced with the formula: "A voice fell from heaven," "came from heaven," "was heard," or "proceeded from heaven." The New Testament has the same formula, *ἤλθεν οὖν φωνή ἐκ τοῦ οὐρανοῦ* (John xii. 28; compare Rev. x. 4, 8; xviii. 4, etc.), which is the equivalent of the Hebrew יָצָא בַת קוֹל מִן הַשָּׁמַיִם, and the Aramaic נִפְקַת בֵּרַת קְלָא מִן שְׁמִיָּא.

Through frequent use the formula was abbreviated into Bat Kol; and it is not correct to differentiate between the longer and shorter expressions. The fact probably is that the fuller form is used generally in the older sources. Since God permits His glory to abide in the Temple at Jerusalem, it results that a voice is also heard from the sanctuary (Yerushalmi and Josephus, *l.c.*; Rev. xiv. 14, 17: "the temple which is in heaven"; *ib.* 18, "another angel came out from the altar").

The characteristic attributes of the Bat Kol are the invisibility of the speaker and a certain remarkable quality in the sound, regardless of its strength or weakness. A sound proceeding from some invisible source was considered a heavenly voice, since the revelation on Sinai was given in that way: "Ye heard the voice of the words, but saw no similitude;

only ye heard a voice" (Deut. iv. 12). God reveals Himself to man through his organs of hearing, not through those of sight. Even Ezekiel,

**Revelation Through Sound.** who sees many visions, "heard a voice of one that spake" (Ezek. i. 28); Elijah recognized God by a "still, small voice," and a voice addressed him (I Kings xix. 12, 13; compare Job iv. 16); sometimes God's voice rang from the heights, from Jerusalem, from Zion (Ezek. i. 25; Jer. xxv. 30; Joel iv. 16, 17; Amos i. 2, etc.); and His voice was heard in the thunder and in the roar of the sea.

The Bat Kol was loud or soft according to circumstances; but the quality of the tone was peculiar. Rab said: "God roars like a lion, and says: 'Wo unto the children on whose account I have destroyed My house, and burnt My Temple, and whom I have dispersed among the nations.'" Jose entered a ruin at Jerusalem and encountered there the prophet Elijah, who asked him: "My son, what voice didst thou hear in the ruins?" He answered: "I heard a Bat Kol; it murmured like a dove (מנהמת כיונה) and exclaimed: 'Wo unto the children,'

**Quality of the Bat Kol.** etc." In the course of the conversation God is spoken of instead of the Bat Kol. Bat Kol (Ber. 3a). Elisha b. Abuyah heard a voice chirping behind the Temple (מפצצת ואומרת), Eccl. R. vii. 8).

When God wishes to announce harm, He uses the Bat Kol; but good proceeds from His own mouth (Targ. on Lam. iii. 38). Nebuchadnezzar hears a Bat Kol which sounds like the shout of a nation (Ex. R. xxx. 20). When Moses died, a Bat Kol rang through the camp of twelve square miles and proclaimed: "Moses is dead!" (Sifre ii. 357; Soṭah 13b, below, etc.).

Josephus in telling the portents of the destruction of the Temple says ("B. J." vi. 5, § 3; compare Rev. xix. 1, 6): "Moreover, at that feast which we call Pentecost, as the priests were going by night into the inner [court of the] Temple, as their custom was, to perform their sacred ministrations, they said that in the first place they felt a quaking, and heard a noise, and after that they heard a sound as of a great multitude, saying, 'Let us remove hence.'"

Hullin 59b tells of the great strength of God's voice. From these passages it is evident that the strength of the Bat Kol was adapted to circumstances, as the divine word of the Ten Commandments on Sinai was spoken with a strength that adapted itself to children, youths, etc. (Tan. on Deut., in Grünhut, "Likḳuṭim," v. 111b, 112a: "The word called from heaven"). The original conception undoubtedly was that the heavenly voice whispered or chirped, as is indicated by the expression which Isaiah (viii. 19; compare x. 14, xxix. 4, xxxviii. 14) uses in regard to the veiled voice of the familiar spirit, and several times in regard to the Bat Kol.

A Bat Kol could come from under the earth and from the nether world, and is heard on heights (Targ. Yer. Num. xxi. 6). Since such sounds supposedly came from the spirit world, Jewish monotheism could conceive of it as springing only from heaven, from the Holy Spirit, from angels, or from God Himself. All nations regarded such sounds as the voices of spirits (Tylor, "Primitive Culture," i. 469; Blau,

"Altjüdisches Zauberwesen," p. 65, n. 2). The troubled mind, the soul in despair, would hear sounds promising comfort in sorrow

**Parallel Instances.** and misfortune. The Arabs tell of a voice, "hâtif," which calls to lost travelers in the wilderness. The "munadi," a similar voice, came in the solitude of night to the Persian poet Nizami when discontented with his lot (Bacher, "Leben und Werke Nizamis," p. 11; Goldziher, "Abhandlungen zur Arabischen Philologie," i. 6).

As shown by the name, this heavenly voice was often considered divine. In the course of the narrative in Ber. 3a, "God" is put instead of "Bat Kol"; and not infrequently God, when using the Bat Kol, is represented as speaking in the first person. Sometimes Bat Kol is identified with the Holy Spirit. In Sifra, Lev. x. 5 (ed. Weiss, 46a), it is the Holy Spirit which speaks; while in Ker. 5b and Hor. 12a, which give the same account, it is the Bat Kol. "At three courts of justice the Holy Spirit beamed forth: at the courts of Shem, of Samuel, and of Solomon. At the first a Bat Kol cried: 'She [Tamar] hath been more righteous than I' (Gen. xxxviii. 26); at the second: 'I am a witness' (Mak. 23b, referring to I Sam. xii. 5); and at the third: 'She is the mother' (I Kings iii. 27; Mak. 23b; Gen. R. xii., lxxxv. *et seq.*).

The Bat Kol usually makes its announcements by means of a passage from the Law or the Scriptures; and, to judge from the instances that are related, it was heard oftenest in Biblical times, when the Holy Spirit rested upon the chosen people. At the death of Moses a Bat Kol was heard saying: "Fear thou not, Moses! I myself will care for thy burial" (Deut. R., end). When R. Bannaa visited the graves of the Patriarchs, and wished also to see Adam's grave, a Bat Kol called out: "Thou

**Voice of the Holy Spirit.** hast seen the likeness of My image, but My image thou mayest not see" (B. B. 58a). When Israel at Sinai said: "We will do and we will hear" (Ex. xxiv. 7, Hebrew), a Bat Kol called out: "Who has revealed to My children the secret which the angels alone possessed"; that is, to do before hearing (Shab. 88a; compare Soṭah 10b).

From the foregoing it is evident that the Bat Kol was identified with the Holy Spirit, even with God; but it differed essentially from the Prophets, though these spoke as the medium of the Holy Spirit. The Holy Spirit rested upon the Prophets, and the intercourse was personal and intimate; while those that heard the Bat Kol stood in no relation whatever to the Holy Spirit. The Prophets again possessed the Holy Spirit; but the Bat Kol could not be possessed: God spoke through it as He did through the Prophets. For this reason the Bat Kol addressed not only favored mortals, but sinners, individuals, or multitudes, within or without the Holy Land (B. M. 86a; B. B. 73b, 74b). It revealed the higher Will, not in the unintelligible speech of the Christian gift of tongues, but in perfectly intelligible words. "After the death of the last three prophets, Haggai, Zechariah, and Malachi, the Holy Spirit departed from Israel; but the Bat Kol was yet heard" (Tos., Soṭah, xiii. 2, where משמיעין is nearer the original than Soṭah 48b; Bab. Sanh. 11a, משתמשין). Prophecy was a

gift of which not only the prophet but his generation had to be worthy. A Bat Kol pronounced Hillel and Samuel the Little to have been worthy of having the Holy Spirit rest upon them, were it not for their generation (*ib.*). From this point of view the **Bat Kol and Prophecy.** Bat Kol was explained as a lesser gift to Israel than prophecy, but not, as some said, as a lower degree of prophecy (Yoma 9*b*; Pes. R. 160*a*).

According to rabbinical tradition, the Bat Kol co-existed with prophecy; that is, at a time when the Holy Spirit rested upon Israel, as well as at other times. When Abraham was beset with doubt as to whether Isaac had not been rejected because he was unworthy to be sacrificed, a Bat Kol quieted him with Eccl. ix. 7 (Lev. R. xx. 2). When Esau thought that his father would soon die, a Bat Kol proclaimed: "The hide of many a foal has served to cover its dam" (Gen. R. lxvii. 8; compare Pes. 173*a* and the parallel passage, Sanh. 52*a*, where the words are quoted as the saying of men, *היינו ראמרי אינשי*; and this gave rise to the erroneous conclusion that by Bat Kol was meant the same as "vox populi vox Dei"). A Bat Kol spoke the words, "She hath been more righteous than I," in the story of Tamar and Judah (Soṭah 10*b*; Targ. Yer. on Gen. xxxviii. 26). When the Israelites, in their flight from Egypt, saw the Red Sea before them while Pharaoh pressed close behind, a Bat Kol comforted them with the words of the Song of Songs ii. 14 (Targ. *ad loc.*). When, according to Ps. lxviii. 17, the mountains disputed with Sinai, a Bat Kol cried out: "Ye are all deficient as compared with Sinai" (Meg. 29*a*). A Bat Kol pronounced the words (Ex. xxiv. 6): "Here is the half of the blood" (Lev. R. vi. 5). A Bat Kol reassured Moses and Aaron when they were in doubt about using the anointment oil too freely (Sifra, Lev. x. 5, etc.). When Israel was cured by the brazen serpent (Num. xxi. 8) a Bat Kol was heard moralizing (Targ. *ad loc.*). At the offering of the firstlings (Deut. xxvi. 2) the Bat Kol said: "Thou shalt be able to make an offering again next year" (this alludes to verse 16; Grünhut, "Liḳḳuṭim," v. 153*a*, 7).

At the promulgation of the terrible threats of Deut. xxviii., the anxious **Instances of Its Action.** Patriarchs who listened were calmed by a Bat Kol (Targ. Yer. on Deut. xxviii. 15). When Moses died, a Bat Kol drew the attention of the world to his suffering (Targ. Yer. on Deut. xxxiv. 5); and, as already mentioned, the Bat Kol is frequently connected with Moses' death (Sifre, Deut. 357; Soṭah 13*b*; Num. R. xiv. 10; Yelamdenu, in "Liḳḳuṭim," v. 104*b*; Jellinek, "B. H." i. 120-128, etc.). When Saul reasoned speciously about his expedition against the Amalekites, a Bat Kol quoted to him the words of Eccl. vii. 16 (Yoma 22*b*). A Bat Kol pronounced judgment in the cases of David and Uriah (M. K. 16*b*) and of David's attitude toward Mephibosheth (Shab. 56*b*, above). At the dedication of Solomon's Temple, during which the celebration of the Day of Atonement was omitted, a Bat Kol promised to all present a portion in the life to come (M. K. 9*a*; Gen. R. xxxv. 3; in Shab. 30*a* the Bat Kol is not mentioned). Upon the favorable reception of Solomon's

offering, a Bat Kol uttered the verse, Cant. iv. 1 (Targ.); and it used Prov. xxiii. 15 and xxvii. 11 to approve Solomon's institution of the 'Erub and of the washing of the hands (Shab. 14*b*, below). When Solomon wanted to place himself on a level with Moses a Bat Kol warned him in the words of Eccl. xii. 10 (R. H. 21*b*, below). When Israel separated from Judah and chose Jeroboam as king, a Bat Kol gave warning in the words of Micah i. 14 (Sanh. 102*a*); and when Ahab doubted the piety of Obadiah, the governor of his house, a Bat Kol upheld his piety, quoting I Kings xviii. 3 (Sanh. 39*b*, below). It spoke concerning the reason why King Hezekiah would not be the Messiah and said: "This is My secret" (Sanh. 94*a*). When King Manasseh criticized the Torah, it recited to him Ps. l. 20 (*ib.* 99*b*). For eighteen years it whispered into Nebuchadnezzar's ears: "Destroy My sanctuary" (Cant. R. ii. 13); when he said: "I will ascend above the heights of the clouds; I will be like the Most High," it cried: "Into the nether world must thou go" (following Isa. xiv. 13, 14; Pes. 94*a*, the dictum of R. Johanan b. Zakkai). When he waxed arrogant because he had succeeded in destroying the Temple, it called to him: "Thou hast killed a people already dead; thou hast burned a sanctuary already burned. Yea, thou hast ground meal already ground" (Sanh. 96*b* with reference to Isa. xlvii. 2; but this is lacking in the parallel passage, Yer. Ta'anit 69*b*, above). When he descended into Sheol, all the inmates feared that he would tyrannize over them, until a Bat Kol calmed them with the two Biblical verses: Ezek. xxxii. 19 and Isa. xiv. 4 (Shab. 149*b*). When the water-drinkers (Rechabites) in Jer. xxxv. brought an offering, a Bat Kol, proceeding from the Holy of Holies, declared it was acceptable (Mek., Yitro. 2). When Haman tested the gallows intended for Mordecai, a Bat Kol called out: "It fits thee!" (Targ. on Esth. v. 14; Esth. R. v. 3). At the feast of Ahasuerus the wine was served in the vessels carried off from the Jerusalem Temple, and a Bat Kol warned the feasters (Meg. 12*a*). Whenever there is no law, no high-priesthood, no Sanhedrin (II Chron. xv. 3), a Bat Kol cries: "Strengthen ye the weak hands" (Lev. R. xix. 5, following Isa. xxxv. 3).

When the men of the Great Synagogue counted Solomon among those kings who would not have a portion in the life to come, flames flashed forth out of the Holy of Holies, and then a Bat Kol uttered the words of Prov. xxii. 29: but they did not harken to this; nor did they abandon their resolution until the Bat Kol repeated Job xxxiv. 33 (Yer. Sanh. 29*b*; Num. R. xiv., beginning, and parallels). It happened that the high priest, John Hyrcanus, heard a voice from the Holy of Holies, announcing that the youths who had proceeded against Antioch had obtained a victory; the hour was noted, and it transpired later that the victory had been won at that very hour (Tosef., Soṭah, xiii. 5 and parallel passages; Josephus, "Ant." xiii. 10, § 3). A remarkable parallel to this story is afforded by the legend on the martyrdom of Polycarp: it is said that on the day and at the hour that he suffered death at Smyrna, Irenæus, who was at Rome, heard a voice like a trumpet proclaiming: "Polycarp has become a martyr" (Weimel, "Die Wirkungen des Geistes und der Geis-

ter," p. 166, Freiburg-in-Breisgau, 1899). Once Herod heard a Bat Kol saying that fortune should attend every slave who would then rise in re-

**Instances in Talmudic Times.** bellion against his master; thereupon he destroyed the house of the Hasmoneans (B. B. 3*a*). In four cases the Temple-court itself called out against or in favor of the priests ministering in the

Temple (Pes. 57*a*). When Jonathan ben Uzziel translated the Scriptures into Aramaic, a Bat Kol cried: "Who reveals My secrets to My children?" And when he was about to translate the Hagiographa, it cried: "Let this suffice, lest he betray the time of the Messiah" (Meg. 3*a*). A Bat Kol announced that the legal norm should be established according to the views of the school of Hillel in cases in which they conflicted with those of the school of Shammai (Yer. Ber. 3*b*, below and elsewhere). But the Tosefta on the same question (Yeb. i., end; 'Eduy. ii. 3) does not mention a Bat Kol. When a Bat Kol called out that the views of Rabbi Eliezer should be adopted, R. Joshua declared: "The Torah is not in heaven; we pay no heed to the Bat Kol." That is to say, the Bat Kol deserved no consideration in giving legal decisions (Yer. Hag. lxxxi. 11; Bab. B. M. 59*b*; Hul. 44*a*, and frequently elsewhere). Hillel devoted his life to study of the Law, while his brother Shebna, who was engaged in business, supported him, thinking they should share as well everything in common in the life to come; but a Bat Kol called out (Cant. viii. 7): "If a man would give all the substance of his house for love, it would utterly be contemned" (Sotah 21*a*). "Every day," says Rab (see Bacher, "Die Agada der Babylonischen Amoräer," p. 11, note 58), "a Bat Kol resounds from Mt. Horeb, proclaiming: 'Wo unto man, that he neglects the Law!'" (Ab. vi. 2). A Bat Kol announces: "The whole world is fed because of the merit of My son, Hanina; and he himself is content with a peck of locust-beans from one Friday to another" (Ber. 17*b*, etc.). While a heretic was with the patriarch Judah, a Bat Kol called out: "To pronounce the benedictions of the grace after meals is worth as much as forty gold dinars" (Hul. 87*a*). A Bat Kol proclaims daily: "This and this maid, this and this house, this and this field, are destined for such and such a man" (Sotah 2*a*, etc.). Simon ben Yoḥai and his son had hidden themselves for thirteen years in a cave. When they came out, everything on which they turned their eyes took fire, and a Bat Kol called to them: "Have ye come out in order to destroy My world?" When Simon was once watching a bird-catcher, he heard a Bat Kol saying, as each bird passed: "Let this bird be caught; let this bird go free"; and the bird was caught or allowed to escape accordingly (Shab. 33*b*; Yer. Sheb. ix. 1, p. 39*d*, and elsewhere. In later sources the legend is changed).

From these examples it is evident that the Bat Kol was heard under various conditions—in the interest of a whole nation or of a favored individual; either as a plaintive cry or as a voice of admonition. As a rule, the accounts are merely embellishments of the Biblical narrative: at times they are clearly legendary in character. The question arises whether the Bat Kol was not a psychological fact, especially in those cases in which it was repeated by the person

who actually heard it. The psychological possibility must be admitted in cases where the imagination

**Psychological Basis.** may have been stimulated by the solitude of a desert or of ruins, or by the impressiveness of the mountain where God gave His revelation; or again by the overwhelming consciousness of sin,

or, when face to face with death, that great mystery of man's existence. An inner voice may have made itself heard. The same is the case when the voice of the national and religious conviction impelled leaders of the people, men beloved and almost worshiped by their fellows, to a martyr's death. Thus the prominent Talmud teacher Elisha ben Abuya, who became an apostate, told his favorite pupil, R. Meir, that once, when the Day of Atonement fell on a Sabbath and he was violating both, a voice behind the sanctuary whispered to him: "Let every sinner return to Me except Elisha, who knows Me and yet sins against Me" (Yer. Hag. 77*b*, near end; Bab. Hag. 13*b*; Ruth R. on iii. 13; Eccl. R. on vii. 8).

Supernatural phenomena are also accompanied by a Bat Kol. Thus Johanan related: "Once, when on a ship, we saw a chest of gems and diamonds in the water surrounded by fish. When a man sprang into the sea to get it, a sea-monster was about to swallow half of him; but he drove it away with vinegar. A Bat Kol then resounded, saying: 'What dost thou want with the chest in which the wife of Hanina ben Dosa keeps the purple which the pious will wear in the future world?'" Rabba bar bar Hana, among his many mythical stories, relates that he saw from a ship a bird standing only ankle-deep in water. When the travelers wanted to cool themselves in the sea, a Bat Kol called out: "Seven years ago a carpenter's ax fell into the water and has not yet reached bottom!" Rabba bar bar Hana also tells of a Bat Kol he heard in the wilderness at Mt. Sinai saying: "Wo is Me that I have sworn to send Israel into exile!" (B. B. 73*b*, 74*a*, 74*b*.) R. Perida having taught his pupil one thing four hundred times, a Bat Kol called

to him to choose between two rewards **Bat Kol for his patience; and God Himself proclaimed Death.** claimed that he should receive both ('Er. 74*b*). When Joshua ben Levi wrested the knife from the Angel of Death, the dying man heard a Bat Kol saying: "Give it back to him; for mankind needs it" (Ket. 77*b*). When Judah I. lay in the agonies of death, a Bat Kol said, in the words of Isa. lvii. 2: "He shall enter into peace!" (Ket. 104*a* and elsewhere.) The Sabbath was violated for his burial; but excepting a laundryman who had failed to do him honor, those present were comforted by a Bat Kol that assured to all a portion in the life to come. When, in consequence of this, the laundryman threw himself from a balcony, the Bat Kol was again heard, saying that even the laundryman was assured of a portion in the life to come (Yer. Kil. ix. 3, 32*b*).

When R. Jose b. R. Eleazar died, a serpent at the mouth of his father's grave prevented the burial, until a Bat Kol declared: "The father was no greater than the son!" As Rabba bar Nahmani expired, he muttered "Clean! Clean!" and a Bat Kol called out: "Happy art thou, Rabba bar Nahmani, clean is thy body, clean thy soul!" At Pumbedita slips

fell from the skies, bearing the words, "Rabba bar Nahmani has been called away," etc. A Bat Kol went forth and exclaimed: "Wo! wo! Samuel, son of R. Isaac, is dead!" (B. M. 85a, 86a; Yer. 'Ab. Zarah 42c.) Simeon ben Lakish marked the graves of the rabbis, but could not find R. Hiyya's. When he grieved over this, feeling that he had not so keen an intellect as R. Hiyya, a Bat Kol said: "Thou art as keen of intellect as he; but thou hast not spread the Torah as he did" (B. M. 85b; Yer. Kil. 32b, below, does not mention a Bat Kol). Those who occupied themselves in mystic teachings heard a Bat Kol promising them great honor in the future world. Johanan b. Zakkai in a dream saw himself and his colleagues on Mt. Sinai and heard a Bat Kol there (Yer. Hag. 77a, below; Bab. Hag. 14b). When a drought drove the inhabitants of Palestine to despair, and R. Eliezer's prayers did not bring rain, while Akiba's did, the rabbis believed there must be some stain upon R. Eliezer's character; but they heard a Bat Kol saying: "Akiba is not a greater man than Eliezer, but less severe" (Ta'anit 25b).

A Bat Kol was often heard at the death of a martyr. In the story of the mother with her seven sons a Bat Kol exclaimed, "A joyful mother of children!" (Ps. cxiii. 9; Git. 57b, below.) A Bat Kol blamed Bar Kokba when he killed Eliezer of Modi'in (Yer. Ta'anit 68a, below). When at Bar Kokba's rebellion Hanina ben Teradion was horribly burned, a Bat Kol called out: "Hanina and the one Roman who made his death easy are destined to the future life" ('Ab. Zarah 18a, and elsewhere, but a Bat Kol is not mentioned in Sifre ii. 357). R. Akiba suffered a dreadful death—his flesh was torn from his body with brazen tongs. And as with his last breath he said the final words of the Jewish confession of faith, "The Lord is one," a Bat Kol came forth and said: "Hail to thee, R. Akiba, that thy soul left thee with the word 'One.'" Then the angels protested, saying: "Is this the Torah and this its reward?" Whereupon God replied: "They have their portion in the life to come"; and a Bat Kol again resounded and said: "Hail to thee, Akiba, thou art destined for eternity!" (Ber. 61b; two other instances in 'Ab. Zarah 10b, below, and 17a.) When a Roman official prevented the execution of R. Gamaliel II. by offering his own life, the deed was proclaimed by a Bat Kol (Ta'anit 29a). The Bat Kol spoke to two later conquerors of Judea as it had once spoken to Nebuchadnezzar. When Titus returned to Rome, after the destruction of the Temple, the sea was stormy, and he remarked that the God of Israel is strong only upon the waters, whereupon a Bat Kol said to him: "Blasphemer and son of a blasphemer, I possess an insignificant little creature, a midge; take it with thee to the land." And the midge penetrated through his nose into his brain (Git. 57b). Hadrian wanted to plumb the ocean: for three and a half years he tied ropes together until finally he heard a Bat Kol telling him to desist (Midr. Teh. xciii. 418b).

In later times, the Bat Kol is heard in the synagogue when the devotion lacks harmoniousness; and it proclaims, in the words of the Song of Songs, "Flee away, my beloved," addressing the Shekinah (Cant. R. to viii. 14). Regarding the nature of the

Bat Kol it is said (Meg. 32a) that it sounds like a man's voice when heard in the city, and like a woman's in the desert; that it repeats words, like "Yea, yea," and "Nay, nay." According to Soṭah 33a, it was taken to be the voice of angels, particularly of Gabriel, who knows all the world's seventy languages. (See Rashi: "The divine power ["middah"] residing in the Bat Kol makes its announcements in each language according as circumstances demand.") Maimonides ("Moreh," ii. 42; see commentaries) compares it with the voice of the angel heard by Hagar

#### Later Views.

or by Manoah and his wife, it being a degree of prophecy. The same view is also expressed by Judah ha-Levi, in "Cuzari," iii. 11, 41, 73; Nahmanides, Ex. xxviii. 30; Bahya ben Asher to Deut. xxxviii. 7; Tosafot Sanh. 11a explains the Bat Kol as the sound of a voice issuing from heaven, whence the name "the daughter of the voice" (compare Lippman Heller to Yeb. xvi. 6). In apocalyptic literature, the Bat Kol is a special being whose function it is to lead the song of the celestial beings in praise of the Most High around His throne (see Jellinek, "B. H." ii. 45). Concerning a kind of Bat Kol which, in view of its aims, falls into the category of omens, see AUGURY.

L. B.

**BAT-SHEBA**: A family of printers, in the sixteenth and seventeenth centuries, whose name originates from the feminine name "Bath-sheba." The printer **Mattathia Bat-Sheba**, who died at Salonica toward the close of 1600, is the first known representative of the name. His two sons, **Joseph Abraham** and **Abraham**, continued the business of their father at Salonica from 1592 to 1605. The printing-establishment was founded with the support of many patrons in Venice, and numerous important and beautiful specimens of printers' work were issued from it. The mark of the establishment was a figure, half lion, half eagle, with crown; and this sign recurs in the prints at Verona, in the production of which Abraham Bat-Sheba participated (1594-95). It is probable that the latter subsequently lived at Damascus. There is a single book published at Damascus, in 1606, entitled "Kesef Nibhar," by Josiah Pinto; and this was issued from the house of Abraham ben Mattathia Bat-Sheba. The Bat-Shebas who later achieved distinction in Prague were probably members of the same family. Among the best known of these was Jacob BASSEVI VON TREUENBERG, who in 1622 was elevated to the Austrian nobility.

**BATĀLYUSI, AL-HAFIZ ABU MOHAMMED ABD ALLAH IBN MOHAMMED IBN AL-SID AL:**

Arabian philologist; born at Badajoz (whence his name Al-Baṭalyuṣi = native of Badajoz) in the second half of the eleventh century; died at Valencia in 1127 (compare Hartwig Derenbourg in "Revue Etudes Juives," vii. 274-279; Steinschneider, "Hebr. Uebers." § 156). According to the Arabian biographers, Baṭalyuṣi was head of the philological school at Valencia, where "his lectures attracted crowds of pupils" (Ibn Hallikan, ed. Slane, ii. 61; Haji Halifa, ed. Flügel, vii. 1666, No. 6259). Besides many works on grammar and philology, which are enumerated by his biographers, there is ascribed to him a philosophical treatise entitled "Al-Hada'ik" (The Orchard), on the resemblance of the world to an

intellectual circle ("dairat al-wahamiyat"). This work, translated from Arabic into Hebrew by Moses ibn Tibbon under the title, "Ha-'Aggilot ha-Ra'yoniyot" (The Intellectual Circles), was edited by D. Kaufmann (Buda-

pest, 1880), with a long introduction in which he attempts to show the traces of Baṭalyuṣi's theories in Jewish philosophy. In Kaufmann's opinion, Hai Gaon used Baṭalyuṣi's work, as appears from a passage quoted by Moses Botarel in his commentary on the "Sefer Yezirah" (iv. 2). Bahya copied the very words of Baṭalyuṣi in speaking of the numbers ("Hobot ha-Lebabot," viii.). The expression "intellectual circles" (העגולות המושכלות) is found in Gabirol's "Meḳor Hayyim" (Munk, "Mélanges de Philosophie Juive et Arabe," iv. 1). Judah ha-Levi expresses himself in a similar way to Baṭalyuṣi on the gradation of the intelligences ("Cuzari," ed. Hirschfeld, v. 20). Abraham ibn Ezra, in his commentary on the Pentateuch (Ex. iii. 15), takes the same view that Baṭalyuṣi does on the decimal numeration. Ibn Zaddik speaks also of the symbolic signification of the numbers ("Olam Ḳaṭan," ed. Jellinek, p. 49).

**Kaufmann's Comment.** Abraham ibn Daud was influenced by Baṭalyuṣi when he says that the non-existence of the number one can not even be supposed ("Emunah Ramah," ed. Weil, p. 48). The whole system of the negative attributes, the theory of the omniscience of God, and the doctrine of free-will expounded in the "Moreh" are borrowed from "The Intellectual Circles." The Jewish philosophers that directly quoted Baṭalyuṣi's work, or used it without mention, are Joseph ibn Kaspi, Kalonymus ben Kalonymus, Samuel ibn Zarzah, Frat Maimon, Simon Duran, Joel ibn Shoeib, Moses ibn Habib, and Isaac Abravanel. Gazzali's work, "Al-Kistas al-Mustakim," is, in Kaufmann's opinion, a simple plagiarism of "The Intellectual Circles." Derenbourg, in an article on Baṭalyuṣi ("Revue Etudes Juives," l.c.), demonstrates that the latter lived in the second half of the eleventh century, and not in the tenth century, as Kaufmann thought; consequently Hai Gaon, Ibn Gabirol, and Bahya, in spite of the parallels, could not have made use of Baṭalyuṣi's work.

There are, however, many reasons for believing that Baṭalyuṣi never wrote the work in question. First, the very fact that none of the Arabic biog-

raphers and bibliographers mention "The Orchard," but represent Baṭalyuṣi as a grammarian only, is alone sufficient to cast doubt upon the assertion that he was the author of a valuable philosophical work; while in his own field—that is, in his philological works, several of which are extant—he evidences a lamentable mediocrity.

As Kaufmann does not mention that the translator converted quotations of the Koran and of the Islamic traditions into Biblical and Talmudical ones—which would, moreover, be a difficult task, beyond the power of Moses ibn Tibbon—it must be supposed that these Biblical quotations are in the original, and consequently could not have been written by a Muslim. References to the sacrifices (which occur in several passages; for example, p. 48) are also entirely of a Jewish character.

Further, the arrangement of the book and the treatment of the subjects bear a Jewish stamp. But even if the original had Koranic quotations, it would be difficult to assign this book to the beginning of the twelfth century; for it would naturally have been mentioned by some writer before the thirteenth century, especially by Ibn Daud, who in using it would have quoted its author as he quotes Al-Farabi, Ibn Sina, and others. It may safely be asserted that this work was written at the beginning of the thirteenth century by a Jew, or at least by an Arab, who, like Al-Tabrizi, was well acquainted with Jewish philosophy, especially with that expounded in the "Guide of the Perplexed"; and the association of Baṭalyuṣi's name with this book can be easily explained.

As Kaufmann states in his introduction, the greater part of the existing manuscripts of "The Intellectual Circles" bears the name of Ptolemæus (בטלמיוס), which Kaufmann considers to be a corrupted spelling of Baṭalyuṣi (בטליוס). Joseph ibn Kaspi (born 1280), who was the first to quote this work, has also "Ptolemaus" ("Ammude Kesef," ed. Werbluner, p. 10). The British Museum MS. (Cod. Add. 21, 140) bears at the head, "Book of the Intellectual Circles of Ptolemæus" (לִבְטַלְמִיּוֹס), and at the colophon, "End of the Book of the Intellectual Circles of Ptolemæus [לִבְטַלְמִיּוֹס], or, According to Others, of Abu Naṣr" (Al-Farabi). The doubt concerning the authorship expressed in this colophon proves that there were copies which bore either Al-Farabi's name, or, what is more probable, no name at all. The fact that there is not a single word of introduction in the book by the author seems to confirm the last supposition. It is therefore probable that some one, in superficially examining the book, on finding representations of circles, thought of Ptolemæus' astronomical work, "Almagest," and accordingly inserted the name of Ptolemæus (לִבְטַלְמִיּוֹס) as author. This Ptolemæus became later Baṭalyuṣi (בטליוס) through the error of some copyist, who, by chance, knew the name of the philologist Baṭalyuṣi, but not that of Ptolemæus, and considered the "mem" as a repetition of the "yod" and "waw," the "mem" being in many manuscripts easily confounded with "yod" and "waw."

"The Intellectual Circles" are treated of in seven chapters. The leading idea of the first four is this: The world with all its beings forms a circle of which God is the point of departure and that of conclusion. In descending from God, one finds beings in the following order: the nine intellects that govern the nine spheres; the active intellect, which created the sublunary world; the soul; form; and matter. By means of form, matter became animated, and after having given birth to the four elements and to minerals, it served for the production of plants, animals, and, finally, man. The latter by means of his intelligence, which is his distinctive attribute, ascends the series of beings, and returns to God. Consequently the universe is a circle. Further, man, who is the last of the series of the creations made by the active intellect, becomes himself, after his death, an active intellect in ascending the series of creations.

The mind of man moves in a circle. It takes the following course: man, animals, plants, minerals, elements, matter, form, soul, and active intellect, from the last-named of which man comes and whither he returns after his death. Consequently, the sphere composed by the mind of man is a circle.

In the natural order of things, man, as the noblest being of all sublunary creations, must have been created before all other beings; but he was nevertheless the last, in order that he might investigate and comprehend all that came before him. The partial intellect of man is able to understand the universal intellect. Man partakes both of the intellectual and the material world. It is on account of this fact that he is called "microcosmus," and that his mind surveys both the intelligible world and the material.

The series of numbers also forms a circle. It starts from unity, unfolds itself, and returns to its point of departure through ten, which is again a unity. God is the unity par excellence. As the numerical unity produces all numbers, so God produces the world.

The fifth chapter deals with God's attributes. The author develops there the theory of the negative attributes, a theory he certainly borrowed from Maimonides.

The sixth chapter treats of the omniscience of God, and refutes the arguments of the philosophers that limit God's knowledge to generalities alone.

In the seventh chapter the author expounds eight proofs of the immortality of the soul. The greater part of this proof has been drawn from Bahya's "Ma'ani al-Nafs" (Reflections on the Soul).

**BATANAEA.** See BASHAN.

**BATE, JULIUS:** English Biblical and Hebraic scholar; born about 1711; died at Arundel Jan. 20, 1771. He was educated at St. John's College, Cambridge, where he received his master's degree in 1740. He took unusual interest in Old Testament studies, and entered with zest into controversy with

Bishop WARBURTON on his "Divine Legation of Moses," and with KENNICOTT on the *variae lectiones* of the Hebrew text that the latter had published.

Among the works of Bate that call for mention are: "Critica Hebræa, or a Hebrew and English Dictionary Without Points"; "Translation of the Pentateuch, and of the Historical Books to the End of the Second of Kings, from the Hebrew," 1773.

BIBLIOGRAPHY: Nichols, *Literary Anecdotes*, iii. 52; Spearman, *Life of Hutchinson*; *Dictionary of National Biography*, iii. 391.  
T. E. Ms.

**BATH:** City, borough, and capital of the county of Somersetshire, England. Though as old as Roman times—in which it was known as "Aquæ Solis," from its hot springs—Jews do not appear to have resided there until quite recently. It is not mentioned in the twelfth century; and the French Jew who recommends a lad to go to England warns him against Bath as "clearly at the very gates of Hell" (Richard of Devizes, "Chronicon," ed. Howlett, p. 436). In the thirteenth century there was no archa at Bath, and therefore no Jews could live there (see ARCHA). The present congregation was founded about 150 years ago, but has always been overshadowed by the more flourishing congregations of the neighboring city of Bristol. The synagogue is in Corn street.

**BATH.** See WEIGHTS AND MEASURES.

**BATH-RABBIM:** A term found only once in the Bible (Cant. vii. 4), apparently as the name of a gate at or near Heshbon. The passage is obscure; but of the various emendations that have been proposed—by Grätz, "Schir ha-Schirim" ("Rabbath Ammon"); by Winckler, "Altorientalische Forschungen," i. 293 *et seq.* ("Helbon"), and by Cheyne, in "Jew. Quart. Rev." 1899 ("wood of Beth Cerem")—none is entirely satisfactory.

G. B. L.

J. JR.

**BATH-SHEBA.**—**Biblical Data:** The daughter of Eliam (II Sam. xi. 3; but of Ammiel according to I Chron. iii. 5), who became the wife of URIAH the Hittite, and afterward of David, by whom she became the mother of Solomon. Her father is identified by some scholars with Eliam mentioned in II Sam. xxiii. 34 as the son of Ahithophel. The real meaning of the Hebrew form of the name "Bath-sheba" is not clear. The second part of the name appears in I Chron. iii. 5 as "shua" (compare Gen. xxxviii. 2).

The story of David's seduction of Bath-sheba, told in II Sam. xi. *et seq.*, is omitted in Chronicles. The king, while walking on the roof of his house, saw Bath-sheba, who was the wife of Uriah the Hittite and immediately fell in love with her. Hearing that her husband was with the army, David temporarily abducted her; but fearing the consequence of his act, he summoned Uriah from the camp as the bearer of a message. He hoped to hide the consequence of his own complicity in Bath-sheba's condition, and dismissed Uriah to his wife with a portion from the royal table. But Uriah, being probably unwilling to violate the ancient Israelitish rule applying to

warriors in active service (see Robertson Smith, "Religion of the Semites," pp. 455, 488), preferred to remain with the palace troops. The king in desperation gave the order to his general, Joab, that Uriah should be abandoned to the enemy in battle. After Uriah's death David was left free to make Bath-sheba his wife.

According to the account in Samuel, David's action was displeasing to the Lord, who accordingly sent Nathan the prophet to reprove the king. After relating the parable of the rich man who took away the one little ewe lamb of his poor neighbor (II Sam. xii. 1-6), and exciting the king's anger against the unrighteous act, the prophet applied the case directly to David's action with regard to Bath-sheba. The king at once confessed his sin and expressed sincere repentance. Bath-sheba's child by David was smitten with a severe illness and soon died, which the king accepted as his punishment.

Bath-sheba soon became the favored wife, and, with the aid of Nathan, was able to obtain the succession-rights for her son Solomon (I Kings i. 11-31).

J. JR.

J. D. P.

—**In Rabbinical Literature:** Bath-sheba, the granddaughter of Abithophel, David's famous counselor, was only eight years and eight months of age when her son Solomon was born, while some maintain that she was not older than six (Sanh. 69%).

The influence of the evil tempter of humanity brought about the sinful relation of David and Bath-sheba. Bath-sheba was making her toilet on the roof of her house behind a screen of wickerwork, when Satan came in the disguise of a bird; David, shooting at it, struck the screen, splitting it; thus Bath-sheba was revealed in her beauty to David (*ib.* 107*a*). Bath-sheba was providentially destined from the Creation to become in due time the legitimate wife of David; but this relation was immaturely precipitated, and thus he became Bath-sheba's partner in sin (*ib.*).

Bath-sheba is praised for her share in the successful effort to secure the succession to Solomon. Thus the verse in Eccl. iv. 9, "Two are better than one," is applied to David and Bath-sheba; while "the threefold cord" which shall not be quickly broken (*ib.* verse 12) is applied to the activity of Nathan the prophet who joined in the effort (Eccl. R. iv. 9). For further details see DAVID IN RABBINICAL LITERATURE.

H. M. S.

—**In Mohammedan Legend:** The only passage in the Koran which has been brought into connection with the story of Bath-sheba is sura xxxviii. 20-25:

"And has the story of the antagonists come to you; when they climbed the wall of the upper chamber, when they came into David? And when he feared them, they said, 'Fear not; we are two antagonists, one of us hath wronged the other, so judge justly between us. . . . This my brother had ninety-nine ewes and I had one. Then he said, 'Give me control of her,' and he overcame me in his plea.' David said, 'Verily he hath wronged thee by asking for thy ewe as an addition to his ewes, and verily most partners act injuriously the one to the other, except those who believe and work righteous works; and such are few.' And David supposed that we had tried him: so he sought pardon of his Lord and fell, worshiping, and repented. And we forgave him that fault, and he hath near approach unto us and beauty of ultimate abode."

From this passage one can judge only that some echo of Nathan's parable had reached Mohammed. The Moslem world has shown an indisposition, to a certain extent, to go further, and especially to ascribe sin to David. As the commentator Baidawi (*in loc.*) justly remarks, this passage signifies only that David desired something which belonged to another, and that God rebuked him by a parable. At the very most, Baidawi continues, he may have asked in marriage a woman who had been asked in marriage by another, or he may have desired that another should abandon his wife to him—a circumstance which was customary at that time. The story of Uriah is regarded as a slander.

What to Mohammed was probably only a somewhat mysterious exhortation to just dealing was made the foundation of an extensive legend. The subject is called emphatically "the Sin of David." Filled with spiritual pride, he asked a trial from God. One story is to the effect that he wished to gain the same rank that the Patriarchs had enjoyed, and that God told him that he must be tried as they had been. Another is that he thought he could endure a whole day without sin. God accepted the challenge, and Satan came upon him and allured him from his devotions with a dove of gorgeous plumage. It led him to where he caught sight of Bath-sheba bathing. The story then follows the Biblical model, with the following changes: There is no sin with Bath-sheba before the death of Uriah, nor is there the episode of the return of Uriah and his sleeping in the king's house. There is no child that dies, and in the Koranic narrative the part of Nathan is taken by the two angels. After the death of Uriah, David marries Bath-sheba, and she becomes, according to most sources, the mother of Solomon.

To Moslem legend Bath-sheba herself is a very shadowy figure, being generally called simply the wife of Uriah. See Al-Tha'labi, "Kis̄ṣ̄-anbiyya," pp. 243 *et seq.*, ed. Cairo, 1298; and Ibn al-Athir, i. 95 *et seq.*, ed. Cairo, 1301.

G.

D. B. M.

—**Critical View:** Her name, which perhaps means "daughter of the oath," is in I Chron. iii. 5 spelled "Bath-shua" (בַּת־שׁוּא), but since this is probably to be pointed בַּת־שֶׁבַע, the form becomes merely a variant reading of "Bath-sheba." The passages in which Bath-sheba is mentioned are II Sam. xi. 2-xii. 24, and I Kings i. ii.—both of which are parts of the oldest stratum of the books of Samuel and Kings. It is part of that court history of David, written by some one who stood very near the events and who did not idealize David. The material contained in it is of higher historical value than that in the later strata of these books. Budde would connect it with the J document of the Hexateuch.

The only interpolations in it which concern the story of Bath-sheba are some verses in the early part of the twelfth chapter, that heighten the moral tone of Nathan's rebuke of David; according to Budde ("S. B. O. T."), the interpolated portion is xii. 7, 8, and 10-12; according to Schwally (Stade's "Zeitschrift," xii. 154 *et seq.*) and H. P. Smith ("Samuel," in "International Critical Commentary"), the whole

of xii. 1-15*a* is an interpolation, and xii. 15*b* should be joined directly to xi. 27. This does not directly affect the narrative concerning Bath-sheba herself. Chronicles, which draws a kindly veil over David's faults, omits all reference to the way in which Bath-sheba became David's wife, and gives only the names of her children.

The father of Bath-sheba was Eliam (spelled "Amiel" in I Chron. iii. 5). As this was also the name of a son of Ahithophel, one of David's heroes (II Sam. xxiii. 34), it has been conjectured that Bath-sheba was a granddaughter of Ahithophel and that the latter's desertion of David at the time of Absalom's rebellion was in revenge for David's conduct toward Bath-sheba.

G. A. B.

**BATHORI, STEPHEN:** Prince of Transylvania 1571-76; king of Poland 1575-86, in succession to Henry of Anjou, who had left the kingdom in order to occupy the throne of France as Henry III. At this election Solomon Ashkenazi, the physician and adviser of Sultan Selim II., made his master's influence felt in behalf of Bathori.

Bathori instituted an eminently liberal policy with regard to the Jews. In 1576 he issued two orders prohibiting the charges brought against them of ritual murder and of the profanation of the host. In 1575 he issued a decree abolishing all restrictions on Jewish commerce, and permitting the Jews to buy and sell goods even on Christian holidays. In the same decree he also abolished the older law which placed Jewish minors under the guardianship of Christians, and put them instead under that of the Jewish rabbi and alderman. He enforced the old decree of Sigismund I. (1506-48), making municipalities liable for losses incurred by Jews during riots. He also decreed that the murder of a Jew should be punished by death, just as the murder of a Christian.

In the same year, when the Jewish community of Posen was threatened by a Christian mob, Bathori sent strict orders to the city council to take measures for the preservation of order, but without effect. Three months after the issue of this decree, a riot broke out in the Jewish quarter of Posen, accompanied by pillage and several cases of murder. Bathori imposed a heavy fine on the town council, but the members testified under oath that they had not been aware of the contemplated attack, and the fine was remitted. At the diet of Warsaw, Jan. 2, 1580, Stephen confirmed the former privileges of the Jews and granted them some additional advantages in trade and commerce, instructing the city authorities to guard their legal rights.

Further decrees provided that Jews should have the same rights and privileges in the cities as Christians; that they should be under the jurisdiction of the king, except in civil suits; that the citizens should be warned against disturbing Jews in their trade and other occupations; that the children and widows of converted Jews should be warned not to assail the rights of those heirs who remained in the Jewish faith; that Jews should take their oaths only on the scroll of the Law or at the door of the synagogue; and the courts were forbidden to summon Jews on Saturdays and Jewish holidays.

Bathori was the last Polish king who maintained and practised the principle that the Jews constitute a fundamental element in the population and, being a class composed mainly of tradesmen and artisans, should enjoy equal rights with the corresponding non-Jewish classes of the nation. He deserves great credit for preserving the spirit and traditions of a liberal epoch at a time when the Jesuit influence had already begun to assert itself in Poland.

H. R.

**BATHS, BATHING:** The clean body as an index and exponent of a clean soul, and thus of an approximation to holiness, is so natural a conception in the human mind that the records of early Jewish legislation accept the theory without any very definite exposition asked or given. Thus, when Jacob prepared his household to visit the shrine of God in Beth-el, he bade them "purify" themselves (Gen. xxxv. 2). When the people were bidden to prepare themselves for the reception of the revelation on Sinai, they were commanded to "sanctify" themselves; that is, wash themselves and wash their garments (Ex. xix. 10). David, anxious to be pardoned for his transgression (Ps. li., superscription), prays: "Wash me thoroughly from mine iniquity, and cleanse me from my sin" (verses 4 [A. V. 2], 9 [A. V. 7]); and the harlot nation, as Jeremiah designates Judah, is so deeply stained with sinfulness that though it wash with niter

**Symbolic** ness that though it wash with niter  
**Sig-** "and take much soap," its iniquity  
**nificance.** is still marked before God (Jer. ii. 22). In all these periods, then, patriarchal, Davidic, prophetic, the symbolical and spiritually purificative side of Bathing was already recognized, so that Bathing was ordained in preparation for holy rites, upon recovery from sickness, etc. When it is considered how valuable water is in the Orient, and how the average Bedouin of to-day looks upon the use of water for cleansing purposes as an extravagant waste of a valuable necessary of life (see Benzinger, "Hebräische Archäologie," p. 108, note), the free prescription of water for ritual purposes in this fashion becomes remarkable.

Turning to enactments of a general character, the Law ordained that various states and degrees of corporeal defilement (see **ABLUTION**) were to be remedied by the purification of the bath. So, too, he who ate of that which was found dead, whether torn of beasts or from other causes (Lev. xvii. 15, 16), and he who had come into contact with a corpse, a bone, or a grave (Num. xix. 19), were alike required to bathe themselves in water and become clean. The priests, who, as it were, approached closer to the Deity, would naturally be required to exhibit in eminent degree the virtue of cleanliness as a means to godliness; there was, therefore, a laver of brass set in the Tabernacle between the court of the congregation and the altar, and the priests were

**In the** Turning to enactments of a general character, the  
**Torah.** Law ordained that various states and degrees of corporeal defilement (see **ABLUTION**) were to be remedied by the purification of the bath. So, too, he who ate of that which was found dead, whether torn of beasts or from other causes (Lev. xvii. 15, 16), and he who had come into contact with a corpse, a bone, or a grave (Num. xix. 19), were alike required to bathe themselves in water and become clean. The priests, who, as it were, approached closer to the Deity, would naturally be required to exhibit in eminent degree the virtue of cleanliness as a means to godliness; there was, therefore, a laver of brass set in the Tabernacle between the court of the congregation and the altar, and the priests were

required to wash hands and feet therein upon entrance (Ex. xxx. 18-21). The high priest on the solemn Day of Atonement was required to bathe himself repeatedly in token of spiritual purification (Lev. xvi. 24); while the messenger who took away the sin-laden scapegoat (*ib.* verse 26), as well as other attendants at the rite (verse 28), was required to bathe and be clean after contact with the sin-offerings of the day. For various other cases requiring Bathing as a purificative rite, see ABLUTION.

Cognate with the idea of purification prior to appearing before God is naturally that of cleansing oneself before visiting a king or person of prominence (Ruth iii. 3; Judith x. 3). Possibly something of the religious aspect of the practise obtained, in addition to the material one of bodily refreshment, when washing the hands and feet was performed before meals (Gen. xviii. 4, xix. 2; Luke vii. 44). The dusty soil of Palestine and the customary open footgear (sandals) necessitated the frequent Bathing or washing of the feet (Gen. xxiv. 32, xliii. 24; Judges xix. 21; I Sam. xxv. 41; II Sam. xi. 8; Song of Solomon v. 3).

For all purposes of Bathing, the streams and ponds constituted the usual resort (II Kings v. 10); possibly the rain-water supply held by the cisterns in large cities may have been utilized to some extent for Bathing purposes, as in II Kings xi. 2, although, as Benzinger (*l.c.*) observes, no traces of bath-rooms have been found in the houses of the people or even in royal palaces. In Babylon there were possibly bathing-pools in the gardens (Susanna 15), though this passage may refer to simple washing in the open air. It was only when later intercourse brought the Jews into contact with Greek civilization that public

Baths were instituted; the Hellenic origin of such is clearly discernible in such Talmudical words as בִּלְנָה, בִּלְנִית, בִּלְנִית (denoting "bathing-master," "bathing-attendant," "bathing-towel," etc., derived from the Greek *balaneion*; see Jastrow, "Dictionary," for citations). Some reminiscence of the older custom of utilizing rivers and streams for Bathing purposes is preserved, at least for the religious or ritual bath, in the ruling regulation that all such Baths must be taken in water that is continually running and of the minimum capacity of 40 seahs, about 120 gallons (according to Num. R. xviii., the seah [= 3 gallons = 700 cubic inches] was the cubic measure of 144 eggs; according to Yoma 31a, the cubic contents of a space one cubit wide, three cubits long, and one cubit deep, the bulk of the average human body). Some bath-houses were artificially heated (Yer. Ber. ix. 14b). Some idea of the value set upon Bathing in Talmudical times may be gained from the remarkable comment on Lam. iii. 17, "I forgot that which is good" (A. V. "prosperity"), according to which the especial "good" neglected and referred to by the prophet was the use of the bath-house (Shab. 25b). The benefits of the warm Baths of Emmaus ("Ham-math"), near Tiberias (Josephus, "Ant." xviii. 2, § 3); at Callirrhoe, near the Dead Sea (*ib.* xvii. 6, § 5); and at Gadara, in Peræa, were known and appreciated.

In medieval times, Bathing naturally concerned

the Jews, as Jews, from the ritual standpoint only; and one of the first cares of every community was

to maintain the "mikweh," as it was called. The purificative bath ordained in Lev. xv. 19-33 was always held to be one of the most essential of observances; and great stress was laid upon its punctual observance by the women, the above-named requisites of running water and sufficient volume being carefully provided. Indeed, the repeated prohibitions against Jews or Jewesses Bathing in the rivers (see Abrahams, "Jewish Life in the Middle Ages," p. 73, note) necessitated the provision of a special bath-house. The oldest mikweh now existing seems to be that of Andernach, near Coblenz, Germany (see ANDERNACH, where a good typical description of the mikweh is given). For diagrams (section and plan) of the similar institution at Speyer, see Meyer's "Konversations-Lexikon," 5th ed., ii. 311, plate ii.

F. DE S. M.

**BATHYRA**: Fortress and city founded by Zamaris, a distinguished Jew of Babylon, who about the year 20 crossed the Euphrates with 500 mounted archers, and requested a dwelling-place from the Roman governor of Syria, Cn. Sentius Saturninus. When Herod the Great learned of this expedition, he assigned to the troop a piece of land in the township of Batanea, and in this way Zamaris founded the city of Bathyra, which he garrisoned. As freedom from taxation was granted to the colony, many people immediately settled there. The fort not only protected the Jews living in Trachonitis, but at the same time safeguarded the pilgrims going from Babylon to Jerusalem against the attacks of the Trachonites. When the Romans got possession of the land, they respected the authority of the regent, but taxed the people.

The brave Zamaris left an equally distinguished son, Jacimus; and the latter's son Philip formed a friendship with Agrippa the younger, and held a command in his army ("Ant." xvii. 2, § 3). When the revolution in Jerusalem threatened to break out, Agrippa sent the hipparchus Darius and the strategus Philip with 2,000 horse, among whom were some Batanians, to restrain the people ("B. J." ii. 17, § 4). The Zealots carried the day, and Philip was glad to escape in disguise (Josephus, in his "Vita," xi., has a more correct and detailed account than in "B. J." ii. 18, § 6). Fortunately for him, he was seized with a fever in a village under his control near Gamala, probably in territory belonging to Bathyra. Had he proceeded to Cæsarea Philippi, over which Varus had been appointed governor by Agrippa when the latter went to Berytus (not to Antiochia), Varus (not Noares, as in "B. J."), who had designs upon the kingdom, would certainly have put Philip to death as a faithful adherent of Agrippa.

Varus, however, entrapped Philip's countrymen, the Babylonians of Bathyra (the editions have "Ekbatana"), killing seventy of them. The inhabitants of Bathyra took up arms, and went with their wives and children to Gamala, a little further north,

where Philip joined them and persuaded them to remain faithful to Agrippa and the Romans ("Vita," *l.c.*). During the absence of Philip the Gamalites threatened the Babylonians, killed Chares, and maltreated his brother Jesus, because they were relations of Philip. King Agrippa quickly despatched Philip with some horse to Gamala, with instructions to take his relations away and resettle the Babylonians in Batanca (*l.c.* xxxv., xxxvi.).

The city of Bathyra, which was probably called after some person of that name, is not mentioned in rabbinical literature; but probably the eminent Talmud teachers called by that name were natives of this city. Ritter ("Erdkunde," xv. 226) thinks "Bathyra" is identical with the "Bethora" mentioned in the "Notitia Dignitatum"; but the *Βαθυρά*, *Βαθυρά* found in Josephus is the ancient Beth-Choron. According to Richter and Schumacher, the name is still preserved in that of the village Beterre.

G.

S. KR.

**BATHYRA** (commonly called **Betera**, **Beterah** [בתירה, בתירא]): A family whose name is probably identical with that of the city of BATHYRA. The name is so rare that all persons called "Bathyra" in the Talmud and Midrash are included in the one family, although there are no data to prove their relationship. Bacher remarks that it is one of the most difficult questions of tannaitic history to distinguish the several members of this family from one another. According to Z. Frankel, the following can be distinguished:

1. **The Children of Bathyra** (בני בתירא, Pes. 66a) or **The Elders of Bathyra** (זקני ב, Yer. Pes. vi. 33a): It is commonly assumed that they were two brothers, heads of the Sanhedrin under Herod I. But as near relations were not allowed to belong to the same judicial college, they probably were merely compatriots; so that the phrase "Sons of Bathyra" was not a patronymic, but a family name (*nomen gentilitium*). Whether the phrase included two or more persons can not be ascertained. They, however, gave a definite character to the Sanhedrin. Herod favored them probably because they were not Judeans but Babylonians, perhaps forerunners of the colonists for whom the city of Bathyra was founded under Herod. When their ignorance was revealed in reference to the question whether the Paschal lamb may be sacrificed on the fourteenth of Nisan when that date falls on a Sabbath, they modestly resigned their position in favor of the more worthy HILLEL. The children of Bathyra who disputed with Johanan b. Zakkai in reference to the New-Year falling on a Sabbath (R. H. 29b), can not be identical with Hillel's opponents, as about one hundred years lie between them; the latter must have been descendants of the earlier leaders of the Sanhedrin who probably still retained some of their ancestors' reputation.

2. **R. Judah b. Bathyra** (also known as **R. Judah Bathyra**): Eminent tanna. He must have lived before the destruction of the Temple, since he prevented a pagan in Jerusalem from partaking of the Paschal offering. Thereupon he received the

message: "Hail to thee, Rabbi Judah ben Bathyra! Thou livest in Nisibis, but thy net is spread in Jerusalem" (Pes. 3b). Since R. Judah was not present himself at the Passover in Jerusalem, it may be concluded that he was far advanced in years, although as a citizen of a foreign land he was not bound by the law which demanded the celebration of the Passover at Jerusalem (Tos. to Pes. *l.c.*). At Nisibis in Mesopotamia he had a famous college, which is expressly recommended together with other famous schools (Sanh. 32b).

R. Eleazer b. Shammua, and R. Johanan, the sandal-maker, started on a journey to Nisibis in order to study under him, but turned back when they reflected that they were giving preference to an alien country over Palestine (Sifre, Deut. 80). R. Judah b. Bathyra himself undertook a journey to Rome with some colleagues. No sooner had they landed at Puteoli than they returned home weeping (*ib.*). R. Judah once arrived at Nisibis just before the beginning of the fast of the Ninth of Ab, and although he had already eaten, he was obliged to partake of a sumptuous banquet at the house of the chief of the synagogue (Lam. R. iii. 17, ed. Buber; "Exilarchs" in other editions is incorrect). The Mishnah quotes seventeen, the Baraita about forty, Halakot by R. Judah; and he was also a prolific haggadist. Since controversies between him and R. Akiba are frequently mentioned, these being chronologically impossible, the existence of a second R. Judah b. Bathyra must be assumed (Tos. to Men. 65b; "Seder ha-Dorot," ed. Warsaw, ii. 110), who was probably a grandson of the former, and Akiba's contemporary; it is possible that there existed even a third R. Judah b. Bathyra, who was a contemporary of R. Josiah (Sifre, Num. 128) or of R. Judah I. (Hul. 54a; Shab. 130a; see also Midr. Sam. x.); he also seems to have lived at Nisibis (Sanh. 96a; but the version "R. Judah ben Bathyra" is doubtful; see Rabbinowicz, "Dikduke Soferim," *ad loc.*, note 10). It is evident from the cases quoted in Tosef., Yeb. xii. 11 (compare Yeb. 102a), and Tosef., Ket. v. 1 (Yer. Ket. v. 29d; Bab. Ket. 58a; compare Weiss, *l.c.*, 158, and Kid. 10b), that R. Judah b. Bathyra (probably the earliest one by that name) did not quite keep pace with the Halakah as it was formulated in Palestine, and represented rather the earlier standpoint. This R. Judah is probably also the one who now and again is mentioned simply as "Ben Bathyra"; compare Tosef., Pes. iii. (iv.) 8, where R. Judah and R. Joshua dispute with Ben Bathyra. Here again the first and last names, "R. Judah" and "Ben Bathyra," probably belong together, making one name; so that R. Joshua was the only other person concerned (compare Zeb. 12a). In Mishnah, Pes. iii. 3, the editions have "R. Judah ben Bathyra," while the Yerushalmi has only "ben Bathyra." There is one passage, however, where R. Judah b. Bathyra and b. Bathyra are reported as entertaining different opinions (Ta'anit 3a); hence Maimonides takes "ben Bathyra" to be identical with "R. Joshua b. Bathyra."

3. **R. Joshua b. Bathyra**: Mentioned in Mishnah Shab. xii. 5; Yeb. viii. 4; 'Eduy. viii. 1; Parah ii. 5. The names "R. Judah" and "R. Joshua b. Bathyra" being abbreviated in the same way (ר"ב, ר"ש), they are often confounded on being written out after

the abbreviation. Frankel has endeavored to distinguish the two tannaim on the basis of the inner peculiarities of their respective teachings. The chronological difficulties may perhaps best be solved, not by assuming the existence of two or three men by the name of R. Judah b. Bathyra, but by substituting "R. Joshua" for the name of the younger "R. Judah."

**4. R. Simon b. Bathyra:** Occurring in 'Eduy. viii. 1, somewhat earlier than R. Akiba, since the latter adds to R. Simon's words.

**5. R. Johanan b. Bathyra:** Mentioned in Zeb. 63a; probably only a misreading for "R. Judah b. Bathyra" (see Rabinowicz, "Dikduke Soferim," note 50), or "R. Joshua b. Bathyra."

R. Judah b. Bathyra sent from Nisibis three warnings to the scholars in Palestine or Babylonia (Sanh. 96a); the same warnings are in part also attributed to Joshua b. Levi (Ber. 8b), which again increases the confusion. The later compilers ("Pirka" of Rabbi the Holy, ed. Schönblum, 206, and "Ma'ase Torah," in Jellinek, "B. H." ii. 95) mention respectively five and four warnings by R. Judah b. Bathyra. The pseudepigrapha ascribe to R. Judah b. Bathyra the mystic "Sefer ha-Bittahon" (Book of Trust).

The name "Bathyra" or "Beterah" is variously spelled פתירה (Tosef., Naz. v. 1, ed. Zuckerman); פתירש (Tosef., Oh. iv. 14); פתר ראש (Naz. 56b); פטורי or פטורי (Tosef., Soṭah, v. 13, and vi. 1); פתורא (Yer. Shek. iii. 47c).

S. KR.

**BATLANIM** (literally, "unemployed men," "idlers"): Title of the ten men of leisure who, unoccupied by business of their own, devote their whole time to communal affairs and are particularly relied upon to attend divine service regularly at the synagogue. Only such places are regarded as worthy of the name of town as have ten Batlanim for the maintenance of the daily service (Meg. i. 3, p. 5a; Yer. Meg. i. 70b; B. K. 82a; Sanh. 17b). Rashi (see especially B. K. 82a) explains the word in the following passage:

"These ten Batlanim abstained from every other work, being supported by the community for the purpose of attending to all congregational work, but especially to be in time for the regular service"—an allusion to the saying, "When on entering the synagogue God fails to find the ten that form a congregation of worshipers, His anger is aroused" (Ber. 6b).

R. Nissim on Alfasi (Megillah) raises objections to the remark that the Batlanim were supported by the community; but Rashi seems to follow an old tradition.

In Sanh. 17b they are counted among the hundred and twenty elect of a city. It is of especial interest to find that Benjamin of Tudela as late as in the twelfth century met in Bagdad with the institution of the ten Batlanim; he states that "they are the presidents of the ten colleges and are called Batlanim because their sole occupation consists in the discharge of communal business. They give decisions on legal and religious questions for all the Jewish inhabitants of the country, during every day of the

week, except Monday, which is set aside for assemblies under the presidency of R. Samuel, master of the college Gaon Jacob, who on that day dispenses justice to every applicant, and is assisted therein by the ten Batlanim, presidents of the colleges" (Benjamin of Tudela, ed. Asher, Hebrew text, pp. 60 *et seq.*; English translation, p. 101). Levy ("Neuhebräisches Wörterb." ii., s.v. בן and בטל) correctly identifies the Batlanim with the "bene-ha-keneset," (the men of the synagogue) (Bek. v. 5, p. 36b). This would make them a survival of the Hasideans, the original founders of the synagogue. Modern times made the institution of ten Batlanim, receiving some compensation from the congregation for regular attendance at divine service, again a necessity, in view of the fact that private men could not always be relied upon; hence many synagogues adhering to the olden ("orthodox") ritual employ hired worshipers, called "Minyan-men."

**BÁTOR (BREISACH), SZIDOR:** Hungarian composer; born at Budapest Feb. 23, 1860. He passed through the realschule and polytechnic in his native city, and at the same time attended the National Conservatory and the Academy of Music. His teacher in composition was Robert Volkmann, who recognized the musical talent of his pupil and encouraged him to follow a musical career. Bátor has composed a number of operettas, which have been successfully performed at the Volkstheater in Budapest; as also accompaniments to a large number of Hungarian songs, pianoforte pieces, ballet music, etc. His works are: "A Milliomosnő," operetta, in collaboration with Béla Hegyi; "Uff Kiraly," operetta in three acts; "A Titkos Csök," operetta in three acts; "A Bor," ballet in three acts; songs to the folk-piece "Az Arendás Zsidó"; "Falun" and "Alkonyatkor"; ten Hungarian folk-songs; a string quartet; a trio; a piano quartet; a sonata for cello; and a suite for a stringed orchestra. Among his more recent compositions the trio for harp, violin, and cello established his fame in Germany and secured a publisher for him there. In 1901 he published an overture performed at the philharmonic concert in Budapest.

**BAUER, BRUNO:** Christian theologian, philosopher, and historian; born Sept. 6, 1809, at Eisenburg, duchy of Saxe-Altenburg; died April 13, 1882, at Rixdorf, near Berlin.

While Bauer regarded emancipation from the thralldom of medievalism as the object of modern civilization, he had no sympathy whatsoever with the Jews' struggle for political, social, and religious emancipation. At the time when the Jews of Germany strove hard to obtain their long-withheld political freedom and equality, and when many, in order to assert their full claim to citizenship, went so far as to urge the rejection of every vestige of Orientalism from their religious life, Bauer published an

article in the "Deutsche Jahrbücher," 1842, on the Jewish question, afterward republished with additions, as a separate book under the title "Die Judenfrage," Brunswick, 1843, in which he sides with the bitterest enemies of the Jews. He finds the continual oppression of the Jews by the Christian state perfectly justified. He declares that by their loyalty to their own history they stand in opposition to the powers that be, because religion and race force them to live in perpetual separation from the rest of mankind, and that the fact of their being Jews prevents them from being perfect men. Judaism, whether it be based on the Mosaic or the Talmudic law, has, in Bauer's opinion, no claim to a share in the world's progress and freedom; since, by its very nature, it is "stability immovable as the hills." Nor, indeed, says he, have the Jews ever contributed anything to the work of civilization; Spinoza was no longer a Jew when he wrote his "Ethics"; and Maimonides and Mendelssohn were no thinkers at all. He ridicules the Reform movement among the modern Jews, and denies them the very right of modernization. Thus, in his opinion, there is absolutely no salvation for the Jew, not even if he should join the Christian majority. Bauer's mode of dealing with the Jewish question is significant as an instance of German liberalism. A similar article by him in Wagener's "Staatslexikon," reprinted in pamphlet form under the title "Das Judenthum in der Fremde," Berlin, 1863, is characterized by the writer of the article on Bauer in Herzog-Hauck's "Real-Encyclopädie," 1897, as "rich in contents and noteworthy"; whereas Steinschneider, in his "Hebräische Bibliographie," vi. 6, deplores the fact that "a liberal man of originally eminent talent could sink so low as to lend his name to such twaddle."

Bauer's attack on the Jews evoked replies from Gabriel Riesser in Weil's "Constitutionelle Jahrbücher," ii. and iii.; Samuel Hirsch, "Das Judenthum, der Christliche Staat und die Moderne Kritik, Briefe zur Beleuchtung der Judenfrage," Leipzig, 1843; G. Salomon, "Bruno Bauer und Seine Gehaltlose Kritik," 1843; W. Freund, "Zur Judenfrage," 1843; S. Holdheim, in his "Autonomie der Rabbiner," 1843; K. Gruen, "Gegen B. Bauer," Darmstadt, 1844; and last, but not least, from Abraham Geiger, in his "Wissenschaftliche Zeitschrift für Jüdische Theologie," v. 199-259, 325-371—a rich literature which contains valuable material for the history of Jewish emancipation and reform.

**BAUER, GEORGE LORENZ:** Christian author of a theology of the Old Testament; born at Hipolstein, Bavaria, Aug. 14, 1755; died Jan. 13, 1806. In 1789 he was appointed professor of philosophy and Oriental languages at the University of Altdorf, and in 1805 professor at the University of Heidelberg, where he died. He was one of the most scholarly and active advocates of the rationalism of the "Period of Enlightenment." He published

twenty-three volumes on Old Testament subjects alone. These, though meritorious for their time, were essentially compilatory and lacking in original ideas, and consequently did not exert a lasting influence.

Bauer's name deserves to be rescued from oblivion because he was the first scholar to produce a theology of the Old Testament. His work, "Theologie des Alten Testaments," appeared anonymously in 1796, and was based on the program of his Altdorf colleague, Johann Philipp Gabler, "De Justo Discrimine Theologiæ Biblicæ et Dogmaticæ Regundisque Recte Utriusque Finibus" (1787). It was followed by "Beilagen zur Theologie des Alten Testaments" (1801); "Hebräische Mythologie" (1802); "Biblische Moral des Alten Testaments"; and "Breviarium Theologiæ Biblicæ," the last-named work being a summary of the conclusions contained in his other works.

**BAUER, JULIUS:** Austrian humorist; born at Raab-Sziget, Hungary, Oct. 15, 1853. Bauer was educated at home until 1873, when he went to Vienna to study medicine. Being poor, he wrote for the local comic papers, and, to his surprise, did so well that he forsook medicine for journalism. For some time he lived in quiet obscurity, when one of a series of satirical articles in a Vienna paper, signed "Don Spavento," drew attention to Bauer and enabled him to gain a firm foothold in the literary world. In 1879 he became the dramatic editor of the "Wiener Extrablatt," in which he published among other articles a satire on Jókai's "Der Goldmensch," which induced Director Jauner, of the Theater an der Wien, to engage Bauer as librettist.

In this capacity he wrote jointly with Hugo Wittmann the libretti for Millöcker's "Der Hofnarr"; "Die Sieben Schwaben"; "Der Arme Jonathan," and "Das Sonntagskind"; as well as "Die Wienerstadt in Wort und Bild" (farce); "Zur Hebung des Fremdenverkehrs" (farce); "Im Zeitungsver-schleiss." He wrote also a number of topical satires and poems.

**BAUER, MARIE-BERNARD:** Chaplain of the Tuileries, Paris; born 1829 at Budapest, Hungary; died 1898. Through the Carmelite priest Augustin (whose actual name was Hermann Cohen), Bauer, after an adventurous youth in which he tried all sorts of *métiers*, including painting and photography, became a convert to Catholicism in Paris and a member of the Carmelite Order, which he, however, left later. He distinguished himself as a pulpit orator, first at Vienna, where he delivered a series of addresses, which were published (1866) under the title "Le Judaïsme Comme Preuve du Christianisme." Eventually he attained to the rank of a bishop. In 1867 he became father confessor to the Empress Eugénie. On Nov. 17, 1869, he delivered the dedicatory address at the opening of the Suez canal. After the downfall of the empire,

Bauer exchanged the bishopric for the turf, and became a faucier of race-horses. Besides the lectures mentioned, he published a series of sermons, "Le But de la Vie" (1869), and a pamphlet, "Napoléon III. et l'Europe en 1867."

**BAUER, MORITZ:** Austrian physician; specialist in vaccination; born at Vienna Feb. 25, 1844. He received his education at his native town, where he attended the gymnasium and university. After obtaining his doctorate in 1870, he was appointed physician of the Wiedener Hospital, but resigned the position in 1872 to engage in private practice. He was a member of the chamber of aldermen for the district of Margarethen from 1882 to 1885, and since 1883 has been secretary of the Medizinische Doctoren-Collegium. Bauer has paid especial attention to vaccination, in which field he is recognized as an authority. He has added to his local reputation by the establishment of an institute for animal vaccine. Bauer's manifold experiences in vaccination have been embodied in his work "Die Schutzpocken-Impfung und Ihre Technik, mit Besonderer Berücksichtigung der Impfschäden, Ihrer Verhütung und Behandlung," Stuttgart, 1890.

**BAUMGARTEN, B. KÁROLY:** Hungarian jurist; born at Budapest Sept. 21, 1853, where he also finished his education; brother of Isidor Baumgarten. From 1876 to 1892 he practised law in Budapest, at the same time editing the technical journal "Buntető Jog Tára." In 1892 he became judge of the Court of Commerce and Exchange in Budapest and president of the Appellate Council, in which capacity he exercised a powerful influence upon the development of the judicature. In 1898 he was appointed a judge of the Supreme Court at Budapest.

**BAUMGARTEN, EMANUEL:** Austrian author and communal worker; born in Kremsier Jan. 15, 1828. In his youth he frequented various yeshibot, acquiring secular learning in private; and in 1848 he went to Vienna, where he devoted himself to commercial life, at the same time attending lectures at the university. Baumgarten was elected to the Sechshaus municipal board in 1861, being one of the first Jews in Austria to be elected to such an office; he was made warden of the temple of Vienna in 1870; and was in 1872 elected a member of the board of the Jewish congregation of that city, in which capacity he displayed a great and beneficent activity. A prominent part was taken by him in the foundation of the Bet ha-Midrash in Vienna, in which such men as Isaac H. Weiss and M. Friedmann found an opportunity to develop their talents; and he was one of the founders of the ISRAELITISCHE ALLIANZ and represented the congregation in the state's boards of education. The emperor honored him by granting him an order of merit; and on the occasion of his seventieth birthday he was the recipient of enthusiastic ovations.

Baumgarten is the author of a Hebrew poem on the occasion of the escape of Emperor Francis Joseph from assassination, Vienna, 1853; a German translation of Bahya's "Duties of the Heart," with the Hebrew text, Vienna, 1854; "Ruth, a Hebrew Epic," Vienna, 1865; "Einige Worte über den Weinhandel und die Weinkultur in Oesterreich," Vienna, 1866. He edited: "Blutbeschuldigung Gegen die Juden, von Christlicher Seite Beurtheilt," Vienna, 1883; "Megillat Sedarim," being Abraham ben Mordecai's memoirs, relating the history of the synagogue of Aussee, which was destroyed because of false accusations preferred by a Catholic priest, Berlin, 1895; "Gutmeinung über den Talmud der Hebräer von Carolus Fischer," Vienna, 1883; Benjamin Israel Fränkel's "Yeshu'at Israel," memoirs relating the history of the Jews in Moravia during the wars between Frederick the Great and Maria Theresa, Berlin, 1898; "Maria Theresia's Ernennungsdekret für den Mährischen Landesrabbiner Gerson Chajes," Berlin, 1899; "Zur Mährisch-Aussee Affaire," Breslau, 1901. He was also a frequent contributor to the daily press of Vienna and to Jewish periodicals printed in German and Hebrew.

**BIBLIOGRAPHY:** *Neue Freie Presse*, Vienna, January 14, 1898; *Ha-Zefirah*, Warsaw, Feb. 12, 1898.

**BAUMGARTEN, ISIDOR:** Hungarian jurist; born March 27, 1850, at Budapest, where he completed his education. Upon his graduation as doctor of law he resided abroad for several years. In 1882 he was admitted to the bar, and in 1885 became a lecturer on criminal jurisprudence at the University of Budapest. He later entered the service of the state as assistant district attorney; and in 1886 was appointed judge (Gerichtshofrichter) of the Court of Budapest, and in 1896 district attorney, which position he held until 1898, when he received the appointment of chief of division (Sectionsrath) in the royal Ministry of Justice. As such he actively participated in the formulation of the new process of legal procedure, particularly distinguishing himself in the debates on the projected supplementary laws to the penal code, and in the organization of the International Congress on Criminal Procedure, held at Budapest in 1899.

Baumgarten is one of the most distinguished jurists of Hungary. His works are: "A Kisérlet Tana," 1885, highly praised by the Hungarian Academy of Sciences; "A Tett Azonosság Kérdéséhez," 1889; "A Kettős Házasság Elévülésének Kérdéséhez," 1886; "Az Előzetes Letartóztatás és Vizsgálati Fogságról," 1890; etc., etc. Baumgarten is also a frequent contributor to publications on jurisprudence.

**BAUSK** or **BAUSKE:** District town, government of Courland, Russia. According to the census of 1897 the population was 6,543, including some three thousand Jews. The principal occupations of the latter are commerce and handicrafts, Jewish artisans numbering 295. About 150 families yearly receive alms at Passover. Two government and three private schools are attended by 50 Jewish pupils;

the Talmud Torah, by 70 children. Besides, private teachers give instruction to about 130 children.

S. J.

[The following is a list of the rabbis of Bausk in the nineteenth century:

1. Rabbi Mordecai ben Abraham RABBINER.
2. Rabbi Aaron, 1830-33.
3. Rabbi Jacob, 1833-62; died at Bausk 1862. Author of "Zikre Ya'akov," published in Wilna.
4. Rabbi Mordecai ben Joseph Eliasberg, 1862-92; a descendant of Mordecai Jaffe, and prominent in the Zionist movement.
5. Rabbi Ezekiel ben Hillel Lifschitz, 1892-95. He held the office of rabbi at Suwalki and Lublin, and is now (since 1895) rabbi of Plotzk.
6. Rabbi Abraham Isaac ben Solomon Kook, since 1895. Some of his novellæ on the Talmud are published in "Tebunah," a periodical devoted to Talmudic literature, edited by Israel Lipkin.

Among the other members of the Jaffe family in Bausk, the most prominent were: Lazar Rosenthal, the most celebrated cantor (hazan) in Russia in the last quarter of the eighteenth and the first quarter of the nineteenth century; died at Bausk in 1831; and Jedidiah Jaffe, who was awarded a medal by Emperor Nicholas I. for useful educational work among the Jews of Courland. See JAFFE FAMILY. H. R.]

**BAVARIA:** Kingdom in southern Germany. The settlement of Jewish merchants in Bavaria dates from the very earliest times. The legend that they dwelt in certain cities—as, for instance, Regensburg and Augsburg—before the Christian era, is undoubtedly fictitious; having been invented to prove that their ancestors had not been among those Jews who killed Jesus. For, while the old Germanic legislation of the sixth and seventh centuries abounds with regulations concerning the Jews, there is not the slightest trace of such laws in the "Leges Bajuvariorum" of the same period. The oldest known document mentioning Jews is an ordinance in the "Leges Portorix" of the year 906 concerning the toll in Passau. It is not until the eleventh century that they appear in the arena of history. The

**Earliest** founder of the present royal house, **References.** Duke Otto I. of Wittelsbach, allowed Jewish settlers, who had advanced him money for the erection of the city of Landshut, certain privileges of asylum in recognition of their public spirit. But it must be confessed that there is no other kingdom in Germany where religious hatred has raged so furiously against the Jews as Bavaria, and that nowhere else has exceptional legislation against them been so persistently maintained. In the Bavarian hereditary provinces, where the Jews lived exclusively in cities, they were more frequently exposed to sudden outbreaks of popular fury than in the Franconian bishoprics and free cities; while their existence was comparatively undisturbed in the lowlands, where many Jews lived in the domains of free lords and under their semi-patriarchal government.

The first Jewish martyrs in Bavaria fell at the time of the Crusades; but while only a few separate communities—particularly those on the Main—suffered then, in 1276 Louis the Strict banished all Jews

residing in the country. This was the first banishment of Bavarian Jews, but it could not have lasted long; for nine years later 180 Jews, accused of a ritual murder in the synagogue, were committed to the flames. The outbreak of 1298, which arose from a charge of insulting the host, and extended over all the district from Franconia to the Austrian frontier, chiefly affected the congregations of Bavaria. Mordecai ben Hillel, the well-known author of a halakic compendium, together with his fam-

**Repeated Massacres and Expulsion.** ily, was among the 628 victims who fell in Nuremberg on one day (Aug. 1, 1298). Driven from the country again by Louis the Bavarian in 1314, the Jews were soon permitted to return, but only to experience further misfortune. In 1338, on a charge of insulting the host, the whole Jewish population of Deggendorf was massacred, and the agitation spread thence over all Bavaria. The murderers at Deggendorf and Straubing were not only pardoned by the duke, but were honored by an edict of commendation; and a memorial church was erected upon the spot, to which, until recently, pilgrimages were made from all parts of Bavaria. The whole episode was actually dramatized, and a representation of the play was given in Regen as late as the year 1800. At the same time (1336-38) the communities in Franconia and Swabia were attacked by the peasants led by ARMLEDER, who claimed to have received a divine call to massacre Jews.

Ten years later about 10,000 Jews in Bavaria fell victims to the bloody epidemic of superstition which accompanied the Black Death. Salfeld's recently published "Martyrologium des Nürnberger Memor-buchs" enumerates nearly eighty Bavarian congregations which suffered almost complete extinction at that time. Numerous churches consecrated to the Virgin are to-day the standing relics of former synagogues, upon the ruins of which they were erected. It was not very long, however, before the dearth of capital in the country made itself felt so severely that Duke Louis, who had not hesitated to pounce upon the possessions of the murdered Jews, felt himself constrained to issue a special proclamation that Jews thenceforth settling in Bavaria would receive particular marks of his favor and protection.

In the fifteenth century it would be difficult to indicate any region where the Jews were not treated as outlawed aliens. When, in 1442,

**The Duke Albrecht, surnamed for this act**  
**Era of Ex-** "the Pious," banished them from forty  
**pulsions.** towns and villages of Upper Bavaria, they found refuge in Lower Bavaria under Henry of Landshut, who, with his well-known reputation for accepting gifts from all sides, welcomed the Jews and their not inconsiderable contributions; indeed, he is said to have boasted of these "chickens that laid golden eggs." Under his successor, Louis the Wealthy—sometimes called "the enemy of kindness and of the Jews"—their condition became worse. Louis conceived the idea of their wholesale conversion to Christianity; but, after detaining them for four weeks in various prisons, and fining them 32,000 florins, he banished them outright (Oct. 5, 1450). The same fate was meted

out to the numerous congregations of the Franconian bishoprics and free cities, as a result of the inflammatory sermons preached by Capistrano and the baptized Jew Peter Schwartz.

But Jews found even more stringent conditions elsewhere; and, in spite of all they had suffered, they again made their way back to their Bavarian homes. Only the edict of 1551 demanded by the estates and issued by Albrecht V. had any lasting effect,—when the Jew Josel of Rosheim, representing the German congregations, had to guarantee that Jews would never again set foot upon the soil of Upper or Lower Bavaria—an example followed in 1555 by the upper Palatinate and placed upon the statute-book. An honorable exception to all this prejudice was afforded by the town of Sulzbach, celebrated with Wilhelmsdorf and Fürth for the large number of Hebrew books printed there. Its duke, Christian August, a great admirer of the Cabala, invited the Jews who had been expelled from Vienna to settle on his domain, and accorded them certain privileges, which, in view of their services rendered on the occasion of the Austrian invasion of 1541, were repeatedly confirmed and augmented.

Meanwhile Upper and Lower Bavaria were for nearly two centuries free from Jews. When, during the Spanish war of succession, Jews had again surreptitiously entered the country, and had made themselves indispensable by their financial connections, the elector Maximilian Emanuel failed in compassing their expulsion, although he alleged that "it would accord with Bavaria's inherited zeal for religion and deliver his subjects from evident harm." The municipal authorities told him plainly that it could not be done, because they had guaranteed immunity to the Jews in return for the employment of their funds. In 1756 the county of Sulzbach thus harbored Jewish families, limited in number, however, to thirty; and when the union of the provinces in 1777 drew the attention of the government to this class of their population, it had already dawned upon the authorities that the time had come for ideas more in keeping with the age, and that Jews might be made useful subjects of the state.

The history of the Jews in Bavaria thus presents the curious spectacle of a well-defined body of subjects toward whose material ruin both Jewish Church and state conspired for the space of nearly a thousand years. The same spectacle, however, modified here and there by particular enactments, is presented by the history of the Jews throughout all Germany. The Jew was not permitted to hold public office; admission to schools and universities was denied him; he was deprived of the honor of bearing arms and of all burgher rights; and outside of the ghetto walls he was made conspicuous by a badge. He could not help feeling himself a foreigner in a home which persistently treated him as one. Those who should have protected him—whether the emperor, whose "serf" he was called through medieval times, or the duke or other authority, who "owned" him—considered him simply as an object of financial consideration and as a source of revenue. Soon, however, the Jews of Bavaria came to exert considerable influence in the sphere of finance to which

their circumstances limited them. Members of the flourishing congregation of Fürth (1719) held the most intimate financial relations with various German courts, and busily engaged in trade and manufacture. Capital was for the greater part in their hands; finance and banking—the source of their prosperity, as also of their misfortunes—were quite generally controlled by them.

A perverted legislation thus made them the benefactors of, and at the same time, as it were, parasites upon, the communities in which

**Usury.** they dwelt. For, whereas the treaty in 1244 and that of 1255, between the dukes and bishops of Bavaria, decreed that Christians might borrow from Jews at 4½ per cent interest, the Augsburg law, which was adopted by Munich and Ingolstadt, declared that every Jew was obliged to lend upon pledges when they were of higher value than the loan asked. Such peculiar circumstances could not fail to lead to economic troubles of various kinds, to remedy which further unwise legislation was invoked. Thus the Jews suffered repeatedly from extortion by the official cancellation of debts due to them, or by arbitrary reduction of the rate of interest. In this connection the frequent financial operations of Emperor Wenzel, between 1385 and 1390, need only to be mentioned.

There were, however, departments other than that of commerce in which the Jews of Bavaria distinguished themselves, in spite of all their unfavorable circumstances. It is even said that

**Spiritual Life.** a Bavarian Jew, Tipsiles of Augsburg, invented gunpowder. Many masters of the mint were Jews; physicians are found in the service of lords and even prelates. The troubadour Suesskind von Trimberg is said to have served at one time in the Würzburg leper hospital; and in 1516 a complaint was made in Regensburg that people insisted upon engaging Jewish physicians.

But the special field of Jewish scholarship was theology. That dialectical treatment of the Talmud, known as "pilpul," had its origin in Bavaria. Speyer became a seat of this learning and the home of a school of Tosafists; while the rabbis of Regensburg were celebrated as early as the twelfth century. There, too, labored the celebrated mystic Judah he-Hasid, author of the "Sefer Hasidim," whose contemporary, Samuel of Babenberg, was a Tosafist and the teacher of Rabbi MEIR OF ROTHENBURG. In the fifteenth century, besides Israel of Nuremberg, whom Emperor Ruprecht in 1407 appointed as "Hochmeister [chief] over all rabbis, Jews, and Jewesses of the German empire," there lived the following scholarly authors of responsa:

**Authors.** Jacob Weil, in Nuremberg and Augsburg; Israel Bruna, in Regensburg; and Moses Minz, in Bamberg.

In the sixteenth century, besides the author of "Tosafot Yom-Tob," who was also a Bavarian, lived Samuel Meseritz, the author of "Nahlat Shiba," and Elijah LEVITA of Neustadt, the celebrated grammarian, and instructor of learned Christians in Hebrew and the Cabala. In the seventeenth century there were, of first importance, Enoch Levi of Fürth, who was intimate with Wagenseil, professor at the

university in the neighboring city of Altdorf, and his nephew, Bärman Fränkel, rabbi of Ansbach. Both of these were of the Fränkel family, which rose into prominence as favorites at the court, and the most celebrated member of which, ELKAN, a favorite of the margrave of Ansbach, known by his rivalry with the court Jews of the Model family in Fürth, met with such a tragic fate. In the eighteenth century lived the celebrated ichthyologist Marcus Eliezer Bloch, and the court painter Judah Pinhas. In their religious affairs the congregations of Bavaria, in which an ascetic form of piety prevailed, were autonomous; and they had their own courts for the adjudication of civil disputes among Jews. In some districts, such as Würzburg and Ansbach, these congregations were united into a corporation ruled by a chief rabbi, who was regarded as their representative by the outside world.

The nineteenth century saw the Jews of Bavaria approaching nearer to their desire—that of being recognized as full citizens of the country which they longed to call their fatherland. On Nov. 10, 1800, the elector Max Joseph announced that thenceforward adherence to the Catholic Church would no longer be held an essential requisite for residence in Bavaria. Unfortunately, however, this act of tolerance was declared (Sept. 21, 1801) not to apply to Jews, because, it was alleged, the ordinances of Judaism contain many observances incapacitating Jews from civil rights. The ungenerous barriers of the age could only be removed piecemeal. In 1804 Jews were admitted to the schools; in 1805 they were allowed to bear arms; in 1808 the Jewish poll-tax was abolished.

In the new possessions, which formerly belonged to Franconia or Brandenburg and were afterward annexed to Bavaria, the Jews remained under the old laws of these territories. The great increase, however, of the Jewish population necessitated a uniform legislation, which was first attempted in the "Religionsedict" of 1809. Under this law the

#### Modern Leg- islation.

Jews were considered as a religious society (*Privat-Kirchengesellschaft*), and its conditions were regulated by various orders, which later on were comprised in the edict of June 10, 1813. This edict pronounced the Jews full citizens of Bavaria as regarded their duties; but as concerned their rights, they were only half-citizens. It contained many enactments in the vein of the new spirit of liberality; but side by side with them were survivals of the narrowest medievalism. An example of this latter was the "Matrikel-Gesetz" (registration-law), in effect an echo of the old Pharaonic law against Jewish increase in numbers. Whoever had no "Matrikel" (license) could found no family, or, as it was commonly expressed, for such a one "the path to the wedding-canopy led only over the coffin of one who had already been registered." Exceptions were made in favor of agriculturists, artisans, and manufacturers; the government desiring to turn the Jews away from commercial pursuits. Similarly, freedom of residence was restricted. The result of all this was that one-half of the Jewish youth of Bavaria emigrated to the United States, where a great many acquired wealth and at the same time

laid the foundation for the more comfortable circumstances of the Jews of Bavaria in the period next ensuing.

While Rhenish Bavaria enjoyed the liberty dating from the French occupation, in the other parts of the country the edict of 1813 remained in force. In 1819, when the first Bavarian Diet assembled, the larger congregations sent prominent men to Munich, under the leadership of Samson Wolff Rosenfeld, rabbi in Uehlfeld and Bamberg, author of many pamphlets on "Emancipation,"

to work for the complete enfranchisement of the Jews; and their efforts were not altogether unsuccessful. The delegates themselves expressed the desire for a revision of the laws governing the Jews, and the Diet promised compliance with their request. Unfortunately, however, the succeeding Diet allowed itself to be influenced by the "Hep-hep" cries of Würzburg, which spread over all Franconia and beyond the frontiers of Bavaria; and it declared, May 13, 1822, that the time for the emancipation of the Jews had not yet arrived. Statistics of the day show that of 53,402 Jewish souls, there were 252 families supporting themselves by agriculture, 169 artisans, and 839 factory hands.

It was not until the revolution of July that, following the lead of other south German states, the Bavarian Diet in 1831 again took up the Jewish question. These debates were immortalized by the tribute paid to them by Gabriel Riesser ("Werke," ii. 373); viz., that throughout the whole of them not one voice was raised in hatred against the Jews. The Diet unanimously called for unrestricted emancipation of the Jews; but the Abel ministry allowed the matter to drag along until the Jewish claims were buried in the general reaction which followed. A convention of Jewish scholars and congregational representatives, called by the state in 1836, to frame a general constitution, produced no results. Successive diets took up the Jewish question, only to dismiss it after a little random discussion. The Jews meanwhile had not been idle among themselves. An association for industrial and humanitarian pursuits, founded in Hürben in 1836, did not accomplish much; but a society for the furtherance of the professions and manual labor in Munich, which is still active to-day, was more successful. In 1844 there were 4,813 artisans and 1,216 agriculturists among the Bavarian Jews. In 1846 the legislative chamber again expressed itself most warmly in favor of a revision of the still effective edicts, and of the abolition of all exceptional laws.

The Revolution of 1848 benefited the Jews not only by giving them the right of suffrage, but also by causing the presentation of an emancipation law to the Diet in that year. The Revolution and the adoption of the same as a part of 1848. of the constitution. But the Upper House refused to pass it (Feb. 16, 1850).

Under Maximilian II., however, the remaining barriers were thrown down. A resolution of the Diet, Nov. 10, 1861, abolished all restrictions with regard to residence and occupation; but the final decision of the ministry (June 29, 1863) contented itself with the most necessary regulation of the ecclesiastical

affairs of the Jews, who were still looked upon as merely a tolerated private religious society. It was not until the federal law of July 3, 1869, enacted in Bavaria, April 22, 1872, that the legal enactment of equal rights for all took place. It is true the realization of such rights in state and social life still leaves much to be desired, in spite of the energetic stand taken by King Ludwig II. against anti-Semitism, and in spite of the fact that, during all this long period of struggle, the Jews of Bavaria have attained eminent positions in society and in the various departments of mental and material activity.

In 1812 the court banker A. E. Seligmann of Munich, in consideration of services to the crown extending over a period of forty years, was raised to the hereditary barony under the title of "Von Eichthal." In 1819 the court banker and landowner Jacob Hirsch of Königshofen, near Würzburg, who in the revolutionary war had raised and armed a battalion at his own expense, was also raised to the barony, as was later his son and successor, Joseph von Hirsch of Gereuth (1805-85), father of the celebrated philanthropist of that name. In 1820 the banker Westheimer of Munich placed 300,000 florins at the disposal of the city to improve the water-supply. The first Jewish attorney in Bavaria, Dr. Grünsfeld of Fürth, was appointed by King Ludwig I. in 1834 by mere accident; but in 1849 Dr. Karl Feust and Counselor Berlin of Fürth were regularly appointed, and both of them later received the Order of St. Michael. A nephew of the last-mentioned, Dr. Max Berlin, in Nuremberg, was the first Jew appointed a judge (1872). In the army were Major Marx and Captain Henle; while a banker, Obermaier of Augsburg, has become major-general of the "Landwehr" (reserve); and a notary, Dr. Ortenau of Fürth, is auditor of a reserve regiment. Non-hereditary nobility has been conferred upon the two brothers Henle, who occupy high positions in railroad administration, and also upon Consul von Wilmersdörfer and on "Justizrath" Jacob Haussmann of Munich.

Among the more eminent Bavarian Jewish families mention may be made of the philanthropic house of the banker Königswarter of Fürth, and of Dr. William Königswarter (1809-87), honorary citizen of that town, who constituted it, on his death, sole heir to his fortune. Among parliamentarians were the manufacturer Dr. Morgenstern (1814-82) of Fürth, who was the first Jew in Bavaria to be elected to the Diet in 1849—singularly enough, from a district in which no Jews resided. In the Diet he successfully defended Jewish rights, with the result that a proposition to withdraw the suffrage from them was rejected by a large majority. Fischel Arnheim (1812-64), a lawyer of Bayreuth, was another representative who valiantly defended his coreligionists in debate, and also succeeded in securing the passage of many laws of general utility. Wolff Frankenburg (1827-89) of Nuremberg, for twenty years a member of the Bavarian Diet, and leader of the Liberal party, was distinguished as an orator and as an authority upon railroad and military affairs. It was through him that the Jewish poll-tax, formerly paid to the Church, was abolished. He was also for four

years a member of the Reichstag. Other members of the Bavarian Diet were Maisson, a manufacturer of Munich, and Judge Gunzenhäuser of Fürth.

Among Bavarian scholars are the following: David Ottensosser of Fürth, well known as exegete and Bible translator; Aaron Wolfsohn (1754-1835) of Fürth, belonged to the school of the "Meassefim," and was a founder of the institution known as "Society of Friends" in Berlin; Jacob Herz (1816-71), who was for twenty-nine years

privat-docent at the University of Erlangen before he received his appointment as the first Jewish professor in Bavaria, was a celebrated surgeon. He so distinguished himself in two great wars by his humanity, unselfishness, and skill, that to him was accorded the honor of a statue erected by public subscription, the first statue to a Jew in all Germany.

It is a remarkable fact that from the celebrated yeshibah of the strictly Orthodox rabbi Wolf Hamburger in Fürth (1770-1850), a number of distinguished scholars have proceeded, who have become celebrated as eloquent representatives of Reform. Of these may be mentioned David Einhorn, M. Lilienthal, H. Hochheimer, Von Schwabacher in Odessa, Loewi in Fürth, Stein in Burgkundsstadt and Frankfort-on-the-Main, Gutmann in Redwitz, Joseph Aub in Berlin, Adler in Kissingen and Cassel, Löwenmeyer in Frankfort-on-the-Oder, Grünebaum, author of the "Ethics of Judaism," in Landau, and others. From the same circle proceeded likewise a pillar of Orthodoxy, Seligman Beer Bamberger, successor of Abraham Bing and founder of the Teachers' Seminary in Würzburg. Outside of it stood Max Grünbaum (died 1898 in Munich), at one time in the Hebrew Orphan Asylum in New York, and author of a Jewish-German and a Jewish-Spanish chrestomathy; also Raphael N. Rabbincowicz, author of the monumental "Dikduke Soferim." The latter can not be mentioned without grateful reference to his Mæcenas, Abraham Merzbacher. In quite recent times Perles in Munich, and H. Gross in Augsburg, author of "Gallia Judaica," have distinguished themselves by scholarship. The brothers Emil and Philip Feust, prominent as journalists, may also be mentioned. In art, Hermann Levi of Munich has labored successfully for the popularization of Wagnerian music; and Toby Rosenthal and Israel, as painters of Oriental subjects, occupy acknowledged positions among Bavarian artists.

It is, however, especially in industries that the Jews of Bavaria have earned recognition. Fürth, sometimes called "Little Jerusalem," owes its prosperity to its Jewish inhabitants. Here Gosdorfer founded his mirror-factory, George Benda his bronze-foundry, both of which export largely to the United States. Ullmann (died 1898) founded a large business in toys and hardware. The royal lumber industry of the Bavarian and Alpine forests was also

organized by a Regensburg Jew of the name of Loewi. The Jews of **Jewish Industries.** Nuremberg, Fürth, and Bamberg control the hop business: in the first-named town, indeed, general export trade has in reality only existed since the Jewish settlement there.

The cattle trade is entirely in the hands of the country Jews.

The 356 Jewish congregations of the kingdom contain 53,750 souls, or about 1 per cent of the total population.

**BAYNUS (BAYNE), RUDOLPHUS:** A Christian Hebraist of Cambridge; professor of the Hebrew language in Paris about the middle of the sixteenth century. He was the author of the work "Compendium Michlol" (also with the Hebrew title, "Kizzur ha-Helek Rishon ha-Miklol"), containing a Latin abstract of the first part of Kimhi's Hebrew grammar, and dealing methodically with the letters, reading, nouns, regular and irregular verbs, prefixes and suffixes (Paris, 1554).

M. B.

**BAYONNE:** Fortified city in the department of Basses-Pyrénées, in the extreme southwest of France. It is divided into Great and Little Bayonne and into the suburbs of St. Esprit, which latter is separated from Bayonne by the rivers Adour and Nive. A Jewish community existed first at St. Esprit. It was founded, after the expulsion of the Jews from the Iberian peninsula, by detached groups of fugitives from Navarre and Portugal, where in order to save their lives they had had to submit to baptism. For this reason on their arrival they were styled "New Christians" or as being of the "Portuguese nation." Outwardly, they conformed strictly to all the practises of the Catholic religion, but in their homes they remained true to the faith of their fathers. No document exists that definitely determines the time of their arrival in the region about Bayonne. A certain number of them are known to have been, at about 1520, in St. Esprit, St. Jean de Luz, and Biarritz. Several families that had just settled in Bordeaux were expelled from that city in 1597 at the instigation of their coreligionists, and established themselves at St. Esprit, Peyrehorade,

Bidache, and La Bastide Clairence, where they remained, although occasionally disturbed by a decree of expulsion like that of Henry IV., which, however, was not executed. Their status was regulated by a series of letters patent from Henry II. (1550, 1574, 1580), which were confirmed by later letters patent from Louis XIV. in 1654, from Louis XV. in 1723, and from Louis XVI. in 1777. At the beginning of the seventeenth century they relaxed in their observance of the Christian religion; and in the middle of the century they discontinued its practise entirely, openly avowing their own faith. After this

Ark of the Law in the Bayonne Synagogue.  
(From Léon, "Histoire des Juifs à Bayonne.")

they were called Portuguese Jews. Up to the French Revolution they were almost incessantly engaged in quarrels with the city of Bayonne and in suits against it on account

**History.** of its refusal to grant them the right

of sojourn and the permission to carry on retail trade. The National Assembly in 1789 accorded them, as well as the Jews of Bordeaux and Avignon, the rights of citizenship. After this they were incorporated into the body of citizens professing other faiths than the Catholic, and were thus enabled to settle in Bayonne and acquire property there; but the majority continued to reside, and still reside, at St. Esprit. During the Revolution, when their synagogues were closed, the Jews of Bidache and La Bastide Clairence left those places to establish themselves at Peyrehorade and St. Esprit. In the Assembly of Notables convened by Napoleon I. the Jews of the department of Landes were represented by Castro, the younger Patto, and Andrade, rabbi of St. Esprit; the Jews of the Basses-Pyrénées, by the

younger Furtado and Marqfoy of Bayonne. In the Great Sanhedrin they were represented by Marqfoy and Andrade. On the organization of the French consistories the community of St. Esprit-Bayonne was attached to that of Bordeaux.

When the Jews of Bayonne could devote themselves to the untrammelled observance of their religion, they established rules for the guidance of the community. The first statutes go back to 1752. Up to the Restoration the two principal institutions

were: La Hébéra, for charity and the general administration of the **Institutions.** synagogue; and the Talmud Torah, for the elementary and religious in-

struction of the young. New regulations concerning various institutions were made in 1826. In 1844 the community was raised to a consistory, with its seat at St. Esprit, its rabbi receiving the title of grand rabbi. After the union, in 1857, of the Jews of Bayonne and St. Esprit, Bayonne became the chief place for the consistorial circumscription. At this time the various institutions were reorganized, new ones were created, and old ones abolished. Henceforth the direction of religious matters was entrusted to a special administration under the control of the consistory. The Hébéra continued to administer charity and to care for the cemetery; and in 1859 it was charged with the superintendence and administration of the asylum for the sick, the aged, and the orphaned, founded that year through the generosity of the bankers D. Salzedo and A. Rodriguez.

The Talmud Torah school, which had always been supported at the expense of the Jewish community, became a public school in 1848. Its first principal was M. Moreau, and he was succeeded by M. David Lévy. In 1887, in consequence of a decree secularizing all public schools, it ceased to exist as a secular school, but continued its religious instruction under the same name. A school for girls, connected with a day nursery, was established in 1845. Its superintendent in 1900 was Mlle. Cossid.

In 1894, owing to an appeal by Zadoc Kahn, grand rabbi of France, and through the initiative of the grand rabbi Emile Lévy, the Association des Etudes Juives was formed at Bayonne. During the winter it gives lectures on Jewish themes, and places at the disposal of its members a library on Jewish subjects. La Société Protectrice de la Jeunesse Israélite was instituted in 1850 by children aged thirteen years to continue the work of the society Malbish 'Arumim; that is to say, to provide poor Jewish children with clothing. The idea of such a society was conceived by Gersam Léon and Camille Delvaile, the latter of whom was still president in 1900. Not long after its foundation this society consolidated with the Society of Arts and Trades, begun by Messrs. Moïse Salzedo and Virgile Léon. Despite initial difficulties, it has gradually extended its scope, and now prepares boys and girls leaving school, for either a manual trade or a profession.

The grand rabbi, A. Astruc, with the assistance of certain ladies, especially of Mme. Heine-Furtado, founded in 1889 a crèche for children of all sects. The children are received as infants, and supported until able to work and maintain themselves. Besides

these there are divers institutions: to subsidize scholars and all that work in behalf of religion; to provide for boys and girls in apprenticeship; to enable workmen to rest on the Sabbath; and to furnish dowries to poor young girls.

So long as the Jews of St. Esprit were forced to conceal their religion, they had to do without a synagogue; and, in order to recite the prayers, they met in small groups at different houses. The ceremonies were conducted by the more educated among them, several of whom had the title of rabbi or of hakam. There were six such places for prayer-meetings. The chief one was called the "yeshibah." The anniversary of its inauguration at the end of the eighteenth century is celebrated annually on the thirty-third day of the Omer by religious ceremonies, by the singing of Hebrew and Spanish songs, and by the distribution of cake among children. The yeshibah embraced the Talmud Torah school, and was the meeting-place for scholars who studied and discussed the Bible and the Talmud. After the inauguration of the present synagogue in 1835, all these meeting places were closed except the Brandon synagogue, which till 1872 was used for services on week-days. The new synagogue is simple and imposing. It is surrounded with buildings that con-

tain homes for the officers, rooms for study, and a mazzot-bakery. It has a choir composed of thirty volunteer members and of twelve children, whose songs, ancient and modern, give impressive coloring to the religious ceremonies.

After the Jews of St. Esprit began to enjoy a little liberty in the practise of their religion, they ceased to bury their dead in Catholic cemeteries, and to have their children baptized, and their marriages solemnized in the Church. In 1654 they bought a burying-ground, which was expropriated by the state in 1680. The Jews in the same year acquired the vast cemetery still in use. In the towns near Bayonne, at Bidache and at La Bastide Clairence, the ancient cemeteries are sole witnesses to the existence of communities now extinct. At Peyrehorade there are only six Jewish persons, and in consequence the synagogue was closed in 1899; but there are three cemeteries, the first established in 1628, the second in 1737, and the third in 1826.

Since the foundation of the consistory of Bayonne its successive heads have been Auguste Furtado, Emile Léon, and Virgile Léon. The president in 1900 was Dr. Delvaile. Among the early

rabbis there are three of whom only the names are known: Isaac Avila, Isaac de Mercado, Israel Al. Baïz. **Representative Men.** Later came Isaac Costa (died 1729), author of a book on the conduct of life, entitled "Via de Salvacion," 1709; Raphael Meldola (died 1748), originally from Italy, author of numerous works, among others a collection of rabbinical responsa edited by his son David Meldola at Amsterdam, 1737; his contemporaries, the learned hazan Daniel Alvarez Pereyre and the rabbi Abraham David Léon, who published sermons on the festivals, entitled "Instrucciones Sagradas y Morales," 1765; Israel Raphael Abravanel de Souza (died 1748);

Jacob Athias (died 1791); Andrade, appointed grand rabbi of Bordeaux in 1808; David Hezekiah, son of Jacob Athias (died 1822); and his son, Jacob Israel Athias (died 1842). His successor was Samuel Marx, who, at the time of the creation of the consistory of Bayonne in 1846, was promoted to the dignity of the grand rabbinate. At his death in 1887, Elie Aristide Astruc, first a rabbi in Paris, then grand rabbi of Belgium, was elected. He accepted, but retired after four years, and was succeeded by Emile Lévy, rabbi of Verdun, who was installed in April, 1892.

The Jewish population of Bayonne numbered 1,100 souls in 1728, 1,000 in 1753, 1,100 in 1808, 1,200 in 1828, 1,293 in 1844. As the result of serious social and economic disturbances, the population has since begun to diminish.

**D.** **E. LÉ.**  
**BAYREUTH:** Principality and capital city of the government district of Oberfranken, Bavaria. Mention is first made of the Jews of Bayreuth in a document of the year 1343. In that year Kalman of Bayreuth is spoken of as one of the creditors of the burgrave Johann von Nürnberg, and in 1356 Emperor Karl IV. granted the burgrave Friedrich the privilege of receiving Jews into his territory. It is also known that during the persecutions at the time of the Black Death the Jews of Bayreuth suffered considerably. The Jewish community must, however, have originated in earlier times, and there are indications that as early as the fourteenth century it was of considerable size and importance.

Thus, in 1372, R. Meyer of Bayreuth was appointed "Hochmeister" (chief rabbi) of the two principalities of Bayreuth and Ansbach, and at the bidding of the burgrave Frederick V. was endowed with full authority over all the Jews in those districts; and in 1384 the monastery of Langheim owed the Jews of Bayreuth and Culmbach 8,000 pfund heller.\* The ghetto in Bayreuth is said to have been built by six foreign Jews in 1441. It is mentioned in connection with some buildings in 1448, and in 1453 a citizen is said to have bought a Jew's house that had been standing after the Hussite wars.

According to the Stadtbuch of Bayreuth, the ledgers of the Jews were not valid for judicial proof. They were not allowed to sell anything in secret, nor could they take in pawn bloody garments, church utensils, or the armor and weapons of citizens. On the other hand, tolerably favorable charters were granted to them by the city of Bayreuth in 1464 and by the elector Albrecht in 1473. According to the latter, no Jew was obliged to stand and answer a Christian, except in the former's home and before a representative of the prince, two pious Christians, and two Jews in good repute. For protection, the Jews paid annually a sum total of 800 florins, and in addition gave the margravine 700 florins, the eldest prince 100 florins, and the second 50 florins.

\*A heller is an old German coin equal to one-eighth of a cent.

In the fifteenth century, two Jews acted as physicians to the elector Albrecht I., whose residence was in Bayreuth. The following century, however, the sixteenth, brought doubt and uncertainty to the Jewish community of the principality. The Diet resounded with complaints of the states against the dangerous competition of the Jews, and with requests to expel the betrayers and calumniators of Christianity. Numerous orders of banishment followed. As early as 1488 they were expelled from the dominions of the margraves Frederick and Sigismund, and in 1515 this example was followed by Margrave Troublous. George the Pious, who, however, allowed the Jews to return in 1528, Margrave Christian, also, intended to banish them, and was dissuaded only by his wife, Maria. Most of these orders were repealed too quickly to have a serious effect, but those affected by them withdrew from the cities, where they had been tolerated only in restricted districts and in limited numbers, and removed to the territories of the feudal gentry. The center for all the Jews of the district—who formed a corporation called the "Landjudenschaft"—was the provincial rabbinate, which had its seat at Baiersdorf. In 1695 Mendel Rothschild, the rabbi at Bamberg (and ancestor of the Freiherr von Rothschild), who officiated at the rabbinate of Bayreuth and Baiersdorf, drew up letters of protection and of privileges for all the Jews then living, or thereafter settling, in the land and the principality. These letters of protection were afterward withdrawn, and new ones were granted by Margrave Georg Wilhelm at his accession in 1712. In 1715, however, the latter again restricted the Jews' privileges, and in 1733 their right of marriage was restricted by Margrave Georg Friedrich Karl, who had wished to expel them as early as 1731. The Jews of Bayreuth were thus dependent wholly on the whims of the margraves, and this uncertain state would have been utterly unendurable for them had not some of them understood how to turn the chronic money difficulties of their rulers to their own and their coreligionists' advantage.

Of the many Jewish officials and followers in the princes' retinues whose names are preserved in history, the following perhaps deserve to be specially mentioned: Moses Goldschmidt, a learned man of Baiersdorf, originally of Hamburg, whom the margrave Georg Friedrich Karl raised to the position of chief rabbi of the province in 1728; Salomon Samson, who had been "resident" of the prince at Baiersdorf in 1708, and who, with his brother, Veit Samson, was appointed warden of the community by the above-mentioned margrave in 1728; and Moses Seckel (Seetzel), the court purveyor and banker, who, in 1759, bought a minor palace belonging to the princely house at Bayreuth. This building, which is still standing, he converted into a synagogue and almshouse, where ten Jewish families obtained residence. In the same year, 1759, Benjamin Hirsch Krambambuli of Posen was given permission to settle at Bayreuth and to brew liquors according to the Danzig way; he made no use, however, of this privilege. Jewish

chess-players, with a salary as high as 200 florins, were engaged (1746-47) to provide entertainment at court, and an annual salary of 300 reichsthaler, paid from the privy purse of the prince, was given to the Jewish painter Judah Löw Pinchas (born in Lehrberg, 1727), who was appointed court miniature-painter by Margrave Friederich in 1753. He must have been an artist of great merit, for on the recommendation of the margrave's daughter he was called to Berlin, where he painted the portraits of Frederick the Great and the Prince of Orange. Bayreuth can boast also an eminent scholar, the grammarian and lexicographer Elias Levita (1469-1549), born in Neustadt-on-the-Aisch, who everywhere, except in his native land, enjoyed the highest respect as a teacher of learned non-Jews.

With 1810, when the principality was joined to the kingdom of Bavaria, the history of Bayreuth as an independent province ceases.

In 1769 fifty-five families were living at Bayreuth, and in all of the margrave's dominions there were three hundred and fifty families, of which one hundred and thirteen were at Baiersdorf. A census taken in 1787 shows that their number had risen to three hundred and fifty-four families, whose wealth at that time was estimated to be 278,000 florins. In 1805 an enumeration showed 2,276 Jews in the Bayreuth province of the Franconian circle. In 1900 the city of Bayreuth had about 420 Jews in a total population of 27,700, and in 1901 it had 425 Jews.

Until 1787 the Jews of Bayreuth were buried at Baiersdorf, Burgkundstadt, and Aufsess, but on Dec. 20, 1786, they acquired a cemetery of their own.

Among prominent rabbis of Bayreuth the following should have special mention: Samson of the family of Judah Selke of Langenlois, one of the Austrian exiles of the year 1670, who was rabbi of Baiersdorf and Bayreuth until 1687; David Dispeck (born 1723; died 1794), author of the homiletic work "Pardes David," who was appointed in 1785; his son Simon, assistant rabbi in Baiersdorf; the latter's successor, Wolf Fellheimer, 1806-26; administrator of the rabbinate, Veitel, 1828-29; Dr. Joseph Aub (born at Baiersdorf 1805; died at Berlin 1880), rabbi at Bayreuth from 1829 to 1852, and editor of "Sinai," a magazine favoring the Jewish Reform movement; Dr. Israel Schwarz, 1852-57; Dr. Julius Fürst, 1859-73; administrator of the rabbinate, the

**Prominent** teacher Dachauer, 1873-81; and Dr.

**Per-** Salomo Kusznitzki, appointed in 1881.

**sonalities.** Other prominent Jewish personalities of Bayreuth have been Fischel Arnheim (Bayreuth, 1812-64), lawyer, honorary freeman of the city of Hof, and for many years its representative in the Bavarian Parliament; the well-known surgeon Jacob Herz of Erlangen, who with his brother, the engineer Von Herz of Vienna, was born in Bayreuth; and Hofrath Dr. Engelmann, for a long period director of the district home for the insane. Among the living are: Dr. Stein, surgeon-general; Von Wilmersdörfer, consul-general, living in Munich; and Haarbürger, judge (*Oberlandesgerichtsrath*) and professor in Munich.

A. E.—A. F.

**BAZARJIK**, or **TATAR BAZARJIK**: A small town of eastern Rumelia, twenty-four miles from Philippopolis, containing a Jewish community of 1,700 in a total population of 17,000. It is said to date from the year 1492, or, according to Bianconi, from the expulsion under Philip II. toward the end of the sixteenth century. There are three tombs of undoubted antiquity, namely, that of Samuel Béhar Abraham, who died in 1644; that of Peni, wife of Solomon Levi, who died in 1659; and that of Rabbi Isaac Azriel, who died in 1709. Among other antiquities may be mentioned a scroll of the Law, in the possession of the congregation, written by a certain Rabbi Albo in 5547 (1686); another scroll, by Hayyim Israel Galipapa, a rabbi of the seventeenth century; and a set of silver "bells" for the scrolls, presented to the synagogue in 1774 by one Abraham Sedi. Strange to say, the Jews of Bazarjik have preserved no chronicle of any important events in their history. The native Mussulmans of Tatar origin—hence the name "Tatar Bazarjik"—terrorized Bulgarians and Jews indifferently. During the Russo-Turkish war (1877-78), the Jews of Bazarjik, having been deserted by the Turkish garrison, made their peace with the Russian general Gourko.

The present (1902) chief rabbi is Menahem Finzi, a man of advanced years. He succeeded his father Jacob Finzi (1773-1848), who was the author of "Zekut Abot," a work printed in Belgrade by Moses Alcalai. This work is a commentary upon the "Ethics of the Fathers."

Bazarjik has two Jewish schools (one attended by 182 boys and the other by 298 girls), both founded and supported by the Alliance Israélite Universelle. The Alliance has likewise cared for the apprenticeship of Jewish boys to various trades; so that the town contains Jewish blacksmiths, saddlers, joiners, tailors, shoemakers, and tinsmiths. The main business, however, in which the Bazarjik Jews engage is the wholesale commerce in grain. In general the Jewish residents are in comfortable circumstances, each family being independent and owning its own house. Even the buildings occupied by the local government administration, such as the courthouse, post-office, telegraph-office, and public bath, are owned by Jews.

D.

M. FR.

**BAZE, ABRAHAM DE**: A prominent Jew in the principality of Orange, Burgundy, at the beginning of the sixteenth century. When the Jews were forced by a decree of Philibert of Luxemburg (issued at Courthezon April 20, 1505) to quit Orange, a period of four months was accorded, during which they could reenter the principality, without, however, being allowed to pass the night there. Abraham

de Baze and Johann Cohen were charged with the strict enforcement of this regulation.

**BDELLIUM** (בדלה "bedolah"): A precious stone mentioned in Gen. ii. 12 by the side of gold and the "shoham" stone as one of the chief products of Havilah. Since manna is compared in appearance to Bdellium (Num. xi. 7), it may be concluded that the latter was generally known among the Hebrews, and was considered very precious. The meaning of the word is not quite certain. The Septuagint translates it in Genesis with *ἀνθραξ* (anthrax), in Numbers with *κρίσταλλος* (crystal), thus interpreting it as a precious stone. Similarly, Reland and others regard it as crystal. Bochart ("Hierozoicon, sive de Animalibus Scripturæ Sacræ," ii. 674-683), who places Havilah on the Arabian coast, interprets "bedolah" as equivalent to "pearl," following Saadia, Kimhi, and others (compare Lagarde, "Orientalia," iii. 44). Most plausible seems the statement of Josephus ("Ant." iii. 1, § 6), who identifies manna with Bdellium (*βδέλλιον*). Dioscorides ("De Materia Medica," i. 80) describes this Bdellium as "the tear of an Arabian tree." It is therefore a resinous substance; according to Pliny ("Historia Naturalis," xii. 35), transparent, fragrant, resembling wax, greasy to the touch, and of a bitter taste. Pliny furthermore says that the tree on which it is found is about as large as an olive-tree, with leaves like the holm-oak and fruit like the wild fig; that it grows in Bactria—where the best Bdellium is found—Arabia, India, Media, and Babylonia. This description is not sufficiently clear to enable one to classify the tree; but most probably it belongs to the *Balsamodendron*.

I. BE.

**BE ABIDAN** (בֵּי אַבִּידָן) and **BE NAZREFE** or **NAZRUFÉ** (בֵּי נַצְרֻפִּי, נַצְרֻפִּי): Supposed names of two places where, according to the Talmud, disputations between Jews and non-Jews were held. The location of these places is as much a matter of dispute as the words themselves—were they really names of places or merely distorted designations for certain non-Jewish institutions? The data given in the Babylonian Talmud are as follows (the passages are not found in the Palestinian Talmud): At the time of Hadrian, Jewish scholars were required to come to Be Abidan, or to give an excuse for their absence ('Ab. Zarah 17b; Shab. 152a). It is furthermore mentioned that Abba Arika visited neither Be Abidan nor Be Nazrefe, while his friend and colleague, Samuel, freely visited the former place, avoiding only the latter (Shab. 116a). The "books of Be Abidan" (סְפָרֵי דְּבֵי אַבִּידָן) are also mentioned (Shab. l.c.) in a way which shows clearly that they are similar to the סְפָרֵי מִיָּנִים, mentioned elsewhere in the Talmud, being the sacred Scriptures of the Judæo-Christians.

In view of the fact that one place could not have served as the seat of disputation both for the Palestinians and, a century later, for the Babylonians, the following dilemma arises: Either the expressions

"Be Abidan" and "Be Nazrefe" are merely general names for places where Jews and non-Jews met to discuss religious topics, or the Talmud designated thereby things that were related but not identical, and transferred Babylonian conditions to Palestinian soil. Jastrow takes "Be Abidan" to be a scornful appellation for בֵּי וועדא ("a place of gathering"), Joel and Löw for בֵּי אַבִּינִי ("house of the Ebionites") and "Be Nazrefe" for בֵּי נַצְרֵנִי ("house of the Nazarenes"); the two expressions being used for the gathering-places of the Jewish Christians. This and similar explanations are controverted by the fact that Abba Arika and Samuel lived in Babylonia at a time when the Christians were utterly without influence; while the passages which mention the disputations at Be Abidan presuppose not Christian, but pagan opponents. Decisive against this supposition is the passage in 'Erubin 80a and 'Ab. Zarah 48a, which recounts that the heathen priests brewed beer from the fruit of a number of trees to supply the demand on the feast-days at Be Nazrefe; and it is evident that this assertion of the Babylonian amoraim must refer to conditions in their own country.

It may therefore be assumed with certainty that Be Abidan and Be Nazrefe were two places, which, in the first half of the third century—they are not mentioned in later times—were considered in Babylonia to be the intellectual centers, where Jews and Persians disputed on religious subjects. They must have been so important that the Talmud applied the general name "Be Abidan" to those localities where disputations between Jews and non-Jews occurred, in the same way that the "Academies" of Berlin or Vienna are spoken of, without reflecting that "Academia" was the garden of Academe in Athens, where Plato taught. It may be mentioned that an astrologer of the name of Abidas, the Greek equivalent of Abidan (Epiphanius, "Hæres." i. 56, ed. Migne, i. 990) disputed about the year 200 with Christians in Persia; hence "Be Abidan" may mean, linguistically and actually, the place where Abidas or his followers had a school. "Be Nazrefe" may be referred to the name of the place Zerifin, which was known to the Arabian geographers, or to Assyrian "nazraptu" (crucible), Be Nazrefe being a place where crucibles were made.

**BE RAB** (בֵּי רַב = "teacher's house"): A name which, in the Talmud, has various meanings and occurs in a variety of combinations. Its immediate signification, however, is "academy of a tannaite or amora" (compare 'Er. 73a), for which the Jerusalem Talmud substitutes the fuller form "Bet Rab-

bal" (house of the teacher; Yer. Sanh. x. 28a). The most frequent citations in Talmud and Midrash beginning with the phrase רבני [תני] תנא, "a tanna from the academy of Rabbi N. N." (Hul. 42a, and frequently), are taken from the collections of the tannaites Simon b. Yohai, Eliezer b. Jacob, Ishmael, Rabbi, and the semi-tannaim Hiyyah and Hezekiah. At the same time citations are found which are designated as emanating from the אנדרה ("Haggadah collection"; Sanh. 57b); "sifra" (book; Ber. 11b, 18b); "she'ar sifre" (other books; Yoma 79a; B. B. 124b) of the academy, without stating which academy is meant. So far as SIFRA and SIFRE as cited are concerned, however, there can be no doubt that under these names are meant the well-known halakic-haggadic commentaries upon Leviticus, Numbers, and Deuteronomy respectively.

It is doubtful which tannaitic Midrash was meant by the "she'ar sifre." That it was only another name for "Sifre" can scarcely be correct: it is far more likely that the ordinary Mekilta or that of Simon b. Yohai was meant, although the quotation in Yoma 74a agrees verbatim with Sifra, Emor. xiv. 102a, ed. Weiss. The meaning of the words "Be Rab" in these collections is open to question. That Akiba was not meant, as some suggest; that it was not he who was briefly styled "the teacher," and that the works mentioned were not those of this teacher, is evident from the fact that the principal parts of the Sifre to Numbers emanated from the school of Ishmael—a school directly opposed to that of Akiba. Another conjecture is that the "Rab" referred to in "Be Rab" is the celebrated amora Rab (ABBA ARIKA), who is mentioned as the last editor of the Sifra. Nevertheless, despite Maimonides and many modern scholars who have followed him, the name of this amora can not be associated with Be Rab. This is evident from the phrase, "Tanna debe rab," which is occasionally cited in the Talmud, where, as Hoffmann shows, it can have no reference whatever to Rab. The explanation of "Be Rab" given by this scholar, and based upon Sherira Gaon's statements, is probably the only admissible one. "Be Rab," in all the before-mentioned instances, means only "academy," and "sifra" and "sifre" are simply the books of this academy—that is, such books as were officially recognized—while other baraita ("outside") collections (compare BARAITA) were excluded therefrom. An authority of a tradition found in Sifra (Shemini, v. 50b, ed. Weiss) is quoted in the Talmud as Tana-de-rab (Hul. 66a). See MEKILTA, SIFRA, SIFRE.

**BEANS** פול ("pol"): The well-known vegetable, mentioned twice in the Old Testament. In II Sam. xvii. 28 it is referred to as a foodstuff along with wheat, barley, and lentils. How it was prepared for the table is not known; it was probably boiled and roasted. Ezekiel (iv. 9) is commanded to bake bread from wheat, barley, Beans, lentils, millet, and spelt, from which fact it may be deduced that Beans were used as a substitute for corn-meal in times of famine. The name "pol" has remained until to-day to denote the so-called field-beans (*Vicia Faba*, Linn.), that have always been found in all lands in the vicinity of the Mediterranean sea. It is the *κίναος* of the Greeks. The bean found in Syria to-day and known as the garden-bean (*Phaseolus*) is of another kind. Its present designation, "lubiye," is evidence that it was not introduced into Palestine in olden times.

J. JR.

I. BE.

**BEAR** דוב ("dob"): An animal often mentioned in the Old Testament, and evidently not rare in Palestine and Syria. Next to the lion, the Bear is regarded as the most formidable enemy of mankind (Amos v. 19), although he must be very hungry to attack man without provocation. The protection of his flock from the lions and bears constitutes the shepherd's most difficult task (I Sam. xvii. 34). The prophet can therefore appropriately use the metaphor of "the cow and the bear feeding together," as an emblem of the profound peace of Messianic times (Isa. xi. 7). The tender love of the female Bear for her cubs was well known to the Hebrews. A female Bear that has been robbed of her young is the picture of ungovernable wrath (II Sam. xvii. 8; Prov. xvii. 12; Hosea xiii. 8). In the apocalypse of Daniel (vii. 5) the Bear, on account of its greediness, is represented as a symbol of the Median empire, greedy for lands. At the present time the Bear is extinct in Palestine proper, and is only occasionally met with in the Lebanon district.

The Syrian Bear (*Ursus Syriacus*) is distinguished from the ordinary type of brown Bear by a somewhat lighter color and an appreciably smaller stature. The brown Bear is found almost everywhere in the north temperate zone.

**BEARD.**—**Biblical Data:** The modern Oriental cultivates his Beard as the sign and ornament of manhood: he swears by his Beard, touching it. The sentiment seems to have been the same in Biblical times. According to the Egyptian and Assyrian monuments, all western Semites wore a full, round Beard, evidencing great care. Long beards, as found on later Babylonian and Assyrian sculptures, representing the highest aristocracy, do not, however, seem to have occurred among the Jews. [The elder ("zakēn"), probably received his name from his long Beard, as "bene barbatus."]

The frequent assertion that the upper lip was shaved is incorrect. According to II Sam. xix. 24 (Hebr. 25), the mustache ("safam"; A. V. "beard") received regular "trimming" (thus A. V., after the Vulgate; the Hebrew "doing" is as general as in

English). Anointing of the Beard seems to be referred to in Ps. cxxxiii. 2 (contrast the neglect of the Beard in I Sam. xxi. 14 as a sign of madness). In II Sam. xx. 9, taking a man by his Beard is, possibly, a sign of special friendship.

To mutilate the Beard of another by cutting or shaving is, consequently, considered a great disgrace, II Sam. x. 4 ("plucking out," Isa. l. 6). Mourners bring a sacrifice by disfiguring themselves in this way: see references to cutting off, in Isa. xv. 2; to clipping, in Jer. xlviii. 37; and plucking off, in Ezra ix. 3 (contrast Jer. xli. 5, where shaving is found even in the presence of the Lord, with the prohibition, Lev. xix. 27, xxi. 5). The latter seems to mean specially the corners; *i.e.*, sides, the clipping or shaving of which produces a pointed Beard. In distinction from the settled Semites, the nomadic tribes of the desert wore such a pointed Beard (compare Jer. ix. 25, xxv. 23, xlix. 32). On Egyptian representations, see W. M. Müller, "Asien und Europa," p. 140. The shaving prescribed for lepers seems

intended to call public attention to this dreaded disease (Lev. xiv. 9).

The business of the barber (Ezek. v. 1) may, outside of ceremonial shaving, have consisted in trimming and polling.

In Gen. xli. 14, Joseph's

Captive Jew with Clipped Beard.  
(From the British Museum.)

shaving does not belong to the Palestinian, but to the Egyptian, custom. The Egyptians of the higher classes shaved the Beard carefully; fashion allowing only sometimes a small tuft under the chin. The long, pointed chin-tuft of the primitive Egyptians (preserved among their Hamitic relatives, the Libyans and the inhabitants of Punt) was kept as an artificial Beard, tied to the chin on state occasions and at religious ceremonies. Of the other nations coming in contact with Israel, the Hittites and the Elamitic nations shaved the Beard completely, as the earliest Babylonians had done (in part?).

A.

W. M. M.

—**In Rabbinical Literature:** That "the adornment of a man's face is his beard" (Shab. 152a) was a favorite saying among the Jews of Palestine in the second century of the common era; two centuries later, the expression "adornment of the face" was current among the Babylonian Jews as a designation for the Beard (B. M. 84a). Intercourse with Greeks and Romans during all this period had evidently not

modified Semitic esteem for the Beard: indeed, it had rather the contrary effect; for it led to its consideration as something specifically Jewish (Baruch vi. 31). The Halakah, accordingly, occupied itself in early times with the subject, having reference to the precepts in Lev. xix. 27, xxi. 5. These passages were supposed to contain two prohibitions, the removal of the side-locks ("pe'ot") and the shaving of the Beard. As regards the former, some authorities prohibit not only the total removal of these locks, but even clipping them (see *Pe'ot*). Concerning the Beard, however, the Halakah only forbids its removal with a razor, and not even by this means except when the hair is removed smoothly and close to the roots (Misknah Mak iii. 5; Sifra, Kedoshim, vi.; ed. Weiss, 90c).

This modification of the actual Biblical prohibition was probably due to Jewish intercourse with the Greeks, as the regulation is expressly made by the Rabbis that any one having constant intercourse with the officers of the government might adopt the heathen tonsure, while to others it remained strictly forbidden (B. K. 83a). Eliezer b. Hyrcanus, the representative of the old Halakah, opposed this innovation (*ib.*; the reading "Elazar" is unsupported; compare Rabbinowicz, "Dikduke Soferim," on the passage), and forbade any removal of the Beard whatever, either with forceps or with a cutting instrument. Some of the ancients explain a passage in the Tosefta (Ber. i. 4) as if its removal were the custom of a heretical sect in the second century (Tos. of Judah Hasid and Solomon b. Adret, on Ber. 11a).

Although this passage admits of another explanation, Epiphanius ("Adversus Hæreses," lxx. 7; ed. Migne, ii. 765) mentions that a certain heretical sect regarded a shaven face as a religious essential. The "Apostolic Constitutions," i. 3, lay insistence upon the Biblical prohibition against the removal of the Beard, as does

Clement of Alexandria ("Pædagogus," chap. iii.; ed. Migne, i. 580-592; compare Jerome on Ezek. xlv. 20), and the Jewish sages agree in basing the objec-

Beard of a Semite of the Upper Class.  
(From the tomb of the Beni-Hassan.)

Jewish Envoy with Beard.  
(From the Black Obelisk of Salmanser II.)

tion to such removal on the ground that God gave man a Beard to distinguish him from woman, and

Beard of an Assyrian King.  
(From Bottu, "Monuments de Ninève.")

that it is therefore wrong to antagonize nature (among Jewish commentators compare Bahya and Abravanel on Lev. xix. 27). In Palestine, where a large Hellenic population resided, the clipping of the Beard (except in periods of mourning) seems to have been prevalent as early as the third century in learned circles of Jews, who probably respected the above-mentioned tannaite Halakah, while the uninformed people scarcely regarded the distinction between clipping and shaving (Yer. R. II. i. 57b).

In medieval times, as in the Talmudical period, the custom of the country seems to have been followed in regard to the Beard. In the East,

**In** among Mohammedan nations, the Jews  
**Medieval** wore long beards; in Germany, France,  
**Times:** and Italy, it was entirely removed  
with scissors (Levi, "Tisporet Luly-anit," pp. 70, 71; Kimhi to II Sam. x. 5; Asheri, Makkot iii., beginning; marginal gloss on the Tos. to Shab. 2b, quoted by Isserlein, "Terumat ha-Deshen," p. 295; authoritative thus for the period from the twelfth to the fifteenth century). Scrupulous German rabbis, however, sought, as early as the fifteenth century, to forbid the cutting of the Beard, doubtless because the majority paid little attention to the strict letter of the Halakah, and, instead of cutting with the scissors, shaved smooth with a razor (Isserlein, *l.c.* p. 9). But this rigor was too much even for Isserles (Shulhan 'Aruk. Yoreh De'ah, 181, 9).

The Cabalists succeeded where the Talmudists failed; they declared even the shortening of the Beard with scissors to be a great sin, and they related of their master, Isaac Luria, that he kept his hands from his Beard lest the contact should cause any hairs to drop from it (Judah Ashkenazi, "Ba'er Heteb," on Yoreh De'ah, *l.c.*). With the spread of Luria's Cabala in Poland and the Slavonic lands, any trimming of the Beard with scissors was gradually prohibited. The Italians, even the Italian Cabalists, still shaved, according to the custom of the land, one of them even going so far as to demonstrate cabalistically that shaving off the Beard was interdicted only in the Holy Land, and that elsewhere the opposite practise was rather to be recommended (Shabbethai Beër, "Responsa Beër 'Eshek," 670).

In Eastern lands the Jews, like their Mohammedan neighbors, did not cut their beards; and in 1720 this led to a violent controversy between Italian Jews who had settled for business purposes in Salonica, Turkey, and the rabbinate there, the latter insisting that the newcomers must wear their beards. The Italian rabbis, called into the discussion by their countrymen, could not decide the matter; for the further question was involved as to the obligation of sojourners to govern themselves by the rules of their temporary abiding-place (Joseph Ergas, "Dibre Yosef," No. 36, decides against the Italians; in their favor were S. Morpurgo and Mordecai Zahalon, in the first responsa collection, "Shemesh Zedakah," No. 61). This "cult of the Beard" had also its opponents, and among them was especially noticeable Joseph Solomon del Medigo, from whom, or from whose pupil, Moses b. Meir מייץ (Metz?), the following epigram is extant:

"If men be judged wise by their beards and their girth,  
Then goats were the wisest of creatures on earth."

In the second half of the seventeenth century the

Head Showing Beard of a Judean from Egypt.  
(From Sayce, "Races of the Old Testament.")

practise arose among the Jews in Germany and Italy of removing the Beard by means of pumice-stone or

chemical agents, which left the face smooth, as if shaven. This was strenuously, though no doubt vainly, opposed by two distinguished Talmudists of

Beard as Worn by a Russian Jew.  
(From a photograph taken at Jerusalem by Bonfils.)

the time, the Polish rabbi Hillel b. Naphtali ("Bet Hillel," on Yoreh De'ah, 187) and the Italian Joseph b. Solomon Fiametta (quoted in his son-in-law's Responsa, "Shemesh Zedakah," No. 61, p. 102*d*). One of the questions constantly recurring in the responsa literature of the seventeenth and the eighteenth centuries concerns the clipping of the Beard on the "middle days" of the festivals ("Hol ha-Mo'ed"), because Talmudical law forbids the cutting of the hair on these days (see the responsa of the Amsterdam and Venetian rabbis in Moses Hages, "Leḳeṭ ha-Kemah," on Yoreh De'ah, 138).

Trivial as all this question appears, it was important in the history of the Jewish Reform movement in Italy. Isaac Samuel Reggio published (Vienna, 1839) a pamphlet entitled "Ma'amar ha-Tiglahat," in which he attempted to prove casuistically that the regulations of the Talmud concerning the cutting of the Beard on the "middle days" no longer had application, on account of the changed circumstances. This called forth the replies, "Tiglahat ha-Ma'amar" (Leghorn, 1839) by Abraham Hay Reggio, and "Tisporet Lulyanit," by Jacob Ezekiel Levi (Berlin, 1839). In Italy the influence

**Modern Views.** of the non-Jewish population was so strong that even so zealous a representative of rabbinical Judaism as

Samuel David Luzzatto remarked in a private letter that he no longer concerned himself with the prohibition of shaving, because he thought the Bible

intended it to apply only to priests. In Poland and in the Slavonic countries, attempts were made, toward the end of the eighteenth century, to evade the Biblical prohibition of shaving, much to the vexation of the leading Talmudists (Ezekiel Landau, "Nodi' bi-Yehuda," ii.; Yoreh De'ah, 80). Hasidism, which just then sprang up in those countries, restored the Beard to its former dignity; so that today, in all eastern Europe, the complete removal of the Beard is considered an evidence of a formal break with rabbinical Judaism (compare Smolenski, "Simhat Hanef," ed. 1890, p. 46, and the Yiddish satire "Die Bord" in Michael Gordon, "Yüdische Lieder," p. 15). Special stress is laid upon the propriety of the hazan's wearing a Beard (Joel Sirkes, "Bet Haddash," on Tur Orach Hayyim, 53; Shabbethai Beër, "Beër Sheba'," p. 107), with reference to an old Talmudical prescription dating from a period when the absence of a Beard was a sign of juvenility (Hul. 24*b*). The fourth council at Carthage (398) similarly decided "clericus nec comam nutriat, nec barbam radat" (the clergyman shall not let his hair grow, neither shall he remove his Beard); and even many centuries later, when the Church found it vain to oppose the removal of the Beard by the laity, it still insisted that the clerics should wear a Beard (Bingham, "Antiquities of the Christian Church," I. ii. 15, 16).

Popular imagination also has occupied itself with the Beard. The following saying, attributed to Ben Sirach, was current in Talmudical times: "A thin-bearded man is cunning, a thick-bearded one is a fool; but nobody can do any harm to a man with a parted beard" (Sanh. 160*b*). The Talmud says of

Beard-Trimming.  
(From Leusden, "Philologus Hebraeo Mixtus," 1657.)

the Pharaoh of the Exodus, that his Beard was an ell in length (M. K. 18*a*).

An oath upon the Beard and pe'ot is customary

among the Polish Jews to-day, although generally employed in an ironical sense (compare Bernstein, in "Ha-Shahar," vi. 405). L. G.

**BEAUCAIRE** (Provençal, **Belcaire**): City in the department of Gard, France. A somewhat important Jewish community was founded here as early as the beginning of the twelfth century, whose members lived among the Christians and enjoyed the same rights and privileges as they did. In particular were they protected by the count of Toulouse, Raymond V., who admitted them to certain offices and entrusted them with an important part of the public administration. About 1195 they were persecuted, and many of them perished. In 1294 Philip the Fair ordered the seneschal to relegate them to the rampart which separated the city from the castle. This special quarter extended from the rock of Roquecourbe to the gate of Cancel; it disappeared entirely in 1578, together with the ruins of the synagogue, at the general demolition which Fouquet de Tholon, seigneur of Ste. Jaille, undertook in order to isolate the fortress which he was besieging.

In 1295 all the Jews under the jurisdiction of the seneschal's court of Beaucaire were arrested, and the richest among them sent to the Châtelet at Paris. At the same time all their possessions were seized, and the prisoners were released only after having paid a considerable ransom and stated the amount of their credit (Ménard, "Histoire de Nîmes," i. 412; *idem*, "Preuves," p. 125). In distributing the assessment of 150,000 livres, which Charles IV. imposed upon all the Jews of France, the Jews in the district of the seneschal of Beaucaire were rated 20,500 livres. On June 2, 1340, Philip VI. canceled all the debts payable to the Jews that had been contracted by the Christians ("Ordonnances," ii. 71). But in 1368 the Jews of the seneschal's court were again authorized to collect their debts (*ib.* iv.). No Jews returned to Beaucaire after the expulsion of 1394.

A number of scholars may be mentioned, who either lived at Beaucaire or were born there: The "prince" Kalonymus and his nephew Judah; Isaac; the poet Judah b. Nathanael and his scholars at five sons, who flourished at Beaucaire **Beaucaire**. about 1271, at the time when the poet Judah al-Harizi visited the city (Gross, "Gallia Judaica," p. 120); the two brothers Don Todros and Jacob b. Judah, the latter being one of the friends of Abba Mari (Neubauer, "Rabbins Français," p. 682); Sen Moses, who lived at Salon in the fourteenth century, and is to all appearances identical with Moses b. Solomon of Beaucaire, the translator of Averroes' great commentary on Aristotle's "Metaphysics" (Gross, *ib.* p. 656); Samuel b. Judah of Marseilles, imprisoned about 1321 in the castle of Beaucaire, where he translated Averroes' commentary on Aristotle's "Ethics" (Gross, *ib.* pp. 121, 380); Tanhum b. Moses of Beaucaire, who translated at Urbanea, Italy, in 1406, Hippocrates' "Prognostica" (Gross, *ib.* p. 121); Bonjour or Bondia of Beaucaire, commissioner in charge of resettling the Jews of Languedoc in 1315 (Saige, "Les Juifs de Languedoc," pp. 106, 330); and Bonet du Barry, who, in 1291, presented to the seneschal of Carcas-

sonne various letters concerning the privileges of the Jews (Saige, *ib.* p. 223).

**BEAUGENCY.** See FRANCE.

**BEAUGENCY, ELIEZER.** See ELIEZER OF BEAUGENCY.

**BEAUTIFUL, THE, IN JEWISH LITERATURE:** To the speculative theory of the beautiful the Jews can not be said to have contributed fruitful thoughts. In the economy of the humanities this field fell to the inheritance of the Greeks. This statement will stand, even though, as is now admitted, the origin of art in Greece points to Semitic influences. The impulses in this domain came to the Greeks neither from the Phenicians nor from the Egyptians, but from the Assyrians. The cycle of Cadmus myths may be dismissed as having no evidential relevancy on the problem (see Gruppe, "Die Griechischen Kulte und Mythen," 1887). Still, whatever power the Assyrian civilization may have exercised to quicken and arouse the artistic genius of the Greeks, the Hebrews can scarcely be credited with having cultivated the beautiful. The common distinction—though resting on one of those sweeping generalizations for which modern thought is indebted, among others, to Ernest Renan—between the office of the Aryan mind and that of the Semitic seems to be on the whole beyond dispute. Beauty is the preoccupation of the Greek soul; righteousness, that of the Hebrew. The philosophy of art, therefore, is naturally and nationally under the spell of Plato's speculation. His theory of beauty as "something abstract, divine, with an absolute and distinct reality quite apart from man," has sounded the key-note of almost all the later disquisitions (see Eugene Veron, "Æsthetics," English transl., London, 1879).

For the Greeks Creation itself became under Platonic instruction a work of beauty, a cosmos. The Creator took on the functions of an architect, molding the shapeless and often stubborn material in accordance with his preconceived and vitalizing ideas. Philo, the Jewish Platonist, does not hesitate to adopt the fundamental element of this Greek conception. According to him, the first day in the Mosaic account of Creation relates to the intelligible cosmos; and he proceeds to unfold his meaning by illustrating it with copious appeals to the methods of architecture in which the ideal plan created and existing in the mind of the architect precedes and controls the execution of the real in stone or other material ("De Opificiis Mundi," §§ 4, 5). Similarly, the ideal tabernacle was revealed to Moses as the precreated pattern of the material one ("De Vita Moysis," iii. 3). The Septuagint manifests its dependency upon similar Platonic concepts, when, in Gen. ii. 1, it renders the Hebrew

**The Greeks  
and  
Beauty.**

"Zeba'am" by κόσμος, a rendition which could easily be read into the original by a slight change of the Masoretic "zeba'am" into "zebyonam" (their beauty, R. H. 11a). Moreover, it is more than likely that in Gen. i. 2 the rendition of the Hebrew "tohu wabohu" by "ἀόρατος καὶ ἀκατασκεύατος" is due to similar Platonic influences (compare Siegfried, "Philo," pp. 8, 9).

In rabbinical Haggadot many instances occur of similar Platonizing interpretations, worked out according to the general method of haggadic exegesis through appeal to the letters of text, but withal proofs of the influence attained in the thinking of the rabbinical homilists by the conception of Creation as a process of unfolding beauty. Some of these analogies have been adduced by Siegfried (*l.c.* pp. 148, 149). More characteristic than

**Creation** those cited by him is the following, credited to Judah ben Ila'i: When **Beauty.** God was about to create the world, He consulted the Torah as one would

an artist or architect, and then carried into effect His preconceived ideal Creation (Tan., Bereshit, 5 [ed. Buber, p. 4]; Gen. R. i.).

The construction of the Tabernacle and the making of the utensils it contained are in the same manner likened to the procedure which an artist confronted with a similar task would adopt. Heavenly patterns descended within the vision of Moses; and these he copied in the practical execution of the command (compare among others Yalk., Cant. 369). The assumption in Ab. R. N. xiii. that when Moses was preparing to erect the "Mishkan" he refused to confer with the princes of the tribes, rests on the notion that as the plan had been divinely unfurled there was no necessity for discussing the work of mortals.

How far the Platonic theory of beauty influenced Aristotle is a moot question. One might find in the Jewish Aristotelians—notably Maimonides—indications of an appreciation of the beautiful. The opening discussion in the "Moreh" on the significance of "zelem" as distinct from "demut" would seem to have a place in this interesting though perilous, because doubtful, chapter of Jewish speculation. At any rate, it is plain that the absolute denial to the Jewish mind of the capacity to appreciate and realize the beautiful can for good reasons be relegated to the lumber-room of prejudices. Granted that the principal anxiety of the Jewish consciousness lies in the plane of the religiously ethical, the artistically beautiful, or esthetics, can not be located in another plane. There are points of intersection between the two. In his quest for the harmonies of life, the Greek evolved also a theory of the harmonies of character and conduct of no mean range or depth. And, on the other hand, the Hebrew, in his zeal for

the discovery of the divinely and eternally true and righteous, could not but perceive that Creation moved to a rhythm of divinely ordered harmonies. The vocabulary of Judaism does not lack terms connoting both the beauty of the body and that of the soul. Thus "yafeh"—applied to men, animals, things, and countries—signifies "beautiful in general outward appearance"; "nehmad" denotes "attract-

ive to the eye," with the underlying suggestion of the "desirability" of the object (Gen. ii. 9), the corresponding noun "hemed" being used in combinations (Isa. xxxii. 12; Ezek. xxiii. 6; Amos v. 11); "naweh," from the verb "iwah," also denotes "desirability," hence "beauty"; "ṭob mareh" signifies "good in appearance," hence "comely."

The Hebrew also employs paraphrases with nouns; for instance, "ez hadar" denotes "a tree of beauty or splendor."

Other combinations with "hen"—for instance, "ba'alat hen"—imply beauty not so much of the body as of the soul—grace. In the common proverbial colloquial language of the Jews to the present day, "hen" is employed to characterize that undefinable something which goes far to render its possessor beloved of men. Loveliness is also expressed in "no'am." Besides, the words "yofi," "shefer," "hadar," "hod" (splendor), "hesed" (love), "kabod" (honor) are used to indicate various manifestations of physical and spiritual gracefulness and beauty. The highest degree of personal charms or local attractiveness is expressed by "miklal yofi."

In the Talmud not only is the same appreciation of beauty shown by the use of these and similar terms—as a glance at the various Hebrew and Talmudical dictionaries shows; the Greek word for "beautiful" (καλός) gave rise also to the verb "kalles" (καλλέω), to declare as beautiful; that is, to praise—but it is enjoined as a rule "to offer up a benediction on seeing beautiful creatures or beautiful trees" (Ber. 58b; Tan., Pinhas, 10).

While the Greeks applied the golden mean of proportion and harmonious relations to art, and the Jew—as Maimonides counsels, and others tacitly practised—construed his rule of conduct on the realization of the law of moderation, still the eyes of the Jew were not blind to the beauty which laughed out upon him from God's own world.

There have been times when the Jew was in conscious and fanatic revolt against the Greek ideal. The Maccabean struggle and that against Rome could not but react in favor of a rigid and unrelenting hostility to whatever in the least smacked of concessions to Greek or Roman conceits. The athletic games of the gymnasium, the divine honors paid to the images of the emperors, naturally carried the pendulum of Jewish thought to the opposite pole. The result was that, for a while at least, attention to physical culture (of the body) fell under the ban; also sensible appreciation of the difference between idolatry and sculpture came nigh to be impossible. Nevertheless, evidence abounds that beauty of the body, both in men and in women, was regarded as a distinction to gain which was worthy of the ambition of the best. At all events, it is certain that the art of ornamenting the body was highly

developed among the Jews at a comparatively early period. The third chapter of Isaiah shows that the beauty of the Hebrew woman was well provided with the things she deemed needful to enhance her charms. Other passages prove that house and home were richly embellished (see Nowack, "Hebräische Archäologie," *passim*).

**Appreciation of Physical Beauty.**

Nor did the art of heightening the natural beauty of man or woman fall into disuse during the Talmudic era. Fondness for bathing was made the subject of special note in the case of no less a personage than Hillel. The use of ointments (Lev. R. xxxiv.); the attention paid to the toilet of the bride on her day of joy; the ornaments which are deemed indispensable to woman (Ket. 48a, 59b; B. B. 22a); the recorded use of artificial cosmetics ("kāhal") to beautify the eyebrows or the finger-nails; the fondness ascribed to women for fine garments and fine surroundings in preference even to luxurious food (Esther R. i. 9); the artificial heightening of the forehead ("kilkul," Shab. viii. 4; 80b)—these and many similar particulars, abundantly scattered throughout Talmudic literature, go far to disprove the popular thesis of the lack of appreciation for beauty of body or surroundings among the Jews. "Woman's attractiveness is her beauty" (אֵין אִשָּׁה אֵלָּא לְיוֹפִי), said the fair maidens of Jerusalem at their gathering on the hills on the Fifteenth of Ab and at the close of the Day of Atonement (Ta'anit 31a). In fact, the Jews had a standard of personal beauty which was largely their own. The acrostic praise of the good housewife's virtues in Proverbs throws some light on the peculiar disposition of the Jewish mind in this field. Still more telling are the descriptive adjectives and similes of the Song of

**Standards** Solomon. There is good reason for saying that, in the estimation of the Jews, physical beauty both in the Biblical period and during that of the Palestinian Talmudists conformed to

the requirements which we know to have been considered indispensable by the Arabs (compare Lane's "Arabian Nights," i. 25). Just as the Bible extols Sarah (Gen. xii. 11), Rebekah (Gen. xxiv. 16), Rachel (Gen. xxix. 17), Joseph (Gen. xxxix. 6), David (I Sam. xvi. 12), and Abigail (I Sam. xxv. 3) for beauty of appearance, so the rabbis mention, as the most beautiful women that ever lived, Sarah, Rahab, Abigail, and Esther (Meg. 15a). Another version gives Vashti in place of Esther, the latter having owed her seeming beauty to the grace bestowed upon her by an angel. The sons of Beeri and all the daughters of the tribe of Asher are said to have attracted attention by their beauty (Pesiḳ. R. 38 [ed. Friedmann, p. 135b]). Eve, again, is extolled by the rabbis as the type of all womanly beauty. A picture ("eiḳon") of her, it is said, was traditionally transmitted to the heads of the generations; but Sarah is held to have been her superior, while Abishag merely approximated the prototype (Gen. R. xl.). God Himself adorned her before presenting her to Adam (Gen. R. xviii.). "The daughters of Israel are all beautiful by nature, only poverty disfigures them," says R. Ishmael (Ned. ix. 10, p. 66a).

In connection with the rabbinical amplification of Sarah's adventure in Egypt, it is stated that, in accordance also with the Shulamite's words in the Song of Songs, black or dark complexion was considered to detract from beauty (*v. b.*). The hair worn high and coiled back was regarded as an effective device to increase personal beauty (Cant. R. iv. 1; compare Bacher, "Ag. Pal. Amor." ii. 385); while the eyes of the bride, if sparkling and soft, were

held to be sufficient and to free her from the necessity of resorting to other ornaments. In this connection it is interesting to note that from these passages it would appear that the hair must have been worn exposed; though mention is made of veils and hoods, which, however, were of such material as to heighten rather than to conceal the magnificence of the hair. One of the ways to allure a would-be suitor and to inflame his passion was the plaiting of the hair (Yer. Sanh. ii. 20a; Num. R. ix. 24). Child-bearing was known to be detrimental to the comeliness of the body; the matriarchs preserved their beauty so long because they were childless for quite a time (Gen. R. xlv.).

Adam is regarded as the type of all manly beauty. As by the Mohammedans the beard is looked upon as the sign of manly beauty and is, therefore, ordained by the Prophet as a mark of the true believer, distinct from the infidel, so among the Jews manliness and beardlessness were held

to be well-nigh incompatible (Yeb. 80b). Abbahu is mentioned as one of the handsomest of men, not merely on account of his towering stature, but also—and in this respect distinguished even beyond Johanan—for his flowing beard (B. M. 84a); see Rashi on the expression הִרְרַת פָּנִים וְקֵן. This latter declaration that the beard constitutes the splendor of the manly countenance is variously credited to R. Akiba and to Joshua ben Kōrḥa (Eccl. R. x. 7; Shab. 152a). R. Johanan b. Nappaha was so deeply impressed with his own beauty that he used to sit for hours by the portals of the bathing-establishments, in order to impress the women with his appearance and thus influence the looks of their expected offspring (Ber. 20a; Löw, "Lebensalter," p. 63). The desire to have beautiful children was keen among the women of Israel; and various devices are on record employed by them to accomplish this end (Löw, *l. c.*), although the father transmits his own beauty as well as his vigor to the sons ('Eduyyot ii. 9).

If the attention paid to physical culture was less insistent or less intense among the Jews than among the Greeks, it was due to the moral abhorrence of nudity. The Maccabean era influenced in this direction the habits and prejudices of the Jews for centuries; while the sad persecutions to which they were exposed in the Middle Ages deprived them of the opportunity to cultivate physical beauty. To the former cause must be ascribed the suspicion with which athletic sports in the circus and the theater were regarded. Especially was attendance at theater and circus performances on the part of Jewish girls declared to be improper (Ruth R. ii. 1); theaters could not but be suspected of influences making for idolatry. Moreover, then as now the stage was employed to cast ridicule on the Jews (Lam. R., Introduction, and iii. 13). In many ways the contact with Roman degenerate life had led to practises which shocked the moral sense of the better Jewish classes.

There is no legitimate reason for holding that the Jews were indifferent to the cultivation of beauty and art. In all departments of art they displayed much ability, if not originality. The Bible shows that they were adepts in all the domestic arts, in weaving, spinning, dyeing in purple; they knew how to work

in metals, to carve and chisel, to refine the precious metals, to engrave precious stones and gems, and were proficient in music and the dance. Dramatic genius was not theirs; but they shared this want with their Semitic kinsmen, and, by way of compensation, excelled in story-telling, gnomic wisdom, and the lyrics. The parable is their preeminent domain. And these artistic leanings, clearly brought out by the study of Biblical civilization, did not atrophy in later days. The contrary is the truth. The Jews, with modifications conditioned by their changed situation, developed them steadily.

It may be doubted whether in architecture the Jews can be credited with inventive genius. The Bible seems to indicate that whatever of the building art they had, had come to them from their neighbors, the Phenicians. Still, in Alexandria and elsewhere, unless the law of their rulers interfered, they saw to it that their public edifices had a dignified, even a luxurious, character. The Talmud speaks of the glory of the synagogue in Alexandria (Suk. 51b).

That the Jew was ever alive to the appreciation of beauty may be learned from the fact that the rabbis did not hesitate to accord the palm in the strife for the beautiful to the Greek; so that to them the Aryan races, the sons of Japhet, were typified by the Greek as representative of beauty; יפת being explained as יפִּיתוֹת (Meg. 9b). When Aquila had finished his Greek translation of the Pentateuch before R. Eliezer and R. Joshua, they lauded him; applying to him the words, "Thou art fairer than the children of men" (Ps. xlv. 3 [A. V. 2]).

On the other hand, the rabbis claimed that nine-tenths of the beauty of the world were bestowed upon Jerusalem as the seat of God's majesty (Kid. 49b; Yoma 54b, in accordance with Ps. l. 2). One of the highest angels in rabbinical angelology bears the name of "Yafefiah" (beauty of God) (Targ. Yer. to Deut. xxxiv. 6). In fact, it is declared by R. Ishmael to be a duty enjoined on the Israelite, in the fulfilment of any of the ceremonial laws, to aim at beauty of form, to have a beautiful "lulab," "sukkah," "tallit," or "tefillin," wherewith to praise God, according to Ex. xv. 2 (Hebr.), "This is my God; I will extol Him"; that is, "I will make everything consecrated to His service appear beautiful" (Mek., Beshallah, Shirah, 3).

Especial stress is laid on moral beauty and the avoidance of ugliness in speech and conduct (Yoma 86a; Shab. 33a). It has been asserted that the Jews were without a sense of the beauties of nature ("Naturgefühl"). Yet that very feeling is evinced in almost every line of the Psalms, while the descriptions in the Book of Job and many graphic similes in the writings of the Prophets challenge comparison with the best produced by the Homeric poets. It differs, however, from that of the Greeks in so far as it responds to the larger totality of the universe, the might and majesty of nature as a whole. It is not the individual star, nor the particularized flower, nor the local sunset, that inspires the Hebrew singer to articulation; but it is the heavens as the throne of God, the mountains as melting under the touch of His will, the earth in the throes of a God-ordained destiny, and similar general appreciations of the sublime and exalted in God's handiwork that impels

the Jewish bard to sing. Homer's description of the bee tribe is offset by that of the ant in the Proverbs. Rhetorical art certainly reached a high development among the Jews in Bible days.

Nor, though general opinion to the contrary, is Talmudic literature barren of literary beauty. The study of the Midrash from this point of view has indeed never been attempted; but it would be an undertaking full of promise. In their analogies derived largely from court life, in their illustrations taken freely from the operations of a builder and the like, the homilists of the rabbinical age showed a keen insight into the implications of rhetorical beauty and ornamentation. Some even in the reported text, full though it is of corruptions due to the misunderstanding of the dialect in addition to other failings of the copyists, must be assigned high place among the coiners of original phrases through the employment of the finer methods of literary composition, such as ALLITERATION, assonance, and even rime. Bacher, in his work on the Haggadah, has paid some attention to this aspect of the subject.

That later Jewish poetry is not unworthy a niche in the temple of literary beauty, both on account of its form and its contents, may be said to be now recognized by all competent to speak on the matter (Delitzsch, "Jüdische Poesie"; Winter and Wünsche, "Jüdische Literatur"). Emma Lazarus' and other versifications in English or German of Hebrew originals; Einhorn's prayer-book, "Olat Tamid," and especially his memorial services, are proofs of this. Modern writers of Jewish extraction or faith have contributed to the literatures of the peoples among whom they lived, and whose nationality and language, since the middle of the nineteenth century, have been theirs. This is sufficient proof against the assertion that the Judaism of these writers has operated to the detriment of the quality of their style.

As in music so in poetry it has been contended that the Jew is always beset by the love of the extravagant and the disproportionate; that his criticism runs to acid dissolution and sarcasm; his poetry to the absurd, baroque, and dissonant. They who have enriched modern literary canons with this discovery of the pernicious effect of Judaism on style are ignorant of the literature which under the direct inspiration of Jewish thought and ideals took on form and shape. Only to a very limited extent is their dictum in accordance with facts. Under the exclusive dominance of the pilpul and owing to the sad conditions socially and politically prevailing in their European Egypt—a veritable house of bondage—the Polish and Russian Jews may with some show of justice be said to have lapsed into literary barbarism. What tendency to the same effect there may have been in the German Jewries during the centuries following upon the epidemic of the Plague and upon the Crusades was effectually checked by the influence of the Mendelssohnian era; while the Sephardic Jew never fell a prey to this disorganization, which anti-Semitism, with a pretense at scientific generalization, traces to the irradicable mental bias and inartistic obliquity of Judaism and Jewish association. Güdemann's work on the "Erziehungswesen und Kultur der Juden" contributes many significant proofs of the

incorrectness of the equation between Judaism and lack of artistic feelings. Modern Jewish literature, even the Neo-Hebraic literature preparatory to Zionism, needs not dread inspection from the point of view of the requirements of the implications of the beautiful. See ART, ATTITUDE OF JUDAISM TOWARD.

K.

E. G. II.

**BEBAI**: 1. Name of a family, of whom, according to Ezra ii. 11 and I Esd. v. 13, 623 returned with Zerubbabel. According to Neh. vii. 16, their number was 628. Twenty-eight more came up with Ezra (Ezra viii. 11). Four of the Bene Bebai married foreign wives (Ezra x. 28; I Esd. ix. 29). A Bebai signed the covenant with Nehemiah (Neh. x. 15). The name "Biba" has been found on a tablet from Nippur (see "Cuneiform Texts," ed. Hilprecht, ix. 27).

2. A place mentioned in Judith xv. 4, location unknown.

G.

G. B. L.

**BEBAI** (בִּבְי): Biblical form בִּבְי. The readings בִּבְי, בִּבְי, בִּבְי are copyists' mistakes for בִּבְי; and the variant בִּבְי is a clerical error for בִּבְי. The Palestinian and the Babylonian Talmudim, as also the Palestinian Midrashim, frequently cite an amora named Bebai, sometimes as "Rabbi" and sometimes as "Rab," but without further designation; and as all the data relating to the name refer to the same age, rabbinic chronologists have always considered them as applying to one person. What is remarkable in this connection, but has been overlooked, is the fact that out of nearly fifty subjects treated in connection with the name, only one appears in both Talmudim (Yer. Shek. iii. 47c and parallels; Men. 103b); from which it may be inferred that the doctrines and sayings appearing under the name of Bebai in the Palestinian sources do not emanate from the Babylonian Bebai, and vice versa. Probably it was this fact which first aroused Frankel's suspicion as to the identity of the Palestinian Bebai with the Babylonian, and accordingly both Frankel ("Mebo," 68b) and Bacher ("Ag. Pal. Amor." iii. 667 *et seq.*) refer to two Bebais, of Palestine and Babylonia respectively.

**Bebai I., R.:** Palestinian amora of the third generation (third century). R. Zeira I., on his first arrival in Palestine, heard Bebai repeating a Halakah in the name of Malluk (Hul. 49a); and the same Zeira refers to a time when he and Bebai sat at the feet of R. Johanan (Nid. 25b, where the patronymic "b. Abaye" is undoubtedly a clerical error, inasmuch as Abaye himself could scarcely have been born before the death of R. Johanan, in 279). Bebai subsequently became a disciple of R. Assi II. (Yer. Ta'an. ii. 66b; Mak. 21b; Yalk., Deut. 932), although he also addresses R. Abbahu as his teacher (Yer. Kid. iv. 66b). He seems to have been outranked, however, by his former colleague, R. Zeira, for he is often found before the latter in the rôle of a reciter (Yer. Ma'as. Sh. v. 56a; Yer. Kid. iii. 64d); and it is known that he was once commissioned by Zeira to procure some cloth from the Saturnalian fair at Beshan ("Bethshean," Yer. 'Ab. Zarah i. 39c). Probably this was done with the purpose of affording Bebai some emolument; for he was poor, as is evident from the

following anecdote: R. Bebai was engaged in explaining a Baraita, when R. Isaac b. Bisna interrupted him with a question on the subject, to which Bebai gave a peevish reply. R. Zeriḳan remonstrated with him; remarking, "Because he asks thee a question thou scoldest him!" Thereupon Bebai excused himself; pleading, "I am not master of myself; for, as R. Hanan has said, 'The Biblical dictum (Deut. xxviii. 66), "Thy life shall hang in doubt before thee," is realized in the one who purchases his yearly supplies from the market, he having no fields of his own; "Thou shalt fear day and night," represents the condition of him who draws his provisions for the week from the huckster in the marketplace; "Thou shalt have no assurance of thy life," may be said of him who is obliged to procure provisions by the day from the shopkeeper,' as I do" (Yer. Shab. viii. 11a; Yer. Shek. iii. 47c, viii. 51a; Men. 103b).

This Bebai is known in the Haggadah as well as in the Halakah; and while he often transmits the views of others, he as often advances his own. According to him, the sin of hypocrisy is alluded to earliest in the Decalogue. Seeing, he argues, that perjury is explicitly prohibited by the command (Lev. xix. 12), "Ye shall not swear by my name falsely," the prohibition (Ex. xx. 7), "Thou shalt not take the name of the Lord thy God in vain," must refer to one who leads a sinful life while parading such ceremonies of holiness as Tefillin and Tallit (Pesik. R. 22). The divine order to number the Israelites (Ex. xxx. 12) he explains by the following illustration: "A king once had numerous flocks. Wolves attacked them and killed many; whereupon the king ordered the herdsman to number the remainder, that he might discover how many were missing. Thus, after the catastrophe of the golden calf, did the Lord say to Moses, 'Number the Israelites, and find out how many are missing'" (Pesik. ii. 18a; Tan., Ki Tissa, 9). Bebai, it seems, never visited Babylonia, since we see him sitting at the feet of R. Johanan (who died about 279), studying under Assi II., and attending Zeira I.; and Dimi, who emigrated to Babylonia about fifty years after R. Johanan's death, reports (Shab. 74a), in illustration of a Halakah, an act of Bebai at a reception tendered to Ammi and Assi (Yer. Ber. i. 3b; ib. viii. 12a; Yer. Kil. v. 30a; Yer. Sheb. i. 33b; Yer. Ter. viii. 45c; Yer. Shek. ii. 46c; Yer. Giṭ. v. 47b; Yer. Sanh. i. 18a; Yer. Nid. iii. 50d; Pesik. R. 15; Pesik., Hahodesh, 50a; Midr. Teh., ed. Buber, Index; Frankel, "Mebo," 68b; Bacher, "Ag. Pal. Amor." iii. 66 *et seq.*).

**Bebai II., Rab:** Babylonian amora of the third generation (third and fourth centuries). He was a disciple of R. Nahman (Hag. 22b; Yeb. 12b; B. M. 23b), and, it seems, a fellow-pupil ("talmid-haber") of R. Joseph ('Er. 23b, 75b). Adda b. Ahaba's host, a proselyte, and Bebai had some litigation about a certain public office to which both laid claim. They personally appealed to R. Joseph; and he decided that, as Bebai was a great scholar, he was entitled to the superintendence of the religious affairs of the community, leaving the management of the municipal affairs to the other (Kid. 76b). Elsewhere it is stated that to settle a scholastic dispute between

Bebai and others as to whether Rab (Abba Arika) had indorsed or disapproved a decision of R. Muna. R. Joseph threw the weight of his opinion on the side of Bebai (Meg. 18*b*).

Of his private life an interesting incident is preserved in the Talmud (Shab. 80*b*; M. K. 9*b*). Bebai was in the habit of using wine or beer at his meals—a luxury rarely indulged in by the Babylonian Jews—and he is also reported to have employed a certain paste to improve his daughter's complexion. A Gentile neighbor of Bebai tried the same experiment on his own daughter with a fatal result; whereupon he said, "Bebai has slain my daughter." R. Nahman, hearing of the case, remarked, "Bebai indulges in strong drinks; therefore, his daughter needs skin-improving pastes: we are more abstinent; consequently we need no such cosmetics for our daughters" (Ket. 39*a*; Kid. 81*a*; B. B. 36*b*).

S. M.

**BEBAI B. ABAYE**: A Babylonian scholar of the fourth and fifth amoraic generations (fourth century), son of the celebrated ABAYE Nahmani, and presiding judge in Pumbedita (Yeb. 75*b*; Ket. 85*a*), where his father had directed the academy. Some rabbinic chronologists (J. Schorr, "Wa'ad Hakamim," 24*b*; Bacher, "Ag. Pal. Amor." iii. 667, note 5) suggest his identity with Bebai II., which, however, is chronologically incorrect (compare Heilprin, "Seder ha-Dorot," ii., *s. v.* "Bebai b. Abin"), the latter having been a fellow-pupil of Rab Joseph, whereas Bebai b. Abaye was a contemporary of Nahman b. Isaac, Kahana III. (Ber. 6*b*; 'Er. 90*a*), Pappi, and Huna b. Joshua. As Abaye was a scion of the priestly house of Eli, which was doomed to premature death (I Sam. ii. 33; see R. H. 18*a*), both Pappi and Huna b. Joshua frequently taunted Bebai with being descended from frail (short-lived) stock, and therefore with uttering frail, untenable arguments ('Er. 25*b*; compare "Dikduke Soferim" *a. l.*; B. M. 109*a*; B. B. 137*b*, 151*a*; compare Jastrow, "Dict." 794*a*, *s. v.* "Mammulae"). Bebai b. Abaye seems to have led a contemplative life; and legend relates some curious stories about him (Hag. 4*b*; Ber. 6*a*; Ber. 8*b*; 'Er. 8*a*; Shab. 3*b*, 4*a*; Hul. 43*b*; Ker. 3*b*; Zeb. 107*a*).

J. SR.

S. M.

**BEBAI B. ABBA, R.**: A Palestinian haggadist, of uncertain date and rarely cited, whose name appears also as "Bebai Rabbah," "Beba Raba," and "Beba Abba" (Lev. R. xxix. 9; Yer. Ta'an. ii. 65*d*; Pesik. Bahodesh, 154*a*; Yalk., Lev. 645). He is cited (Lev. R. iii.) as having commended the following form of confession for the Day of Atonement, which is partly adopted in the ritual for the evening service of that day: "I confess before Thee all the evil I have committed. I have indeed stood in the path of evil; but as I have done, I shall do no more. May it please Thee, O my God, to forgive all my sins, pardon all my iniquities, and remit all my errors." This, Bebai states, is in accordance with what the prophet teaches in saying (Isa. lv. 7), "Let the wicked forsake his way, and the unrighteous man his thoughts," etc. (compare Yer. Yoma viii. end, 45*c*).

In the Wilna (1878) edition of the Midrash the

patronymic is "Abia"; in the ed. Warsaw (1850) it is "Abaye." "Yuhasin" and "Sed. ha-Dor," however, read "Abba"; and Heilprin ("Seder ha-Dor," *s. v.*) suggests the identity of Bebai b. Abba with Bebai b. Abin, identifying the latter with the Bebai generally cited without patronymic. But "Abin" seems to be a misreading of "Abaye."

**BEBAI, BEN**: A priestly family or gild having charge of the preparation of wicks for the Temple lamps (Shek. v. 1; Yer. Shek. v. 48*d*; Yer. Peah viii. 21*a*). The name is derived from the first person appointed to that office after the return from the Babylonian captivity (Tiklin Hadtin to Yer. Shek.). At a later time, owing to the double meaning of the word "peki'a," used in the Mishnah, an erroneous opinion was set forth that the family Ben Bebai had the supervision of the straps used for the chastisement of negligent priests (Yoma 23*a*).

**BECHER, ALFRED JULIUS**: Austrian journalist, musician, and revolutionist; born at Manchester, England, in 1803 (or 1805); died at Vienna Nov. 23, 1848. He was a son of the founder of the Rhenish-West India Company, and studied law at Heidelberg, Göttingen, and Berlin. It was not long before he conceived ultra-socialistic ideas that led to his arrest. On his release shortly after, he went to Elberfeld, where he practised law for a time. His restless spirit would not permit him to pursue his profession, so he went to Cologne to assume editorial supervision of a trade paper founded and published by his father. Restless again, Becher decided to study painting and music, and accordingly went to Düsseldorf, where he formed lasting friendships with Mendelssohn Immanuel, Uetritz, and Grabbe, continuing, however, his adhesion to radical socialism. There he remained until 1838, when he was appointed professor of the theory of music at the university at The Hague. For nearly two years he labored at this, until an injudiciously worded criticism led to his departure for London, where he became professor of music in a private academy. His stay in the English capital was very short, however, for litigation with an English nobleman forced Becher to leave the country.

Then began the last act in his eventful life. In 1841 he appeared at Vienna as a performer in his

own composition, "Monologue at the Piano." He also wrote a pamphlet, "Jenny Lind, eine Skizze Ihres Lebens," and a quartet. Of the last-named composition Grillparzer declared: "It sounds as though a man were splitting wood with an ax, the while two women sawed a cord of wood."

Becher was perennially poor, and eked out a precarious existence writing for the "Sonntagsblatt" and the "Wiener Musikzeitung." He was a staunch champion of the classical school of music, and especially of Mendelssohn and Berlioz.

In the spring of 1848 Becher became the practical head of the radicals, then fomenting a revolt in the Austrian capital. He became a member of the central committee and assumed editorial charge of the revolutionary organ, "Der Radikale." While the revolution lasted and during the siege of Vienna by Prince Windischgrätz, Becher was a popular hero. When, however, the tide of war turned, and Vienna fell into the hands of the imperial troops, Becher was forsaken by his whilom friends and tried for treason. He was found guilty, and early in the morning of Nov. 23 was taken before the Neuethor, where a battalion of Jaegers shot him.

**BECHER, SIEGFRIED:** Austrian economist; born at Plany, Bohemia, Feb. 28, 1806; died at Vienna March 4, 1873. He studied at the universities of Prague and Vienna, receiving from the latter the degree of Ph.D. In 1831 he entered the state service; in 1835 became professor of geography and history at the Vienna Polytechnical High School; in 1848, councilor in the Ministry of Commerce under Minister Dobbhoff. He was charged with various missions to Germany and Belgium (1849), and received the title "Kaiserlich Königlich Hofrath." During the revolutionary period Becher was the head of the ministry until relieved by Baron Bruck.

Becher published the following works: "Beiträge zur Oesterreichischen Handels- und Zollstatistik von 1831-42," part I. Stuttgart, 1844 (the only part published); "Die Organisation des Gewerbewesens," Vienna, 1851; "Die Bevölkerungsverhältnisse der Oesterreichischen Monarchie," Vienna, 1846; "Die Deutschen Zoll- und Handelsverhältnisse," Leipsic, 1850; "Ergebnisse des Handels- und Zolleinkommens der Oesterreichischen Monarchie im Jahre 1842," Leipsic, 1845; "Handbuch zur Vorbereitung für das Historische Gesamtstudium und Literatur Desselben," Vienna, 1833; "Handelsgeographie," vol. ii., Vienna, 1837; "Ideen zu einer Vernünftigen Erziehung," Vienna, 1835; "Das Oesterreichische Münzwesen vom Jahre 1524 bis 1838," vol. ii., Vienna, 1838; "Statistische Uebersicht der Bevölkerung der Oesterreichischen Monarchie nach den Ergebnissen der Jahre 1834-1840," Stuttgart and Tübingen, 1841; "Statistische Uebersicht des Handels der Oesterreichischen Monarchie mit dem Auslande Während der Jahre 1829 bis 1838," *ib.*, 1841; "Die Volkswirtschaft," Vienna, 1853.

**BECHER, WOLF:** German physician and medical author; born at Filehne, province of Posen, Prussia, May 6, 1862. He received his education at the gymnasium of his native town and at the University of Berlin, whence he was graduated as doctor of medicine in 1889. After having been assistant physician at the Litten'schen Poliklinik für Innere Krankheiten at Berlin from 1889 to 1892, he engaged in private practise in that city in 1893.

Becher has written several essays, among which may be mentioned: "Choleraerschleppung," in "Deutsche Medizinische Wochenschrift," 1892; "Cholera und Binnenschiffahrt," *ib.* 1893; "Experimentelles über Anwendung des Röntgenverfahrens in der Medizin," *ib.* 1896 (jointly with R. Lehnhoff); "Ueber Körperform und Lage der Nieren," *ib.* 1898.

G. B. L.

**BECK, ADOLF:** Austrian physician and professor of physiology at the University of Lemberg; born Jan. 1, 1863, in Cracow, Galicia, of poor parents. During his academic career Beck supported himself as a private tutor. Upon graduating with distinction from the gymnasium of his native city in 1884, he entered the University of Cracow. In 1888, while still a medical student, Beck gained the prize of the university by a paper on the excitability of a nerve, afterward published under the title, "O Pobudliwosci Roznych Miejsc Tego Samego Nerwu" (On the Excitability of a Nerve at Different Points). In 1890 he received the degree of M.D., and in the same year published the results of his extensive research on electrical processes in the brain. His papers on this subject, "Die Bestimmung der Localisation des Gehirn- und Rückenmarksfunktionen Vermittelst der Electricischen Erscheinungen," 1890, and "Weitere Untersuchungen über die Electricischen Erscheinungen des Hirnrinde der Affen und Hunde," 1891 (in collaboration with Cybulski), attracted wide attention in Germany, France, and England, and won for him a prominent position among students of physiology.

In 1889 Beck was appointed assistant in the physiological laboratory of the University of Cracow; and he remained in this position until 1894, when he became privat-docent on the presentation of his thesis "Ueber die Physiologie der Reflexes." In the following year he was offered a chair of physiology as associate professor in the newly created medical department of the University of Lemberg, and in 1897 was appointed professor in the same institution.

Beck has received many marks of distinction from medical societies in recognition of his scientific investigations. His numerous contributions, published in German and in Polish, belong almost exclusively to the domain of physiology. Among his papers, besides those already referred to, may be

mentioned: "Researches on the Sense of Taste in a Tongueless Human Being" (in collaboration with Cybulski), in Polish, 1887; "Die Ströme der Nervencentren," 1890; "On the Present State of the Theory of Localizing the Functions of the Brain," in Polish, 1892; "Hermann Helmholtz," 1894; "On the Vital Processes and Methods for Their Investigation," in Polish, 1895; in collaboration with Cybulski, "Further Investigations on the Electrical Processes in the Brain," in Polish, 1896; "Dreams and Their Causes," in Polish, 1896; "Die Erregbarkeit Verschiedener Nervenstellen," 1897; "Zur Untersuchung der Erregbarkeit der Nerven," 1898; "On Color-Blindness, Artificially Produced," in Polish and in German, 1899. To the investigations represented by the foregoing should be added the extensive work of research conducted on similar lines in the Physiological Institute of the University of Lemberg under Beck's immediate supervision.

s. A. S. C.

**BECK, JACOB BEN ENOCH:** Dayyan and shoḥet at Leipnik, Moravia, at the end of the eighteenth century and the beginning of the nineteenth. He was the author of "Zibḥe Shelamim" (Sacrifices of Peace-Offerings), containing the laws concerning the slaughtering of animals and the examination of the lungs. The work is arranged in questions and answers. It was published by the author himself at Brunn in 1795, and was so much appreciated for the convenience of its method that it was reprinted several times.

**BECK, KARL:** Austrian poet; born May 1, 1817, at Baja, Hungary; died April 10, 1879, at

Karl Beck.

Währing, a suburb of Vienna. Although of Jewish parentage, he was brought up in the Protestant Church. Upon his completion of the high-school course in Budapest, he entered the University of Vienna with the view of devoting himself to the study of medicine; but in 1833 ill health compelled him to abandon his scientific pursuits, and he then attempted to follow his father's commercial career. Barely six months had elapsed when he suddenly left the parental home and registered at the University of Leipsic as a free student in the course of philosophy. In Leipsic he found his true calling. Induced by his friend Gustav Kühne, then editor of the "Zeitung für die Elegante Welt," he published his first poems, "Nächte. Gepanzerte Lieder," Leipsic, 1838, which met with great success. Gutzkow predicted for the author the fame of a Byron. Encouraged by the success of his first work, he soon followed it up by another, "Der Fahrende Poet," Leipsic, 1838, consist-

ing of four songs: "Hungary," "Vienna," "Weimar," and "Die Wartburg," the first of which is a splendid picture of Hungarian life and customs, and contains some of the best lines in the entire work. The "Stille Lieder," which appeared later (Leipsic, 1840), are the very antithesis to the author's "Gepanzerte Lieder," and were greeted with the same unqualified favor.

Beck's next attempt was at drama; but his tragic play, "Saul" (Leipsic, 1841), produced in Budapest, although a model of poetic diction, and abounding in spirited and brilliant lines, was totally wanting in dramatic action. With his masterpiece, an epic poem entitled "Yankó, der Ungarische Rosshirt" (Leipsic, 1842; 3d ed., 1870), Beck returned to his proper element: in no other work did he paint a truer picture of his native land and its people.

In 1843 Beck took up his abode in Vienna, where he formed an intimate acquaintance with the poet Lenau, whose style, it is said, he imitated in his works. Another year, however, found him back in Berlin, engaged in preparing a complete collection of his poems, which was first published in Berlin in 1844 and has since run into several editions. This work brought him into conflict with the Prussian government, which at first suppressed the entire edition. Later, however, the author's appeal to the Higher Court of Censure (*Oberzensurgericht*) released all but two of his poems from the interdiction.

The social and political movements in which the poet took part during this period called forth his "Lieder vom Armen Mann," Berlin, 1848, 4th ed. (?), and another series of "Gepanzerte Lieder," Berlin, 1848. The Hungarian insurrection of 1848 drew him again to Vienna, and in an eloquent poem entitled "An Franz Joseph" (Vienna, 1849, two editions), he pleaded for a general amnesty in behalf of his defeated fellow-countrymen.

In Vienna, Beck was for some time attached to the editorial staff of the ministerial organ "Lloyd," occasionally contributing to its literary columns; but, disconsolate at the death of his wife, which had occurred only a few months after their marriage, he seized the opportunity of a change of scene, when he was offered the charge of a new journal devoted to art and literature, "Frische Quellen," founded in Budapest. Only a few numbers of this publication were issued; and Beck soon returned to the Austrian metropolis, where he spent his remaining years.

Despite a tendency to allow ulterior motives to influence his writings, Beck remained a true poet. His inspired enthusiasm and passionate sympathy for downtrodden Judaism lifted some of his creations to an almost prophetic height; while the fiery zeal with which he embraced the cause of suffering humanity lent to others of his poems a touch of pathos and reality. But it was in the soul-stirring descriptions of the singular, wildly passionate life of his native land and people that Beck reached the sublime. His superb epic poem "Yankó" seems, however, to have exhausted the fire of his genius. His later works—"Aus der Heimath," Dresden, 1852; "Mater Dolorosa," a novel, Berlin, 1854; "Yadwiga," an epic poem, Leipsic, 1863; "Still und Bewegt," a collection of poems,

Berlin, 1870; "Monatsrosen," Berlin, 1848; and others—are but feeble echoes of his earlier inspirations.

A. S. C.

**BECK, KLINOS:** Hungarian singer; born in 1868 at Budapest, where he attended commercial schools. He received the elements of a thorough musical education from Abrányi Kornél, whose pupil he remained throughout his career at the National Musical Academy, where he also studied the piano with Sándor Nikolics, and composition with H. Gobbi. At the age of nineteen he began his studies as an operatic singer, and against the wishes of his father went to Paris in order to prepare himself for the stage. At the Conservatoire there he obtained a free scholarship and two prizes. In 1892 he returned to Budapest, where, under the management of Count Gera Zichy, he made his début in Thomas' "Hamlet" with such success that he was at once engaged at the opera. He still (1902) retains the position of one of the leading operatic artists of Hungary.

J.

**BECK, MIKSA, DE MADARAS:** Hungarian financier; born at Bács-Madaras, 1838. His parents settled at Budapest when he was still a child; and it was there that he completed his commercial education. In 1864 he became the business manager of the banking-house of J. J. Cohen. In 1870 he became chief director of the Hungarian Eskomptebank; and when, in 1899, Koloman von Széll became president of the Hungarian cabinet, Beck was elevated to the presidency of the bank. He is one of the leading financial authorities of Hungary; and under his circumspect leadership the Eskomptebank has become one of the most important in Hungary. In 1894 Beck received the Order of the Iron Crown,

and was elevated to the Hungarian nobility with the title of "De Madaras."

**BIBLIOGRAPHY:** *Pesti Hirlap*.

**BECK, NÁNDOR, DE MADARAS:** President of the Hungarian Hypotheken-Bank; born 1840 at Bács-Madaras; a younger brother of Miksa Beck. He was educated in Pest. In 1867 he obtained a position in the Anglo-Hungarian Bank, and in 1871, when only thirty-one years of age, was elected director-general of the Hungarian Hypotheken-Bank, which position he held until 1899, when he was unanimously elected president of the institution. He contributed greatly to the prosperity of the bank, which, under his leadership, has now become one of the leading financial institutions of Hungary. In 1893 he received the Order of the Iron Crown of the third class, and in 1895 was elevated to the nobility with the title of "De Madaras."

**BIBLIOGRAPHY:** *Pesti Hirlap*, 1899.

**BED:** In early as in later times the Bed of the poor was the bare ground, and the bedclothes the simple gown worn during the day, which was wrapped about one at night (Ex. xxii. 25, 26; Deut. xxiv. 13). Hence a pledge of the "simlah" (garment) had to be returned before sunset. When a man was on a journey such a Bed was the most natural one, and a stone served the purpose of a pillow (Gen. xxviii. 11). The mat upon the floor was an advance. It was placed near the wall and, later, put on an elevation; hence the expression, "going up" to the Bed (Gen. xlix. 31). The Bed itself was built upon supports and was of different forms, as may be inferred from the variety of names for it; e.g.: (1) "Miṭah," 27 times, Gen. xlvii. 31, xlviii. 2, xlix. 33; Ex. viii. 3; I Sam. xix. 13, and elsewhere. (2) "Mishkab," 45 times, Gen. xlix. 4, etc. (3) "'Eres" (compare the Assyrian "ershu"), 10 times, Song of Songs i. 16; Prov. vii. 16; Ps. xli. 4, etc. (4) "Maza'," once, Isa. xxviii. 20. (5) "Yezua'," 5 times, I Chron. v. 1; Job xvii. 13; Ps. lxxiii. 7 [A. V. 6], cxxxii. 3; Gen. xlix. 4. It is impossible to state just what was the difference between these names, but in time the simple Bed of Deut. xxiv. 13 gave way to a more luxurious article, and in post-exilic days beds of fine wood are found, and pillows of costly materials elaborately embroidered (Judith x. 21; Esth. i. 10; Cant. iii. 10). Among the rich, couches also were used (Amos iii. 12, vi. 4).

Among the poorer classes there was no separate

sleeping-room; but when there were two floors, the second was set aside for sleeping. Both "mishkab" and "mitah" have a somewhat figurative meaning, signifying the final resting-place, and similarly the "eres," or couch, of the king of Og (Deut. iii. 11) may refer to his sarcophagus.

J. JR. G. B. L.

**BEDAD:** Father of Hadad, one of the early kings of Edom (Gen. xxxvi. 35, and corresponding list I Chron. i. 46).

J. JR.

G. B. L.

**BEDAN:** 1. A judge mentioned by Samuel in his farewell address (I Sam. xii. 11) among the judges that delivered Israel from their enemies. Though referred to along with Jerubaal, Jephthah, and Samuel, the name "Bedan" is not found in the Book of Judges. The Targum, following the Tosefta R. H. ii. 3 [1], identifies "Bedan" with "Ben Dan"; i.e., Samson. Rashi follows this supposition, and so does Kimhi. Ewald proposes "Abdon" as a correction from Judges xii. 13; but it is rather strange that a judge like Abdon, who appears to be of minor importance, should be mentioned with Jerubaal and Jephthah. Nor can it be supposed that Samuel is giving the name of a new judge, for it is unlikely that Judges should have left out so important a judge as the connection indicates. The LXX. reads "Barak," and this reading Wellhausen, Budde, Moore, and Smith (commentaries to Judges and Samuel, *ad loc.*) support. On the whole, the latter is the most probable view. 2. A Gileadite, son of Alam, and a descendant of Machir (I Chron. vii. 17).

J. JR.

G. B. L.

**BEDARESI, JEDAIAH.** See BEDERSI.

**BÉDARRIDE, JASSUDA:** French juriscounsel; born at Aix, in Provence, in 1804; died there Feb. 4, 1882. He studied law at the Aix University; and with great promise began in 1825 the practise of law in his native town. In 1847 he was made leader of the bar (*bâtonnier*) of Aix. After the Revolution of 1848 he was appointed mayor of Aix and counselor-general of the department of Bouches-du-Rhône. But he soon gave up his public functions to devote himself to writing. Under the general title "Droit Commercial, Commentaire du Code de Commerce," he published, between 1856 and 1867, a series of treatises on commercial law, in eighteen volumes, which constitute a complete account of all the matter found in the Commercial Code. Bédarride's other works upon law are: "Traité du Dol et de la Fraude en Matière Civile et Commerciale," 3 vols., 1852; "République, Monarchie," 1873; and "Commentaire de la Loi du 14 Juin, 1865, sur les Chèques," 1876.

Bédarride was also greatly interested in Jewish history, and contributed especially to the "Archives Israélites." His writings upon Jewish topics includes: "Les Juifs en France, en Italie, et en Espagne," 1859, being researches into the condition of the Jews from their dispersion to the present time, with regard to legislation, literature, and commerce (this passed through two editions); "A Study of the Tal-

mud," in the "Mémoires de l'Académie de Montpellier"; and "Du Prosélytisme et de la Liberté Religieuse," published by his son in 1875.

s.

J. W.

**BÉDARRIDES, GUSTAVE EMANUEL:** French magistrate; born at Aix-les-Bains Feb. 20, 1817; died at Paris June 5, 1899. Graduating from the University of Paris, he entered public life in 1840 as substitute counselor at the tribunal of Aix. Three years later he discharged the same function at the court of the same town, and became successively "avocat-général" and president of one of the sections at the same court. In 1862 Bédarrides was appointed "procureur-général" at Bastia, Corsica; in 1864 he was summoned to the Court of Cassation as avocat-général to the section of penal jurisdiction; and in 1875 he was promoted to be first avocat-général.

The ability which he displayed in these capacities gained for him the post of president of the Chambre des Requetes in 1877. In 1890, when the first president of the entire court resigned, the government had the idea of appointing Bédarrides as his successor. This idea, however, was not carried out, probably on account of Bédarrides' age—he was then seventy-three—but when, two years later, he had to retire under the age regulations, a presidential decree conferred on him the title of honorary first president.

Bédarrides took great interest in Judaism, and in 1867 he was elected to represent the Jewish community of Marseilles in the central consistory of France. In 1872, when Adolphe Franck retired, Bédarrides was elected vice-president of the consistory, which office he held until his death.

Two of Bédarrides' works have been published: "Eloge de Fr. Decormis"; "Du Périer et le Droit Provençal."

Bédarrides was a commander of the Legion of Honor.

**BEDDINGTON, MAURICE:** English communal worker; born in 1821; died at Carshalton Sept. 9, 1898. Throughout his life he was identified with most of the London communal institutions. He was one of the original members of the Board of Guardians and chairman of the Investigating Committee of the Board. He was a founder of the Central Synagogue and a life member of the council of the United Synagogue. He served as chairman of the Building Committee, and was a vice-president of the Jews' Hospital and Orphan Asylum, to which institution he was a very generous benefactor. He was a member of the committee of the Anglo-Jewish Association, the Indigent Blind Society, and the Association for the Diffusion of Religious Knowledge. Beddington was a justice of the peace both for the county of Surrey and the county of London, besides being a founder of the City Liberal Club, and serving on the Political Committee.

**BEDERSI** or **BEDARESİ, ABRAHAM BEN ISAAC:** Provençal poet; born at Béziers (whence his surname "Bedersi"—native of Béziers). The dates of his birth and death have not been ascertained. An elegy which he composed during his youth, upon the "Confiscation of the Books of the Law," is supposed by some scholars to refer to the burning of the Talmud in Paris about the year 1242; by others, to the confiscation of the Talmud in Aragon in 1264, as the direct result of the Barcelona controversy. If the latter view be correct, Bedersi may well have flourished about the year 1240 (Zunz, "Z. G." p. 413).

As appears from the letter sent by Bedersi to Don Vidal Solomon ("Hotam Toknit," p. 4), he went early (perhaps in 1273) to Perpignan, where he attended the lectures of Joseph Ezubi. He returned often to Perpignan and took an active part in its communal affairs. A number of his letters, contained in MS. cviii (7<sup>2</sup>) of the Vienna Hofbibliothek, are written to prominent Jews in Barcelona, asking them to aid their less fortunate coreligionists. At one time he lived at Arles, and in 1285, during the war of France with Roussillon, he took refuge in Narbonne. He seems at one time to have been rich, for in a poem he declares that he is independent and writes for his own pleasure. The compiler of his diwan relates that Bedersi sent money to the wandering poet Gorni (Luzzatto, Intro. to "Hotam Toknit," p. 4).

Bedersi was a prolific writer. Several collections of his poems are still extant in manuscript in various libraries. The most complete manuscript is that in the British Museum. Add. No. 27,168. This contains an elegy on the death of his relative. David

of Cabestan; several poems and letters addressed to Todros Abulafia and his companion, Abu al-Hasan Saul; poems dedicated to the physician of the king of Castile, Abu al-Hasan Meir ibn al-Harit; and the elegy mentioned above.

Two of Bedersi's works were published, with an interesting introduction by Luzzatto, by G. Polak, Amsterdam, 1862: (1) "Hereb ha-Mithapeket (A Revolving Sword), a poem of 210 strophes, according to the numerical value of the word  $\text{הרב} = 8 + 200 + 2$ . The author in this poem gives a brief account of Jewish poetry, the decadence of which he deplores. He praises the "makamat" (poems) of Hariri, which he probably knew through the translation of several by Al-Harizi. (2) "Hotem Toknit" (Who Seals the Sum; compare Ezek. xxviii. 12), a treatise on Hebrew synonyms. Another poetical work, entitled "Bakashat ha-Lamedin," published at Frankfort-on-the-Oder, 1812, was attributed to Abraham Bedersi; but it is probable that this poem was written by his son Jedaiah.

Bedersi's poetical works are the best proof of the decadence of Jewish poetry at that time. His style is stiff and unintelligible, though he possessed a thorough knowledge of Hebrew.

G.

I. BR.

**BEDERSI** or **BEDARESİ, JEDAIAH BEN ABRAHAM**, surnamed the Orator (המליץ): Poet, physician, and philosopher; born at Béziers (whence his surname Bedersi) about 1270; died about 1340. His Provençal name was En Bonet, which probably corresponds to the Hebrew name Tobiah (compare "Oheb Nashim" in the "Zunz Jubelschrift," Hebrew part, p. 1); and, according to the practise of the Provençal Jews, he occasionally joined to his name that of his father, Abraham Profiat (Bedersi). In his poems he assumed the appellation "Penini" (Dispenser of Pearls), and because of this appellation the ethical work "Mibhar ha-Peninim" of Solomon ben Gabirol has been erroneously ascribed to Bedersi.

Bedersi was a precocious child. He was scarcely fifteen years old when he published

**Early Life.** his work "Baqqashat ha-Memim" (The Mem Prayer), a hymn of 1,000 words, each of which begins with the letter "mem" (translated into Latin and German). Bedersi's father, very much pleased with those evidences of his child's precocity, expressed his approbation in a short poem which in many editions is given at the end of the hymn. The work contains only mere quibbles on Biblical passages, and is often very obscure; but, considering the age of the author, the facility with which he handles the Hebrew vocabulary is astonishing.

Bedersi's Talmudical knowledge must have been equally extensive; for, as may be seen in the introduction to his commentary on the Haggadah of the Talmud, he was but fifteen years old when he entered the Talmudical school of R. Meshullam. At the age of seventeen he produced his ethical work.

"Sefer ha-Pardes" (The Book of the Garden). This treatise, first published at Constantinople in 1515 (?) and reproduced by Joseph Luzzatto in

"Sefer ha-Pardes." "Ozar ha-Sifrut," iii., is divided into eight chapters: (1) on isolation from the world, and the inconstancy of the latter; (2) on divine worship and devotion; (3) on instruction, and the sciences that men should acquire after having familiarized themselves with their religious obligations; (4) on the laws and the conduct of the judge; (5) on grammar; (6) on sophism; (7) on astronomy; (8) on rhetoric and poetry.

At eighteen he published a work in defense of woman, entitled "Zilzal Kenafayim" (The Rustling of Wings) or "Oheb Nashim" (The Women-Lover).

In the short introduction to this treatise, Bedersi says that he wrote it against Judah ben Shabbethai's "Sone ha-Nashim" (The Woman-Hater). The young poet dedicated this composition to his two friends, Meir and Judah, sons of Don Solomon Dels-Enfanz of Arles. It was written in rimed prose, and has been edited by Neubauer in the "Zunz Jubelschrift," 1884.

These poetical productions of Bedersi's youth were followed by a number of works of a more serious character, among which were: (1) A philosophical commentary on the Haggadah of diverse parts of the Midrashim, such as Midrash Rabbah, Midrash Tanhuma, Sifre, Pirke de-Rabbi Eliezer, and Midrash Tehillim (copies of this commentary are still extant in manuscript in several European libraries). (2) "Iggeret Hitnazzelut" (Apologetical Letter), addressed to Solomon ben Adret, who, at the instigation of Abba Mari, had pronounced

"Iggeret Hitnazzelut." an anathema against the works and partizans of Maimonides and against science in general. Bedersi, after having expressed his respect for the upright and learned rabbi of Barcelona, remarked that he and his friends were not indignant about the ban, because science was invulnerable. Their grievance was that Ben Adret should have branded the Jewish congregations of southern France as heretics. From time immemorial, science had been fostered by Jewish scholars on account of its importance for religion. This was true in greatest measure of Maimonides, who studied philosophy, mathematics, astronomy, and medicine by the aid of the Greek writers; in theology, however, he was guided by tradition, submitting even in this to the investigations of philosophy. He, Bedersi, therefore, entreats Solomon ben Adret to withdraw the excommunication for the sake of Maimonides—whose works would be studied in spite of all excommunication—for his own (Ben Adret's) sake, and for the good name of Provençal Jewish learning. The "Iggeret Hitnazzelut" has been incorporated with Solomon ben Adret's Responsa, § 443. (3) A commentary on the "Sayings of the Fathers" (Pirke Abot) and on the Haggadah of the Talmudical section Nezikin. This work, which is still extant in manuscript (Escurial MS. G. iv. 13), refers often to commentaries of Bedersi on treatises belonging to other sections. It is therefore probable that he wrote commentaries on all the Haggadot of the Talmud.

(4) "Behinat ha-'Olam" (The Examination of the World), called also by its first words, "Shamayim la-Rom" (Heaven's Height), a didactic

"Behinat ha-'Olam." poem written after the banishment of the Jews from France (1306), to which event reference is made in the eleventh chapter (compare Renan-Neubauer, "Les Ecrivains Juifs Français," p. 37). This poem is divided into 37 short chapters, and may be summarized as follows:

"The sage, though the highest type of humanity, is liable to the vicissitudes of fortune. He is not exempt from any of the evils which assail humanity; and the sword of death stabs alike the philosopher and the boor. But, if this view be dispiriting, there is another which is consoling. The soul which lives within him, when man is bereft of this world's goods, will accompany him beyond the grave. Still, to the shame of humanity, man does not care to improve this noblest part of himself. He is entrapped by the perfidious charms of the world; and his years roll away in search of illusions.

"And yet the world is nothing but a tempestuous sea; time is naught but a bridge thrown over the abyss connecting the negation that preceded existence with the eternity that is to follow it. The slightest inadvertence can precipitate him who crosses this bridge into the abyss. Are worldly pleasures, then, worth seeking? After their enjoyment follows despair, a vacuum never to be filled. Unfortunate are they who give way to their enticements. Can one be heedless when so many agents of destruction are suspended over his head; when the stars that roll above him and survey his fate bring about, in their rapid courses, unforeseen but inevitable events, that the decree of the Eternal has attached to their movement.

"But do not, child of man, accuse the Author of nature of the evils that overwhelm thy short and frail existence. The evils thou complainest of are of thine own making. As for the Eternal, His words are all wisdom and goodness. Man aspires in vain to understand them; they are beyond his intelligence. All that may be conceived of Him is that He is inconceivable. Celestial by origin, the human soul, so long as it is attached to the body, groans under a shameful slavery. The occupation worthy of its noble extraction is therefore to direct all its faculties toward the worship of its Creator, the happiness of its fellow-creatures, and the triumph of truth. This result can be attained only in keeping the commandments of God."

Bedersi concludes his poem by expressing his admiration for Maimonides:

"Finally, turn neither to the left nor to the right from all that the wise men believed, the chief of whom was the distinguished master Maimonides, of blessed memory, with whom no one can be compared from among the wise men who have lived since the close of the Talmud; then I shall be sure that thou, enriched with all the knowledge of religion and philosophy, wilt fear the Lord thy God."

This poem enjoyed the greatest success. Published first at Mantua by Estellina, wife of Abraham Conat, between 1476 and 1480, it was republished 67 times (compare "Bibliotheca Friedlandiana," ii. 139), with many commentaries, among which are those written by Moses ibn Habib, Jacob Frances, and Yom-Tob Lipmann Heller. Four commentaries written by Isaac Monçon, Jacob (of Fano?), Leon of Mantua, and Immanuel of Lattes the Younger are still extant in manuscript (MSS. at St. Petersburg and at the Bodleian Library, Oxford, Nos. 503 and 1404). The poem was translated into Latin by Uchtman; into German by Isaac Auerbach, Hirsch ben Meir, Joel ben Joseph Faust or Wust (יוחנאן), Simson Hamburger, Auerbach (who made use of a translation of parts iv. and v. by Mendelssohn), J. Levy, Joseph Hirschfeld, and (in verse) by Stern, preceded by an interesting Hebrew introduction by Weiss; into French by Philippe Aquinas and Michel Beer; into Italian in "Antologia Israelitica," 1880.

pp. 334 *et seq.*; into English by Tobias Goodman; and into Polish by J. Tugendhold.

According to Luzzatto ("Hotam Toknit," Appendix, p. 5), Bedersi was also the author of the poem "Baqqashat, ha-Lamedin" (The Lamed Prayer), or "Bet El" (The House of God), or "Batte

**Minor Works.** "Nefesh" (Tablets), a prayer composed of 412 words in which only the letters from "alef" to "lamed" occur. This

composition is commonly attributed to his father, Abraham Bedersi. Another poem, entitled "Elef Alfin" (Thousand Alefs), composed of 1,000 words, each of which begins with the letter "alef," also attributed to Abraham Bedersi, seems to have been written by Jedaiah. In this poem the author bewails the sufferings and the exile of the Jews, which can only refer to the banishment of the Jews from France in 1306 (compare Luzzatto, *l.c.*; "Shem ha-Gedolim," ii. s.v.; Grätz, "Gesch. der Juden," vii. 206).

Bedersi also wrote a large number of treatises on philosophy, several of which are quoted by Moses ibn Habib in the introduction to his commentary on the "Behinat ha-'Olam." Seven of these works are still extant in manuscript: (1) "Annotations on the Physics of Averroes" (De Rossi MS. No. 1398); (2) "Annotations on the Canon of Avicenna" (MSS. Oxford, Nos. 2100, 2107, and 2121, 6); (3) "Ketaf ha-Da'at" (Treatise on the Intellect), a modification of the Hebrew version (entitled "Sefer ha-Sekel we ha-Muskalat") of Alfarabi's Arabic work, "Kitab al-'Akl we al-Ma'akulat"; (4) "Ha-De'ot be-Sekel ha-Homri" (The Theories Concerning the Material Intellect), in which Bedersi gives the diverse opinions on the Passive Intellect as expounded by Aristotle in "De Anima" (compare ALEXANDER OF APHRODISIAS); (5) "Ha-Ma'amar be-Hafuke ha-Mehallek" (Treatise on the Opposites in the Motions of the Spheres), explaining a passage in the commentary of Averroes on Aristotle's "De Celo," i. 4; (6) "Ketaf ha-Hit'azmut" (Book of Consolidation), in which Bedersi answers the objections made by a friend of his to the theories expounded in the preceding work; (7) a dissertation, bearing no title, on the question whether individuals of the same species, diverse in their "accidents," differ also in their essential form; or whether form is inherent in the species and embraces it entirely, so that individuals differ solely by reason of their "accidents." In Bedersi's opinion there are two forms: a general one embracing the whole species; and a special individual form which is essential and can not be considered as an "accident." In this dissertation is quoted another work of Bedersi's, his "Midbar Kadmut" (The Desert of Antiquity), containing a commentary—no longer in existence—on the twenty-five premises given by Maimonides in his introduction to the second volume of the "Guide of the Perplexed." It is probable that Bedersi wrote a supercommentary on the commentary on Genesis by Ibn Ezra (compare Steinschneider, "Cat. Bodl." col. 1283), and that he was the author of the philosophical poem on the thirteen articles of belief of Maimonides (compare Luzzatto, "Hotam Toknit," p. 2).

**Philosophical Works.** Bedersi's philosophical works are: (1) "Annotations on the Physics of Averroes" (De Rossi MS. No. 1398); (2) "Annotations on the Canon of Avicenna" (MSS. Oxford, Nos. 2100, 2107, and 2121, 6); (3) "Ketaf ha-Da'at" (Treatise on the Intellect), a modification of the Hebrew version (entitled "Sefer ha-Sekel we ha-Muskalat") of Alfarabi's Arabic work, "Kitab al-'Akl we al-Ma'akulat"; (4) "Ha-De'ot be-Sekel ha-Homri" (The Theories Concerning the Material Intellect), in which Bedersi gives the diverse opinions on the Passive Intellect as expounded by Aristotle in "De Anima" (compare ALEXANDER OF APHRODISIAS); (5) "Ha-Ma'amar be-Hafuke ha-Mehallek" (Treatise on the Opposites in the Motions of the Spheres), explaining a passage in the commentary of Averroes on Aristotle's "De Celo," i. 4; (6) "Ketaf ha-Hit'azmut" (Book of Consolidation), in which Bedersi answers the objections made by a friend of his to the theories expounded in the preceding work; (7) a dissertation, bearing no title, on the question whether individuals of the same species, diverse in their "accidents," differ also in their essential form; or whether form is inherent in the species and embraces it entirely, so that individuals differ solely by reason of their "accidents." In Bedersi's opinion there are two forms: a general one embracing the whole species; and a special individual form which is essential and can not be considered as an "accident." In this dissertation is quoted another work of Bedersi's, his "Midbar Kadmut" (The Desert of Antiquity), containing a commentary—no longer in existence—on the twenty-five premises given by Maimonides in his introduction to the second volume of the "Guide of the Perplexed." It is probable that Bedersi wrote a supercommentary on the commentary on Genesis by Ibn Ezra (compare Steinschneider, "Cat. Bodl." col. 1283), and that he was the author of the philosophical poem on the thirteen articles of belief of Maimonides (compare Luzzatto, "Hotam Toknit," p. 2).

G.

I. BR.

**BEDFORD:** Borough and capital of the county of Bedfordshire, England; situated on the River Ouse. The earliest notice of Jews at Bedford is entered on the pipe-rolls of 31 Henry I. (1185), when Solomon and Jacob, Jews of Bedford, paid a large sum to the king to recover a debt (Jacobs, "Jews of Angevin England," p. 85). From this time onward the names of Jews from Bedford occur sporadically in the records, some of the Jews migrating to other places, as Hitchin, Thetford, and Essex. Seven Jews of Bedford contributed £1 8s. in 1194 to the "donum" of the Jews of England toward the ransom of Richard I. (Jacobs, *ib.* p. 163); and among the names mentioned in the Bedford list was that of a Jewess named "Fleur de Liz."

In 1202 a curious charge was brought against Bonefand, a Jew of Bedford, for the "ementulation" of Richard, nephew of Robert of Sutton, by which the death of the same Richard was caused. The case was brought before a jury of the hundred and the Jew was acquitted. It seems probable that this was a case of conversion to Judaism on the part of Richard (Tovey, "Anglia Judaica," p. 66).

Throughout the thirteenth century Bedford continued to be one of the centers of the English Jewry: it was one of the twenty-six towns where an ARCHA or chest was kept in which all chirographs involving indebtedness of Jews were registered and preserved, so that the king might know exactly how much each Jew was worth, and could thus claim his share of his property either at death or on occasion of tallage ("Papers of the Anglo-Jewish Historical Exhibition," p. 187). The Jews of Bedford appear to have lived in High street, as at the expulsion in 1290 there fell into the hands of the king two messuages in that street, formerly belonging to Cok Fil Benedict and Pictavus, Jews of Bedford. From his name the latter would appear to have been an immigrant from Poitou. He had two sons: one of them, Benedict, was baptized at Ely; the other, Jacob, was hanged for felony; and the messuage in High street belonging to him was given by the king to the crier of Newnham ("Transactions of the Jewish Hist. Soc." ii. 86).

In more recent times, since the return of Jews to England, very few of them have settled in Bedford; those that have thus settled have been declared by legal process not entitled to the benefits of the Bedford charity, though Sir Philip Magnus is now one of the governors.

J.

**BEDIKĀH**, בדיקה ("examination," "investigation," in ritual law): Term employed in the Talmud and ritual codes denoting the rigid scrutiny by means

of which the fitness or unfitness of a person or object, according to the requirements of the rabbinical law, is ascertained. The term is employed chiefly in the following cases:

**1. Bedikah ha-Sakkin** ("the examination of the knife"): The Mosaic law, as interpreted by the Rabbis, requires that animals whose flesh is to be used as food be slaughtered according to the method enjoined by tradition and known as SHEHITAH. The throat of the animal must be cut with a perfectly keen and smooth knife, of a prescribed size, which must be drawn to and from across the throat, with a swift and uninterrupted motion, and in such a manner as to sever at least the larger portion ("rob") of both the esophagus and the trachea; except in the case of fowls, when only one of the tubes needs to be cut. Although the act of shehitah may be performed by any person, the appointment of a professional slaughterer, or "shohet," has at all times been customary, and this official must be a well-informed and religious man. The slaughterer, whoever it be, is in duty bound carefully to examine the knife before the slaughtering to see that it be perfectly keen and smooth (קדוה חלוקה), without dent or roughness, and to repeat the process after the slaughtering. Should the knife be dented ("pagum," having a "pegimah") or become so during the slaughtering, the flesh of animals slaughtered therewith is rendered ritually unfit for food (Hul. 17b; Maimonides, "Yad," Shehitah, i. 23 and 24; Shulhan 'Aruk, Yoreh De'ah, 18, 1-12).

**2. Bedikah ha-Simanim** ("the examination of the parts," the esophagus and trachea, that require to be severed in slaughtering): **Inspection of Parts.** After the animal has been slaughtered, the shohet's next duty is to immediately inspect the simanim to see whether they have been properly severed. Neglect of this procedure would render the flesh ritually unfit for food (see Shulhan 'Aruk, Yoreh De'ah, 25, 1).

**3. Bedikah ha-Reah** ("the examination of the lung"): After the shohet has satisfied himself that the act of slaughtering has been properly performed, it becomes his duty to examine the lung of the animal to see whether it is in a perfectly sound condition or is tainted with any of the blemishes specified by the rabbinical law as making the flesh prohibited for use as food. This is the most important examination in connection with the slaughtering of animals for food, and must be performed with the utmost care and scrupulous conscientiousness.

The shohet, who, in his capacity as inspector or examiner, is called "bodek," scrutinizes the lung most carefully in order to see whether it contains any one of numerous fatal defects. A puncture in the lung ("nekeb"), the absence of any part thereof ("hissaron"), a softening ("nitmasmes"), or drying ("yabesh") of the tissue, the presence of hard spots ("atum," "tinre"), or the hardening of the entire tissue ("kashah ke'ez"), blisters or tubercles ("bu'ot"), filaments filled with pus ("sirkot"), and an unnatural and unwholesome color ("mareh pesulah") are the chief defects in the lung which may render the flesh of an animal forbidden. The examination is conducted in various ways: by insert-

ing the hand into the body before the lung is removed and feeling it ("mishmush"); also by putting the lung into lukewarm water, through which hard spots may become soft; and by inflating the lung ("nefihat ha-reah"). By the last-mentioned procedure the presence of a puncture can be at once detected. The result of this careful inspection is that flesh passed as "kosher" or fit is almost certain to be pure and wholesome as food (see Shulhan 'Aruk, Yoreh De'ah, 35-39; Maimonides, "Yad," Shehitah, viii., based on Mishnah Hul. iii. 1, and Gem. 46a et seq.).

**4. Bedikah Hamez** ("the search for leaven") is the name of a ceremony performed on the evening of the thirteenth of Nisan, when the master of the house examines, with the aid of a candle, all the corners, chinks, and remote places of the house for the purpose of discovering and removing any stray morsels of leavened matter. The object of this search is to obtain the assurance that the house is entirely free from leaven during the continuance of the Passover festival, as commanded by the Mosaic law. Any leavened matter found, unless otherwise disposed of, is required to be burned about ten o'clock on the following morning. As at present performed the search is rather perfunctory, the main reliance being upon the housewife, who sees to it that the house is thoroughly cleansed of leaven and put into a proper condition for the festival. The chief purpose of the formal search is to give a religious sanction to the actions of the housewife.

For "Bedikah ha-ishshah" (the examination of women) see NIDDAH. For "Bedikah le-gadlut" (the examination concerning maturity) see MAJORITY, and also Vows and NEDARIM. For examination of witnesses see ACCUSATORY AND INQUISITORIAL PROCEDURE. For "Bedikah le-mumim" (the examination concerning defects in relation to matrimony) see MARRIAGE AMONG HEBREWS. For "Bedikah li-netinat get" (examination concerning the capacity of giving a bill of divorce) see DIVORCE. For "Bedikah ha-metim" (examination of the dead) see DEATH. For "Bedikah le-yohasin" (examination concerning purity or legitimacy of descent) see PURITY OF RACE.

B. D.

**BEE:** A honey-gathering insect frequently referred to in the Bible. Bee-keeping dates very far back, and it is quite probable that the ancient Hebrews were engaged in it, although there is no direct testimony on the subject either in the Old or in the New Testament. Isaiah vii. 18 is usually quoted in evidence, and the phrase "the Lord shall hiss . . . for the bee" is explained as a technical term of apiculture, meaning to entice the bees to the hive; but the correctness of this supposition may be questioned. It would be more justifiable to quote II Chron. xxxi. 5, where reference is made to the first-fruits of honey. Philo is the first to mention bee-keeping, and the Talmud often refers to it. Whatever age, therefore, is to be assigned to apiculture

among the Hebrews, in any case wild bees abounded in Palestine; the phrase "the land flowing with milk and honey" (Ex. iii. 8) vouches for this fact. In Gen. xliii. 11, and also in Ezek. xxvii. 17, honey is named as an article of export; and in other passages of the Old Testament the abundance of wild honey is often spoken of (Deut. xxxii. 13; Judges xiv. 8; I Sam. xiv. 25 *et seq.*; Ps. lxxxii. 17 [A. V. 16]; Prov. xxv. 16; Matt. iii. 4). In Hebrew cookery, honey plays an important part (see HONEY). The Bee is also often mentioned; and a swarm of wild bees is compared to a hostile army (Deut. i. 44; Isa. vii. 18 *et seq.*; Ps. cxviii. 2). The small, unpretentious work of the Bee, that yet gives such sweet produce, is praised in Ecclus. (Sirach) xi. 3; compare the sentence added in the Septuagint to Prov. vi. 8, where much the same is said of the Bee as the Hebrew text says of the ant. From the word "Bee" is derived the popular name "Deborah" (Bee). To-day apiculture is carried on to a considerable extent in Palestine, and not only is Palestinian honey exported in large quantities to Europe and America, but even the bees of Palestine are sent to other countries. The beehives consist of hollow cylinders, made of earth mixed with chopped straw, about 39 inches long and ten inches wide. The beehives in ancient times could hardly have been more primitive.

I. BE.

**BEELEN, THEODORE JOHANN**: Professor of Oriental languages at the Catholic University of Louvain, Belgium; born at Amsterdam at the beginning of the nineteenth century. He devoted himself early to the study of Hebrew literature, especially rabbinical, and acquired much learning in this subject. Beelen is the author of a work, divided into three parts, entitled "Abne Hefez [Precious Stones], Chrestomathia Rabbinica et Caldaica cum Notis Grammaticis, Historicis, Theologicis, Glossario et Lexico Abbreviatarum, quæ in Hebr. Script. Passim Occurrent," Louvain, 1841. The first part, which is the most important—the other two being a mere supplement to it—is divided into ten chapters with the following headings: (1) Acute et Sapienter Dicta; (2) Sententiæ et Proverbia; (3) Fabulæ et Parabolæ; (4) Epistolæ Familiares; (5) Selecta Historiarum; (6) Grammatici et Lexicographi; (7) Scripturæ Interpretes; (8) Philosophi et Theologi; (9) Talmudica; (10) Poeta. The author drew only to a slight extent from Plautavitus' "Florilegium Rabbinicum" and from Buxtorf—the greater part being taken from Jewish sources, such as Sefer Toledot ha-Kabalah, Seder 'Olam, Sifra, Mekilta, etc. In the poetical part the author made use of Abraham ibn Ezra, Moses ibn Ezra, Judah ha-Levi, Gabirol, etc.

**BEEIADA** ("Baal knows"): A son of David (I Chron. xiv. 7), who in II Sam. v. 16 and I Chron. iii. 8 is called "Eliada." This is due to an intentional change by the scribe, to whom the name "Baal" was hateful, and who therefore substituted

"El" in its place. For other instances of disguising the name "Baal," see BOSHETH.

**BEELZEBUB** or **BEELZEBUL**: Name of a demon mentioned in the New Testament as chief of the demons (Matt. xii. 24-27; Mark iii. 22; Luke xi. 15-18). When the Pharisees heard (of the cures performed by Jesus), they said: "This man doth not cast out demons but by Beelzebul, the prince of the demons"; whereupon Jesus answered: "If Satan casts out Satan, he is divided against himself; how then shall his kingdom stand? And if I by Beelzebul cast out demons, by whom do your sons cast them out? But if I cast out demons by the spirit of God, then the kingdom of God is come unto you." On another occasion Jesus said to his disciples: "If they have called the master of the house [that is, himself] Beelzebub, how much more (shall they so call) them of his household" [that is, the disciples] (Matt. x. 25). The name "Beelzebub," written also "Beelzebul," which occurs nowhere else in Jewish literature, is a variant form of "Baal Zebub," the god of Ekron, whose oracle King Ahaziah consulted during his illness, provoking thereby the wrath of God (II Kings i. 2-16); the name is commonly explained after the Septuagint and Josephus, "Ant." ix. 2, § 1, as the "Lord of Flies" (see BAAL-ZEBUB). Plagues being often ascribed to the influence of flies (Ex. xxiii. 28; Eccl. x. 1; Pliny, "Historia Naturalis," x. 28, 75; Pausanias, "Description of Greece," v. 14, 1; Aelian, "Natura Animalium," v. 17, xi. 8; Usener, "Götternamen," p. 260), the god who dispelled flies (Apollo Apomyios) probably retained his popularity long after he had ceased to be an object of worship. In fact, the fly was regarded by the Jews in particular as more or less impure and demonic. "The evil spirit ["yezer ha-ra'"] lies like a fly at the doors of the human heart," says Rab. with reference to "the flies of death" in Eccl. x. 1 (Ber. 61a and Targ. Yer. to the passage). "A fly, being an impure thing, was never seen in the slaughterhouse of the Temple" (Abot v. 8), nor did one cross the table of Elisha; which fact, according to Rab., gave proof to the Shunammite woman that he was "a holy man" (II Kings iv. 9; Ber. 10b). The devil in German folk-lore also appears in the shape of a fly (Simrock, "Deutsche Mythologie," 1874, pp. 95, 479).

Geiger ("Urschrift," p. 53) thinks that Baal Zebub, in his capacity as god of the hated Philistines, became the representative of the heathen power and consequently the arch-enemy, the foe par excellence, and therefore the name "Baal debaba" ("debaba" being the Aramaic form corresponding to Hebrew "Zebub") acquired the meaning of "hostility," the verb זָבַב with the sense of "hostile action" being derived from it. But neither this opinion nor a similar one expressed by Döderlein and Storr, and revived in Richm's "Realwörterbuch," seems acceptable, as "Beel debaba" is the ordinary Aramean word for "calumniator." (Brockelmann, "Lex Syriæ.")

What renders the name still more problematic is the form "Beelzebul," which the older manuscripts present, and which has given rise to a number of other conjectures, among them the following: (1)

It has been suggested that the appellations Beelzebub and Baal Zebub are corrupt forms of what was originally "Baal Zebul" (Baal of the heavenly mansion, בַּלְזְבּוּל, Movers, in "Journal Asiatique," 1878, pp. 220-225), and afterward "Baal of the nether world." (2) The word "Zebul" (from "zebel," dung) is a cacophonic corruption of "Zebub," in order to give the name the meaning of "god of the dung." It is more likely that the name "Beelzebub" is a dialectic variation of "Beelzebub," as "Belial" is of "Belial"; Jerome read and translated the name as "dominus muscarum" (lord of flies).

## K.

**BEER** ("well"): 1. A halting-place of the Israelites near Arnon, in Moab, where they stopped during their wanderings in the desert (Num. xxi. 16). On the finding of the well a song was composed (Num. xxi. 17, 18): one of the earliest poetic pieces of the Bible. See an article by Budde in "The New World," March, 1895.

2. A place to which Jotham fled from his brother Abimelech (Judges ix. 21). This place has not been identified, though so much appears probable, that it was within the territory assigned to Manasseh.

**BEER, AARON:** Chief cantor of the Jewish congregation of Berlin; born 1738; died Jan. 3, 1821, in the fiftieth year of his official capacity as cantor. He possessed a well-trained tenor voice of extraordinary compass and rich and powerful quality; and such was his fame, about 1770, that music-lovers gathered from far and near to hear him. The Royal Library at Berlin contains a fine picture which represents him as a young man, holding in his hand a title-page with the motto "Immer Besing Ich des Ewigen Huld" (Ps. lxxxix. 2 [A. V. 1]).

**BIBLIOGRAPHY:** Mendel, *Musikalisches Konversations-Lexikon*.

**BEER, ADOLF:** Austrian historian and educator; born at Prossnitz, Moravia, Feb. 27, 1831. While still young he came under the influence of men like Gideon BRECHER and Hirsch Bär FASSEL, and received a careful education in the high school of his native city. Thus prepared he went abroad in quest of a higher education and attended the universities of Berlin, Heidelberg, Prague, and Vienna, training himself for a political career. To this ambition he sacrificed his Jewish religion and embraced Christianity. Having graduated as Ph.D., he was first appointed teacher of history at the high schools of Czernowitz, Prague, and Vienna, then in 1857 assistant professor of Austrian history at the Law Academy of Grosswardein, Hungary. In the following year he was promoted to a professorship of history at the Commercial Academy of Vienna. In this position he remained for ten years, when, in 1868, he was transferred to the Technische Hochschule of that city.

At that time his ambitions began to materialize. He entered the Ministry of Public Instruction as councilor, doing yeoman service in the cause of popular and higher education; and in 1873 he was elected member of Parliament, which election has since been renewed without interruption. His lucid parliamentary speeches, founded on a comprehensive and deep knowledge of educational, commercial, and financial affairs, won him the respect of his colleagues and opponents. In the political dealings between the conservative and liberal elements consequent upon the fall of the Taaffe ministry on Oct. 30, 1893, Beer was proposed as state secretary of education, but his Jewish descent thwarted all his hopes of entering the cabinet.

Beer is of a conservative disposition, appealing rather to the reason than to the emotions of his audience. His numerous writings show the wide range of his knowledge. They embrace commerce, finance, foreign politics, education, and modern history. As far back as 1872 Leopold von Ranke praised Beer's facility of expression and wide sweep of historical view.

Beer is the author of the following works: "Geschichte des Welthandels," 1860; "Fortschritte des Unterrichtswesens," 1867; "Die Zweite Theilung Polen's," 1867; "Joseph II., Leopold II., und Kaunitz," 1873; "Leopold II., Franz II., und Katharina von Russland," 1873; "Finanzen Oesterreich's im 19. Jahrhundert," 1877; "Zehn Jahre Oesterreichischer Politik 1861-10," 1877; "Staatshaushalt Oester.-Ungarns seit 1868," 1881; "Aus-Tegethoff's Nachlass," 1882; "Die Orientalische Politik Oesterreichs seit 1774," 1883; "Die Oesterreichische Handelspolitik im 19. Jahrhundert," 1893.

**BEER, ADOLPH:** Austrian colonel; born 1833 in Prossnitz, Moravia; died Oct. 2, 1888, at Leibach, Carniola. He entered a school for military cadets. On leaving it with the rank of lieutenant, he was appointed professor at the military academy in Weisskirchen, Moravia. Later Beer held a similar position in the military school of Cracow. During the Austro-Prussian war (1866) he greatly distinguished himself in the defense of the frontier fortress of Olmütz and by preventing its surrender, when the Prussians unexpectedly appeared before it at night. Beer was one of the first Jews in the Austrian army to attain the grade of colonel.

B. B.

**BEER, ALEXANDER:** Religious teacher and author in Munich, who wrote in 1826, under the direction of Abraham BRUG, rabbi of Würzburg, and with the approbation of the "bet din" in Fürth, and other rabbinical authorities of Bavaria, a catechism in the German vernacular under the title "Lehrbuch der Mosaischen Religion" (Munich, 1826), and in an abridged form "Hauptlehren der Mosaischen Religion" (*ib.* 1826), for the use of the Jewish schools. The same was indorsed by a rescript of King Ludwig I. of Bavaria, and was published at the expense of the government, with the

view of introducing systematic religious instruction in modern form among the Jews.

The book is therefore of historic interest as being the result, on the one hand, of governmental initiative in the direction of improved religious education of the Jews, and, on the other, of conscientious labor on the part of the conservative rabbis of Bavaria, who were eager to harmonize modern culture with the ancient faith and practise. By placing the Hebrew quotations from the Bible, Talmud, Maimonides, Moses of Coucy (Semag), and Aaron ha-Levi (Hinnuk) alongside of the German text, the author displayed pedagogical tact combined with loyalty to the traditional method of the past. The first part deals, in 32 paragraphs, with the Thirteen Articles of Faith; while the following part deals in 115 paragraphs with duties toward God, in 9 paragraphs with duties toward oneself, and in 49 paragraphs with duties toward one's fellow-men; an appendix treating also of the marriage laws and of the Aaronites. There is a foot-note on p. 57 of special significance by the rabbinate of Fürth, stating that the omission of circumcision does not exclude the Jew from the Jewish community or release him from all other obligations devolving upon the Jew. On account of its conservative tendencies, the book was attacked by an anonymous writer in a pamphlet entitled "Die Reform der Juden und das Beer'sche Lehrbuch," 1827 (Jost, "Neuere Geschichte der Israeliten," i. 127). Beer also published "Siddur Tefillot" (Prayer-book), with German translation, Munich, 1827.

**BEER, AMALIE** (née **Amalie Wolf**): German philanthropist and communal worker; died at Berlin June 22 (24), 1854. She was the wife of the banker Jacob Herz Beer, daughter of Liebmann Meyer Wolf (known as "the Berlin Cræsus"), and great-granddaughter of Lipmann Wolf Taussig. She was very charitable, and an active member of the Women's Aid Society for Wounded Soldiers, which was conducted under the patronage of Princess William of Prussia. In consideration of her valuable services, she received from the king the Order of Queen Louise, being the first Jewess to be so distinguished. In order, furthermore, not to offend the pious Jewess, who was averse to wearing a cross, the king decreed that she should wear the ordinary decoration of the first class in the form of a medalion attached to a ribbon. Her hospitable home in the Thiergartenstrasse, Berlin, was one of the most brilliant salons of the time, and was honored occasionally by the king's presence. Amalie Beer was the mother of the poet Michael Beer, of the composer Giacomo Meyerbeer, and of two other sons, Heinrich and Wilhelm.

**BEER, AUGUST:** German mathematician; born at Trier July 31, 1825; died at Bonn on the Rhine Nov. 18, 1863. Beer was educated at the technical school and gymnasium of his native town until 1845, when he went to Bonn to study mathematics and the sciences under Plücker, whose assist-

ant he became later. In 1848 he won the prize for his essay, "De Situ Axium Opticorum in Crystallis Biaxibus," and obtained the degree of Ph.D. Two years later he was appointed lecturer at the University of Bonn. At the same time he began publishing the results of his scientific labors, writing in 1854 "Einleitung in die Höhere Optik," which obtained a wide reputation. He followed this with a series of scientific articles in Poggendorff's "Annalen." In 1855 he was appointed professor of mathematics at Bonn. Beer also wrote "Einheit in der Electrostatik," published two years after his death.

**BEER, BENJAMIN BEN ELIJAH HAROFÉ:** An Italian, doubtless an artist, who lived in Italy, probably at Ferrara, during the fifteenth century. On a bronze medal discovered at Lyons, France, in 1656, Beer's name appears in acrostic in the Hebrew legend encircling the head. The medal measures about six inches in diameter, and has on the obverse an artistically stamped head crowned with a laurel wreath. The legend is as follows:

בנורת נהוג ית' מרצון נצחי בתם כל משפט העדר  
הצורה ראיתי אורך לזמן ישיגו הקץ ואחבונן בהשגחת  
אלי רומי השאיר רשומם ואעלח פדותך אוהיל יי שדי  
רב וסלח יי גח וע עי.

Outside the circle, on both sides of the head, occurs **מי בת הע שא הל הו בן ימין בן כרש** and below, "umilitas, τα ὤρωσις," the latter a misspelling of ταπεινωσις. The reverse of the medal represents a dark ground around which runs the legend, "Post tenebras spero lucem felicitatis judex dies ultimas D.III.M."

Menestrier the Jesuit, in his "Histoire de Lyon" (1696), was the first to describe the medal and to endeavor to interpret the legend. In his opinion the figure represents Louis le Débonnaire,

**Erroneous Opinions** and the legend expresses the gratitude of the Jews toward this king, who permitted them to build a synagogue.

**Concerning Medal.** This opinion respecting the head was held by many, among whom were De Boissi ("Dissertation Critique"), S. Löwisohn ("Vorlesungen"), and Carmoly ("Mémoire sur une Médaille en l'Honneur de Louis le Débonnaire"); they differ only in the interpretation of the legend.

It was only in 1836 that Gerson Levi called attention to the fact that the figure could not be that of Louis, because there existed no medal with the effigy of any French king earlier than Charles VII. Zunz ("Israelitische Annalen," 1840, Nos. 17, 18) pointed out that the dotted words from the beginning to contain in acrostic: **בנימין בכמההרר** (= **יחיה שנים רבות וטובות**). "Benjamin, son of my respected preceptor, the learned Rabbi Elijah Beer, the physician. May he live many happy years." Both father and son are known to have lived in Italy in the fifteenth century; and the "D.III.M." on the reverse of the medal

may represent the year (1503) in which the legend was written. Zunz believed that there was no connection between the figure and the legend; that Benjamin was interested in astrology, and that believing he had discovered the date of the coming of the Messiah, he engraved it on the medal.

**Zunz's View.**

L. Loewe, in "Memoir on the Lämlein Medal" ("Numismatic Chronicle," 1857, vol. xix.), goes still further. He expresses the opinion that Benjamin was an adherent of the pseudo-Messiah Asher Lämlein, who lived at that time, and that the words **אלי אשר לעמלן יהודי רומי** are an abbreviation of **אשר לעמלן יהודי רומי** ("Asher Lämlein, the Roman Jew"). The first eight of the eighteen letters with which the legend concludes he believed to be the initials of Job xix. 25 (A. V.) **ואני ידעתי נואלי חי ואחרון על עפר יקום**, which is thus rendered by Loewe: "I knew it, my Redeemer

been paid to the reverse of the medal, which serves to explain both the legend and the head. It bears the same head as the obverse, with the exception that in the former the head is turned to the left and has no laurel wreath, while rays diverge from the top. The features are represented indistinctly in order to picture the darkness out of which light is beginning to dawn. Benjamin, who probably was an artist, symbolized by this medal Judaism, past, present, and future.

The following are interpretations of the legend, according to Zunz, Loewe, Geiger, and the present writer:

**Zunz:** "By the decree of the divine Disposer, praised be He! by the mercy of the Eternal, whilst all judgment ceases and the image perishes, I behold Thy light at the time when redemption will take place, and I reflect on the providence of my

THE LÄMLEIN MEDAL.

(From "Zeit. der Deutschen Morgenl.-Gesellschaft.")

liveth; the last on earth will confirm it." The other letters are abbreviations of **מעשי ידי כתיבת בנימין** (Me'ashe yedi kethivat benjamin). **בן ר' שבתי ממשפחת עניים שבה ותהלה לאל חי וקים** ("The work of my hand, the writing of Benjamin, the son of R. Shabbethai of the Anavim family. Praise and glory I render to the living and everlasting God!")

According to Geiger, the figure represents Benjamin himself, and the legend expresses his belief in the immortality of the soul. As

**Loewe and Geiger on the Medal.** to the eighteen letters, Geiger explains the first eight as Loewe did, and in the remainder he finds the initials of Job xiv. 13, **כי יתן בשאול תצפני**, "Oh, that thou wouldst . . . keep me secret until thy wrath be past, that thou wouldst appoint me a set time, and remember me!"

But this interpretation also is forced, and it is impossible that Benjamin should have represented his own head with a laurel wreath. No attention has

God. O Romans, guard their trace! Thus I shall rejoice, waiting for Thy deliverance, O God, almighty Ordainer and Forgiver."

**L. Loewe:** "By the decree of Him who is the Guide [of the Universe], blessed be He! By His eternal will. When all justice ceased and consideration failed, I beheld the length of that period reaching the appointed end of exile [and no redemption had yet taken place]; but, reflecting on the ways of Providence as by Eli Romi, [I perceived] that he caused the spiritual traces of them yet to remain, and I rejoiced, I fully hope, in the redemption, O eternal, omnipotent God, who art great and forgiving!"

**Geiger:** "By the decree of the Guide, who is above volition (that is, above the mutability of changing resolutions); of the Eternal even when the process of the divestiture of forms ceases (the change of forms which are withdrawn from matter through *ἀποστέργαις*, in order to make place for others), I saw a fixed term for the time (the temporal) when the

end should come. And I reflected on the providence of my God, my height. He left [however] their traces [of the temporal and finite]; and I rejoiced. I am waiting," etc.

A better translation would be the following: "By the decree of the Ruler, blessed be He! through the will of the Eternal; while all justice [to the Jews] has ceased, and the image fails [as represented on the reverse], I behold Thy light [expressed by the rays on the top] at the time when redemption shall take place. And I consider as the effect of the providence of my God that the Romans left their traces [of the Jews], and I rejoiced," etc.

**BEER, BERNHARD:** German author; born July, 1801, at Dresden; died there July 1, 1861.

Bernhard Beer.

His father, Hirsch Beer, and his mother, Clara, belonged to the Bondi family, which migrated about the middle of the eighteenth century into Saxony, and which was intimately connected with the Jewish congregation of Dresden from its beginning. Bernhard was an only son. While a youth he was much influenced by his relative, Dr. M. Bondi, author of the lexicographical work "Or Esther." As the

narrow spirit then reigning in Saxony made attendance at public schools disagreeable to Jews, Beer was never a pupil at one of them; but, by the aid of private teachers and by self-study, he acquainted himself early and thoroughly with the ancient and modern classics. Herder, Mendelssohn, and Hartwig Wessely were his favorites. In 1824 he formed a society of young men for the discussion of the Bible and other Hebrew literature, and, above all, the works of the exegetes and philosophers of the Middle Ages.

Beer was the first to introduce sermons into the German language. With the permission of the chief rabbi of Dresden, A. Löwy (died April 28, 1835), Beer, although a layman, preached at the high festivals.

Beer was not only a volunteer preacher; he was also a volunteer educator of his poor coreligionists, who were unable to pay the fees of private teachers (access to public schools being very difficult and not without humiliation to Jewish children). In 1829, on the one-hundredth anniversary of Mendelssohn's birth, Beer, with the cooperation of E. Collin, a Dresden physician, founded the Mendelssohn-Verein for the advancement of trade, art, and science among Jews; and several members of the congregation at once declared themselves willing that their boys should learn a trade. This was accomplished only

with great difficulty. Up to this time there had been no Jewish teachers of handicrafts; and Christians had been forbidden to take Jewish apprentices.

Beer fought also as a journalist for the emancipation of his coreligionists in Saxony. An essay of his, published in "Die Biene," 1820, No. xxxvi., attracted public attention. In 1833 he drafted the petition which the Jewish congregation of Dresden addressed to the Saxon Parliament, protesting against a law which excluded the Jews from the rights of full citizenship. The result was favorable to the Jews.

After this, Beer went back to his favorite studies—history, philosophy, and Bible exegesis. His knowledge of the Jewish religion, and especially of the religious philosophy of the Middle Ages, was remarkable; and he collected a very valuable library. In 1834 Beer received the degree of Ph.D. from the University of Leipzig; and in the same year he married Bertha Bondi, who, by her great intelligence and pleasing manners, made his house one of the spiritual centers of Dresden; among others, Karl Gutzkow, Berthold Auerbach, and Julius Hammer frequently resorting thither. In 1842, after a serious illness, he made a tour through Italy and Switzerland. He also visited most of the important libraries of western Europe; enriching his library, when possible, with manuscripts and incunabula.

Beer was by nature a theologian. He endeavored to systematize Jewish theology, and presented his ideas on the subject in various magazines and special publications, such as Fürst's "Orient"; Frankel's "Zeitschrift für die Religiösen Interessen des Judenthums"; Frankel's "Monatsschrift"; "Jahrbuch der Deutschen Morgenländischen Gesellschaft"; Wertheimer's "Wiener Jahrbücher"; "Kerem Hemed"; "Jeschurun," etc. His principal works are: (1) "Die Freie Christliche Kirche und das Judenthum," 1848 (open letter to Ronge); (2) A translation of Solomon Munk's "La Philosophie chez les Juifs" into German, under the title "Philosophie und Philosophische Schriftsteller der Juden," 1852; (3) "Jüdische Literaturbriefe," originally published in Frankel's "Monatsschrift," 1853, 1854; later, in book-form, Leipzig, 1857; (4) "Abel," in "Literaturblatt des Orients," iv.; (5) "Aaron," in Wertheimer's "Wiener Jahrbücher," 1855; (7) "Leben Moses" (a fragment in manuscript found at his death).

In memory of Beer, the congregation in Dresden founded a scholarship in art and science; and two others were instituted by the committee of the Breslau Jewish Theological Seminary, which received the greater part of Beer's library, the remainder being bequeathed to the University of Leipzig.

**BIBLIOGRAPHY:** Z. Frankel, B. Beer, in *Monatsschrift*, xi. 41-56, 81-101, 121-143, 174-191, 245-266, 287-312, 325-344, 365-391, 405-430; K. Gutzkow, *Unterhaltungen am Häuslichen Herd*, 1861; *Deutsches Museum*, Aug., 1861.

**BEER, BERTHOLD:** Austrian medical writer; born at Brünn, Moravia, April 24, 1859. Educated at the high schools of his native city, first at the realschule, then at the gymnasium, he left for Vienna, where he attended the university and graduated in 1885. For several years he was physician at the "Allgemeines Krankenhaus" (General Hospital), making neuropathy a specialty. His scien-

tific researches were published in various Vienna medical journals, and in the "Journal of Anatomy," London; "The Lancet," London; "Nature," London; "Science," New York; and especially in "Wiener Medicinische Presse," of which he is editor.

M. B.

**BEER, JACOB LEYSER.** See MEYERBEER, GIACOMO.

**BEER, JULES:** Composer; son of Michael Beer, and nephew of Giacomo Meyerbeer; born 1833 in Paris, where he still (1902) resides. His first attempts at composition were two one-act comic operas, "En Etat de Siège" and "Les Roses de M. de Malesherbes," which were respectively performed before a private audience in 1859 and 1861. His next work was an opera entitled "La Fille d'Egypte," which was produced at the Théâtre Lyrique April 23, 1862. He then attempted works of greater magnitude; and in March, 1871, "Elisabeth de Hongrie," a grand opera by him, in four acts, was given at the Théâtre de la Monnaie at Brussels. Beer has since produced several other operatic works, none of which, however, has met with marked success. In addition to the foregoing, he has set to music Psalm cxxxvii., a work of colossal proportions for soli, chorus, and orchestra, which was performed for the first time on Jan. 23, 1868, at Paris, with Manduit, Caron, and Warot as the principal soloists.

Although these works are somewhat deficient when judged from a high artistic standpoint, they nevertheless deserve to be ranked far above the usual standard of amateur productions. Among the pianoforte compositions of Beer may be mentioned "La Marguerite," "Le Chant des Feuilles," and several other *morceaux de salon*.

**BEER, MAX JOSEF:** Austrian pianist and composer; born at Vienna Aug. 25, 1851. He studied with Dessoff, and was still very young when, on the recommendation of Hanslick, Dessoff, and Herbeck, he on three different occasions received emolument from the Austrian government for the compositions "Ariadne auf Naxos," "Die Auferweckung des Lazarus," and a number of songs. Beer, who in 1901 was living at Vienna, is the composer of the following operas: "Otto der Schütz"; "Der Pfeiferkönig"; "Friedel mit der Leeren Tasche," performed at Prague, 1892; "Der Streik der Schmiede," one-act opera, first performed at Augsburg, 1897. He also wrote the operetta, "Das Stelldichein auf der Pfahlbrücke"; the cantata, "Der Wilde Jäger"; the lyrical pieces, "Abendfeier," "Eichendorffiana," "Haidebilder," "Spielmannsweisen," "Was sich der Wald Erzählt"; a pianoforte-suite; and several books of songs. Of these works, "Der Streik der Schmiede" is generally considered the best. In this little opera, which was also successfully performed at the Theater des Westens in Berlin, Beer displays a fine mastery of vocalization. The prize operetta, "Das Stelldichein auf der Pfahlbrücke," has likewise met with favorable recognition. Among the literary productions of Beer may be mentioned a

contribution to Wagnerian literature entitled "Eva Pogner."

J. So.

**BEER, MICHAEL:** German poet; brother of Giacomo Meyerbeer, the composer, and of Wilhelm Beer, the astronomer; born Aug. 19, 1800, in Berlin; died at Munich March 22, 1833.

At the Werder Gymnasium, Berlin, where Beer was completing the education he had received at home, he early showed a marked preference for the tragedians among the classical writers of ancient Greece and Rome. At the age of eighteen he wrote his first tragedy, "Klytemnestra," which was produced at the Hoftheater, Berlin, Dec. 8, 1819, and made a favorable impression. After this youthful attempt—which revealed the weak points of his insufficient training, while the success of the play encouraged him in the pursuit of a literary career—he plunged with renewed fervor into his interrupted studies, following courses in history, philology, the natural sciences, and philosophy at the universities of Berlin and Bonn.

Beer's extensive travels through European countries contributed much to the liberal character and thoroughness of his education. From his second journey to Italy he brought home a new tragedy, "Die Bräute von Aragonien," suggested by Goethe's ballad, "Die Braut von Korinth." It was published simultaneously with "Klytemnestra," in Leipzig in 1823.

The most successful of Beer's works was the one act tragedy "Der Paria." With remarkable stagecraft, which is lacking in his later productions, he concentrated into a single act a story rich in content and full of stirring incident. It was produced for the first time Dec. 22, 1823, in Berlin, and received an ovation, Goethe himself adding warm praise to the plaudits of the audience. The author pictures in vivid colors the momentous struggle which a noble nature undergoes in a conflict with the depressing influence of degrading circumstances. It is an eloquent and bitter outcry against the oppression of the Jews in Europe.

In 1824 Beer moved to Paris, where the large circle of acquaintances and the growing fame of his brother, Giacomo Meyerbeer, threw open the doors of every salon to the young German poet. He soon learned to know intimately a number of eminent litterateurs, artists, and statesmen in Paris, and before the end of the year he felt as much at home in the French metropolis as at his father's home in Berlin. He rarely returned to his native city in after-days,

Michael Beer.

spending the rest of his life in Paris, on the Rhine, or in Munich, where he succumbed to neurasthenia at the age of thirty-two.

The largest and best, if not the most successful, of Beer's works was his "Struensee," a tragedy in five acts, dedicated to King Ludwig of Bavaria, and produced for the first time March 27, 1828, in Munich. It was very favorably received; and Count de St. Aulaire, with whom Beer became intimately acquainted while in Paris, made it known to the reading public in France by his translations of several scenes from the tragedy, which appeared in the "Revue Française." The whole work, published originally in Stuttgart, 1829, was later translated into French by Ferguson (Paris, 1834, simultaneously with a translation of "Der Paria," by Xavier de Marmier). A fine edition of this tragedy, with an introduction by Joseph Kürschner, is to be found in Kürschner's "Deutsche Nationalliteratur," cxxxvi., 1889.

Beer was also the author of some excellent poems, among which may be mentioned his "Elegies," written in Italy (1826). A complete edition of Beer's works was prepared two years after his death by his friend and admirer Eduard von Schenk, the noted Bavarian poet and statesman (Leipsic, 1835).

**BEER, MOSES SHABBETHAI:** An Italian rabbi; born at Pesaro; died in Rome, May 6, 1835, where he officiated as rabbi from the year 1825. On Dec. 18, 1829, he was admitted to an interview of forty minutes with Pope Leo XII., in order that he might plead on behalf of his community. This was the first time in the history of the Roman Jews that one of their representatives was permitted to appear in person before the pontiff.

**BIBLIOGRAPHY:** Berliner, *Gesch. der Juden in Rom* (Index), s. M. B.

**BEER, PETER (PEREZ):** Austrian educationist; born Feb. 19, 1758, at Neubydžow, Bohemia; died Nov. 8, 1838, at Prague. After having received his early training in Bible and Talmud, and—what was unusual in those days—in German and Latin, he entered, at the age of fourteen, the yeshibah at Prague, and four years later that of Presburg. When twenty-one he began his career as a teacher in a Hungarian village; but the desire for study soon brought him to Vienna, where for a time he attended the university.

As a teacher in his native town, and from 1811 at the Jewish school at Prague, Beer displayed great activity in reforming the methods of instruction. By a well-arranged system of teaching He-

Peter Beer.

brew, Bible, and religion, he, like his contemporary Herz Homberg, fostered the spirit of progress which during the reign of Emperor Joseph II., and through the impulse given by Moses Mendelssohn, had been kindled among the Jews of Austria. As an advocate of radical reform in religious matters Beer was considerably in advance of his time.

Beer was the author of several pedagogical works which were used in Jewish schools for many years. The principal ones were: (1) "Toledot Yisrael" (The Generations of Israel), a Biblical history in Hebrew and German, Prague, 1796; Vienna, 1810, 1815; and revised editions, Vienna, 1843, 1854; Prague, 1875; the Hebrew text with translation into Russian by B. Segall, Warsaw, 1870; 4th ed., Odessa, 1881; 5th ed., with additions by S. J. Abramowitsch, Odessa, 1883; by Abraham Solonowitsch, 3d ed., Warsaw, 1881; with translation into Polish by Simon Dankowicz, Warsaw, 1862. (2) The "Toledot Yisrael" (vol. ii.), post-Biblical history, appeared at Vienna in 1808, reprinted in "Musar Hasekel" ("Kiryat Sefer," ii.) by Baruch Schönfeld, Prague, 1831. (3) "Dat Yisrael" (Statute of Israel), religious text-book, Prague, 1809-10. (4) "Emet we-Emunah" (Truth and Faithfulness), elementary religious manual, Prague, 1810. (5) "Handbuch der Mosaischen Religion für Studierende," Prague, 1818.

Besides these school-books he wrote: (6) "Gebetbuch für Gebildete Frauenzimmer Mosaischer Religion," Prague, 1815; 3d ed., Vienna, 1845; (7) "Gebete der Israeliten auf das Ganze Jahr. In Gemeinschaft mit Joseph Jakob Ballin Bearbeitet," Aurich, 1818; (8) "Geschichte, Lehren, und Meinungen Aller Bestandenen und noch Bestehenden Religiösen Sekten der Juden und der Geheimlehre oder Kabbala," two parts, Brünn, 1822-23; (9) "Handwörterbuch der Deutschen Sprache," two vols., Vienna, 1827; (10) "Reminiscenzen, Bezüglich auf Reorganisation des Oeffentlichen Gottesdienstes bei den Israeliten," Prague, 1837; (11) "Ein Wort an Rabbinats- und Predigtamts-Candidaten," in "Zeitung des Judenthums," 1839, pp. 496 *et seq.*; (12) "Leben und Wirken des Rabbi Moses ben Maimon, Gewöhnlich Rambam, auch Maimonides Genannt, Prodrum, und Einladung zur Subscription auf eine Deutsche Uebersetzung des More Nebochim. Nebst einem Probebogen," Prague, 1834. This translation was not published, probably in consequence of Joseph Derenbourg's criticism in Geiger's "Jüd. Zeit." (1835), i. 97-123, 210-224, 414-427. Another criticism by I. Bukofzer, "Maimonides im Kampf mit Seinem Neuesten Biographen Peter Beer," appeared at Berlin in 1844.

An autobiography of Beer was published at Prague in 1839, extracts of which are given in "Allg. Zeit. des Jud." 1839, p. 101. Some of his Hebrew poems appeared in the "Meassef" and "Bik-kure ha-'Ittim," and several essays in the "Sulamith" and "Jedidja."

**BEER, RACHEL:** English journalist; daughter of Sassoon D. Sassoon. She was educated privately and spent two years in hospital training. Since

Oct., 1893, she has managed and edited the "Sunday Times," of which she is proprietress. Mrs. Beer is a member of the Institute of Journalists, and also of the Institute of Women Journalists. She has composed and published some piano and instrumental music. She married Frederick Arthur Beer, editor of the "Observer," London.

**BEER, WILHELM**: Astronomer; brother of Giacomo Meyerbeer, the composer, and of Michael Beer, the poet; born in Berlin Jan. 4, 1797; died there March 27, 1850. Wilhelm shared with his brothers the advantages of a liberal and modern education. At the age of sixteen he joined the ranks of the volunteers and took part in the campaigns of 1813 and 1815 against Napoleon. He did not remain long in the military service, but entered the banking-house of his father, whom he succeeded after the death of the latter in 1826. His leisure hours were devoted to the study of astronomy under the guidance of his friend J. H. Mädler, with whose assistance he erected and equipped an excellent private observatory at his villa in the Thiergarten, Berlin.

Beer and Mädler together made a number of observations of the planet Mars during the oppositions of 1828, 1832, 1835, and 1837, and published the results of the first series under the title "Physische Beobachtungen des Mars in der Erdnähe," in 1830. Their most important work was a map of the moon, "Mappa scelenographica totam lunæ hemisphæram visibilem complectens observata," in four sheets (Berlin, 1834-36). This map was incomparably superior to anything of its kind previously attempted, being executed with the utmost care and representing years of laborious micrometric measurements. Each landmark discovered on the moon's surface was noted with great precision, and 919 spots and 1,095 determinations of the heights of lunar mountains were measured by the two astronomers, who described the results of their work in "Der Mond nach Seinen Kosmischen und Individuellen Verhältnissen, oder Allgemeine Vergleichende Selenographie" (two vols., with maps, 1837). The map of Beer and Mädler—which is extremely rare to-day—remained for a long time a standard work in selenography.

Another valuable contribution to astronomy by Beer and Mädler appeared in 1841; namely, the "Beiträge zur Physischen Kenntniss Himmlischer Körper im Sonnensystem." This was the last astronomical work in which Beer participated. His friend Mädler accepted a call from the University of Dorpat to take charge of the observatory there; and Beer, without altogether losing interest in the science for which he had done so much, gradually drifted into politics. In 1846 Beer was elected to a seat in the Prussian Chamber of Deputies, and published his political ideas and sentiments in a number of pamphlets, among which was "Die Dreikönigsverfassung in Ihrer Gefahr für Preussen," Berlin, 1849.

**BEER-BING, ISAIAH**: French journalist; born at Metz in 1759; died in Paris July 21, 1805. He entered early upon a literary career, and at the age of twenty-five published a French translation of the "Phædon" of Moses Mendelssohn, under the title "Traité sur l'Ame." In 1788 he attracted the attention of Abbé Grégoire, Mirabeau, Lafayette, and Roederer, by his pamphlets in behalf of the Jews, and especially by his "Lettre," in which he defended his coreligionists against the attacks of Aubert Dubayet. Notwithstanding his various literary occupations, he did not neglect the Hebrew language, and translated Mendelssohn's "Phædon" into Hebrew, with a preface and commendatory verses written by the poet Hartwig Wessely (Berlin, 1786). Beer-Bing was, however, obliged to interrupt his literary career, because of the necessity of securing means to provide for his large family, and he obtained the position of administrator of the salt-works in the eastern part of France.

**BEER ELIM**: A Moabite town mentioned in the lament for Moab (Isa. xv. 8). It is probably to be identified with the **Beer** of the desert wanderings (Num. xxi. 16).

J. JR.

G. B. L.

**BEER LAHAI RO'I**: Name of a well in the desert south of Palestine on the road to Shur (Gen. xvi. 7 *et seq.*), known as the stopping-place of Isaac (Gen. xxiv. 62, xxv. 11). According to the rather artificial and not at all lucid explanation of Gen. xvi. 13 *et seq.*, the name means "the well of him that liveth and seeth me." In order to find the true etymology of the word, Wellhausen ("Prolegomena," 4th ed., p. 330) proposes to read "lehi," jawbone (compare Judges xv. 17 *et seq.*), which among the Arabs is a name given to any prominent crag; and to interpret "ro'i" as the name of an animal. In Arabic such a place is found bearing the name "camel's jawbone." The spring lay between KADESH and the otherwise unknown Bered (Gen. xvi. 14). The Bedouins worship the spring in Muweilih, twelve miles to the northwest of Kadesh, as the well of Hagar. From this it would appear that the traditional well of Hagar, already mentioned by Eusebius, may be sought here; but the exact site of the well, which is thus bound up with questions regarding Hagar's home, can not be fixed upon such testimony.

J. JR.

F. BU.

**BEER-SHEBA**: A place situated on the southern boundary of Judea (compare Judges xx. 1; II Sam. xvii. 11; I Kings xix. 3) which was allotted to the tribe of Simeon (Josh. xix. 2). It is referred to in Gen. xxii. 19 as the dwelling-place of Abraham; and according to Gen. xxi. 31, Abraham and Abimelech made a treaty there, whence it derives its name Beer-sheba, the "well of the oath." According to Gen. xxvi. 23 *et seq.*, the place derived its name from the fact that Isaac and Abimelech made a treaty there. Isaac also built a shrine at Beer-sheba; and again, according to Gen. xxviii. 10 and xlv. 5, it was Jacob who sojourned there for a time. As early as the days of Samuel, Beer-sheba was an

important place, since it is stated that the sons of Samuel "were judges in Beer-sheba" (I Sam. viii. 2). Amos (v. 4 *et seq.*, viii. 14) speaks of the shrine and of its impure ritual. The importance of the place is further shown by the fact that the mother of King Jehoash came from Beer-sheba (II Kings xii. 1). In post-exilic times Beer-sheba is mentioned in Neh. xi. 27, 30. Later, it belonged to that part of the country held by the Idumeans. At the time of Eusebius and Jerome, Beer-sheba was an important garrisoned city. After this, however, it fell into decay; and now nothing remains of it but the well, the name "Bi'r es-saba," and some unimportant ruins.

**BEERAH.**—**Biblical Data:** A descendant of Reuben, and head of the tribe at the time it was taken into captivity by Tiglath-pileser (I Chron. v. 6).  
J. JR. G. B. L.

—**In Rabbinical Literature:** Beerah, the prince of the tribe of Reuben, is identical with Beeri, the father of the prophet Hosca and himself a prophet (Lev. R. xv.). He was called בארה ("well") because he was a well-spring of knowledge and scholarly attainments. God caused him to die in the Assyrian captivity, in order that his piety might be of service to his fellow-exiles who died

THE WELLS OF BEER-SHEBA.  
(After a photograph.)

In the Old Testament, as already mentioned, the name is said to mean "the well of the oath"; others, as Stade, explain it as meaning the "seven wells." But grammatically this is questionable on account of the order of the words; and according to careful investigation of travelers (see especially Gautier, "Souvenirs de la Terre Sainte," pp. 149 *et seq.*; "The Expository Times," x. 328), there are only three wells on the site.

**BEEROTH** ("wells"): One of the cities of the Gibeonites (Josh. ix. 17) which after the conquest fell to the lot of Benjamin (Josh. xviii. 25). This possession, however, seems to have been but temporary; for in II Sam. iv. 3 we find that the inhabitants fled to Gittaim. The name is again found in the post-exilic list of those that returned with Zerubbabel (Ezra ii. 25; Neh. vii. 29; "Beroth" I Esd. v. 19). It is the modern El-Bireh (Baedeker-Socin,

p. 325; Buhl, "Geographie des Alten Palästina," p. 173).

J. JR.

G. B. L.

**BEET:** This well-known biennial root-plant is not mentioned in the Bible; according to De Candolle, it was not cultivated before the sixth or fourth century B. C., although Wönig claims to recognize it in an Egyptian picture from the Beni Hassan (XII. dynasty). Its name in the Mishnah appears to be a foreign one; its Syrian-Arabic appellation *sikelos*, extensively known in Europe, is accepted as the equivalent of "Sicilian."

Both the white and red Beet, *Beta vulgaris* or *rapacea* grow wild in Palestine (Post, "Coast, Jordan Valley, and Dead Sea Valley," p. 679). Both the white Beet and *Beta vulgaris*, or *cicla*, are to-day called "silḳ" in Arabic (Ascherson and Schweinfurth, "Flora d'Egypte," p. 125; Boissier, "Flora Orient," iv. 896). In Syriac it is "selḳa"; in the Babylonian Talmud, סלקא; but in the Mishnah, a different word, תרדן (plural), Kil. i. 3. Jerome gives it as "tolet" in Syriac, evidently having in mind the Mishnaic term תרדן, and not, as Mandelkern states, *s. r.*, the Mishnaic תראה. Brockelmann ("Lexicon Syriacum") wrongly registers a Syriac word, "tarida." There is no such word in Syriac, while Sachs's derivation ("Beiträge," i. 107) of a Babylonian word, תרירא,—from "bliteus" (a tasteless, silly person), is not tenable, because there is no support for it in Aramaic, and because the reading תרארא has better authority. The Mishnaic word תרדן is used as late as 309 by R. Hisda of Sura, in a Hebrew saying.

Like all biennials, the Beet develops in the first year a very short stem, crowned with a rosette of leaves, and provided with a thick and fleshy root in which the plant-food is stored up. When active life is resumed in the second year, an upright stalk is sent up, with leaves and blossoms, which are fed out of this reserve source in the root (Kerner, "Pflanzenleben," i. 717). These stems are the חלפני תרדן (חלפנות, חלפנות) of the Mishnah, which were eaten after preparation like those of asparagus, the white variety being preferred (Schuchardt, "Gemüse und Salate der Alten," p. 51; perhaps *καυλωτόν* in "Athen." ix. 317a). See passages in 'Uk. i. 4; Yer. Ter. xi. 47d; 'Orlah iii. 7; and parallel passages. Bezaḥ 3b; Yeb. 81b. If this stem be pinched off (קנב), the roots start to grow again (Shab. 73b).

The cultivation of beets is spoken of in Giṭ. 69b; B. M. 109a; they are crushed in a mortar (Shab. 74b); remain fresh only one day (Yer. Pes. iv. 31c, 2); can not be eaten raw (Yer. Ma'as. Sh. ii. 53b, 44; compare 'Er. 28b); when boiled, according to R. Hisda, are very beneficial to the heart and eye, and as well to the intestinal tract. They are therefore boiled with other vegetables (according to Pliny xix. 133, with lentils and beans), or steeped (Ter. x. 11; Ber. 38b); and the broth (מי תרדן, Yer. Ter. xi. 47d, 43) is wrongly identified by Rabba b. Samuel with *οινύραρον*, though it should be mentioned that beets boiled and eaten with oil, γάρον, fish-milt, and a little carbonate of soda, according to "Geoponica," xii. 15, serve to soften and purify the body (מיא דסילקא, Ber. 35b; Krauss, "Lehnwörter," ii. 73).

Basing his statements upon an utterance by R. Huna, a Babylonian teacher once laid stress on the use of beets and rice on the evening of Passover (Pes. 114b; compare Yer. Pes. x. 37d, 10, רב מטבל בחרדן). Beets are used to this day in Slavic countries in the preparation of a "sour" soup for Passover called "borscht." They are also reckoned among the foods of propitious omen to be eaten on New-Year's Day (Ker. 6a; Hor. 12a), based, according to Hai Gaon's apt explanation, upon the play of words (יסתלקו עונינו, "May our sins depart!" סלקא = beet) (Responsa of the Geonim, "Heimdah Genuzah," No. 166, in "Shibbole ha-Leḳet," p. 266, יסולקו עונותינו). Not so apt is its derivation from the phrase יסתלקו אויבנו, "May our enemies depart!" pertaining to days of persecution (Tur and Shulḥan 'Aruk, Oraḥ Ḥayyim, 583, 1). In Italy, beets are to-day still roasted in ovens or upon hot ashes, constituting the "barba di biesola" (Lenz. 446), concerning which Raphael Meldola gave his opinion in Pisa ("Mayyim Rabbim," ii. 15, 17), as to whether they might be eaten when roasted by non-Jews.

Beets are recommended as a remedy (Giṭ. 69a, b; 'Ab. Zarah 28b; Ber. 57b). R. Hanina b. Hama taught that the Babylonians were free from leprosy because they ate beets and drank a liquor made from lupins, or, according to R. Johanan, because they ate beets and drank this liquor and bathed in the Euphrates (Ket. 77b; Bacher, "Ag. Pal. Amor." i. 3, note). Both Greek and Latin authors ascribe medicinal virtue to the Beet (Schuchardt, l. c. p. 53).

**BIBLIOGRAPHY:** Löw, *Ar. Pflanzennamen*, p. 273.

J. JR.

I. Lö.

**BEETH, LOLA:** Austrian operatic singer; born Nov. 23, 1862, at Cracow, Galicia. The daughter of a well-to-do merchant, she spent her youth in tranquil prosperity; but her father's subsequent failure in business impelled her to earn her own livelihood. She had received a good musical education at home, but at first her work was confined to the piano. Her patroness, Princess Sapiéha, discovered her talent for singing and acting; and her training in these branches was continued at the school for singing conducted by Marie Luise Düstmann at Vienna. One year's instruction under Mme. Viardot Garcia at Paris brought her art to such a state of perfection that she was able to appear as *Elsa* in "Lohengrin" at the Berlin Royal Opera on March 25, 1882. Her great success secured her position at the German capital, where she remained for six years, appearing in not less than thirty-six rôles. On May 1, 1888, she connected herself with the Imperial Opera at Vienna, then directed by Jahn, and has since lived in that city.

Beeth's favorite parts are the difficult rôles of the Wagnerian heroines—*Elizabeth* and *Venus* in "Tannhäuser," *Elsa* in "Lohengrin," *Sieglinde* in the "Walküre." Though she herself testified to the keen appreciation of her Vienna audiences, she has not confined her performances to that city, but has appeared at Berlin, Leipsic, Paris, and New York; and everywhere her great gifts have made a brilliant impression.

O. F.

**BEETLE:** English equivalent in A. V. for the Hebrew "hargol" (Lev. xi. 22; R. V. "cricket"). It is here mentioned as a kind of locust, together with "arbeh," "sal'am," and "hagab." According to the Talmud the hargol has a tail, and a hump on its head. In Shab. vi. 10 it is stated that a hargol's egg is hung on the ear as a cure for earache. It is impossible to say now with which of the known species of Beetle the hargol is to be identified; but it has nothing in common with the ordinary Beetle (compare Dillmann on Lev. xi. 22). See LOCUSTS.

J. JR.

I. BE.

**BEGGING AND BEGGARS:** Although it has made ample provision for the relief of the poor, the Mosaic legislation does not contain any prescription with regard to beggars; nor has the Biblical Hebrew a specific term for professional beggary, the nearest expression being "to ask [or seek] bread" and "to wander" (see below). Wherever the Bible commands charity, or even "gifts" to the needy (Esther ix. 22), it does not mean such as are urged by an intruding or supplicating mendicant, but such charitable deeds as are practised spontaneously by the giver—whenever there is a need for them. Thus the Bible praises a worthy woman with the words: "She stretcheth out her hand to the poor; yea, she reacheth forth her hands to the needy" (Prov. xxxi. 20; compare Deut. xv. 7; Isa. lviii. 7).

This omission of all care for beggars wandering from door to door is not without reason, but lies in the very nature of the Mosaic law. The distribution of the Holy Land among all the children of Israel in equal parts corresponding to the number of the members of each family; the manifold provisions for the relief of families or individuals impoverished by misfortune or disease; the strict prohibition of every kind of usury; the cancellation of all debts in the sabbatical year; the restoration of all the destitute landowners to their former estate at the recurrence of the jubilee year; and, finally, the provision that a poor Hebrew who sold himself to his wealthier brother should serve him until the jubilee only, without becoming deprived of his citizenship, and that his master was forbidden to treat him as a slave (Lev. xxv. 39 *et seq.*)—all these laws, as far as actually practised, must have rendered the existence of beggars quite impossible.

In somewhat later times, however, with the development of larger cities, begging seems to have been known to the Jews, either as occurring among them or among neighboring nations. This may be inferred from Ps. cix. 10, where the children of the wicked are cursed with beggary in contradistinction to the children of the righteous, who will never have to seek bread (Ps. xxxvii. 25; for the Hebrew expression corresponding to "begging," compare Ps. lix. 16 and cix. 10).

The first clear denunciation of beggary and alms-taking is found in Ecclus. (Sirach) xl. 28-30, where the Hebrew word for "begging" (according to the edition of Cowley and Neubauer, Oxford, 1897) is as in Ps. cix. 10 (compare Ecclus. [Sirach] xxix. 23 *et seq.*). Here, as well as in Tobit, and especially in the New

Testament, where beggars are frequently mentioned (Mark x. 46; John ix. 8; Acts iii. 2, 3), the word *ἐλεημοσύνη* has already assumed the

**In the specialized sense of alms given to beg-**  
**Apocrypha** *ging* poor (Tobit iv. 7, 11, 16, 17; xii. 8—**and N. T.** 11; Ecclus. [Sirach] iii. 14, 30, 33; vii. 10-12; xvi. 14; xxix. 11-13; xxxi. 11; Matt. vi. 2-4; Luke xi. 41; xii. 33; Acts ix. 36; x. 2, 4, 31; xxiv. 17).

The existence of house-to-house begging in Mishnaic and Talmudic times may be inferred from Peah viii. 7; Shab. l. 1, 151b; Meg. 15b (with this passage compare Targ. Esth. ix. 14); Ket. xiii. 3; B. B. 9a; and Sifre, Deut. 116. By these passages, however, it can not be decided with certainty whether there were only itinerant mendicants, or also resident beggars. The expression used in Peah viii. 7, "ani ha-'ober mi-makom le-makom," probably alludes to the first class, while the other terms, "mahazir 'al ha-petahim" and the Aramaic "ahadore appitha" may include both classes. Women did not

**Women Did** beg from house to house. The sup-  
**Not Beg.** port of a needy woman was, therefore, thought preferable to that of a needy man (Hor. iii. 7; Maimonides, "Yad," Mattemot 'Aniyim, viii. 15; Shulhan 'Aruk, Yoreh De'ah, 251, 8). Professional beggars were a despised class; and it was forbidden to support them from the general charity fund with more than small alms (B. B. 9a; see Rashi on the passage; Yoreh De'ah, 250, 3, and the annotations of Shabbethai Cohen, according to which private benefactors may also observe the same rule). But it was also forbidden to drive a beggar away without giving him any alms (B. B. l.c.; Yad ha-Hazakah, l.c. vii. 7). Non-Jewish beggars were also recommended for support with food and garments (Tosef., Git. v. [iii.] 4; Yad ha-Hazakah, l.c. vii. 7; Yoreh De'ah, 251, 1, gloss); but Jews were prohibited from receiving alms publicly from non-Jews, unless they were in danger of life (Sanh. 26b, see Rashi; Yad ha-Hazakah, l.c. viii. 9; Yoreh De'ah, 254, 1). Allusion is also made to a class of professional mendicants who feigned diseases or deformities in order to attract the sympathetic notice of passers-by. Such beggars were looked upon with contempt and aversion (Peah viii. 9; Tosef., Peah, iv. 14; Yer. Peah vii. 21b; Ket. 68a). Among the Samaritans there were many professional beggars, and the Midrash (Lev. R. v. 8; Midr. Teh. xix.) describes in a very amusing way the methods of these Samaritan mendicants.

To what extent begging was practised among the Jews of post-Talmudic times up to the eleventh century, is a question which can not be decided with certainty, since Hebrew sources of this period of Jewish history are very scanty. Judging from the undoubted fact that one of the chief forms that Jewish charity assumed was to discountenance begging from door to door, it is almost certain that before the period of the ghetto, and especially in smaller towns, there were no Jewish beggars at all (Abrahams, "Jewish Life in the Middle Ages," p. 309, Philadelphia, 1896).

The fact that the Jews formed distinct communities in the midst of contemptuously indifferent or

actively hostile environments, caused them to draw closer to one another, and tended to soften and bridge over the differences of poverty and position. Hence in most Jewish communities before the thirteenth century, though the inroad of itinerant mendicants was a grievous burden on Jewish benevolence, the number of settled, resident beggars was very small (*ib.*).

This was changed with the beginning of the ghetto age, when Jews were restricted to certain streets or quarters. Within the ghetto the Jews

**Ghetto Age.**

formed one large family, and house-to-house begging was carried on without publicity. Thus the system received a new impetus in the ghetto centuries, and reestablished itself in Jewish life. But the begging was restricted to Fridays and the middle days of festivals (Vogelstein-Rieger, "Gesch. der Juden in Rom," ii. 315). Begging in the streets of the ghetto or in front of the synagogue was, however, sternly forbidden (Berliner, "Gesch. der Juden in Rom," ii. 2, 56 *et seq.*). The system of house-to-house begging was occasionally favored by wealthier Jews, but the ordinary middle class were opposed to it; and their view carried the day (Yoreh De'ah, 250, 5).

In the seventeenth century the system was revived; and especially on Fridays and on the eves of

**Seventeenth Century Onward.**

festivals the Jewish poor went about from house to house gathering alms. In modern Jewish life this system became a full-grown abuse; and irrepressible crowds of pushing beggars assembled about the synagogue doors (Abrahams, *l.c.*, p. 310). To-day the Jewish beggar, the so-called "schnorrer," is a persistent and troublesome figure in modern Jewish society.

As another kind of begging must be regarded the collections made for the Jewish settlers in Palestine. See also ALMS, CHARITY, חֲלוּקָה, RUSSIA, and SCHNORRER.

**BÉGIN, ÉMILE AUGUSTE:** French physician and historical writer; born at Metz April 24, 1802 (according to some sources, April 23, 1803); died in Paris May 31, 1888. Meeting with difficulties in his preparation for the polytechnic school, he turned to medicine. Bégin served in the army, and was, during the Spanish war, attached to the hospital of Barcelona. Upon his return to France in 1828 he received the doctor's degree upon contributing the thesis "Influence des Travaux Intellectuels sur le Système Physique et Moral de l'Homme," Strasbourg. He then settled in his native city, where in 1830 he founded a weekly journal, called "L'Indicateur de l'Est," which was, however, discontinued on Jan. 1, 1832. In 1850 Bégin removed to Paris and engaged in literary and archeological pursuits.

Among other activities he participated in the works of the commission charged with the collection and publication of the correspondence of Napoleon I. In 1869 Bégin was appointed librarian of the Louvre, and in 1874, of the Bibliothèque Nationale, Paris, serving at the same time as physician at this institution. Besides being a member of many academies and societies, he was also attached to the Commission of Historical Monuments of the Moselle department.

In the field of medicine he published, in addition to his doctorate dissertation: "Connaissance Physique et Morale de l'Homme," Nancy, 1837; "Lettres sur l'Histoire Médicale du Nord-Est de la France," Metz, 1840; "Le Buchan Français: Nouveau Traité Complet de Médecine Usuelle," 2 vols., Paris, 1836; "Lettres à M. Littré sur Quelques Phlegmasies Muqueuses Epidémiques Qui Ont Regné Depuis Deux Siècles dans le Nord-Est de la France," Metz, 1842; and others. In literary and historical fields he displayed a still greater productivity, the chief works of which are: "Histoire de Napoléon, de Sa Famille et de Son Epoque au Point de Vue de l'Influence Napoléonienne sur le Monde," 6 vols., Paris, 1853-54; "Biographie de la Moselle," 4 vols., Paris, 1832; "Mélanges d'Archéologie et d'Histoire," Metz, 1840; "Dithyrambe Composé pour Honorer la Mémoire du Général Foy," in "Couronne Poétique du Général Foy," by Magalon, Paris, 1826; "Guide de l'Etranger à Metz et dans le Département de la Moselle," Metz, 1834; "Education Lorraine Élémentaire," 3 vols., Metz, 1835-36; "Guide de l'Etranger à Nancy," Nancy, 1837; "La Moselle d'Ausone," translated into prose, Nancy, 1839; "Metz Depuis Dix-Huit Siècles," 3 vols., Metz, 1846; "Voyage Pittoresque en Espagne et en Portugal," Paris, 1852; "Voyage Pittoresque en Savoie et sur les Alpes," Paris, 1852; "Musée Médiomatricien," Metz; "Eloges"; "Histoire des Sciences, des Lettres, des Arts et de la Civilisation dans le Pays Messin Depuis les Gaulois Jusqu'à Nos Jours," Metz, 1829; "Histoire des Duchés de Lorraine, de Bar, et des Trois Evêchés: Meurthe, Meuse, Moselle, et Vosges," 2 vols., Nancy, 1833; and a large number of articles and treatises in periodical publications, especially in "Austrasia," of which, he was one of the founders. Of particular interest to Judaism are his researches on the history of the Jews in France, "Recherches pour Servir à l'Histoire des Juifs dans le Nord-Est de la France," published in "Revue Orientale," Brussels, vols. i. and ii.; and on Jewish physicians in Alsace and some other provinces, published in the form of letters to E. Carmoly, editor of the "Revue Orientale" ("Lettres Messines," *ib.* ii.).

**BÉGIN, LOUIS JACQUES:** French surgeon and author; born at Liège, Belgium, Nov. 2, 1793; died in Gorriquen, near Lacrovan, Bretagne, April 13, 1859. He studied medicine at the Military Hospital of Metz and in Paris. During the wars of Napoleon I. he served as assistant surgeon in the campaigns against Russia and Germany, 1812-14; and

upon returning to his country continued with great success his studies at Strasburg and Val-de-Grâce, receiving the highest rewards. In 1821 Bégin was appointed instructor of physiology as applied to gymnastics at the military gymnasium of Metz; obtained his doctorate at Strasburg in 1823; and in 1832 was made lecturer to the School of Strasburg, on anatomy, physiology, and surgery. His educational and literary activity soon attracted attention. Upon arriving at Paris in 1835 he rapidly gained the highest degree in the civil and in the military medical service. Bégin was a member of the French Medical Academy since its foundation in 1823, and its president in 1847; surgeon-in-chief and first professor at the Hôpital de Perfectionnement of Val-de-Grâce; member in 1842, and subsequently president from 1850 to 1857, of the Sanitary Council of the French armies; commander of the Order of the Legion of Honor in 1851; and member of many learned societies—French and foreign. An ardent adherent of Broussais, he defended his theories with remarkable talent. Bégin's friend, Dupuytren, confided to him and Sauson the publication of the new edition of Sabatier's "Médecine Opératoire"; and in his will charged him with the publication of his unfinished "Traité de la Taille." In 1857 Bégin retired from the public offices he held.

Besides contributions to sanitary and medical periodicals, Bégin published the following works: "Principes Généraux de Physiologie Pathologique d'Après la Doctrine de M. Broussais," Paris, 1821; "Considérations Pathologiques et Thérapeutiques sur les Maladies Chirurgicales Aigues," doctorate thesis, Strasburg, 1823; "Application de la Doctrine Physiologique à la Chirurgie," Paris, 1823; "Nouveaux Eléments de Chirurgie et de Médecine Opératoire," Paris, 1824, in 2 vols.—the 2d ed. in 3 vols. in 1835; "Traité Thérapeutique Rédigé Suivant les Principes de la Nouvelle Doctrine Médicale," 2 vols., Paris, 1825; "Mémoire sur la Déviation du Rachis," Paris, 1826; "Traité de Physiologie Pathologique," 2 vols., Paris, 1828; "Mémoire sur l'Esophagotomie," Paris, 1833; "Etudes sur le Service de Santé Militaire en France," Paris, 1849; "Mémoire sur la Gymnastique Médicale," Paris, 1823; "Supplément au Traité Historique et Dogmatique de la Taille, de J. Deschamps," 1826; "Mémoire sur l'Hémorragie à la Suite de l'Opération de la Taille par la Méthode Périnéale," etc., 1842; "Quels Sont les Moyens de Rendre, en Temps de Paix, les Loisirs du Soldat Français Plus Utile à Lui-Même, à l'Etat, et à l'Armée?" 1843; "Des Plaies d'Armes à Feu," 1849; "Principales Maladies des Yeux, de Scarpa," 1821.

**BEHAIM, MARTIN.** See ZACUTO, ABRAHAM.

**BEHAK, JUDAH:** Russo-Hebrew writer; born at Wilna Aug. 5, 1820; died at Kherson Nov. 14, 1900. He was the last of the champions of progress in Russo-Hebrew literature, known under the name of "Maskilim." Owing partly to the influence of Elijah of Wilna, and partly to the progressive

spirit of the epoch of Moses Mendelssohn, a circle of pioneers of Jewish culture was formed in Wilna, the leading spirits of which were Behak, M. A. Guenzburg, A. B. Lebensohn, Benjacob, S. I. Fuenn, and others. Its object was the revival of Biblical Hebrew and the diffusion of secular knowledge among the Jewish masses by the cultivation of the Hebrew language and literature.

Behak entered the literary field at the age of twenty, and engaged mainly in philological research, studying the Aramaic translation of the Bible and rational exegesis. He soon attracted attention by his scholarly articles in the Hebrew periodicals "Pirhe-Zafon" and "Ha-Karmel." When the Rabbinical School was established at Wilna in 1848, Behak was invited to occupy the position of instructor in the Talmud of the advanced classes. This post he continued to hold until 1856, when he removed to Kherson, where he retired into private life. In commemoration of his eightieth birthday (Aug. 5, 1900), some of the prominent members of the Jewish congregation of Kherson founded, under the name of "Bet-Yehudah," a school in which all subjects were to be taught in Hebrew.

Behak corresponded extensively with most of the Hebrew scholars of the second half of the nineteenth century. Two of his letters (to A. Dobsevig and Palei) appeared in "Ha-Modia' la-Hadashim," No. 5, New York, 1901.

Besides numerous articles in various Hebrew periodicals, Behak published notes on the "Biurim Hadashim" to the Pentateuch, to be found in the first volume of the Bible edition published by Lebensohn and Benjacob, Wilna, 1848-53; "Ez-Yehudah" (Judah's Tree), a treatise on the prophet Samuel and on the twenty-four places in the Bible where the priests are also called Levites, Wilna, 1848; notes to Ben-Ze'eb's "Talmud Leshon Ibri," Wilna, 1848 and 1857; notes to Solomon Loewisohn's "Mehkerei Lashon," Wilna, 1849; "Tosephet Milluim" (Additional Notes), a commentary on the Aramaic translation of the Pentateuch, Wilna, 1898.

**BEHALAH** ("terror" or "panic"): A name commonly bestowed on several periods of great excitement in Lithuania and Poland, when, for various reasons, Jewish parents thought it prudent to have their children married at the earliest possible age. Early marriages were customary in those times, and therefore those which occurred in the behalahs, being exceptionally early, were contracted for children of very tender age, sometimes not more than seven or eight years, in order to save them from some supposedly impending danger. There is reason to believe that there was a Behalah as early as 1754 (Ephraim Solomon Margoliot, "Bet Ephraim," part "Eben ha-'Ezer," No. 41, Lemberg, 1818); but the first about which there is positive information occurred in 1764. It is described by Ezekiel Feivel of Dretschin, in his "Toledot Adam" (1st ed., Dyhernfurth, 1801, 11a), in the name of R. Hayyim of Volozhin, who describes how, in that year, terror was spread among the Jews of Lithuania by a report that Jewish girls were to be prohibited from marrying before

the age of thirty, and boys before twenty-five. Many of the Jews then hastened the marriages of their children, even of the youngest. Then, naturally, soon arose the question of the legality of such marriages, and a discussion of it is found in a responsum by Raphael Cohen of Hamburg (then at Pinsk), dated 1765.

The second Behalah occurred in Poland between 1780 and 1793. It is mentioned in a responsum in Ezekiel Landau's "Noda' bi-Yehudah," part "Eben ha-'Ezer," No. 43, which is preceded by the remark that this question from Poland came before Joseph of Posen "in the time of the great excitement before the issue of the severe law ["gezerah"] about marriages, when a rumor was spread . . . and they were marrying little boys to little girls, and now they repent. . . ." As Joseph came to Posen in 1780, and Ezekiel Landau died in 1793, this Polish Behalah must have taken place between those dates.

The next Behalah occurred in 1833. It was caused by some wild rumors of enlisting Jewish girls in the army, and other absurd reports about terrible gezerot, spread before the promulgation of the regulations concerning the Jews, in the year 1835. Section 17 of these regulations prohibits marriages among Jews before the bridegroom has reached the age of eighteen, and the bride that of sixteen. Bogrov, in his "Zapiski Yevreya," p. 3, gives a vivid account of this Behalah.

The latest behalals took place between 1843 and 1848 at various Russian towns, and were merely precautions taken by some fanatical Jews to save the unmarried children from being forced to attend the schools, then about to be established in various Jewish communities. The last Behalah was rather insignificant, and has been traced to a poor schoolmaster who had a houseful of grown-up daughters for whom he could not provide any dowries, and whom, in the excitement which he helped to cause, he succeeded in marrying to little boys. According to the reports of people still living (1902) who remember that period, the account of the last Behalah, in a novel of Peter Smolenskin, is highly exaggerated.

**BEHAR, MOSES SHABBETHAI:** Rabbi and author; lived in Salonica at the beginning of the nineteenth century. Author of a Hebrew book, "Torat Mosheh" (Salonica, 1802), a collection of responsa.

S.

M. Fr.

**BEHAR, NISSIM:** Palestinian educator; born at Jerusalem, 1848. His father, Rabbi Eliezer Behar, having migrated from Rumania to Palestine, instructed Nissim, when but five years old, in the Talmud. Distress forced the family to leave Jerusalem in 1863 for Constantinople, where Behar was admitted to the Ecole Camondo. Adolf Crémieux, visiting that school, took an interest in the young man, and sent him in 1867 to Paris, where he entered the Ecole Orientale and was prepared for a pedagogical career. Having finished his studies, he returned to the East, and with the financial aid of the Alliance Israélite Universelle organized elementary schools at Aleppo in 1869, in Samacoff (Bulgaria) in 1874, at Galata (a suburb of Constantinople) in 1875, and finally in 1882 at the Technical School of Jerusalem, the opening of which brought upon Behar severe persecution from ignorant Jews of that city. After twenty-eight years of educational work, fifteen of which were passed as headmaster of the Technical School, Behar was pensioned in 1897.

A whole generation of young men owe their mental development and success in life to the devotion of their master, Behar. In 1899 he commenced the propaganda in favor of the Alliance Israélite Universelle, traveling in Western Europe and in the United States of America. He is now (1902) a resident of the city of New York, furthering the interests of the Alliance Israélite.

Behar is the author of a small biography, in Judeo-Spanish, of Adolf Crémieux (Constantinople, 1879).

F. T. H.

**BEHEADING.—Biblical Data:** As a regular capital punishment, Beheading does not seem to have been known to the Israelites before the time of the Greek dominion. Only cutting off the head of a slain or disabled enemy (I Sam. xvii. 51 *et seq.*) for a trophy occurs (I Sam. xxxi. 9; practised by the Philistines). Soldiers sent to kill anybody usually brought his head as proof of the faithful execution of their mission (see II Kings vi. 31, 32; II Sam. xvi. 9; xx. 21, 22). The Babylonian and Assyrian monuments abound in representations of such trophies. The Egyptians, however, seem to have employed this mutilation very rarely, except in the earliest times (first and second dynasties). Their belief that life has its seat in the head, and that Beheading means, therefore, a destruction of the soul's second existence—Beheading thus was reserved for the worst criminals as bringing double and eternal death—may possibly furnish a clue for the importance attached to the head as a trophy, among ancient nations. See CAPITAL PUNISHMENT.

J. JR.

W. M. M.

—**In Rabbinical Literature:** According to rabbinical opinion, Beheading was one of the accepted modes of execution in the Bible (Mishnah Sanh. vii. 1). Murder and idolatry (when committed by a whole city, Deut. xiii. 14) were the crimes punishable with Beheading (Mishnah Sanh. ix. 1; Mek., Mishpatim, 4; Sifre, Deut. 94). Punishing a slave so severely that death followed within twenty-four

hours, was accounted murder; and the guilty master was punished capitally (Mek., Mishpatim, 7).

The mode of procedure in Beheading is a matter of dispute, even as early as the Tannaites of the second century, some of whom maintained that the criminal's head was struck off with a sword, "the way the government does"; while, according to R. Judah ben Ilai, the neck of the victim was placed against a block, and the head hewn off with an ax (Mishnah Sanh. vii. 3). This discussion between R. Judah and his opponents (Tosef., Sanh. ix., end; Gem. *ib.* 52b) reveals the fact that Beheading, as a mode of execution, must have been adopted in late years from other nations—Assyria or Persia, Greece or Rome. The very question, whether ax or sword should be employed, is intelligible only on the supposition that Beheading was a foreign procedure, and one, therefore, not determined by law or custom. It is known that the Roman emperors adopted the use of the sword in lieu of the ax. For the same reason, Beheading was the only mode of execution which a Jewish king might employ, other current modes mentioned in Scripture being reserved for the established courts of law; a king may only claim, as royal privilege, that which kings customarily demand (Maimonides, "Yad ha-Hazakah," Sanh. xiv. 2; *ib.*, Melakim, iii. 8, following the Tosefta, Sanh. vii. 3; Yer. Sanh. vii. 24b).

Beheading was accounted one of the least painful modes of execution; according to the view of R. Simeon, it was the least painful (Mishnah, *ib.* vii. 1). It was customary to have two different burial-places for executed criminals: one for those who had suffered death by stoning or by fire; the other, for those beheaded or strangled. The punishment was considered a measure of the crime; and it was not deemed right to bury criminals of a minor degree among those of greater wickedness (Tosef., Sanh. ix. 9; Mishnah, vi. 5; Gem. 47b).

**BEHEMOTH.** See LEVIATHAN.

**BEHR, ISSACHAR FALKENSOHN:** Lithuanian poet; born in 1746 at Zamosc, government of Lublin, Russian Poland, or, according to Recke and Napiersky, at Salaty, a village in Lithuania, near the Courland frontier. Behr received in his native town no education beyond that afforded in small country schools, and was married at an early age, according to the custom of that time. He engaged in retail trade, and while he was at Königsberg, Prussia (about 1767), his whole stock in trade, consisting of a piece of velvet, was stolen from him. Ashamed to return, and in the hope of bettering his condition and that of his family, he sought to become a student at the university, though possessing no funds and having no knowledge of German. Finding this impossible, he left Königsberg and tramped to Berlin, often contemplating suicide in a nearby stream. Arrived at the Prussian capital (1768), he looked up his relative and countryman, Israel Zamosc, who, as tutor, came in contact with the leading Jewish families of the city. Through the influence of his relative and of Daniel Jafe he

was introduced to Moses Mendelssohn, whose house was at that time the rendezvous of men of talent and genius. With the assistance of his new friends, Behr was enabled to acquire an education, studying German, French, and Latin (being forced to start, however, with the rudiments of each language), and later natural science, philosophy, and medicine.

As soon as Behr had mastered German, he commenced to write poetry, using as models the poems of Ramler, Wieland, and Herder. During this time Boie wrote to Knebel, the friend of Goethe: "The poems of the Lithuanian are said to have appeared in print. You are right: the Jewish nation promises much after it is once awakened" (translated from "Literarischer Nachlass und Briefwechsel Karl Ludwig von Knebel's," ed. Varnhagen von Ense and Th. Mundt, ii. 111, Leipsic, 1840).

In 1771-72 the "Gedichte eines Polnischen Juden, mit Anhang" were published in Mitau and Leipsic. Goethe himself reviewed them in the "Frankfurter Gelehrte Anzeigen" of 1772. "First, we must admit," he says, "that the superscription of these pages has made a very favorable impression upon us." He continues by saying that he had expected something new, and had hoped to note the impression made by German habits and customs upon a foreigner—and this foreigner a Polish Jew entirely unacquainted and unused to the country—but that he finds himself sorely disappointed: "Only mediocrity, hatred of gods and men." He concludes his review with these words: "We hope that we may one day meet him again in those parts, where we seek our ideals, and in a more intellectual mood" (Goethe's "Vollständige Ausgabe Letzter Hand," xxxiii. 38 *et seq.*, Stuttgart and Tübingen, 1830).

About this time Behr left Berlin for Halle, and completed at the university of that city his studies in medicine, graduating in 1772. The title of his thesis was "Animadversiones Quædam ad Illustrandum Phrenitidis Causam" (Halle, 1772). The same year he went to Breslau. Kayserling, in his "Issachar Falkensohn Behr," says that, according to a manuscript, Behr's coreligionists, fearing that, like many others, he would change his religion, placed him in custody. Of his further history nothing is known, except that he practised medicine in Hasenpoth, Courland, and removed to Mohilev on the Dnieper about 1775. It is doubtful whether he went thence to St. Petersburg, as stated by Fischer in Hupels' "Nordische Miscellen," iv. 15. According to Kayserling, Behr was the father of Rabbi Jeruham, who published "Ozar Nehmad," a commentary on the "Cuzari" by Israel Zamocz; if this were so, then Behr died before 1796.

F. T. H.

**BEHREND, FRIEDRICH JACOB:** German physician; born at Neu-Stettin, Pomerania, June 12, 1803; died at Berlin May 30, 1889. He was educated for a mercantile career, and became a clerk at Königsberg, East Prussia, in 1819, but resigned the position in 1821 to prepare himself for his academic studies. In 1823 he entered the University of Königsberg, and three years later was graduated as doctor of medicine. Spending the following two years in travel, he settled as physician in Berlin in 1829. There he was employed by the city department of police as medical examiner of prostitutes, becoming in 1876 chief physician of the "Sittenpolizei," with the title of "Geheimer Sanitätsrath."

Behrend was the editor of the following medical works and journals: (at first with Moldenhauer, later alone) "Allgemeines Repertorium der Medizinisch-Chirurgischen Journalistik des Auslandes," 22 vols., Berlin, 1829-35; "Bibliothek von Vorlesungen der Vorzüglichsten und Berühmtesten Jetzt Lebenden Aerzte, Wundärzte und Geburtshelfer des Auslandes über Medizin, Chirurgie, und Geburtshilfe," 23 vols., Leipzig, 1833-41; "Syphilidologie oder die Neuesten Erfahrungen, Beobachtungen, und Fortschritte des Inlandes und Auslandes über die Erkenntniss und Behandlung der Venerischen Krankheiten," Leipzig, 1838-40; (with A. Hildebrandt) "Journal für Kinderkrankheiten," Berlin and Erlangen, 1843-72; (with Henke) "Zeitschrift für Staatsarzneikunde," 1850-64.

He was also the author of the following books: (1) "Ikographische Darstellung der Nichtsyphilitischen Hautkrankheiten," Leipzig, 1839; (2) "Ikographische Darstellung der Beinbrüche und Verrenkungen," Leipzig, 1845; (3) "Prostitution in Berlin und die Gegen die Syphilis zu Nehmenden Massregeln," Erlangen, 1850; (4) "Die Oeffentlichen Bäder und Waschanstalten, Ihr Nutzen und Ihr Ertrag," *ib.* 1854; (5) "Die Kanalisierung der Stadt Berlin in Gesundheitlicher Beziehung," Berlin, 1866.

Further, Behrend has contributed many essays to Rust's "Magazine," Hufeland's "Journal der Praktischen Arznei und Wundarzneikunde," Henke's "Zeitschrift für die Staatsarzneikunde," etc., and translated medical works of foreign countries.

F. T. H.

**BEHREND, GUSTAV:** German dermatologist, medical writer, and professor of medicine at the University of Berlin; born at Neu-Stettin, Prussia, Jan. 10, 1847. He attended the gymnasium of his native town and the University of Berlin, obtaining his doctorate in 1870. During the Franco-German war he was assistant physician at the Reserve Lazareth in Berlin, in which city he established himself as a physician in 1872, becoming a well-known specialist in dermatology and syphilis. In 1882 he was admitted to the medical faculty of the University of Berlin as privat-docent, and lectured on dermatology and syphilis. He also treated of the subject of prostitution. He became titular professor in 1897, and chief physician of the Municipal

Dispensary for Sexual Diseases in 1891. Behrend is the author of about sixty books and articles, the more important of which are: (1) "Ueber Erythema Exsudativum Multiforme Universale," Berlin, 1877; (2) "Pemphigus, Syphilis Hæmorrhagica," etc., *ib.* 1879; (3) "Ueber Pityriasis, zur Lehre von der Vererbung der Syphilis," etc., *ib.* 1881; (4) "Ueber Komplikation von Impetigo Contagiosa und Herpes Tonsurans," *ib.* 1884; (5) "Wirkung des Lanolin bei Hautkrankheiten," etc., *ib.* 1886; (6) "Ueber Anthrarobin," *ib.* 1888; (7) "Nervenläsion und Haarausfall," *ib.* 1889; (8) "Ueber die Gonorrhoebehandlung Prostituirter," *ib.* 1898. His "Lehrbuch der Hautkrankheiten," *ib.* 1883, is well known. He is also a contributor to the "Handwörterbuch der Medizin" and to Eulenburg's "Realencyklopädie der Medizin." For the latter he has thus far written about thirty articles.

**BEHREND, HENRY:** Physician and communal worker; born in Liverpool in 1828; died in London Nov. 28, 1893. After completing a brilliant academical career, he studied for the medical profession at University College Hospital, London, and continued his studies at Manchester. In 1850 he was elected a member of the Royal College of Surgeons of England; became a licentiate of the Royal College of Physicians of Edinburgh in 1859, and a member of the same in 1868. At first Dr. Behrend practised in Liverpool, where he was appointed honorary physician of the Liverpool Dispensary and other institutions. He also acted for some time as surgeon to a Lancashire regiment of militia. Later on he practised in London, where he was widely patronized. Dr. Behrend contributed many articles to the medical journals; a series of papers on "The Late Cholera Epidemic" to the "Lancet," in 1852; an "Essay on the Post-Biblical History of the Jews," 1850. His articles on the "Communicability of Diseases from Animals to Man" were translated into several continental languages. Dr. Behrend wrote also in defense of shehitah and the regulations of the Mosaic code. In the "Nineteenth Century" he published an article entitled "Diseases Caught from Butchers' Meat"; and other contributions on the same subject were later reprinted in book form. He also lectured before learned societies on medical and archeological subjects.

Dr. Behrend rendered his greatest service to the London community in his connection with the Jews' Hospital and Orphan Asylum, Norwood, of which he was elected chairman of the committee in 1868, vice-president in 1869, and president in 1871. This last office he filled with conspicuous ability, helping to make the charity one of the best-managed orphan asylums in the United Kingdom.

G. L.

**BEHREND, ISRAEL B.:** German physician and writer on medical subjects; born at Wittenburg, Mecklenburg-Schwerin, 1804; died at Ros-

tock, March 13, 1867. Educated at the gymnasium and the university at Rostock. In 1827 he received the degree of doctor of medicine from the latter institution, and the same year he established himself as a physician in Rostock. He followed the profession in that city for forty years, until his death, and built up a large practise.

Of Behrend's works the following are the most important: "Ueber die Anwendung des Brechmittels gegen die Cholera," Schwerin, 1831 (interesting for its information on the treatment of cholera at that time); "Febris Intermitteus Stationaria," Wismar, 1853. Some of his essays treating on homeopathy, neuralgia facialis, fever, etc., were published in "Hufeland's Journal," vols. lxx. xciii.; "Hennemann's Beiträge," vol. i.; "Mecklenburger Medizinisches Conversationsblatt," vol. i. *et seq.*

Behrend was deeply interested in the political position of his coreligionists in Mecklenburg, and embodied his opinions in his work, "Eine Schrift über die Juden in Mecklenburg und Ihre Bürgerliche Gleichstellung," 1843.

F. T. H.

**BEHREND, JACOB FRIEDRICH:** German jurist; born at Berlin Sept. 13, 1833; finished his studies in his native city at the university. He became "Gerichtsassessor" in 1859; but, deciding upon a scholastic career, he became privat-docent at the Berlin University in 1864. The first-fruit of his research was the "Magdeburger Fragen," edited by him, and published in Berlin, 1865. This 300-page treatise is a critical treatment of the manuscripts which are in existence under this name, and are traced by him to a Prussian origin of about the period from 1386 to 1402, and dealing with the "Schöffen-Recht." The next product of his industry in the same direction was "Ein Stendaler Urtheilsbuch aus dem 14ten Jahrhundert," Berlin, 1868. This consists of thirty-one decisions of the "Magdeburger Schöffentstuhl," published for the first time from a manuscript in the Royal Library, Berlin. Each decision is furnished with an exhaustive commentary. It was received by juridical scholars as a perfect model of such work.

Behrend became associate professor of jurisprudence at Berlin University in 1870. In the following year he assumed the editorial management of the "Zeitschrift für die Deutsche Gesetzgebung und für Einheitliches Deutsches Recht." In 1873 Felix Dahn was associated with him in this magazine, the title of which was changed in 1875 to "Zeitschrift für Gesetzgebung und Rechtspflege in Preussen." A treatise by him, "Zum Prozess der Lex Salica," appeared in the "Festgaben für A. W. Heffter," Berlin, 1873; and in the same year he issued his masterly contribution to the literature of the law of stock corporations, "Ein Gutachten über die Aktiengesellschaften," which was published in the "Schriften des Vereins für Social-Politik," Leipsic, 1873. That year was memorable, too, for his having received a call from the University of Greifswald as professor of jurisprudence, which he accepted.

His next important production, and probably his

most substantial contribution of permanent value, to legal literature is the "Lex Salica, Nebst den Capitularien zur Lex Salica, Bearbeitet von Alf. Boretius," xxiii. 164, Berlin, 1874. The scholarly and exhaustive manner in which Behrend proposed the task of editing critically the manuscripts of this code of laws of the early Franks is attested by the fact that a revised and enlarged edition was issued twenty-three years later; viz., at Weimar in 1897.

In the year 1880 the publication of Behrend's "Lehrbuch des Handelsrechts," designed to be comprised in two volumes, was begun in serial form by the issue of the first "Lieferung" of 192 pages. Its great importance was immediately recognized as being the first comprehensive scientific exposition of German commercial law. The production of this vast undertaking was, however, a slow process. In sixteen years six parts were issued, completing the first volume of nearly 1,000 pages. Another of Behrend's works worthy of mention is "Anevang und Erbgewere," Berlin, 1885. In 1888 he received the appointment of "Reichsgerichtsrath" in Leipsic, a judicial position in the highest court in Germany. The Order of the second class of the Red Eagle was conferred upon Behrend in Oct., 1900.

**BEHREND, LEFFMANN (LIEPMANN COHEN):** Financial agent of the dukes and princes of Hanover; born about 1630; died at Hanover Jan. 1, 1714. His honorable position is lauded by Manasseh b. Israel in his "Hope of Israel." Behrends frequently used his influence in favor of his coreligionists. His father, Issachar Bärmann by name (died Aug. 23, 1675), was the son of the Talmudic scholar Isaac Cohen of Borkum; and the name "Behrends" was adopted by Liepmann in honor of his father. His first wife, Jente (died 1695), was a daughter of Joseph Hameln, president of the congregation; his second, Feile (died 1727), a daughter of Judah Selkele Dilmann. Liepmann had the following children by his first marriage: Naphtali Hirz (died 1709), who became president of the congregation; Moses Jacob (died 1697), praised as a Talmudic scholar and philanthropist; Gumpert and Isaac, who, in 1721, were accused of an attempt at fraudulent bankruptcy, in consequence of which they were compelled to leave Hanover (1726). Behrend's daughter Genendel became the wife of the chief rabbi of Prague, David Oppenheimer. She died at Hanover June 13, 1712.

Behrend's services as president of the congregation, in his endeavors to preserve the congregational cemetery, and to secure a special rabbinate and other privileges for Hanover, were valuable in the extreme. In 1683 Duke Rudolph August appointed him chief supervisor of the bleacheries of his community in the Harz. He stood in close relation to a number of princes, assisted Talmudic scholars, and established a "bet ha-midrash" in his own house. The library of his son-in-law David Oppenheimer, which he had himself enlarged, and which his son-in-law, owing to the censorship and other reasons, did not wish to keep at Prague, was removed by Behrends

to Hanover, thus enabling the pastor Johann Christian Wolf of Hamburg to avail himself of it in preparing the "Bibliotheca Hebraea." Together with his son Naphtali Hirz, Liepmann in 1703 had a new synagogue erected upon the site of the old one, which, constructed by order of the duke of Hanover in 1609, had been torn down four years after its erection. The fate of Liepmann's two sons Gumbert and Isaac is related in a family "megillah," published by Jost in the second volume of the "Jahrbuch für die Geschichte der Juden."

**BEHRENS, SIR JACOB:** Municipal worker at Bradford, England; born at Pyrmont, Germany, Nov., 1806; died at Torquay April 22, 1889. His father, removing to Hamburg in 1815, became a successful merchant; and Jacob began his career by entering his father's firm. In 1834 he left Hamburg for England and took up his residence in Leeds. Here he entered into business as merchant, and in a short time extended his operations to Manchester. In 1838 he finally settled at Bradford, and the history of the development of the worsted trade of that town is inseparably associated with his name. He took an active part in the municipal life of the town, was the founder of the Bradford Chamber of Commerce, and was regarded as an authority upon questions of tariffs and of commercial treaties. He was also an expert statesman, occupying himself in that capacity mainly with obtaining statistics on trade, the tribunals of commerce, the bankruptcy laws, and the Yorkshire Joint Tariffs Committee (of which he was president). Mr. Behrens appeared before a commission at Paris as a witness from the English worsted district, in reference to the commercial treaty with France. In recognition of his services on this occasion, he was knighted by Queen Victoria Oct., 1882. Sir Jacob was an advocate of free trade, and rendered much assistance to Richard Cobden in the intricate negotiations which led up to the French treaty of 1861. He was active also in philanthropic movements, held a prominent place in the Bradford Philosophical Society, founded the Eye and Ear Hospital at Bradford; and was a member of the Anglo-Jewish Association, although he took no further active part in Jewish communal affairs.

**BEHRMANN, LAZAR JAKOVLEVICH:** Russian teacher and editor; born in Friedrichstadt, Courland, Sept. 26, 1830; died at St. Petersburg April 27, 1893. He received his early education in the heder and in the district school of his native town, where he began his vocation as private teacher. In 1854 he settled in Mitau, where in 1861 he opened a private school for Jewish boys. The Jewish community of St. Petersburg invited him in 1864 to found its first Jewish school, which remained under his management until his death. From 1869 to 1882 he was instructor in the Jewish religion at the Kolomenskaya Women's College in St. Peters

burg. In 1879 he founded there the weekly Russo-Hebrew periodical "Russki Yevrei," which he published and edited conjointly with H. M. Rabinovich until 1883, and after that with L. O. Kantor to the end of 1884.

Behrmann is the author of "Osnovy Moiseyeva Zakona," which was recommended by the Ministry of Public Instruction as a manual for all high schools where the Jewish religion was taught and of "Sankt-Peterburgskiya Yevreiskiya Uchilishcha."

**BIBLIOGRAPHY:** Vengerov, *Kritiko-Biograficheski Slovar*, III, St. Petersburg, 1892.

H. R.

**BEHRMANN, VASILI LAZAROVICH:** Russian lawyer; son of Lazar Jakovlevich Behrmann; born in Mitau, Russia, Sept. 15, 1862; died at Cairo, Egypt, March 18, 1896. He received his early education at his father's school in St. Petersburg, passed through the gymnasium, and then studied law at the University of St. Petersburg, whence he graduated in 1885. While at the university he edited the foreign news department of the periodical "Russki Yevrei" (Russian Hebrew), published by his father. After the anti-Jewish riots in South Russia in 1881 he became an ardent Zionist, an active promoter of the Palestine movement in Russia, and a useful collaborator of the Society for the Promotion of Education Among the Jews of Russia.

In 1884 Behrmann published a collection of articles entitled "Palestina," and in 1892 another collection, *Sion* (Zion). In 1894 he visited England on a mission to collect information about the English emigration system. He left in manuscript a work on "How to Regulate Russian-Jewish Emigration."

H. R.

**BEILIN, ISAAC WULFOVICH:** Russian teacher and physician; born in the first quarter of the nineteenth century; died at Wilna March 9, 1897. He was graduated from the Rabbinical School of Wilna, and subsequently held the position of senior teacher there for seventeen years, until the school was closed by order of the government. He then, at the age of forty, began to study medicine, and, after being graduated from the Academy of Medicine of St. Petersburg, was appointed military physician to the 107th Troitzky Regiment, which position he held until his death. He contributed some valuable articles on the Jewish question to the "Yevreiskaya Biblioteka" and to "Razsvyct."

H. R. V. R.

**BEIM, SOLOMON BEN ABRAHAM:** Karaite hakam and hazan at Odessa; born there about 1820. Having received a good education from his father, who was an excellent Hebrew scholar, Solomon devoted himself to the instruction of his coreligionists, and founded many schools in Odessa and in the Crimea. He published in Russian at Odessa in 1862 a memorial work on the chief seat of Karaism in the Crimea—viz., Chufut-Kale—entitled "Pamjato Chufut-Kale," in which he endeavors to demonstrate the great antiquity of the Karaite sect and

goes so far as to trace the settlement of the Karaites in the Crimea back to the time of Cambyses.

I. Br.

**BEIRUT, SYRIA** (ancient **Berytus**): City in Phenicia, at the mouth of the river of the same name, on the Mediterranean between Byblus and Sidon. In the El-Amarna texts (Winckler, "Altorientalische Forschungen," i. 309, 436; "Monatsschrift," 1898, xlii. 480) the city is called "Birutu" ("Biruna"). At a very remote period it was also called "Beroa," like another town in the vicinity ("Rev. Archéol." v. 549), and only in historic times was it called by the Greeks "Berytus." According to Stephen of Byzantium, the word *Βερύτιος* is derived from *βήρη* (בֵּהַר), a well, or rather from its plural בְּהָרוֹת (Muss-Arnolt, in "Transactions of the Am. Phil. Assoc." 1892, xxii. 48). Modern scholars derive the name from Aramaic בְּרִית and Syriac כְּרִיתָא (כְּרִיתָא), "cypress," the name of the whole country, *ḫorvīnā*, being similarly derived from the palm. The form בְּרִיתָא is found on monuments (it is an adjective meaning "Berytic"; see Cook, "A Glossary of Aramaic Inscriptions," s. v.), hence the similarly sounding word in the Talmud (Men. 28b, 63a) must be translated as "apples of the Berytians"; another passage (Yer. Pes. 30a) mentions cakes from Berytus.

Several places of the name of "Beeroth" are mentioned in the Bible. Some exegetes have erroneously identified Berytus with Berotha (Ezek. xlvii. 16), which was near Hamath and on the northern boundary of Palestine. Just as all places of the name of "Beeroth" are to-day called in Arabic "El-Bireh," so Berytus bore (according to S. Krauss) in Talmudic times the name "Beri" or "Biri"; this is clear from a passage in Yalkuṭ (Num. 729), where Beri is located between Sidon and Antiochia as a port; compare Sifre, Num. 84. As Sidon is called in the Bible (Josh. xi. 8, xix. 28) "great Zidon," so Berytus is called in Yer. Sheb. 36c "great Beri" (the name is corrupted in the parallel passages Tos. Sheb. iv. 11; Sifre, Deut. 51), to distinguish it from other places of the same name. In any case the city lay within the jurisdiction of the Jews, for the Sibylline Books (vii.) also mention Berytus, and Jews, of course, were living there.

It is impossible to tell at what time the Jews commenced to live at Beirut, as very little is known about the city in Phenician and Seleucid times. In the year 15 B. C., it became a Roman colony, receiving the name "Colonia Julia Augusta Felix Berytus" (Schürer, "Gesch." i. 340). It was for this reason that the Herodian house did so much to build it up. Herod erected cloisters, temples, and market-places ("Ant." xvi. § 11, 2; Josephus, "B.

**Becomes a Roman Colony.** J." i. 21, § 11; i. 27, § 2), and the emperor Augustus ordered the court to sit here that examined into the charges made by Herod against his sons, Alexander and Aristobulus, whom he afterward executed (Josephus, "Ant." xvi. 11, § 2; "B. J." i. 27, § 2). After Herod's death (4 C. E.) the citizens of Beirut placed 1,500 auxiliaries at the disposal of Quintus Varus to assist in suppressing the robbers that infested Judea ("Ant." xvii. 10, § 9; "B. J." ii. 5, § 1). Agrippa I. (41) also paid particular atten-

tion to the city, and erected a sumptuous theater, baths, and porticoes ("Ant." xx. 9, § 4). At the dedication of these buildings 400 malefactors were ordered to take part in the gladiatorial fights ("Ant." xix. 7, § 5). Agrippa II. (50-100) continued to embellish the city at a great expense, and to the serious displeasure of his Jewish subjects, who objected to so much money being spent upon a heathen city ("Ant." xx. 9, § 4). It was to this heathen city that Titus came after the destruction of Jerusalem (70) and, at the games, put to death a great many of the Jews taken captive in the war ("B. J." vii. 3, § 1). The same atrocities are probably referred to in Pesik. R. (xxviii. 135b, ed. Friedmann), where, however, the Berytians are called "children of Bari" (or Beer).

No information can be gotten about Beirut from Talmudic literature. Bartuta, the birthplace of R. Elazar ben Judah (see the passages in "Seder ha-Dorot," ii. 63a, Warsaw, 1878), is not to be identified with it, as Isaac Helo (see below) maintains. For many centuries little mention is made of the Jews of Beirut. The story that they dishonored a picture renowned in ancient times (Athanasius, "De Passione Imaginis Christi") is declared by Wulfer to be a fable of the monks ("Animadversiones zum Jüd. Theriak," p. 135). One of the earliest facts known in regard to the Jews of the city is that in 502 their synagogue was demolished by a great earthquake which destroyed several cities in Syria (Assemani, "Bibl. Orient." i. 272; "Joshua the Stylite," ed. Wright, ch. xlvii.). Benjamin of Tudela, about 1173, says in his "Itinerary" that he found there fifty Jews, among whom were Rabbis Solomon, Obadiah, and R.

Joseph. Syria at this time was in the hands of the Seljuk Turks. There **First Mention of Jews.** are no historic data to show whether the Jews of Beirut suffered as did those of Acre when the sultan Malik al-

Ashraf (Khalil) captured the city from the last Crusaders in 1291. During the fourteenth century Isaac Helo left Aragon and went with his family to live in the Holy Land. In his itinerary ("Shebile Yerushalayim," in Carmoly's "Itinéraires de la Terre Sainte," p. 249) he mentions Beirut, but says nothing of any Jews living there. The same is true of the anonymous traveler in 1495, who speaks of the commerce of Beirut with Venice in gold, silver, copper, tin, and stuffs (Neubauer, "Zwei Briefe Obadjah's," 1863, p. 97). In 1522 an anonymous Italian Jewish traveler (see "Shibhe Yerushalayim," ed. Leghorn, 1785), embarking at Venice, landed at Beirut, traversed the whole of Palestine, and reembarked again at Beirut. But neither in coming nor in going does he mention any Jews in that city. In 1799 another Italian Jewish traveler explored Palestine, and claimed to have met at Beirut four Jews from Bagdad. This is all that the chroniclers give concerning this city; but if the local traditions may be credited, the large synagogue of Beirut, as well as the Jewish cemetery, are 600 years old; and the oldest tombstone, dating back five centuries, is that of R. Abtalion Bouézo. In his book, "Nach Jerusalem," Ludwig August Frankel speaks of the old Jewish cemetery at Beirut, and of a tombstone about four centuries old, but he does not give an exact date. When Sir Charles Napier bombarded the city on

Sept. 11, 1840, and it came again under Turkish rule, not more than twenty-five Jewish families were living there.

The great rabbis of the nineteenth century were: Moses Yedid Levi, died about 1811; R. Alfandari,

died about 1850; Aaron Moses Yedid Levi, died about 1870; Jacob Buk'ai

**The Last Century's Rabbis.** (בוקעי), died about 1899; R. Joseph ben Señor, appointed ḥakam bashi by

an imperial firman, resigned after a year to return to Smyrna, his home. In 1889 the Jews of Beirut numbered 1,500 in a population of 20,000. In 1901, numbering 5,000 in a population of 180,000, they had for their spiritual leader Moses Aaron Yedid Levi, and for their official representative Hayyim Murad Yusuf Dana. They have a large synagogue and twelve "midrashim" (meeting-houses), called generally after their founders. The names of the midrashim are as follows: (1) Midrash Ḥakam Shem-Tob; (2) Midrash Raphael Stambuli; (3) Midrash of the Damascenes; (4) Midrash Diarné (founded by Jews from Dair-el-Kamar, in the Lebanon mountains, who had fought with the Christians against the Druses in 1860 and had been forced with them to leave the mountains. They are renowned for their physical strength and are dyers by trade); (5) Midrash Joseph Picciotto;

**Midrashim and Modern Schools.** (6) Midrash of the Society Misgab Ladak; (7) Midrash of Isaac Mann;

(8) Midrash Ruben Iddy (ידדי); (9) Midrash Samhaji; (10) Midrash of the Ashkenazim; (11) Midrash of the Jewish Alliance; (12) Midrash Menahem Yédid.

The first to open a Jewish school upon modern European methods was Ḥakam Zaki Cohen. A school for girls was established in June, 1878, by Emma Rosenzweig, and was taken over by the Alliance Israélite Universelle. In 1899 it had 237 pupils. In 1879 a boys' school was founded by the Alliance, and in 1899 it had 290 pupils. In 1890 a manual-training school was founded, from which a number of good workmen have been graduated, especially carpenters and smiths. In 1899 this school had 16 pupils. But on the whole the Jews of Beirut follow commerce rather than trade. Aside from some Syrian Jews, the greater number have come from Smyrna and Constantinople, and lately from Russia. Among the most prosperous families are: the Anzarut

**Families and Societies.** (ענזרות), Hayyim Murad Yusuf Dana, Isaac Mann, the brothers Iddy, Joseph Rubben, and Joseph Picciotto.

There are two benevolent societies at Beirut: the Bikkur-Holim, founded in 1890 for assisting the sick poor; and the Misgab-Laddak, founded in 1896 for placing youths in apprenticeship. Although not far from Damascus, where Jewish studies are still pursued, Beirut has neither a body of rabbis nor any Jewish writer of importance. Yet in the Midrash Stambuli there is a room set apart for study, the yeshibah, where old men and pious Jews meet daily to read from the Zohar, the Talmud, etc.

Three young Jews of Beirut have published works in Arabic: (1) Selim Mann, author of four graded school-readers, entitled "Minhaj"; (2) Selim Cohen (son of Ḥakam Zaki Cohen), author of twenty

plays; (3) Raphael Cohen (brother of Selim), a translator. Among other works he translated from French into Arabic a novel of Richebourg, "Jean-Loup."

S. KR.—G.

**BEISER, MOSES:** Austrian physician and philanthropist; born in Lemberg April 7, 1807; died in the same city Oct. 12, 1880. At twenty he entered the University of Vienna, and was graduated as M.D. in 1835. He began the practise of medicine as house physician to a noble family in Gwazdziec, near Kolomea, Galicia.

In 1845 Beiser removed to Kolomea, where his advice was much sought. He showed his sympathy with the Liberal movement at that time by offering his house to exiles from Russo-Poland, and was himself a deputy of the Roda Narodwa, or People's League. This attracted the attention of the Austrian government, and Beiser was banished from Kolomea to Zolkiev.

After two years the interdict was removed and Beiser resumed the practise of medicine in Lemberg. When in 1855 the cholera broke out, he was chief physician of the military hospitals. It was in Lemberg especially that he became noted as a philanthropist; going among the poor, and giving pecuniary assistance in addition to medical advice. His services soon came to be recognized, and in 1876 he was made honorary citizen of Lemberg. In 1877 Beiser was unanimously elected to the Municipal Council (*Gemeinderath*), in 1878 to the Board of Education (*Cultusrath*), and later to the Jewish Hospital Council (*Israelitische Spitalsrath*).

S. M. M. K.

**BEIT, ALFRED:** South African financier; born of a well-known Hamburg Jewish family in 1853. Beit went to Kimberley during the early days of the diamond "rush" (1875), and in company with Barney Barnato, Cecil Rhodes, H. J. King (Friedlander), J. C. Wernher, J. B. Robinson, and a few others gradually obtained control of the diamond-mining claims in the Central, Dutoitspan, and De Beers mines; Beit, who had formed a partnership with Wernher, furnishing the money necessary for the exploitation of the company. In return for this service, Beit was made a life governor of the De Beers mines. This was the foundation of his ultimate fortune. Just before the consolidation of the diamond-mines, gold had been discovered on the Bezuidenhout farm in the Witwatersrand district, Transvaal, about thirty-five miles south of Pretoria. Beit and his associates, realizing the limitations of Kimberley, sent emissaries into the new gold districts to stake out claims wherever there appeared any trace of gold. So assiduous were these representatives that the Kimberley financiers, 90 per cent of whom were Jews, soon had practical control of the Rand district.

Beit was the first to see the possibilities of the

gold district as the base of stock-company exploitation. With Barnato, Rhodes, King, and others, he floated company after company, each one heavily capitalized. Shares rose from no value to absurdly high prices; and by the summer of 1889 Beit, through judicious selling, had accumulated an immense fortune.

In that year, however, nature interfered with the Kimberley speculators; for no rain fell for so long that the gold-mines were forced to shut down. In consequence the share market broke, and Beit was enabled to buy many of the better-class shares at comparatively low figures and thereby increased his fortune. Another phase of Beit's life was his connection with the Jameson raid, about which he testified before the Parliamentary Commission, and later with the so-called "Uitlander protest," which was the direct cause of the South African war.

Beit was a director of the Rand Mines, Rhodesia Railways, Bechuanaland Railway Trust, Beira Railway Company, the Consolidated Company, the Bultfontein Mines, and a shareholder in almost every company whose interests center in South Africa. He died July 16, 1906.

**BEJA:** City in Portugal that had, next to Santarem, the oldest Jewish community in Portugal. In a *foro* (charter) granted to the city of Beja toward the end of the twelfth century, it was enacted that every Jew passing through the town should pay a toll of one maravedi (about one-fourth of a cent). The Jews in Beja, and probably also in other towns of the country, took the oath on the Torah in the synagogue in the presence of the rabbi and of an official of the municipality. A Christian might pay his debt to a Jew only in presence of Christians and Jews.

After the expulsion of the Jews from Portugal, Beja became the dwelling-place of a number of Maranos. It was the birthplace of the physician and poet Moses Duarte Rosa Lopez, and of the learned Abraham of BEJA, who, by order of Juan II., traveled to Cairo with Jos. Zapateiro.

**BEJA, ABRAHAM OF.** See ABRAHAM OF BEJA.

**BEKIIN** (Hebrew כפר פקיען, בקיען): A small town in Palestine, between Jabneh and Lydda. It is mentioned as the seat of a Talmudical school founded by R. Joshua ben Hananiah during the reign of Gamaliel II. (Bab. Sanh. 32b; Yer. Hag. i. 75d; Toscf., Soṭah, vii. 9).

**BEKKAYAM, MEÏR.** See BIKAYIM.

**BEKOR SHOR, JOSEPH BEN ISAAC.** See JOSEPH BEN ISAAC BEKOR SHOR.

**BEKOR SHOR, SAADIA:** Alleged son of Joseph Bekor Shor, and reputed author of a fre-

quently published poem on the number of letters in the Bible. This poem is mentioned in a Masoretic work written in the fourteenth century in southern Arabia, and is there attributed to the gaon Saadia b. Joseph (Derenbourg, "Manuel du Lecteur," p. 139). Shem-Tob b. Gaon, a cabalistic writer of the fourteenth century, also speaks of the gaon Saadia as its author (Munk, "Notice sur Aboulwalid," p. 42). The same assertion is made by Elias Levita in the appendix to his "Masoret ha-Masoret" (ed. Ginsburg, p. 289). In a work which appeared in 1629-31 ("Ta'alumot Hokmah," by Samuel Aschkenasi), Saadia b. Bekor Shor is for the first time mentioned as the author of the poem, instead of Saadia b. Joseph. From this, Zunz ("Z. G." p. 75) and Dukes ("Beiträge," ii. 75) concluded that Saadia, the author of the Masoretic poem, was the son of Bekor Shor, the well-known exegete. Steinschneider also adopts this theory ("Cat. Bodl." col. 2225). In no other place, however, is there found the slightest trace of the existence of a Saadia ben Joseph Bekor Shor. On the other hand, there is no tenable argument against the tradition that the gaon Saadia b. Joseph was the author of the poem. It would be best, therefore, to strike "Saadia b. Joseph Bekor Shor" from the list of Jewish authors (compare Derenbourg, "Manuel du Lecteur," pp. 234-241).

W. B.

**BEKOROT** (בכורות, in Biblical Hebrew "Bekorim," "the first-born"): Name of the fourth treatise—according to the order of the Mishnah—of Seder Kodashim ("Holy Things"). The law concerning the first-born is repeated in the Pentateuch several times (Ex. xiii. 2, 11-15; xxxiv. 19-20; Num. xviii. 15-18; Deut. xv. 19-23). The first-born of man is redeemed by giving five shekels of silver (15s., according to London usage; compare Zunz, "Z. G." pp. 535 *et seq.*) to a priest; the first-born of clean cattle, if a male, was given to the priest, who sacrificed it, if it was without blemish, or killed it in the ordinary way, if it had any blemish; the first-born of unclean cattle—of an ass—was redeemed by a lamb or killed. The treatise is divided into nine chapters, seven of which treat of the first-born. These nine chapters are divided as follows: Chap.

**The Mishnah.** i. on the first-born of an ass. Chapters ii.-vi. on the first-born of clean cattle; namely, on cases of exemption through partnership with a non-Israelite (ii.); on cases of doubt whether an animal is first-born or not (iii.); on first-born cattle having a blemish (iv.); on cases of blemishes wilfully caused by the owner (v.); a list of blemishes (vi.). Chapter vii. treats of the first-born son and regulations for his redemption. Chapter viii. treats of blemishes that disqualify a priest for the sacrificial service; and chap. ix. contains the regulations concerning the tithe of the cattle ("ma'aser behemah")—a subject which has many things in common with the "first-born" (see Zebahim v. 8).

Besides the two chapters vii. and ix., there are a few digressions in the treatise: i. 7 speaks of the option between redeeming the first-born of an ass and killing it, and recommends the former course; a few parallels are introduced of option between two

courses, of which one is recommended. The examination of the blemishes of the first-born animal had to be done gratis (iv. 5, 6), but an exception is made in favor of a professional veterinary surgeon, as *Ila* (or *Ayla*; in *Tosef.*, Bek. iv. 11, *Amlah*). In the same chapter another veterinary authority is named,—*Theodos*, the physician (iv. 4).

To take payment for giving a decision in religious matters was considered unlawful and it rendered the decision invalid (iv. 6). When unqualified persons caused loss through their decision, they had to compensate for the loss; not so in the case of qualified persons (iv. 4). Transfer of property is generally reversed in the year of Jubilee; but what the first-born obtains by his birthright remains his forever. Parallel cases are given in viii. 10.

In the *Tosefta* the treatise *Bekorot* has likewise the fourth place, and is divided into seven chapters.

**The** Chap. i. corresponds to the first chap-  
**Tosefta.** ter of the *Mishnah*; chap. ii. to ii.—iii.;  
chap. iii. to iv.—v.; chap. iv. to vi.;  
chap. v. to vii.; chap. vi. to viii.; chap.  
vii. to ix. The *Tosefta* differs greatly from the *Mish-*  
*nah* in the enumeration of the blemishes and in their  
names.

The Palestine Talmud does not include *Bekorot*,  
but the Babylonian *Gemara* has, in

**The** addition to the full discussion of the  
**Gemara.** laws mentioned in the *Mishnah*, the  
following interesting digressions:

Rabbi *Johanan* and *Resh Lakish* discuss the  
question whether those first-born of the cattle that  
were born in the wilderness had to be treated as  
animals sanctified to the Lord. *R. Johanan* an-  
swers in the affirmative; his opponent in the ne-  
gative (p. 4*b*, *et seq.*).

In the course of discussions on physiological  
conditions of pregnancy in animals, the story is  
told how *Cæsar* challenged Rabbi *Joshua*, son of  
*Hananiah*, to show his superior wisdom and skill in  
a discussion with the old men of *Be-Athuna* (*Athens*,  
or an Athenian school). He did so, and completely  
defeated his opponents (p. 8*b*).

Teaching, judging, giving evidence, etc., must  
be done gratis; and if a person can not find a  
teacher that would teach him gratis, he is recom-  
mended to act in accordance with Prov. xxiii. 23,  
"Buy truth"; but as regards teaching others he is  
warned, "and do not sell" (p. 29*a*).

Regulations as to the admission of new members  
to the Society of *Haberim*—persons who undertake  
to observe strictly the laws concerning clean and  
unclean (p. 30*b*).

In the Babylonian Talmud the treatise has the  
third place in the *Seder*.

**BEL.** See **BA'AL**.

**BEL AND THE DRAGON:** An Apocryphal  
tract, placed, in the Septuagint and Theodotion,  
among the additions to the Book of Daniel (see  
**APOCRYPHA**). It consists of two separate stories:  
one relating to Bel; the other, to the Dragon. In

the former, Daniel, by a clever device, exposes the  
trick by which the priests of Bel made it appear that  
the idol consumed the food and drink set before it.  
In the latter, Daniel slays the Dragon-god by putting  
into its mouth cakes made of pitch, fat, and hair,  
after eating which it bursts asunder. Daniel is  
thereupon cast into a den of lions, but remains un-  
harmed by the beasts, and is fed by the prophet  
*Habakkuk*, who is miraculously brought from Judea  
for that purpose by an angel.

The purpose of the stories is to ridicule idol-wor-  
ship, and to extol the power of God, who preserves  
His faithful servants in all perils. The material is  
drawn from current ideas and legends. Bel was the

central figure of the Babylonian idola-  
**Origin.** try (Isa. xlv. 1; Jer. li. 44), and the  
Exile the type of heroic struggle. The

myth of the contest between God and the Dragon  
(*Tannin*, *Rahab*, *Leviathan*) occurs throughout the  
old post-exilic literature (*Gunkel*, "Schöpfung und  
Chaos"); and the way in which Daniel destroys the  
Dragon is similar to that in which *Marduk* destroys  
*Tiamat* (*Delitzsch*, "Das Babylonische Welterschöp-  
fungsepos"; compare *Nöldeke*, "Geschichte des Ar-  
tachsir i Papakan," 1879, p. 55). *Marduk* drives a  
storm-wind into the dragon and thus rends it  
asunder; and Marshall (in Hastings' "Dictionary of  
the Bible") suggests that the "pitch" of the Greek  
(Aramean, **שפית**) may have come from an original  
term for "storm-wind" (Aramean, **שפית**).

How the prophet *Habakkuk* came to be introduced  
into the story is hardly possible to explain (see **HA-**  
**BAKKUK**). The title to the Septuagint text reads:  
"From the prophecy of *Habakkuk*, the son of *Jesus*  
[*Joshua*], of the tribe of *Levi*." There was in exist-  
ence, probably, a work ascribed to *Habakkuk*; but  
of its nature nothing is known. Legends relating  
to Daniel circulated, doubtless, in a great variety of  
forms, and were constantly modified by scribes.  
From such legends there are independent selections  
in Daniel and Bel and the Dragon. The tone and  
contents of the latter work show that it was not  
taken from Daniel.

The Greek work exists in two recensions, (1) that  
of the Septuagint and (2) that of Theodotion, both  
of which are given, with various readings, in  
Swete's "Old Testament in Greek."

**Greek and** The two, though substantially iden-  
**Aramaic** tical, differ in a number of details.

**Texts.** Thus, in the Septuagint, besides the  
reference to a prophecy of *Habakkuk*,

Daniel is called a priest, the son of *Habal*, and is in-  
troduced as a person previously unknown; while  
the name of the king of Babylon, whose friend he  
was, is not given. In Theodotion the king is *Cyrus*,  
who is said to be the successor of *Astyages*; Daniel  
is not called a priest; and nothing is said of a prophe-  
cy of *Habakkuk*. The style of the Septuagint is  
simpler and more Hebraic; Theodotion is fuller,  
more dramatic, and more polished. It may be in  
part a revision of the Septuagint; but it appears  
also to follow other authorities, or to be based on a  
different version of the stories from that given in the  
Septuagint. The question arises whether the Greek  
recensions are derived from other written sources;  
that is, whether the stories were originally com-

posed in Aramaic. Aramaic forms of the legends do, in fact, exist. Raymund Martini (1250), in his "Pugio Fidei" (at the end of the book), cites from a Midrash on Genesis a part of what is contained in the Greek text. His accuracy has been called in question, but Neubauer (in his "Tobit") gives, from a manuscript in the Bodleian Library (the Midrash Rabba de Rabba) a Syriac text with which that of Martini is identical, and a parallel extract from the Bereshit Rabbati.

From another manuscript in the same library, M. Gaster has published a text of the Dragon story that confirms the correctness of Martini's quotation. The Aramaic text of this manuscript is printed in the "Proceedings of the Society of Biblical Archaeology" for November and December, 1894; and the English translation of a long paraphrase is given by Gaster in his "Chronicles of Jerahmeel," 1899. In the Introduction to the latter work, Gaster discusses the relations of "Jerahmeel" to "Yosippon," "Sefer ha-Yashar," and the "Antiquities" of Pseudo-Philo. The Jerahmeel Aramaic text is nearer to Theodotion than to the Septuagint; though it sometimes accords with the latter or with the Latin against other forms, and sometimes differs from all others. But in the present state of knowledge it seems better to reserve opinion as to its antiquity. Gaster thinks it is the text after which Theodotion's version was revised, and Marshall regards it as ancient. The occurrence of the stories in the Midrash makes it probable that there was an Aramaic original; but it is not clear that this is preserved in the texts cited. The fact that the Jerahmeel text agrees here and there with some one of the ancient versions does not prove its originality; for in the course of centuries various readings may have crept into it from sources unknown; thus it has, in common with "Yosippon," the statement that Daniel put iron combs into the cakes that he gave the Dragon—a natural embellishment of the story. It is possible that some divergent readings in the two Greek recensions may be explained as the result of the misunderstanding or misreading of Aramaic terms. A few cases of this sort are suggested by Marshall, and they undoubtedly go to show originality in the Aramaic text; but they are neither clear enough nor numerous enough to be decisive.

The booklet appears to have been regarded in Alexandria as belonging in the class of sacred writings; but it was never so regarded by **Canonicity**, the Palestinian Jewish leaders. It is quoted as the work of the prophet Daniel by Tertullian and other early Christian writers, and its claim to canonicity is defended by Origen ("Epistola ad Africanum"); it was not, however, formally accepted as canonical by the early Church. In modern times it has been included among the canonical books by the Roman and the Greek churches, and excluded by Protestants.

T.

**BELA: 1.** An early king of Edom, having his royal seat at Dinhabah; son of Beor (Gen. xxxvi. 32, 33; I Chron. i. 43, 44). The name "Dinhabah" occurs in Palmyrene, Syria, and in Babylonia (Dillmann, "Genesis," *ad loc.*); and, since it has not been encountered in Edom, the conclusion has been drawn by critics that Bela was a foreigner who conquered Edom while retaining his own capital as the seat of government. Targum Yerushalmi calls him "Balaam ben Beor"; while the Septuagint reads "Balak." But while the close resemblance of "Bela" to "Balaam" is rather curious, there is no real reason for regarding the two personages as identical.

**2.** A son of Benjamin (Gen. xlv. 21, A. V., where the name is spelled "Belah"; Num. xxvi. 38; I Chron. vii. 6). The names of his children vary in the different accounts.

**3.** A Reubenite, son of Azaz, living in Aroer and as far as "the entering in of the wilderness from the Euphrates" (I Chron. v. 8).

**4.** One of the five cities attacked by the invading army under Amraphel, Hammurabi (Gen. xiv. 2). In the two passages where "Bela" occurs a gloss adds "it is Zoar" (Gen. xiv. 2, 8), which establishes its identity with that city. Its location was probably at the southern end of the Dead Sea. In Gen. R. xlii. 5 the name "Bela" is fancifully associated with the Hebrew stem "bala" (to swallow up), and explained as due to the circumstance that "her citizens were swallowed up," with reference, no doubt, to the convulsion which befell Sodom.

J. JR.

G. B. L.

**BELAIS** (בלעיס), **ABRAHAM BEN SHA-LOM**: Rabbi and poet; born in Tunis 18th of Ab, 1773; died in London 1853. An eccentric personality, he had a curious career. First rabbi in Tunis and treasurer to the Bey, being pressed by his creditors, he left his home and went to Jerusalem. In 1817 he, who had hospitably received at his home in Tunis many messengers from Palestine, made a trip through Europe to collect alms for himself. Wherever he went he received valuable gifts. King Victor Emmanuel I., at an audience in Turin, presented him with 1,000 francs. According to the "Gazette of the Netherlands," Oct. 1, 1827, he was a candidate for the rabbinate of the Portuguese synagogue of Amsterdam; and had papers of recommendation from several Italian ministers, bishops, and archbishops. In France, Belais was encouraged by the ministers of Charles X., and especially by the Vicomte de Larochefoucauld, director-general of fine arts: he even received a Hebrew letter from the duke of Sussex. He was rabbi of the congregation of Nice for some years; but from 1840 to 1853 was attached to the yeshibah connected with the Spanish and Portuguese congregation at Bevis Marks, London.

The works of Belais are nearly all in Hebrew, and treat of morals and exegesis. The principal ones are: (1) a collection of notes on the Bible and Tal-

mud, entitled, "Sefer Tebuot Yekeb," after Jacob Carinona Bechor, at whose expense it was printed, Leghorn, 1820; (2) "Sefer Be'er Lahai Ro'i" in Hebrew, Italian, and French, Turin, 1826; (3) "Yad Abishalom," a commentary on the "Orah Hayyim," Leghorn, 1829; (4) "Petah ha-Bayit," a commentary upon "Tur Orah Hayyim," together with answers in reference to congregational questions in London, and "Peri Ez Hayyim," seven funeral orations delivered in Mogador, Tunis, London, and Leghorn, 1846; (5) "'Afarot Tebel" (The Dust of the World), a commentary on the Book of Ecclesiastes, in Hebrew and English, London, 1850. Besides these books Belais composed occasional poems: an epi-

Abraham ben Shalom Belais.  
(From Belais, "'Afarot Tebel.")

thalamium on the marriage of Baron de Rothschild, in Hebrew and English (Paris, 1824); an ode in honor of Louis XVIII., in Hebrew and French (Paris, 1824); an ode in honor of George IV., in Hebrew and French (Paris, 1824); a funeral ode on the deaths of the three monarchs Victor Emmanuel of Sardinia, Louis XVIII. of France, and Ferdinand of Naples, Nice, 1825; an ode and Hebrew prayer translated into French by L. Wogue, 1835; Hebrew ode translated into French, followed by the Eighteenth Psalm, in honor of Louis Philippe, king of France, the duke of Nemours, the duke of Joinville, and the French army, on the capture of Constantine in Algeria (Paris, 1837).

J.

M. K.—J. W.

**BELASCO, ABRAHAM** (commonly called **Aby Belasco**): English pugilist; born in London, England, April 9, 1797; died there. Belasco entered the prize-ring in 1817, when he defeated Cribb's "Coal-Heaver," a pugilist patronized by Tom Cribb, champion of England (1805-20). During that year he fought four other battles, in two of which he was defeated. In the first of these four—that took place at Woolwich, Kent—he met and defeated

Josh Hudson after a two hours' battle. His next encounter—with Jack Payne—took place at Moulsey Heath, Surrey, April 3. It terminated in the sixteenth round. On July 23, at the same place, Belasco was defeated by Tom Reynolds, a potato-salesman, after fighting one hour and twenty minutes. He was again defeated—this time by Jack Randall—at Shepperton Range, Surrey, Sept. 30, in seven rounds. Soon thereafter Belasco accompanied Daniel MENDOZA on an exhibition tour.

He returned to the ring at Rickmansworth, June 10, 1818, and was defeated in nine rounds by Cyrus Davis, a butcher's apprentice. Later in the year he defeated the Winchcomb champion in twelve minutes on the race-course at Cheltenham, Gloucestershire; and Joe Townshend in twenty-four minutes at Coventry, Warwick, on Dec. 9. Belasco was matched against Phil. Sampson, Feb. 22, 1819, at Potter's street, Essex; but the fight terminated in a wrangle, and the stakes were awarded to Belasco.

On three other occasions he was matched against Sampson; and met and fought him in the first of these in London, Feb. 29, 1820, when, after nine rounds, the contestants were separated. Both the second fight—which occurred at the Tennis Court in Windmill street, London, on Dec. 21—and the third—Aug. 25, 1823, fought on Crawley Downs in Sussex—ended in the defeat of Belasco. Next Belasco was matched against Pat Halton, an Irishman. This encounter, which took place April 8, 1823, on Harpenden Common near St. Albans, Herts, was interrupted on a foul claimed against Belasco, who, it was said, had hit his opponent in the face with his knee as the latter went down in the eleventh round.

Not desiring to retire from the ring defeated, Belasco fought George Weston, May 25, 1824. Miles describes this encounter as a burlesque in which Weston was knocked all over the ring, surrendering after three rounds.

Shortly thereafter, Belasco retired from the prize-ring and opened a gambling-house. Step by step he sank lower in the social scale until, continually brought into conflict with the officers of the law, he lost all his friends, and died in almost abject poverty.

**BIBLIOGRAPHY:** Miles, *Pugilistica*, vols. i. and ii.; Egan, *Boxiana*; Belasco's portrait was painted by Sharpello and engraved by Cooper.

F. H. V.

**BELASCO, DAVID:** American dramatist; born in San Francisco in 1858 of English parents. He is of the same family as the English actor known on the stage as David James. Belasco began his dramatic work in early youth. His boyhood was passed in Vancouver, B. C., under the tutelage of a Catholic priest, and he was afterward graduated at Lincoln College, San Francisco, California. In 1878 he became stage-manager of the Baldwin Theater, San Francisco, and at various times held the same position at the Metropolitan Theater, the Broad Street Theater, and the Grand Opera House in that city. During this period he was also the stage-director of many important dramatic companies. While perfecting himself in stage-management, he was at work writing and adjusting plays and dramatizing novels.

His first play, given at Mozart Hall in San Fran-

cisco in 1872, was called "Jim Black; or, The Regulators' Revenge." In 1880 Belasco went to New York to take charge of two productions at the Madison Square Theater; and it was there that he made his first pronounced success as a dramatic author. This was achieved in 1884 with "May Blossom," the most famous of the Madison Square plays of that period. When Daniel Frohman left the Madison Square Theater to take charge of the Lyceum Theater in 1885, Belasco went with him and became director of the productions there. Forming a literary partnership with Henry C. de Mille, their first joint work was "The Wife." Two other collaborations, "The Charity Ball" and "Lord Chumley," followed, in which E. H. Sothorn gained his first triumph as a star. The three plays were produced at the Lyceum. Then Belasco and De Mille wrote and produced "Men and Women" for Charles Frohman at Proctor's Theater. Twenty-third

David Belasco.

street. De Mille having died, Belasco, in collaboration with Franklin Fyles, wrote "The Girl I Left Behind Me." In 1891 his English version of "Miss Helyett" was produced. Four years later he brought out "The Heart of Maryland." During the last decade Mr. Belasco has taken rank at the head of American dramatic authors, and has written and produced "Zaza," "Madame Butterfly," "La Belle Russe," "Valerie," and, with James A. Herne, "Hearts of Oak" and "Du Barry."

A.

E. MS.—H. VE.

**BELASCO, DAVID.** See JAMES, DAVID.

**BELASCO, ISRAEL:** English pugilist; born in London in 1800; a brother of the better-known Abraham or "Aby" Belasco. His first appearance in the prize-ring was on July 23, 1817, at Moulsey Heath, England, where after a battle of thirty rounds he was defeated by Ned Brown, commonly known as the "Sprig of Myrtle." In his second encounter, which was with Kit Barber at Tarbury Common, Sept. 15, 1819, Belasco was more fortunate. At the end of forty-one rounds Belasco was declared the winner of the £50 staked by his opponent. Two years later (Oct. 30, 1821) he defeated Saunders in fourteen rounds at Moulsey Heath, but on March 19, 1823, at the same place, matched against A. Matthewson for £25 a side, he was defeated in forty-four rounds.

**BELFAST:** Chief town of the county of Antrim, province of Ulster, Ireland. The Jewish community—a comparatively prosperous one—numbering some 400 or 500 souls, is of recent date; its foundation being due to M. A. Jaffe, who arrived there in 1851. A synagogue was established in 1870;

and the Revs. J. Chotzner and J. E. Myers have successively filled the post of minister. Of recent years a number of Russian Jews have settled in the place; and it has been found necessary to establish a board of guardians (1893), and a Hebrew ladies' foreign benevolent society (1896), while in 1898 a Hebrew national school was founded for the training of their children.

Sir Otto Jaffe was mayor of Belfast in 1899.

J.

**BELGIUM:** One of the smaller states of western Europe. Under the Romans it formed one of the six provinces of ancient Gaul and bore the name "Gallia Belgica" (Gibbon, "Decline and Fall," vol. i. ch. i).

There are no authentic records of the date of the earliest immigration of Jews to Belgium. According to a widely spread legend, their first settlement in this rich and fertile country occurred as early as the second century. Jewish merchants are said to have carried on at that time a considerable commercial intercourse between different parts of Asia Minor and the central countries of Europe. They followed the Roman legions in their path of conquest. In the wars of Vespasian and Titus a considerable number of Jewish captives found their way either willingly or unwillingly to Gaul and the Iberian peninsula. The defeat of Bar Kokba completed the dispersion of the Jews in the West;

**Early Settlement.** and the number of Jewish settlements in Gaul and Spain increased. In the fourth century their existence is historically attested. The original settlements were in the immediate vicinity of the Roman military posts, which formed a chain of communications extending all the way to Britain. Tongres and Tournai, in actual Belgian territory, are mentioned among the first places where Jews settled. They were also established in the chief seats of the provinces. At that period they appear to have enjoyed a considerable degree of freedom and prosperity. They were admitted to rights of citizenship; the tribunals treated them on a footing of equality with other citizens, and they shared and participated in the common duties and benefits of the state.

The irruption of the Vandals did not affect, to any appreciable degree, the position of the Jews. They lived on in a state of complete tranquillity, undisturbed by adverse religious enactments and unhindered by commercial restrictions. The Frankish kingdom, founded by Clovis (486), included the whole of Belgium and embraced all the country beyond the Somme, and between the Meuse and the sea. The fortunes of the Belgian Jews were, therefore, for some centuries interwoven with those of

their brethren in France. Like their sister communities, they were conditioned by the political and religious movements of the time. In general their state was exceedingly prosperous. They engaged in commerce, agriculture, and all forms of industry; and their argosies were seen in the rivers and on the seas. Nor was the profession of arms denied them; for they took a prominent part at the siege of Arles (508) in the war between Clovis and the general of Theodoric. Their condi-

tion changed but little till Chilperic (561-584), whose seat was at Soissons, conceived the idea of forcing his Jewish subjects to embrace Christianity. This zeal of a prince, whom Gregory of Tours designated as "the Nero of the Franks," met with little success. The Jews, despite these efforts, remained faithful to the religion of their fathers.

Under the early Carolingians the Jews likewise enjoyed tranquillity. They were treated with humanity, and the favor accorded them by Pepin (751-768) attracted a vast number to his dominions. Their power and influence increased still more during the reigns of Charlemagne (768-814) and Louis le Debonnaire (814-840). Nor was their condition less prosperous under Charles the Bald (843-877). Between them and the Christians an almost perfect equality reigned.

This period of wise toleration and protection ceased, however, with the rise of the feudal régime. On the dismemberment of the empire of the Franks, Belgium was partitioned into separate counties, duchies, and independent cities, in each of which a despotic sovereignty without regard to law or humanity prevailed. The

**The Feudal Régime.** Jews were handed over to the caprices of rulers who knew no other law but their passions. They were soon reduced to a deplorable condition. Restrictions without number were placed upon them, and they were robbed, despoiled, and massacred on every occasion and opportunity. The chronicles of the times abound with many tales of arbitrary and cruel deeds. Melart, in his history of Huy, relates how Ogier, count of Huy, on his return from the war waged by Otho the Great against Louis d'Outremer, found among his prisoners a rich Jew, upon whom he fastened an absurd charge of having secretly favored the invasion of the Normans. He was first tortured and then put to death, all his property being confiscated—a measure which was immediately followed by the expulsion of all the Jews from Liège and its province. It was always the wealth of these unfortunates that constituted their sole crime. With singular naïveté, Everard Kints ("Délites du Pays de Liège") observes that the justice and piety of this prince rose superior on this occasion to his political interests, for, as he afterward discovered, the whole commerce of the country, which had formerly been carried on by the Jews, received its death-blow on their expulsion. The clergy, too, who looked upon them as deicides, threw the weight of their influence against them. In 1160 Gauthier de Castillon, provost of the chapter of Tournai, wrote a diatribe in three books against the Jews, which excited the populace by its calumnies and imputations. It must, however, be said that not all the Belgian clergy were animated by a similar spirit of intolerance. On the contrary, many prelates were favorably inclined to the Jews, among others Wazon, bishop of Liège, who treated them kindly, and was on terms of great friendship with the Jewish physician of Henry III.

The epoch commencing with the thirteenth century was more favorable to the Jews of Belgium. They were subjected to less harsh and arbitrary treatment, and in the laws affecting them a spirit of fair discrimination appears to have been adopted.

In a decree of Henry III. issued at Louvain, February, 1260, expelling the Jewish usurers, a distinction is drawn in favor of those engaged in honest trades, who were permitted to remain. This just distinction was not often made in those days; and more than once the whole of a Jewish population was held responsible for the crime of an individual. Under the shadow of this protection the Belgian Jews recovered somewhat their former prosperity. Commerce again flourished among them; and they engaged particularly in the study and practise of medicine. But the right to pursue these avocations had to be dearly purchased; and often the fruits of their industry became the prey of the exchequer.

After the death of Henry III. of Brabant (1261) his widow, Alix, upon whom the government devolved, finding herself in need of money, consulted the famous Dominican, Thomas Aquinas, on the question whether she could, without violation of conscience, draw upon her Jewish subjects for extra taxation, and, if need be, confiscate their goods. In itself this letter of the duchess is a proof that some sentiment of equity and humanity prevailed for the Jews of Brabant, and that they were under the shadow of some legal protection. The answer of Thomas Aquinas is a fine example of mingled casuistry and courtier-like subservience struggling against the better sentiment of religion. He argues that since much of the worldly possessions of the Jews represented the gains of usury, it would not be unlawful to deprive them of it: but he pleads that they should not be entirely despoiled; sufficient should be left to enable them to live. How the duchess acted in this matter is not known; but the Jews continued to reside and traffic in Brabant during the long and glorious reign of her son, John I. At that time flourishing Jewish communities existed not only at Brussels, but at Mechlin, Antwerp, Bruges, Ghent, Binche, Péronne, Ath, Tournai, Mons, Liège, Louvain, etc. A considerable accession to their numbers was made at the commencement of the fourteenth century, when Philippe le Bel expelled the Jews from France. William, count of Hainault, Vauthier of Enghien, and John II. of Brabant hospitably received them. The last-named prince accorded them special privileges and allowed them to establish banks for public credit. This charter was, however, revoked in 1307, Pope Clement V. absolving the prince from the oath which he took to grant this privilege in perpetuity. It is likely that the cancelation of the bank charter was due to a fresh influx of Jews in 1306, which must have disturbed the economic equilibrium, for the duke remained their stanch protector till his death.

In 1321 the Jews were again expelled from France, and for a second time sought refuge within the borders of Belgium. The newcomers were allowed to settle in Mons, where a district was assigned to them for residence. They were permitted the free exercise of their religion and the right to pursue their avocations. Moreover, William refused to countenance an effort that was made to convert them.

**Resettlement in Belgium.**

In 1337 William II. succeeded to the sovereignty of the state of Hainault. Following the example of his father, he confirmed the Jews in their privileges. These, however, had a considerable money value for the state. A document is extant (see below), dated Valenciennes, 1337, which grants to thirty Jews for five years a safe-conduct ("sauf-conduit") for a money charge of 2,000 florins. In the neighboring duchy of Brabant the Jews were no less fortunate under John III., who inherited all his father's goodwill for them. Unhappily, the Jews of Belgium at this time were, like their brethren all over Europe, persecuted on charges of having desecrated the host, of having killed infants, and of having poisoned wells. The storm that swept over the Jews of Belgium annihilated them; and so completely was the work of destruction done that scarcely a trace of their existence has remained. A series of massacres appears to have taken place during a period of twenty years, which finally culminated

**Brussels** in the Brussels massacre of 1370. In  
**Massacre** the Metz Memorbuch, Brabant is men-  
**of 1370.** tioned as one of the lands in which  
Jews suffered in 1349 ("Monatsschrift,"  
xiii. 36; Salfeld, "Martyrologium," pp. 270, 286).  
The particulars of these tragedies are involved in a  
good deal of obscurity. The following narrative in  
connection with the Black Plague is taken from Li  
Muisis, a contemporary historian ("Chronique Ma-  
nuscrite de la Bibliothèque de Bourgogne," No. 13,  
076; see Carmoly, "Revue Orientale," 1841, p. 169):

"In the city of Brussels, in the duchy of Brabant, where the duke had his seat, a large number of Jews resided, at the head of whom was a very rich man, said to be the treasurer of John III. The former was on very friendly terms with the duke. When the Flagellants arrived, carrying red crosses wherewith to inflame the people against the Jews, the treasurer hastened to the duke and entreated his protection. The latter assured him that no ill would befall them. But the people, already excited by the denunciations of the Flagellants, approached the duke's eldest son, demanding that they should be allowed to put all the Jews to death, and obtained from him a promise that he would intercede with his father, the duke, that no punishment should follow their action. They thereupon rushed with fierce cries to the Jewish quarter, destroyed the houses of the Jews, dragged their unfortunate victims through the streets, and without distinction of age or sex massacred them. Five hundred, it is said, perished on this occasion. Nor was the duke's treasurer spared. Taken alive and put to the torture, he was made to confess that he was engaged in the plots to poison the wells and to defile the consecrated host. He was burned alive. Similar butcheries occurred in other towns in the duchy, more particularly at Louvain, where the Jews were all delivered to the flames (1349 and 1350)."

Whether this narrative refers to a separate event, or is identical with the massacre of the Jews at Brussels on May 22, 1370, is open to doubt. The details of both are strangely similar. In each case the number of Jews that perished is given at 500. The principal Jew that figures in both narratives is the banker of the duke. The charges against the Jews are similar, and the mode of death is the same in both accounts. There can, however, be no doubt of the massacre at Brussels on May 22, 1370. The event has been locally signalized as the miracle of St. Gudule, and was commemorated by a periodical fête-day. Eighteen tableaux, representative of the various incidents of the piercing of the host and of the miracle of the blood spurting forth, were painted for the church, and are to this day an evidence of

the blind fanaticism which wrought such dreadful havoc among innocent men, women, and children. But one solitary document in reference to this dreadful catastrophe has been unearthed in the treasury of Brabant. It is a receipt signed by Godefroi de la Tour, receiver-general of Brabant, who therein acknowledges the payment of the annual tax imposed on Jews living in Brabant. This is, in all probability, a page, or a fragment, of a collection of similar receipts. The following is a translation (see Carmoly, "Revue Orientale," 1841, p. 172):

"Received from the Jews who this year resided in Brabant, payment of their annual tribute and also of goods belonging to them received after they had been burned on Ascension Day, 1370. Accomplices in the crime of piercing the host: first, Wynand de Pondéy, 14 francs; Arnold the Jew, 14 francs; Medey de Sallyn, 14 francs and 11 sheep; Medey Willacs, 22 francs; Simon Claere, 14 francs; Mestam, Joseph Wazoel, and Leonec, nothing, because they had left and were not residing this year at Brussels; the same of Wynandus the Physician, for he had not made payment of his tribute this year, although he resided at Brussels."

No other references to this massacre have come to light, either in the national archives or in the annals of local historians. "The neglect of the historians of that century," says Foppens, in his "History of the City of Brussels," "has been the cause why neither the edict nor the names of these sacrilegious Jews nor their sentences have been preserved."

On the Jewish side, the Memorbuch of Mayence commemorates the Jewish martyrs of Brabant. An elegy written in Hebrew in honor of the martyrs has been published by Carmoly, who has translated it into French ("Revue Orientale," 1841, p. 172). The Memorbuch of Pfersee, near Munich, recalls the martyred Jews of Flanders (ולנדן), and so does Joseph ha-Kohen ("Emek ha-Baka," p. 55). "The Jews of פיאנדרה," says the latter, "were accused of profaning the host and adjudged to die. Many, however, saved themselves by conversion; and their descendants are still to be found numerous in that country."

Few records have survived respecting the Jews who resided in the Middle Ages in the various states which comprised the Catholic portion of the Pays-Bas and of the Liège country, the greater part of which was formerly the territory of Belgium and of the grand duchy of Luxemburg. Nearly all that is known has been published by Baron de Reiffenberg, Carmoly, and Emile Ouerleaux. Koenen ("Geschiedenis der Joden in Nederland") has written of the middle countries of the Pays-Bas, and Felix Hachez of the Jews of Mons and of Hainault ("Essai sur la Résidence à Mons"), while Rahlenbeck has given an account of the Jews at ANTWERP ("Les Juifs à Anvers," in "Revue de Belgique," 1871, pp. 137-146). But altogether there is a singular dearth of records both in Jewish and Belgian annals of the thousand-year-long stay of the Jews in Belgium. The materials for a full history of their social, intellectual, and religious condition are wanting. Benjamin of Tudela ("Itinerary," i. 106) has a passing reference to them, and the "Mahari" (ה' שמחות, 12a) speaks of the religious customs

**Arche-  
ology and  
An-  
tiquities.**

of the Jews of Flanders. They do not seem at any time to have attained, like their brethren in Spain and France, any importance in the world of learning and science, but appear to have been successful as physicians, bankers, and handicraftsmen. There is no mention of any scholars of note among them or of persons rising to positions of influence in the state except one or two financiers. Since, however, every vestige of written record has been swept away, it is impossible to say what their status really was.

Yet, despite this almost total ignorance concerning the Belgian ghettos, many traces of their existence in every part of the country are still to be found. This is especially the case with the street nomenclature of nearly every Belgian town, which usually includes a "Jodenstraat" or "Rue des Juifs." Of those in ancient Brabant are the "Joden Trappen" or "Escaliers des Juifs," a group of five small streets situated near the hill De la Cour in Brussels; the "Jodenstraat" in Antwerp and in Louvain, and streets of like name in Cumplich, Tirlemont, Mons, Wasmes, Grosage, Bavai, Maroilles, Sains, Ghent, Looz, Spalbeek, Eupen, etc. In Tirlemont the Castel, formerly "Joden-Castel," was, without doubt, the ancient synagogue. A reminiscence of Jonathan, the banker, who was the head of the Brabant Jews at the time of the massacre in Brussels, is the Maison de Jonathas in the middle of Enghien. A vast plain situated outside the walls of that city also bears his name—Jardin de Jonathas. Many other localities and buildings with Jewish associations existed, the traces of which have nearly disappeared. Such are the "Jodenpoel," a fishery of the Jews of Brussels; the "Jodenborch" (synagogue) of Louvain, and the Château des Juifs in the Jodenstraat at Wommerson, near Tirlemont. Foulon, the historian of Liège, states that the Chilstree of that town—i.e., Dog street—and a street of similar name in Huy derived their appellation from the former residence of Jews there, the name being evidently one of derision.

The same fate of oblivion which has befallen their records has also attended the burial-places of the Jews of Belgium. The only memorial of that far-off past has come to light in the shape

**Scarcity of Records.** of a white stone with a Hebrew inscription found in 1872 in the grounds of a hospital at Tirlemont. Considering its age, the epitaph is well preserved; it reads as follows:

מפותחת  
אבן אחד והיא נצבה  
לראש מרת רבקה בת  
ר' משה שנפטר בשם  
שנת חמשת אלפים  
וששה עשר לפרט  
זנוחה בנן ערן

"This stone is inscribed and placed at the head of Mistress Rebekah, daughter of R. Moses, who passed away . . . in the year 5016 (1255-56). May she rest in the Garden of Eden!" The word **אחד** is evidently a misreading for **אחת**. The only other trace of a Jewish cemetery is mentioned by the Abbé d'Echternach, Jean Bertel, who, in speaking of the "Juden-

pforte" of Luxemburg, declares that, before the extension of the city on that side, the remains of a Jewish cemetery existed in its vicinity. Neither the archives of the various Belgian states and duchies nor the writings of local antiquaries and historians have yielded much toward any fuller elucidation of the history of the Jews of Belgium. The documents extant referring to them are exceedingly few. One, the safe-conduct edict, to which reference has already been made, is interesting for the names that it gives:

Elie de Maroel; Eliot, his valet; Douce; his cousin and son; Abraham-le-Mirre de Binche; Benoit, his son; Benoit, his son-in-law; Le Maistre des Juifs; Maistre Dele-le-Sire; Jacob Baron, Joie; Salomon de Doullers; Isaak de Péronne; Belevigne, his son-in-law; Maistre Sause; Jacob de Mieknies; Michel de Pons; Amendanc, his uncle; Maistre Sause; Amendanc; Jacob de Foriest; Hagins de Péronne; Abraham de Nueville; Sause de Crespín; Maistre Lyon d'Ath; Abraham de Foriest; Hastée; Oursiel (brother of Lyon d'Ath); Floris de Mons (daughter of Maistre Elie).

The list includes a rabbi and five physicians; the rest were merchants and bankers.

The other documents comprise deeds and charters of the usual kind obtaining in the Middle Ages, and relate to the sale of property and to bonds for debts. M. Van Even (in "Louvain Monumental") cites a passage from a charter of the Abbey d'Averbode, dated 1311, wherein Rabbi Moses sells to Jean Van Rode, advocate, a house situated in the "Jews' street," near the cemetery of St. Peter of Louvain:

"Moyses Judeus, Judeorum presbyter, cum debita effestuatione tradit domum et curtem cum suis pertinentiis sitam in vico in quo Judei nunc commorantur juxta atrium S. Petri, Johanni de Rode Causidico."

The only Hebrew document discovered in the royal archives is a memorandum on the margin of a bond contracted Oct. 26, 1344, to which Wilhemote delle Porte de Rosières Notre-Dame, debtor, and Master Sause, a Jew of Blaton, creditor, subscribe their names. The memorandum is a summary of the terms of the deed:

זה החותם אוילמוטא  
דלפורטא דר אל רחייא  
והוא פרוע מכל וכל עד ז'  
עמורי' וחייוב הכופר  
וחייוב נ' גדולים ישנים  
מיין הנשבעים  
ועוד אוילמאה דלפורטא  
חייב על זה החותם כנ'  
מנינים והצי וקדושים  
קול וקולאר דטבראש  
חייב בעבורו

The archives of the Côte d'Or of Dijon contain two registers of Hebrew documents relating to transactions carried on by an association of Jews in France, Germany, and Belgium; and those of Luxemburg, notably of the castle of Clairvaux, have likewise many documents dealing with money transactions between Jews and the aristocracy.

It does not appear that any formal decree of banishment was issued against the Jews of Belgium; and it is very likely that after the massacre of 1370 there were fugitive Jews and their families who

managed to settle again in the several communes. Not, however, till the middle of the fifteenth century do they reappear in Belgian history. One of their number, it is said, was chosen by the citizens of Luxemburg to treat with Philip le Bon in 1444 for the surrender of the castle. This would imply that there were some who even exercised an influence on public affairs. But their position was at all times of a precarious nature. They possessed no legal status, and under the houses of Burgundy and Hainault they were subjected to heavy and special taxation. The right of residence had to be dearly paid for. Every Jew who entered Luxemburg had to pay, if on horseback, a sum of 5 sols, and if on foot 2½ sols. Any one leaving the duchy was mulcted in 3½ sols. Besides all manner of other restrictions, the Jews in many parts were compelled to wear a distinctive dress. Under the pressure of these influences it is no wonder that the native Jews gradually disappeared from the Belgian provinces.

In 1477, by the marriage of Mary of Burgundy to the archduke Maximilian, son of Emperor Frederick IV., the Netherlands became united to Austria, and thereafter its possessions passed to the crown of Spain. The whole country, owing to the cruel persecutions of Philip II. of Spain and his attempt to establish the Inquisition, became involved in a series of desperate and heroic struggles. There is no doubt that the Jews played some important part in those stirring times. At the beginning of the sixteenth century a number of Maranos from Spain and Portugal began to arrive in the country. They were looked upon with suspicion, and Charles V., whom Cardinal Ximenes had prejudiced against them, refused them asylum, but they nevertheless managed to obtain a footing and to live there. They were rich and possessed of talent and enterprise, and evidently ingratiated themselves with the people, with whom they sided in their struggle against the hateful Spanish domination. Several attempts were made to expel them. In 1532 and 1549 and again in 1550 decrees were issued by the court against harboring Maranos, and citizens were bidden to inform the authorities of their presence; but this utterly failed of effect.

The duke of Alva, the Spanish governor, was especially severe in the repression of Jewish books. His edict of Feb. 15, 1570, ordered the expurgation of all errors from heretical books. On the advice of Arias Montanus and others, a list was prepared of such passages as ought to be expurgated, and a commission at Antwerp compiled an "Index Expurgatorius," the first of its kind (June 1, 1571). The Trent Index was published at Liège (Popper, "Censorship of Hebrew Books," p. 55). The number of secret Jews who entered the country increased daily. They, moreover, took an active part in the uprising of the Pays-Bas, the happy issue of which was to establish forever the principle of liberty of conscience in the United Provinces. The Jews labored assiduously in the cause of the people, and together with their brethren in Holland, who already enjoyed the right of publicly professing their faith, contributed materially to the success which crowned their

II.—42

efforts. They were strenuous supporters of the House of Orange, and in return were protected by it. But in that part of the Pays-Bas which remained under the dominion of Austria, the Jews, in contrast to their brethren in the Dutch Netherlands, were subjected to all the old restrictions and to hateful and discriminating enactments. In the treaty of peace (concluded April, 1609) between Albert of Austria and the States General it was stipulated that the subjects of either, excepting Jews, should be free to pass between the two countries. The intolerance of the archduke affected those only who publicly professed their faith, like the Jews of Amsterdam. In 1670, when the Comte Monterey succeeded the Duke de Feria, the Jews of Amsterdam petitioned for admission to the Pays-Bas. The count was at first disposed to grant the request; but clerical interference prevented its adoption.

There are few facts to relate concerning the Jews during the eighteenth century. They were still subjected to special imposts and harassing enactments; but, for the most part, that did not prevent them from growing in numbers and in prosperity. Many families of position and standing came from Germany and Holland and settled in the principal towns of Belgium. Among them were the Landaus, the Fürths, the Lipmans, the Hirshes, and the Simons, and to the last-named family belongs the chevalier Jean Henri Simon, a distinguished artist who had an adventurous career in the French Revolution. Under the influence of the Revolution, many Belgian writers and publicists took up the cause of the Jews. The most distinguished of these was the Prince de Ligne, who published a memoir defending them from the attacks of Voltaire, and eulogizing their virtues and character. He predicted for them a great destiny if admitted to full civil and political rights. A deep impression was made by this publication; and the Jews were soon placed on an equal footing with their fellow-citizens. In 1815 they obtained their full freedom. Thenceforward their political and social advancement and religious development proceeded on similar lines to those of their coreligionists in western Europe. For the history and condition of individual communities in the various towns of Belgium, see ANTWERP, BRUSSELS, GHENT.

The Jews of Belgium number about 12,000, and by imperial decree dated March 17, 1808, were divided into consistorial circumscriptions of nine departments, each comprising a synagogal district. The seat of the Central Consistory is at Brussels; and official communities exist at Antwerp, Arlon, Ghent, Liège, and Namur.

**BELGRADE:** Capital of the kingdom of Servia, situated at the confluence of the Save and the Danube. After Sultan Sulaiman the Magnificent had captured the city from the Hungarians in 1522, the Turks remained in possession until 1867, when they withdrew their garrison. The House of Austria

took the city from them three times within as many centuries, retaining it each time about one or two years. Probably a Jewish community existed at Belgrade before the Ottoman conquest. In any case, a large number of Jews established themselves in the city during the reign of Sulaiman, owing to the influence of Joseph Nasi, who obtained similar privileges of residence for his coreligionists in Bosnia. These facts are evident from the responsa of the learned rabbi of Salonica, Samuel b. Moses de MEDINA, a contemporary of the events.

The community of Belgrade pursued a quiet existence. At an early date a printing-press was established, from which many works were issued. Toward 1620 the learned Talmudist Asher Zebulun lived there, and later removed to Sarajevo. About 1658 the chief rabbi of Belgrade was Simḥah Cohen, son of Gershom Cohen. An "approbation" bearing his name is placed at the head of a work, "Nahalat Zebi," by the Polish rabbi Zebi ben Samson of Cracow (G. Bragadino, Venice, 1658). Some years later a Talmudist of Salonica, Joseph Almosnino, grandson of the renowned Moses Almosnino, was chief rabbi of Belgrade. He died at Nikolsburg, Moravia, in 1689. The community suffered greatly when the imperial troops captured the city Sept. 6, 1688. Many Jews were sold as slaves, but were redeemed by charitable coreligionists.

On Feb. 9, 1788, Emperor Joseph II. of Austria declared war against Turkey, and seized Belgrade, which he held until Aug. 4, 1789. Many Jews then emigrated to the neighboring cities, especially to Vienna, Rustchuk, etc. In 1792 Belgrade again came under Turkish rule. The new governor, Topal Osman Pasha, imprisoned many Jews; and in consequence a number of others left the city. From 1807 to 1813 the Servians were in a state of revolt against the Turks. Many Jews perished during those disturbances, others lost their possessions, and the synagogue was destroyed.

When Servia became a principality (1826), and civic rights, though with some restrictions, were conferred upon the Jews, those of Belgrade began to take part in the political life of the country. During the Turco-Russian war (1876-78) four Jews of Belgrade distinguished themselves and were decorated; viz., Dr. Samuel Pops, physician of the Jewish community, and Dr. Samuel Brüll, both of whom received the Order of the Cross of Tacovo; Benjamin Russo, who received a silver medal for his courage during an attack at the Gamada; and Michel Oser, cornetist of the squadron of the department of Belgrade, and a veteran of eight battles, who, later, distinguished himself at Shumatowaty, was decorated on the field of battle, and elevated to the rank of brigadier. Another Jew of Belgrade, Abraham Oser, was a member of the Servian Parliament in 1877.

Like the rest of the population of Belgrade, the Jews suffered when that city was bombarded by the Turks in 1862. About this time they aggregated 2,000 souls. In consequence of laws restricting Jewish commerce, the number decreased to 1,000 in 1867. The president of the community at that time was David B. Russo. The Jews were then living in the ghetto of Belgrade. By 1880 the numbers had

again risen to 2,000, and by 1890 to 4,652 in the whole of Servia.

**BELIAL.**—**Biblical Data:** A term occurring often in the Old Testament and applied, as would seem from the context in I Sam. x. 27; II Sam. xvi. 7, xx. 1; II Chron. xiii. 7; Job xxxiv. 18, to any one opposing the established authority, whether civil, as in the above passages, or religious, as in Judges xix. 22; I Kings xxi. 10, 13; Prov. xvi. 27, xix. 28; Deut. xiii. 14, xv. 9; II Sam. xxiii. 6. A somewhat weaker sense, that of "wicked" or "worthless," is found in I Sam. i. 16, ii. 12, xxv. 17, xxx. 22. The use of the word in II Sam. xxii. 5 is somewhat puzzling. Cheyne explains it as "rivers of the under world," while more conservative scholars render "destructive rivers."

The etymology of this word has been variously given. The Talmud (Sanh. 111b) regards it as a compound word, made up of "beli" and "ol" (without a yoke). This derivation is accepted by Rashi (on Deut. xiii. 14). Gesenius ("Dict." s. v.) finds the derivation in "beli" and "yo'il" (without advantage; i. e., worthless). Ibn Ezra (on Deut. xv. 9), without venturing on an etymology, contents himself with the remark that "Belial" is a noun, and quotes the opinion of some one else that it is a verb with a precativ force, "May he have no rising." Cheyne ("Expository Times," 1897, pp. 423 *et seq.*) seeks to identify Belial with the Babylonian goddess Belili (Jastrow, "Religion of Babylonia," pp. 588, 589). Hebrew writers, according to this view, took up "Belili" and scornfully converted it into "Belial" in order to suggest "worthlessness." Hommel ("Expository Times," viii. 472) agrees in the equation Belial = Belili, but argues that the Babylonians borrowed from the western Semites and not vice versa. This derivation, however, is opposed by Baudissin and Jensen ("Expository Times," ix. 40, 283).

G. B. L.

—**In Rabbinical and Apocryphal Literature:** In the Ḥasidic circles from which the apocalyptic literature emanated and where all angelologic and demonologic lore was faithfully preserved, Belial held a very prominent position, being identified altogether with Satan. In the Book of Jubilees (i. 20), Belial is, like Satan, the accuser and father of all idolatrous nations: "Let not the spirit of Belial ["Beliar" corrupted into "Belhor"] rule over them to accuse them before thee." The uncircumcised heathen are "the sons of Belial" (*ib.* xv. 32). In the Testaments of the Twelve Patriarchs, Belial is the archfiend from whom emanate the seven spirits of seduction that enter man at his birth

**In Apoc- (Reuben ii.; Levi iii.; Zebulun ix.; calyptic Dan. i.; Naphtali ii.; Benjamin vi., Literature. vii.),** the source of impurity and lying (Reuben iv., vi.; Simeon v.; Issachar vi.-vii.; Dan. v.; Asher i., iii.), "the spirit of darkness" (Levi xix.; Joseph vii., xx.). He will, like Azazel in Enoch, be opposed and bound by the

Messiah (Levi xviii.), "and cast into the fire forever" (Judah xxv.); "and the souls captured by him will then be wrested from his power." In the Ascension of Isaiah, Belial is identified with SAMAEL (Malkira [Dan. v.]; possibly Malak ra = the Evil Angel [i. 9]), and called "the angel of lawlessness"—"the ruler of this world, whose name is Matabuchus" (a corrupt form of "Angro-mainyush" or AHRIMAN ?) (ii. 4). In Sibyllines, iv. 2 (which part is of Christian origin) Belial descends from heaven as Antichrist and appears as Nero, the slayer of his mother. In the Sibyllines, iii. 63 (compare ii. 166) Belial is the seducer who, as the pseudo-Messiah, will appear among the Samaritans, leading many into error by his miraculous powers, but who "will be burned up by heavenly fire carried along by the sea to the land [an earthquake ?] to destroy his followers," "at the time when a woman [Cleopatra] will rule over the world."

In regard to the meaning and etymology of the word "Belial" there has always been a wide difference of opinion. The Septuagint, in translating it "lawlessness"—*ἀνομία* (Deut. xv. 9), *ἀνομία* (II Sam. xxii. 5), or *παράνομος* (Deut. xiii. 14; Judges xix. 22; and elsewhere)—follows a rabbinical tradition which interpreted it as "beli 'ol" the one who has thrown off the yoke of heaven (Sifre, Deut. 93; Sanh. 111b; Midr. Sam. vi.; Yalk. to II. Sam. xxiii. 6; so also Jerome on Judges xix. 22, "absque jugo." Belial was accordingly considered the opponent of the rule of God; that is, Satan, or the antagonist of God (see ANTICHRIST). Aquilas (LXX., I Kings xxi. 13) translates it *ἀποστασία* = sedition, in the same manner that the "nahash bariah," or dragon (= Satan), is described as the apostate. The various modern etymologies, taking the word as a combination of "beli yo'il" (without worth) (Gesenius), or of "beli ya'al" (never to rise)—that is, never to do well (Ibn Ezra, Lagarde, Hupfeld, Fürst)—are alike rejected by Moore as extremely dubious (commentary to Judges, p. 419). Theodotion to Judges xx. 13, Ibn Ezra (Deut. xv. 9), and so Luther and the A. V. occasionally take Belial as a proper noun. It was Balthgen (commentary to Ps. xviii. 5) who first translated Belial, "the land from which there is no return," and then Cheyne (in "Expositor," 1895, pp. 435-439, and in the "Encyc. Bibl." s.v. "Belial"). They proved it to be the exact equivalent of the Assyrian "matu la tarat" (the land without return). Tiamat, the dragon of the abyss, having been identified with Satan, thus gave rise to the various uses of the word, and the legends of Belial Antichrist. Baudissin, in Hauck-Herzog's "Realencyklopädie," s.v., still takes a skeptical attitude as to the mythical character of Belial in the Old Testament, without, however, explaining the peculiar history of the word. Compare SATAN.

**BELIAS (BELIASH, בִּלְיָשׁ), SAMUEL:** Envoy from Morocco in 1608. He delivered to Maurice of Nassau, governor-general of the Netherlands, credentials from Muley Zaidan, sherif of Morocco,

testifying Belias to be "ministerium Regiæ nostræ sublimis, qui negotiis ejus diligenter incumbit, resque ejus curat." It was possibly a descendant of his, **G. Belias**, who published at Constantinople, in 1855, a Spanish-Hebrew dictionary under the title **אוצר דברי לשון הקודש** ("Diccionario de la Lengua Santa con la Declaracion en Lengua Sephardi").

**BIBLIOGRAPHY:** Steinschneider, *Hebr. Bibl.* xvi. 61.

G. M. K.

**BELID (or BELITUS), SON OF ALÈGRE:** Prominent French Jew; lived in Toulouse at the beginning of the thirteenth century. His name figures in many deeds of conveyance with the title "Dominus," which implies a superior rank. On several occasions his wife, termed Domina Montaniera, had to give her consent to the sale.

Belid must have been the possessor of immense property. In July, 1202, he and his brother Abraham became the holders of lands belonging to the Templars; while on April 2, 1203, and again in 1207, the Knights of St. John sold them properties belonging to the seignior of Pierre and Ponce du Piu. Belid's estates were several times confiscated by Raymond VII.; but he always managed to recover them.

G. I. BR.

**BELIEF.** See FAITH.

**BELILHOS (or BELILLOS), DANIEL:** Preacher and teacher at Amsterdam. He had a thorough knowledge of Biblical and rabbinical literature, was a facile Hebrew poet, taught the third class of the Talmud Torah, and officiated as preacher of the charitable societies Maskil el-Dal and Temime Derek. Besides the oration at the obsequies of his father-in-law, Isaac da Fonseca Aboab, Belilhos, on Nisan 14, 5453 (1693) delivered a memorial sermon in honor of the latter. It is still extant in manuscript. Belilhos' publications comprise: "Sermoens Pregados . . . na Esnoga de Talmud Torah," Amsterdam, Moseh Dias, 1693; and a more voluminous poetical work in Hebrew, describing Adam in Paradise, "Toledot Adam" (The History of Adam), which also is extant in manuscript.

**BIBLIOGRAPHY:** Kayserling, *Bibl. Españ.-Port.-Jud.* p. 26; *idem*, in *Monatsschrift*, xii. 312 et seq.

L. G. M. K.

**BELILHOS, JACOB:** Relative of Daniel Belilhos; rabbi at Venice about 1680. He wrote "Bin-yam Ne'arim" (Edification of Youth) in refutation of Samuel Aboab; it was, however, never published.

**BIBLIOGRAPHY:** Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 203.

**BELILLA, DAVID:** One of the leading Jews in Cranganore, sixteen miles north of Cochin, southern India, about the middle of the sixteenth century. Together with Samuel Castiel, Ephraim Salah, and Joseph Levi, he built a synagogue in Cranganore during the year 1568. According to an anonymous Hebrew chronicle giving the history of the Malabar Jews, and now preserved in the University Library at Cambridge, England, his grandfather had come from Jerusalem; though this statement is perhaps not to be taken literally, as the white

Jews in Cochin are sometimes called "Jerusalem Jews" ("Jüd. Lit.-Blatt," xix. No. 25, p. 95; "Jewish Quarterly Review," i. 23). The same chronicle mentions a Hayyim Belilla (hazan), who had come from Safed.

**BIBLIOGRAPHY:** Kayserling, *Gesch. der Juden in Portugal*, p. 166; Schechter, in *Jewish Quarterly Review*, vi. 143.  
J. G.

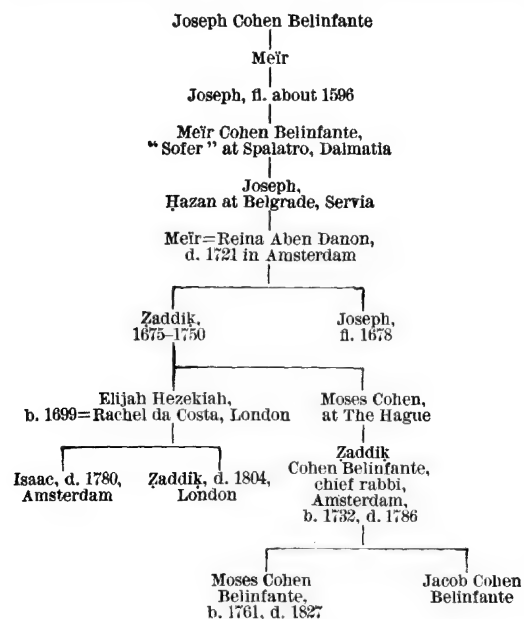

**BELIN (or BLIN), ELIJAH BEN MOSES I.:** German commentator and liturgical poet of the fifteenth century. He was rabbi, cantor, and teacher of Talmud and Rabbinic literature at Worms, 1490. According to Zunz, he lived before this at Bingen-on-the-Rhine. Belin wrote a supercommentary on Rashi's commentary on the Pentateuch; and Simon Aschenburg incorporated some of his explanations into his own compilation and supercommentary "Debek Tob" (Venice, 1588), mentioning the fact in the preface. In the collection of manuscripts at the Bodleian Library, Oxford (Neubauer, "Cat. Bodl. Hebr. MSS." No. 672), there are three Hebrew poems by Belin.

**BIBLIOGRAPHY:** Zunz, *L. G.* p. 107; Michael, *Or ha-Hayyim*, No. 367; Brüll, in *Bet Ozar ha-Sifrut*, i. 31, 32.  
L. G. I. BER.

**BELIN (or BLIN), ELIJAH BEN MOSES II.:** German Talmudist; died at Worms Feb. 26, 1587, having taken an active part in the affairs of the Jewish community in that city. A manuscript copy is extant (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2184) of a disputation in the form of question and answer which Belin had with Naphthali Herz ben Gersom of Worms. The controversy dates from 5338 (= 1578), and is partly transcribed in Judæo-German.

**BELINFANTE FAMILY:** A Sephardic Jewish family who trace their ancestry to Joseph Cohen

Belinfante, a fugitive from Portugal to Turkey in 1526. The family included a number of writers and divines, the most eminent of the latter being Zaddik Cohen Belinfante, chief rabbi of Amsterdam toward the end of the eighteenth century. The annexed sketch-pedigree gives the chief members of the family up to the beginning of the nineteenth century.

**BIBLIOGRAPHY:** *American Hebrew*, Feb. 25, 1881.

J.

**BELINFANTE, ISAAC COHEN:** Poet and preacher at the great synagogue 'Ez Hayyim, Amsterdam; died in that city Sept. 7, 1781; son of Elijah Cohen Belinfante. In an approbation to the work "Dibre David" he enumerates the following political works written by him which are still extant in manuscript in the Bodleian Library (Nos. 5 and 6 of the old Michael collection) and in the Montesinos library at Amsterdam: (1) "Shefer Tehillim" (The Beauty of the Psalms), poems on the preachers of Amsterdam; (2) "'Ateret Paz" (The Golden Crown), a collection of 87 satirical poems ("Paz" = 87); (3) "Berit Kehunat Yizhak" (Alliance of the Priesthood of Isaac), poems in honor of his friends; (4) "Abne Segullah" (Precious Stones), a collection of poems dedicated to some fellow-writers; (5) "Siah Yizhak" (The Prayer of Isaac), a catalogue of printed books and manuscripts, with extracts and biographical notes on the authors, especially the Spanish and Portuguese Jewish writers of London and Amsterdam. A specimen of his work was published by Gabriel Polak in "Ha-Maggid," 1869, Nos. 10, 11.

Belinfante's printed works are: (1) "Minhat Nedabah" (A Free Offering), a poem in honor of the poet David Franco Mendes (Amsterdam, 1764); (2) "Gilah we-Ranen" (Joy and Singing), an epithalamium (Amsterdam, 1777); (3) "Kinah" (Lamentation), elegies on the destruction of the Temple, inserted in the prayer-book "Mishmerot ha-Layelah" (Amsterdam, 1768); (4) two sermons in Portuguese, "Sermão do Nada Moral" (Amsterdam, 1761); "Sermão Moral Sobre o Temor Heroyco" (Amsterdam, 1767); and a number of Hebrew odes ("shirim"), which are printed in other works written and published at Amsterdam.

From one of his poems, "Kinyan Torah" (The Possession of the Law), it appears that Belinfante wrote many works on Talmud, grammar, ethics, cabala, and philosophy. He revised the prayer-book of the Sephardic rite printed at Amsterdam, 1726, by S. Rodrigues Mendes, and other works printed in that city.

Roest, *Bet ha-Sefer*, p. 350, Amsterdam, 1868; Fürst, *Bibl. Jud.* i. 99; *Catalog der . . . Rosenthal'schen Bibliothek*, i. 284 (list of occasional poems).

I. BR.

**BELINFANTE, MOSES BEN ZADDIK HA-KOHN:** A Judæo-Dutch journalist, translator, and writer of school-books; born at The Hague Sept. 24, 1761; died there June 29, 1827. He founded in 1806 the first Judæo-Dutch paper, "Sulamith," devoted especially to the interests of the Jewish community of Amsterdam. This paper was, however, discontinued in 1808. Belinfante published the following works: (1) "Israelitischer Almanach,"

32 small vols., 1796-1827; (2) a translation from Hebrew into Dutch, of Shalom Cohen's Hebrew catechism, "Shorashe Emunah," Amsterdam, 1816; (3) "Geschenk noor de Israelitche Jeugd"—an elementary work, 4 vols., The Hague, 1809-34; (4) "Parabelin"—parables and legends extracted from the Talmud, 2 vols., Amsterdam, 1822; (5) "Moda' li-Bene Binah" (A Friend of the Intelligent Youth); a Hebrew reader, recast from Moses Philippsohn's German work, with a Dutch translation and additions, Amsterdam, 1817; (6) The Portuguese prayer-book, translated into Dutch in collaboration with T. Saruco, 4 vols., The Hague, 1791-93.

I. BR.

**BELINSON** (or **BEILINSON**), **MOSES ELIEZER**: Russian publisher and scholar; born at Odessa about 1835. He devoted himself chiefly to the study of the genealogy of old Russian Jewish families, to one of which he belongs. He wrote on this subject two works, "Megillat Yuhasin" (Scroll of Genealogy), and "Yalkut Mishpahot" (Collection of Families), published at Odessa, 1892-94. These works, although of no great literary value, contain interesting contributions to the history of Jewish families in Russia.

In 1865 Belinson edited "Ale Hadas" (Myrtle Leaves), a periodical containing literary and scientific articles by the most eminent Russian scholars of the day, and issued a second edition of the "Sefer Elam" and "Ma'yan Gannin" of Salomon Joseph del Medigo, with notes and a biography of the author. Two other periodicals, "Yagdil Torah" (Magnifying the Law), and "Mekilta de Rabbanan" (The Rabbis' Study), dealing with questions concerning the Halakah and the exposition of the Talmud, were edited by Belinson (Odessa, 1871-81 and 1886-87); but, as in the case of the "Ale Hadas," only a few numbers appeared. He published also (Odessa, 1898) "Shelome Emune Yisrael" (The Perfectly Righteous Men of Israel), a collection of letters on literary subjects.

Belinson contributed to many Russian and Hebrew periodicals, and was very active in disseminating the Neo-Hebrew literature through his printing-office, from which were issued numerous works of the Russian "maskilim."

**BELISARIO, MIRIAM MENDES**: English authoress and teacher; born in London about 1820; died there 1885. She was a granddaughter of Isaac Mendes Belisario (see Lyson, "Environs of London," iii. 429), and with her sisters for many years kept a girls' school in which numerous members of the Sephardic community were educated under her direction. She compiled a "Hebrew and English Vocabulary" for a selection of the daily prayers (1848), and wrote "Sabbath Evenings at Home" (London, 1856); the latter being in the form of dialogues upon the spirit and ordinances of the Jewish religion.

**BIBLIOGRAPHY:** Jacobs and Wolf, *Bibliotheca Anglo-Judaica*, Nos. 2093, 2105.

J.

**BELKIND, ISRAEL**: Russian Hebraist and teacher; born in 1861 at Logoisk, government of Minsk, Russia; educated at the high school of Mohilev on the Dnieper, and at the University of Kharkov. After the persecution of the Jews in Russia in 1881, when colonization committees were formed in the large Jewish centers of Russia, some of which favored the establishment of agricultural colonies in America, and some in Palestine, Belkind became an ardent follower of the Palestinians, and he founded at Kharkov a society of Jewish students, under the name of "Bilu" (בילי). With the aid of some of its members he established the colony Ghederah or Katra, near Ekron (see AGRICULTURAL COLONIES IN PALESTINE).

The enterprise was not successful; and Belkind, after many hardships, removed to Jaffa, where he became a teacher of Hebrew. Later he occupied a similar position in Jerusalem. To supply the want of Hebrew text-books he wrote the following: On arithmetic, "Assefat Sheelot ha-Hesbon," Jerusalem, 1896; on geography, "Reshit Yedi'at Ketibat ha-Arez," Jerusalem, 1898, 2d ed. 1899; on general history, "Dibre Yeme ha-Amin," vol. i., Jerusalem, 1897. Israel's father, **Meir Belkind**, held the office of rabbi at the Ghederah colony, and his sister, **Olga Belkind**, who practised midwifery at Jaffa, wrote articles in Hebrew.

H. R.

**BELKIS, QUEEN OF SHEBA**. See SHEBA, QUEEN OF.

**BELKOVSKY, GRÉGOIRE**: Russian political economist; born at Odessa 1865. While a student he joined the Jewish nationalists of Odessa, and lectured at the Sabbath free school of Löw and Sussman. For his treatise "Zalog po Rimskomu Pravu," he was honored with a gold medal. Graduating from the university in 1889, a proposition for a professorship was made to him, but as one of the conditions was that he embrace Christianity, he declined the offer. Four years later he was invited to lecture at the University of Sofia, Bulgaria, on political economy and the history of Roman law. At Sofia he published (in the Bulgarian language) his "History of the Roman Law," 1895; "Political Economy," 1896; "Exchange in Bulgaria," 1895; and "Credit and Banking in Bulgaria," in vols. xv., xvi., and xvii. of the magazine of the Ministry of Public Instruction. At this time Belkovsky became active in the spread of Zionism, and published "Appel an das Judenthum und Seine Getreuen Söhne" (anonymous, Sofia, 1897, in German, French, Hebrew, and Spanish). He has been a prominent supporter of the Zionist movement, and since 1899 one of the Russian representatives in the larger "Actions-Committee."

In 1897 Belkovsky returned to St. Petersburg, where he still lives (1902), and continues his propaganda of Zionism. Besides the above-named works he contributed articles on agriculture, political economy, and industrial subjects to the "Entziklopedicheski Slovar" of Brockhaus and Efron, to the "Sudebnaya Gazeta," and other periodicals. On the Jewish question, he wrote "O Zemle Dyeltsheskikh Fernakh, Kak o Razsadnikye Proizvoditelnavo Truda," "Slovo o Pinskerye"; "Die Lage der Juden

in Bulgarien"; and a series of articles on the Jewish Colonial Bank.

S. J.

**BELLA, wife of Joshua FALK:** A woman of Talmudic learning; born at Lemberg about the middle of the sixteenth century; died at a very advanced age at Jerusalem. She was a daughter of the philanthropist and head of the community at Lemberg, Israel Edels, and wife of the well-known Talmudist Joshua Falk ha-Kohen, author of the "Sefer Me'irat 'Enayim." Supported by his father-in-law, Falk carried on his studies privately, and conducted a Talmudic high school at Lemberg. When he died, in 1614, his wife, Bella, removed to Jerusalem.

Bella had a strong inclination toward Talmudic studies, and gave some decisions on certain difficult halakic cases. One of these was that on festivals the festive blessing over the lights should be said before and not after the lights are kindled (see Ezekiel Landau, "Dagul me-Rebabah" to Shulhan 'Aruk, Oraḥ Ḥayyim, ch. 12).

I. BER.

**BELLCAIRE:** City in Catalonia, Spain; had Jewish inhabitants in the thirteenth and fourteenth centuries. It was the birthplace of David of Bellcaire, the richest Jew of Barcelona, who owned in the ghetto of the latter city the finest houses, with eight large stores. In 1391 he accepted baptism, changing his name to Michael Lobet; a family of the name of Lobet still lives at Barcelona. Senton (Shem-Tob) de Bellcaire, another Jew of Barcelona, called himself after baptism Arnaldo Ferrarli.

D.

M. K.

**BELLE-ASSEZ or RACHEL:** A daughter of Solomon ben Isaac, called "Rashi" (1040-1105,) and wife of R. Eliezer. Belle-Assez (not "Bellejeune," "Belle," "Schön," see Jacob Tam, "Sefer ha-Yashar," ed. N. Rosenthal, p. 44, note), like the other daughters of Rashi, was very well versed in Hebrew and rabbinical literature. It was at one time thought that Belle-Assez or at least one of Rashi's daughters) used to take down his responsa on juridical questions (Grätz, "Geschichte," vi. 82), but Zunz showed that this was due to a misreading of the original text which referred only to Rashi's grandson ("Zur Geschichte," pp. 172, 567). From a responsum of her nephew Jacob Tam (*l.c.*) it is learned that she was unhappy in her married life, and that she obtained a divorce from R. Eliezer.

I. BR.

**BELLELI, LAZARUS (MENAHEM):** Greek polyglot writer and philologist; born in Corfu, Greece, Oct. 31, 1862. In 1877 he edited "Atteret Bahurim" (The Crown of the Young), being a Hebrew-Greek vocabulary for the Book of Genesis, supplemented by a sketch of Hebrew grammar, and afterward contributed to the "Ves-

sillo Israelitico," the "Famiglia Israelitica," and the "Mose." Belleli matriculated in the University of Athens. A controversy of an anti-Semitic character caused him to leave for Italy; and when a student in the Istituto di Studi Superiori at Florence he was appointed principal of the Jewish schools at Leghorn. Belleli in 1890 resigned his principalship, which allowed him little time for study, and paid a lengthy visit to Paris, whence he returned to Greece after having contributed "Deux Versions Peu Connues du Pentateuque" to the "Revue des Etudes Juives," vol. xxii., and "Une Version Grecque du Pentateuque du Seizième Siècle" to the "Revue des Etudes Grecques," vol. iii. In the following year Belleli graduated in Florence as doctor of philology with a special certificate in Hebrew and Aramaic.

Shortly after graduating, Belleli was a witness of the Corfu outbreak against the Jews which followed the murder of the Jewish girl Rubina Sarda; and he reported for the Alliance Israélite Universelle the trials which in that connection came before the Patras assize court.

The spread of anti-Jewish literature induced Belleli to undertake the translation into Greek of Th. Reinach's "Histoire des Juifs," and the work was published at Athens in 1895.

In 1897 Belleli, while in England, contributed to the "Revue des Etudes Juives," vol. xxxv., an article severely criticizing D. G. Hesselings's transcription of the Constantinople Neo-Greek Pentateuch.

Belleli in 1899 represented the Greek government at the twelfth Congress of Orientalists.

**BIBLIOGRAPHY:** Harris, *Jewish Year Book*, 1901, p. 244.

S.

**BELLERMANN, JOHANN JOACHIM:** Christian Hebraist and professor of theology at Berlin University; born at Erfurt Sept. 23, 1754; died at Berlin Oct. 25, 1842.

On graduating from the University of Göttingen Bellermann accepted a position as teacher at Reval, Russia, where he remained for four years. On his return to Erfurt in 1782, he became "Magister legens" in the gymnasium, and later assistant professor of theology and philosophy in the University of Erfurt. In 1804 he was appointed director of the Gymnasium zum Grauen Kloster at Berlin, and professor of theology at the university in that city.

Bellermann was one of the earliest students of Hebrew epigraphy. Among his numerous writings on various subjects, the following works are of special interest to Jewish scholars: (1) "De Inscriptionibus Hebraicis Erfordiae Repertis," printed in the Gymnasium Program, i.-iv., 1793-94; (2) "De Duodecim Lapidibus in Jordanis Laveo Erectis," 1795; (3) "De Ænigmatibus Hebraicis," Prog. i.-iv., 1796-1800; (4) "De Usu Palæographiæ Hebraicæ ad Explicanda Biblia Sacra, cum Tribus Tabulis Æri Incisis"; (5) "Ueber den Kunstvollen Plan im Buche Hiob," 1813; (6) "Versuch einer Metrik der Hebräer," 1813; (7) "Geschichtliche Nachrichten aus dem Alterthum über Essäer und Therapeuten," 1821; (8) "Die Urim und Thumim, die Aeltesten Gemmen; ein Beitrag zur Alterthumskunde," 1824.

I. Br.

**BELLS**: The use of Bells for summoning seems to have arisen in the Far East, and was not customary in countries bordering the Mediterranean until late Roman times (Sittl, "Archäologie der Kunst," p. 246). Small disks, however, were generally attached to pet animals, which, being struck together, emitted a sound supposed to frighten away the evil spirits (L. Mortillet, "Etude sur l'Emploi des Clochettes chez les Anciens," Dijon, 1888).

The only use known to the ancient Hebrews similar to this was the attachment of Bells and pomegranates to the lower hem of the high priest's ephod (Ex. xxviii. 33), the object of which was that he might be heard on entering the high place, or, according to Sirach xlv. 9, "for a memorial to the children of his people." It is probable that the sound was caused by the Bells striking against the adjacent pomegranates, and not by a clapper. The two together form an ornamental design resembling that of the lotus and bud border, used in Egyptian decorative art. According to the Rabbis there were seventy-two Bells. In Talmudic days Bells were used to summon people. (See Naz. vi. 1, where a distinction is made between the outer shell of the bell and the clapper.) In Shab. 54b is a reference to a bell stuffed with wool so that it could make no sound. Mention is also made of cattle-bells and door-bells (Tosef Kelim, B. M. i., at end). Small Bells in the form of a ball with a split in it have been found in the excavations at Tell el-Hesi.

The word "bells" was also used in the A. V. to translate מַצְלוֹת in Zech. xiv. 20, where the correct translation is probably "bridles" as in the margin. Since they were necessarily inscribed with the words "Holiness to the Lord," there were probably flat pieces of brass attached for ornament to horses, as in the East at the present day (Rosenmüller, "Morgenländische Forschungen," iv. 411), and corresponding to שְׁרָרִים (Isa. iii. 18; Judges viii. 21).

**BELLSOM**. See MOSES OF NARBONNE.

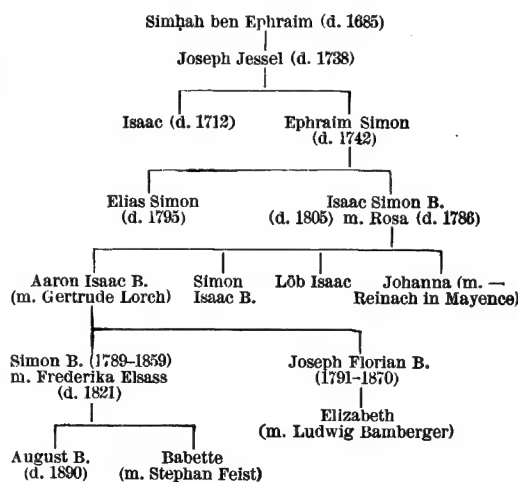

**BELLUCIA, ASCARELLI**. See ASCARELLI.

**BELMONT**: Jewish family in Alzey, Rhein-Hessen. It traces its origin to Isaac Simon, who at the end of the eighteenth century took the family name of Belmont. His father, Ephraim Simon (d. 1742), was the son of Joseph Jessel, "Vorsteher der Juden in Ampt Alzey" (d. 1738), who is probably the person mentioned in a document dated 1700 (Löwenstein, "Juden in der Kurpfalz," p. 146). This Jessel was the son of Simḥah ben Ephraim (d. 1685),

who was buried in Sobernheim. The son of Isaac Simon mentioned above was Simon Belmont, who died March 16, 1805. Of his four children, the eldest, Aaron Isaac (m. Gertrude Lorch of Frankfort), was the great-grandfather of August Belmont. Johanna, a sister of Aaron Isaac, married a Mr. Reinach of Mayence; and Joseph Florian, the younger brother of Simon, had a daughter who married Ludwig Bamberger. August Belmont had a second cousin, Charles Frederick, who remained in Alzey. Of the issue of the latter, some live in Alzey, some in Frankfort-on-the-Main, and others in Philadelphia. Simon had a daughter, Babette, who married Stephan Feist of Frankfort, from whom the Feist-Belmonts are descended.

The family was probably the most important Jewish family in Alzey. Isaac Simon Belmont left that city 30,000 florins, 20,000 of which were converted (1790) by his four children into a fund, called the "Belmont Stiftung," for defraying certain congregational expenses and providing dowries for poor girls. A similar "Belmont Stiftung" exists in the city of Mayence. Simon Belmont (1789-1859) was a prominent member of the Jewish congregation in Alzey, the minutes of the board of trustees for a number of years being signed by him.

There is little doubt that the Belmont family of Alzey is descended from the Belmontes of Amsterdam. Probably some member of the latter family wandered either from Amsterdam or from Hamburg down the Rhine, ultimately settling in Alzey; and when the Jews were forced by the government to take family names, his descendants revived the name which by tradition they knew to have belonged to their family. The accompanying sketch-pedigree shows the relationship of the chief members of this family:

G.

**BELMONT, AUGUST**: American financier; born in Alzey, Germany, in 1816; died in New York city, Nov. 24, 1890. He was educated at Frankfort-on-the-Main, and, after serving several years in the Rothschild banking offices in that city and at Naples, settled in New York (1837) as the American representative of his former employers.

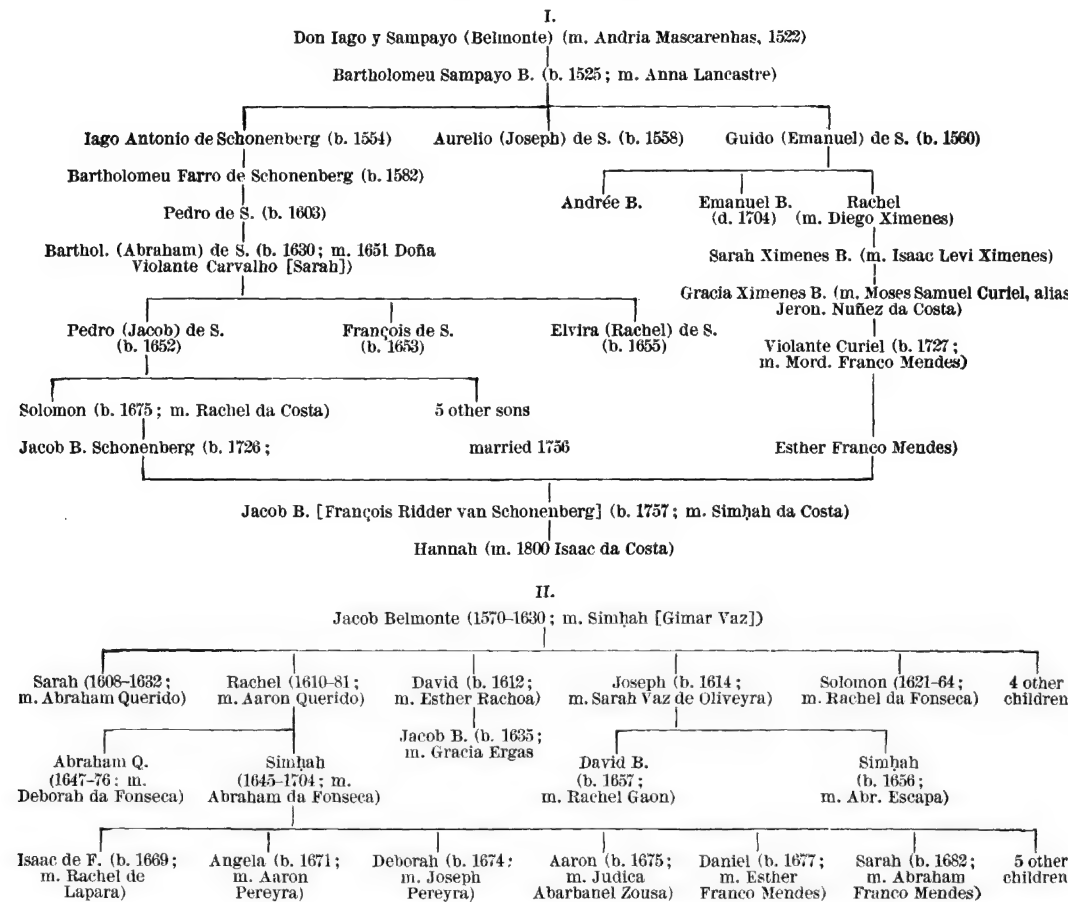

He was consul-general for Austria in New York city from 1844 to 1850, and resigned on account of his disapproval of the treatment of Hungary by Austria. In 1853, he was appointed United States chargé d'affaires at The Hague, where he was minister resident from 1855 to 1858. While holding this appointment, he negotiated an important consular convention and rendered other diplomatic services for which he received special thanks from the United States State Department. In 1860 he was chosen chairman of the Democratic national committee, serving until 1872, when he resigned. He was

name of the city and to transmit it to his posterity. In 1522 Don Iago married Andria Mascarenhas. Of his five sons, the one called Bartholomeu Sampayo Belmonte (b. 1525), who married Anna Lancastre, was sent in 1551 on a political mission to the Netherlands, where he changed his name to "Van Schoenberg."

The family history shows that some of the members returned to the Jewish fold, while others remained Catholics (neo-Christians). A number occupied influential positions in the diplomatic world, while others were prominent in the Amsterdam

## BELMONTE FAMILY.

a delegate from New York to every Democratic national convention from 1860 to 1884. Belmont was widely known as a patron of art, and he possessed one of the finest collections of paintings in New York. He was president of the American Jockey Club, and did much for thoroughbred racing.

M. W. L.

**BELMONTE:** Portuguese Dutch Marano family, which traced its descent from Don Iago y Sampayo, to whom in 1519 King Manuel of Portugal gave the city of Belmonte, allowing him to take the

Jewish community. The great-grandson of Bartholomeu, Pedro de Schonenberg, returned to the Jewish faith; taking the name of Abraham, and his wife that of Sarah. The name of his son Pedro was changed to Jacob, and that of his daughter Elvira to Rachel. A third son, François de Schonenberg, was brought up as a Catholic by relatives in Madrid; and in 1709 was made a marquis of Brabant. A son of Pedro, Solomon (b. 1675), married Rachel, the daughter of Abraham da Costa. Their son, Jacob Belmonte, married Esther Franco Mendes, who had issue, Jacob Belmonte, alias François Ridder van Schonenberg (b. 1757). His daughter,

Hannah, married in 1800 Isaac da Costa, the author of "Israel and the Gentiles."

Two of the children of Bartholomeu Sampayo Belmonte returned to the Jewish faith in 1604; Aurelio (b. 1558) taking the name Joseph, and Guido (b. 1560), that of Emmanuel. From Aurelio are descended the Ergas Belmontes, Pereyra Belmontes, Brandao Belmontes, Sarfatino Belmontes, and the Abendana Belmontes. The Abendana Belmontes emigrated to Hamburg; a number of the

Arms of the Belmonte Family.

tombstones of this family can still be seen in the Portuguese-Jewish cemetery at Altona. Guido was the ancestor of the Ximenes Belmontes. His grandchildren were probably Don Andree de Belmonte and Baron Manuel de Belmonte, both agents of the Spanish crown in the Netherlands. Their

sister, Rachel, married Diego Ximenes, whose granddaughter was the wife of Moses Solomon Curiel. The granddaughter of the latter, Esther Franco Mendes, married Jacob Belmonte mentioned above.

A second branch of the same family in Amsterdam takes its rise with Jacob Belmonte, who came to that city in 1620 from the island of Madeira. He was one of the founders of the Portuguese community in Amsterdam, and his descendants intermarried with the Queridos, da Fonsecas, Pereyras, etc. Descendants of the Belmonte family still live in Amsterdam and in Hamburg. The accompanying two sketch-pedigrees show the relationship of the principal members of the family.

G.

**BELMONTE, B. E. COLAÇO:** Lawyer and writer in Surinam, Dutch West Indies, about the middle of the eighteenth century. He published "Over de Hervorming van het Regeringstelsel in Nederlandsch West-Indië" (Leyden, 1857); "Werkzaamheden der Surinamsche Maatschappij van Weldadigheid" (Paramaribo, 1858); "Neërlands West-Indië in z. belangen en Dr. W. R. v. Hoëvell in zijn 'Slaven en Vrijen'" (Leyden, 1855).

J.

G.

**BELMONTE, BENVENIDA COHEN:** Poetess; lived in London at the beginning of the eighteenth century. She was a sister of the Mæcenas Mordecai Nuñez Almeyda, and was among those who sang the praise of Lopez Laguna's "Espejo Fiel de Vidas" (London, 1720). She also wrote a poem in honor of Samuel Nassy of Surinam.

D.

G.

**BELMONTE, ISAAC NUÑEZ (נונים בלמונט):**

One of the most prominent of Oriental casuists; son of Moses Nuñez Belmonte; lived in Smyrna at the end of the eighteenth century, and at the beginning of the nineteenth. He published a commentary upon the first and second parts of Maimonides' Mishnah Torah under the title "Sha'ar ha-Melek" (The King's Gate), Salonica, 1771; 2d ed., with notes by Baruch ben Jonah Jeiteles, Brünn, 1801-3; 3d ed., with notes by Joseph Saul Nathanson, Lemberg, 1859 (the work is one of the most important productions of Oriental casuistry, and was introduced into Germany and Poland by Jeiteles in the second edition); "Derek ha-Sha'ar" (The Gateway), an oration contained in Raphael (Isaac) Maggio's "Darke ha-Yam," Salonica, 1813.

G.

L. G.

**BELMONTE, ISAAC NUÑEZ (Don Manuel de):** Dutch statesman; born in Amsterdam; died there in 1704. He was not a son of Jacob BELMONTE who came from Madeira in 1614, as no mention is made of a son Isaac in the records of the Portuguese community at Amsterdam. From the year 1664 he was agent general, and from 1674 resident of the king of Spain to the Netherlands. He was created "Comes Palatinus" in 1693 by the German emperor, and did much to conserve friendly relations between Spain and the Netherlands. His correspondence with the Spanish government between the years 1667 and 1691 is preserved in the Biblioteca Nacional at Madrid (MS. cc. 50, Nos. 899 and 900).

Nuñez was of a literary turn of mind. He wrote a poem on the martyr Abraham Nuñez BERNAL; in 1676 he founded the poetic academy Los Sitibundos, and in 1685 the Academia de los Floridos. In 1683 De Barrios dedicated to him and others his "Triumpho del Gobierno Popular"; in 1689 David Pardo, his "Compendio de Dinim" (see "Catalogue . . . de feu M. Isaac da Costa," No. 2306); and in 1693 Isabelle de Correa, her translation of Battiste Guarini's Italian pastoral "Pastor Fido" (De los Rios, "Etudes . . . sur les Juifs d'Espagne," p. 585).

The beautifully carved tombstone of Isaac Nuñez is still to be seen in the cemetery at Oudekerk near Amsterdam. It is probable that his son was the Baron de Belmont who in 1700 addressed a memorial to Sir William Beeston, governor of Jamaica, concerning the extraordinary taxes levied upon the Jews of that island ("Proc. Amer. Jew. Hist. Soc." ii. 165; Kayserling, in "Jew. Quart. Rev." xii. 712).

G.

**BELMONTE, JACOB ISRAEL:** One of the founders of the Portuguese-Jewish community of Amsterdam, his colleagues being Jacob Tirado and Solomon Palache; born on the island of Madeira in 1570; died at Amsterdam Dec. 4, 1629. He married Simḥah (Gimar) Vaz, whose picture by her son Moses is to be found in David Franco Mendes' "Memorias do Estabelecimento . . . dos Judeos Portuguezes," preserved in manuscript in the archives of the Portuguese congregation at Amsterdam. Jacob Israel came to Amsterdam on Jan. 13, 1614. He wrote a poetic account of the Inquisition in one hundred octaves, which he called "Job." Of this, De Barrios ("Rev. Et. Juives," xviii, 282) says:

"Contra la Inquisición Jacob Belmonte  
Un canto tira del Castallo monte  
Y comico la Historia de Job canta."

Together with Rahel Yeshurun and Joseph Israel Pereyra, Belmonte drew up the articles of incorporation for the newly acquired burial-ground of the community in Oudekerk, Jan. 13, 1614. At his death Morteira founded a yeshibah in his honor. He left ten children: Sarah i., Sarah ii., Rachel, David, Rebecca, Joseph, Benjamin, Moses, Solomon, and Samuel.

**BIBLIOGRAPHY:** De Castro, in *Nieuwe Isr. Weekblad*, 17 Jan., 1873, No. 26; idem, *De Synagoge der Portug.-Israel.-Gemeente te Amsterdam*, p. 7; idem, *Keur van Grafsteenen*, p. 53; Kayserling, *Sephardim*, pp. 289 (quotes an octave from his Job), 359; idem, *Bibl.-Esp. Port.-Jud.* p. 27.

G.

**BELMONTE, MOSES:** Poet and translator; eighth child of Jacob Belmonte; born 1619; died at Amsterdam May 29, 1647. He was a pupil of Saul Morteira, whose sermons ("Gib'at Sha'ul," 1645) he edited together with Benjamin Diaz. His poem "Argumenta Contra os Noserim" has been reprinted by De Castro in his "Keur van Grafsteenen," p. 58. He translated the Song of Songs into Spanish. It was published in Hebrew characters in several editions of the Bible printed at Venice; then in Amsterdam, 1644, under the title "Paraphrasis Caldaica en los Cantares de Selomo con el Texto; Traduzida en Lengua Española." He also translated the Pirke Abot into Spanish ("Perakym," Amsterdam, 1644).

Belmonte founded the society Gemilut Ḥasadim in 1639.

**BIBLIOGRAPHY:** Kayserling, *Sephardim*, pp. 290, 359; idem, in *Revue Etudes Juives*, xviii, 284; idem, *Biblioteca Españ.-Portug.-Judaica*, pp. 27, 72; De Rossi-Hamburger, *Hist. Wörterbuch*, p. 55; Steinschneider, *Cat. Bodl.* No. 6434; De Castro, *Keur van Grafsteenen op de Nedert.-Portug.-Israel-Begraafplaats te Oudekerk*, p. 56.

G.

**BELMONTE, MOSES BEN JOSEPH:** Writer in Amsterdam during the first half of the eighteenth century. He was the author of a poem in Hebrew prefixed to the edition of the Pentateuch and Haftarot published by S. Rodrigues Mendes (Amsterdam, 1726), and of "Calendario Ebraico desde el año 5485 = 1724 hasta el de 5700 = 1940" (Amsterdam, 1724), an appendix to the "Seder ha-Tefillot" published in the latter year.

**BIBLIOGRAPHY:** Kayserling, *Biblioteca Españ.-Portug.-Judaica*, p. 27; *Cat. . . de feu Isaac da Costa*, No. 2101.

G.

**BELMONTE, SOLOMON ABENDANA:**

Jurist; born in Hamburg 1843; died there March 19, 1888. He was educated at the Johanneum and the gymnasium in that city; then studied law at the universities of Berlin, Heidelberg, and Göttingen; and practised as an advocate in his native city, in conjunction with Dr. Banks (1864), whom he succeeded in the management of the firm after the latter's death, and as director of "Die Reform." In his professional career Belmonte displayed considerable oratorical gifts, and he became a very popular counselor.

In 1887 Belmonte was elected deputy to the Hamburg Bürgerschaft, and remained a member of that assembly up to his death. He took part in the work of many Jewish charitable institutions, and was a member of the Prison Commission and of the Medical College. For a short time Belmonte held the office of assistant public prosecutor.

B. B.

**BELORADO** (the old Bilforado; also called Belorado de la Rioja): A city in the Spanish province of Burgos, which had Jewish inhabitants as early as the end of the eleventh century. The *fuero*, or charter of the city, granted by Alonzo el Batallador in 1116, and confirmed two hundred years later by Fernando IV., contains the enactment: "No difference shall be made between Jew or Christian in the matter of adjudging injuries inflicted on each other." In 1291 the community of Belorado paid 8,500 maravedis poll-tax and 2,001 maravedis municipal tax, about as much as the districts of Aguilar, Albelda, and Alfacel; and therefore Belorado had as many Jewish inhabitants as the districts named.

In Belorado, Jews were required to dwell apart from the Christians, the quarter of the former being in the vicinity of the Torre del Homenage. According to the command of King Alfonso X., issued in 1325, they were allowed to trade with Christians only on Monday, the market-day; and eight years later even this privilege was withdrawn from them, as well as from the Moors dwelling in the city. The Jews in Belorado were not only traders, but, like the Christians, were occasionally cattle-breeders. In 1408 Ayn Meromet or Vidal (Ḥayyim) de la Cuesta complained, in the name of the community, that though they were compelled by the Christians to sweep the streets and open places, and to repair the walls of the city from the Torre del Homenage to the Arco de D. Blanca, they were nevertheless forbidden to drive their herds on the common pasture-grounds or to hew wood in the mountains. To investigate this matter the infanta Don Fernando appointed a commission in which the Jews were represented by Ayn Meromet mentioned above, and by Don Carruel ibn Tropabe, who was probably a physician. It was agreed, on the one hand, that the Jews should repair the city walls, and that on Thursday of every week two Jews should have the streets and open places cleaned alternately; on the other hand, it was agreed that the Jews should be allowed to drive their herds into the common pasture-grounds and to hew wood.

Gradually the number of Jews in Belorado de-

creased. While in 1291 they paid 10,500 maravedis in taxes, in 1474 only 1,500 maravedis were paid by the community of Belorado together with the Jews of Ochacastro, Bergaño, Villaharte, Quintanar, Villa de Pozo, Val de San Vicente, San García, and Estordeche. After the expulsion in 1492 the houses of the Jews were sold at low prices, and the former Jewry received the name "Barrio Nuevo," which it still bears.

**BELOVAR:** Town in Croatia, Austria. The Jewish community of Belovar was founded about 1877, when some fifty Jewish families settled there.

While in Belovar, Moritz Grünwald published there the "Jüdisch-Literarisches Centralblatt." The community now (1902) numbers about 300 families, and is the seat of a district rabbinate, the present incumbent being S. D. Tauber. See CROATIA.

A. F.—G.

**BELSHAZZAR.**—**Biblical Data:** King of Babylon mentioned in Dan. v. and viii. as the son of Nebuchadnezzar and as the last king before the advent of the Medes and Persians. The Greek form *Bαλράζαρ* is used both for the Hebrew "Belshasar," or less accurately, בלִשְׁצָר (*ib.* vii. 1), and for "Belteshazzar" בִּלְטִישְׁצָר, Dan. i. 7). The name appears also in Baruch i. 11 as "Balthasar" (R. V. "Baltasar"). There can be no doubt, however, that the allusions to this personage in Baruch and elsewhere in extracanonical literature are all based on the data given by Dan. v. and viii.

It is stated in Dan. v. that Belshazzar gave a banquet to the lords and ladies of his court, at which the sacred vessels of the Jerusalem Temple, which had been brought to Babylon by Nebuchadnezzar at the time of the Judean captivity in 586 B.C., were profaned by the ribald company. In consequence of this, during the turmoil of the festivities, a hand was seen writing on the wall of the chamber a mysterious sentence which defied all attempts at interpretation until the Hebrew sage Daniel was called in. He read and translated the unknown words, which proved to be a divine menace against the dissolute Belshazzar, whose kingdom was to be divided between the Medes and Persians. In the last verse we are told that Belshazzar was slain in that same night, and that his power passed to Darius the Mede.

J. JR.

I. M. P.

—**In Rabbinical Literature:** The chronology of the three Babylonian kings is given in the Talmud as follows: Nebuchadnezzar reigned forty-five years, Evil-merodach twenty-three, and Belshazzar was monarch of Babylonia for two years, being killed at the beginning of the third year on the fatal night of the fall of Babylon (*Meg.* 11b).

The references in the Talmud and the Midrash to Belshazzar all emphasize his tyrannous oppression of his Jewish subjects. Several passages in the Prophets are interpreted as though referring to him

and his predecessors. In the passage, "As if a man did flee from a lion, and a bear met him" (*Amos* v. 19), the lion represents Nebuchadnezzar, and the bear, equally ferocious if not equally courageous, is Belshazzar (*Esther* R., Introduction). The three Babylonian kings are often mentioned together as forming a succession of impious and tyrannous monarchs who oppressed Israel and were therefore doomed to disgrace and destruction. The verse in *Isa.* xiv. 22, "And I will rise up against them, saith the Lord of hosts, and cut off from Babylon name and remnant and son and grandchild, saith the Lord," is applied to the trio. "Name" refers to Nebuchadnezzar, "remnant" to Evil-merodach, "son" is Belshazzar, and "grandchild" Vashti (*ib.*). The command given to Abraham to cut in pieces three heifers as a part of the covenant established between him and his God, is thus elucidated, "And he said unto him, take unto me three heifers" (*Gen.* xv. 9 [*A. V.* "a heifer of three years old"]). This symbolizes Babylonia, which gave rise to three kings, Nebuchadnezzar, Evil-merodach, and Belshazzar, whose doom is prefigured by this act of "cutting to pieces" (*Gen. R.* xlv.).

Belshazzar's feast, in the course of which the sacred vessels of the Temple in Jerusalem were put to sacrilegious use (*Dan.* v.), is traced by the Rabbis to his miscalculation in chronology. He well knew that the period of Jewish exile in Babylonia, according to Jeremiah's prophecy, was not to exceed seventy years (*Jer.* xxix. 10). Belshazzar's starting-point was the accession of Nebuchadnezzar, who reigned forty-five years. To this he added the reign of Evil-merodach, which, according to tradition, continued for twenty-three years, and his own reign of two years, making in all seventy. "Jeremiah must be wrong," argued Belshazzar, "for the limit has been reached, and since the Jews have not yet returned to their land, they probably will not return any more." Emboldened by this erroneous calculation, he made impious use of the sacred vessels at the royal feast, where the sound of revelry mingled with hymns to the heathen gods. The miraculous handwriting on the wall, the fall of Babylon, and the king's violent death on that fatal night soon followed. Ahasuerus also erred in his calculation as to the period of the Babylonian exile, though his starting-point is shifted to a later date than that of Belshazzar. The Rabbis assert that the true basis for this reckoning is the destruction of Jerusalem. For the famous prophecy of Jeremiah is properly understood by Daniel when he says (*Dan.* ix. 2), "In the first year of his [Darius'] reign, I Daniel understood by books the number of the years, whereof the word of the Lord came to Jeremiah the prophet, that he would accomplish seventy years in the desolations of Jerusalem" (*Meg.* 11b *et seq.*).

The Midrash enters into the details of Belshazzar's death. It is stated that Cyrus and Darius were employed as doorkeepers of the royal palace. Belshazzar, being greatly alarmed at the mysterious handwriting on the wall, and apprehending that some one in disguise might enter the palace with murderous intent, ordered his doorkeepers to behead every one who attempted to force an entrance that night, even though such person should claim to be

the king himself. Belshazzar, overcome by sickness, left the palace unobserved during the night through a rear exit. On his return the doorkeepers refused to admit him. In vain did he plead that he was the king. They said, "Has not the king ordered us to put to death any one who attempts to enter the palace, though he claim to be the king himself?" Suiting the action to the word, Cyrus and Darius grasped a heavy ornament forming part of a candelabrum, and with it shattered the skull of their royal master (Cant. R. iii. 4). See DANIEL, and NEBUCHADNEZZAR IN RABBINICAL LITERATURE.

J. SR.

H. M. S.

—**Critical View:** The name "Belshazzar" was previously held to have been invented by the author of the Book of Daniel, which has long been recognized as a Maccabean production (see DANIEL). Since the discovery and decipherment of the cuneiform inscriptions, however, "Belshazzar" is now generally admitted to be the Hebrew-Aramaic equivalent of the Babylonian form "Belsharusur" (Bel preserve the king), which has been found in the cuneiform documents as the name of the eldest son of Nabonidus (Nabuna'id), the last native king of Babylon (555-538 B.C.). The most important allusions to Belsharusur in Babylonian literature are clearly those in the two inscriptions of Ur (Nabonidus) (see Prince, "Daniel," p. 36), and in the so-called "Annals of Nabonidus" (see MENE), which is the chief document relating to the fall of Babylon at the hands of the

Persians. In the Ur records Nabonidus prays that his son may live long and piously, although it is not stated why special mention should be made of the prince here. It may be conjectured, with Tiele ("Gesch. Assyriens," p. 463), that Belshazzar was governor of Ur; or it is possible that the king, who was noted for his strictness in religious matters, may have attached some special importance to the cult of the moon-god practised in Ur. The petition that the king's son may not incline to sin may also imply that Belshazzar had in some way offended the religious classes, who, as is well known, supervised the preparation of the inscriptions. The allusion to the prince in the "Annals of Nabonidus" shows plainly that he remained with the army in northern Babylonia, most probably in the capacity of commander-in-chief, while his father was living in Tema apparently free from the cares of government and applying himself to his favorite study of religious archeology. In the "Annals" the name "Belsharusur" does not occur, the reference being merely to the son of the king; but there can be no doubt that the first-born is meant. The references in the contract literature to Belshazzar throw no further historical light on his career (see Prince, *ib.* pp. 263, 264). That the name was not an unusual one is seen from the fact that certainly two

other persons are called by it in the Babylonian inscriptions (Prince, *ib.*, pp. 11, 29, 35).

**Contrast with History.** The following important differences between Belsharusur and the Belshazzar of Daniel are patent. The former was the son of the last king of Babylon, but never reigned,

except possibly as coregent with his father; while the latter is distinctly called the last king and the son of Nebuchadnezzar, both of which statements are undoubtedly made in perfectly good faith by the author of Daniel.

It can not be shown that the Belshazzar of Daniel was intended, as some scholars have supposed, for Evil-merodach, son of Nebuchadnezzar, and was used by the Biblical author as a secondary name. Had the author meant this, he would never have made Daniel declare to the Babylonian monarch that *his* kingdom was about to pass to the Medes and Persians. The prophecy was evidently intended for the last king, as there would have been no point in such a warning delivered a generation before its fulfillment. Besides this, had the author regarded his Belshazzar as Evil-merodach, he would have deliberately passed over in silence the reigns of several Babylonian kings between the death of Evil-merodach and the foreign supremacy. This will appear plainly from an examination of the list of the last kings of Babylon: Nebuchadnezzar, 604-561; Amel-Marduk (Evil-merodach), 561-559; Nergalsharusur (Neriglissar), 559-555; Labashi-Marduk, 555, reigned only nine months; Nabonidus, 555-538; Cyrus captures Babylon, 538. There can be no doubt then that the author of Daniel regarded Belshazzar as the last native king of Babylon.

While it is historically possible that Belsharusur may have been coregent, it is clear that the writer of Daniel could not have thought this, as he would hardly have given him the unqualified title "king of Babylon" without further elucidation; compare chap. viii., where there is no mention of any overruler.

Finally, the statement that Belshazzar was the son of Nebuchadnezzar shows conclusively that the historical data of the Biblical author were at fault. It is impossible also to reconcile this

**Illustrations from Cuneiform Documents.** assertion with the facts by supposing that "son" here is to be translated "descendant" or "grandson" (so Pusey, "Daniel," p. 346), which is of course grammatically permissible.

The way, however, in which Nebuchadnezzar is referred to in chap. v. shows conclusively that the author could have had no knowledge of the intervening kings, but that he really considered Nebuchadnezzar to be the actual father of Belshazzar. The narrative of the fifth chapter follows directly on the chapters about Nebuchadnezzar, and begins with the statement that Belshazzar was the son of that king; and, furthermore, the remark of Belshazzar in verse 13, "Art thou that Daniel . . . whom the king my father brought from Jewry?" would have had no force if the king were referring to an ancestor. Had such been the author's meaning, the name "Nebuchadnezzar" would certainly have been repeated in order to show to which "father" the king was alluding. In addition to all this, there is no evidence that Belsharusur was in any way related to Nebuchadnezzar. Nabonidus, his father, was the son of a nobleman, Nabu-balaṣṣu-ikbi, and was probably a usurper against the older house of Nebuchadnezzar. There is nothing to show that he was connected by blood or marriage with any of the

preceding kings. It is interesting to observe in this connection that in the Chaldean legend given by Abydēnus, of doubtful date, the last king of Babylon is spoken of as a son of Nebuchadnezzar (compare Schrader, in "Jahrbücher für Protest. Theologie," 1881, pp. 618-629).

It should be remarked that the force of the narrative of the fifth chapter of Daniel would have been materially weakened had the author known and made use of the names of the kings intervening between Nebuchadnezzar and the last king. The whole point of the fifth chapter is a comparison between the great Nebuchadnezzar, the real founder of the Babylonian monarchy, and the insignificant last king who suffered the reins of government to slip from his feeble hands, with a prophetic emphasis on the coming stranger people who should divide among them the empire of Nebuchadnezzar.

There can be no doubt that the son of Nabonidus was the prototype of the Biblical Belshazzar. The author of Daniel simply did not have correct data at hand. We must not be surprised at the incongruity between the historical inscriptions and the Book of Daniel in this instance, but should rather note the very evident points of agreement: first, that while the Belshazzar of Daniel is represented as being the last king, the original of the tradition—whose name is etymologically equivalent to "Belshazzar"—was actually the son of the last king; and secondly, that the son of Nabonidus probably met his death at the time of the capture of Babylon, as has recently been established (compare Prince, *ib.* p. 103), in partial agreement with the Biblical account of the final feast of Belshazzar.

That such a festival really took place on the eve of the capture of Babylon is not improbable. Although there is no parallel account in the inscriptions, it certainly seems significant that both Herodotus and Xenophon allude to a feast at this time. Thus, according to Herodotus, i. 191, Babylon was captured while the besieged were off their guard during a festival; and Xenophon, alluding to the capture of Babylon, states that Cyrus had heard that a feast was going forward ("Cyropædia," viii. 5, 15). See DANIEL, MENE, NEBUCHADNEZZAR.

I. M. P.

**BELTESHAZZAR:** The name given to Daniel by the chief of the eunuchs (Dan. i. 7). The writer of the Book of Daniel sees in the first syllable the god Bel, but it is more probable that the name is to be explained as the Babylonian "balaṣṣu [or "balaṣṣu"]-ušur," "May [Bel] guard his life" (Schrader, "C. I. O. T." ii. 125; compare Kohler, in "Zeit. für Assyriologie," iv. 49). George Hoffmann, however, translates the name "May Belit guard the king" ("Zeit. für Assyriologie," ii. 56).

**BEMAH.** See ALMEMAR.

**BEMIDBAR** ("in the wilderness"): The Hebrew name for the Book of NUMBERS (see NUMBERS).  
J. JR. G. B. L.

**BEMIDBAR RABBAH:** The Midrash commentary upon Numbers, called in the *editio princeps* of Constantinople (1512) "Bemidbar Sinai Rabbah," and so cited frequently by Nahmanides and others. It is the latest component of the "Rabbot" collection upon the Pentateuch, and as such was unknown to 'Aruk, Rashi, and Yalkuṭ. It consists of two parts, which are of different origin and extent. The first portion, sections i.-xiv. (ed. Venice, 1545, parashah "Bemidbar," fol. 135a to 145c; parashah "Naso," fol. 145c to 178b)—almost three-quarters of the whole work—contains a late haggadic commentary upon Num. i.-vii.; the second part, sections xv.-xxxiii. (fol. 178b to 194d, ed. Venice), reproduces the Midrash Tanḥuma from Num. viii. almost word for word. The consideration of the second portion will therefore be found in the article TANḤUMA. There also the form of the homilies of the Tanḥuma Midrash, their halakic introductions, their proems, their exposition covering in each case only a few verses of the text, their regular formulas of conclusion, are more appropriately considered. Suffice it to state here that the second portion of Bemid-

**Relation to bar Rabbah** follows closely those readings of the Tanḥuma which are familiar from the oldest edition (compare Buber's Introduction to his edition of the Tanḥuma, pp. 38a et seq.); and that M. Beneviste, in the preface to "Ot Emet" (Salonica, 1565), drew attention as early as 1565 to the fact that Tanḥuma and Bemidbar Rabbah are almost identical from the section "Beha'aloteka" onward. Buber gives a list of the variations between the two (*ib.* 39a et seq.). The passages drawn from the Pesikta Rabbati (Zunz, "G. V." p. 259, note) are to be found exclusively in the first or later part of this Midrash. This is true also, with the exception of the interpretation of the numerical value of the Hebrew word for "fringes," of the other passages pointed out by Zunz as originating with later, and notably French, rabbis. This numerical interpretation just mentioned forms a part of a passage, also otherwise remarkable, at the end of the section "Korah" (xviii. 21), which, taken from Bemidbar Rabbah, was interpolated in the *editio princeps* of the Tanḥuma as early as 1522 (Constantinople), but is absent from all the manuscripts. Another long passage, *ib.* 22, which belongs to the beginning of "Hukkat," as in Tanḥuma, is erroneously appended in the editions to the same section, "Korah."

The halakic exordium at the beginning of the second part, on Num. viii. 1, is cut down to its concluding passage; the Paris MS., Cod. No. 150, and a MS. in the possession of Epstein, contain the exordium

complete with its customary formula, **ילמדנו רבינו**, as usual in Tanhuma, which formula reappears throughout this portion of Bemidbar Rabbah, while in the editions, in section xv., Nos. 11, 17; sec. xvi., Nos. 1, 26; xvii. No. 1; sec. xx. Nos. 21, 22; sec. xxi. No. 2; xxii. No. 7; xxiii. Nos. 1, 7, the formula is changed to **הלכה**. In section xxi., beginning, and Nos. 16 and 23, the exordiums of Tanhuma, Pinhas, Nos. 12 and 15 (Nos. 11, and 13, Buber) have been omitted, as also in section xxii., beginning, Nos. 1 and 2 (compare Buber, pp. 47b, 51b).

The portions of Numbers to which there are Tanhuma homilies in this portion of Bemidbar Rabbah are intended for public worship according to the divisions of the cycle of the sedarim and the Pesikta. The well-known variations existing in the division into sedarim probably explain why some of the old sedarim, as Num. xi. 23 (xvii. 16), xviii. 25, xxiii. 10, xxviii. 26, xxxi. 25, are here without these homilies, while such are appended—or at least fragments of such—to the passages, Num. viii. 5, xiv. 26, xv. 37, xx. 7-13, xxiv. 3. In an article in the "Monatschrift," 1885, p. 351 *et seq.*, upon "the Midrashim to the Pentateuch and the three-year cycle of Palestine" (to which reference may be had for many details omitted here), the undersigned has registered 32 or 33 sedarim in Numbers (see "Monatschrift," 1886, p. 443), while the rabbinical Bible of Venice, 1617, contains a note stating that, according to some codices, Numbers contains 28 sedarim.

It is evident that in this portion of Bemidbar Rabbah, as in its source, the Tanhuma, the collected homilies have been considerably metamorphosed and disjointed. Many are quite fragmentary, and others so discursive that they treat of the whole seder *in extenso*, contrary to the usual practise of this Midrash. Although the marking of the parashiyot at their beginnings and in marginal superscriptions is a departure in the Venice edition (in the *editio princeps*, the expression **סליק סידרא** stands only at the end of section v.), the sections of the second part are indicated according to the usual notation of the parashiyot. With the exception of sections 16 and 17, which belong to "Shelah Leka," each section contains a parashah of the one-year cycle, which was already recognized when Bemidbar Rabbah was compiled; there are even Tanhuma Midrashim extant with divisions according to the parashiyot, while the Tanhuma, in its earliest editions, is alone in using the original arrangement based on the sedarim-cycle. In Bemidbar Rabbah, even in the newest editions, the divisions according to separate homilies are no longer recognizable. The following conspectus of the contents of this second part may therefore be interesting: (1) section xv. 1-10, upon Num. viii. 1; (2) *ib.* 11, 12, upon Num. viii. 5; (3) *ib.* 13-16, upon Num. x. 1; (4) *ib.* 17-25, upon Num. xi. 16; (5) section xvi. 1-11 (= Tanh., "Shelah," 1-7, Tanh. ed. Buber, 1-11) upon Num. xiii. 1; (6) *ib.* 12-23 (= Tanh. 8-13; Tanh. Buber, 12-25, is not in the Vatican MS.) comment upon Num. xiii. 17 to xiv. 23; (7) *ib.* 24, 25 (Tanh. Buber, addition, 1-6, Vatican MS.) homily upon Num. xiv. 11; (8) *ib.* 26-28 (compare Tanh. Buber, addition, 7-14, Vatican MS.) upon Num. xiv. 26; (9) section xvii. 1-4, upon Num. xv. 1; (10) *ib.* 5,

6, upon Num. xv. 37; (11) section xviii. 1-20, upon Num. xvi.; (12) *ib.* 21, an addition **אזהרות כפולות**, contained in none of the Tanhuma MS.; (13) *ib.* 23, a fragment of a homily on Num. xvii. 16; (14) *ib.* 22 and section xix. 1-8, on Num. xix. 1; (15) *ib.* 9-14, commentary on Num. xx. 7-13; (16) 15-33, continuous exposition of Num. xx. 14-xxi. 35; (17) sec. xx. 1-20, explanation of Num. xxii. 2-xxiii. 24; (18) *ib.* 21, upon Num. xxiv. 3; (19) *ib.* 22-25, upon Num. xxv. 1; (20) section xxi. 1 and 3-7, upon Num. xxv. 10; (21) *ib.* 8-13, upon Num. xxvi. 52; (22) *ib.* 2 and 14, 15, upon Num. xxvii. 15; (23) *ib.* 16-22, upon Num. xxviii. 1; (24) *ib.* 23-25, on Num. xxix. 35; (25) section xxii. 1, upon Num. xxx. 2; (26) *ib.* 2-6, upon Num. xxxi. 1; (27) *ib.* 7-9, upon Num. xxxii. 1; (28) section xxiii. 1-4, on Num. xxxiii. 1; (29) *ib.* 5-12, on Num. xxxiv. 1; (30) *ib.* 13-14, upon Num. xxxv. 9.

Since the second part of Bemidbar Rabbah, additions excepted, is derived from the Tanhuma Midrashim, the question arises whether it and part 1 (sec. i.-xiv.) are to be ascribed to one author. That the author of the comparatively late commentary on the parashiyot "Bemidbar" and "Naso"—supposing that the Midrash upon these two is the work of a single author—should have deliberately rounded out his incomplete work with the Midrash Tanhuma is certainly highly improbable. According to Epstein ("Beiträge zur Jüdischen Alterthumskunde," p. 70) some unknown author wrote the Midrash upon the parashah "Bemidbar" in order to complete the Sifre, which commences with Num. v. 1; another then continued it with the commentary on "Naso," and in order to complete the work for the remainder of Numbers, the commentary for the remaining parashiyot was drawn from Tanhuma. It must also be mentioned that Cod. Hebr. 149 of the Paris National Library, dating from the year 1291, contains only the parashah "Bemidbar," while the Munich Cod. 97, 2 (Steinschneider), dated 1418, covers only this and "Naso."

Even the first part contains much that is taken from the Tanhuma: "but a copious stream of new Haggadah swallows the Midrash drawn from this source and entirely obscures the arrangement of the Yelamdenu" (Zunz, "G. V." p. 260). In the parashah "Bemidbar," the outer framework of the original composition is still recognizable. There are five sections, containing five homilies or fragments of such, taken from the Tanhuma upon Num. i. 1, ii. 1, iii. 14, iii. 40, and iv. 17, which are expanded by some very discursive additions. As Tanhuma only treats of the first verses of each chapter, no doubt the author's intention was to supply haggadic commentary to the others. But in the section upon "Naso," which is more than three times the volume of that preceding, there are long passages which have no relation to the Tanhuma homilies, based as they are upon the sedarim-cycle, and commencing in "Naso" with Num. v. 11. Sections vi., vii., viii., x., which, like the other lengthy sections in which the material derived from the Tanhuma is overwhelmed in a flood of new Haggadot, show even more clearly the endeavor to supply homilies and continuous expositions for all sections of "Naso." Very truly has

As a writer, Ben-Avigdor is original and has considerable power of description and expression. Some of his longer stories—*e.g.*, "Leah Mokeret ha-Dagim" and "Menahem ha-Sofer"—attracted much attention. Other stories of his and some articles gave occasion for interesting polemics. He was attacked not only for his ideas as a Nationalist, but also for his style, which he modeled after the so-called "new direction," caring more for being understood than for the purity of Biblical Hebrew. Some of his stories were published in the *Alhasaf* annuals.

P. Wl.

**BEN 'AZZAI:** A distinguished tanna of the first third of the second century. His full name was Simon b. 'Azzai, to which sometimes the title "Rabbi" is prefixed. But, in spite of his great learning, this title did not rightfully belong to him; for he remained all his life in the ranks of the "talmidim" or "talmide hakamim" (pupils or disciples of the wise). Ben 'Azzai and Ben Zoma were considered in the tannaitic school-tradition as the highest representatives of this degree in the hierarchy of learning (*Tosef.*, *Kid.* iii. 9; *Bab. Kid.* 49*b*; *Ber. Kid.* 57*b*; *Yer. Ma'as. Sh.* ii. 53*d*; *Bab. Sanh.* 17*b*). Ben 'Azzai is especially named as an eminent example of a "pupil who is worthy of the hora'ah," of the right of independent judgment in questions of religious law (*Hor.* 2*b*). Ben 'Azzai stood in close relation to the leaders of the school of Jabneh. He handed down, "from the mouth of two-and-seventy elders," who were present on the occasion, a halakic decision, which was accepted in Jabneh on the day when

Eleazar b. Azariah was elected president in the place of Gamaliel II. (*Yad. iv.* 2; *Zeb.* i. 3); also another resolution of the same day, declaring the books *Kohelet* and *Shir ha-Shirim* to be as sacred as the other Scriptures, whereby the collection of the Biblical writings, or the canon, was officially closed (*Yad.* iii. 5).

Chief among Ben 'Azzai's teachers was Joshua b. Hananiah, whose opinions he expounded (*Parah.* i. 1), proved to be correct (*Yeb.* iv. 13), or defended against Akiba (*Yoma.* ii. 3; *Ta'anit.* iv. 4; *Tosef.*, *Sheb.* ii. 13). Akiba himself was not really Ben 'Azzai's teacher, although the latter occasionally calls him so, and once even regrets that he did not stand in closer relation as pupil to Akiba (*Ned.* 74*b*); and he expressed the same regret in regard to Ishmael b. Elisha (*Hul.* 71*a*). In his halakic opinions and Biblical exegesis, as well as in other sayings,

Ben 'Azzai follows Akiba; and, from the tone in which he speaks of Akiba in the discourses that have been handed down, the Amoraim concluded that his relations with Akiba were both those of pupil and of colleague (*Yer. B. B.* ix. 17*b*; *Bab. ib.* 158*b*; *Yer. Shek.* iii. 47*b*; *Yer. R. H.* i. 56*d*).

Ben 'Azzai's most prominent characteristic was the extraordinary assiduity with which he pursued his studies. It was said of him afterward, "At the death of Ben 'Azzai the last industrious man passed

away" (*Soṭah.* ix. 15). A later tradition (*Midr. Hallel*) says of the zealous studies of Ben 'Azzai and Akiba—by way of reference to *Ps.* cxiv. 8—that in their perceptive faculty both had been as hard as rock; but, because they exerted themselves so greatly in their studies, God opened for the man entrance into the Torah, so that Ben 'Azzai could explain even those things in the Halakah that the schools of Shammai and Hillel had not understood. His love of study induced Ben 'Azzai to remain unmarried, although he himself preached against celibacy, and even was betrothed to Akiba's daughter, who waited for years for him to marry her, as her mother had waited for Akiba (*Ket.* 63*a*). When Eleazar b. Azariah reproved him for this contradiction between his life and his teachings, he replied: "What shall I do? My soul clings lovingly to the Torah; let others contribute to the preservation of the race" (*Tos. Yeb.* viii. 4; *Bab. ib.* 63*b*; *Gen. R.* xxxiv.; compare *Soṭah.* 4*b*).

Another characteristic of Ben 'Azzai was his great piety. It was said, "He who has seen Ben 'Azzai in his dreams is himself on the way to piety" (*Ber.* 57*b*). Thanks to this piety he could, without injury to his soul, devote himself to theosophic speculations, when he, like Ben Zoma, Elisha b. Abuyah, and Akiba, entered, as tradition has it, into the garden ("pardes") of the esoteric doctrine. Tradition (*Hag.* 14*b*) says of him: "He beheld the mysteries of the garden and died; God granted him the death of His saints" (*Ps.* cxvi. 15). With reference to this verse, Ben 'Azzai himself had taught that God shows to the pious, near the hour of their death, the rewards awaiting them (*Gen. R.* lxii.). Other sayings of his concerning the hour of death have been handed down (*Ab. R. N.* xxv.). According to a tradition not entirely trustworthy, Ben 'Azzai was among the first victims of the persecutions under Hadrian; his name, therefore, is found on a list of the "ten martyrs" (*Lam. R.* ii. 2).

Ben 'Azzai's posthumous fame was extraordinary. The greatest amora of Palestine, Johanan, and the greatest amora of Babylonia, Rab, each said, in order to mark their authority as teachers of the Law: "Here I am a Ben 'Azzai" (*Yer. Bik.* ii. 65*a*; *Yer. Peah.* vi. 19*c*). The name of Ben 'Azzai is applied in the same sense by the great Babylonian amora Abaye (*Soṭah.* 45*a*; *Kid.* 20*a*; *'Ar.* 30*b*) and Raba (*'Er.* 29*a*). A haggadic legend of Palestine relates of him the following: "Once, as Ben 'Azzai was expounding the Scriptures, flames blazed up around him, and being asked whether he was a student of the mysteries of the 'Chariot of God,' he replied: 'I string together, like pearls, the words of the Torah with those of the Prophets, and those of the Prophets with those of the Hagiographers; and therefore the words of the Torah rejoice as on the day when they were revealed in the flames of Sinai'" (*Lev. R.* xvi.; *Cant. R.* i. 10).

Under Ben 'Azzai's name, traditional literature has preserved many sentences, with and without Biblical foundation. Two of these have been taken over into the sayings of the Fathers (*Ab. iv.* 2, 3).

After a saying of Ben 'Azzai, at the beginning of the third chapter of "Derek Erez Rabbah," this little book—which began originally with that chapter—is called "Perek Ben 'Azzai" (Rashi to Ber. 22a; Tos. to 'Er. 53b). In a sentence that recalls a fundamental thought of Akiba, Ben 'Azzai gives the characteristic features of a kind of deterministic view of the world: "By thy name they shall call thee, at the place where thou belongest shall they see thee, what is thine they shall give to thee; no man touches that which is destined for his neighbor; and no government infringes even by a hair's breadth upon the time marked for another government" (Yoma 38a *et seq.*). Following Hillel, Akiba had declared the commandment "thou shalt love thy neighbor as thyself" (Lev. xix. 18) to be the greatest fundamental commandment of the Jewish doctrine; Ben 'Azzai, in reference to this, said that a still greater principle was found in the Scriptural verse, "This is the book of the generations of Adam [origin of man]. In the day that God created man [Adam], in the likeness of God made he him" (Gen. v. 1; Sifra, Kedoshim, iv.; Yer. Ned. ix. 41c; Gen. R. xxiv.). The commandment to love God with all the

**The Greatest Principle.** explained in the same manner as Akiba: "Love him even to the last breath of the soul!" (Sifre, Deut. 32). Several of Ben 'Azzai's haggadic sentences, having been called forth by those of Akiba, are introduced by the words, "I do not wish to oppose the interpretation of my master, but will only add to his words" (Sifra, Wayikra, ii.; Mek., Bo, Introd.).

Ben 'Azzai's observations on sacrifices (Sifre, Num. 143) are obviously directed against Gnosticism. As against the doctrine of the Gnostics, that the part of the Law containing the rules of sacrifice could have originated only with a secondary god, the demiurge, who is merely just, not beneficent, Ben 'Azzai maintains, that in connection with the sacrificial laws, not any one of the various names of God is there used, but precisely the distinctive name, the Tetragrammaton, in which especially the goodness of God is emphasized, in order that the "minim" (disbelievers) might not have an opportunity to prove their views by the Bible. Ben 'Azzai's symbolic interpretation of the first word of Lamentations (אֵיכָה) is also polemical and probably directed against Pauline Christianity. He holds that in the numerical value of the four letters of this word is indicated that the Israelites did not go into exile until after they had denied the one God (א), the ten commandments (י), the law of circumcision, given to the twentieth generation after Adam (כ), and the five (ה) books of the Torah (Lam. R. i. 1).

W. B.

**BEN BAG-BAG:** An early tanna. At the end of the Mishnah Abot (v. 22, 23) two sentences are given concerning the study of the Torah; one by Ben Bag-Bag, the other by Ben Hê-Hê. Both sentences are also ascribed to Hillel (Ab. R. N. xii.); as indeed in their pithy language as well as Aramaic wording they are similar to the well-known Aramaic sentences of Hillel. Tradition reports two exegetical questions, which Ben Hê-Hê asked of Hillel (Hag.

9b). Ben Hê-Hê and Ben Bag-Bag may, therefore, be considered disciples of Hillel; or, as is even more likely, both names represent one and the same person.

The peculiarity of these names may be explained by the following anecdote (Shab. 31a): Hillel once convinced a proselyte of the truth of the oral law by proving to him, in a lesson on the Hebrew alphabet, that even a knowledge of the phonetic value and of the order of the letters of the alphabet is not possible without a belief in their oral transmission from age to age. If this proselyte is identical with the disciple of Hillel quoted under the above pseudonyms, then the one name, "Ben Hê-Hê," may have been chosen to indicate that "Hê" is always pronounced "Hê," as the tradition shows; and the other name, "Ben BG-BG," to show that in the alphabet the sequence bet gimel is fixed by tradition. That Ben Hê-Hê and Ben Bag-Bag are identical is apparently an old tradition, mentioned by Abraham Zacuto in "Yuhasin."

In Tos. to Hag. 9b Ben Bag-Bag and Ben Hê-Hê are also considered to be proselytes, although the symbolic meaning of their names is differently accounted for. Several halakic interpretations of Scriptural passages by Ben Bag-Bag have been transmitted: of Ex. xiii. 13 (Bek. 12a); of Lev. xix. 11 (Sifra, Kedoshim, ii. 2; Tosef., B. K. x. 38; Bab. B. K. 27b); of Num. xxviii. 2 (Pes. 96a; Men. 49b); 'Ar. 13b; anonymously stated in Sifre, Num. 142, and in the name of 'Akiba in Meg. Ta'anit i.); of Deut. xiv. 26 (Sifre, Deut. 107; 'Er. 27b).

There is another rabbi distinct from this elder Ben Bag-Bag who was never cited with a given name. He is Johanan ben Bag-Bag, possibly the son of the former. Nothing is known about him except that he sent to Nisibis a halakic question to Judah b. Betera, a contemporary of Akiba, who in his reply referred to Ben Bag-Bag as one noted for being "familiar with the chambers of the Law" (Tosef., Ket. v. 1; Yer. Ket. v. 29a; Bab. Kid. 10b; Sifre, Num. 117).

J. SR.

W. B.

**BEN-BATIAH:** 1. A man, at the time of the teachers of the Mishnah ("Aruk," s.v. אַבְרָהָם), whose fist, being about the size of an adult's head, was used as a standard of measurement (Kelim xvii.; Bek. 37b; compare hip-bone of the giant king Og, Tosef., Oh. ixv. 4).

2. The son of the sister of Johanan b. Zakai, who, as one of the ringleaders of the Zealots, burned the granaries at Jerusalem in order that the Jews should have to fight more desperately (Lam. R. i. 5; Eccl. R. vii. 11; Yalk., Eccl. 975). In Git. 56a the name "Abba Sakkara" (or, as others read, "Abba Sikra" = leader of the Sicarii) occurs. Many think that the two persons are identical (see ABBA SAKKARA, ATHRONGES).

S. KR.

**BEN CHANANJA:** 1. A periodical published by Leopold Löw at Leipzig in 1844 with the subtitle "Blätter für Israelitisch-Ungarische Angelegenheiten." It was an octavo containing sixty-four pages, including four introductory ones.

2. A periodical devoted to Jewish theology, also edited and published by Leopold Löw, rabbi of

Szegedin, Hungary. It appeared at Szegedin from 1858 to 1867, covering ten volumes. Its form and subtitle underwent various changes: the first three volumes were in octavo; the last seven, in quarto. The subtitle was at first "Monatsschrift für Jüdische Theologie"; in the third volume it reads "Zeitschrift," etc.; from the fourth to the ninth, "Wochenblatt," etc., and from the thirty-eighth number of the ninth volume to the end of the tenth, "Zeitschrift für Jüdische Theologie und für Jüd. Leben in Gemeinde, Synagoge, und Schule."

The ten volumes of this journal contain important information concerning the history of the Jews in Hungary during the period of its existence, especially in relation to the Reform movement, in which its editor was heartily interested. Two supplements containing valuable contributions by eminent scholars appeared occasionally from 1866 to 1867. The one, a homiletic review, was entitled "Homiletische und Didaktische Beilage"; the other, for special scientific research, bore the title "Forschungen des Wissenschaftlich-Talmudischen Vereins." A separate treatise, "Der Judeusid Betrachtet vom Mosaisch-Religiösem und Humanitärem Standpunkte," by I. C. Soppron, was attached to vol. vii. An index to both supplements was prefixed to the tenth volume. Among notable contributors were N. Brüll, Carmoly, Criezenach, Dukes, Jost, Kohut, Munk, Neubauer, and other able scholars.

The erudite articles contributed by the editor to the magazine throughout its course were reissued in his "Gesammelte Schriften," edited by his son, Immanuel Löw, chief rabbi of Szegedin.

G. A. K.

**BEN DAMA** (or **DAMAH**; full name, **ELEAZAR B. DAMA[H]**): Tanna of the beginning of the second century; a nephew of ISHMAEL B. ELISHA. His inclination toward Hellenism and the Judæo-Christians contrasted with the attitude of his uncle, whom he once asked if he should study "Greek Wisdom," since he had finished the study of the Torah. The answer of Ishmael was: "Study the Torah day and night and 'Greek Wisdom' when it is neither day nor night." Ben Dama died of a snake's bite, and the following account is given of his last moments:

Jacob of Kefar Sama (Sakonya), a Judæo-Christian, wanted to charm away the deadly effects of the bite by formulas in the name of Jesus; but Ishmael did not believe in such charms and would not allow him to come in. Just as Ben Dama essayed to prove to his uncle that there could be no objection to the cure from a Jewish standpoint, he died, and Ishmael exclaimed, "God has shown thee mercy in that thou didst depart in peace and didst not transgress the law of the sages" (Tosef., Hul. ii. 22, 23; 'Ab. Zarah 27b; Yer. 'Ab. Zarah ii. 40d).

It is not improbable that Ben Dama's inclination toward the Judæo-Christians was the reason that nothing written by him was transmitted either by the Halakah or by the Haggadah, and that neither the Babylonian nor the Palestinian Talmud gives him the title "Rabbi." His title and full name have

been preserved by the Tosefta (Hul. l.c.), which contains a halakic controversy between Ben Dama and Ishmael (Sheb. iii. 4).

**BEN ELASAH**: A rich and prominent Palestinian of about the middle of the second century. He was the son-in-law of R. Judah ha-Nasi I., and is chiefly known in the Talmud as having been made a butt of on various occasions by Bar Kap-para (Ned. 51a; Yer. M. K. iii. 81c). It was also said that Ben Elasa paid a large sum of money to a barber to have his hair cut after the fashion of the high priests (Ned. l.c.; Sanh. 22b). From these stories it appears that Ben Elasa was merely a rich man; and it is highly improbable that he was identical, as Heilprin asserts, with the R. Elasa mentioned in Midr. Teh. ix., where the following conversation is reported as having taken place between R. Elasa and a philosopher:

"The philosopher asks the rabbi when the prediction of the prophet Malachi (i. 4), that the Edomites would build in vain, would be fulfilled; to which Ben Elasa replies that he interpreted the passage to mean that the evil intents of Edom [Rome] against the Jews are frustrated by Providence. The philosopher thereupon admits that the Romans annually plan to destroy Israel, but that 'an aged one' [a wise counselor] always comes to defeat their counsels." [Compare Pes. 78b; 'Ab. Zarah 10b].

The last words are very obscure and possibly contain an allusion to Antoninus, a contemporaneous emperor, whose friendship for the Jews is a frequent topic in Talmudic legends (see ANTONINUS IN THE TALMUD). Assuming this to be true, there would be some, but by no means conclusive, reason for the identification of R. Elasa with Ben Elasa.

M. FR.

**BEN-HADAD.**—**Biblical Data:** A name that would seem to mean simply "the son of Hadad," a well-known appellation of an Aramean and perhaps also of an Edomite deity (see **HADAD**). As found in the Old Testament, the name is applied to at least two distinct kings of Damascus; some expositors, however, say three. Of these, Ben-hadad I., son of Tabrimon, son of Hezion, was subsidized by Asa of Judah to aid him in his attack on Baasha of Israel while the latter was building the fortress of Ramah (I Kings xv. 18; II Chron. xvi. 2). The allies succeeded in their campaign; and Asa, removing the building material of Ramah, constructed with it Geba and Mizpah. Ben-hadad engaged later in a war with Ahab and unsuccessfully besieged Samaria (I Kings xx. 12; see **AHAB**). The campaign resulted happily for Israel, as the Syrian was overwhelmed at Aphek, in spite of his numerous allies. On his attacking Samaria again, his army fled without giving battle, owing to a rumor that the king of Israel had entered into an alliance with the Hittites and Egyptians (II Kings vii. 6, 7).

The relations between Ben-hadad and the Assyrian king Shalmaneser II. are very clear. The Syrian forces were utterly defeated at Karkar on the Orontes in 853 B.C., in spite of the enormous armament which the Damascene had brought to his aid.

**Ben-hadad** The inscriptions of Shalmaneser in one and **Shal-** passage give the number of the slain **maneser.** as 20,500. With 120,000 men in 845 B.C. Shalmaneser again entered Syria and overthrew Ben-hadad and a large army of allies.

According to II Kings viii. 7-15, Ben-hadad fell ill and sent Hazael to the prophet Elisha—who was then in Damascus—in order to inquire whether he would recover. Elisha prophesied that Hazael would be king in Ben-hadad's stead and would do much evil to Israel. On Hazael's return to his master he smothered Ben-hadad with a wet cloth and declared himself king (see **HAZAEI**). When, in 841, the Assyrian king once more encountered the forces of Damascus, his chief foe was Hazael, who, it is known, was Ben-hadad's successor, so that the latter must have died between 845 and 841 B.C.

Some expositors deny the necessity of assuming that the events just described should be divided between two kings named Ben-hadad, on the ground that the period between Ben-hadad's alliance with Asa and Ben-hadad's death—which, as just shown, could not have been earlier than 845—is too long for the reign of one king. It is suggested, in answer to this, that Tabrimon, the father of Ben-hadad, may have been contemporaneous with Baasha and Asa for a long time, so that really not more than forty years need have passed between Ben-hadad's alliance with Asa and the death of the former.

The son of Hazael also is called "Ben-hadad" in II Kings xiii. 24, 25, where he is mentioned as an oppressor of Israel and as a contemporary of Jehoahaz ben Jehu (814-798 B.C.).

**Hazael** Joash of Israel met and defeated this king three times and recovered from him a number of cities. This Ben-hadad II. is probably the same as "Mari" alluded to in Rawlinson, "Cuneiform Inscriptions of Western Asia," i. pl. 35, No. 1, l. 15, as resisting Ramman-

nirari III. between 826 and 803. The Assyrian form "Mari" may possibly be an attempt to reproduce the Aramaic title "Maré" (lord, possessor) which may have been applied as a subsidiary name or title of honor to this king. This is Schrader's view ("C. I. O. T." p. 212) and appears the most reasonable, but Cheyne suggests that "Mari" was the correct name of the king as against "Ben-hadad."

The name "Ben-hadad" in the late passage, Jer. xlix. 27, is not a general term for the kings of Damascus, but is simply an allusion to Ben-hadad I., son of Tabrimon, and not to Ben-hadad II., son of Hazael. The passage in Jeremiah is probably borrowed from Amos i. 4.

—**In Rabbinical Literature:** When Ben-hadad demanded that Ahab should surrender, in addition to his gold, silver, wives, and children, also **כל מהמדי עיניך** ("whatsoever is pleasant in thine eyes") (I Kings xx. 6), the haggadists affirm that he meant by this expression the sacred scroll of the Torah, which the Syrian king wanted to take away from Ahab. Although a sinful king, Ahab would not be responsible for such an act, but convoked the elders, who advised him to refuse compliance with the wish of Ben-hadad. As a reward for thus honoring the Torah, it was granted to Ahab to reign for twenty-two years (as the Torah is written with an alphabet of twenty-two letters) and to conquer Ben-hadad (Tan., Shemot, 29; ed. Buber, 26; Ex. R. iii. 8; Sanh. 102b).

G. B. L.

**BEN JUDAH, ELIEZER:** Palestinian editor; born at Luzhky, government of Wilna, Jan. 7, 1858; son of Judah Perlman—hence his name "Ben Judah." He received his early Talmudic education at the yeshibah of Rabbi Joseph Blücker at Polotzk, afterward was graduated from the gymnasium of Dvinsk (Dünaburg), and later went to Paris to study medicine. He married in Vienna, and settled in Jerusalem, 1881, where he has resided ever since.

After three years of hard study in the medical college at Paris, Ben Judah developed symptoms of consumption, and his physician ordered him to the warmer climate of Algeria. The national idea of the Zionist movement then absorbed all his thoughts. He wrote a letter, dated Algiers, Dec. 21, 1880, to the "Ha-Shahar," expounding his political views on Zionism, and taking exception to those of the editor, P. Smolensky, on the Jewish problem; namely, that Jews can foster their national spirit and the Hebrew

language in other countries than Palestine. Ben Judah declares that it is only possible to revive the study of Hebrew as a living tongue in a country almost entirely inhabited by Jews.

In the same strain he wrote in the "Habazelet," a weekly paper edited in Jerusalem by Frumkin, with whom Ben Judah made arrangements to become assistant editor. In one article he bitterly complains of the Alliance Israélite Universelle for encouraging and assisting Russian-Jewish emigration to America, which he calls the final burial-place of Judaism ("Habazelet," 1882, xiv., No. 2). After his arrival in Jerusalem Ben Judah met Michel Pinnes, an ardent Zionist and Hebrew scholar, in whom he found a fellow-enthusiast of his scheme to make the Hebrew a living language. He made it the language of his household. The example he set was soon followed by the colonists in Palestine, and has been successfully introduced in many of the Alliance schools.

In 1884 Ben Judah began to edit and publish the monthly supplement to the "Habazelet," called "Mebasseret Zion"; but it did not long survive, as his new doctrines were out of harmony with the views of the editor-in-chief of the journal. Ben Judah made futile attempts to obtain from the government a firman to publish a Hebrew paper of his own, and at last he succeeded in making use of Hirshenson's firman, and commenced to publish "Ha-Zebi." His first effort was to promote the circulation of the new paper among the poor, who could ill afford to purchase the high-priced "Habazelet." The first issue (1885) was a four-page quarto and was sold for a quarter-piaster (one cent) in the streets of Jerusalem.

The paper contained a summary of general news and particularly Jewish topics. The editor's principal object, however, was to propagate the settlement of the Holy Land by the persecuted Russian Jews. He also endeavored to counteract the zeal of the English missionaries in promoting Christianity among the Jews in Palestine; and to this end he helped to organize the society called "Ezrat Nedahim." He combated the system of the *Ḥalukkah*, which gave support to the idle poor in preference to the industrious colonists.

These attacks naturally called forth strong opposition from all sides; the *Ḥalukah* faction nick-naming him "the leader of the Philistines." At length his enemies succeeded in their machinations.

The pasha suspended the paper for "Ha-Zebi" a time and ordered the arrest of its editor. Even the colonists accused Ben Judah of being prejudiced against them, owing to his connection with the Rothschild administration, which subsidized his paper.

Ben Judah may be regarded as the originator of the modern type of New Hebrew, which he claims is a necessity for the regenerated nation. Most of his new vocabulary is coined either from the Talmudic literature or from the Arabic, such as: "penknife" = *אָנל*, "buckle" = *אָנום*, "sympathy" = *אָמירה*, "reflection" = *בְּצִבְרִין*. His adoption of the era from the

destruction of Jerusalem, by which he dates all his writings, is not altogether new. See Responsa, "Benjamin Ze'eb," § 50, p. 104b, Venice, 1539.

Ben Judah's works are: (1) "Erez Yisrael" (The Land of Israel), a physical and geographical description, Jerusalem, 1883; (2) (jointly with Beer Lipschütz) "We-Yada'ta ha-Yom" (And Know To-day), a Hebrew calendar for the year 5644 (1884) with Jewish historical notes, Jerusalem, 1883; (3) (with D. Jellin) "Ha-Mikra le-Yalde Yisrael," a reader for Jewish children, with notes, 2 vols., Jerusalem, 1889; (4) "Kizzur Dibre ha-Yamim, etc.," an abridged history of the Jews during their national existence in the Holy Land, 2d ed., Jerusalem, 1894; (5) "Milon Kelali," unabridged Hebrew dictionary, with French and German translation, including all New Hebrew words, pts. i. ii., published Jerusalem, 1896-1900.

J. D. E.

**BEN KAFRON** or **IBN CAPRON**: One of the three disciples of Menahem ben Saruk (last third of tenth century) who defended the honor of their teacher against his critic, Dunash ben Labrat. Judah ben Sheshet, a disciple of Dunash, wrote a violent polemic against this controversial treatise of the disciples of Menahem, in which he mentions the authors of the treatise by name, and among them mentions Ben Kafron. Moses ibn Ezra also speaks of an Isaac ibn Kafron (Geiger, "Jüd. Zeitschrift," i. 238), who doubtless is identical with the Ben Kafron of Judah ben Sheshet's polemic. The name is derived from the Latin *caper*, goat; and Judah b. Sheshet continually and tauntingly alludes to this name of his opponent. For the polemic of Menahem's disciples, of which Ben Kafron was joint author, and which was printed by S. G. Stern at the same time as the refutation of Judah ben Sheshet ("Liber Responsionum," Vienna, 1870), see **MENAHEN**.

W. B.

**BEN KALBA SABBUA'**: A rich and prominent man of Jerusalem who flourished about the year 70. According to the Talmud (Git. 56a), he obtained his name from the fact that any one that came to his house hungry as a dog (Kalba), went away satisfied (Sabbua'). He was one of the three rich men of Jerusalem (the other two being Nakdimon ben Goryon and Ben Zizit ha-Keset), each of whom had in his storehouses enough to provide the besieged city with all the necessities of life for ten years. But as these three favored peace with Rome, the Zealots burned their hoards of grain, oil, and wood, thus causing a dreadful famine in Jerusalem (Git. *ib.*; Lam. R. i. 5; Eccl. R. vii. 11; Ab. R. N., ed. Schechter, vi. 31, 32, in which Ben Kalba Sabbua's wealth is described as still greater).

Although the details of this account are hardly supported by historical evidence, there is no reason to doubt the existence of the three rich men. But the account in the Babylonian Talmud, according to which Akiba ben Joseph was the son-in-law of Ben Kalba Sabbua', is probably without any histor-

ical foundation; nor is there any reference to it in the Palestinian sources. It tells of the secret marriage of Ben Kalba's daughter; that she was turned away by her father; and that he finally became reconciled to her (Ned. 50a; Ket. 62b *et seq.*). Compare **AKIBA IN LEGEND**.

A grave, alleged to be that of Ben Kalba Sabbua', to which the Jews pay great respect, is pointed out about half a mile north of Jerusalem. It is mentioned by Benjamin b. Elijah, a Karaite who traveled in Palestine (compare T. Gurland, "Ginze Yisrael," i. 53). Recent excavations show that there actually are graves on this spot; but the statement that an inscription bearing Ben Kalba Sabbua's name was found there has not been proved (Gurland, *ib.* p. 68; "Ha-Maggid," viii. 28).

**BEN KOSIBA.** See **BAR KOKBA**.

**BEN LA'ANAH:** Author of an apocryphal book. The name occurs only once in Yer. (Sanh. x. 28a), where it is said that among the apocryphal books ("sefarim ha-hizonim") mentioned in the Mishnah (Sanh. x. 1) as forbidden to be read, the works of Ben Sira and of Ben-La'anah are included. "Ben Tagla," in Eccl. R. xii. 12, is probably only a variant of Ben-La'anah, since this Midrashic passage is taken from the Jerusalem Talmud. An author at the beginning of the sixteenth century writes the name "Ben Ya'anah" (יענה), remarking that he has the latter's apocryphal works before him, and finds them full of riddles [fables] and stupidities (David ben Judah, Messer Leon's manuscript commentary on "Moreh," in Steinschneider, "Hebr. Bibl." vii. 65).

It may be inferred from the above-mentioned passage of the Talmud that Ben-La'anah's work was not reckoned among the profane books, but was, like the book of Ben Sira, included by some authorities in the Scripture, and that for this reason the Mishnah protested against reading it, or, more correctly, against including it in the canon (compare **AKIBA B. JOSEPH**). M. Joel thinks that this apocryphal book was apocalyptic in nature, whence the name "Ben-Tagla" (from "galah," to reveal), and that Ben-La'anah characterized it as a work in which the word "wormwood" לענה (= "La'anah") played an important rôle. Fürst, on the other hand, who emends the text of the Jerusalem Talmud, takes "Ben-La'anah" to be a corruption of "Apollonius," that is, of Tyana, the well-known pagan philosopher, and identifies Ben-Tagla with Empedocles. Perles takes "Ben-Ta'ala" to be the original form, from which the corruptions "Ben-Tagla" and "Ben-La'anah" arose. But "Ben-Ta'ala" means "the fox"; hence the book of Ben-Ta'ala would correspond to "Mishle Shu'alim" (The Fables of the Fox), which are also mentioned in Jewish sources. These are only a few examples of the various etymological explanations to which the names "Ben-La'anah" and "Ben-Tagla" have given rise.

**BIBLIOGRAPHY:** Fürst, *Canon des Alten Testaments*, pp. 97-99; Joel, *Blicke in die Religionsphilosophie*, i. 75; Kaufmann, in *Revue Etudes Juives*, iv. 161; Perles, *ib.* iii. 116-118.

L. G.

**BEN LEB B. ZADIK.** See **HASIDIM**.

**BEN MEÏR:** Palestinian nasi in the first half of the tenth century. His name was brought to light some twenty years ago by several fragments discovered in various genizoth. The fragments contain an account of a controversy on the calendar between Ben Meïr and the academies of Babylon. Introducing a new rule in the fixation of the "Molad" of Tishri, Ben Meïr had decreed that, in the year 922, Passover and the other Jewish feasts should be celebrated two days before the date prescribed by the traditional calendar. Saadia, who was at that time staying at Bagdad, joined his protest to that of the Babylonian academies. Ben Meïr, however, refused to yield to their injunctions, denying them any authority in astronomical matters; and, owing to his own reputation and that of his family, won the confidence of Jews in many countries. A letter was then addressed by the exilarch David ben Zakkai and the Babylonian notables to Ben Meïr, imploring him not to cause a schism and showing him the fallacy of his calculations with regard to the calendar. Ben Meïr answered in an arrogant fashion, and was then excommunicated by David ben Zakkai and the academies. Circular letters were also sent to various parts of the world, warning the Jews against Ben Meïr's teachings. In this manner an end was made of this agitation.

Such are the facts of this affair, which remained unknown to the Jewish historians until the present time. The aim pursued by Ben Meïr in this agitation is obvious. He conceived the project of transferring the dignity of the exilarch from Babylonia back to Palestine, and he endeavored to deprive the exilarchate of one of its most important prerogatives, which was the calculation of the calendar. The moment chosen by Ben Meïr was very propitious. The exilarch David ben Zakkai had no authority, being neither a learned man nor a very scrupulous one; and of the two academies at Sura and Pumbedita, the former had no head, and the latter was directed by the ambitious Cohen Zedek. Ben Meïr's failure was chiefly due to the intervention of Saadia, whose opinion on the subject of discussion, expounded in his "Sefer ha-Mo'adim" written for that occasion at the request of the exilarch, became authority. The exilarch later rewarded for the services rendered to him by Saadia by appointing the latter gaon at Sura, notwithstanding the disinterested advice to the contrary by Nissim Naharwani, who, knowing Saadia's impartiality and uprightness, foresaw the collisions that could not fail to occur between the gaon and the unscrupulous exilarch David ben Zakkai.

I. BR.

**BEN MELAK.** See **SOLOMON IBN MELEK**.

**BEN NAPHTALI:** Masorite; flourished about 890-940 C.E., probably in Tiberias. Of his life little is known. His first name is in dispute. Some medieval authorities called him "Jacob"; two Tchufut-Kalè manuscripts have "Moses b. David"; a third

contains his autoepigraph, which unfortunately is incomplete, only "Ben David ben Naphtali" remaining.

Ben Naphtali wrote a Bible with vowels, accents, and Masorah, wherein he differed in some respects from his contemporary and rival, AARON B. MOSES BEN ASHER. This Bible codex has not been preserved, but the differences between its author and Ben Asher are found in more or less complete Masoretic lists and in quotations in David Kimhi, Norzi, and other medieval writers. These lists are printed in the rabbinical Bibles, in the texts of Baer-Deitzsch and of Ginsburg, and in the latter's Masorah, vol. iii. The differences between Ben Naphtali and Ben Asher number about 875, nine-tenths of which refer to the placing of the accents **מְחַן** and **נְעִיף**. The remaining ones have reference to **רִפִּי** and **רִנִּי**, to vowels, accents, and consonantal spelling. The variations may be classified as follows, Ben Asher being referred to as B. A. and Ben Naphtali as B. N.:

(1) The proper name **יששכר** constitutes the first point of difference. B. A. vocalizes it **יששכר**, B. N. has **יששכר**. For the

**Differences Between the Two.** reading of B. N. in this case, various sources give different accounts.

(2) Certain forms of the verb **אכל** ("to eat"). According to B. A., wherever a form of this verb occurs with a suffix and the **ל** has "segol," the **כ** has "hataf-patah," except in one instance (Eccl. v. 10); whereas B. N. always points it with simple "sheva."

(3) Some forms of the verb **גרש** ("to drive away"). Wherever the forms of this verb occur with a suffix and the **ש** has segol, B. A. points the **ר** with hataf-patah, with the exception of **יגרשהו** (Ps. xxxiv. 1), where the **ש** has "sere"; while B. N. always points the **ר** with simple sheva.

(4) The "dagesh" in the **ת** in the forms of the word **בתים**, when it has two accents. According to B. A., this word has extra dagesh only in two instances (Deut. vi. 11; I Chron. xxviii. 11); according to B. N., there are more instances where it has two accents and has the extra dagesh in the **ת**; viz., Ex. ii. 7, viii. 7; Deut. vi. 11; I Chron. xxviii. 11; II Chron. xxxiv. 11. The term "extra dagesh" probably means "dagesh forte," as both consider the dagesh in the word **בתים**, whenever it has only one accent, as a "dagesh lena."

(5) The prefixes **ב** and **ל**, in words which begin with a **י** having the vowel **i**. To B. A. this prefix takes sheva and the **י** retains its vowel. Thus he would vocalize **בִּישְׂרָאֵל**, **לִישְׂרָאֵל**. B. N. asserts that the prefix takes the vowel of the **י** and the latter loses its consonantal force; e.g., **בִּישְׂרָאֵל**, **לִישְׂרָאֵל**, a feature analogous to the usage of the Syriac language. As this is also the method of the Easterns (compare MASORAH), the statement of E. Levita is confirmed that the Westerns follow B. A. and the Easterns B. N.

(6) The presence or absence of the dagesh in the letters **ב** and **כ** under certain conditions.

(7) Individual cases of orthography and textual readings; e.g., B. A. reads **ישנה** (I Kings iii. 20), B. N. spells **ישנה**; B. A. reads **זרעך** (Isa. xxx. 23),

B. N. **זרעך**; B. A. **תהיה שממה** (Ez. xiv. 16), B. N. **שממה תהיה**.

The differences between the two Masorites do not represent solely personal opinions; the two rivals represent different schools. Like the

**Relation of Ben Ashers** there seem to have been **Both** several Ben Naphtalis. The state-

**to Received** ment of E. Levita ("Mas. ha-Masoret,"

**Text.** ed. Ginsburg, p. 144), that the West-

erns follow Ben Asher, and the East-

erns Ben Naphtali, is not without many exceptions.

Thus, for instance, in the difference concerning I Kings iii. 20 (see above, No. 7), the Westerns are said to agree with Ben Naphtali, while the Easterns follow Ben Asher. The rule of Ben Naphtali given

under No. 5 is followed in all MSS. and printed edi-

tions, in the words **בִּיקְרוֹתֶיךָ** (Ps. xlv. 10) and **לִיקְהַת**

(Prov. xxx. 17), etc. The Masoretic lists often do

not agree on the precise nature of the differences

between the two rival authorities; it is, therefore,

impossible to define with exactness their differences

in every case; and it is probably due to this fact

that the received text does not follow uniformly the

system of either Ben Asher or Ben Naphtali. The

attempt is likewise futile to describe the one codex

as Western or Eastern.

**BEN PORATH.** See MANASSEH BEN JOSEPH OF ILYE.

**BEN SIRA, ALPHABET OF** (**ספר אלפא**)

(**ביתא דבן סירא**): A small book containing a double list of proverbs—twenty-two Aramaic and twenty-two Hebrew—alphabetically arranged, and a haggadic commentary on them, enriched with fables and legends. Corresponding to their linguistic difference, there are differences in their contents and origin; consequently the two collections must be treated separately. Following is a list of the Aramaic proverbs, concerning only four of which definite statements of origin can be made:

1. "Honor the physician before thou hast need of him" (see Ecclus. [Sirach] xxxviii. 1; cited also in the rabbinical sources as a genuine saying of Ben Sira; compare Schechter, in "Jewish Quarterly Review," iii. 694, 703).

2. "If a son do not conduct himself like a son, let him float on the water." This means "deliver him up to his own fate." For another explanation, see Reifmann, in "Ha-Karmel," ii. 126.

3. "Gnaw the bone that falls to thy lot whether it be good or bad."

4. "Gold must be hammered, and the child must be beaten."

5. "Be good and refuse not thy portion of good."

6. "Wo to the wicked man and wo to his companions."

This proverb is frequently cited in rabbinical literature; compare Dukes, "Rabbinische Blumenlese," p. 91.

7. "Cast thy bread upon the waters and upon the land, for thou shalt find it after many days" (Eccl. xi. 1, with the addition of the word **יבישׁה**, "and upon the land").

8. "Hast thou seen a black ass? [Then] it was neither black nor white." (Addressed to a confirmed liar whose very statement is a proof against itself.) [Cowley and Neubauer, p. 29, read: "Hast thou seen white and black?"]

9. "Bestow no good upon that which is evil, and no evil will befall thee." The rabbinical sources characterize this as a saying of Ben Sira, though it does not occur in Ecclesiasticus [it is a slight scribal variation of Ben Sira, vii. 1]; compare Schechter, *ib.* pp. 694, 703; Cowley and Neubauer, "The Original Hebrew of a Portion of Ecclesiasticus," Introduction, p. xx.

10. "Restrain not thy hand from doing good." According to the MS. reading in Cowley and Neubauer (*ib.* p. 29), the proverb runs, "Never restrain thy hand from chastising a child."

11. "The bride enters the bridal chamber and, nevertheless, knows not what will befall her."

12. "A nod to the wise is sufficient; the fool requires a blow." This is cited as a maxim in Prov. R. xxii. 15.

13. "He who honors them that despise him is like an ass."

14. "A fire, when it is kindled [Neubauer, *ib.*, suggests קָלִי, "little" instead of רֵיק "kindled"], burns many sheaves" (compare James iii. 5).

15. "An old woman in the house is a good omen in the house" ('Ar. 19a, according to which כְּבֵא in the present passage is the *status absolutus* of כְּבֵא, and is to be translated by "old woman"; compare Rashi on Lev. xxvii. 7).

16. "Even a good surety has to be applied to for a hundred morrows; a bad one for a hundred thousand."

17. "Rise quickly from the table and thou wilt avoid disputes."

18. "In thy business deal only with the upright."

19. "If the goods are near at hand, the owner consumes them; but if they are at a distance, they consume him."

20. "Do not disavow an old friend."

21. "Thou mayest have sixty counselors, but do not give up thy own opinion" (Ecclus. [Sirach] vi. 6; compare Cowley and Neubauer, *ib.* p. 20).

22. "He that was first satisfied and then hungry will offer thee his hand; but not he that was first hungry and then satisfied." For the proper reading and signification of this proverb see below.

The parallel citations from rabbinical literature show that only five of these twenty-two proverbs are known to Talmudic-Midrashic literature; consequently they can not be regarded as being drawn from it. It is noteworthy that two of them, Nos. 17 and 22, agree almost literally with

**Origin of the Proverbs.** two of AḤIḲAR's proverbs, Nos. 43 and 71 (in the Syriac). A comparison reveals the fact that No. 17 is to

be read פִּטְר פְּתוּרָא פְּרִישׁ פְּלִנְתָּא, in which the four פ's make a paronomasia. Similarly No. 22 of the Alphabet shows that the manuscript reading of No. 71 of Aḥikar is correct in omitting אֵל, "not." The meaning of No. 22 is that one grown suddenly rich is accustomed to the niggardly ways of his poverty, and is not free in giving; but a rich man grown poor will remain true to habits of generosity.

Since the book of Aḥikar is very probably derived from Jewish sources, its agreement with the proverbs of Ben Sira is not particularly remarkable; for although Ben Sira is not the real author of the Alphabet, the proverbs are undoubtedly olden current Jewish adages. This is evident especially from the language in which they are written, which is far from being a learned imitation of a later style, but is of archaic Aramaic character. As Aramaic renditions of the real Ben Sira (compare Zunz, "G. V." 2d ed., p. 110) existed at the time of the Amoraim, and probably earlier, it is possible that the Alphabet may have sprung from an Aramaic collection; that is, a later author may have made an alphabetical list of proverbs from the many genuine and spurious sayings of Ben Sira.

The accompanying Hebrew commentary, which explains every proverb, and illustrates its correctness with legends and tales, is much more recent. It is true that, with the exception of the mythical Uzziel and Joseph (p. 8 has R. Jose, probably the same as Joseph), the son and the grandson of Ben Sira (compare JOSEPH BEN UZZIEL), no authorities are cited by name; yet there is no doubt that the commentary availed itself of the Talmud and the Midrashim.

Thus the commentary begins with a citation from Sanh. 44b; and the whole section following is but an elaboration of this Talmudic passage and of B. B. 121b. More than a

**The Commentary.** dozen such citations can be pointed out. An especially interesting fact

concerning the commentary is that it combines the fable told in Eccl. R. (v. 8) of the lion and the grass that revives the dead (on Nos. 7, 9; ed. Venice, pp. 5b, 7), with a totally distinct one. The author indeed betrays a general inclination to give stories from the Talmud and the Midrash in a modified form, which, no doubt, in many cases was that current among the people. Moreover, the author in all likelihood drew upon Midrashic sources now unknown; and this would account for many differences between the Haggadah in its present form and the Haggadah of the Alphabet.

It is impossible to determine the date at which the commentary was written, but it was probably about 1000, the end of the gaonic period. Concerning the locality of its composition there is no doubt. In the first place, the stress laid upon never omitting the formula אִם נִוֹר הַשֵּׁם, "if God wills" (on No. 11; ed. Venice, pp. 9b, 10a), shows that it originated in a Mohammedan country; for the use of formulas was introduced to the Jews by the Mohammedans. In the second place, the exact words of an Arabic proverb are cited (on No. 22; ed. Venice, p. 16a) with the phrase "There is a proverb among the 'goyim'" (Gentiles); and a writer living among Christians would not refer to the Mohammedans as "goyim." Moreover, the commentary alludes to the arbitrariness of the Mohammedan ruler (No. 8; ed. Venice, p. 6), and in another passage denounces the divorces frequently occurring among the Arabs and their Jewish countrymen.

The author combats exaggerated piety, the indulgence of children, and yielding to enemies (on Nos. 5, 9, 13; ed. Venice, pp. 4, 6, 7, 10, 11). The virtues which he particularly recommends are praying (on No. 1), almsgiving (on Nos. 7, 10; ed. Venice, pp. 4b-6, 7b-9a), respect for the aged (on No. 15; ed. Venice, pp. 12a, 13a), exclusive intercourse with the upright, and constancy in friendship. The manner in which the author imparts moral instruction at the end of the proverbs by a happy combination of Haggadah and legend shows him to be a clever writer, and one who knows how to treat his subject. Some of the notions may seem strange to the modern mind; but this is the case with many Midrashim.

The so-called second Alphabet of Ben Sira is quite different in character from the other, and belongs to a much later period. It consists, as stated, of twenty-two Hebrew proverbs with a commentary upon

them. Half of the proverbs are borrowed from the Talmud; and it is clear that some of them are divided into several proverbs in order to preserve the desired number of twenty-two, the number of letters in the Hebrew alphabet. The other half consist of platitudes whose form and contents betray a lack of literary training. But the proverbs themselves are of secondary interest for the author, whose main purpose is to use them as a basis for the legends which he not unskillfully groups about the person of Ben Sira.

The account begins with the remarkable birth of Ben Sira. He is represented as the son of Jeremiah, and was born with the physical and mental powers of an adult. In fact, the proverbs were made by him when as a one-year-old child he was sent to a teacher, and was taught the alphabet by him. As his teacher began to say the alphabet, Ben Sira interrupted him by giving a proverb which corresponded to the letter about to be taught him. His fame for wisdom reached Nebuchadnezzar, who sent for him, and at whose court Ben Sira gave many proofs of his wisdom, which are described by the commentator.

The alleged intercourse between Ben Sira and Nebuchadnezzar is the invention of the author, while the miraculous birth and early history of Ben Sira are a Jewish echo of a Christian legend, in which Jesus Ben Sira is made to play the part of Jesus of Nazareth. According to the "Evangel of the Childhood of Jesus," a pseudepigraph written in Arabic (Thilo's "Codex Apocryphus Novi Testam." i. 122 *et seq.*), Jesus spoke to his mother (chap. i.) while he was still in the cradle, and said: "I, whom thou hast brought forth, am Jesus, the son of God." Ben Sira, likewise, had teeth when he was born and could talk, for he at once told his mother who he was, whence he came, his name, and what he would accomplish (ed. Venice, 17*a*, *b*). Furthermore, just as the "Evangel" chap. xlviii.) mentioned above narrates that Jesus, while a schoolboy, astonished his teacher by explaining the names, form, and order of the Hebrew letters—in this book Ben Sira is said to have done the same. The story of the extraordinary conception of Ben Sira by his mother, p. 16*b*, is evidently a parody of the familiar Christian dogma.

The chief interest attaches to the animal fables, which are of great value for comparative folk-lore. The following may serve as an instance: At the creation of the world God consigned a male and a female of every kind of animal to the sea. When the Angel of Death ("Malak ha-Mawet"), who was charged with the duty of sinking them in the water, was about to take the fox, that animal began to cry. The Angel of Death asked him why he did this. The fox answered that he wept because his friend had been condemned to live in the water; and going to the shore, he pointed to his own image in the water. The Angel of Death, believing that a fox had already been sunk, allowed him to go. Leviathan, the ruler of the sea, now tried to lure the fox into its depths, because he believed that if he could eat the heart of so cunning an animal he would gain in wisdom. One day, while the fox was walking by the sea, some fishes came and spoke to him. They

told him that Leviathan was nearing his end and wanted the craftiest of animals to be his successor. They promised the fox to carry him to a rock in the sea where he could erect his throne without fear of the surrounding waters. When he reached the high seas the fox knew that for once he had been tricked; but he did not lose his self-possession. "What!" said he. "It is my heart you want, is it? Well, why did you not say so before? I would then have brought it here; for usually, you know, I do not carry it with me." The fish quickly conveyed him back to the shore, and in exultation he leaped about. The fish called to him to fetch his heart and come with them; but the fox replied: "To be sure, I went with you when I had no heart" (the ancients considered the heart the seat of wisdom); "but now I have my heart, I'll stay here. I got the better of the Angel of Death; how much easier, then, to fool stupid fish!" (Ed. Venice, pp. 27*a*–28*b*; partly given, according to the MS. version by Schorr, in "He-Ḥaluz," viii. 170, 171.)

A comparison of this fable with the Indian fables as given in the "Panchatantra" and "Kalila and Dimna," shows that the author fused three into one. Evidently the story of the fox and the Angel of Death has no connection with the story of the fox and the fish. The latter is identical with the Indian fable of the ape and the crocodile ("Panchatantra," iv. 1; French translation by E. Lancereau, pp. 271–278, Paris, 1871), which corresponds to the fable of the ape and the turtle in "Kalila and Dimna" (Hebrew version, ed. Derenbourg, pp. 128–138, Paris, 1881; Syriac version, ed. Bickell, pp. 49–52, Leipsic, 1876). The end of the fable, as told in the Alphabet, does not belong to this fable, but to the Indian one of the lion, the jackal, and the ass ("Panchatantra," iv. 3, 285–288; "Kalila and Dimna," Hebrew, pp. 139–142; Syriac, pp. 52, 53). The author, however, did not draw upon the "Panchatantra," but upon some version of the "Kalila and Dimna," as is evident from the fact that in the latter the two fables are joined, while in the "Panchatantra" there is no direct connection.

It is difficult to decide which version of Bidpai Ben Sira drew upon, since the date of the composition of the Alphabet has not been determined. The earliest authority who cites the little book is the author of the 'Aruk, *s.v.* פֶּרִיץ, ed. Kohut, vi. 450; but it is doubtful in what form he knew it; and there is reason to suppose that it underwent changes—in insertions and elaborations—in the course of time. Yet it is probable that Abraham ben Nathan in the second half of the twelfth century was acquainted with the legends and fables of the book as it now is (compare the citations from the manuscript of Abraham ben Nathan in "Jewish Quarterly Review," iii. 685). Maimonides did not know of the book; for the remark in his Mishnah commentary on Sanh. x. 1 shows that he obtained his opinion of Ben Sira from the Talmud (*l.c.* 100).

In spite of Maimonides' disparaging opinion of the book, it has survived; and, to judge from the many manuscripts, both the Alphabets and the commentaries had a certain popularity, though mostly among the unlearned. The commentary on the sec-

ond Alphabet is really nothing more than a collection of legends and fables common among the Jews of the Middle Ages. It is to be expected that such a book should be full of absurdities; and it is not just in Reifmann, Epstein, and Neubauer to stigmatize it as an intentional "mockery of Jewish literature." Oriental popular books—and the second part of Ben Sira came from Arabia or Persia—contain much that is vapid together with good specimens of popular wit and charming fables.

**BIBLIOGRAPHY:** Editions, Manuscripts, and Translations: First ed., Salonica, 1514, not known to the bibliographers, but of which one copy is in possession of Elkan N. Adler, and another of L. Schwager in Husiatyn; second ed., Constantinople, 1519; only one complete copy known, that in the British Museum; the Bodleian copy is defective; third ed., Venice, 1544, very rare; most later editions are based on this one, but are, however, badly mutilated. Steinschneider published a reprint of this edition with a comparison of the MS. with a MS. at Leyden, under the title *Alphabeticum Syracidis*, Berlin, 1854. The Bodleian Library has several MSS. with some variations from the printed text. The proverbs have been translated into Latin, French, and German; in Cowley and Neubauer, *The Original Hebrew of a Portion of Ecclesiasticus*, Introduction, pp. 28, 29, the First Alphabet has been translated into English, and the whole book has been translated several times into Judæo-German, and once into Judæo-Spanish. Compare Steinschneider, *Cat. Bodl.* cols. 203, 206; Van Straalen, *Catalogue*, p. 24. Literature: Epstein, *Mi-Kadmoniyot ha-Yehudim*, pp. 119-124; Reifmann, in *Ha-Karmel* (monthly), ii. 124-138 (in this work there are many errors along with some good observations); *idem*, in *Keneset Yisrael*, ii. 135, 136; Dukes, *Rabbinische Blumenlese*, pp. 31, 32, 67-84; Zunz, *G. V.*, 2d ed., p. 11; Schorr, in *He-Haluz*, viii. 169-173; Jellinek, in *Monatsschrift*, ii. 430; *idem*, in his Introduction to *B. H.* vi. 11-13.

**BEN TEMALION:** A demon mentioned in the Talmud. When the Jewish sages, with Simon b. Yoḥai at their head, went to Rome to obtain the revocation of certain edicts hostile to the Jews, the demon Ben Temalion appeared before them and offered his services. He proposed to enter into the body of a princess of the imperial house, and not to leave her until Simon b. Yoḥai was asked to cure her; for in her madness she would call for him. On Simon b. Yoḥai's whispering the name "Ben Temalion" into the ear of the princess, he would leave her, and as a sign of his departure all the glass in the palace would break. At first the sages did not wish to make use of his services; but as they could think of no other means of obtaining favor for their request, they could not dispense with his help.

Everything then took place as Ben Temalion had predicted. As a reward for the princess' cure, Simon b. Yoḥai received permission to take whatever he wished from the imperial treasure-house. He found the anti-Jewish edicts there, and, taking them, tore them up (*Me'ilah* 17*b*). In the Talmud this legend occurs only in shortened form; but a more elaborate version is given in the "Halakot Gedolot," ed. Hildesheimer, pp. 603, 604; in the apocalyptic Midrash, "Tefillat R. Simon b. Yoḥai"; in Jellinek, "B. H." iv. 117, 118; and in a MS. printed in *ib.* vi. 128, 129. Rashi also, in his commentary on the passage in *Me'ilah*, cites a Haggadah which gives the legend in a form essentially varying from the one in the Talmud. R. Gershon, in his commentary on the passage, and the so-called Rashi, in Ḥabib's "En Ya'aqob" on the passage, give an Aramaic version, which is probably the older form of the legend.

In more than one respect this legend is of great interest for comparative folk-lore, occurring, as it does, also in the Christian legends of the saints and

in Buddhist tradition. It is related of the apostle Bartholomew that he went to India and there freed the daughter of the king from a devil which possessed her. Instead of accepting a reward, he caused a devil to enter an idol and then bade it leave the statue. Thereupon this statue and all others in the temple were broken (Fabricius, "Codex Apocryphus N. T." i. 674 *et seq.*; Tischendorf, "Acta Apostol. Apocrypha," 246 *et seq.*; Migne, "Dictionnaire des Apocryphes," ii. 153-157).

The kinship of this with the Jewish legend can not be denied. Yet it is highly improbable that the names of the demon Ben Temalion and Bartholomew are the same, the saint in the one story becoming the demon in the other. Such a metamorphosis, indeed, is not impossible; but, in this event, the demon would be expected to be hostile and not friendly to the Jews; and the fact that other etymologies suggested for the name "Ben Temalion" are hardly acceptable, provides no argument in favor of its identity with "Bartholomew." The Buddhist legend, which is probably the source of the Jewish and Christian legends, is as follows: A demon, desiring to please a man, promises to enter into a princess and not to leave her until bidden to do so by certain words spoken by the man. This happens; the man obtains the princess as his wife and receives one-half of the king's realm ("Panchatantra," ed. Benfey, i. 520; ed. Lancereau, p. 20).

The French Jews considered Ben Temalion a kind of "lutin" (goblin or brownie), who in French folk-lore is friendly and helpful to man, but teases him. The Tosafists (on *Me'ilah* *l.c.*) remark that Ben Temalion has the appearance of a child and is wont to have his sport with women. Whether this was the original representation of Ben Temalion is very questionable.

Zeit.* xi. 273-278 (he holds that Ben Temalion was originally the name of a Senator friendly to the Jews); Schorr, in *He-Haluz*, viii. 123.

**BEN-ZE'EB, JUDAH LÖB:** First Jewish grammarian and lexicographer of modern times; born near Cracow 1764; died at Vienna March 12, 1811. He received the religious education common to the Jews of Poland in those days. He married at a very early age and settled in Cracow in the home of his wife's parents, where he spent his days in studying Talmud, and his nights in clandestinely acquiring the knowledge of Hebrew philology and of secular subjects. The financial embarrassment of his family compelled him to seek his fortune in another land, and he naturally gravitated toward Berlin, **Haskalah**, which was then the center of the "Haskalah"; *i.e.*, the movement to spread enlightenment among the Jews by means of Neo-Hebraic and German studies. Ben-Ze'eb was soon ad-

Judah Löb Ben-Ze'eb.

mitted to the galaxy of brilliant scholars and pioneers of Haskalah, who were to some extent considered as the disciples and successors of Moses Mendelssohn. Later, for about ten years, he lived in Breslau, where

he wrote and published his Hebrew grammar, "Talmud Leshon 'Ibri," in 1796. Two years later he published his Hebrew translation of Ecclesiasticus, or Ben Sirach, which is called by Delitzsch ("Zur Geschichte der Jüdischen Poesie," p. 110) a masterpiece of imitation of Biblical gnomic style. Ben-Ze'eb returned from Breslau to Cracow, and later settled in Vienna

as corrector in the Hebrew printing establishment of Anton Schmid, where he remained till his death.

Ben-Ze'eb is the author of many valued works; his Hebrew poetry is marked by the purity of its diction and is not devoid of originality and profundity (Delitzsch, *ib.*). He was the first to systematize, in the Hebrew language itself, Hebrew grammar, to arrange it methodically and to facilitate the mastery of a good style by introducing logic, syntax, and prosody as part of grammatical studies. This accounts for the great success of his "Talmud Leshon 'Ibri," which work is an immense improvement over former Hebrew grammars and a step toward the introduction of Western methods in Hebrew literature. It has since been republished with additions, annotations, and commentaries more than fifteen times, and is still the most popular Hebrew grammar in use among the Jews of eastern Europe. The Wilna edition of 1874, with the commentary "Yitron le-Adam" by A. B. Lebensohn, is the most improved, and has been republished several times. His second great work, the "Ozar ha-Shorashim," a Hebrew lexicon (based on a similar work by David Kimḥi), in which the roots are translated into German, went through six editions up to 1880, and has

**Gram-** familiar with the German language  
**matical** and with secular knowledge. It is  
**Works.** true that Ben-Ze'eb was not strictly  
scientific in the modern sense, and that

his works do not come up to the standard of Western Hebraists, even of his own time; but great numbers have been taught by him to understand the language of the Bible and to express their thoughts in it, in localities and under circumstances in which other and more scientific means were not available.

Ben-Ze'eb is easily the foremost grammarian among the Galician Hebraists, the latter never attaining great prominence in the study of Hebrew (see Weissberg's "Die Neuhebräische Aufklärungsliteratur in Galizien," p. 30, Leipsic and Vienna, 1898). His clear and logical style, added to his exactness and thoroughness, renders him a favorite with lay readers and students alike. Ben-Ze'eb is the author also of "Melizah le-Purim," a collection of mock-prayers

and seliḥot for Purim, which contain many clever parodies on familiar texts. This work has been often published with Kalonymus ben Kalonymus' celebrated Talmudical parody, "Mascket Purim." In his "Mebo"—introduction to the Bible (which, since its first publication, has appeared in several editions of the Bible), Vienna, 1810—Ben-Ze'eb follows the theories mainly of Johann Gottfried Eichorn. Ben-Ze'eb's "Mesillat ha-Limmud," for elementary scholars in Hebrew, has been translated into Italian by Leon Romani, Vienna, 1825; and into Russian by A. J. Papirno, Warsaw, 1871. "Torat Leshon 'Ibri, Hebräische Sprachlehre" is a German revision of his Talmud by S. J. Cohen, of which the first part appeared in Berlin in 1802, and three parts in Dessau in 1807. Five more editions appeared up to 1856. Ben-Ze'eb also contributed to the "Meassefim" over the signature "J. L. C." (Judah Löb Cracow). The memory of Ben-Ze'eb is abhorred by the Ḥasidim, who attribute to him the same miserable death which orthodox Christians assigned to Arius.

**BEN ZITA.** See ELEAZAR BEN ZITA ABU AL-SARI.

**BEN ZOMA:** Tanna of the first third of the second century. His full name is Simon b. Zoma without the title "Rabbi"; for, like Ben 'Azzai, he remained in the grade of "pupil," and is often mentioned together with Ben 'Azzai as a distinguished representative of this class (see BEN 'AZZAI). Like Ben 'Azzai, also, he seems to have belonged to the inner circle of Joshua b. Hananiah's disciples; and a halakic controversy between them is reported in which Ben Zoma was the victor (Naz. viii. 1).

His erudition in the Halakah became proverbial; for it was said, "Whoever sees Ben Zoma in his dream is assured of scholarship" (Ber. 57b). He was, however, specially noted as an interpreter of the Scriptures, so that it was said (Soṭah ix. 15), "With Ben Zoma died the last of the exegetes" ("darshanim"). Yet only a few of his exegetic sayings have been preserved. The most widely known of these is his interpretation of the phrase, "that thou mayest remember the day when thou camest forth out of Egypt" (Deut. xvi. 3), to prove that the recitation of the Biblical passage referring to the Exodus (Num. xv. 37-41) is obligatory for the evening prayer as well as for the morning prayer. This interpretation, quoted with praise by Eleazar b. Azariah (Ber. i. 5), has found a place in the Haggadah for the Passover night. In a halakic interpretation Ben Zoma explains the word "naki" (clean) in Ex. xxi. 28 by referring to the usage of the word in every-day life (B. K. 41a; Kid. 56b; Pes. 22b).

The principal subject of Ben Zoma's exegetic research was the first chapter of the Torah, the story of Creation. One of his questions on this chapter, in which he took exception to the phrase "God made" (Gen. i. 7), has been handed down by the Palestinian haggadists (though without the answer), with the remark, "This is one of the Biblical passages by which Ben Zoma created a commotion all over the world" (Gen. R. iv.). An interpretation of

the second verse of the same chapter has been handed down in a tannaitic tradition (Tosef., Hag. ii. 5, 6; compare Hag. 15*a*), together with the following anecdote: Joshua b. Hananiah was walking one day, when he met Ben Zoma, who was about to pass him without greeting. Thereupon Joshua asked: "Whence and whither, Ben Zoma?" The latter replied: "I was lost in thoughts concerning the account of the Creation." And then he told Joshua his interpretation of Gen. i. 2. When speaking to his disciples on the matter, Joshua said, "Ben Zoma is outside," meaning thereby that Ben Zoma had passed beyond the limit of permitted research.

As a matter of fact, Ben Zoma was one of the four who entered into the "garden" of esoteric knowledge (see BEN 'AZZAI). It was said of him that he beheld the secrets of the garden and "was struck" with mental aberration (Hag. 14*b*). The disciples of Akiba applied to the limitless theosophic speculations, for which Ben Zoma had to suffer, the words of Prov. xxv. 16, "Hast thou found honey? eat so much as is sufficient for thee, lest thou be filled therewith, and vomit it" (Tosef., Hag. *l.c.*; Bab. Hag. *l.c.*; compare Midr. Mishle on xxv. 16).

Even the few sentences of Ben Zoma that have come down to us show the depth of his thoughts; as, for instance, his reflections on seeing large crowds of people (Tosef., Ber. vii. [vi.] 2; Ber. 58*a*):

"Ben Zoma, seeing the crowds on the Temple mount, said, 'Blessed be He who created all these to attend to my needs. How much had Adam to weary himself with! Not a mouthful could he taste before he plowed and sowed, and cut and bound sheaves, and threshed and winnowed and sifted the grain, and ground and sifted the flour, and kneaded and baked, and then he ate; but I get up in the morning and find all this ready before me. How much had Adam to weary himself with! Not a shirt could he put on before he sheared and washed the wool, and hatched and dyed and spun and wove and sewed, and then he clothed himself; but I rise in the morning and find all this ready before me. How many trades are anxiously busy early in the morning; and I rise and find all these things before me!'"

Also his reflections on man as the guest of God in this world (*ib.*):

"A grateful guest says, 'That host be remembered for good! How many wines he brought up before me; how many portions he placed before me; how many cakes he offered me! All that he did, he did for my sake.' But the ill-willed guest says, 'What did I eat of his? A piece of bread, a bite of meat. What did I drink? A cup of wine. Whatever he did, he did for the sake of his wife and his children.' Thus the Scripture says [Job xxxvi. 24], 'Remember that thou magnify His work, whereof men have sung.'"

Again, take his fourfold motto (Ab. iv. 1) on the truly wise, the truly rich, the truly powerful, and the truly esteemed. In the closing words of Ecclesiastes, "for this is the whole man," he finds the thought expressed, that the pious man is the crown and end of mankind; the whole race ("the whole world") was created only to be of service to him who fears God and respects His commandments (Ber. 6*b*; Shab. 30*b*; see 'Aruk, *s.v.* צוֹרֵחַ, 5). Ben Zoma is also the originator of the beautiful sentence, "Hast thou, in repentance, been ashamed in this world, thou wilt not need to be ashamed before God in the next" (Ex. R. xxx. 19).

**BENAIAH** (Hebrew, "Benayahu" or "Benayah," "the Lord hath built").—**Biblical Data:** 1. One of the Bene Parosh who took foreign wives (Ezra x. 25); in I Esd. ix. 26 he is called "Baaniash."

2. One of the Bene Pahath-moab in the same list (Ezra x. 30), called "Naidus" in I Esd. ix. 31.

3. One of the Bene Bani in the same list (Ezra x. 35); he is called "Mabdei" in I Esd. ix. 34.

4. One of the Bene Nebo in the same list (Ezra x. 43); he is called "Banaiah" in I Esd. ix. 35.

5. A Simeonite chief (I Chron. iv. 36).

6. Son of Jeiel, and grandfather of the Jahaziel who brought a message of encouragement to Jehoshaphat (II Chron. xx. 14).

7. Father of Pelatiah, the prince of the people denounced by Ezekiel (Ezek. xi. 1, 13).

8. The Pirathonite, one of the thirty valiant men of David (I Chron. xi. 31; II Sam. xxiii. 30), commanding the army in the eleventh month (I Chron. xxvii. 14).

9. A Levite singer (I Chron. xv. 18), who also played in the Temple service (I Chron. xv. 20, xvi. 5).

10. A priest, one of those who "did blow with the trumpets before the ark" (I Chron. xv. 24, xvi. 6).

11. A Levite in the reign of Hezekiah, who assisted in keeping the offerings brought to the Temple (II Chron. xxxi. 13).

12. Son of Jehoiada, a priest (I Chron. xxvii. 5) who distinguished himself in military affairs under David, and later on in Solomon's reign. Three of his exploits are particularly mentioned: (1) the slaughter of the two Ariels of Moab; (2) the killing of a lion that had been trapped in a pit; Benaiah descended into the pit and there battled with the beast; (3) the overthrow of an Egyptian or a Mizri, from whom he wrenched his weapon and slew him with it (II Sam. xxiii. 20-22 = I Chron. xi. 22-25). Officially Benaiah held various positions. He commanded the Cherethites and Pelethites (II Sam. viii. 18, xx. 23); was placed by David over the guard (I Chron. xi. 25; II Sam. xxiii. 23); and commanded the army in the third month (I Chron. xxvii. 5). In Adonijah's attempt at the kingship, Benaiah sided with Solomon (I Kings i. 8 *et seq.*) and took part in proclaiming the latter king. On the death of David, Benaiah, by order of Solomon, put Joab and Adonijah to death (I Kings ii. 25). Later Benaiah succeeded to the supreme command of the army (I Kings ii. 35). Along with the other priest Abiathar, Benaiah acted as one of the counselors of King David (I Chron. xxvii. 34; the reading "Jehoiada ben Benaiah" is evidently wrong).

—**In Rabbinical Literature:** The Rabbis taught that Benaiah was president of the Sanhedrin under David (Ber. 4*a*). His position as leader of the Jewish scholars is declared to be indicated in II Sam. xxiii. 20, the verse being expounded as follows: Benaiah was a man, בֶּן־אִישׁ חַי ("son of a valiant man," A. V.; Hebr., "son of a man living"), who could be called "alive" even after his death; "who had done many acts"; of "Kabzeel," *i.e.*, he was very active in behalf of the Torah ("kabaz," he collected; "el," for God). "He slew two sons of Ariel." There was no

one like him either at the time of the first or of the second Temple, Ariel, "lion of God," being a symbolic name for Temple. "He went down and slew a lion in the midst of a pit in the time of snow," may be interpreted either that he broke the ice in order to perform prescribed ablutions, or, figuratively, that he studied on a winter's day the great and abstruse book, Sifra (Ber. 18b; Targ. II Sam. *l.c.*).

Benaiah also occupied an eminent position under Solomon, being his chancellor and best friend. When the queen of Sheba was coming to visit Solomon, the latter sent Benaiah, whose beauty resembled the morning star, to meet her; he shone among his companions like Venus among the other stars (Targ. Sheni on Esther i. 2; ed. Munk, p. 9). When the queen saw him, she thought him Solomon, and was about to fall on her knees before him; when he told her who he was, she said to her companions: "Although ye have not seen the lion, ye have seen his den; judging by Benaiah, ye may form for yourselves an idea of Solomon" (*l.c.* p. 10). When Solomon returned to Jerusalem after his long wanderings (compare SOLOMON IN RABBINICAL LITERATURE), he at once went to Benaiah and reminded him of the times past, giving such details that the latter could not doubt that he was talking with Solomon (Midrash "Shir ha-Shirim," ed. Grünhut, p. 30a; compare Git. 68b; see also Jellinek, "B. H." vi. 124-126). In the cabalistic literature Benaiah is counted among the thirty pious ones who exist in every generation in order that the world may continue (Zohar i. 105b; compare i. 6b).

**BENAMOZEGH, ELIJAH:** Italian rabbi; born at Leghorn in 1822; died there Feb. 6, 1900. His father (Abraham) and mother (Clara), natives of Fez, Morocco, died when Elijah was only four years old. The orphan early entered school, where, besides instruction in the elementary sciences, he received tuition in Hebrew, English, and French, excelling in the last-named language. Benamozegh devoted himself later to the study of philosophy and theology, which he endeavored to reconcile with each other.

Elijah Benamozegh.

At the age of twenty-five he entered upon a commercial career, spending all his leisure in study; but his natural tendency toward science and an active religious life soon caused him to abandon the pursuit of wealth. He then began to publish scientific and apologetic works, in which he revealed a great attachment to the Jewish religion, exhibiting at the same time a broad and liberal mind. His solicitude for Jewish traditions caused him to defend even the much-decried Cabala. Later, Benamozegh was ap-

pointed rabbi and professor of theology at the rabbinical school of his native town; and, notwithstanding his multifarious occupations from that time, he continued to defend Jewish traditions by his pen until his death.

Benamozegh was the author of the following works: (1) "Emat Mafgia" (The Fear of the Opponent), a refutation of Leon de Modena's attacks upon the Cabala, in 2 vols., Leghorn, 1858; (2) "Ger Zedek" (A Righteous Proselyte), critical notes on Targum Onkelos, *ib.*, 1858; (3) "Ner le-David" (Lamp of David), commentary on the Psalms, published together with the text, *ib.*, 1858; (4) "Em la-Mikra" (Matrix of Scripture), commentary on the Pentateuch containing critical, philological, archeological, and scientific notes on the dogmas, history, laws, and customs of the ancient peoples, published together with the text under the title "Torat Adonai," Leghorn and Paris, 1862-65; (5) "Ta'am la-Shad" (Arguments for Samuel David [ר' שד"ל]), refutation of Samuel David Luzzatto's dialogue on the Cabala, Leghorn, 1863; (6) "Mebo Kelali," general introduction to the traditions of Judaism, published in "Ha-Lebanon," 1864, pp. 73 *et seq.*; (7) "Storia degli Esseni," Florence, 1865; (8) "Morale Juive et Morale Chrétienne. Examen Comparatif Suivi de Quelques Réflexions sur les Principes de l'Islamisme," Paris, 1867; (9) "Teologia Dogmatica ed Apologetica," Leghorn, 1877; (10) "Le Crime de la Guerre Dénoncé à l'Humanité," Paris, 1881 (this work won for its author a medal and honorable mention from the Ligue de la Paix, on the proposition of Jules Simon, Edouard Laboulaye, and Frederic Passy); (11) "Ya'aneh be-Esh" (He Will Answer Through Fire), discussion of cremation according to the Bible and the Talmud, Leghorn, 1886.

Besides writing these works, Benamozegh contributed to many periodicals, his more important articles being: "Spinoza et la Kabbala," in "Univers Israélite," xix. 36 *et seq.*; "La Tradition," *ib.* xxv. 20 *et seq.*; "Intorno alla Cabbala," in "Il Vessilo Israelitica," xli. 3 *et seq.*; "Il Libro di Giobbe," in "Educatore," ix. 325 *et seq.*; "Dell' Escatologia," *ib.* xxv. 203 *et seq.*

**BENARY, FRANZ FERDINAND:** German Orientalist; born at Cassel March 22, 1805; died at Berlin Feb. 7, 1880. The exact date of Benary's conversion to Christianity has not been ascertained, but it is known that, after studying theology and philology at the University of Bonn, he continued his theological studies at Halle (1824-27), where his attention was first turned by Gesenius to the Oriental languages. In 1827 he went to Berlin, and in addition to the theological courses there, of Hegel, Schleiermacher, Neander, and Marheineke, he attended Bopp's lectures on Sanskrit, by which he was deeply impressed.

While acting as privat-docent of Oriental languages at the Berlin University (1829-31), he published the old Hindu poem "Nalodaya" (1830).

In 1831 he became assistant professor of theology. His lectures were principally on Biblical literature and exegesis, Semitic languages and paleography. Among his writings on these subjects, published chiefly in the "Jahrbücher für Wissenschaftliche Kritik," should be mentioned his treatise "De Hebræorum Leviratu." Berlin, 1835, which won for him the degree of D.D. from the University of Halle.

S.

**BENARY, KARL ALBERT AGATHON:** German philologist; born at Cassel 1807; died 1860; brother of Franz Ferdinand Benary. He received his education at the gymnasia of Göttingen and Erfurt, studied classical philology (1824-27) at the universities of Göttingen and Halle, and obtained his degree of Ph.D. with the thesis "De Æschyli Prometheo Solutio." While teacher at a Berlin gymnasium, he continued, together with his brother, his philological studies at the university under Bopp.

From 1833 until his death Benary was professor at the so-called Cölnische Realgymnasium at Berlin, and at the same time lectured in the university. He was one of the first linguists who applied the methods of comparative grammar to Latin and Greek. Unfortunately his work "Die Römische Lautlehre Sprachvergleichend Dargestellt," 1837, vol. i., remained a torso. Most of Benary's essays were published in the Berlin "Jahrbücher für Wissenschaftliche Kritik," and in Kuhn's "Zeitschrift für Vergleichende Sprachforschung." In 1848 he sided with the Liberal party. Like his elder brother, he embraced Christianity.

**BENAS, BARON L.:** English communal worker; born in Liverpool, England, 1844. Has been throughout his life a leading figure in the Liverpool Old Hebrew congregation, of which he is one of the trustees.

During the Russian emigration of 1882 he helped to found the Liverpool branch of the Russo-Jewish committee, on which was thrown most of the organizing work connected with the emigration from Russia through England into the United States.

Outside the community he has been president of the Liverpool Literary and Philosophical Society, to the transactions of which he has contributed many papers on economic, social, and antiquarian topics, including one on the history of the Liverpool community, 1900.

**BENASH (or BENUSH), BENJAMIN:** Cabalist of the beginning of the eighteenth century; son of Judah Löb Cohen of Krotoschin, Prussia. He wrote the "Shem-Tob Kaṭan"—extracts from alleged works of Isaac Luria and Moses Naḥmanides, and containing various prayers and formulas illustrating the practical application of the Cabala. Among others there is a prayer by Moses Naḥmanides for making oneself invisible to robbers while on a journey—the writer adds that he tried it himself and found it efficacious—and another prayer for extinguishing a conflagration. Conceived in the same spirit is his other book, "Amtaḥat Binyamin" (Benjamin's Bag).
